**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

**Required knowledge**

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- basic theory related to mechanical splicing and anchoring as a reinforcement technology
- construction and steelfixing tensioning terminology
- factors affecting concrete bonding, curing and strength
- handling, storage and environmentally friendly waste management
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- mechanical anchoring systems, materials and techniques
- mechanical splicing systems, materials and techniques
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- complete the full mechanical splicing and anchoring cycle on a minimum of three occasions covering foundations, a slab and one other structure.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

- confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to splicing and anchoring using mechanical methods
- relevant Australian standards
- safe work procedures relating to splicing and anchoring using mechanical methods
- signage
RANGE STATEMENT

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- mechanical splicing and anchoring used in reinforcement in foundations, pits and slabs, columns, walls, stairs, plinths, kerbs, gutters, pathways and hard standings.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting, grinding and welding equipment
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - working with metals under stress
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment:

- include:
  - bolt cutters
  - couplers
  - mechanical cutting equipment
  - nippers
RANGE STATEMENT

- tool belts
- measuring tapes
- may include:
  - electric cold cut-off saw
  - oxy-acetylene equipment and metal inert gas (MIG), tungsten inert gas (TIG) and manual metal arc welding (MMAW) equipment.

Materials include:
- labelling
- specialist material handling gloves.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant *information*, confirmed and applied to the scope of work performed.  
1.2. Reinforced concrete construction schedule is identified from project schedule.  
1.3. Elements of structure are identified from project construction schedule and job drawings.  
1.4. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.5. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and legislative authority* obligations and applied. |
| 2. Read and interpret schedule. | 2.1. Structural element to be constructed is confirmed from site and structural detail drawings.  
2.2. Reinforcement schedule is read to identify the appropriate reinforcement type for the structural element.  
2.3. Number of reinforcement pieces/sheets is identified from structural detail drawings.  
2.4. Reinforcement schedule is read to identify coding and number related to labels.  
2.5. Discrepancies in coding and numbering are identified and situation is reported to schedule contact for clarification. |
| 3. Check contents of bundles. | 3.1. Content of reinforcement material bundles is checked for conformity to schedule and proposed structural element.  
3.2. Discrepancies between the schedule and actual material quantities are investigated and resolved or reported.  
3.3. Discrepancies between the schedule and actual material shape, size or length are investigated and resolved or reported.  
3.4. Cranked or bent items of reinforcement are identified, segregated and reported.  
3.5. Schedule is marked where content conforms to schedule and structural element’s requirements. |
| 4. Locate reinforcement for element | 4.1. Reinforcement is marked or placed and noted ready |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
construction. | for transportation to element location.

4.2. Reinforcement is directed to structural location for placement and fixing.

5. Communicate schedule information.

5.1. Job sequencing schedule detail is communicated to steel fixers and team members to ensure efficient work practices.

5.2. Changes to job sequencing schedule are recorded as per site requirements.

5.3. Work completion procedures are identified and relevant personnel notified when finished, as per site requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - communicate job sequencing schedule detail to steel fixers
  - determine requirements
  - follow instructions
  - notify completion of work
  - read and interpret:
    - construction and reinforcement schedule
    - documentation from a variety of sources
    - drawings and specifications
  - report discrepancies and faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record changes to job sequencing schedule detail
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - mathematical and numeracy skills to apply measurements and calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a
REQUIRED SKILLS AND KNOWLEDGE

- range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- construction and steelfixing terminology
- construction site traffic control and signage arrangements
- conventional symbols, markings and numbering systems relevant to reinforcement schedules
- job safety analysis (JSA) and safe work method statements
- presentation and contents of reinforcement schedules
- presentation and general content of typical construction schedules
- quality requirements
- reinforcement material types, appearance standards, packaging and labelling arrangements
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- for a minimum of two different sites:
  - confirm the reinforcement material to the schedule
  - direct the location of the reinforcement materials for element construction
  - communicate schedule information and variations to steel fixers.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

- confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of reinforcement schedules
- relevant Australian standards
- safe work procedures relating to the application of reinforcement schedules
- signage
RANGE STATEMENT

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Reinforced concrete construction schedule:
- information includes:
  - grade of steel reinforcing
  - length of material
  - location for material, size and shape of bars
  - number of bars in a bundle
  - shape of formed bars
  - size of mesh
  - surface markings
  - type of steel bars, cranks and bends

- structural elements include:
  - beams
  - columns
  - footings
  - slabs
  - walls.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
RANGE STATEMENT

- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Environmental requirements include:
- clean-up management
- dust and noise
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

ELEMENT PERFORMANCE CRITERIA

4.2. Anchor blocks and wedges are set up to manufacturers’ design.
4.3. Stressing operations are carried out to nominated loads and to engineer standards using authorised calibrated stressing equipment.
4.4. Extensions are measured and recorded on standard forms for approval by the engineer.

5. Finish the tensioning.
5.1. Protruding strands are cut and sealed according to manufacturer specifications.
5.2. Cement grout is mixed and pumped in accordance with the specifications and relevant standards.

6. Clean up.
6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record extensions
- identifying and accurately reporting to appropriate personnel any faults in tools,
REQUIRED SKILLS AND KNOWLEDGE

- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic theory related to cable stressing as a reinforcement technology
- calibration procedures related to stressing techniques and equipment
- construction and steelfixing tensioning terminology
- factors affecting concrete bonding, curing and strength
- grouting equipment and procedures
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- requirements and processes for recording stressing operations
- safe stressing procedures and monostrand techniques
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- carry out the full monostrand post-tensioning cycle to specification, covering:
  - five strand tendon
  - a minimum of thirty metres
  - standard tensioning
  - completion of site tensioning documentation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with
EVIDENCE GUIDE

a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to monostrand post-tensioning
- relevant Australian standards
- safe work procedures relating to monostrand post-tensioning
RANGE STATEMENT

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- monostrand post-tensioning is designed to replace standard reinforcement materials with cables and through tensioning, and provide required strength in a reduced thickness of concrete
- post-tensioning plans will contain position of cables, height of chairs, cable specifications, number of strands per cable and the stressing loads
- monostrand is a single cable with a standard seven wire strand with sizes ranging from 12.7mm to 15.2mm
- tensioning is stipulated in the job specifications but is not to exceed 85% of the ultimate tensile strength of the cable
- types of structural elements include slabs, beams, columns and ground anchors
- types of structures include buildings, bridges, towers, tanks, silos, stayed structures, offshore platforms, and underground and submerged structures
- work is to conform to relevant Australian standard, unless this is replaced by superior specifications.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and
RANGE STATEMENT

Treatments associated with:

- cutting and grinding equipment
- lighting
- power equipment
- power leads and sources
- trip hazards
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- working with cables under stress
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:

- angle grinders (power)
- grouting equipment
- hacksaws
- hammers
- hydraulic power packs
- measuring tapes and rules
- monostrand jacks
- nips
- spanners
- staple guns
- steelfixing reels.

**Materials** include:

- labelling
- specialist material handling gloves.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:

- clean-up management
- dust and noise
- waste management.

**Statutory and regulatory authorities** include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

ELEMENT | PERFORMANCE CRITERIA
--- | ---
4.2. | Anchor blocks and wedges are set up to manufacturers’ design.
4.3. | Stressing operations are carried out to nominated loads and to engineer standards using authorised calibrated stressing equipment.
4.4. | Extensions are measured and recorded on standard forms for approval by the engineer.
5. | Finish the tensioning.
5.1. | Protruding strands are cut and sealed according to manufacturer specifications.
5.2. | Cement grout is mixed and pumped in accordance with the specifications and relevant standards.
6. | Clean up.
6.1. | Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
6.2. | Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record extensions
- identifying and accurately reporting to appropriate personnel any faults in tools,
REQUIRED SKILLS AND KNOWLEDGE

- mathematical and numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic theory related to cable stress as a reinforcement technology
- calibration procedures related to stressing techniques and equipment
- construction and steelfixing tensioning terminology
- factors affecting the concrete bonding, curing and strength
- grouting equipment and procedures
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- requirements and processes for recording stressing operations
- safe stressing procedures and multistrand techniques
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- carry out the full multistrand post-tensioning cycle to specification covering:
  - a multistrand cable of at least fifteen strands
  - a minimum of thirty metres
  - standard tensioning
  - completion of site tensioning documentation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to multistrand post-tensioning
- relevant Australian standards
- safe work procedures relating to multistrand
RANGE STATEMENT

post-tensioning
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.
• multistrand post-tensioning is designed to replace standard reinforcement materials with cables and, through tensioning, provide required strength in a reduced thickness of concrete
• post-tensioning plans will contain position of cables, height of chairs, cable specifications, number of strands per cable, and the stressing loads
• multistrand cable contains at least fifteen wire strands with sizes ranging from 12.7mm to 15.2mm
• tensioning is stipulated in the job specifications but is not to exceed 85% of the ultimate tensile strength of the cable
• types of structural elements include slabs, beams, columns and ground anchors
• types of structures include buildings, bridges, towers, tanks, silos, stayed structures, offshore platforms and underground and submerged structures
• work is to conform to relevant Australian standard, unless this is replaced by superior specifications.

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
• hazard control
• hazardous materials and substances, including cement and curing agents
• organisational first aid
• PPE prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including the
RANGE STATEMENT

conduct of operational risk assessment and treatments associated with:
  • cutting and grinding equipment
  • lighting
  • power equipment
  • power leads and sources
  • trip hazards
  • work site visitors and the public
  • working in confined spaces
  • working in proximity to others
  • working with cables under stress
  • use of firefighting equipment
  • use of tools and equipment
  • workplace environmental requirements and safety.

Tools and equipment include:
  • angle grinders (power)
  • grouting equipment
  • hacksaws
  • hammers
  • hydraulic power packs
  • measuring tapes and rules
  • multistrand jacks
  • nips
  • spanners
  • staple guns
  • steelfixing reels.

Materials include:
  • labelling
  • specialist material handling gloves.

Quality requirements include relevant regulations, including:
  • Australian standards
  • internal company quality policy and standards
  • manufacturer specifications
  • workplace operations and procedures.

Environmental requirements include:
  • clean-up management
  • dust and noise
  • waste management.

Statutory and regulatory authorities include:
  • federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment are selected to carry out tasks consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied. |
| 2. Place and inspect bar, fit components and seal ducts. | 2.1. Bar and components are placed and fitted according to manufacturer specifications and job instructions.  
2.2. Bar layout is inspected for compliance with job specifications and relevant standards.  
2.3. Ducts are sealed in accordance with manufacturer specifications. |
| 3. Define the work area. | 3.1. Safe work area is defined according to safe work practice and OHS regulations.  
3.2. Barricades and signage are erected where required to isolate safe work areas. |
| 4. Stress bars. | 4.1. Stressing jack and accessories are placed and stressing is carried out in accordance with manufacturer and engineer's specifications.  
4.2. Nuts are tightened and locked off during stressing procedure in accordance with normal stressing safety standards.  
4.3. Extensions are measured and recorded on standard quality assurance forms for approval by engineer. |
ELEMENT PERFORMANCE CRITERIA

5. Finish the tensioning.
   5.1. Anchorages are sealed to prevent grout loss.
   5.2. Cement grout is mixed and pumped in accordance with the specifications and relevant standards.

6. Clean up.
   6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
   6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- carry out a minimum of two stressbar post-tensioning cycles to specification, covering:
  - two different bar sizes
  - a minimum of thirty metres
  - standard tensioning
  - completion of site tensioning documentation.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

Separate further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- Diagrams or sketches

3.5. Surface defects are repaired and imperfections stopped, filled and sanded to smooth finish ready for required finish in accordance with manufacturer recommendations and job specifications.
4. Clean up.
4.1. Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in accordance with sound work practices and compliance with environmental requirements.
4.2. Tools and equipment are cleaned and stored safely and effectively to manufacturer specifications.
4.3. Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.
4.4. Work area is cleared and materials disposed of or recycled in a manner to avoid spontaneous combustion in accordance with legislation, regulations, codes of practice and job specifications.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
REQUIRED SKILLS AND KNOWLEDGE

- read and interpret drawings, specifications and documentation from a variety of sources
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set-out work
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- corrosion processes and techniques for the protection of metals
- hazards associated with lead, asbestos, solvents, chemicals and dust
- interpretation of plans, drawings and specifications
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials handling and environmentally friendly waste management processes
- prevention and rectification procedures for surface coating defects
- procedures, products and techniques associated with preparation of surfaces
- processes for the calculation of material requirements
- properties and surface preparation requirements of new substrates
- surface coating technology
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare all surfaces listed in the range statement for finishing, providing evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools, plant and equipment
- communicate and work effectively and safely with others
- prepare to specification a minimum of four surfaces:
  - one being a new gyprock surface
  - three being previously coated surfaces with one being an external timber surface, one an internal surface and one a metal or masonry surface.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- drawings and documentation relevant to activities
- materials relevant to proposed activities
- range of surfaces for painting preparation
- tools and equipment appropriate to required tasks.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language,
EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the preparation of surfaces for painting
- relevant Australian standards
- safe work procedures relating to the preparation of surfaces for painting
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
RANGE STATEMENT

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - electrical fires and/or explosion from combustible materials
  - falling objects
  - manual handling
  - solvents, lead, asbestos, chemicals, fumes and gases
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:

- drop sheets
- duster brushes
- filling knives and blades
- hammers
- hand sanders
- heat removal equipment
- mechanical sanders
- nail punches
- putty knives
- scrapers
- water blasters
- wire brushes.
RANGE STATEMENT

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications where specified
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Surfaces** include:
- horizontal or vertical
- inclined or curved
- internal or external
- timber, metal, masonry, concrete or plaster.

**Surface preparation method** includes:
- chemical stripping
- grinding
- sanding
- scraping (mechanical and hand)
- use of heat guns
- washing down
- water blasting.

**Existing substrate and surface** may be contaminated with:
- dust
- films of grease
- mild chalking
- mild efflorescence
- mould
- paint films, which are:
  - blistering
  - flaking
  - peeling
  - cracking
- smoke damage.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.       Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare work. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental protection requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Identify extruded aluminium sections. | 2.1. Types of *aluminium sections* are identified for sectional size and design.  
2.2. Uses of various sections are recognised consistent with their specific design. |
| 3. Identify methods of joining sections. | 3.1. Characteristics of sections are identified for method of *joining*.  
3.2. Securing of joints is identified with types of sections. |
| 4. Use sections to construct frames. | 4.1. Aluminium sections designed for frames are set out and prepared for joining.  
4.2. Door and sash type sections are set out and prepared for joining.  
4.3. Joints are made and secured to structural design requirements. |
| 5. Clean up. | 5.1. Work area is cleaned and waste material disposed of safely.  
5.2. Tools and equipment are cleaned, maintained and stored. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- design and use of aluminium extrusions
- interpretation of workshop drawings
- job safety analysis (JSA) and safe work method statements
- measuring and marking processes related to aluminium fabrication
- types and performance of materials relevant to aluminium fabrication work
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to identify six and assemble four different types of aluminium extruded sections, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- display compliance with organisational policies and procedures, including quality assurance requirements within the context of aluminium fabrication
- identify designed purpose of six separate aluminium sections
- identify methods of joining different sections
- demonstrate sound and safe techniques in preparing component sections for joining
- demonstrate safe and effective application in the fitting and securing of four different types of construction joints
- display safe and effective handling applications to minimise opportunities for damage of material surfaces
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

Resource implications for assessment include:

- workshop location
- tools and equipment appropriate to required tasks
- materials relevant to proposed activities
- drawings and documentation relevant to activities.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets
- memos
- regulatory and legislative requirements pertaining to the use of aluminium sections in fabrication
- relevant Australian standards
- safe work procedures relating to the use of aluminium sections in fabrication
- signage
- verbal, written and graphical instructions
RANGE STATEMENT

1.2. **Planning and preparation**
include:
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

1.3. **Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

1.4. **Tools and equipment**
include:
- air compressor and hoses
- docking saws
- files
- grinders
- hammers
- measuring tapes and rules
- power drills
- power leads
- screwdrivers
- squares.
RANGE STATEMENT

1.5. **Quality requirements** include:
- control of handling procedures
- fabrication procedures
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
  - use and maintenance of equipment
  - workplace operations and procedures.

1.6. **Materials** include:
- aluminium sheets
- rivets.

1.7. **Environmental protection requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

1.8. **Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

1.9. **Aluminium sections** are those designed for the fabrication of:
- door and window frames
- doors (swing, slide and revolving type)
- partitions
- sashes
- screens
- shopfront components
- wet area unit components.

1.10. **Joining** may involve:
- cutting for joint
- cutting to length
- drilling holes
- punching holes
- trimming for fit.

5.3. Work area is cleared and waste material and debris are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specifications.
5.4. Tools and equipment are cleaned, routinely maintained and returned to store.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations relevant to surface areas
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

**Required knowledge**

Required knowledge for this unit is:

- AS1940 The storage and handling of flammable combustible liquids
- behaviour of sealant materials used in structures
- job safety analysis (JSA) and safe work method statements
- measurement and calculation techniques relevant to surface areas
REQUIRED SKILLS AND KNOWLEDGE

- safe materials handling techniques and requirements, including hazardous materials relevant to sealant application work
- safe use of scaffolding and working platforms
- types and performance of sealants used in buildings
- types and use of hand tools and equipment relevant to sealant application and installation work
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to handle and use all the sealant materials and application devices listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements
- select and use appropriate processes, tools and equipment to carry out tasks
- adopt and carry out correct procedures prior to and during handling and application of materials
- demonstrate safe and effective operational use of tools and equipment
- demonstrate safe application in the process of cleaning up application area and cleaning equipment
- communicate with others to ensure safe and effective operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- sealants and sealant devices appropriate to application tasks
- plant and equipment appropriate to application processes
- hand tools appropriate to application processes
- work location appropriate to activity processes
- MSDS information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

- attention to job specifications
- control of handling procedures
- preparation of surfaces
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
  - use and maintenance of equipment.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

**Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Sealant materials** include:
- bitumen
- mastic
- putty
- silicone
- waterproof paint.

Sealant materials can be **applied** to:
- acrylic sheeting
- bricks and concrete masonry
- concrete
- glass
- metal sheeting
- paints
- plaster sheeting
- plywood and particle board
- structural metallic sections and components
- timber.

**Sealant devices** include:
- cover plates to aluminium framework
- cover straps or beading to sheet jointing
- flashings to window and door frames
- impregnated material for masonry expansion joints
- strip or sheet membrane.
RANGE STATEMENT

Waste material and debris include:

- broken or damaged goods
- cardboard
- loose material
- paper
- plastic
- sealants and sealing materials.

</tbody>
</table>

6.2. Bench/counter top is positioned on carcase to specified dimensions and fixed by specified fixing method and appropriate fixings and fasteners.

7. Assemble and install drawers.

7.1. Drawers are assembled to specifications, with bottoms fitted and fixed.

7.2. Drawer runner type is determined and installed to specified dimensions and manufacturer specifications.

7.3. Drawers are installed parallel to carcase bottom showing specified clearances, and drawer fronts and doors are prepared for installation.

8. Fit doors and drawer fronts.

8.1. Door hinges are installed to plan and manufacturer specifications and doors are hinged and hung to carcase with faces flush and specified clearances allowed.

8.2. Drawer fronts are secured to drawers by nominated method with specified clearances allowed and handles and catches accurately installed to specification.

8.3. Unit is cleaned up and surface edge finishes are sanded to specified finish for proposed coated finish, where applicable.

9. Clean up.

9.1. Free standing fitments are stored safely to avoid damage to surfaces.

9.2. Work area is cleared to specifications and waste and unwanted material is removed safely.

9.3. Plans, specifications and set-outs are stored for future reference and tools and equipment are cleaned, maintained and stored.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- types of fitments
- adhesives, fixings and fasteners relevant to fitment construction
- clearances associated with types of finishes to surfaces
- organisation’s quality assurance requirements
- drawings and specifications
- handling of materials relevant to fitment construction
- manufacturing processes for fitment components
- materials and their characteristics relevant to fitment construction
- measurement and marking related to making set-out for fitments
- methods of constructing fitments
- setting out, assembling and fixing procedures for fitment construction
- use of tools and equipment relevant to setting out materials, manufacturing and assembling processes for fitments
- workplace and safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to manufacture and assemble either a cabinet, showcase, wall unit, counter or workstation, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of manufacturing and assembling fitments
- select and use appropriate setting out techniques, tools and equipment
- correctly apply details and dimensions to make set-out for fitment
- show clear details of sectional material and method of joining components on set-out
- accurately apply set-out to mark each component correctly for length and machining processes
- efficiently identify marking and stacking of each different marked component
- identify details and specifications of nominated fitment to be constructed
- identify components and manufacturing processes to be carried out
- safely and efficiently set up and use machines for required machining processes
- safely and efficiently use hand tools and equipment
- select and use appropriate processes, tools and equipment for assembling components
EVIDENCE GUIDE

- demonstrate sound techniques in checking and adjusting component joints for fitting
- safely and efficiently assemble and fix carcase and components parts
- accurately and safely fit and fix/secure drawers and doors
- apply appropriate processes to finish surfaces to specified requirement
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workshop location and set-out bench appropriate to activity
- dressed and sheet materials relevant to fitment designs
- material appropriate for set-out boards
- drawings and specifications relevant to activities
- tools and equipment appropriate for activity
- materials and components related to proposed activity
- static machines relevant to proposed manufacturing processes
- drawings, specifications and documents relevant to the fitment.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
EVIDENCE GUIDE

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to setting out and assembling cabinets, showcases, wall units, counters and workstations
- relevant Australian standards
- safe work procedures relating to setting out and assembling cabinets, showcases, wall units, counters and workstations
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations
**RANGE STATEMENT**

and workplace policies and practices

- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Tools and equipment** include:

- air compressor and hoses
- bevels
- chisels
- clamps
- hammers
- hand saws
- marking gauges
- measuring tapes and rules
- nail guns
- power drills
- power leads
- power planers
- power routers
- power saws
- sanders
- sash cramps
- screwdrivers
- set-out bench
- squares
- straight edge.

**Quality requirements** include:

- assembling procedures
- attention to specifications of work
- control of handling procedures
- quality of materials
RANGE STATEMENT

- relevant regulations, including:
  - AS1473 Guarding and safe use of woodworking machinery
  - internal company quality policy and standards
  - manufacturer specifications where specified
- storing and packaging
- use and maintenance of equipment
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Carcase construction:
- materials include:
  - medium density fibreboard (MDF)
  - particle board
  - plywood
  - timber
  - veneered particle board
- types include:
  - framed and panelled
  - hollow frame flush
  - solid core flush
  - solid panel
  - type and thickness of backing.

Set-out boards may be:
- paper on solid base
- particle board
- plywood.

Machining manufacturing processes include:
- band sawing to shape
- cutting to lengths
- dressing to shape
- grooving and rebating
- mortising
- moulding to shape
- sanding
RANGE STATEMENT

- trenching for housings
- trenching for tenons.

*Fixings and fasteners* used in assembling fitments include:
- brads
- director screws
- knockdown fittings
- nails
- self-tapping screws
- wood screws.

*Surface edge finishes* include:
- aluminium mouldings
- plastic laminates
- thermo plastics
- timber veneers.

*Free standing fitments* may be constructed of:
- acrylic
- glass
- laminates
- manufactured board
- solid timber.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.  
1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. **Tools and equipment** selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Personal protective equipment selected, correctly fitted and used.  
1.6. Material quantity requirements are calculated in accordance with plans, specifications and **quality requirements**.  
1.7. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.8. **Environmental** requirements are identified for the project in accordance with environmental plans and **statutory and regulatory authority** requirements, and are applied. |
| 2. Undertake site measurements. | 2.1. Datums and gridlines or reference points are located and confirmed using **levelling techniques**.  
2.2. Surrounding structures and surfaces are checked for plumb, level, line and square.  
2.3. Measurements are taken of internal width and height, if applicable, and are recorded.  
2.4. Inconsistencies in dimensions, layout or location of structure outside the specified tolerances are noted and reported to appropriate personnel.  
2.5. Position of proposed frames and fittings are marked out on surrounding surfaces using non-permanent markers. |
| 3. Assemble components of framework. | 3.1. Appropriate area is selected and material components are laid out for assembly.  
3.2. Framework is assembled, with overall dimension checked for conformity to location and design and using appropriate **fixings and fasteners**.  
3.3. Frame is checked for square and adjusted where |
ELEMENT | PERFORMANCE CRITERIA
---|---
3.4. Areas are laminated where required and finishes applied where applicable.
4. Pre-fit component fittings. | 4.1. Component fittings are pre-fitted where applicable. 4.2. Fittings are fixed to locations according to specifications.
5. Prepare for packaging. | 5.1. Fittings too large for safe transport are disassembled. 5.2. Packaging of separate components is identified and arranged.
6. Clean up. | 6.1. Components and assembly diagram are numbered for inclusion in delivery instructions. 6.2. Waste and unwanted material are disposed of safely. 6.3. Unused materials are stored/stacked. 6.4. Tools and equipment are cleaned, maintained and stored.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant
REQUIRED SKILLS AND KNOWLEDGE

resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:
- aluminium construction materials and methods
- AS1873 Powder actuated (PA) hand-held fastening tools
- AS2047.2 Windows in buildings - Construction, installation and maintenance
- commonly used shopfitting materials and their characteristics
- job safety analysis (JSA) and safe work method statements
- measuring and levelling processes related to setting out and checking lineal measurements and levels of surfaces
- measuring and squaring processes relevant to lineal measurements for framework
- organisation’s quality assurance requirements
- shopfront design processes
- timber construction methods
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare all components for manufacture of a shopfront, providing evidence of the ability to:

- demonstrate operational safety compliance with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of assembling and installing a shopfront
- identify design, delivered assemblies, components, fittings and assembly diagram
- identify and select components and fittings to locations in assembled shopfront
- select and use appropriate processes, tools and equipment to assemble and install nominated unit
- demonstrate appropriate and effective applications to prepare opening to receive framework
- safely and efficiently assemble sections, components and fittings
- safely and efficiently install bulkhead into position
- safely and efficiently locate and install assembly into place
- safely and efficiently install components and fittings and, where applicable, check for designed operation
- identify typical faults and problems that occur
EVIDENCE GUIDE

and action required to rectify them

- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workshop location with appropriate area
- tools and equipment appropriate to required tasks
- materials and prepared components for assembly processes
- drawings, specifications and other documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
RANGE STATEMENT

- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to setting out and fabricating shopfront commercial entries bulkheads and component fittings
- relevant Australian standards
- safe work procedures relating to setting out and fabricating shopfront commercial entries bulkheads and component fittings
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
RANGE STATEMENT

- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- air compressor and hoses
- bolsters
- brushes
- chalk lines
- chisels, including cold chisels
- clamps
- explosive power tools
- grinders
- hammers
- hand saws
- measuring tapes and rules
- operation of explosive power tools in accordance with AS1873 Powder actuated (PA) hand-held fastening tools
- plumb bob
- power drills, including masonry
- power leads
- power planers
- power saws
- sash cramps
- saw stools
- scaffolding
- screwdrivers
- set spanners
- squares
- step ladders.

**Quality requirements** include:
- assembling procedures
- attention to specifications of work
- control of handling procedures
- protection of material surfaces
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
RANGE STATEMENT

- workplace operations and procedures
- use and maintenance of equipment
- workplace operations and procedures.

Materials include:
- aluminium
- timber.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Levelling techniques include using:
- automatic level
- spirit level
- spirit level and straight edge
- staff.

Fixings and fasteners include:
- bolts and nuts
- coach screws
- masonry anchors
- metal brackets
- self-tapping screws
- wall plugs.

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency.  
Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.  
1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. **Tools and equipment** selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and **quality requirements**.  
1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and **statutory and regulatory authority** requirements, and are applied.  
1.8. Fittings and/or pre-assembled frames are unloaded carefully to protect finishes and are placed in well protected area until ready to reassemble. |
| 2. Establish datum and plumb lines. | 2.1. Datum is struck for level as required for installation.  
2.2. Plumb lines are marked at all connecting points. |
| 3. Prepare opening. | 3.1. Opening dimensions are checked in accordance with dimensions of fabrication and plumb lines are checked for similarity to original site measurement.  
3.2. Drawings are checked for position of lease line or where unavailable checked with building contractor.  
3.3. Protrusions are scraped, chipped and cut away to connecting points to facilitate installation.  
3.4. Narrowest part of opening is determined and sill packing is set up to specified level for installation that to conforms to AS2047 Windows in buildings. |
| 4. Assemble shopfront. | 4.1. Fittings are placed into position to commence installation.  
4.2. Holes are pre-drilled for fixing positions suitable to connect to brickwork, timber and stone. |
## ELEMENT | PERFORMANCE CRITERIA
---|---
4.3. Measurements of completed assembly are checked against opening and glazier is contacted for site measurements.

### 5. Fit bulkhead.

5.1. Bulkhead is prepared for installation by drilling, cutting and routering holes and openings to accept fittings and fixtures.

5.2. Scaffolding is erected to fit bulkhead into position.

5.3. Bulkhead is raised into position using mechanical lifting equipment and secured to specifications using fixing methods required to securely support installation.

### 6. Install assembly.

6.1. Door are checked for square to ensure glazier has blocked glass correctly and assembly is positioned into opening allowing it to rest on packing at highest position in floor.

6.2. Datum line is transferred on assembly and position is measured and transferred to all connecting points.

6.3. Assembly is installed to level using appropriate equipment for levelling process, plumbed off narrowest point of width and packed to position.

6.4. Assembly is anchored at all connecting points to specifications, doors are fitted where applicable and glazier is contacted to notify that assembly is ready for glass installation.

6.5. Door closures are checked to ensure that they face mount, floor or transom and that automatic and floor or head-fixed tracks operate freely.

6.6. Closures, door furniture and scribe fillers are fitted and any remaining gaps are sealed with approved sealant.

6.7. Sealants are applied to specification to protect against water, wind and dust penetration.

### 7. Clean up.

7.1. Assembly is cleaned free from excess sealant, finger marks and masking tape.

7.2. Waste and unwanted material are disposed of safely with any waste aluminium stored for recycling and any unused material stored/stacked.

7.3. Tools and equipment are cleaned, maintained and stored.
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- Australian standards, including AS1873 Powder actuated (PA) hand-held fastening tools, and AS2407 Windows in buildings
- design and construction processes for shopfronts
- interpretation of relevant drawings and specifications
- job safety analysis (JSA) and safe work method statements
- organisation's quality assurance requirements
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare and assemble all components of a shopfront, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of setting out and fabricating a shopfront
- identify details and specifications of nominated shopfront to be set out
- accurately apply tools and equipment to set out and mark location of frame material thickness and components
- accurately apply measuring devices to read and record dimensions, plumb and level
- identify inconsistencies in dimensions, plumb and level recorded for notification to appropriate personnel
- identify and select prepared materials for components
- display sound procedures for the safe and accurate preparation of each component for assembling
- select and use appropriate processes, tools and equipment for assembling components
- demonstrate safe and efficient use of tools and equipment
- demonstrate sound techniques in the safe and efficient assembly of components to form
EVIDENCE GUIDE

- display sound and accurate fitting of component fittings to locations
- complete assembly free of scratches, dents and blemishes
- safely and efficiently disassemble components and fittings and identify for delivery and assembling instructions
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workshop operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workshop location with appropriate area
- tools and equipment appropriate to required tasks
- materials and prepared components for assembly processes
- drawings, specifications and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning
EVIDENCE GUIDE

Knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Appropriate personal protective equipment selected, correctly fitted and used.  
1.6. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.7. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.8. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Identify types of decorative finishes and requirements for fixing. | 2.1. Types of *decorative add-ons and finishes* are identified and applied.  
2.2. Methods of fixing and finishing *add-ons* are identified and applied. |
| 3. Carry out fixing processes and finishing techniques. | 3.1. Preparation requirements for *fixing* of add-ons are carried out to instructions and specifications.  
3.2. Decorative add-ons are fitted and fixed according to instructions and specifications.  
3.3. Applied add-ons are trimmed and finished to specifications. |
| 4. Clean up. | 4.1. Work area is cleared and waste material disposed of safely.  
4.2. Tools and equipment are cleaned, maintained and stored. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- commonly used decorative and ornamental finishes
- fixings and fasteners relevant to affixing decorative edgings and add-ons
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- materials and their characteristics relevant to decorative edgings and add-ons
- measuring and setting out related to decorative finishes
- organisation’s quality assurance requirements
- workplace and environment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to select finishes, and fix and finish at least two types of decorative add-ons in two different materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of applying decorative finishes
- identify four designed decorative or ornamental finishes to be applied in application projects
- identify and select required materials and components for project
- select and use appropriate processes, tools and equipment for application tasks
- appropriately and accurately set out materials and locate for placement
- adopt safe and effective handling procedures for movement and placement of materials and components
- safely and efficiently fix or secure two separate add-ons into place
- apply appropriate and efficient applications of at least two specified finishes
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
EVIDENCE GUIDE

environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location and unit associated with application tasks
- materials and components relevant to proposed activity
- tools and equipment appropriate for activity
- drawings and documentation relevant to designed activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further
EVIDENCE GUIDE

learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to applying and trimming decorative finishes
- relevant Australian standards
- safe work procedures relating to applying and trimming decorative finishes
- signage
RANGE STATEMENT

Planning and preparation include:

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - working platforms and scaffolding
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:

- air compressor and hoses
- bevels
- chisels
- clamps
- hammers
- hand saws
- measuring tapes and rules
- nail guns
RANGE STATEMENT

- power drills
- power leads
- saw stools
- screwdrivers
- spirit levels
- squares.

Quality requirements include:
- attention to specifications of work
- control of handling procedures
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- use and maintenance of equipment
- workplace operations and procedures.

Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Decorative add-ons and finishes include:
- brackets
- carving
- extruded sections
- mouldings.

Add-ons may be manufactured from:
- aluminium
- marble
- medium density fibreboard (MDF)
- plaster
- plastics
- reinforced concrete
- stone
- timber.

Fixing methods include:
- dowel joint
- nailing
- screwing
RANGE STATEMENT

- use of adhesives.

Unit Sector(s)

Construction

Functional area

Functional area
CPCSSH3006A Apply finishes

Modification History
Element 6 and associated unit content relating to powder coating removed
Not equivalent to CPCSSH3004A

Unit Descriptor
This unit specifies the outcomes required to prepare and apply types of finishing materials to surfaces.

Application of the Unit
This unit of competency supports the achievement of skills and knowledge to apply finishes to surfaces, which may include working with others and as a member of a team.

Licensing/Regulatory Information
Not applicable.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare.  
1.1 Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.

1.2 Work health and safety (WHS) requirements are followed according to safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.

1.5 Material quantity requirements are calculated according to plans, specifications and quality requirements.

1.6 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.

1.7 Environmental requirements are identified for the project according to environmental plans and statutory and regulatory authority requirements, and are applied.

2 Identify various types of finishing applications.  
2.1 Various types of finishing surfaces are identified according to type of material surface and specified finish.

2.2 Methods of applying finishes to surfaces are identified.

2.3 Characteristics for type of material to be applied are identified to determine means of application.

3 Apply stain to a surface/veneered surface.  
3.1 Surface is checked to ensure that it is clean, dry and ready for stain application.

3.2 Stain is applied in an even and consistent manner with cloth, pad or brush to instructions and specifications.
4 Apply lacquers to a surface.

4.1 Stained surface is checked as being fully dry and light sanded to ensure clean surface.

4.2 Surface is sanded to ensure that it is clean and free of imperfections.

4.3 Consistent coverage of lacquer is applied to surface according to manufacturer recommendations.

5 Apply paint/sealer to a surface.

5.1 Surface is checked to ensure it is smooth and clean, then paint or sealer is applied with roller/brush to obtain an even coverage to specifications.

5.2 Paint or sealer is applied with spray gun to obtain an even coverage to specifications.

6 Clean up.

6.1 Area is cleaned and waste material disposed of safely.

6.2 Unused materials are sealed and stored.

6.3 Equipment is cleaned safely using correct solvent according to material safety data sheet (MSDS) instructions, maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to:
  - recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
  - select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- literacy skills to read and interpret drawings, specifications and relevant Australian standards
- numeracy skills to calculate material requirements
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities

Required knowledge

- interpretation of construction specifications
- job safety analysis (JSA) and safe work method statements
- organisation's quality assurance requirements
- surface preparation relevant to material surfaces and applied finishes
- types and performance of finished surfaces
- types and uses of finishing materials
- types of applicators and equipment relevant to applying finishing materials
- types of hazardous materials and safe handling requirements
- types of material substrates and surfaces
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to apply finishes to all the surfaces listed in the range statement, providing evidence of the ability to:

- comply with WHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of applying finishes to timber and aluminium surfaces
- identify designed finish and surface to be covered
- identify and select appropriate materials and applicators to apply three separate types of finishes
- select and use appropriate processes and safety requirements to prepare materials, application and area
- select and use appropriate personal protective equipment
- safely and effectively apply material to provide designed base coat
- safely and efficiently sand and prepare surface before coat applications, where applicable
- correctly and efficiently use applicators
- safely and effectively apply coats of three specified finishes to surfaces, free from blemishes
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workshop operations.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location appropriate for application processes
- spray booth and appropriate spray equipment for activity
- materials and equipment applicable to activity processes
- documentation and specifications relevant to the application and finishes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured
learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to applying finishes
- relevant Australian standards
- safe work procedures relating to applying finishes
- signage
- verbal, written and graphical instructions
- work bulletins
Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Work health and safety is to be according to state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:
- air spray equipment
- airless spray equipment
- benches
- brushes
- buckets
- dusting brushes
- pads
- paint stirrers
- rags
• roller accessories
• rollers
• spray guns
• stools.

**Quality requirements** include:
• control of handling procedures
• finishing of surfaces
• quality of materials
• relevant regulations, including:
  • internal company quality policy and standards
  • manufacturer specifications where specified
  • workplace operations and procedures
• spray application procedures
• use and maintenance of equipment
• workplace operations and procedures.

**Materials** include:
• lacquers
• paints
• sealers.

**Environmental requirements** include:
• clean-up management
• dust and noise
• stormwater protection
• waste management.

**Statutory and regulatory authority** includes:
• federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Surfaces** to be finished may be:
• aluminium
• medium density fibreboard (MDF)
• particleboard
• timber
• veneered panelling.

Methods for **applying finishes** for both horizontal and vertical applications include:
• brush
• pad
• roller
• spray gun.

| 2. Identify and apply the theory of colour to signage. | 2.1. Principles of colour legibility and contrast are identified and applied to signage.  
2.2. Principles of colour harmony are identified and applied to signage.  
2.3. Colours schemes are identified and applied to signage. |
| 3. Apply computer colour matching systems. | 3.1. Colour matching by computer colour matching systems is applied to signage. |

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to apply design concepts and principles of colour
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - design principles
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or
REQUIRED SKILLS AND KNOWLEDGE

external personnel

- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- problem solving skills to recognise, and take action to rectify, minor faults and problems.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- quality assurance requirements, including:
  - Australian and international standards relevant to the sign industry
  - internal company quality assurance policy and risk management strategies
  - workplace operations and procedures
- relevant Australian and New Zealand standards and:
  - manufacturer specifications
  - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in signage design.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
  - principles of colour
  - colour theory
  - colour matching
  - signage for visual impact
- applying appropriate software in order to design and apply the principles of colour to signage.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to using colour for signage
- support materials appropriate to activity
- workplace instructions relating to using colour for signage
- material safety data sheets
- research resources, including industry-related
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in
EVIDENCE GUIDE

relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Colour matching systems include:
   - black and white
   - cyan, magenta, yellow and black (CMYK)
   - grey scale
   - pantone matching system (PMS)
   - red, green and blue (RGB).

1.2. Colour harmony includes:
   - analogous
   - complementary
   - monochromatic
   - split complementary.

1.3. Colour schemes include:
   - analogous
   - complementary
   - monochromatic
   - split complementary.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to apply layout and design concepts and principles and sound techniques to produce layout accurately to a balanced design
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - design principles
    - job drawings
    - charts and hand drawings
    - manufacturer specifications and instructions
REQUIRED SKILLS AND KNOWLEDGE

- organisational work specifications
- computer programs
- requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- quality assurance requirements, including:
  - Australian and international standards relevant to the sign industry
  - internal company quality assurance policy and risk management strategies
  - workplace operations and procedures
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in signage design.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the
EVIDENCE GUIDE

workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
  - principles of layout and design
  - layout and design theory
  - signage for visual impact
- applying appropriate software in order to design and apply the principles of layout and design to signage
- correct and effective protocols for using computers and software.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to layout and design signage
- support materials appropriate to activity
- workplace instructions relating to layout and design signage
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources,
and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training.
EVIDENCE GUIDE

staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Clients include:

- business owners
- printers
- property owners
- sign manufacturers
- statutory bodies.

Principles of layout include:

- balance
- colour
- contrast
- harmony
- letter styles
- spacing.

Computer software includes:

- Adobe Illustrator
- Adobe Photoshop
- CorelDraw
- FlexiSign
- Vinyl Master Pro.

Principles of legibility and spacing of letters include:

- bold, normal and light
- format of text - capitals, lowercase, etc.
- spacing issues
- type of font used.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare work. | 1.1. **Quality assurance requirements** of signage operations are recognised and adhered to.  
1.2. **Safety (OHS)** requirements are recognised and adhered to in accordance with application tasks and workplace operations.  
1.3. **Job requirements** are identified from drawings, specifications, instructions and/or client briefs.  
1.4. Product range is assessed and selected in accordance with job requirements and relevant Australian standards.  
1.5. Paint systems and materials are selected to carry out tasks consistent with job requirements.  
1.6. **Tools and equipment** are selected to carry out tasks consistent with job requirements.  
1.7. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.  
1.8. Temporary or permanent application of materials is determined from job requirements. |
| 2. Prepare surface and apply undercoat or primer. | 2.1. Surface is **cleaned and/or abraded** with appropriate tools and equipment to manufacturer specifications.  
2.2. **Undercoat or primer** is applied to manufacturer specifications. |
| 3. Apply paint coating using spray application. | 3.1. Appropriate spray gun is selected, used safely and effectively and set to meet manufacturer specifications.  
3.2. Air compressor is set to meet manufacturer specifications.  
3.3. Compatible **coating type** for **substrate** is selected and the correct viscosity of paint is determined for specified application.  
3.4. Coating is applied evenly over the surface area.  
3.5. Tools and equipment are cleaned using the correct cleaning products and procedures. |
| 4. Apply paint coating using brush application. | 4.1. Appropriate brushware and compatible coating type for the substrate are selected.  
4.2. Coating is applied evenly over the surface area.  
4.3. Brushes are cleaned using correct cleaning products and procedures. |
| 5. Apply paint coating | 5.1. Appropriate roller and roller sleeve, and compatible |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
using roller application. | coating type for the substrate are selected.
 | 5.2. Coating is applied evenly over the surface area.
 | 5.3. Rollers and sleeves are cleaned using correct cleaning products.

6. Clean up.

6.1. Surrounding surface environment/area is cleaned using correct solvent.
6.2. Waste materials are removed in accordance with *statutory and regulatory authority requirements*.
6.3. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to prepare surfaces using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - computer programs
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- organisational skills, including the ability to plan and set out work
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- coating types characteristics and uses for:
  - acrylic lacquers and their thinner/reducer
  - clear finishes and their thinner
  - oil based paints and their solvents
  - spraying enamel and its thinner
  - two-pack paints and their thinner
  - water-based paints and their thinner
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- quality assurance requirements, including:
  - Australian and international standards relevant to the sign industry
  - internal company quality assurance policy and risk management strategies
  - workplace operations and procedures
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals
- terminology and definitions used in signage.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
  - correct coating products for particular applications according to their characteristics
  - solvents, thinners and reducers safely and correctly
  - using spray guns, brushes and rollers effectively to apply coatings on surfaces being prepared for signage.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to preparing surfaces for signage
- support materials appropriate to activity
- workplace instructions relating to preparing surfaces for signage
- material safety data sheets
EVIDENCE GUIDE

- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language,
EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing signage
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
RANGE STATEMENT

- lighting
- restricted access barriers
- traffic control
- working at heights
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Tools and equipment include:
- air compressor
- brushware
- roller and roller sleeve
- spray gun.

Cleaned and/or abraded materials include:
- alcohol
- garnet paper
- methylated spirits
- mineral turpentine
- silicon paper
- thinners
- wax and grease remover.

Undercoats and primers include:
- acrylic undercoat
- enamel undercoat
- galvanised primer
- wood primer.

Coating types include:
- acrylic lacquers and their thinner/reducer
- clear finishes and their thinner
- oil based paints and their solvents
- spraying enamel and its thinner
- two-pack paints and their thinner
- water-based paints and their thinner.

Substrate includes:
- corflute
RANGE STATEMENT

- masonry
- metal
- plastics, including polyvinyl chloride (PVC)
- rough finish
- smooth finish
- timber.

Statutory and regulatory authority requirements include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

6. Produce printed signage. | 5.4. Print heads are monitored and adjusted when required.
6.1. Characteristics and functions of raster image processor (RIP) are identified and applied.
6.2. Correct profile for the media to be printed is selected to meet job requirements.
7. Laminate printed signage. | 7.1. Characteristics and application of laminator and laminating media types are identified and selected to meet job requirements.
7.2. Laminate is applied to digitally printed media to manufacturer specifications.
8. Clean up. | 8.1. Equipment is cleaned, maintained and stored.
8.2. Work area is cleaned and tidied.
8.3. Waste materials are disposed of safely.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - computer programs
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or
REQUIRED SKILLS AND KNOWLEDGE

- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
- using applicators and materials correctly to prepare surfaces.

Required knowledge

Required knowledge for this unit is:

- characteristics of different types of digital printing, including:
  - aqueous
  - dye sublimation
  - eco solvent
  - flatbed printers
  - grand format
  - thermal transfer
  - true solvent
  - ultraviolet (UV) printers
- colour theory principles
- laminating theory and methods
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- procedures for routine maintenance and cleaning of printers
- quality assurance requirements, including:
  - Australian and international standards relevant to the sign industry
  - internal company quality assurance policy and risk management strategies
  - workplace operations and procedures
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
REQUIRED SKILLS AND KNOWLEDGE

- storage of chemicals
- terminology and definitions used in signage
- uncompressed file formats, such as:
  - EPS
  - PDF
  - RAW
  - TIFF.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- digital printing products of various types and characteristics
- uncompressed file formats
- digital colour management principles
- media used in digital printing
- printer set-up methods and procedures
- laminating processes
- RIP software
- routine maintenance of printers.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated
EVIDENCE GUIDE

documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
RANGE STATEMENT

- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:

- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Relevant Australian standards include:

- regulatory requirements
- standard drawings and details
- urban design manuals.

Tools and equipment include:

- acrylic glues
- acrylic heating equipment
- hand and power tools for metal fabrication
- routing equipment (hand and CAD CAM)
- substrate cutting equipment.

Materials include:

- acrylic
- light weight metal.

Attachments include:

- fastenings
- fixings.

4.3. Signwriting is applied using a sign cutter on uneven surfaces.
5. Clean up finished sign.
5.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.
5.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- ability to use correct applicators and materials
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or external personnel
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- identification and use of appropriate material for application to substrate
REQUIRED SKILLS AND KNOWLEDGE

- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- sound techniques to design, set out and produce sign for designed signwriting
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- alphabet construction
- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- layout methods for signwriting
- layout of various types of lettering
- material safety data sheets (MSDS)
- signwriting equipment
- OHS requirements and relevant Australian standards, including:
  - AS1319 Safety signs for the occupational environment
  - AS1530.3 Fire retardant systems
- relevant Australian and New Zealand standards, AS2311 General workmanship - painting and AS2700 Colour range - painting, and:
  - manufacturer specifications
  - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- terminology and definitions used in signage
- theory of letter spacing.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying to a range of signwriting tasks:

- principles of layout
- construction of alphabets
- theory of letter spacing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to signwriting to simple forms
- support materials appropriate to activity
- workplace instructions relating to signwriting to simple forms
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with
EVIDENCE GUIDE

Disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be
EVIDENCE GUIDE

obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
RANGE STATEMENT

- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Relevant Australian standards include:
- Australian standards:
  - AS1319 Safety signs for the occupational environment
  - AS1530.3 Fire retardant systems
  - AS2311 General workmanship - painting
  - AS2700 Colour range - painting
- regulatory requirements
- standard drawings and details
- urban design manuals.

Tools and equipment include:
- cutting knives
- Mahl stick
- oils
- signwriting pencils, pens and brushes
- stirring sticks
- tape measures and rulers
- tapes
- work pots.

Substrates include:
- corflute
- glass
- masonry
- metals
- plastics
- wood.

Layout methods include:
- computer-generated layout
RANGE STATEMENT

- direct onto substrate
- overhead projection
- pounce method.

Simple alphabets include:
- block lettering
- footed alphabets
- freestyle alphabets
- sans serif alphabets
- script lettering
- serif alphabets.

Statutory and regulatory authority requirements include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**
REQUIRED SKILLS AND KNOWLEDGE

Required skills for this unit are:

- ability to correctly access and use substrate and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- ability to transfer measurements accurately from drawings to surfaces
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings, specifications and documentation from a variety of sources
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- bonding ability of mechanical and chemical fasteners and fixings
- effect of mechanical and chemical products on substrates
- load bearing specifications for a range of fastener and fixing measurements and calculations related to material quantities
- MSDS
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
REQUIRED SKILLS AND KNOWLEDGE

- types and uses of tools and equipment relevant to fasteners and fixings.

Assessment processes and techniques should as far
EVIDENCE GUIDE

as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
RANGE STATEMENT

- concealed services (water, power and gas)
- lighting
- restricted access barriers
- traffic control
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

**Job requirements** include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

**Clients** include:
- business owners
- printers
- property owners
- sign manufacturers
- statutory bodies.

**Relevant Australian standards** include:
- regulatory requirements
- standard drawings and details
- urban design manuals.

**Tools and equipment** include:
- application fluid
- application tape
- marking pencils
- metal rules
- squeegees
- weeding tools.

**Substrates** include:
- corflute
- glass surfaces
- metals
- plastics
- vehicles.

**Vinyl types include:**
- calendared (polymeric/monomeric)
- cast.

**Vinyl layout cut includes:**
- blade types
RANGE STATEMENT

- cutting pressure
- cutting speed
- function of plotters
- test cut
- vinyl tracking.

Statutory and regulatory authority requirements include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare work. | 1.1. *Quality assurance requirements* of signage operations are recognised and adhered to.  
1.2. *Safety (OHS)* requirements in accordance with application tasks and workplace operations are recognised and adhered to.  
1.3. *Job requirements* are identified from drawings, specifications, instructions and client briefs.  
1.4. Product range is assessed and selected in accordance with job requirements and *relevant Australian standards*.  
1.5. *Tools and equipment* and materials are selected to carry out tasks consistent with job requirements.  
1.6. *Routine maintenance* requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.  
1.7. Temporary or permanent application of materials is determined from job requirements. |
| 2. Work with materials and equipment. | 2.1. Routing *materials* are selected according to job specifications.  
2.2. Correct type of routing system to be used is selected according to job specifications and materials to be routed.  
2.3. Cutter types and their applications are identified for the specified job.  
2.4. Appropriate routing systems are used to rout on a range of surfaces. |
| 3. Use software in engraving. | 3.1. Appropriate software is selected and used to rout for the required signage job.  
3.2. Software and equipment are used according to manufacturer specifications to rout cleanly and effectively. |
| 4. Maintain cutters. | 4.1. Cutters are sharpened using correct techniques.  
4.2. Cutters are cleaned and stored safely and correctly after use. |
| 5. Clean up. | 5.1. Work area is cleaned and waste materials removed in accordance with *statutory and regulatory authority requirements*.  
5.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to prepare surfaces using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - computer programs
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or external personnel
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
  - organisational skills, including the ability to plan and set out work
  - problem solving skills to recognise, and take action to rectify, minor faults and problems
  - teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- maintenance of routers and cutters
- material safety data sheets (MSDS)
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in routing
- theory of routing:
  - cutter types
  - guillotine systems
  - routing depths
  - routing materials and their uses
  - routing software
  - types of routing systems.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- characteristics and uses of routing materials and equipment in a range of signage jobs
- uncompressed file formats used in signage
- router set-up and safe use
- correct and safe maintenance of routers and cutters.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to engrave using laser/rotary router
- support materials appropriate to activity
- workplace instructions relating to engraving using laser/rotary router
- material safety data sheets
- research resources, including industry-related
EVIDENCE GUIDE

systems information

- relevant software.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language,
EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
RANGE STATEMENT

- lighting
- restricted access barriers
- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:

- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Relevant Australian standards include:

- regulatory requirements
- standard drawings and details
- urban design manuals.

Tools and equipment include:

- laser routers
- range of router cutting tools
- rotary routers.

Routine maintenance includes:

- checking for damage or non-standard performance
- cleaning.

Materials include:

- acrylic
- laminated acrylic
- medium density fibreboard (MDF).

Statutory and regulatory authority requirements include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

| 5. Clean up finished sign. | 5.1. Sign and surrounding surface environment/area is cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.
| | 5.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- ability to signwrite to decorative forms using correct applicators and materials
- applying signwriting using brush strokes
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or external personnel
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- alphabet construction
- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- layout methods for signwriting
- layout of various types of lettering
- material safety data sheets (MSDS)
- OHS legislation applicable to workplace activity/operation
- signwriting equipment
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- sound techniques to produce layout accurately to balanced design
- terminology and definitions used in signage
- theory of letter spacing.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying in a range of signwriting activities:

- principles of sign layout
- construction of alphabets
- theory of letter spacing
- decorative techniques.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to signwriting to decorative forms
- support materials appropriate to activity
- workplace instructions relating to signwriting to decorative forms
- material safety data sheets
- research resources, including industry-related systems information.
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
RANGE STATEMENT

- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:

- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Relevant Australian standards include:

- Australian standards:
  - AS2311 General workmanship - painting
  - AS2700 Colour range - painting
  - AS1530.3 Fire retardant systems
  - AS1319 Safety signs for the occupational environment
- regulatory requirements
- standard drawings and details
- urban design manuals.

Tools and equipment include:

- cutting knives
- Mahl stick
- oils
- signwriting pencils, pens and brushes
- stirring sticks
- tape measures and rulers
- tapes
- work pots.

Substrates include:

- corflute
- glass
- masonry
- metals
- plastics
- wood.

Layout methods include:

- computer-generated layout
RANGE STATEMENT

- direct onto substrate
- overhead projection
- pounce method.

Decorative alphabets include:
- formal script alphabets
- freestyle alphabets
- informal script alphabets
- sans serif alphabets
- serif alphabets.

On and off-face decorative effects include:
- 3-D effects
- blocking
- colour effects
- shading.

Statutory and regulatory authority requirements include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:
REQUIRED SKILLS AND KNOWLEDGE

- ability to apply layout and design concepts and principles
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
- read and interpret:
  - charts and hand drawings
  - computer programs
  - design principles
  - job drawings
  - manufacturer specifications and instructions
  - organisational work specifications
  - requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in signage
- theory of cutting vinyl, including:
  - blade offset setting
REQUIRED SKILLS AND KNOWLEDGE

- blade types
- cutting pressure
- cutting speed
- function of plotters
- function of printers
- printer calibration settings
- purpose of test cut
- vinyl tracking
- vinyl types and uses in sign manufacture.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
  - principles of vinyl cutting
  - vinyl theory
  - attributes of vinyl
- applying appropriate software to produce vinyl signage
- correct and effective protocols for using computers and software
- applying vinyl to vehicle panels, free of air bubbles.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to producing vinyl signage
- support materials appropriate to activity
- workplace instructions relating to producing vinyl signage
EVIDENCE GUIDE

- material safety data sheets
- research resources, including industry-related systems information
- range of digital printers
- relevant software.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and
EVIDENCE GUIDE

Supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the
**RANGE STATEMENT**

Conduct of operational risk assessment and treatments associated with:
- concealed services (water, power and gas)
- lighting
- restricted access barriers
- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

**Job requirements** include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

**Clients** include:
- business owners
- printers
- property owners
- sign manufacturers
- statutory bodies.

**Relevant Australian standards** include:
- regulatory requirements
- standard drawings and details
- urban design manuals.

**Tools and equipment** include:
- application fluid
- application tape
- applicators
- coloured marking pencils
- metal rules
- weeding tools.

**Substrates** types include:
- corflute
- glass surfaces
- illuminated surfaces
- metals
- plastics
RANGE STATEMENT

Vinyl includes:
- calendared (polymeric/monomeric)
- cast
- easy apply (vehicle wrap)
- translucent.

Layout of sign includes:
- function of printers
- printer calibration settings
- test print
- vinyl tracking.

Vinyl layout cut includes:
- blade types
- cutting pressure
- cutting speed
- function of plotters
- test cut
- vinyl tracking.

Applied to surface includes:
- curved (irregular)
- flat
- illuminated.

Statutory and regulatory authority requirements include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - computer programs
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or external personnel
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
  - organisational skills, including the ability to plan and set out work
  - problem solving skills to recognise, and take action to rectify, minor faults and problems
  - teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- maintenance of engravers and cutters
- material safety data sheets (MSDS)
- relevant Australian and New Zealand standards, and:
REQUIRED SKILLS AND KNOWLEDGE

- manufacturer specifications
- OHS requirements
- other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to removal of waste products
- terminology and definitions used in engraving
- theory of engraving, including:
  - cutter types
  - engraving depths
  - engraving materials and their uses
  - engraving software
  - guillotine systems
- types of engraving systems.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- characteristics and uses of engraving materials and equipment
- engraving set up
- maintenance of engravers and cutters.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to engrave using laser/rotary router
- support materials appropriate to activity
- workplace instructions relating to engraving using laser/rotary router
- material safety data sheets
- research resources, including industry-related systems information
- relevant software.
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
RANGE STATEMENT

- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Relevant Australian standards include:
- regulatory requirements
- standard drawings and details
- urban design manuals.

Tools and equipment include:
- cutting tools
- laser routers
- rotary routers.

Engraving materials include:
- acrylic
- glass
- metal.

Statutory and regulatory authority requirements include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

Elements and Performance Criteria  Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare work. | 1.1. **Quality assurance requirements** of signage operations are recognised and adhered to.  
1.2. **Safety (OHS)** requirements in accordance with application tasks and workplace operations are recognised and adhered to.  
1.3. **Job requirements** are identified from drawings, specifications, instructions and client briefs.  
1.4. Specifications, drawings and instructions interpreted and job requirements and sequence, determined.  
1.5. Layout set out to scale using setting out techniques applicable to sign design.  
1.6. **Gilding materials** product range is assessed and selected in accordance with job requirements and relevant Australian standards.  
1.7. **Tools and equipment** and materials are selected to carry out tasks consistent with job requirements.  
1.8. **Substrates** are identified and prepared in accordance with planned material application.  
1.9. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.  
1.10. Potential material shrinkage is determined to ensure quality of completed work. |
| 2. Identify and draw to scale lettering and decorative forms of signage. | 2.1. Drafted designs are set out and drawn to appropriate scale and transferred to prepared surface using direct and indirect layout methods.  
2.2. Decorative process is applied to create desired finish to specifications. |
| 3. Use gilding tools and equipment. | 3.1. Tools and equipment are selected for cutting and shaping process.  
3.2. Materials are safely held in correct position ready for cutting and shaping operation. |
| 4. Apply water gilding to signage. | 4.1. Gilding material is cut to required size and shape as specified and **sign surface** is prepared to receive gilding.  
4.2. Appropriate size is mixed, with colour added as designed and applied to prepared surface.  
4.3. Gilding material is applied to surface and excess material is trimmed and removed.  
4.4. Appropriate cleaning procedure and materials are used to carry out tasks consistent with job requirements. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
5. Apply surface gilding to signage. | 5.1. Size is applied carefully to surface using appropriate application techniques to contain within design.
 | 5.2. Gilding material is applied to size using appropriate rubbing techniques, ensuring no gaps and design shape is fully covered.
 | 5.3. Applied gilding leaf is burnished to ensure loose particles are removed.
 | 5.4. Design shape is trimmed carefully where applicable, and appropriate cleaning procedure and materials are selected and applied to clean the gilded and surrounding surface.
6. Clean up finished gilded signage. | 6.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.
 | 6.2. Re-usable and recyclable materials are salvaged and stored.
 | 6.3. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- apply gilding operations:
  - cutting
  - melting
  - shaping
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and
REQUIRED SKILLS AND KNOWLEDGE

confirm requirements, share information, listen and understand
• follow instructions
• read and interpret:
  • charts and hand drawings
  • job drawings
  • manufacturer specifications and instructions
  • organisational work specifications
• report faults
• use and interpret non-verbal communication
• use language and concepts appropriate to cultural differences
• draft design of sign to scale
• innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
• organisational skills, including the ability to plan and set out work
• prepare surfaces
• problem solving skills to recognise, and take action to rectify, minor faults and problems
• requirements and instructions issued by authorised organisational or external personnel
• teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
• transfer design to location.

Required knowledge

Required knowledge for this unit is:
• design and layout of signs
• design transfer methods
• finishing techniques for gilding and gilded surfaces
• gilding materials and their characteristics
• gilding techniques
• handling materials relevant to gilding operations
• identification of dimensions, symbols, abbreviations and key features of signage
• job safety analysis (JSA) and safe work method statements
• material safety data sheets (MSDS)
• measuring and setting out relevant to layout of signs
• preparation of surfaces for gilding
• relevant Australian and New Zealand standards, and:
  • manufacturer specifications
  • OHS requirements
REQUIRED SKILLS AND KNOWLEDGE

- other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- terminology and definitions used in signage
- traditional and contemporary font styles
- types and characteristics of tools and equipment used to apply water gilding
- types of metal leaf used for gilding.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
  - principles of surface preparation and application of gilding
  - construction of alphabets
  - theory of letter spacing
  - sound techniques in preparing sign surface to receive gilding
  - sound and accurate techniques to produce design to sign and gilding requirements.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to apply lines and scrolls using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings, specifications and documentation from a variety of sources
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- select and record colours
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
- transfer measurements from drawings to scroll work on surfaces.

Required knowledge

Required knowledge for this unit is:

- Australian standards:
  - AS1319 Safety signs for the occupational environment
  - AS2311 General workmanship - painting
- brushes used in line and scroll work
- colour selection techniques and principles
- design of line and scroll work
- job safety analysis (JSA) and safe work method statements
- materials relevant to drawings and specifications for scroll work on surfaces
- measurements and calculations related to material quantities
REQUIRED SKILLS AND KNOWLEDGE

- measuring and setting out relevant to layout of signs
- MSDS
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- symbols, dimensions and terminology relating to scroll work on surfaces
- techniques in producing line work
- techniques in producing scroll work
- terminology and definitions used in signage
- types and uses of drawings and layouts used for line and scroll work on surfaces.
Evidence Guide

EVIDENCE GUIDE

Reasonable adjustments for people with
EVIDENCE GUIDE

Disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be
EVIDENCE GUIDE

obtained from relevant authenticated
documentation from third parties, such as existing
supervisors, team leaders or specialist training
staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different
work environments and situations that may affect performance. Bold italicised
wording, if used in the performance criteria, is detailed below. Essential operating
conditions that may be present with training and assessment (depending on the work
situation, needs of the candidate, accessibility of the item, and local industry and
regional contexts) may also be included.

1.1. Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant
to the sign industry
- control of handling procedures
- internal company quality assurance policy and
  risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

1.2. Safety (OHS) is to be in accordance with state and
territory legislation and regulations and project
safety plan and may include:

- emergency procedures, including
  extinguishing fires, organisational first aid
  requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations
  and workplace policies and practices
- safe operating procedures, including the
  conduct of operational risk assessment and
treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
RANGE STATEMENT

- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

1.3. **Job requirements** include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

1.4. **Relevant Australian standards** include:
- AS2700 Colour range - painting
- AS1319 Safety signs for the occupational environment
- AS2311 General workmanship - painting
- regulatory requirements
- standard drawings and details
- urban design manuals.

1.5. **Tools and equipment** include:
- artist brushes
- dagger liners
- drafting equipment
- guides
- ladders
- lining fitches
- measuring tapes and rules
- planks
- pots
- quill liners
- rollers
- scaffolding
- spray equipment
- stirrers
- straight edges
- templates.

1.6. **Application** includes:
- brush with lining or template guide
- freehand brush application
- spray, roller and brush application to substrate.
RANGE STATEMENT

1.7. **Materials** include:
   - acrylic paint
   - enamel paint
   - water-based paints.

1.8. **Line work and scroll work** include:
   - arrowed
   - bull nosed
   - curled
   - square end
   - tapered.

1.9. **Statutory and regulatory authority requirements** include:
   - federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
     - removal of waste products
     - storage of chemicals.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare work. | 1.1. *Quality assurance requirements* of signage operations are recognised and adhered to.  
1.2. *Safety (OHS)* requirements in accordance with application tasks and workplace operations are recognised and adhered to.  
1.3. *Job requirements* are identified from drawings, specifications, instructions and client briefs.  
1.4. Spelling of brief content is checked from copy and confirmed as correct.  
1.5. Layout is set out to scale using setting out techniques applicable to sign design.  
1.6. *Tools, equipment* and *materials* are selected to carry out tasks consistent with job requirements.  
1.7. *Substrates* are identified and prepared in accordance with planned material application.  
1.8. Colour selection is determined, consistent with job requirements. |
| 2. Use correct layout principles to maximise impact. | 3.1. Type of formal or informal layout is determined from specifications, *client brief* and *relevant Australian standards*.  
3.2. Correct *principles of layout* are identified and applied in line with given brief. |
| 3. Identify materials and methods of application for effective showcards/chalkboards. | 4.1. Substrates, backgrounds, materials and equipment used in preparation are identified and applied.  
4.2. Compatible surfaces, paints, mediums and various methods of their application for showcards/chalkboards are identified and applied.  
4.3. Appropriate and effective colour combinations for showcards/chalkboards are identified and applied. |
| 5. Develop layout roughs and sketches from specifications. | 5.1. Job specifications are established from specified material.  
5.2. Sketches are produced as required to meet job specifications. |
| 6. Produce showcards/chalkboards using effective layout and illustrations from sketched roughs. | 6.1. Layout design is produced to specifications from layout roughs and sketches.  
6.2. Appropriate drawing instruments, mediums and background materials are selected and prepared.  
6.3. Layout is produced incorporating lettering and illustrations and using appropriate techniques and mediums. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
6.4. Accurate proportion and perspective are applied to the illustration using light and shade effects.
6.5. Completed work is cleaned and presented to specification.
7. Clean up.  
7.1. Work environment/area is cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.
7.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or external personnel.
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
REQUIRED SKILLS AND KNOWLEDGE

- interpret drawings and documentation and make sketches of work
- measure accurately and calculate material quantities
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- select and record colours
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- colour selection techniques and principles
- commonly used drawings and layouts for showcards/chalkboards
- designs of showcards/chalkboards
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- measurement and calculation techniques related to material quantities
- measuring and setting out methods relevant to layout of showcards/chalkboards
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- symbols, dimensions and terminology relating to showcards/chalkboards
- techniques for writing tickets and showcards/chalkboards
- types and characteristics of brushes and applicators relevant to showcards/chalkboards
- types and use of appropriate materials for application to substrates.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate
EVIDENCE GUIDE

construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
  - principles of layout
  - construction of alphabets
  - theory of letter spacing
  - identification of dimensions, symbols, abbreviations and key features of signage
  - sound checking techniques to ensure spelling and dates are correct
  - sound and accurate application to produce design to colours and specification
  - identification of typical faults or problems that occur and action required to rectify them.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to writing showcards/chalkboards
- support materials appropriate to activity
- workplace instructions relating to writing showcards/chalkboards
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources,
EVIDENCE GUIDE

and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

1.2. Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
RANGE STATEMENT

- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

1.3. **Job requirements** include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

1.4. **Tools and equipment** include:
- brushes
- drawing equipment
- roller and tray
- omnichrome pencil
- measuring equipment.

1.5. **Materials** include:
- adhesives
- blackboard paint
- crayons
- felt tip pens
- fixatives
- pastels
- polyvinyl acetate (PVA) paints
- transfer paper.

1.6. **Substrates** include:
- card
- chalkboard surfaces to include composite timber substrates, such as medium density fibreboard (MDF) and masonite
- corflute
- paper
- tyvek.

1.7. **Clients** include:
- advertising agencies
- business owners
- marketing agencies
- property owners
- retail outlets
- sign manufacturers
- statutory bodies.

1.8. **Relevant Australian standards** include:
- AS1319 Safety signs for the occupational environment
- AS2311 General workmanship - painting
- AS2700 Colour range - painting.
RANGE STATEMENT

1.9. Principles of layout include:
- balance
- colour
- contrast
- harmony
- letter styles
- space.

1.10. Statutory and regulatory authority requirements include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

  • storage of chemicals and materials
• techniques for cutting designs for screens
• traditional and contemporary font styles
• terminology and definitions used in screen-printing.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- sound procedures to accurately reproduce a design for screen-printing
- sound techniques to transfer design to material for screen
- accurate and safe techniques to cut screen design to shape
- sound and safe procedures to construct screen ready for printing
- sound techniques in identifying and recording colours
- application of material accurately to sign surface for printing
- sound techniques to apply paint or ink to print from screen
- identification of typical faults and appropriate remedial action taken to rectify problem.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions

  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
  - innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
  - interpret drawings and documentation
  - measure accurately
  - organisational skills, including the ability to plan and set out work
  - problem solving skills to recognise, and take action to rectify, minor faults and problems
  - select and record colours
  - teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
  - transfer measurements from drawings to sign in pictorial forms.

Required knowledge

Required knowledge for this unit is:

- Australian standards:
  - AS2311 General workmanship - painting
  - AS2700 Colour range - painting
- application techniques with paint
- colour selection
- commonly used drawings and layouts for signs
- identification of dimensions, symbols, abbreviations and key features of signage
- job safety analysis (JSA) and safe work method statements
- measure and set out relevant to layout of signs
- measurements and calculations related to material quantities
- MSDS
- pictorial designs and reproduction
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- symbols, dimension and terminology relating to signage
- techniques to set out sign for designed signwriting
- terminology and definitions used in signage.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying:
  - principles of layout
  - construction of alphabets
  - theory of letter spacing
  - identification of dimensions, symbols, abbreviations and key features of signage
  - identification and correct application of designed material to substrate
  - sound and accurate techniques to reproduce pictorial to size requirements
  - appropriate techniques to identify and record colours
  - sound techniques to produce colour fully to boundary limits
  - completion of pictorial to design and specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to hand rendering pictorials
- support materials appropriate to activity
- workplace instructions relating to hand rendering pictorials
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
RANGE STATEMENT

- concealed services (water, power and gas)
- lighting
- restricted access barriers
- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Substrates include:
- canvas
- glass
- metal
- paper
- timber.

Tools and equipment include:
- artist brushes
- charcoal
- easel
- mediums
- oil and acrylic paints
- pencils
- sketch pad.

Relevant Australian standards include:
- AS2311 General workmanship - painting
- regulatory requirements
- AS2700 Colour range - painting
- standard drawings and details
- urban design manuals.

Painting techniques include:
- posterisation
- scumbling
- stippling
- wet blend.
RANGE STATEMENT

Statutory and regulatory authority requirements include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare work. | 1.1. *Quality assurance requirements* of signage operations are recognised and adhered to.  
1.2. *Safety (OHS)* requirements in accordance with application tasks and workplace operations are recognised and adhered to.  
1.3. *Job requirements* are identified from drawings and specifications/instructions and/or client brief.  
1.4. Product range assessed and selected in accordance with job requirements and *relevant Australian standards*.  
1.5. *Tools and equipment* and materials are selected to carry out tasks consistent with job requirements.  
1.6. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.  
1.7. Temporary or permanent application of materials is determined from job requirements.  
1.8. Potential material shrinkage is determined to ensure quality of completed work. |
| 2. Use LED technology. | 2.1. LED systems appropriate to specified job are identified and evaluated for use.  
2.2. LED system packages available for the work are identified, evaluated and appropriate choices are made.  
2.3. LED semi-conductor chip technology and characteristics are evaluated for the specified application.  
2.4. LED colour systems are identified and applied in the appropriate environments.  
2.5. Expected lifetime of different LED systems is evaluated and communicated to clients.  
2.6. Electrical current feed to the LED system is regulated according to manufacturer specifications.  
2.7. Heat emanating from LED signage systems is calculated and managed according to manufacturer specifications. |
| 3. Clean up finished sign. | 3.1. Sign and surrounding surface environment/area is cleaned and waste materials removed in accordance with *statutory and regulatory authority requirements*.  
3.2. Tools and equipment, including personal protective |

 | equipment, are cleaned, maintained and stored.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to calculate heat from LED systems and apply appropriate managing techniques
- ability to evaluate and use a variety of LED systems for correct signage applications
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or external personnel
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying
REQUIRED SKILLS AND KNOWLEDGE

physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- LED colour types and limitations
- LED components
- LED lifetime characteristics
- LED semi-conductor chip technology characteristics
- LED systems and system packages
- management of heat in LED signage
- material safety data sheets (MSDS)
- regulation of electrical current in LED systems
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- terminology and definitions used in signage.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding of and techniques for evaluating and using:
  - LED systems and packages
  - LED components
  - regulation of electrical current in LED systems
  - management of heat in LED signage.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to using LED technology for illuminated signage
- support materials appropriate to activity
- workplace instructions relating to using LED technology for illuminated signage
- material safety data sheets
- research resources, including industry-related systems information.
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications

2.2. *Characteristics of electricity* are applied to the illuminated sign activity carried out.  
2.3. Power consumption of illuminated signage types is evaluated and communicated to clients. |
| 3. Clean up finished sign. | 3.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with *statutory and regulatory authority requirements*.  
3.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored. |

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:  
  - determine requirements  
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
  - charts and hand drawings
  - job drawings
  - manufacturer specifications and instructions
  - organisational work specifications
  - requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- calculate electrical loads and necessary supply conditions for illuminated and LED sign installations
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- characteristics of electricity:
  - current
  - voltage
  - circuits:
    - series
    - parallel
    - series-parallel
  - watts
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- power consumption in illuminated signage
- regulation of electrical current in illuminated signage
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
REQUIRED SKILLS AND KNOWLEDGE

- other applicable codes or standard operating procedures relevant to the sector
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- terminology and definitions used in signage.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- electrical theory to a range of illuminated sign installations, including light emitting diode (LED).

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying electrical theory to illuminated signage
- support materials appropriate to activity
- workplace instructions relating to applying electrical theory to illuminated signage
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes
EVIDENCE GUIDE

where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated
EVIDENCE GUIDE

documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
RANGE STATEMENT

- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:
- assessment of conditions and hazards
- determination of work requirements
- equipment defect identification
- safety plans and policies
- work site inspection.

Client includes:
- business owners
- printers
- property owners
- sign manufacturers
- statutory bodies.

Relevant Australian standards include:
- regulatory requirements
- standard drawings and details
- urban design manuals.

Characteristics of electricity include:
- circuits:
  - series
  - parallel
  - series-parallel
- current
- voltage
- watts.

Statutory and regulatory authority requirements include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

4.2. Tools and equipment, *including* personal protective equipment, are cleaned, maintained and stored. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to prepare surfaces using correct applicators and materials
- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - charts and hand drawings
    - electrical systems
    - job drawings
    - manufacturer specifications and instructions
    - organisational work specifications
    - requirements and instructions issued by authorised organisational or external personnel
  - report faults
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- material safety data sheets (MSDS)
- job safety analysis (JSA) and safe work method statements
REQUIRED SKILLS AND KNOWLEDGE

- maintenance of routers and cutters
- relevant Australian and New Zealand standards, and:
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector
- terminology and definitions used in LED
- theory of LED and routing:
  - routing materials and their uses
  - cutter types
  - LED systems
  - routing depths
  - routing software
  - types of routing systems
  - wiring.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency can be assessed in a real or simulated environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of understanding and applying:

- characteristics and uses of routing materials and equipment in a range of signage jobs
- LED bulbs and wiring used in signage
- router set up and safe use
- correct and safe maintenance of routers and cutters
- correct techniques for connecting and sealing LED wiring.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to using laser/rotary router for LED system
- support materials appropriate to activity
- workplace instructions relating to using laser/rotary router for LED systems
- material safety data sheets
EVIDENCE GUIDE

- research resources, including industry-related systems information
- relevant software.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far
EVIDENCE GUIDE

as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
RANGE STATEMENT

- concealed services (water, power and gas)
- conduct of operational risk assessment and treatments associated with lighting
- restricted access barriers
- traffic control
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of machines
- use of tools and equipment
- workplace environmental requirements and safety.

Job requirements include:

- and determination of work requirements and safety plans and policies
- assessment of conditions and hazards
- equipment defect identification
- work site inspection.

Relevant Australian standards include:

- regulatory requirements
- standard drawings and details
- urban design manuals.

Tools and equipment include:

- electrical wire connectors
- electrical wire cutters
- laser routers
- range of router cutting tools
- rotary routers.

Routine maintenance includes:

- checking for damage or non-standard performance
- cleaning.

Materials include:

- acrylic
- laminated acrylic
- medium density fibreboard (MDF).

Characteristics of electricity include:

- circuits:
  - series
  - parallel
  - series-parallel
- current
- voltage
RANGE STATEMENT

Statutory and regulatory authority requirements include:

- watts.
- federal, state and local authorities administering applicable Acts, regulations and codes of practice and also can pertain to:
  - removal of waste products
  - storage of chemicals.

This unit contains employability skills.

---

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare work. | 1.1. **Quality assurance requirements** of signage operations are recognised and adhered to.  
1.2. **Safety (OHS)** requirements in accordance with application tasks and workplace operations are recognised and adhered to.  
1.3. **Job requirements** are identified from drawings and specifications/instructions and/or **client** brief.  
1.4. Specifications, drawings and instructions are interpreted and job requirements and sequence determined.  
1.5. Layout is set out to scale using setting out techniques applicable to sign design.  
1.6. Product range is assessed and selected in accordance with job requirements and **relevant Australian standards**.  
1.7. **Tools, equipment** and materials are selected to carry out tasks consistent with job requirements.  
1.8. Routine maintenance requirements of equipment are identified and implemented in accordance with workplace and quality assurance procedures.  
1.9. Temporary or permanent application of materials is determined from job requirements. |
| 2. Mark out design. | 2.1. Direct and indirect layout methods are identified and applied.  
2.2. Sections are calculated and marked out to design specifications.  
2.3. Joint locations are determined from layout and marked out on pattern.  
2.4. Electrodes are marked out to indicate double backed/right angled position. |
| 3. Bend glass. | 3.1. Glass is heated with care over a gas flame until pliable.  
3.2. Glass is bent to form shape consistent with pattern and specifications. |
| 4. Attach electrodes and connect glass to form sections. | 4.1. Electrodes are attached in accordance with pattern specification and Australian standards requirements.  
4.2. Glass tubing is connected using appropriate procedures and techniques. |
| 5. Prepare glass for lighting system. | 5.1. Pumping station is activated in accordance with job requirements and section is connected to pumping |
### PERFORMANCE CRITERIA

station in accordance with job specifications.  

5.2. Glass is vacuumed in accordance with job requirements and filled with gas pumped using equipment and materials consistent with job requirements.  

5.3. Glass is sealed and bombarded using equipment consistent with job requirements and industry standards.  

5.4. Glass is cooled safely and aged in accordance with job requirements.  

5.5. Neon sections are tested to determine transformer loadings in accordance relevant Australian standards.  

5.6. Doubled sections of glass are blackened to form design shape.  

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 6. Install tube supports to board/panel. | 6.1. Neon glass sign is securely attached to board/panel using tube supports.  
  
  6.2. Illuminated sign components are fixed to board/panel using appropriate attachments. |
| 7. Clean up finished sign. | 7.1. Sign and surrounding surface environment/area are cleaned and waste materials removed in accordance with statutory and regulatory authority requirements.  
  
  7.2. Tools and equipment, including personal protective equipment, are cleaned, maintained and stored. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - determine requirements
  - effectively communicate verbally with others within a team environment
REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- read and interpret:
  - job drawings
  - charts and hand drawings
  - manufacturer specifications and instructions
  - organisational work specifications
  - requirements and instructions issued by authorised organisational or external personnel
- report faults
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- organisational skills, including the ability to plan and set out work
- problem solving skills to recognise, and take action to rectify, minor faults and problems
- teamwork skills to be able to coordinate with others, action tasks and relate to people from a range of social, cultural, ethnic backgrounds and with varying physical and mental abilities
- work, shape and join glass-tubed sections safely.

Required knowledge

Required knowledge for this unit is:

- identification of dimensions, symbols, abbreviations and key features of signage
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- measurement and setting out related to layout of signs
- methods of pumping gas into glass
- shaping and forming glass techniques
- statutory and regulatory authority requirements, particularly those relating to:
  - removal of waste products
  - storage of chemicals and materials
- terminology and definitions used in signage
- types and characteristics of gas-charged glass-formed illuminated signs
- types and correct handling of materials and their characteristics relevant to construction of glass illuminated signs
- types and uses of electrodes and transformers
REQUIRED SKILLS AND KNOWLEDGE

- relevant Australian and New Zealand standards:
  - Australian standards, including:
    - AS2508.2.012 Safe storage and handling; information cards for hazardous materials
    - AS3100 Approval and test specification - General requirements for electrical equipment
    - AS3953 Loading guide for dry-power transformers
  - manufacturer specifications
  - OHS requirements
  - other applicable codes or standard operating procedures relevant to the sector.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- understanding and applying principles of sign lay out
- effective operational use of tools and equipment to handle and form glass to design shapes
- safe techniques to attach electrodes and connect glass tubing
- safe and controlled techniques to prepare glass and pump gas to glass assembly
- safe techniques to bombard, cool and age glass to specifications
- handling and securing procedures to affix sign to board or panel to complete job to requirement
- identification of typical faults in illuminated signage and appropriate remedial action taken to rectify problems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

**mandatory task requirements**

- relevant specifications and work instructions
- tools and equipment appropriate to manufacturing gas-charged glass-formed illuminated signage
- support materials appropriate to activity
- workplace instructions relating to manufacturing gas-charged glass-formed illuminated signage
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,
EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality assurance requirements include:

- attention to work specifications
- Australian and international standards relevant to the sign industry
- control of handling procedures
- internal company quality assurance policy and risk management strategies
- procedures for installing and finishing
- quality of materials
- use and maintenance of equipment
- workplace operations and procedures.

Safety (OHS) is to be in accordance with state and territory

- emergency procedures, including extinguishing fires, organisational first aid

Unit Descriptor

This unit of competency specifies the outcomes required to prepare and apply materials to produce various forms of airbrushed work.

Application of the Unit

This unit of competency supports the achievement of skills and knowledge required to apply airbrush techniques to prepared surfaces.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Plan and prepare work.
   1.1 Job requirements are identified from drawings, specifications, instructions and client briefs.
   1.2 Task sequence is planned according to organisational requirements.
   1.3 Colour is selected according to job requirements.
   1.4 Tools, equipment and materials are selected to carry out tasks consistent with job requirements.
   1.5 Substrates are identified and prepared according to planned airbrush application.

2  Set up and test airbrush equipment.
   2.1 Applications of different types of airbrushes are considered and airbrush is selected for the job.
   2.2 Components and accessories for the selected airbrush are identified, selected and set up according to manufacturer recommendations and specifications.
   2.3 Function and security of fittings are checked before use according to manufacturer recommendations.

3  Prepare and apply masks for use with airbrush.
   3.1 Masks are identified according to planned airbrush application.
   3.2 Adhesive masks are prepared and applied according to job requirements.
   3.3 Hand-held templates are prepared and applied according to job requirements.
4 Apply inks or paints using airbrush.

4.1 Airbrush inks or paints are applied to surface using application techniques consistent with job requirements.

4.2 Light and shade effects are applied to create visual realism using technique suitable to the selected medium.

4.3 Defects in application are identified and corrective action taken.

4.4 Airbrush work is finalised according to job specifications.

5 Clean up and store equipment.

5.1 Airbrush and associated components and accessories are dismantled, checked, cleaned and maintained according to manufacturer recommendations.

5.2 Airbrush inks, paints and solvents are stored safely according to manufacturer specifications and organisational requirements.

5.3 Work area is cleaned and waste materials are removed according to statutory and regulatory authority requirements.

5.4 Other tools and equipment, including personal protective equipment (PPE), are cleaned, maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language and literacy skills to:
  - communicate clearly and directly using verbal, non-verbal and written communication
  - interpret job requirements and instructions, including:
    - client specifications
    - drawings
    - manufacturer instructions
    - material safety data sheets (MSDS)
  - report faults
  - use questioning to identify and confirm requirements
- numeracy skills to calculate scaled enlargements
- planning and organising skills to:
  - sequence tasks
  - set out work
- problem-solving skills to:
  - recognise minor faults and problems and take action to rectify them
  - respond to workplace challenges and put ideas into action
  - select appropriate tools and equipment
- self-management skills to:
  - comply with work site environmental and sustainability frameworks or management systems
  - contribute to achievement of team goals
  - identify and follow organisational procedures
  - respond to change
- technical skills to:
  - identify defects associated with airbrush application and take corrective action
  - maintain, clean, dismantle and reassemble airbrush, components and accessories
  - prepare and apply a variety of masks to use in conjunction with airbrush techniques
  - apply airbrush techniques
  - select, set up and check airbrush equipment and accessories prior to use

Required knowledge

- airbrush application principles, sequencing and techniques
- airbrushing terminology and definitions
- Australian and New Zealand standards applicable to airbrushing signage work
- materials relevant to airbrush work, including:
  - inks
  - paints
  - masks
  - masking materials
- statutory and regulatory authority requirements relevant to airbrushing signage work, including those relating to removal of waste products
- types of airbrushes, components and accessories used in airbrushed signage work
- work health and safety (WHS) requirements and safe work methods applicable to airbrushing
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- comply with site safety and OHS legislation, regulations and codes of practice applicable to workplace operations
- interpret specifications for the preparation and application of various airbrush techniques
- apply airbrush using a variety of freehand and masked techniques
- use airbrushing tools, plant and equipment to produce airbrushed signage work that complies with organisational quality standards and client requirements.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to apply lines and scrolls
- support materials appropriate to activity
- workplace instructions relating to applying lines and scrolls
- MSDS
- research resources, including industry-related systems information.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- written and/or oral assessment of required knowledge
- observed, documented and/or first-hand testimonial evidence
of the candidate producing airbrushed signage work using a variety of techniques.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Organisational requirements** include:

- quality assurance requirements:
  - applying Australian and international standards relevant to the sign industry, such as AS1319 Safety signs for the occupational environment
  - applying internal company quality assurance policy and risk-management strategies
  - determining and adhering to work specifications
  - checking quality of materials
  - correctly using and maintaining equipment
  - identifying equipment defects
- WHS is to be in line with state and territory legislation and regulations and project safety plan, and may include:
  - assessment of conditions and hazards
  - emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation
  - hazard control, including hazardous materials and substances
  - PPE prescribed under legislation, regulations and workplace policies and practices
  - safe operating procedures, including the conduct of
operational risk assessment and treatments associated with:
- concealed services (water, power and gas) and lighting
- restricted access barriers
- work site visitors and the public
- working in proximity to others
- use of MSDS
- use of tools and equipment
- workplace environmental requirements.

**Tools and equipment** may include:
- airbrush inks
- air brush, and components and accessories
- buckets
- compressed air and leads
- measuring tapes and rules
- stencil knives
- straight edges.

**Materials** may include:
- airbrush inks
- mask and template mediums, such as:
  - acetate film
  - cardboard
  - frisk film
  - mask vinyl
  - masking tape
- paints, including:
  - oil-based
  - water-based.

**Different types of airbrushes** may include:
- single action
- double action
- internal mix
- external mix.

**Components and accessories** may include:
- air hose
- paint pot attachment.

**Airbrush work** may include:
- freehand techniques
- geometric shapes
• graphics
• lettering
• signage.

Statutory and regulatory authority requirements include:

• federal, state and local authorities administering Acts, regulations and codes of practice applicable to:
  • airbrush signage work
  • removal of waste products
  • storage of chemicals.

Unit Descriptor

This unit of competency specifies the outcomes required to select and use a variety of advanced software applications to design and produce digital signage.

Application of the Unit

This unit of competency supports workers in the digital signage and printing sector who lay out, design and produce signs using multiple advanced software applications.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria  Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Interpret client brief and job specifications.
   1.1 Details of client design brief and job specifications are interpreted and clarified with client or supervisor.
   1.2 *Type of signage application* is determined and production requirements are assessed.
   1.3 Appropriate *software application* is selected to produce the work as required.

2  Arrange graphic framework on page.
   2.1 Client copy and images are assembled to conform to the design brief.
   2.2 *Elements* are created and arranged on page to ensure artwork meets job specifications and with precise alignment or visual balance.
   2.3 Elements are arranged in layers to allow for effective selection and re-arrangement.
   2.4 Text is formatted and flowed into document using most *productive technique*.
   2.5 Text or data is imported from other applications, correctly formatted and any cross-application formatting issues are resolved.
   2.6 Graphics and other elements are imported from other applications and are arranged according to the design brief.
3 Produce vector objects.

3.1 **Tools and software functionalities** are used to produce objects and required attributes are entered and shapes manipulated, continuing until graphic framework is finalised.

3.2 Lines and curves are adjusted and edited to fit design specifications.

3.3 Objects are painted and transposed and strokes and effects are scaled according to the design brief.

3.4 Colour and appearance attributes are selected and copied as required.

3.5 Gradients, fills and patterns are used to paint and blend as required by the layout and design brief.

4 Edit raster images.

4.1 Images are retouched to conform to job specifications.

4.2 Colour and tone corrections are employed to conform to job specifications.

4.3 Appropriate **contouring technique** is applied to produce the best result, depending on the image.

4.4 Software functionalities are used to mask objects where required.

4.5 Edited image is saved in **appropriate format** to allow for import into other applications and to conform to job specifications.

4.6 Image storage requirements are identified and employed.

5 Produce print-ready file.

5.1 File is checked for errors according to client brief and job specifications.

5.2 Correct colour profiles are applied to accurately reproduce colours.

5.3 Sufficient image resolution is applied according to output specifications.

5.4 Bleeds, printer marks and contour cuts are applied.
5.5 Completed file is sent to be ripped according to enterprise procedures.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language and literacy skills to:
  - express ideas and information
  - gain client agreement on design layout
  - interpret client brief and specifications
- numeracy skills to determine image resolution
- planning and organising skills to:
  - collect and organise the storage and retrieval of electronic files
  - produce proofs according to timeframe specified in client requirements
- problem-solving skills to:
  - analyse content of imported electronic files and determine formatting requirements
  - check and fix errors in the image produced
- self-management skills to:
  - apply work health and safety (WHS) requirements, including correct ergonomics when operating a computer
  - contribute to the maintenance of the production process as a member of a team
- technical skills to:
  - operate relevant hardware and software to produce a layout
  - select colour libraries within software applications

Required knowledge

- image storage options, including:
  - use of lossless file compression formats to preserve files
  - use of lossy file compression formats to share files
- printing processes used in digital production
- reasons for:
  - considering printing process during design phase, including potential problems resulting from lack of consideration
  - editing or manipulating images
  - creating a colour profile when preparing an image for printing
- types of software applications suitable for producing digital signage and the functionalities of each type of software, including:
  - colour modes, profiles and rendering intents and the advantage and disadvantages of
each

- methods for:
  - flowing text throughout a document
  - adjusting guides and rulers
- qualities of different file formats and advantages and disadvantages for specific types of work, including types of file format that are unsuitable for print-based jobs
- techniques for styling text productively
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:
- find and use information relevant to tasks from a variety of information sources
- use at least two software applications to prepare two different sets of layouts according to enterprise standards.

Context of and specific resources for assessment

Assessment of this unit:
- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include access to relevant facilities, equipment and materials used for digital production, such as:
- high-end computers
- layout software
- output devices.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
- written and/or oral assessment
- observed, documented and/or first-hand testimonial evidence of the candidate selecting and using a variety of high-end software applications to efficiently produce a standard job.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical,
take into account the language, literacy and numeracy capacity of
the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work
environments and situations that may affect performance. Bold italicised wording, if used in
the performance criteria, is detailed below. Essential operating conditions that may be present
with training and assessment (depending on the work situation, needs of the candidate,
accessibility of the item, and local industry and regional contexts) may also be included.

**Type of signage application may be:**
- banners
- illuminated signs
- promotional display signs
- vehicle graphics.

**Software applications may include:**
- Adobe InDesign
- Adobe Illustrator
- Adobe Photoshop
- Corel Draw
- Corel PHOTO-PAINT
- new software applications
- new versions of existing software applications.

**Elements may include:**
- complex shapes
- graphics
- text.

**Productive techniques may include:**
- character style
- eyedropper tool
- linking of text frames
- paragraph style.

**Tools may include:**
- direct selection
- pen
- shape.

**Software functionalities**
- cutout
may include:
- mask
- trace
- vectorise.

**Contouring techniques** may include:
- layer masks
- paths
- quick mask or lasso tool.

**Appropriate format** may include:
- file types that support transparency or paths, vector and raster images, such as:
  - portable document format (PDF)
  - tagged image file format (TIFF)
  - encapsulated postscript (EPS).

CPCCSP2001A Handle solid plastering materials

Modification History
Not Applicable

Unit Descriptor
Unit descriptor This unit of competency specifies the outcomes required to handle, sort and store solid plastering materials. It includes identifying a range of commonly used materials; planning and preparing for work; safe and effective handling; sorting and storage of materials, including both during installation and removal; and cleaning and maintenance of the work area.

Application of the Unit
Application of the unit This unit supports the attainment of skills and knowledge to handle and store a range of materials used for plastering work, which includes working with others and as a member of a team.

Licensing/Regulatory Information
Not Applicable

Pre-Requisites
Prerequisite units CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry
Employability Skills Information

Employability skills       This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant *information*, confirmed and applied to the *scope of work* performed.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and legislative authority* obligations and applied. |
| 2. Handle, sort and store solid plaster material and components. | 2.1. Solid plastering material and components are identified on delivery to site and checked for conformity to material schedule, plans and *quality requirements*.  
2.2. Handling characteristics of solid plastering material and components are identified and safe handling techniques are selected and applied in accordance with workplace requirements.  
2.3. Solid plastering material and components are sorted to suit material type and size, stacked for ease of identification, retrieval for task sequence, and job location in accordance with work specifications.  
2.4. Solid plastering material and components are protected against physical and water damage and are stored clear of traffic ways.  
2.5. Signage and barricades are erected to isolate stored materials from workplace traffic or unauthorised access. |
| 3. Handle and position solid plastering material and components in preparation for installation. | 3.1. Solid plastering material and components are identified from stack and safely handled and distributed to required job location.  
3.2. Solid plastering materials and components are positioned ready for fixing in accordance with manufacturer recommendations and job requirements. |
| 4. Handle and remove | 4.1. Materials are handled safely and effectively according |
### PERFORMANCE CRITERIA

**solid plastering material and components on completion.**

- to material safety data sheets (MSDS) and requirements of regulatory authorities.

4.2 Hazardous material is identified for separate handling by authorised personnel.

4.3 Dust suppression procedures are used to minimise health risk to self and others.

4.4 Protection of materials is provided in accordance with specific material needs.

4.5 Materials are stored safely and effectively according to MSDS and requirements of regulatory authorities.

5. **Clean up.**

- Unused materials are sealed and stored/stacked in accordance with standard material handling practices and techniques and company requirements.

- Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

- Stormwater system is protected during clean-up process in accordance with sound work practices compliant with Environment Protection Authority (EPA) requirements.

- Waste and unwanted materials are removed and placed into job waste bins or rubbish stockpile in a safe and effective manner in accordance with sound work practices compliant with EPA requirements.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
REQUIRED SKILLS AND KNOWLEDGE

- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- plans, drawings and specifications
- plastering terminology
- plastering tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of solid plastering materials and components
- workplace and equipment safety requirements including common manual handling injuries and handling techniques.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- handle and store the mandatory solid plastering materials and components listed in the range statement
- dispose of waste and excess materials.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to handling and storage of solid plastering materials and components
- relevant Australian standards
- safe work procedures relating to solid plastering materials
- signage
RANGE STATEMENT

- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- solid plastering materials and components include corner beads, casing beads, render and setting coats mix composition (including additives like plasticisers, colour and waterproofing agents), timber or metal lathing, fasteners, sand, lime, lime putty, plaster compounds and finish coats
- protection of stacked/stored materials from moisture or damage includes isolation/separation, covering, tying or banding, barricades, signs and locking away (hazardous materials)
- waste material and debris include banding straps, packing pieces, broken or damaged goods, cardboard, plastic, paper and excess plaster and render material
- dust suppression procedures include spraying with water, covering or using a vacuum cleaner.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - manual handling
  - surrounding structures
  - traffic control
  - trip hazards
RANGE STATEMENT

- working at heights
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment include:

- mortar boards and stands
- shovels
- sieves
- straight edges
- wheelbarrows.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- vibration
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

- quality requirements
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of:
  - solid plastering hand tools
  - solid plastering materials
  - solid plastering power tools
  - solid plastering plant items
- wall and ceiling industry terminology
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- select, use and maintain the tools and equipment listed in the range statement
- select, use and perform operator maintenance of the plant listed in the range statement.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying
EVIDENCE GUIDE

safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- Diagrams or sketches
- Instructions issued by authorised organisational or external personnel
- Manufacturer specifications and instructions, where specified
- MSDS
- Memos
- Regulatory and legislative requirements pertaining to the use of solid plastering tools and equipment
- Relevant Australian standards
- Safe work procedures relating to solid plastering tools and equipment
- Signage
- Verbal, written and graphical instructions
- Work bulletins
RANGE STATEMENT

- work schedules, plans and specifications.
- general tools include:
  - brushes
  - hammers
  - measuring tapes and rules
  - scaffolding and work platforms
  - screed boards
  - trowels
- power tools include:
  - power grinders
  - power mixers
  - power saws
- plant includes:
  - earth leakage protection
  - lighting sets and power routers
  - power actuated fasteners
  - small compressors, air operated
  - small petrol or diesel engine driven generators
- levelling devices include:
  - line level
  - spirit level
  - straight edge
  - string line
  - water level and laser
- hand tool processes include:
  - boring and shaping of material
  - cutting
  - marking and levelling
  - material shifting and holding
  - placing and finishing concrete and mortar products
  - planing
  - setting out.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or
RANGE STATEMENT

include:

- mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant information, confirmed and applied to the scope of work performed.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and legislative authority obligations and applied. |
| 2. Prepare surface. | 2.1. Preparation requirements are identified from site inspection, plans and specifications.  
2.2. Hazards, obstructions and attachments are removed, or arrangements made for their removal.  
2.3. Surface preparation tools are selected and set up in accordance with surface condition and job requirements.  
2.4. Tools are used to prepare surface in accordance with manufacturer specifications and job requirements.  
2.5. Loose or protruding material is removed by sander or grinder and brush so that surface is prepared to specification. |
| 3. Patch and fill holes and depressions. | 3.1. Patching method of hole is determined from type of material surface, size of hole, compatibility of materials and planned finish.  
3.2. Patching materials are selected to suit material surface and are mixed to manufacturer specifications.  
3.3. Material is applied to manufacturer specifications using appropriate application method. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3.4. Surface is brushed, washed and scraped clean of surplus material in accordance with type of patching material and material surface.
3.5. Patched areas are sealed by application of prime or sealing coat, to suit requirements of specified finishes.
4. Clean up. 4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
4.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- prepare surfaces for plastering for either solid plastering (masonry or concrete) or sheet plastering (timber, steel or masonry) including:
  - both wall and ceiling surfaces to a level and plumb surface finish
  - patching or filling holes and depressions.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

mandatory task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the
EVIDENCE GUIDE

point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the preparation of surfaces for plastering
- relevant Australian standards
- safe work procedures relating to the preparation of surfaces for plastering
RANGE STATEMENT

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- surface preparations include preparation for solid plastering and sheet plastering or lining material, and may include pre-cast cladding
- surfaces may include timber, plasterboard and plasterglass, masonry, brick, metal (ferrous and non-ferrous), concrete and solid plaster.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment:

- include:
  - brooms
  - brushes
  - buckets
RANGE STATEMENT

- chisels
- filling blades
- hammers
- power grinders
- power sanders
- sanding blocks
- scrapers
- shovels
- sponges
- trowels
- may include:
  - elevated work platforms
  - hoses
  - ladders
  - planks
  - trestles
  - water sprayers.

**Materials** include:
- caulking compounds
- cellulose and plaster
- lime putty
- plaster
- proprietary fillers
- sand and cement
- sheet material.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- vibration
- waste management.

**Statutory and regulatory authorities** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant *information*, confirmed and applied to the *scope of work* performed.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. *Materials* quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and legislative authority* obligations and applied. |
| 2. Prepare templates for curved work or circular columns. | 2.1. Material is selected to manufacturer templates.  
2.2. Radiuses and shapes are established for curves and columns according to plans and specifications.  
2.3. Templates are manufactured and formed to suit job requirements. |
| 3. Prepare background surface. | 3.1. Background surface is identified and wire-brushed if required.  
3.2. Dash coat is mixed and applied liberally to wetted surface.  
3.3. Bonding coats using patent products are applied to specifications.  
3.4. Metal beads are selected for external or squint arises.  
3.5. Metal beads are fixed to arises and checked for accuracy. |
| 4. Apply floating and rendering to flat and curved surfaces. | 4.1. Screeding lines or guides are established to specified tolerances.  
4.2. Float is used and applied to Australian standards and plans and specifications. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
4.3. Floating coat is applied and ruled off to screed.
4.4. Surface is finished, plumbed and levelled to specified alignment tolerance.
4.5. Heads, reveals and sills are finished square off to wall face and back into opening.
4.6. Internal angles, ceiling and floor lines are accurately cut.
5. Apply floating and rendering coats to piers.
5.1. Floating coat is applied using floating profiles and rules, and Dutch pins or hooks so that face of pier is plumb and ruled off.
5.2. Face is squared off to form returns and reveals, rules are removed and arises are left square or radiused as required.
6. Apply floating coat within metal beading.
6.1. Metal beading is fixed to base surface to form a panel with expansion joint so that panel is plumb and square to specified position.
6.2. Panels are finished to true, flat surfaces, suitable for applying plaster and lime setting.
7. Finish rendering coats on flat walls, piers and curved work.
7.1. Walls are hand floated to fill slacks and voids.
7.2. Walls are scoured and fined using water and hand float systems.
8. Clean up.
8.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
8.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
REQUIRED SKILLS AND KNOWLEDGE

- determine requirements
- follow instructions
- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- flat and curved surface plastering floating, rendering and finishing techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plastering tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- solid plastering terminology
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of solid plastering materials and components
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- floating, rendering and finishing to specification a minimum of three surfaces, including:
  - a curved wall
  - a ceiling
  - a column.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
EVIDENCE GUIDE

- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,
EVIDENCE GUIDE

with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of float and render
- relevant Australian standards
- safe work procedures relating to the application of float and render
RANGE STATEMENT

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- floating, rendering and finishing include horizontal, vertical and curved surfaces, including walls, reveals, sills, piers and columns
- templates include those for curved work and circular columns
- background surfaces include concrete, concrete blockwork, brickwork, stonework, and timber or metal lathing
- cleaning and preparation of background surfaces include wire brushing, grinding, washing down, chipping and blast cleaning
- wash coating may be applied using trowel, brush or nozzle spray
- bond coating may be applied using nozzle spray, roller or brush.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
RANGE STATEMENT

- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:
- measuring tapes and rules
- spirit levels
- squares
- trowels
- floats
- brushes
- screed boards
- straight edges
- mortar boards and stands
- shovels
- wheelbarrows
- hawks
- joint rules
- small tools
- plumb bobs and mason's squares
- buckets
- sieves
- power leads
- hammers
- tin snips
- grinders
- wood saws
- metal files
- concrete mixers and scaffolding.

Materials:
- solid plastering materials and components
  include:
  - casing beads
  - corner beads
  - lime
  - lime putty
  - plaster compounds and finish coats
RANGE STATEMENT

- render and setting coats mix composition, including additives such as plasticisers, colour and waterproofing agents
- sand
- other materials may include:
  - flat marine ply
  - flat sheet plain galvanised iron (PGI)
  - nails
  - timber.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Environmental requirements include:

- clean-up management
- dust and noise
- stormwater protection
- waste management.

Statutory and regulatory authorities include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plastering tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- solid plastering terminology
- systems and techniques for safe handling of materials
- trowelled texture coat finish application techniques
- types, characteristics, uses and limitations of solid plastering materials and components
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- prepare for and apply to specification a minimum of two different types of texture coat finishes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying
EVIDENCE GUIDE

safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. **Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the application of trowelled texture coat finishes
- relevant Australian standards
- safe work procedures relating to the application of trowelled texture coat finishes
- signage
- verbal, written and graphical instructions
- work bulletins
RANGE STATEMENT

1.2. **Scope of work:**

- work schedules, plans and specifications.
- application of trowelled texture coat finishes includes application to horizontal or vertical surfaces to a maximum thickness of 8mm
- trowelled texture coat finishes includes high build (acrylic or styrene/acrylate) coatings, proprietary products or lines of finish, and cement render
- surfaces used for application of trowelled texture coat finishes include concrete, concrete blockwork, brickwork, stonework, timber or metal lathing, off-form concrete, fibre cement sheeting and tilt-up concrete slabs, and other brick and masonry surfaces
- cleaning of surfaces includes wire brushing, grinding, shipping and washing down
- dash coat may be applied using trowel, brush or nozzle spray.

1.3. **Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
RANGE STATEMENT

1.4. **Tools and equipment** include:
- brushes
- concrete mixers
- floats
- grinders
- hawks
- joint rules
- mason's squares
- measuring tapes and rules
- mortar boards and stands
- plumb bobs
- scaffolding
- screed boards
- shovels
- small tools
- spirit levels
- squares
- straight edges
- trowels
- wheelbarrows.

1.5. **Materials** include:
- acrylic or styrene/acrylate coatings
- cement render
- proprietary texture coat finish products.

1.6. **Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

1.7. **Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

1.8. **Statutory and regulatory authorities** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plastering tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
REQUIRED SKILLS AND KNOWLEDGE

- quality requirements
- solid plastering terminology
- solid plastering, restoration and renovation techniques
- systems and techniques for safe handling of materials
- types, characteristics, uses and limitations of solid plastering materials and components
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- restore solid plasterwork to specification on a minimum of three tasks, including:
  - one curved surface
  - one ceiling
  - one archway or column
- renovate lettering to specification where the task requires the preparation and use of significant moulds.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the restoration and renovation of solid plasterwork
- relevant Australian standards
RANGE STATEMENT

- safe work procedures relating to the restoration and renovation of solid plasterwork
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

1.2. Scope of work:
- restoration may be to lime mortar or cement render surface and includes straight or curved walls, straight or curved ceilings, chimneys and archways
- renovation includes lettering and monograms.

1.3. Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

1.4. Tools and equipment:
- include:
  - brushes
  - buckets
RANGE STATEMENT

- floats
- grinders
- hammers
- hawks
- joint rules
- mason's squares
- measuring tapes and rules
- mortar boards and stands
- plumb bobs
- power leads
- screed boards
- shovels
- sieves
- small tools
- spirit levels
- squares
- straight edges
- tin snips
- trowels
- wheelbarrows
- may include:
  - concrete mixers
  - metal files
  - scaffolding
  - wood saws.

1.5. **Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

1.6. **Statutory and regulatory authorities** include:
- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

1.7. **Materials** include:
- casing beads
- corner beads
- finish coats
- lime
- lime putty
- plaster compounds
- render and setting coats mix composition,
RANGE STATEMENT

including additives such as plasticisers, colour and waterproofing agents
• sand.

1.8. Quality requirements
include relevant regulations, including:
• Australian standards
• internal company quality policy and standards
• manufacturer specifications
• workplace operations and procedures.

1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.6. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and legislative authority* obligations and applied. |
| 2. Set out and prepare base. | 2.1. Blockwork is set out to position in accordance with plans, specifications and *quality requirements*.  
2.2. Base is prepared so that the surface is dry, horizontal, clean and flat to specifications. |
| 3. Lay plaster blockwork. | 3.1. Plaster adhesive is prepared in accordance with quantity requirements and block manufacturer recommendations.  
3.2. Plaster blocks are laid to set out line, level and plumb in accordance with plans and specifications.  
3.3. Vertical abutments with other walls are made plumb and aligned to specification.  
3.4. Surplus adhesive is removed from joints to specification requirements. |
| 4. Clean up. | 4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
4.2. *Tools and equipment* are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - notify completion of work
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and calculations
  - organisational skills, including the ability to plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- cast plaster blockwork installation materials and techniques
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plasterwork and wall and ceiling terminology
- processes for the calculation of material requirements
- quality requirements
- types, characteristics, uses and limitations of cast plaster blockwork tools and
REQUIRED SKILLS AND KNOWLEDGE

- equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply of relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- install a pre-cast gypsum plaster blockwork wall that meets specifications and is plumb with other walls.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying
EVIDENCE GUIDE

- safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the installation of cast plaster blockwork
- relevant Australian standards
- safe work procedures relating to the installation of cast plaster blockwork
- signage
- verbal, written and graphical instructions
- work bulletins
RANGE STATEMENT

1.2. **Scope of work** includes:

- installation of all pre-cast gypsum plaster blockwork, which may be single or multi-thickness wall construction.

1.3. **Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - power equipment
  - power leads and sources
  - trip hazards
  - work site visitors and the public
  - work site visitors and the public
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

1.4. **Tools and equipment** include:

- brick saws
- builder’s lines
- caulking guns
- concrete mixers
- hammers
- levelling equipment
- line pins
- measuring tapes and rules
- mortar boards
RANGE STATEMENT

- planks
- power leads
- scaffolding
- shovels
- spirit levels
- trowels.

1.5. **Environmental requirements** include:

- clean-up management
- dust and noise
- stormwater protection
- vibration
- waste management.

1.6. **Statutory and regulatory authorities** include:

- federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

1.7. **Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to apply pre-blended plasters and cement render materials on various background surfaces using a projection plastering system.

It includes planning and preparation for the work, selection and preparation of materials, preparation of the work area, application of plaster and cement render, and completion of post work clean-up activities.

The unit does not include swimming pool or pond application.

Application of the Unit

Application of the unit
This unit supports the attainment of skills and knowledge to use plaster projection equipment for application of pre-blended plaster and cement render materials in construction projects, excluding swimming pools, spas and ponds. It includes working with others and as a member of a team.

- safe work procedures relating to the
RANGE STATEMENT

application of plaster by projection machine
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- applications include walls, ceilings, inclined surfaces, sills and arches
- substrates for application include blockwork, concrete, stonework and cement sheet.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Scope of work:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
RANGE STATEMENT

**Tools and equipment** include:
- brushes
- joint rules
- measuring tapes and rules
- plumb bobs
- power leads
- projection machine and support equipment and tools
- scaffolding or working platforms
- small tools
- spirit levels
- squares
- straight edges
- trowels.

**Materials** include:
- cement render
- cleaning materials
- plaster.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- stormwater protection
- vibration
- waste management.

**Statutory and regulatory authorities** include:

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - drawings and specifications
    - material safety data sheets
    - plans
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to calculate measurement requirements related to lengths and allowances
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- material handling techniques associated with stonemasonry work
- measurement techniques relevant to stone
- types and characteristics of materials used in stonemasonry work
- types and safe use of portable power tools for stonemasonry work
- types and use of hand tools and equipment relevant to stonemasonry work
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to prepare for a range of stonemasonry activities, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements
- carry out correct procedures prior to and during the construction processes
- demonstrate safe and effective operational use of tools, plant and equipment
- adopt and use correct procedures to handle and place materials
- communicate with others to ensure safe and effective work site operations.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- construction materials relevant to stonemasonry work
- hand and power tools appropriate to stonemasonry work processes
EVIDENCE GUIDE

- plant and equipment appropriate to stonemasonry work processes
- suitable work area appropriate to construction processes.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to preparation for stonemasonry production process
- relevant Australian standards
- safe work procedures relating to preparation for stonemasonry production process
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

1.2. Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
RANGE STATEMENT

1.3. Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - dust
  - lighting
  - restricted access barriers
  - traffic control
  - wind
  - work site visitors and the public
  - working at heights
  - working from platforms
  - working in confined spaces
  - working in proximity to others
  - working with heavy stone
  - use of firefighting equipment
  - use of shifting equipment
  - use of tools and equipment
  - working platforms and scaffolding
  - workplace environmental requirements and safety.

1.4. Tools and equipment include:

- angle grinders
- bolsters
- brushes and brooms
- hammers
- hoses
- masonry saws
- measuring tapes and rules
- mortar boards
- power leads
RANGE STATEMENT

1.5. Quality requirements include:
- handling of materials
- preparation of surfaces
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- storage of materials
- use and maintenance of tools and equipment.

1.6. Materials:
- include:
  - cement
  - lime
  - sand
- may vary in accordance with stone:
  - colour
  - shape
  - size
  - type
- preparation may include:
  - cutting stone
  - preparing materials for batching for mortar.

1.7. Environmental requirements include:
- clean-up management
- dust and noise
- stormwater protection
- waste management.

1.8. Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

1.9. Work area preparation includes:
- cleaning of strip footings or slab
- erecting scaffolding
- establishing temporary water and power supply
- locating mortar boards
RANGE STATEMENT

1.10. Construction processes include:

- preparing access for supply of mortar
- setting up concrete mixer.
- cleaning stone face
- laying stone
- preparing for stone laying
- work site preparation.

Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### ELEMENT | PERFORMANCE CRITERIA
--- | ---
1. **Plan and prepare.** | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.
   
   1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.
   
   1.3. Signage and barricade requirements are identified and implemented.
   
   1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.
   
   1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.
   
   1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.
   
   1.7. Stone hardness is identified using Moh's scale.
   
   1.8. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied.

2. **Use abrasives.** | 2.1. Coolant is used as required by selected abrasives, stones and job requirements.
   
   2.2. Range of grades of abrasives is used in accordance with job requirements and specifications.
   
   2.3. Polishing compounds are used in accordance with job requirements and specifications.
   
   2.4. Various polishing heads are used in correct sequence to provide finish to specification.

3. **Use stone cutting equipment.** | 3.1. Stone is set into place on cutting table to obtain maximum efficiency in cutting.
   
   3.2. Stone is wedged or fixed into place by nailed timber strips to ensure stability and is aligned correctly to cutting blade.
   
   3.3. Adjustments are made to machinery as required by maximum depth of cut and size of stone.
   
   3.4. Primary cutting machines are used appropriate to their cutting capacity.
   
   3.5. Secondary cutting machines are used appropriate to

</tbody>
</table>

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace
REQUIRED SKILLS AND KNOWLEDGE

responsibilities, such as current work site environmental or sustainability frameworks or management systems

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - drawings and specifications
    - other relevant workplace documentation
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences

- numeracy skills to workplace requirements including measurements

- problem solving skills to recognise and take action to rectify minor faults and problems
- read and interpret drawings and documentation

- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- methods of finishing stone
- Moh's scale of stone hardness
- OHS regulations relating to guarding and using static and hand-held power tools and equipment on stone
- range and grades of polishing compounds
- regulations related to safe waste disposal and dust suppression
- role of coolant in stone polishing process
- types and characteristics of adhesives and fillers relevant to finishing stone surfaces
- types of stone and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to finish two types of stone, one hard and one soft, using at least two types of equipment listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to machinery, equipment and workplace operations
- apply organisational quality procedures and processes within the context of finishing stone
- stabilise stone or equipment, prior to cutting or polishing
- select cutting and polishing processes appropriate to stone shape, size and specified finish
- use polishing heads in a logical sequence to achieve specified finish
- polish, using both hand-held and static polishing machinery
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations
- complete finishing process to stone to specifications.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace operations
- access to equipment and materials for cutting and polishing stone
- stone relative to cutting and polishing proposed activity
- drawings, specifications and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

Separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- Diagrams or sketches
- Instructions issued by authorised organisational or external personnel
- Manufacturer specifications and instructions, where specified
- Material safety data sheets (MSDS)
- Memos
- Regulatory and legislative requirements pertaining to handling stone
- Relevant Australian standards
- Safe work procedures relating to handling
RANGE STATEMENT

Planning and preparation include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - working platforms and scaffolding
  - workplace environmental requirements and safety.

Tools and equipment include:

- angle grinders
- buffs
- circular saws
- drills
- edge polishers
- frame saws
RANGE STATEMENT

- hole saws
- Jenny Lind type polishers
- line polishers
- milling machines
- rise and fall saws
- rotating or transverse tables
- stationary slab polishers
- twin tables
- water jets
- wire saws.

Quality requirements include:
- attention to specifications of work
- control of handling procedures
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- use and maintenance of equipment
- workplace operations and procedures.

Materials include:
- cementitious material
- chemical adhesive
- epoxy and polyester resins
- plaster.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Adhesives applied as fillers may be to:
- apply reinforcing to slabs
- fill natural fissures
- laminate edges.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
REQUIRED SKILLS AND KNOWLEDGE

- follow instructions
- read and interpret:
  - drawings and specifications
  - material safety data sheets
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to calculate measurement requirements related to lengths and allowances
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS3700 Masonry in buildings
- Building Code of Australia (BCA) requirements relevant to stonemasonry work
- common finishes used for mortar in masonry
- commonly used range of mortar additives, including plasticisers and their application
- interpretation of work drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring and levelling processes relevant to stonemasonry work
- mortar mix types and composition
- techniques for laying and securing stone
- types of stone and their characteristics
- types of stone wall construction
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to construct three stone walls using different types of stone materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- display compliance with organisational policies and procedures, including quality assurance requirements within the context of laying stone
- select and use appropriate processes, tools and equipment to carry out tasks
- demonstrate sound techniques in preparing mortar
- display sound and safe application methods to handle stone
- demonstrate sound techniques in laying stone to line, level, plumb or to designed alignment
- select and use sound techniques to finish stone face to specification
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location
- appropriate tools, plant and equipment
- scaffolding where applicable
- materials suitable to the task
- relevant drawings, specifications and documentation.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
RANGE STATEMENT

Planning and preparation include:

- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - working platforms and scaffolding
  - workplace environmental requirements and safety.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- use of firefighting equipment
- use of tools and equipment
- working platforms and scaffolding
- workplace environmental requirements and safety.

Tools and equipment include:

- angle grinders
- bolsters
- hammers
- jointing tools
- measuring tapes and rules
- screed boards
- shovels
- spirit levels
- trowels
- wheelbarrows.
RANGE STATEMENT

Quality requirements include:
- control of handling procedures
- control of quality of stone
- relevant regulations, including:
  - AS3700 Masonry in buildings
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- specification of mix
- specified finish
- use and maintenance of equipment.

Materials include:
- basalt
- granite
- marble
- sandstone
- other natural or manufactured stone material.

Environmental requirements include:
- waste management
- dust and noise
- vibration
- clean-up management.

Statutory and regulatory authority include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Mortar admixtures include:
- plasticisers
- setting retardants
- waterproofers.

Reinforcing includes:
- mechanical ties and fixtures
- steel rods
- welded wire fabric
- wire strands.

1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Move, locate and secure load. | 2.1. Shifting/anchorage points are located and identified and slings, tackles, associated lifting gear and tools are selected consistent with needs of task.  
2.2. *Shifting equipment* and tools are inspected and damaged work items are reported to supervisor.  
2.3. Strongbacks/stiffeners are positioned and securely attached as required.  
2.4. Load is safely slung, connected to lifting gear and packing is secured to protect load.  
2.5. Destination location is prepared to receive load.  
2.6. Load is stood vertically if necessary, safely moved to required location and secured in position. |
| 3. Clean up. | 3.1. Slings, associated lifting equipment and packing are removed and loose debris and waste material removed and disposed of safely.  
3.2. Slings, lifting equipment and tools are cleaned, maintained and safely stored.  
3.3. Necessary documentation is completed. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change, and contribute to workplace responsibilities such as current work site environmental/sustainability frameworks or management system
- communication skills to:
  - communicate with team
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report damaged work items to supervisor
  - use and interpret non-verbal communication, including the use of hand signals
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to workplace requirements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- basic hand signalling techniques
- basic tools, plant and equipment related to materials handling
- hazard identification and prevention methods to be adopted
- job safety analysis (JSA) and safe work method statements
- measurement techniques relevant to slinging and placing materials
- techniques for stacking and storing materials safely and for allowing egress to others and easy access to materials for retrieval
- types and characteristics of materials used in stonemasonry work
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to sling and move materials, providing evidence of the ability to:

- comply with workplace and equipment safety requirements of state and territory regulatory authorities
- comply with organisational policies and procedures within the context of handling materials and using valuable equipment
- select and use appropriate lifting equipment to suit load movement process
- connect lifting equipment safely and effectively
- apply safe and effective techniques to carry out movement and placement of materials
- use appropriate communication techniques with others to assist with moving a load, ensuring safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace
- plant and equipment relative to activity
EVIDENCE GUIDE

- tools and equipment appropriate to materials and activities
- materials appropriate to proposed activities.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to load slinging
- relevant Australian standards
- safe work procedures relating to load slinging
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

1.2. Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
RANGE STATEMENT

1.3. **Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of shifting plant and equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

1.4. **Tools and equipment** include:

- chain slings and hooks
- lifting beams
- lifting clutches
- mobile pendant operated cranes
- nylon ropes
- packing
- ropes
- shackles and eye bolts
- spanners
- strongbacks.

1.5. **Quality requirements** include:

- control of handling procedures
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and
RANGE STATEMENT

standards
• manufacturer specifications where specified
• workplace operations and procedures
• use and maintenance of equipment.

1.6. Materials include:
• crates of fittings
• packs of metal sections
• packs of pipe lengths
• packs of sheet material
• packs of timber
• pallets of bagged material
• pre-cast concrete
• steel sections
• stone sections.

1.7. Environmental requirements include:
• waste management
• dust and noise
• vibration
• clean-up management.

1.8. Statutory and regulatory authority includes:
• federal, state and local authorities administering applicable Acts, regulations and codes of practice.

1.9. Shifting equipment refers to:
• equipment excluding that requiring a certificate of competency for operation as specified by state and territory licensing requirements.

Functional area

Functional area
CPCCST2006A Identify and use stone products

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to descriptor, application, performance criteria (including additional performance criteria), required skills and knowledge, and critical aspects for assessment
- Range of other minor editorial changes
Not equivalent to CPCCST2002A Identify and use stone products

Unit Descriptor
This unit of competency specifies the outcomes required to identify and use suitable natural stone, and stone products manufactured to designed specifications, for both off-site and in situ installation. The unit may include working with others and in a team.

Application of the Unit
This unit of competency supports the work of stonemasons who select and prepare specific types of natural stone and stone products for different work tasks according to job specifications.

Licensing/Regulatory Information
Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements for work carried out on heritage structures.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1 Plan and prepare.  
   1.1 Work instructions are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.
   1.2 *Work health and safety (WHS) requirements* are followed according to safety plans and policies.
   1.3 Signage and barricade requirements are identified and implemented.
   1.4 *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.
   1.5 Material quantity requirements are identified and calculated according to plans, specifications and *quality requirements*.
   1.6 *Materials* appropriate to the work application are obtained, prepared, safely handled and located ready for use.
   1.7 *Environmental requirements* are identified for the project according to environmental plans and *statutory and regulatory authority* requirements.

2 Use industry terms for the identification and use of stone  
   2.1 Common terms, instructions and information relating to use of stone are understood and used in the workplace.
   2.2 Commonly used symbols and abbreviations are identified and applied.
### Identify and use stone products.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication
  - use questioning to identify and confirm requirements
  - share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to calculate material requirements
- problem-solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to work with others to action tasks

Required knowledge

- architectural styles used in stonemasonry work
- characteristics of different types of natural stone
- drawing conventions and construction terminology used in plans and specifications
- job safety analyses (JSA) and safe work method statements (SWMS)
- measurement techniques relating to stonemasonry work
- types and uses of accessories associated with stone construction
- types of stone and stone products
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the selection and use of a minimum of three stone types from a range of igneous, metamorphic, sedimentary or reconstituted materials that are suitable for nominated purposes, providing evidence of the ability to:

- comply with WHS requirements applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements
- carry out correct procedures prior to and during handling processes
- select and use appropriate processes, tools and equipment to cut stone
- adopt and use correct procedures to handle and place materials
- communicate with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment may include:

- construction materials required to apply stone product
- hand and power tools appropriate to work processes
- plant and equipment appropriate to work processes
- suitable work area appropriate to application processes.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work
conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reviewing relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**
• current Australian standards relating to handling, sawing and using stone products
• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• memos
• regulatory and legislative requirements for handling stone products
• safe work procedures relating to handling stone products
• safety data sheets (SDS)
• signage
• verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
• work bulletins
• work schedules, plans and specifications.

**Planning and**
• assessing conditions and hazards
**preparation** may include:
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting work sites.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - working platforms and scaffolding
  - workplace environmental requirements and safety.

**Tools and equipment** may include:
- angle grinders
- bolsters
- brushes and brooms
- chisels
- clamps
- hammers
- hoses
- level
- masonry saws
- measuring tapes and rules
- mortar boards
- pitching tools
- power leads
- scaffolding
- shovels
- small tools
- stone packers
- wheelbarrows.
Quality requirements may include:

- attention to specifications of work, including architectural style
- control of handling procedures
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal organisational quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- use and maintenance of equipment.

Materials may include:

- basalt
- granite
- marble
- pre-cast concrete
- sandstone.

Environmental requirements may include:

- clean-up management
- dust and noise control
- vibration management
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Processing and manufacture may include:

- crushed to aggregate size
- crushed to fine particle (dust) size
- cut and polished to tile size
- cut or finished to pavement section size
- natural stone products cut to size.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied. |
| 2. Prepare stone for dressing. | 2.1. Stone is checked for defects or natural inclusions and dimensions of stone are checked for accuracy as required by job and specifications.  
2.2. Bedding plane is checked where relevant for correct orientation to suit function and location of finished job. |
| 3. Mark details on stone. | 3.1. Templates are applied square to stone or appropriate to job requirements and marked on adjacent ends of stone.  
3.2. Placed templates are checked for twist/wind to ensure stone is marked out true.  
3.3. Required template details are scribed or marked so that lines remain indelible for duration of job. |
| 4. Dress a simple moulding. | 4.1. Mouldings are dressed in a staged sequence of fillets and chamfers, or as required by job.  
4.2. Each stage of dressing is marked out accurately and as required by job before proceeding with dressing and each stage is checked upon completion for accuracy before proceeding. |
| 5. Finish moulded stone surfaces. | 5.1. Stone surfaces are finished using chisels or other hand tools as required by job and specifications.  
5.2. Abrasives are used to finish surfaces if required by job and specifications. |
| 6. Clean up. | 6.1. Stone is cleaned using water and brush or other appropriate non-corrosive method. |
ELEMENT | PERFORMANCE CRITERIA
---|---
6.2. Tools and equipment are cleaned, maintained and stored.
6.3. Work area is cleared and waste materials disposed of in an appropriate manner and in accordance with Environment Protection Authority (EPA) requirements.
6.4. Templates are cleaned, labelled and stored for reuse.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to workplace requirements
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of working drawings and specifications
- job safety analysis (JSA) and safe work method statements
REQUIRED SKILLS AND KNOWLEDGE

- material handling techniques associated with stonemasonry work
- measuring and marking techniques relevant to stonemasonry work.
- methods of dressing stone
- regulations related to safe waste disposal and dust suppression
- types of stone and their characteristics
- use of templates for stonemasonry work
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to dress hard and soft stone to at least three separate simple moulding types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of dressing stone
- select and use appropriate processes, tools and equipment consistent with task requirements
- sound and accurate techniques used to set out and prepare stone for dressing processes
- demonstrate sound techniques in dressing hard and soft stone
- display sound application processes in sequencing tasks associated with the shaping of stone
- adoption and use of accurate techniques to set out stone and set up templates to mark mould
- adopt and use safe and effective procedures to dress and shape stone
- complete mould to designed shape and surface finish.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
EVIDENCE GUIDE

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- hand tools and equipment appropriate to tasks
- working drawings, specifications and templates relevant to tasks
- workshop and related equipment appropriate for required activity
- stone appropriate to the relevant tasks.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

Confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
RANGE STATEMENT

Planning and preparation include:

- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - control of dust and noise
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- bevels
- brushes
- chisels
- clamps
- cocks combs
- dividers and wing compasses
- drags
- hammers
- measuring tapes and rules
RANGE STATEMENT

- pitching tools
- pneumatic chisels
- portable cutters and grinders
- power grinder
- power leads
- punches
- scribes
- squares
- straight edges
- tooth chisels.

Quality requirements include:

- attention to specifications of work
- control of handling procedures
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- use and maintenance of equipment.

Materials include:

- igneous rock, including basalt (blue stone) and granite
- marble
- sandstone.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Stone types include:

- igneous rock, including basalt (blue stone) and granite
- marble
- sandstone.

Templates may be made of:

- aluminium sheet
- cardboard
- plastic
- plywood
RANGE STATEMENT

Moulding types depend on local industry requirements, existing heritage structures or other factors and may include:

- zincalume sheet.
- ashlar stopped with external mitre
- curved segments
- internal mitres
- pediment springers
- ramp and twist
- straight sections.

  - read and interpret:
    - drawings and specifications
    - plans
    - schedules
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and...
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

• interpretation of drawings and specifications
• job safety analysis (JSA) and safe work method statements
• measuring and marking techniques used in stonemasonry work
• methods of shaping stone
• regulations related to safe waste disposal and dust suppression
• types of stone and their characteristics
• workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to shape one hard and one soft stone type to design specifications, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within the context of shaping stone
- select and use appropriate processes, tools and equipment to carry out required tasks
- adopt and use sound and safe techniques in handling and manoeuvring stone
- sound and accurate techniques used to set out stone for shaping processes
- display effective and sound procedures to control dust, noise and hazards
- demonstrate sound and safe application techniques to use equipment and shape stone.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- hand tools and equipment appropriate to tasks
- stone materials applicable to required activities
- suitable work area appropriate to application
EVIDENCE GUIDE

- work drawings and documentation.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as
EVIDENCE GUIDE

Far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
RANGE STATEMENT

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - control of dust and noise
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Tools and equipment** used to shape stone include:

- axes
- bush hammers
- chisels
- patent axes
- poky
- spalling hammers.

**Quality requirements** include:

- attention to specifications of work
- control of handling procedures
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
- use and maintenance of equipment.
RANGE STATEMENT

Materials include both hard and soft stones, such as:

- basalt (blue stone)
- granite
- limestone
- sandstone.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied. |
| 2. Use a range of methods for splitting stone. | 2.1. Alternative methods are identified for drilling and splitting stone.  
2.2. Stone is split and squared by drilling and using plugs and feathers.  
2.3. Holes are set out to line and spacings and drilled to depths as specified for type and size of stone.  
2.4. Guillotine principles are applied and used for splitting various thicknesses of slabbed stone as required by job or organisation.  
2.5. Stone is split using natural lines of cleavage. |
| 3. Clean up work. | 3.1. Stone surfaces are finished as required by job and specifications.  
3.2. Work is cleaned on completion with fresh water and brushes if necessary.  
3.3. Waste materials are disposed of in an appropriate manner and in accordance with Environment Protection Authority (EPA) requirements. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of working drawings and specifications relevant to stonemasonry work
- job safety analysis (JSA) and safe work method statements
- material handling techniques associated with stonemasonry work
- measuring and marking techniques relevant to splitting stone
- methods of splitting stone
- regulations related to safe waste disposal and dust suppression
- types of stone and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to split stones to thickness both with and against the grain, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of splitting stone
- select and use appropriate processes, tools and equipment to carry out tasks
- split both hard and soft stone
- sequence appropriate tasks associated with splitting stone
- adopt and use safe and effective procedures when using power tools and splitting of stone.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location
- hand tools and equipment appropriate to splitting stone
- stone appropriate to activity
- drawings, specifications and documentation
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language,
EVIDENCE GUIDE

literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
RANGE STATEMENT

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:

- axes
- bush hammers
- chisels
- masonry drills
- patent axes
- plugs and feathers
- poky
- sledge hammers
- spalling hammers
- splitting wedges.

Quality requirements include:

- attention to specifications of work
- procedures in splitting stone
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where
RANGE STATEMENT

specified

- workplace operations and procedures
- use and maintenance of equipment.

**Materials** include hard and soft stones, such as:

- basalt (blue stone)
- granite
- limestone
- locally available stone
- porphyry
- sandstone
- slate.

**Environmental requirements** include:

- clean-up management
- dust and noise
- vibration
- waste management.

**Statutory and regulatory authority** include:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Splitting stone** methods may include:

- expanding grout
- freezing
- hydra splitting
- plugs and feathers
- v-cut and wedging.

- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to dress both hard and soft stone types from those listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational quality procedures and processes within context of dressing stone
- select and use appropriate processes, tools and equipment to carry out tasks
- demonstrate sound and safe techniques to produce dressed face on stone
- demonstrate accurate setting out of each side and end of stone
- select appropriate sequencing of tasks associated with shaping of stone
- adopt and use safe and effective procedures to dress stone
- regularly check dressing process to ensure work is to set out and size
- dress and finish stone to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- workplace location
- hand tools and equipment appropriate to setting out and dressing processes
- stone appropriate to activity
- drawings, specifications and documentation relative to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured
EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified

- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards
- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation

- assessment of conditions and hazards
RANGE STATEMENT

include:

- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- axes
- bevels
- cocks combs
- drags
- drills (power or hand)
- hand saws
- koblers
- mallets and hammers
- measuring tapes and rules
- pitchers
- plugs and feathers
- punches
- range of chisels

Tools and equipment will depend on type of stone being used, designed shape to be produced and will include:
RANGE STATEMENT

- scribers
- spalling hammers
- spirit levels
- splitting gads
- squares
- straight edges
- tooth chisels.

Quality requirements include:
- attention to specifications of work
- control of handling procedures
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
  - use and maintenance of equipment.

Materials include hard and soft stones, such as:
- basalt (blue stone)

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to cut, grind and polish to specification at least three types of stone products listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures
- select and use appropriate processes, tools and equipment to carry out tasks
- apply organisational quality procedures and processes within the context of setting and anchoring stone facades
- demonstrate sound techniques in dressing hard and soft stone
- select stone consistent with specification for material and colour
- accurately set out and install fixing brackets
- demonstrate safe handling practices in moving and placing stone
- fix stone to position and structure
- fix stone to line, level and plumb with clamps securing components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations
- complete stone facade to specification.

Context of and specific resources

This competency is to be assessed using standard
EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- work location for installation of stone
- tools, plant and equipment appropriate to installation processes
- construction materials relevant to proposed activity
- appropriate documentation relevant to task.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected
EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions, where specified
• material safety data sheets (MSDS)
• memos
• regulatory and legislative requirements pertaining to handling stone
• relevant Australian standards
RANGE STATEMENT

Planning and preparation include:

- safe work procedures relating to handling stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:

- brooms
- brushes
- clamps
- hammers
- jigs
- measuring tapes and rules
RANGE STATEMENT

- shovels
- spanners
- spirit levels
- squares
- wedges.

**Quality requirements** include:
- internal company quality policy and standards
- manufacturer specifications
- relevant regulations including Australian standards
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
- waste management.

**Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Stone machining equipment** includes:
- block squaring machines
- drilling machines
- frame or gang saws
- Jenny Lind type polishers
- multi-blade saws
- multi-functional cutter, grinder and polisher (Jenny Lind type)
- multi-head static polishers
- planing machines
- shaping machines
- slab splitting machines
- static diamond circular saws
- travelling beam circular saws.

**Machining operation** includes:
- bevelling
- drilling
- grinding
- polishing
- sawing.

Types of **stone** include:
- igneous rock, including basalt (blue stone) and granite
- limestone
- marble
- sandstone.
RANGE STATEMENT

Cutting blades include:
- carborundum
- diamond.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  
Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Stone quality identified, selected and *prepared* for turning.  
1.8. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Construct templates. | 2.1. Appropriate template material is selected and *template* prepared and cut to required shape or design using appropriate tools.  
2.2. Template is applied to stone for basic roughing out procedure as required by design, and appropriate tools and machines are selected consistent with job requirements. |
| 3. Identify applications of lathe work to stonemasonry. | 3.1. Specific features of lathe applications and methods of handling and holding work applicable to lathe operation are identified and used.  
3.2. Machine operations, including pre-service checks, are identified and machine speeds and feed rates are calculated. |
| 4. Operate lathe and turn stone. | 4.1. Job sheet is prepared as service record of lathe operation where applicable, and correct lathe cutting tools are selected and prepared for use.  
4.2. Correct alignment of talkstock is accurately performed. |
ELEMENT | PERFORMANCE CRITERIA
---|---
4.3. | Pre-service checks are correctly performed in accordance with manufacturer specifications and machine working speeds and feed rates.
4.4. | Roughing and finishing areas are set by calculations from operations sheet specifications.
4.5. | Holding devices are correctly applied to work piece and lathe is operated through a dry run check before lathe start-up procedure is applied.
4.6. | Lathe *operation* is performed to turn stone to match contour of template.
5. | Finish and seal stone.
5.1. | Correct contour conformity to template is checked, stone is turned and surface is finished to specification.
5.2. | Completed stonemasonry work is removed from lathe and prepared for sealant application as specified.
5.3. | Sealing solutions and compounds are applied to manufacturer specifications.
6. | Clean up.
6.1. | Debris and waste materials are removed on completion of process.
6.2. | Re-usable and recyclable materials are salvaged and stored.
6.3. | Lathe accessories are removed and tools and equipment are cleaned, maintained and stored.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measurement techniques relative to design shapes in stone
- processes and techniques for finishing stone surfaces
- processes for preparation of stone
- techniques for operating a lathe
- techniques for safe handling of material relevant to stonemasonry work
- techniques for turning and shaping stone
- types and uses of templates for lathe work
- types and uses of cutting tools associated with turning stone
- types and uses of hand tools and equipment relevant to setting up and turning stone
- types of stone and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to prepare and turn stone and produce two different finished, turned products using at least two of the stone material types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of producing turned stone
- demonstrate safe and effective operational use of tools and equipment with processes
- adopt and use correct procedures to handle and place material
- demonstrate sound techniques to accurately produce template to designed profile
- demonstrate sound and safe procedures to dress stone to requirements in preparation for turning
- display sound understanding of turning work applications and selection of appropriate cutting tools
- demonstrate sound techniques to set up and prepare material and lathe for lathe operation
- display sound and safe techniques to cut, dress and finish stone to shape and specifications
- communicate with others to ensure safe and effective workplace operations.
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- materials relative to the activity
- hand tools, machinery and equipment appropriate to activity
- suitable work area
- drawings and documentation relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information includes:**

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings, specifications and job designs
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- basic keyboarding skills
- basic problem and fault finding skills with software applications
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to workplace requirements
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- construction materials and their characteristics
- handling techniques for material relative to stonemasonry work
- hardware requirements for software use
REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- measuring techniques relevant to dimensions and shape
- range of software applications appropriate to computer numerically-controlled (CNC) equipment
- types of machines and machining processes, including computer-controlled machinery
- workplace and equipment safety requirements.
### Evidence Guide

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to produce three separate stone components using two types of stone material listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- select and use appropriate processes, tools and equipment to carry out application tasks
- apply organisational quality procedures and processes within context of operating computer-controlled machinery
- input data to achieve job requirements
- demonstrate sound procedures with machine operated through a reduced speed dry run to check functions and alarms
- demonstrate sound and safe techniques to set stone into place for machine operations
- demonstrate correct procedures in start-up and shut-down procedures for machining operations
- produce products to design in accordance with job specifications and drawings
- identify faults or problems that may occur and necessary action taken to rectify
- communicate with others to ensure safe and effective workplace operations.

#### Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- CNC machinery applicable to proposed activity
- range of cutters, heads and required tools and equipment
- machining project and specifications relevant to activity
- data and software programs relevant to application activity
- material applicable to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Select stone. | 2.1. Stone is selected for quality, grain and dimensions to suit job specifications.  
2.2. *Surface for lettering* is prepared for setting out process in accordance with type of stone and specifications. |
| 3. Set out for lettering. | 3.1. Drafting skills are used to accurately set out *lettering* to full size for transference to work surfaces using *templates or stencils* and fonts appropriate to cemetery monument set-out and design.  
3.2. Fonts are set out appropriate to architectural settings and to suit a variety of commercial signage applications.  
3.3. Set out lettering is accurately transferred to stone face by use of appropriate transfer method. |
| 4. Cut and form traditional and contemporary letters. | 4.1. Raised and flush letters are cut and formed in stone to set-out designed shapes.  
4.2. V-formed letters are cut and formed in stone to set-out designed shapes.  
4.3. Decorative ornamental work in lettering is cut and formed in stone to set-out designed shapes. |
5. Cut and form innovative forms of lettering.

- 5.1. Innovative design and technique for working letters in stone are developed and drafted into set-out.
- 5.2. Drafted design is transferred to prepared surface by an appropriate method.
- 5.3. Lettering is cut and formed in stone to designed shapes and style of cut.

6. Clean up.

- 6.1. Final stone finish is cleaned to specification.
- 6.2. Waste materials are disposed of according to EPA requirements.
- 6.3. Tools are cleaned, maintained and stored.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- Ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems.
- Communication skills to:
  - Enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand.
  - Follow instructions.
  - Identify letters in order to check spelling.
  - Read and interpret:
    - Client's brief.
    - Drawings and specifications.
  - Use and interpret non-verbal communication.
  - Use language and concepts appropriate to cultural differences.
- Innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action.
- Numeracy skills to apply measurements and calculations.
- Planning and organisational skills to identify requirements, apply relevant resources and sequence tasks.
- Problem solving skills to recognise and take action to rectify minor faults and...
REQUIRED SKILLS AND KNOWLEDGE

problems

- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- drawing and sketching techniques
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- lettering techniques relevant to stonemasonry work
- materials handling techniques
- measuring and setting out processes related to layout of signs or lettering
- methods of working stone
- traditional and contemporary font styles used in stonemasonry work
- types and use of portable power tools relevant to stonemasonry work
- types and use of stencils and templates
- types and use of tools and equipment relevant to dressing stone and processes for cutting letters
- types of stone and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to produce a range of stone letters in different fonts, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures, including quality assurance requirements within the context of lettering in stone
- select and use appropriate processes, tools and equipment to carry out tasks
- demonstrate sound and accurate techniques to draft lettering to design requirements
- prepare face for lettering, carried out to surface finish and setting out specifications
- accurate setting out of letters to form balanced presentation
- check spelling prior to transference or cutting processes
- demonstrate sound and accurate techniques to transfer design to stone face
- demonstrate correct procedures and sound techniques to use tools and equipment to produce lettering to design
- provide protection to surrounding area during application processes
- complete lettering and finish surface to design and specifications
- communicate with others to ensure safe and
EVIDENCE GUIDE

effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- materials relative to the activity
- hand and power tools appropriate to activity
- plant and equipment appropriate to activity
- suitable work area appropriate to activity
- appropriate drawings, documentation and drawing or sketching equipment relevant to activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over
EVIDENCE GUIDE

a period of time reflecting the scope of the role and practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
RANGE STATEMENT

- memos
- regulatory and legislative requirements pertaining to handling and cutting stone
- relevant Australian standards
- safe work procedures relating to handling and cutting stone
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:

- clamps
- drafting equipment
- hammers
RANGE STATEMENT

- lettering chisels
- mallets
- masonry drills
- measuring tapes and rules
- pneumatic chisels, including lettering chisels
- power grinders
- punch
- scribers
- sculptor's chisels
- squares.

**Quality requirements** include:

- attention to specifications of work
- control of handling procedures
- finishing of stone surfaces
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures
  - use and maintenance of equipment.

**Materials** include:

- granite
- marble
- reconstituted stone
- slate.

**Environmental requirements** include:

- clean-up management
- dust and noise
- vibration
- waste management.

**Statutory and regulatory authority** includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Surfaces for lettering** include:

- dressing
- milling or cutting
- painting surface for setting out
- polishing
- sandblasting.

**Lettering** may extend beyond

- heraldry
- iconography
RANGE STATEMENT

recognised fonts to include: symbols.

Templates and stencils may be made of:
- aluminium sheet
- cardboard
- plastic sheet
- plywood
- zinalume sheet.

Design transfer involves:
- computer aided design (CAD) equipment to assist setting out, such as vinyl cut out
- direct drafting
- stencils
- templates
- tracings.

| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Material quantity requirements are calculated in accordance with plans, specifications and quality requirements.  
1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.6. Environmental requirements are identified for the project in accordance with environmental plans and statutory and regulatory authority requirements, and are applied. |
| 2. Identify design requirements for various monuments. | 2.1. Range of monuments covered by AS4204 Headstones and cemetery monuments, and features and components involved in monumental construction are identified and applied.  
2.2. Legislation, regulations and codes relating to masonry work are identified and site features influencing design are applied from site visit or report. |
| 3. Prepare plans and specifications for construction and installation. | 3.1. Foundation design is selected in accordance with AS4204, job safety analysis (JSA) and safe work method statements, proposed monument and foundations.  
3.2. Materials are selected in accordance with regulations, site conditions and customer requirements.  
3.3. Drawings and specifications are prepared to requirements of approving authority, where applicable. |
| 4. Check details, edit drawings and specifications for submission. | 4.1. Specifications and drawing details are checked to ensure consistency with client brief and regulatory authority requirements.  
4.2. Documentation and drawings are accurately copied and distributed. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation
    - plans
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- AS4204 Headstone and cemetery monuments
- basic design of cemetery monuments
- Building Code of Australia (BCA) requirements relevant to stonemasonry work
- common materials used in monumental construction
- interpretation of drawings and specifications
- JSA and safe work method statements
- measuring and levelling techniques and processes relevant to stonemasonry work
- regulatory authorities and agencies controlling monumental construction
- types and characteristics of soils and foundations
REQUIRED SKILLS AND KNOWLEDGE

- types and performance of concrete footings.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to design and plan installation of a stone monument to a client's brief, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- appropriately select available data consistent with requirements of activity
- apply organisational quality procedures and processes within the context of planning monumental construction
- gather and address in planning process, information relating to site regulations/caveats and construction requirements
- identify burial site location on site drawing and location on site
- select materials in accordance with cemetery proposed monument and AS4204 requirements
- use construction fixing, fastening and finishing requirements specified in final design.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- drawing equipment and appropriate workplace
EVIDENCE GUIDE

- Australian standards and BCA
- brief relevant to proposed activity
- cemetery data relevant to the design project.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
EVIDENCE GUIDE

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel

equipment and waste and unwanted material are disposed of safely.

7.3. Unused materials are stored/stacked and tools and equipment cleaned, maintained and stored.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

**Required knowledge**

Required knowledge for this unit is:

- Australian standards
- BCA
- interpretation of drawings and specifications
REQUIRED SKILLS AND KNOWLEDGE

- job safety analysis (JSA) and safe work method statements
- measuring, levelling and calculation processes relevant to stonemasonry work
- methods of fixing stone veneer
- range of commonly used mortar additives
- safe use of scaffolding
- types and safe use of lifting equipment
- types of mortar mix and composition
- types of stone and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to fix stone veneer to at least one of the structural types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- select and use of appropriate processes, tools and equipment for carrying out tasks
- apply organisational quality procedures and processes within the context of stone veneer construction
- select stone consistent with specification for material and colour
- use safe handling practices in moving and placing stone
- fix stone to position and structure
- use safe and effective procedures to lay a stone wall to alignment and plumb
- fix and finish wall ties of stone face to specifications
- comply with organisational policies and procedures
- demonstrate accurate measuring and setting out techniques
- determine wall location and set-out accurately
- lay stone to line level, plumb and gauge
- apply safe and effective procedures in erecting scaffolds
- identify faults and problems that occur and take necessary action to rectify
EVIDENCE GUIDE

- communicate interactively with others to ensure safe and effective work operations are carried out
- clean up cavities, wall and work area
- complete base and stone veneer construction to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- work location for stone veneer activity
- tools, plant and equipment appropriate to construction processes
- construction materials relevant to proposed activity
- appropriate documentation relevant to task.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Unit Descriptor
Unit descriptor: This unit specifies the outcomes required to fix a monumental stone, using granite, marble, basalt, pre-cast concrete sections or reconstituted stone.

Application of the Unit
Application of the unit: This unit of competency supports the achievement of skills and knowledge to carry out cemetery stone monument fixing, which may include working with others and as a member of a team.

Licensing/Regulatory Information
Not Applicable

Pre-Requisites
Prerequisite units:
- CPCCOHS2001A: Apply OHS requirements, policies and procedures in the construction industry.
Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Construct footings and prepare monument stones. | 2.1. Monument footings are set out and excavated to dimensions from drawings and specifications.  
2.2. Reinforcement is placed, formwork fixed and concrete poured to provide footings to specifications.  
2.3. Delivered stone is checked for conformity to size, design and specifications.  
2.4. Layout is set out on footings to dimensions of design and appropriate lifting equipment is installed and tested or made ready to OHS regulations and job requirements, where applicable. |
| 3. Set up side stones into place. | 3.1. Side stones are stood up into position on packing of cement sheet or stone pieces with packing adjusted to provide slight fall towards front stone.  
3.2. Side stones are checked for plumb and packing is adjusted where required.  
3.3. Measurement for diagonals and parallel are checked to be true and stones are checked for alignment by levelling at both front and back ends of side stones. |
<p>| 4. Prepare dowel joints. | 4.1. Depth of abutting dowel holes is checked for measurement and dowels are measured and marked |</p>

10. Clean up. | 10.1. Monument is cleaned down and polished where applicable to specification.
| 10.2. Area is cleared and waste material disposed of safely.
| 10.3. Tools and equipment are cleaned, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- Australian standards: 4204 Headstones and Cemetery Monuments, AS2904 Damp proof courses and flashings, AS3700 Masonry in buildings and AS2699 Wall ties on masonry construction
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measure and levelling techniques relevant to stonemasonry work
- properties and performance of concrete footings
- stone monument construction methods
- types and performance of adhesives and sealants used in stonemasonry work
- types and safe use of shifting equipment
- types of stone and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to install a cemetery monument using any of the materials listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures
- select and use appropriate processes, tools and equipment to carry out installation tasks
- apply organisational quality procedures and processes within the context of installing cemetery monuments
- install concrete footings to location and level
- demonstrate accurate measurement of stone sections and setting out for monument
- adopt and use safe and effective procedures to fit and fix front, side and backstones
- use correct procedures to place and fix headstone
- complete installation and finish to specifications. Identify typical faults and problems that occur and action required to rectify them interactively communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- site location for proposed activity
- materials appropriate to required constructions activity
- hand and power tools, plant and equipment appropriate to applications tasks
- drawings and specifications relevant to proposed activity.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone and concrete
- relevant Australian standards
- safe work procedures relating to handling
RANGE STATEMENT

Planning and preparation include:

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment include:

- air compressor and hoses
- concrete mixers
- fencing bars
- generators
- hacksaws
- hammers
- impact drills
RANGE STATEMENT

- masonry chisels
- measuring tapes and rules
- pinch bars
- power grinders
- power leads
- rollers
- shovels
- spirit levels
- squares
- trowels
- wheelbarrows.

Quality requirements include:
- attention to finish of monuments
- attention to specifications of work
- relevant regulations, including:
  - AS4204 Headstones and cemetery monuments
  - internal company quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures.

Materials include:
- basalt
- granite
- marble
- pre-cast concrete sections
- reconstituted stone.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Shifted includes using:
- gin poles
- hydraulic or mechanical jacks
- shear legs.

</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented in consideration of *hazards*.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans, specifications and *quality requirements*.  
1.6. Fixing connection materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and *statutory and regulatory authority* requirements, and are applied. |
| 2. Prepare stone for dressing. | 2.1. Stone facade erection is planned consistent with AS3850 Tilt up concrete construction.  
2.2. Delivered stone is checked for conformity to size and colour against specifications and provided material sample.  
2.3. Area of *structure* to receive stone for facade is set out for line and level in accordance with job drawings and dimensions and datum or level line is established for base course of stone components.  
2.4. Area of structure to receive stone components is prepared consistent with manufacturer's fixing recommendations, site drawings and specifications.  
2.5. Brackets or anchors are installed to structure for line of placement to specifications for structural fixing.  
2.6. Steel dowels are fitted to base where specified to provide key for base course of components.  
2.7. Stone is checked for faults prior to installation and stone components are prepared, lifting locations checked and lifting gear attached in accordance with manufacturer requirements and AS3850. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
3. Shift, erect and fix stone. | 3.1. Scaffolding is erected, where required, to job requirements and OHS regulations.
3.2. Slings, clutches and other predetermined rigging equipment are selected to job requirements and inspected for correct function.
3.3. Stone components are shifted and transferred to fixing location at structure in accordance with job safety requirements.
3.4. Base components are prepared for placement by drilling holes for dowels where applicable, and placement of wedges or packers for adjustment.
3.5. Initial stone is manoeuvred, placed and adjusted in position to be fixed level, to line and plumb.
3.6. Base course of stone components are placed and fixed to lines, level, aligned on face and plumb to specifications with location of each stone component to align and tie components together, adjusted and secured to specifications.
3.7. Corners of stone facade are joined and fixed to designed junction, to specifications.
3.8. Stone facade is installed using appropriate fixing methods to engineer's specifications.
3.9. Shifting gear/rigging equipment is removed from stone facade upon engineer's or site authority's approval of fixing.
3.10. Stone facade is caulked, sealed and flashed in accordance with job drawings and engineer's specifications.

4. Clean up. | 4.1. Area is cleaned to specification.
4.2. Waste material is removed and placed into job waste bins.
4.3. Tools and equipment are cleaned, inspected, maintained and stored.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.
REQUiRED SKILLs AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to recognise procedures, respond to change and contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret drawings and specifications
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculations
- planning and organisational skills to identify requirements, apply relevant resources and sequence tasks
- problem solving skills to recognise and take action to rectify minor faults and problems
- teamwork skills to be able to work with others to action tasks and relate to people from a range of cultural, social, ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- Building Code of Australia (BCA) and AS3850 Tilt up concrete construction
- interpretation of drawings and specifications
- job safety analysis (JSA) and safe work method statements
- measuring, levelling and calculation techniques for stonemasonry work
- methods of fixing stone to structures
- safe use of scaffolding
- types and safe use of lifting equipment
- types of stone and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to set and anchor a stone facade to at least one of the structural types listed in the range statement, providing evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- comply with organisational policies and procedures
- select and use appropriate processes, tools and equipment to carry out tasks
- apply organisational quality procedures and processes within the context of setting and anchoring stone facades
- demonstrate sound techniques in dressing hard and soft stone
- select stone consistent with specification for material and colour
- accurately set out and install fixing brackets
- demonstrate safe handling practices in moving and placing stone
- fix stone to position and structure
- fix stone to line, level and plumb with clamps securing components
- identify typical faults and problems that occur and action required to rectify them
- communicate with others to ensure safe and effective workplace operations
- complete stone facade to specification.

Context of and specific resources

This competency is to be assessed using standard
EVIDENCE GUIDE

for assessment

and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- work location for installation of stone
- tools, plant and equipment appropriate to installation processes
- construction materials relevant to proposed activity
- appropriate documentation relevant to task.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm a reasonable inference that competency is not only verified under the particular assessment circumstance, but is able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected
EVIDENCE GUIDE

must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to handling stone
- relevant Australian standards

- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation

include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Hazards include:

- barricades
- dust
- excessive noise nearby
- obstructions to clear access for supply
- other work personnel
- power leads
RANGE STATEMENT

- wind.

**Tools and equipment** include:
- air compressor and hoses
- chalk lines
- clogging tools
- hammers
- lifting gear and equipment
- masonry chisels
- measuring tapes and rules
- power drills, including impact
- power grinders
- power leads
- rollers
- rubber mallets
- scaffolding
- screw cramp and wedges
- spirit levels
- squares
- string lines.

**Quality requirements** include relevant regulations, including:
- internal company quality policy and standards
- manufacturer specifications
- AS3850 Tilt up concrete construction
- workplace operations and procedures.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
- waste management.

**Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Structure** types include:
- brick/concrete masonry walls
- in situ reinforced concrete
- pre-cast reinforced concrete
- structural steel frame.

**Fixing methods** include:
- chemical masonry anchor
- mechanical masonry anchor
- metal bracket for connection to steel frame
- supporting and tying stone components together:
  - S hook
  - back cramp
RANGE STATEMENT

- corbel plate bracket
- dog cramp
- fish tailed cramp
- pin bracket
- slotted bracket
- turned end cramp.

Functional area

Functional area
CPCCST3015A Apply gilding to stone

Modification History
New unit based on superseded unit BCG3083A Apply gilding to stone
This version first released with CPC08 Construction, Plumbing and Services Training
Not equivalent to superseded BCG unit

Unit Descriptor
This unit of competency specifies the outcomes required to apply gilding to lettering or shapes carved into stone surfaces. It may include working with others and in a team.

Application of the Unit
This unit of competency applies to stonemasons who inlay gold into stone.

Licensing/Regulatory Information
Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements for work carried out on heritage structures.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Plan and prepare.  

1.1 Work instructions are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.

1.2 *Work health and safety (WHS) requirements* are followed according to safety plans and policies.

1.3 *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.

1.4 *Gilding materials* product range is assessed and materials are selected according to job specifications and *quality requirements*.

1.5 *Environmental requirements* are identified for the project according to environmental plans and *statutory and regulatory authority* requirements.

2  Apply surface gilding to lettering or shapes on stone surfaces.

2.1 Stone surface, with pre-cut lettering or shapes, is prepared for gilding according to job specifications and workplace procedures.

2.2 Size and specified colour are mixed and applied to stone surface according to job specifications, ensuring size is contained within lettering or shape areas.

2.3 Potential material shrinkage is determined and gilding material is cut to required size and shape according to job specifications.
2.4 Sized stone surface is checked for stickiness and gilding material is applied according to workplace procedures.

2.5 Excess gilding material is trimmed and removed at edges of lettering or shapes according to job specifications.

2.6 Gilding material is burnished to ensure loose particles are removed.

2.7 Cleaning procedure and materials are selected and applied to clean gilded letters and shapes and surrounding surface according to job specifications.

3 Clean up.

3.1 Waste and unwanted material are disposed of safely according to workplace requirements.

3.2 Re-usable and recyclable materials are salvaged and stored according to workplace requirements.

3.3 Tools and equipment are cleaned, maintained and stored according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication
  - use questioning to identify and confirm requirements
  - share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculate material requirements
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- reading skills to read and interpret drawings and specifications
- teamwork skills to work with others to action tasks

Required knowledge

- drawing conventions and construction terminology used in plans and specifications
- finishing techniques for gilding and gilded surfaces
- gilding materials suitable for application to letters and shapes cut into stone, and their characteristics
- job safety analyses (JSA) and safe work method statements (SWMS)
- methods for applying gilding to stone
- types of stone and their characteristics
- workplace and equipment safety requirements that apply to the use of gilding tools and equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to apply gilding to at least three different types of lettering, insignia and monograms, providing evidence of the ability to:

- select and use appropriate tools, equipment and processes consistent with requirements of activity
- comply with WHS requirements applicable to workplace operations
- apply organisational quality procedures and processes within the context of applying gilding to stone
- provide appropriate protection to surrounding areas
- use safe and effective procedures to apply gilding recesses in stone
- apply gilding and finish surface to specifications
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment may include:

- workplace location
- tools and equipment appropriate to gilding processes
- stone relevant to proposed activity
- drawings, specifications and documentation relevant to activity.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCST3010A Set out and cut letters in stone
- CPCCST3018A Inlay lead to stone.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- regulatory and legislative requirements for handling stone
- current Australian standards relating to the application of gilding to stone
- safe work procedures relating to handling stone
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.
Planning and preparation may include:

- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting work sites.

Work health and safety requirements must comply with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - working at heights
  - work site visitors and the public
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment may include:

- clamps
- cotton wool or velvet
- gelatine
- hammers
- gilding tools, including:
  - pad
  - knife
  - mop
  - mug
  - tip
  - heating pot
  - stove
- lettering chisels
- mallets
- masonry drills
- measuring tapes and rules
- pneumatic lettering chisels
- power grinders
- power leads
- punches
- scribers
- sculptor’s chisels
- squares
- straight edges.

**Gilding materials** may include:
- loose leaf metals, such as:
  - gold
  - silver
  - aluminium
  - Dutch metal
  - copper
  - variegated leaf
  - water-based size.

**Quality requirements** may include:
- attention to specifications of work
- control of handling procedures
- finishing of stone surfaces
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal organisational quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures.

**Environmental requirements** may include:
- clean-up management
- dust and noise control
- vibration management
- waste management.

**Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Unit Sector(s)**

CPCCST3016A Build solid stonemasonry walls

Modification History
New unit based on superseded unit BCF3059A Cavity and solid construction
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
Not equivalent to superseded BCF unit

Unit Descriptor
This unit of competency specifies the outcomes required to construct solid stone walls, including installing door and window frames, lintels, sills and other specified requirements such as damp-proofing.

Application of the Unit
This unit of competency supports the work of stonemasons who build solid stone walls of various types according to detailed job drawings and specifications. The work may be completed individually or in a team.

Licensing/Regulatory Information
Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements for work carried out on heritage structures.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.  

1.1 Work instructions are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.

1.2 **Work health and safety (WHS) requirements** are followed according to safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 **Tools and equipment** selected to carry out tasks are consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.

1.5 Material quantity requirements are identified and calculated according to plans, specifications and **quality requirements**.

1.6 **Materials** appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.7 **Environmental requirements** are identified for the project according to environmental plans and **statutory and regulatory authority** requirements, and are applied.

1.8 Scaffolding is erected as required according to job requirements, WHS regulations and relevant standards.
2 Set out stonework for walls.

2.1 Location and structural details of required stonework are determined from drawings and specifications.

2.2 Datum or level line is established according to job drawings and specifications.

2.3 Base stonework, below floor construction, is set out according to job drawings and specifications.

2.4 Load bearing stonework and piers are set out according to job drawings and specifications.

2.5 Stone walls are set out according to job drawings and specifications.

3 Construct base stonework for walls.

3.1 Mortar is mixed according to specifications and relevant standards.

3.2 Base stones are laid to set out, and constructed according to specifications and relevant standards.

4 Construct solid stone walls.

4.1 Stonework gauge is determined and set out using gauging rod to confirm correct course height.

4.2 Solid walls are constructed straight and true in plumb, line and level within set tolerance, according to job drawings and specifications and relevant standards.

4.3 Damp-proof courses are built in according to job drawings and specifications and relevant standards.

4.4 Openings are constructed and flashing installed according to job drawings and specifications.

4.5 Lintels are installed according to job drawings and specifications.

4.6 Expansion joints are formed according to locations specified on job drawings and requirements of relevant standards.

4.7 Weepholes, reinforcing, vermin proofing and wall flashings are built in, where required, according to job drawings and specifications.
4.8 Sills are cut where required and laid to line according to job drawings and specifications.

5 Position door and window frames in walls.

5.1 Windows are located and built into walls according to job drawings and specifications and protected from mortar droppings during construction.

5.2 Door jambs are located, built in and fixed to walls according to job drawings and specifications.

6 Finish stonework.

6.1 Joints to laid stonework are raked or ruled to correct depth according to job specifications.

6.2 Stonework is brushed down prior to drying using appropriate brushing tool.

7 Clean up.

7.1 Work area is cleared according to job requirements and specifications.

7.2 Tools and equipment are cleaned, maintained and stored.

7.3 Working platform or scaffolding is dismantled according to WHS regulations and relevant standards.

7.4 Unused materials are stored and waste material removed and disposed of according to environmental and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication
  - use questioning to identify and confirm requirements
  - share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements when setting out and calculating material requirements
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- reading skills to read and interpret drawings and specifications
- self-management skills to work safely, including safely handling materials
- teamwork skills to work with others to action tasks
- technical skills to:
  - erect scaffolding
  - identify and select materials specific to requirements
  - select and use appropriate plant, equipment, hand and power tools

Required knowledge

- Australian standards as they relate to the construction of stonemasonry walls, including:
  - AS1316 Masonry cement
  - AS1684 National Timber Framing Code
  - AS2699 Wall ties for masonry construction
  - AS2904 Damp-proof courses and flashings
  - AS3700 Masonry structures
- mortar mix composition for different types of stone
- National Construction Code as it applies to the construction of stonemasonry walls
- procedures for the safe use of scaffolding
- processes for measuring, levelling and calculations
- range and application of mortar additives
- safe operation of tools, plant and equipment relevant to stonemasonry walls
- types and characteristics of stone
- types and safe operation of relevant lifting equipment
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards
- worksite communication protocols
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or simulated workplace setting. Assessment shall be while tasks are undertaken either individually or as part of a team under limited supervision.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to select and use the appropriate materials, tools and equipment to set out and lay a solid stonemasonry wall with one corner and one opening containing a window or door with flashing over the openings. This solid stonemasonry structure must:

- be a minimum of 6 metres in total length
- be a minimum of 1.7 metres high
- include a brick sill that is a minimum of 600 mm wide
- incorporate base masonry work, including bearer piers and one stopped end.

The candidate must also provide evidence of:

- applying organisational quality procedures and processes within the context of cavity and solid construction
- applying safe handling practices when moving and placing stone
- complying with WHS regulations applicable to workplace operations
- complying with organisational policies and procedures
- establishing and maintaining cavity between external and internal stone walls
- identifying typical faults and problems that occur and taking necessary action to rectify them
- communicating with others to ensure safe and effective workplace operations
- giving particular attention to fixing stone to position and structure
- using safe and effective procedures to lay a stone wall to alignment and plumb
- selecting and using appropriate processes, tools and equipment to carry out tasks
- selecting stone consistent with specification for material and colour
- fixing stone to line, level and plumb.
Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment may include:

- construction materials relevant to proposed activity
- documentation relevant to task
- tools, plant and equipment appropriate to installation processes
- work location for stone construction activity.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in
the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** may include:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- regulatory and legislative requirements
- current Australian standards relating to building solid stonemasonry walls
- safe work procedures
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** may include:

- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting work sites.

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - working at heights
  - work site visitors and the public
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** may include:

- air compressor and hoses
- chalk line
- concrete mixer
- elevated work platforms (EWPs)
- gin poles
- hammers
- jointing tools
- material hoists
- measuring rules or tapes
- mortar boards
- power drills, including impact
- power grinders
- power leads
- rollers
- rubber mallets
- scaffolding
- screw cramp and wedges
- shear legs
- shovels
- spanners
- spirit levels
- squares
- string lines
- trowels.

**Quality requirements** may include:
- attention to specifications of work
- control of handling procedures
- finishing of stone surfaces
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal organisational quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures.

**Materials:**
- may include:
  - cultured artificial stone
  - Hebel
  - limestone
  - sandstone
- may be:
  - regular
  - random regular
  - coursed
  - uncoursed.
Environmental requirements may include:

- clean-up management
- dust and noise control
- vibration management
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

2 Set out and prepare arch work.

2.1 Location of *arch* is set out on base or footing for stone construction according to job drawings and specifications.

2.2 Wall or columns are constructed according to job drawings and specifications up to level of springing line of arch.

2.3 Supports are designed and constructed for ease of release without jarring stonework.

2.4 Arch centring is raised according to specified height, located level across springing line and crown, and supported according to workplace requirements.

3 Construct arch with regularly cut stone.

3.1 Stones are cut according to job drawings and specifications.

3.2 Pre-cut stones are checked for conformity with job specifications.

3.3 Mortar is mixed according to job specifications and relevant standards as required.

3.4 Central keystone is established and stones are laid to form arch according to job drawings and specifications.

3.5 Regular stone is laid to form courses, and bond is maintained according to job drawings and specifications.

3.6 Stones are cut, or pre-cut stones are used, to complete courses and abut arch stones.

3.7 *Joints* are made within specified tolerance while maintaining alignment and plumb of stone face.

4 Construct arch with irregular voussoirs forming stepped extrados.

4.1 Voussoirs/wedge stones that are delivered pre-cut are checked for conformity to design and order.

4.2 Keystone of archway is positioned centrally and designed voussoirs are laid around centre to form arch.

4.3 Regular stones are laid where voussoirs are designed to correspond with courses.
4.4 Random regular stones are laid where voussoirs are not designed for regular gauged courses.

5 Construct arch with irregular stones.

5.1 Stones are pre-cut, or set out and cut, to suit shape of designed arch.

5.2 Keystones are laid at crown and other arch stones are laid over centre to form arch to specifications.

5.3 Wall is constructed of random rubble or random squared ashlar to match curved extrados according to arch specifications.

5.4 Joints are made with mortar, with stones selected and matched close to abutting stones, and bond strength is maintained.

5.5 Joints are made to specifications with wall maintained in alignment and plumb.

5.6 Mortar joints are struck and finished according to specifications for finish.

6 Clean up.

6.1 Stonework is cleaned, area cleared of waste, and materials and equipment are removed.

6.2 Waste and unwanted materials are disposed of safely.

6.3 Unused materials are stored or stacked.

6.4 Tools and equipment are cleaned, maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication
  - use questioning to identify and confirm requirements
  - share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculate material requirements and mortar mixture
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- reading skills to read and interpret drawings and specifications
- self-management skills to work safely, including safely handling materials
- teamwork skills to work with others to action tasks
- technical skills to:
  - erect scaffolding
  - identify and select materials specific to requirements
  - select and use appropriate plant, equipment, hand and power tools

Required knowledge

- arch design and construction principles
- Australian standards as they relate to the construction of stonemasonry arches, including:
  - AS1316 Masonry cement
  - AS2699 Wall ties for masonry construction
  - AS3700 Masonry structures
- methods for constructing stonemasonry arches
- mortar mix composition for different types of stone
- National Construction Code as it applies to the construction of stonemasonry arches
- procedures for measuring, levelling and calculating
- procedures for the safe use of scaffolding
• range and application of mortar additives
• safe operation of tools, plant and equipment relating to arch construction
• types and characteristics of stone
• types and safe operation of relevant lifting equipment
• workplace and equipment safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or simulated workplace setting. Assessment shall be while tasks are undertaken either individually or as part of a team under limited supervision.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to build two different types of stone arches and provide evidence of:

- complying with work health and safety requirements applicable to workplace operations
- complying with organisational policies and procedures
- selecting and using tools and equipment to carry out arch construction process
- applying organisational quality procedures and processes within the context of constructing stone arches to walls or columns
- adopting and using safe and effective procedures to set out and set up arch centre to specification
- giving particular attention to support of centre and method of lowering when arch is complete
- identifying and, where applicable, marking each cut stone for arch location
- using safe and effective procedures to handle and place each stone
- forming arch to specification and, where applicable, applying mortar to joints
- identifying typical faults and problems that occur and taking necessary action to rectify them
- communicating with others to ensure safe and effective workplace operations
- completing arch construction, including finish to specifications.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.
Resource implications for assessment may include:
- drawings and specifications relevant to proposed activity
- hand and power tools, plant and equipment appropriate to construction processes
- materials relevant to proposed activity
- scaffolding appropriate to construction processes
- site location for proposed activity.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- regulatory and legislative requirements
- current Australian standards relating to the construction of stone arches
- plans and specifications
- quality requirements
- safe work procedures
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.
- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting work sites.

**Planning and preparation** may include:

**Work health and safety requirements** must comply with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - working at heights
  - work site visitors and the public
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** may include:

- chisels
- concrete mixers
- gin poles
- hammers
- hand saws
- masonry saws
- measuring tapes and rules
mortar boards
power leads
power saws
shear legs
shovels
spirit levels
squares
straight edges
string lines	
trowels.

**Quality requirements** may include:
- attention to specifications of work
- control of handling procedures
- finishing of stone surfaces
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal organisational quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures.

**Materials for arches:**
- may include:
  - granite
  - limestone
  - marble
  - sandstone
- may be:
  - ashlar
  - pre-cut stones
  - regular
  - random regular
  - coursed
  - uncoursed.

**Environmental requirements** may include:
- clean-up management
- dust and noise control
- vibration management
- waste management.

**Statutory and regulatory authority** includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

**Arches may be designed for walls of:**
- regular gauge
- random regular
- random rubble.
Joints in stone arches may be:

- cement mortar
- dry.

Unit Sector(s)
Construction

Custom Content Section
Not applicable.
**Modification History**

New unit based on superseded unit CPCCST3008A  
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.  
Not equivalent to CPCCST3008A Inlay lead to stone

**Unit Descriptor**

This unit of competency specifies the outcomes required to inlay lead to lettering or shapes carved into stone surfaces. The unit may include working with others and in a team.

**Application of the Unit**

This unit of competency applies to stonemasons who inlay solid lead into stone.

**Licensing/Regulatory Information**

Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements for work carried out on heritage structures.

**Pre-Requisites**

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

**Employability Skills Information**

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.
   1.1 Work instructions are obtained using relevant information, confirmed and applied for planning and preparation purposes.
   1.2 Work health and safety (WHS) requirements are followed according to safety plans and policies.
   1.3 Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.
   1.4 Material quantity requirements are identified and calculated according to plans, specifications and quality requirements.
   1.5 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.
   1.6 Environmental requirements are identified for the project according to environmental plans and statutory and regulatory authority requirements, and are applied.

2 Perform lead inlay process on lettering of stone surfaces.
   2.1 Lead is prepared and handled safely, in suitably ventilated area and according to WHS requirements.
   2.2 Lead strips are cut to suit incised letters and beaten into cavities according to job and WHS requirements.
   2.3 Lead is rasped and rubbed to a raised or flat finish with stone surface according to job and WHS specifications.
2.4 Letters or insignias are finished with clean edges and surface is finished according to job specifications.

3 Clean up.

3.1 Waste and unwanted material are disposed of safely according to workplace and legislative requirements.

3.2 Re-usable and recyclable materials are salvaged and stored according to workplace requirements.

3.3 Tools and equipment are cleaned, maintained and stored according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication
  - use questioning to identify and confirm requirements
  - share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculate material requirements
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- reading skills to:
  - identify letters in order to check spelling
  - read and interpret drawings and specifications
- teamwork skills to work with others to action tasks

Required knowledge

- drawing conventions and construction terminology used in plans and specifications
- effect of lead on humans and related safety precautions
- job safety analyses (JSA) and safe work method statements (SWMS)
- methods of inlaying lead to stone
- types of stone and their characteristics
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to inlay at least three different types of lettering, insignia and monograms using solid lead, providing evidence of the ability to:

- select and use appropriate tools, equipment and processes consistent with requirements of inlaying lead to lettering or shapes on stone surfaces
- comply with WHS requirements applicable to workplace operations
- apply organisational quality procedures and processes within context of inlaying lead to stone
- use safe and effective procedures to inlay lead to recesses cut into stone
- complete inlaying of lead and finishing of surface to specifications
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment may include:

- workplace location
- tools and equipment appropriate to inlaying processes
- stone with pre-cut lettering or patterns relevant to proposed activity
- drawings, specifications and documentation relevant to activity.

Method of assessment

Assessment for this unit must verify the practical application of
the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCST3010A Set out and cut letters in stone
- CPCCST3015A Apply gilding to stone.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- regulatory and legislative requirements for handling lead and stone
- current Australian standards relating to inlaying solid lead into stone
- safe work procedures relating to handling lead and stone
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including
Planning and preparation may include:

- manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.
- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting work sites.

Work health and safety requirements must comply with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- handling and disposal of hazardous materials and substances, especially lead
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - working at heights
  - work site visitors and the public
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment may include:

- clamps
- cotton wool or velvet
- gelatine
- hammers
- lettering chisels
- mallets
- masonry drills
- measuring tapes and rules
- pneumatic lettering chisels
- power grinders
- power leads
- punches
- scribes
- sculptor’s chisels
- squares
Quality requirements may include:
- straight edges.
- attention to specifications of work
- control of handling procedures
- finishing of stone surfaces
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal organisational quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures.

Environmental requirements may include:
- clean-up management
- dust and noise control
- vibration management
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Unit Sector(s)
Construction

Custom Content Section

CPCCST3019A Lay stonemasonry stairs

Modification History
New unit based on superseded unit BCF3027A Lay stair and floor surfaces
This version first released with CPC08 Construction, Plumbing and Services Training
Not equivalent to superseded BCF unit

Unit Descriptor
This unit of competency specifies the outcomes required to build stonemasonry stairs, internally or externally, according to detailed job drawings and specifications.

Application of the Unit
This unit of competency supports the work of stonemasons who construct stonemasonry stairs in houses and gardens, working either individually or in a team.

Licensing/Regulatory Information
Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements for work carried out on heritage structures.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare work.

1.1 Work instructions are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.

1.2 **Work health and safety (WHS) requirements** are followed according to safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 **Tools and equipment** selected to carry out tasks are consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.

1.5 Material quantity requirements are identified and calculated according to plans, specifications and **quality requirements**.

1.6 **Materials** appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.7 **Environmental requirements** are identified for the project according to environmental plans and **statutory and regulatory authority** requirements, and are applied.

1.8 Location of **steps or stairs** is identified from job drawings and specifications.
2 Set out steps or stairs.

2.1 Rise and going dimensions for each step are identified from job drawings and specifications or calculated according to relevant codes and standards.

2.2 Position locations for faces to treads and risers are set out according to dimensions identified or calculated for rise and going of steps.

2.3 Face location of profile of steps or stairs is set out according to job drawings and specifications.

3 Lay stone steps or stairs.

3.1 Stones are selected for variance in shape to suit abutting blocks according to job drawings and specifications.

3.2 Starting point for steps of stairs is determined and first stone is selected.

3.3 First stone is individually bedded to finish level to proposed floor level according to job drawings and specifications.

3.4 Stones for each step are selected and individually bedded with close joints according to specified finish level.

3.5 Final bedding is carried out by adding additional sand where required and compacting according to job specifications.

3.6 Profile of steps or stairs is faced where applicable with like stone according to designed pattern and is checked to confirm that it is straight and plumb according to job specifications.

4 Clean up.

4.1 Work area is cleared according to job requirements and specifications.

4.2 Tools and equipment are cleaned, maintained and stored.

4.3 Unused materials are stored and waste material removed and disposed of according to environmental and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication
  - use questioning to identify and confirm requirements
  - share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculate material requirements
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- reading skills to read and interpret drawings and specifications
- self-management skills to work safely, including safely handling materials
- teamwork skills to work with others to action tasks
- technical skills to:
  - identify and select materials specific to requirements
  - select and use appropriate plant, equipment, hand and power tools

Required knowledge

- Australian standards as they relate to the construction of stonemasonry steps or stairs, including:
  - AS1316 Masonry cement
  - AS3700 Masonry structures
- mortar mix composition for different types of stone
- National Construction Code as it applies to the construction of stonemasonry steps or stairs
- range and application of mortar additives
- safe operation of relevant tools, plant and equipment
- types and characteristics of stone
- types and safe operation of relevant lifting equipment
- types of designs for steps and stairs
- workplace and equipment safety requirements, including relevant statutory regulations,
codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or simulated workplace setting.

Assessment shall be while tasks are undertaken either individually or as part of a team under limited supervision.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to set out and construct a stone staircase and provide evidence of:

- communicating with others to ensure safe and effective workplace operations
- complying with work health and safety requirements applicable to workplace operations
- complying with organisational policies and procedures
- selecting and using appropriate processes, tools and equipment
- applying organisational quality procedures and processes within context of laying and fixing stone
- selecting stone and mortar consistent with specification of job required
- marking out location of treads and risers accurately
- adopting safe and effective procedures and using them to handle and place stone
- identifying typical faults and problems that occur and taking necessary action to rectify them
- finishing steps or stairs and joints to specifications.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment may include:

- construction materials appropriate to construction of stone steps and stairs
- documentation relative to task
- tools, plant and equipment appropriate to installation processes
Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- regulatory and legislative requirements
- current Australian standards relating to laying masonry stairs
- safe work procedures
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
Planning and preparation may include:

- work bulletins
- work schedules, plans and specifications.
- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting work sites.

Work health and safety requirements must comply with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - working at heights
  - work site visitors and the public
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment may include:

- brooms
- brushes
- concrete mixers
- jointing tools
- lifting clamps
- mallets
- masonry saws
- measuring tapes or rules
- mortar boards
- power leads
- rollers
- screed boards
- shovels
- spirit levels
- squares
- trowels
- wheelbarrows.
Quality requirements may include:
- attention to specifications of work
- control of handling procedures
- finishing of stone surfaces
- quality of materials
- relevant regulations, including:
  - Australian standards
  - internal organisational quality policy and standards
  - manufacturer specifications where specified
  - workplace operations and procedures.

Materials used to renovate or restore stone may include:
- granite
- locally available stone
- marble
- slate.

Environmental requirements may include:
- clean-up management
- dust and noise control
- vibration management
- waste management.

Statutory and regulatory authority includes:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Steps and stairs may include:
- geometrical stairs
- open flight
- quarter and half space landings
- solid treads
- straight flight
- veneer faced.

CPCCST3020A Produce reconstituted stone

Modification History
New unit based on superseded unit BCG3053A Produce reconstituted stone
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
Not equivalent to superseded BCG unit

Unit Descriptor
This unit of competency specifies the outcomes required to create or use specific moulds; and mix, pour and finish to detailed specifications to produce reconstituted stone products, such as terrazzo and epoxy-based stone repairs.

Application of the Unit
This unit of competency supports the work of stonemasons who create stone products using different types of concrete mixes. The work may be completed individually or in a team.

Licensing/Regulatory Information
Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements for work carried out on heritage structures.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Select and prepare materials and equipment.
   1.1 Work instructions are obtained using relevant information, confirmed and applied for planning and preparation purposes.
   1.2 Work health and safety (WHS) requirements are followed according to safety plans and policies.
   1.3 Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.
   1.4 Material quantity requirements are identified and calculated according to plans, specifications and quality requirements.
   1.5 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.
   1.6 Environmental requirements are identified for the project according to environmental plans and statutory and regulatory authority requirements.

2 Produce reconstituted stone.
   2.1 Forms or moulds are constructed, or cleaned and prepared, according to job specifications ready for placement of aggregate mix.
   2.2 Aggregates are measured, proportioned and mixed according to job specifications.
   2.3 Mould is filled with mix and light vibration is applied to
consolidate material and eliminate voids.

2.4 Level of filled mould is screeded to form a flat surface and cured according to job specifications.

2.5 Reconstituted stone section is removed from mould, carefully handled and placed on table ready for grinding process.

2.6 Surface of mould is ground thoroughly to expose aggregate and voids are filled evenly with matching colour cement mortar.

2.7 Surface is polished to produce finish that is flat and free from blemish.

3 Clean up.

3.1 Area is cleared of waste material, dust and equipment according to workplace requirements.

3.2 Unused materials are stored and waste materials disposed of according to environmental and workplace requirements.

3.3 Tools and equipment are cleaned, maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication
  - use questioning to identify and confirm requirements
  - share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculate material requirements
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- reading skills to read and interpret drawings and specifications
- teamwork skills to work with others to action tasks

Required knowledge

- materials used to produce reconstituted stone and their characteristics
- methods for placing, levelling and compacting concrete
- polishing and grinding processes
- proportion of materials for different mortar mixes
- procedures for safely handling of materials
- safe operating methods for plant, tools and equipment used for producing reconstituted stone
- types of formwork and moulds for concrete and how they are constructed, cleaned and prepared
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation in the workplace or simulated workplace setting.

Assessment may be conducted while tasks are undertaken either individually or as part of a team under limited supervision.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to construct a terrazzo panel and repair terrazzo, marble or granite in situ, including the ability to:

- apply organisational quality procedures within the context of producing reconstituted stone
- select and use appropriate processes tools and equipment to produce reconstituted stone
- select stone materials consistent with job specification
- ensure accurate setting up of forms or moulds for placement of mix
- proportion materials according to specification for mix
- adopt and use safe and effective procedures to apply grinding and polishing processes
- complete produced stone to specifications for mix and finish
- comply with work health and safety regulations and requirements, including safe handling and placement procedures
- identify typical faults and problems that may occur when creating moulds, and taking necessary action to rectify them
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment may include:

- drawings and specifications relevant to proposed tasks
- materials required for composition of proposed mix
- moulds or material for formwork appropriate to activities
• tools, plant and equipment appropriate to the application processes
• work area suitable to tasks.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information may include:
• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• memos
• regulatory and legislative requirements
• current Australian standards relating to the production of reconstituted stone
• safe work procedures
• safety data sheets (SDS)
signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.
- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting work sites.

Planning and preparation may include:

Work health and safety requirements must comply with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - working at heights
  - work site visitors and the public
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment may include:

- concrete mixers
- floats
- forklifts
- gantry cranes
- grinding machines
- hammers
- measuring tapes and rules
- polishing machines
- screed boards
- shovels
- spirit levels
- wheelbarrows.

Quality requirements
- attention to specifications of work
- control of handling procedures
may include: • finishing of stone surfaces
• quality of materials
• relevant regulations, including:
  • Australian standards
  • internal organisational quality policy and standards
  • manufacturer specifications where specified
  • workplace operations and procedures.

Materials used in the production of reconstituted stone may include:
• basalt (bluestone)
• coloured cement
• igneous rocks
• river gravel
• sand.

Environmental requirements may include:
• clean-up management
• dust and noise control
• vibration management
• waste management.

Statutory and regulatory authority includes:
• federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare work.

1.1 Work instructions are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.

1.2 *Work health and safety (WHS) requirements* are followed according to safety plans and policies.

1.3 Signage and barricade requirements are identified and implemented.

1.4 *Tools and equipment* selected to carry out tasks are consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.

1.5 Material quantity requirements are identified and calculated according to plans, specifications and *quality requirements*.

1.6 *Materials* appropriate to the work application are obtained, prepared, safely handled and located ready for use.

1.7 *Environmental requirements* are identified for the project according to environmental plans and *statutory and regulatory authority* requirements, and are applied.

1.8 Working platform or scaffolding is erected according to WHS requirements.

1.9 Lifting and lowering equipment is installed and tested according to WHS and workplace requirements.

Reproduce decorative carving work.

6.1 Templates of decorative stone carving are made to match the original carving according to job specifications.

6.2 Stone is selected to match original according to job specifications.

6.3 Prepared carving template is applied to stone and stone is marked to show areas to be removed according to workplace procedures.

6.4 Bulk areas of waste stone are removed according to workplace procedures and job specifications.

6.5 Template is re-applied, and stone is re-marked in preparation for carving of detail according to workplace requirements and job specifications.

6.6 Detailed carving of stone is completed and inspected to ensure carving matches the original stone and amendments are made as required.

Clean up.

7.1 Area is cleared of waste material and equipment according to workplace requirements.

7.2 Unused materials are stored and waste materials disposed of according to environmental and workplace requirements.

7.3 Tools and equipment are cleaned, maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication
  - use questioning to identify and confirm requirements
  - share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculate material requirements
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- reading skills to read and interpret drawings and specifications
- self-management skills to work safely, including safely handling materials
- teamwork skills to work with others to action tasks
- technical skills to:
  - erect scaffolding
  - identify and select materials specific to requirements
  - select and use appropriate plant, equipment, hand and power tools

Required knowledge

- codes and standards applicable to replacing stone, including:
  - AS3700 Masonry in buildings
  - National Construction Code
- methods for:
  - fixing stone
  - preparing exposed areas of existing stonework for replacement stone
- mortar mix compositions required for different types of stonework
- principles and procedures to conserve Australian heritage places according to the Burra Charter
- range of mortar additives and their applications, including plasticisers
- range, production and use of templates for stonework
- safe operation of plant, tools and equipment used in stonework
- techniques for measuring and levelling stone
- types and safe operation of lifting and lowering equipment
- types of stone used in renovation and restoration work and their characteristics
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or simulated workplace setting. Assessment may be conducted while tasks are undertaken either individually or as part of a team under limited supervision.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- reproduce and replace stone, including at least three different types of moulds each a minimum of 15 centimetres in height and length
- reproduce a decorative carving, which may include elements of both flora and fauna and must be a minimum of 15 x 15 x 15 centimetres, for example a lion’s head with floral decoration.

The candidate should also provide evidence of:

- accuracy in taking measurements and preparing templates for replacement stone
- adopting and using safe and effective procedures to remove damaged stone
- applying organisational quality procedures and processes within the context of renovating or restoring stonework
- completing renovation process to specifications
- complying with work health and safety requirements applicable to workplace operations
- complying with organisational policies and procedures
- applying the Burra Charter where appropriate in relation to historic stone structures
- identifying typical faults and problems that occur and taking necessary action to rectify them
- communicating with others to ensure safe and effective workplace operations
- selecting and using appropriate processes, tools and equipment
- selecting stone consistent with specification for material and colour
- using safe handling practices in moving and placing stone.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic
and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills

- must meet relevant compliance requirements.

Resource implications for assessment may include:

- work location for renovation activity
- tools, plant and equipment appropriate to renovation and replacement processes
- construction materials relevant to the activity
- documentation relevant to task
- scaffolding appropriate to location and activity.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate,
accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- regulatory and legislative requirements
- current Australian standards relating to renovating and restoring stone work
- safe work procedures
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation may include:**
- assessing conditions and hazards
- determining work requirements and safety plans and policies
- identifying equipment defects
- inspecting work sites.

**Work health and safety requirements must comply with state and territory legislation and regulations and project safety plan and may include:**
- emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
- hazard control
- hazardous materials and substances
- personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - restricted access barriers
  - traffic control
  - working at heights
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

**Tools and equipment may include:**
- air compressor and hoses
- cranes
- elevated work platforms (EWPs)
• forklifts
• gin poles
• hammers
• masonry chisels
• material hoists
• measuring rules or tapes
• power drills, including impact drills
• power grinders
• power leads
• rollers
• scaffolding
• shear legs
• spirit levels
• squares.

Quality requirements may include:
• attention to specifications of work
• control of handling procedures
• finishing of stone surfaces
• quality of materials
• relevant regulations, including:
  • Australian standards
  • internal organisational quality policy and standards
  • manufacturer specifications where specified
  • workplace operations and procedures.

Materials used to renovate or restore stone may include:
• basalt (bluestone)
• granite
• marble
• sandstone.

Environmental requirements may include:
• clean-up management
• dust and noise control
• vibration management
• waste management.

Statutory and regulatory authority includes:
• federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Changes to application, performance criteria, required knowledge, and critical aspects for assessment
- Range of other minor editorial changes
Not equivalent to CPCCST3005A Carry out profile work

Unit Descriptor
This unit specifies the outcomes required to produce templates for profiling work and to set up and use profiling machinery and equipment to profile edges of stone accurately and according to job specifications.

Application of the Unit
This unit of competency supports the work of stonemasons who finish edges of stone by profiling, using hand and power tools. The work may be completed individually or in a team.

Licensing/Regulatory Information
Check with relevant state and territory licensing and regulatory authorities. State and territory jurisdictions may have different regulatory requirements for work carried out on heritage structures.

Pre-Requisites
CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare.
   1.1 Work instructions are obtained using relevant information, confirmed and applied for planning and preparation purposes.
   1.2 Work health and safety (WHS) requirements are followed according to safety plans and policies.
   1.3 Tools and equipment selected to carry out tasks are consistent with job requirements, checked for serviceability, and faults are rectified and reported before work begins.
   1.4 Material quantity requirements are identified and calculated according to plans, specifications and quality requirements.
   1.5 Materials appropriate to the work application are obtained, prepared, safely handled and located ready for use.
   1.6 Environmental requirements are identified for the project according to environmental plans and statutory and regulatory authority requirements, and are applied.

2 Transfer dimensions from an engineering drawing to work.
   2.1 Stone is marked out for profile work requirements according to job specifications.
   2.2 Datum points are correctly established on stone for application of profile set-out.
Develop patterns.

3.1 Dressing procedures are analysed and most appropriate development method is chosen and applied for type of stone.

3.2 Calculations are carried out and used to develop true shape of profile mould.

3.3 Patterns are set out accurately for profile mould, reverse mould and bed mould to dimensions and specified shapes.

3.4 Allowances for fabrication processes with guide/roller working off template are correctly determined and transferred to bed mould.

Use hand or hand-held power cutting tool.

4.1 Tool is adjusted for operation in consideration of application work.

4.2 Hand tool or power cutting tool is used safely and correctly to cut patterns for templates.

4.3 Materials are cut to size according to drawing and job requirements, minimising wastage.

4.4 Templates are trimmed to set-out, where required, to specifications.

Shape and form stone.

5.1 Equipment is set up and adjusted to meet job requirements and standard operating procedures.

5.2 Stone is located and fixed into place on table ready for machine operation.

5.3 Appropriate cutter is set to machine to carry out initial cutting processes and cutters are changed as required during profiling process.

5.4 Bed template is located and aligned with stone and machine operation to requirements of job and manufacturer specifications.

5.5 Machine is set up and operated with allowances for thickness of template and gauges.

5.6 Machine is operated and stone is shaped and formed to specifications, with material checked for accuracy.
against required dimensions and shape.

6  Clean up.

6.1  Area is cleaned to specification.

6.2  Waste material is removed and placed into job waste bins.

6.3  Tools and equipment are cleaned, inspected, maintained and stored.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - follow instructions
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- innovation skills to select appropriate tools and equipment, respond to workplace challenges and put ideas into action
- numeracy skills to apply measurements and calculate material requirements
- planning and organising skills to identify requirements, apply relevant resources and sequence tasks
- problem-solving skills to recognise and take action to rectify minor faults and problems
- reading skills to read and interpret drawings and specifications
- teamwork skills to work with others to action tasks

Required knowledge

- drawing conventions and construction terminology used in plans and specifications
- job safety analyses (JSA) and safe work method statements
- measuring and marking techniques relating to stonemasonry work
- techniques for profiling stone
- types and uses of templates for stonemasonry work
- types of stone and their characteristics
- workplace and equipment safety requirements.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or simulated workplace setting. Assessment shall be while tasks are undertaken either individually or as part of a team under limited supervision.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to profile stone for three different job specifications, providing evidence of the ability to:

- comply with WHS requirements applicable to workplace operations
- comply with organisational policies and procedures
- select and use appropriate processes, tools and equipment to carry out tasks
- apply organisational quality procedures and processes within the context
- transfer critical dimensions and reference points to work accurately
- develop required patterns, accurate to job details
- accurately produce templates for job requirements
- apply correct procedures with use of templates to set up machines and equipment with stone to carry out machining processes
- adopt and use safe and effective procedures to cut and shape stone
- carry out safe and effective operations with use of equipment and machines
- complete profile work with accuracy of shape according to specifications
- identify typical faults and problems that occur and take necessary action to rectify them
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.
Resource implications for assessment may include:
- construction materials relevant to proposed activity
- documentation relevant to task
- tools, plant and equipment appropriate to installation processes
- work location for stone construction activity.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information may include:**
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- memos
- regulatory and legislative requirements for handling stone
- current Australian standards relating to profiling stone
- safe work procedures relating to handling stone
• safety data sheets (SDS)
• signage
• verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
• work bulletins
• work schedules, plans and specifications.
• assessing conditions and hazards
• determining work requirements and safety plans and policies
• identifying equipment defects
• inspecting work sites.

Planning and preparation may include:

Work health and safety requirements must comply with state and territory legislation and regulations and project safety plan and may include:

• emergency procedures, including extinguishing fires, organisational first aid requirements, and evacuation procedures
• hazard control
• hazardous materials and substances
• personal protective equipment (PPE) prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including operational risk assessment and treatments associated with:
  • concealed services (water, power and gas)
  • lighting
  • restricted access barriers
  • traffic control
  • work site visitors and the public
  • working at heights
  • working in confined spaces
  • working in proximity to others
• use of firefighting equipment
• use of tools and equipment
• workplace environmental requirements and safety.

Tools and equipment may include:

• carborundum cutters
• clamps
• cutting and grinding machines, including:
  • power grinders
  • portable machines
• diamond cutters
• dividers and wing compasses
• jigs
• measuring tapes and rules
• power leads
• scribes
• squares
Quality requirements may include:

- travelling arm saws.
- internal organisational quality policy and standards
- manufacturer specifications
- relevant regulations, including Australian standards
- workplace operations and procedures.

Environmental requirements may include:

- clean-up management
- dust and noise control
- vibration management
- waste management.

Statutory and regulatory authority includes:

- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Type of stone may include:

- igneous rock, including:
  - basalt (blue stone)
  - granite
  - marble
  - sandstone.

Template may be made of:

- aluminium sheet
- cardboard
- plastic sheet
- plywood
- zincalume sheet.

CPCCSV5001A Assess the construction of domestic scale buildings

Modification History
Not Applicable

Unit Descriptor
Unit descriptor This unit of competency specifies the outcomes required to assess the construction of domestic scale buildings and those of a similar loading, construction and size, such as small industrial, commercial or public buildings.

It includes evaluation and identification of appropriate construction methods, and identification of required standards and services according to relevant legislation, design and maintenance specifications.

Application of the Unit
Application of the unit This unit of competency supports the attainment of the understanding and skills to assess the construction of domestic scale buildings, including the demonstration of research, analysis, evaluation and reporting skills within the context of relevant legislation, the Building Code of Australia (BCA) and Australian standards.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.  Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
1. Research for compliance with building and planning legislation. | 1.1. Compliance with building and construction planning legislation is investigated, interpreted and communicated to others throughout design and construction of the building project for *planning and preparation* purposes.
1.2. Planning and construction effects of the BCA and construction requirements of relevant Australian standards are researched and documented following *construction principles for domestic scale buildings*.
1.3. Effects of state or territory, local government and service supply authorities’ legislation, including *reporting systems* on design and construction are researched and documented.
1.4. Methods of foundation assessment and classification are identified and evaluated.
1.5. Effects of the Disability Discrimination Act (DDA) regarding access for people with a disability are researched and documented.
2. Record all relevant planning and construction information. | 2.1. Building planning and construction information is determined and recorded using appropriate industry terminology and symbols.
2.2. Salient features of a site, sufficient for the preparation of design and construction documents, are recorded on the plan.
3. Investigate and evaluate a site for establishment, preparation and excavation requirements. | 3.1. Salient features of a building site and methods of soil investigation, assessment and clarification are appraised and recorded on documents available to site services.
3.2. Principles and practices of site establishment and different types and uses of builders’ plant and equipment are identified and evaluated.
4. Determine trade sequencing. | 4.1. Trade sequencing appropriate to the different forms of residential construction are identified and evaluated.
4.2. Structural systems commonly used in domestic scale buildings are described and sketched.
4.3. Types and principles of construction relevant to the domestic design and construction are identified and evaluated according to *relevant legislation*, including BCA, and construction standards and...
### PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 5. Evaluate and apply cyclone-resistant construction to buildings. | 5.1. Cyclone category areas and code specification are defined.  
5.2. Terrain categories and their application to cyclone design are defined.  
5.3. Methods of 'tie down' construction are identified from BCA.  
5.4. Applications of structural bracing principles are identified in specifications.  
5.5. Alternative approaches of construction in cyclone areas are evaluated in accordance with BCA. |
| 6. Evaluate construction standards and practices. | 6.1. Standards and practices for claddings, linings, finishes and coatings associated with domestic scale buildings are identified and evaluated.  
6.2. Construction standards and practices of window, door and joinery fabrication and installation are identified and evaluated.  
6.3. Basic principles and integration of building services into the building are identified and evaluated.  
6.4. Structural principles of loads, forces, stresses and strains applied in the design and construction of single storey domestic scale buildings are identified and evaluated.  
6.5. Types, principles, standards and practices for the installation of the services in single and two storey residential dwellings are identified and evaluated.  
6.6. Types, principles, construction standards and practices relating to domestic stair construction, balustrading and handrails are identified and evaluated. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:
REQUIRED SKILLS AND KNOWLEDGE

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - communicate effects of planning and construction legislation to others
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
  - BCA
  - legislation
  - reports
  - specifications
  - standards
  - working drawings
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
  - document effects of legislation and standards
  - draft evaluation of own actions to make judgements about performance and necessary improvements
  - record planning and construction information
- numeracy skills to interpret complex mathematical information
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and requirements of the DDA with regard to access
- authorities and powers of a building surveyor
- codes of conduct and ethics
- design and construction principles of buildings
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
REQUIRED SKILLS AND KNOWLEDGE

- terminology, definitions and hazard identification.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- apply the principles of construction, standards and services, and design and maintenance specifications; associated reporting of data, findings, recommendations and strategies for at least one domestic scale building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.
- apply strategic plans, workplace policies and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

- mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements
- identification of any equipment defects
- safety plans and policies
- work site inspection.

Construction principles for domestic scale buildings include:

- evaluation and identification of construction methods, standards and services in compliance with relevant legislation, design specifications, maintenance specifications
- domestic scale building projects requiring the application of principles of construction include provision of site access/facilities, work schedules, project milestones and the calculation and processing of application or
RANGE STATEMENT

**Reporting systems** in accordance with organisational, legislative and quality assurance procedures include:
- desk-based assessment
- site-based assessment.

**Relevant legislation** includes:
- that relevant to domestic scale buildings (or those similar in characteristics in terms of loading, construction and size and may include small industrial, commercial and public buildings).

**Types, principles, standards and practices** for standard construction include:
- communication systems
- cupboard joinery and finishes
- damp proof courses
- electricity
- flashings
- floor, wall and ceiling finishes and coatings
- floor, wall and ceiling linings, including fire-rated systems and acoustic system installations
- footing systems
- gas
- heating and cooling systems
- mechanical ventilation
- membranes
- mouldings
- openings (floors, walls, ceilings and roofs)
- paving
- roof water plumbing and drainage
- sarking and insulations
- sewerage plumbing and drainage
- structural floor systems
- structural roof systems
- structural wall systems
- surface drainage
- telephone
- termite control
- timber and aluminium-framed windows and doors
- wall and floor cladding
- wet area floor detailing.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and
REQUIRED SKILLS AND KNOWLEDGE

confirm requirements, share information, listen and understand

- written skills to:
  - produce detailed specification notes
  - provide notations and dimensions on drawings
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- innovation skills to select suitable materials for building, taking into account a range of factors such as cost and environmental issues
- numeracy skills to produce drawings for residential buildings
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to carry out tests on materials and to use and apply data for decision making
- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- environmental issues impacting on material selection
- grading processes and grade markings used to categorise timber and timber products
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural and design principles for buildings
- terminology, definitions and hazard identification.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the
EVIDENCE GUIDE

Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- evaluate, choose and apply various building materials; their subsequent maintenance; and associated reporting of data, findings, recommendations and strategies for at least one domestic scale building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.
- apply strategic plans, workplace policies and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
EVIDENCE GUIDE

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured
EVIDENCE GUIDE

learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Properties of materials include:
- environmental considerations
- adherence to legislative requirements for the BCA.

Domestic scale building projects requiring evaluation include:
- domestic scale buildings, including existing and proposed structures
- provision of site access/facilities, work schedules and project milestones.

Adherence to legislative requirements is limited to:
- domestic scale buildings (similar in characteristics to those of residential dwellings in terms of loading, construction and size and may include small industrial, commercial and public buildings).

Types of structures include:
- residential structures with concrete skeleton and slabs
- residential structures with steel and metallic column and member construction
- residential structures with timber and other
RANGE STATEMENT

composite material construction
- residential structures constructed from non-metallic materials.

Materials include:
- adhesives and sealants
- admixtures
- clay products
- concrete and concrete products
- glass
- masonry
- metal
- mortar for load bearing walls
- new relevant proprietary materials
- plaster and plasterboard
- plastic
- pre-stressed structural concrete components
- protective and fire-rated protective coatings
- timber and timber products.

Standard specifications include
industry standard specifications and may be:
- preliminary or outline specifications
- developed specifications
- detailed specifications addressing specific components such as structural or other requirements.

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to read and interpret plans and specifications and to undertake basic architectural drafting of conventional residential structures.

It includes the production of two and three-dimensional (3-D) drawings in accordance with standard industry drawing practice and to a level suitable for building permit approval.

Application of the Unit
Application of the unit
This unit of competency supports the attainment of the understanding and skills to produce working drawings for residential buildings and requires the demonstration of two and three-dimensional drawing skills and compliance within the context of relevant legislation, the Building Code of Australia (BCA) and Australian standards.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Use drawing instruments, equipment and materials to set out drawings.</td>
<td>1.1. Drawing instruments, equipment and materials are used to produce working drawings for residential buildings with scaled line work, simple geometric shapes, lettering, numbering and correct setting out of drawings.</td>
</tr>
<tr>
<td>2. Produce drawings at varying scales using architectural conventions for linework, lettering and symbols.</td>
<td>2.1. Linework is applied in a range of different types and media in accordance with standard industry drawing practice for production of building drawings. 2.2. Hand letter text is formed in a variety of formats. 2.3. Different drawing scales are identified and used. 2.4. Graphic symbols are identified and used. 2.5. Orthographic projection in building drafting applications is drawn accurately to scale. 2.6. Notations and dimensions are added to complete drawing.</td>
</tr>
<tr>
<td>3. Read and interpret plans and specifications for a single storey dwelling.</td>
<td>3.1. Interrelationships between plans and specifications are identified and interpreted. 3.2. Key information is located and interpreted according to drawings, specifications and application of Australian standards.</td>
</tr>
<tr>
<td>4. Draw three dimensional sketches.</td>
<td>4.1. Annotated 3-D sketches of various building components are produced to specifications using parametric (e.g. isometric) or perspective techniques.</td>
</tr>
<tr>
<td>5. Produce building permit approval drawings.</td>
<td>5.1. Building permit approval drawings, including detailed specification notes for residential dwellings, are completed to architectural conventions.</td>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management
REQUIRED SKILLS AND KNOWLEDGE

systems

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- written skills to:
  - produce detailed specification notes
  - provide notations and dimensions on drawings
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- interpret and apply information from plans and specifications to develop required drawings
- numeracy skills to produce drawings for residential buildings
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
  - enable production of working drawings
  - complete documentation and calculations.

Required knowledge

Required knowledge for this unit is:

- codes of conduct and ethics
- drafting and drawing protocols
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural, design and construction principles of buildings
- terminology, definitions and fault identification.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- produce two and three-dimensional drawings for residential building projects, including at least one orthographic, one isometric and one perspective drawing
- produce drawings to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
EVIDENCE GUIDE

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured
EVIDENCE GUIDE

Learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Working drawings for residential buildings include:

- area analysis
- BCA Class 1 and 10 buildings
- computer-generated or paper-based presentations
- construction notes
- details
- elevations
- floor plans
- general notes
- location
- neighbouring buildings
- plan and specification interpretation
- projections
- sections
- services
- single storey dwellings (elementary or conventional)
RANGE STATEMENT

Production of building drawings includes:

- site plans
- two and three-dimensional drawings.
- banks and landscaping
- base structure - timber and masonry
- cathedral ceilings
- certificate of title to land
- chimney construction
- complex roof and wall shapes
- composite construction (e.g. steel and timber)
- conversion of plans and specifications to architectural and building detail
- drawing protocols, including:
  - abbreviations
  - legends
  - lettering standards
  - numbering
  - paper size
  - scale
  - standard units of measurement
  - symbols
- electrical connections plan
- excavation cut and fill
- flashings and box gutters
- general plumbing services plan
- glazing, including bay window construction
- insulation and sarking
- internal and external wall claddings
- joinery
- land surveyor plans
- large span timber beams and connections, including glue laminated beams
- levels and contours
- retaining walls
- roof construction
- sewerage connection and easement plan
- soil classification and tests
- stairs
- stormwater connection and easement plan
- timber and masonry
- upper floor construction
RANGE STATEMENT

- wall construction
- window and door schedules.

Application of Australian standards includes:
- AS1100 Architectural drawing and supplement
- AS1684 Residential timber framing
- AS2870 Residential slabs and footings
- AS3700 Masonry.

REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- control and appeal system
- current home/commercial building development criteria
- land use management models and concepts
- local market conditions
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- socioeconomic data.
- urban zoning.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- evaluate, report data findings, recommend and classify at least one conventional building development in compliance with applicable local government planning scheme for urban development and building control projects associated with relevant legislation and the BCA
- provide reports to appropriate body/individual as determined by the project brief.
- apply strategic plans, and workplace policies and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

| 1. Evaluate geological formation of rocks and their subsequent weathering to form various soil types. | 1.1. Formation of igneous, sedimentary and metamorphic rocks is identified and documented.  
1.2. Mode of transportation, deposition and formation of sands, gravels and clays are identified and documented. |
| 2. Read and evaluate both topographical and geological maps. | 2.1. Topographical and geological maps are interpreted without error.  
2.2. Maps of both types are interpreted by drawing sections indicating features.  
2.3. Retaining structures and systems suitable for various situations are identified. |
| 3. Identify soil types and their behaviour. | 3.1. Cohesive and granular soils are identified from hand specimens without error.  
3.2. Soil types and soil properties are identified and calculated with reference to standards, codes and industry literature.  
3.3. Effects of depth on overburden and pore water pressure are estimated. |
| 4. Determine suitability of foundation soils to support various types of structures. | 4.1. Meaning of total and differential settlement of a building is interpreted without error.  
4.2. Factors influencing settlement and the ultimate bearing capacity of the ground are interpreted.  
4.3. Total and net pressure on foundation soils due to the load of a structure is calculated to determine suitable foundation systems. |
| 5. Identify and apply the various methods and applications of soil testing. | 5.1. Australian standard laboratory testing of permeability, strength, consolidation and point load tests (for rocks) is identified and interpreted.  
5.2. Australian standard for carrying out sub-soil investigations and in situ testing is identified and interpreted.  
5.3. Soil testing methods are selected and applied or accessed through competent agencies. |
| 6. Determine footing systems for the site conditions and building type. | 6.1. Mechanism of soil shrinkage and swelling is interpreted.  
6.2. Site classification for the design and construction of a footing system for a single storey dwelling is in accordance with the BCA.  
6.3. Application of footings and geomechanical principles for the footing system for a domestic scale building. |
7. Determine site maintenance requirements necessary to minimise long-term damage to the structure.

7.1. Influence of moisture content changes in clay soils on maintenance requirements is determined.

7.2. Minimisation strategies for long-term damage to a structure with respect to the soil conditions found on a particular site where active clays are located are recommended.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - written skills to report evaluations
- read and interpret:
  - BCA
  - legislation
  - reports
  - specifications
  - working drawings
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- numeracy skills to interpret complex mathematical information
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to carry out tests and calculations and to use and apply data for decision making
- technological skills to:
REQUIRED SKILLS AND KNOWLEDGE

- complete documentation and calculations
- enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- design principles and concepts for footings
- geomechanical engineering principles
- nature of materials and effect on performance
- nature of soil mechanics and effect of performance in problem soils
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural design principles in buildings.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and analyse construction faults arising on residential building sites. | 1.1. Information to identify and analyse construction faults is collected relating to the specific construction problem.  
1.2. Construction problem in construction in residential buildings is identified relative to original specifications and form of construction.  
1.3. Construction problem is communicated to appropriate personnel and documented in accordance with standard work practices.  
1.4. Problem solving techniques are used and typical construction faults and problems for building categories are identified and action to rectify is deemed to be in accordance with the BCA. |
| 2. Identify construction techniques, methods and materials. | 2.1. Building terminology is used accurately in the communication of issues.  
2.2. Existing or designed construction problems are identified and evaluated from working drawings and specifications.  
2.3. Alternative methods and materials to meet construction aims and objectives are prepared to specification nominated in the BCA and Australian standards.  
2.4. Detailed sketches of available alternative methods and materials available to meet the construction aims and objectives are prepared to specification. |
| 3. Resolve construction faults using alternative construction methods. | 3.1. Suitable construction methods from available alternative solutions are evaluated and recommended to resolve the problem in accordance with project aims and objectives, the BCA, relevant State and Territory Appendix to the BCA and Australian standard.  
3.2. Selected method is integrated into the project in order to resolve the construction problems in accordance with project aims.  
3.3. Evaluation of available alternative forms of construction is carried out in accordance with project aims. |
| 4. Resolve common on-site faults with building materials. | 4.1. Commonly occurring on-site problems with building materials and their causes are evaluated.  
4.2. Corrective and preventative measures are identified and implemented. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - communicate construction problems to appropriate personnel
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
  - Australian standards
  - BCA
  - legislation
  - reports
  - specifications
  - working drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- use accurate terminology
- written skills to document construction problems and solutions and recommendations to resolve problems
- numeracy skills to calculate workplace requirements
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:
- authorities and powers of a building surveyor
- design and construction principles of buildings
- nature of materials and effect on performance
REQUIRED SKILLS AND KNOWLEDGE

- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- assess construction faults in residential buildings, determine rectification strategy and consider alternative construction methods, as well as the associated reporting of data, findings, recommendations and strategies for at least one residential building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

- confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Construction in residential buildings includes:
- evaluation and identification of construction faults and determination of alternative methods, standards and services in compliance with relevant legislation, design specifications, maintenance specifications and adherence to legislative requirements for BCA Class 1 and 10 buildings.

Forms of construction include:
- autoclaved aerated concrete (AAC)
- earth (mud brick and rammed earth)
- pole-framed
- steel-framed
- timber-framed.

Construction faults include:
- installation
- refurbishing
RANGE STATEMENT

- renovation
- restoration.

Building categories include:
- low-rise residential buildings
- single storey buildings.

Australian standards include:
- AS1288 Installation of glass in buildings
- AS1684 Residential timber framed construction
- AS2050 Fixing of roof tiles
- AS2180 Metal rainwater goods, selection and installation
- AS2208 Safety glazing materials for use in buildings
- AS2627.1 Thermal insulation of roof/ceilings and walls in dwellings
- AS2870.1 Residential slabs and footings
- AS3500 National plumbing code
- AS3600 Concrete structures
- AS3623 Domestic metal framing
- AS3660 Protection of buildings from subterranean termites
- AS3700 Masonry
- AS3740: 2004 Waterproofing of wet areas in residential buildings
- AS4349 Inspection of buildings.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Measure linear distances on site using building and basic surveying equipment. | 1.1. Areas and volumes of regular shapes and figures are calculated.  
1.2. Distances are measured accurately, independent of site characteristics and measurement methods, using basic surveying equipment.  
1.3. Distances are measured on building sites within a tolerance of 1mm error in 4.0m (1:4000) or without error.  
1.4. Overall distances are calculated from field data without error.  
1.5. Slope corrections are recorded accurately. |
| 2. Carry out a closed level transverse procedure using the rise and fall recording method. | 2.1. Levelling equipment is inspected for damage, wear and serviceability.  
2.2. Set-up steps are performed and instruments made ready for use without error.  
2.3. Instruments are checked for accuracy and adjusted (where possible) within 3mm over 60 metres using the two peg test.  
2.4. Closed level traverse procedure is completed with a minimum of 15 points, including an inverted reading, with a minimum of 5 change points all within a closing tolerance of 10mm.  
2.5. Data of traverse is correctly recorded and extended including mathematical column checks by use of the rise and fall method. |
| 3. Perform grid surveys for contour purposes. | 3.1. Site identification for site surveying and setting out procedures is established and all survey pegs are located without error.  
3.2. Grid distances are determined and grid is pegged correctly.  
3.3. Site detail that may effect building operation is recorded without error.  
3.4. Reduced levels of all grid points are determined from a close performed onto the bench mark to within 10mm, without error.  
3.5. Contour lines are plotted on the site plan at intervals appropriate to the site with longitudinal and cross sections pegged and measured as nominated within 100mm. Sections are plotted to scale without error.  
3.6. Grades of line are determined within a 0.5% tolerance and expressed as percentage, rise to run... |

---|---
7.3. Coordinates of a point, given the bearing and distance from a point with known coordinates, are calculated.
7.4. Offsets from a coordinated point, given the bearing and distance from a point with known coordinates, are determined.
7.5. Information necessary to set out a structure, or part thereof, using a site plan with positions fixed by a mixture of bearings and distances, offsets and coordinates is calculated.
7.6. Documents that make up a land title are listed and their relationship to each other outlined according to relevant government legislation.
7.7. Different restrictions on the use of land title and restricted development are illustrated.
7.8. Building covenants and statutory bodies responsible are identified.
7.9. Restrictions stated in legislation that regulate setbacks for residential buildings are identified and differentiated.

Evaluate documents and plans incorporated in land titles.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - communicate construction problems to appropriate personnel
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - field data
    - reports
REQUIRED SKILLS AND KNOWLEDGE

- site plan
- specifications
- working drawings
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- written skills to:
  - document suitability of surveying equipment
  - record mathematical information
- numeracy skills to apply measurements and calculations
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to identify faults and problems in, and accuracy of, equipment and take appropriate remedial action
- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- level and grade checking to perform survey control to accuracy criteria
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- specifications and capabilities of surveying and levelling equipment and their componentry
- structural, design and construction principles of buildings.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable.
- apply surveys and set out procedures to building projects and the associated reporting of data, findings, recommendations and strategies for at least one civil or residential building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

| 1. Research combustion process as it relates to different materials. | 1.1. Processes and flame characteristics of combustion of solids, liquids and gases are identified and recorded from a research and analysis process.  
1.2. Factors contributing to combustion are identified and recorded.  
1.3. Endothermic and exothermic processes are researched and recorded.  
1.4. Heat of combustion fuels is calculated without error.  
1.5. Factors contributing to propagating flame front are analysed and recorded. |
| 2. Analyse flammability of matter in different states. | 2.1. Flammability in terms of fire triangle and fire tetrahedron theories is analysed and recorded.  
2.2. Flammability of matter in physical states is examined and recorded.  
2.3. Flammability in terms of upper and lower flammability limits is identified and recorded.  
2.4. Factors contributing to the explosiveness of dusts are identified and recorded. |
| 3. Identify conditions of burning at the fire point. | 3.1. Limiting adiabatic flame temperature (LAFT) values are interpreted accurately.  
3.2. Process of extinguishment related to the combustion process is analysed and recorded. |
| 4. Record mechanisms of heat transfer during fire growth, development and spread. | 4.1. Heat transfer factors in fire situations are identified and recorded.  
4.2. Processes of self-induced heating are analysed and recorded.  
4.3. Behaviour of fires in partially and fully enclosed compartments are observed and recorded.  
4.4. Amount of smoke produced from a fire is calculated. |
| 5. Record the behaviour of building materials subjected to extreme levels of heat. | 5.1. Building materials are evaluated for fire safety and fire resistance levels are recorded.  
5.2. Effect of fire on structural and non-structural elements is identified and recorded.  
5.3. Effect of fire on plastic and textile materials is identified and recorded. |
| 6. Devise the fire load of a building and | 6.1. Effect of building occupancy on potential fire load is calculated. |
ELEMENT PERFORMANCE CRITERIA

describe the effect on the BCA classification and compartmentation.

6.2. Factors that may increase the severity of a fire are researched and recorded.

6.3. Fire load, fire severity and general burning behaviour of materials are researched and recorded.

7. Report the requirements of fire resistance of building elements and forms of construction.

7.1. Fire resistance levels of building elements and forms of construction are researched and recorded.

7.2. Early fire hazard indices are applied to the BCA requirements.

7.3. Australian standards relating to fire testing of building materials and forms of construction are researched and recorded.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - evaluate own actions to make judgements about performance
  - read and interpret Australian standards
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to report testing of building materials

- numeracy skills to apply calculations and interpret data

- problem solving skills to carry out tests and calculations and to use and apply data for decision making

- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.

Required knowledge
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- characteristics of endothermic and exothermic processes
- extinguishment principles
- LAFT values
- principles of combustion and flammability
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- perform fire research, analysis, identification and reporting of findings for at least one fire assessment or equivalent, including at least three different materials
- assess applicable fire safe suitable building materials for at least one building project
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying
EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Research and analysis process includes:
- definitions and test outcomes
- material safety data sheets (MSDS)
- reports
- written records and historical data.

Materials:
- include timber, plastic and fabric building materials and structures
- may include other types of fire load forming building materials.

Effect of fire on structural and non-structural elements includes:
- behaviour of building materials subject to extreme heat
- combustion of materials
- fire loads of buildings
- fire resistance of materials
- flammability circumstances
- heat transfer characteristics
- point of fire burning conditions.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Devise interaction strategies. | 1.1. Interested and affected individuals and parties are identified.  
1.2. Range of interaction strategies is identified, assessed for suitability and selected.  
1.3. Resources required to conduct interaction are determined.  
1.4. Regulations are reviewed to ensure strategies meet all criteria. |
| 2. Assess demographic, cultural, social and psychological considerations. | 2.1. Needs of disadvantaged individuals and groups are identified and incorporated from relevant information and social theory.  
2.2. Cultural, social and psychological factors are considered and incorporated.  
2.3. Urban, demographic, technological, political and economic effects are considered and incorporated.  
2.4. Collective community behaviour is assessed. |
| 3. Communicate legislative requirements to individuals and groups. | 3.1. Information is prepared that is clear, accurate and appropriate to the needs of the parties involved.  
3.2. All parties involved are informed of the applicable legislation through presentation of information.  
3.3. Information is provided to affected parties at an appropriate time and place and in an appropriate way.  
3.4. Interaction is undertaken in an orderly manner to ensure all viewpoints are canvassed. |
| 4. Record, analyse and report results. | 4.1. Responses are assessed and checked against the project brief.  
4.2. Appropriate suggestions for improvement are incorporated into the project brief.  
4.3. Accurate report is prepared, including recommendations for approval.  
4.4. Overall effectiveness of the interaction is reviewed and evaluated, with action taken where required. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to prepare information in alternative formats and to provide access to consultations for diverse groups through interpreters, etc.
- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - consult with the community, including provision of information about legislation
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - regulations
    - legislation
    - other relevant documentation
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences
- written skills to:
  - record and report results of interaction with the community
  - prepare information
- innovation skills to identify and implement appropriate and diverse strategies for interacting with diverse communities
- organisational and time management skills to prepare information for meetings and to arrange and conduct meetings to timelines
- problem solving skills to review feedback and select appropriate suggestions for improvement for inclusion in report
- technological skills to:
  - complete documentation, including information materials and reports
  - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- effects and psychological theories relevant to working with clients in a regulated environment, such as:
  - social stratification
  - social change
REQUIRED SKILLS AND KNOWLEDGE

- technological change
- local factors affecting communities and individuals
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- strategies for consultation
- urbanisation.
Evidence Guide

EVIDENCE GUIDE

supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Interested and affected individuals and parties include:
- existing community groups
- government agencies
- individuals and special interest groups
- private sector businesses
- social groups and emergency services.

Interaction strategies include:
- client meetings
- home and site visits
- meetings of relevant stakeholders
- surveys.

Relevant information and social theory include:
- awareness of diverse cultures
- collective behaviour
- deviance
- economic order
- inequality
- political order social change and interaction
- stratification
- technology and the environment
- the family
RANGE STATEMENT

- urbanisation.
- age
- ethnicity
- gender
- individual and group profiles
- social stratification.

Demographics include:

Appropriate to the needs of the parties involved involves:

- providing material in alternative formats, such as:
  - large print
  - other languages.

Presentation of information includes:

- computer simulations
- display plans
- graphics
- handouts
- models
- software presentations
- videos.

An appropriate way includes:

- taking into account access issues, such as parking or building access and cultural requirements or protocols
- using assistive technology, for example telecommunication device for the deaf (such as TTY) or video captioning
- using interpreters, including sign language interpreters.

<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Analyse the purpose and basic intent of the BCA. | 1.1. Objectives of the BCA and the purpose of its respective components in relation to construction in residential buildings and building categories are evaluated and documented.  
1.2. Deemed-to-satisfy (DTS) concept for construction to meet BCA requirements is evaluated and documented. |
| 2. Locate and interpret code and standard requirements applicable to particular projects. | 2.1. Clauses from the BCA that apply to particular residential building projects requiring review of compliance issues are identified and documented.  
2.2. Prescriptive requirements of relevant BCA clauses and standard specifications are determined.  
2.3. Requirements of Australian standards referenced in the BCA are identified and documented.  
2.4. Special requirements that may be applicable to specific areas of building surveying procedures are identified and documented. |
| 3. Classify buildings. | 3.1. Nature of a building is determined in regard to its proposed use and site arrangement.  
3.2. BCA criteria are applied to determine the defined classification.  
3.3. BCA requirements are interpreted for multiple classifications. |
| 4. Apply solutions to construction problems for compliance with the BCA. | 4.1. Criteria to ensure construction methods comply with the intent of the BCA are determined.  
4.2. Alternative approaches to construction problems that comply with the requirements of the BCA are reported.  
4.3. Assessment methods used to determine whether a building solution complies with performance requirements or DTS provisions of BCA are analysed and applied.  
4.4. Assessment methods are confirmed and identified as appropriate to meet the DTS provisions of BCA. |

## Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - Australian standards
    - BCA
    - other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
  - document building requirements
  - report alternative approaches to construction problem
- innovation skills to develop compliant alternative solutions to construction problems
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:
- authorities and powers of a building surveyor
- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- BCA and primary referenced Australian standards
- criteria for Class 1 and 10 buildings
- design, construction and structural principles of buildings
- DTS provisions
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
REQUIRED SKILLS AND KNOWLEDGE

- research methods.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management
REQUIRED SKILLS AND KNOWLEDGE

systems

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - plans and specifications
    - other relevant documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to record mathematical information
  - numeracy skills to apply measurements and calculations
  - planning and organisational skills to collect, organise and analyse information
  - technological skills to:
    - complete documentation and calculations
    - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- grading processes and grade markings used to categorise timber and timber products
- manufactured timber framing systems
- nature of timber and effect of physiology and timber pests on its performance
- processes for the administration and preparation of documentation
- processes for the application of wind force, raking forces, and bracing and tie down systems
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural, design and construction principles of buildings, including the application of timber in buildings.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- assess timber-framed designs, evaluate plans and specifications, and identify faults; select structural members for roofs, ceilings, walls, floors and stumps relating to performance and the associated reporting of data, findings, recommendations and rectification strategies for at least one building project of up to two storeys or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

Confidence in the person’s demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCCSV5001A Assess the construction of domestic scale buildings
- CPCCSV5006A Assess construction faults in residential buildings.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating...
RANGE STATEMENT

Conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Structural members required in ceiling and roof framing:**
- includes evaluation and identification of structural members used in:
  - ceiling and roof framing
  - floor bearer and joist installing
  - timber stumping
  - timber wall framing
  - suitable for the building design in compliance with:
    - BCA
    - design specifications
    - legislative requirements
    - maintenance specifications
    - relevant legislation.

**Building categories include:**
- all timber-framed domestic scale buildings up to and including two storeys.

**Assessment of timber-framed designs:**
- includes the identification and recording and reporting of faults, in accordance with workplace providers, in verbal or written format
- timber-framed designs include:
  - floor framing, such as loose set single storey timber structures and two storey suspended upper floor level construction
  - overhang framing with soffits and eaves, attached carport, attached veranda and attached patio
  - roof framing, such as skillion, gable, hip and valley and cathedral
  - wall framing of various sizes, bracing locations and tie downs.

| 1. Identify the significance of the macro and micro climates in the construction process. | 1.1. Climate zones and their characteristics are identified and recorded for design projects requiring review of energy efficiencies.  
1.2. Methods for establishing characteristics of specific climates are established and documented.  
1.3. Construction materials and methods suited to specific climates are determined. |
| 2. Assess design criteria for energy efficient construction. | 2.1. Characteristics and location-specific requirements to establish a design are identified and listed.  
2.2. Appropriate form of construction is selected and documented according to established specifications.  
2.3. Prevailing hot and cool wind directions are identified and recorded.  
2.4. Sun path for the location is identified and documented.  
2.5. Building orientation is established and documented. |
| 3. Assess building designs. | 3.1. Accommodation within the building is assessed and recorded.  
3.2. Effective zoning within the building is established.  
3.3. Floor plan is sketched and recorded.  
3.4. Suitability of design in relation to cross-ventilation and shadow lines is determined and recorded.  
3.5. Impacts of energy efficiency design principles are identified and recorded for architectural and services design in accordance with state and territory legislation and the BCA. |
| 4. Identify that energy consumption practices are incorporated into design briefs. | 4.1. Energy appliances of the building and their consumption are established and recorded.  
4.2. Recommended best practice to conserve energy is identified and documented in energy audits.  
4.3. Selection and use of energy efficient fittings and services are determined and included in design brief.  
4.4. Energy budget principles for building fabric and services are identified and applied in accordance with standard industry practice. |

## Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - BCA
    - legislation
    - other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
  - develop recommendations and strategies for the implementation of energy efficient design principles
  - report data and findings
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- effects of fossil fuels on the atmosphere
- energy consumption relative to construction processes
- greenhouse gas emissions
- impact of construction process on the atmosphere
- impacts of national greenhouse strategy and Kyoto protocol on construction
- macro and micro climates
- nature of materials and effect on performance
- ozone depletion theories
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- R values (overall thermal resistance) for construction material
REQUIRED SKILLS AND KNOWLEDGE

- relevant federal, state or territory legislation and local government policy and procedures
- services design concepts
- site topography.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- evaluate and report on data, findings, recommendations and strategies for the implementation of energy efficient design principles for at least one building development project and in compliance with the applicable local government authority, relevant legislation and the BCA
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Design projects requiring review of energy efficiencies include:

- evaluation of building designs for the purposes of applying appropriate construction methods to reduce energy consumption.

Energy efficiency design principles include:

- application and assessment of BCA performance-based solutions
- best practice to conserve energy:
  - appliance usage
  - building location and orientation
  - choice and product performance
  - compliance with legislation pertinent to conserving energy
  - living practices that maximise benefit
- climate conditions:
  - climate zones in Australia specified in BCA
RANGE STATEMENT

- micro climates associated with a specific area
- energy consumption:
  - low energy lighting
  - solar hot water systems
  - star rated appliances
  - utilities and showerhead restriction fittings
  - window coverings and glazing
- energy efficient construction:
  - construction methods
  - efficient design briefs
  - geography and topography of site
  - location
  - materials used
  - method of application
- star rating systems:
  - Building Energy Rating Scheme (BERS) computer model
  - First Rate computer model
  - National Housing Energy Rating Scheme (NatHERS) computer model.

| 1. Evaluate documents submitted with an application for building approval. | 1.1. Plans, specifications and structural drawings for residential buildings are evaluated for compliance with building application process and building surveying procedures.  
1.2. Application/proposal is evaluated against legislative requirements.  
1.3. Components of the application requiring referral to other agencies or departments are identified and forwarded.  
1.4. Common faults with application are identified, noted and reported to relevant parties.  
1.5. Notice of decision, including approval, conditional approval or refusal, is drafted and processed according to workplace procedures. |
| 2. Carry out inspections at various stages of building work. | 2.1. Compliance of building work is checked according to schedule or at discretion, and reports are prepared promptly for appropriate parties.  
2.2. Written notices for non-complying work with a full explanation and any remedial action specified, are prepared and processed according to workplace procedures.  
2.3. Follow-up inspections are conducted at a suitable time to check rectified work without disruption to building progress.  
2.4. Meetings are conducted with stakeholders, taking notes, preparing minutes and responding as required. |
| 3. Prepare reports on various building types. | 3.1. Analyses of residential buildings are prepared and advised.  
3.2. Suitability of existing buildings are inspected and reported prior to purchase for proposed use and requirements.  
3.3. Existing buildings are inspected for safety and reports are completed.  
3.4. Outcome of construction work is inspected prior to occupancy and reported on. |
| 4. Determine the compliance of building services with respect to building legislation. | 4.1. Compliance of building services with building legislation is determined and reported on prior to occupancy.  
4.2. Legislative requirements are interpreted and applied.  
4.3. Common faults with building services are identified, researched and processed according to workplace procedures. |
ELEMENT PERFORMANCE CRITERIA

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - drawings
    - legislation
    - plans and specifications
    - other relevant documentation
  - report faults to other parties and conduct meetings with stakeholders
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
  - draft notices
  - prepare reports
  - take notes and minutes
- organisational and time management skills to arrange and conduct meetings to timelines
- planning and organisational skills to collect, organise and analyse information
- problem solving skills to identify faults and problems, to use and apply data for decision making and to review meeting feedback and take appropriate action
- teamwork skills to work with diverse individuals and groups
- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation, and local government policy and procedures
- research methods
- structural, design and construction principles of buildings
- terminology, definitions and hazard identification.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- apply building surveying procedures to produce an accurate proposal outlining the status of approval, compliance with regulations, determination of safety procedures, laws abided with, survey findings, and recommendations and strategies for at least one residential building project
- provide reports to appropriate body/individual as determined by the project brief and according to workplace procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

Confidence in the person's demonstrated ability and applied knowledge

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - BCA
REQUIRED SKILLS AND KNOWLEDGE

- relevant Australian standards
- other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to report findings and provide reports
- numeracy skills to analyse and apply complex mathematical information
- planning and organisational skills to collect, organise and analyse information
- technological skills to:
  - complete documentation and calculations
  - enable information gathering and analysis.

Required knowledge

Required knowledge for this unit is:

- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- nature of materials and effect on performance
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural and design principles for buildings.
Evidence Guide

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- assess, identify and report on findings for the design, positioning and sizing of structural members of at least one domestic scale building project or equivalent
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
EVIDENCE GUIDE

- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and
EVIDENCE GUIDE

supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment of structural requirements:

- includes:
  - analysis of engineering drawings
  - evaluation of site physicality
  - identification of safe structural practices
- may require actual site visits.

Adherence to legislative requirements is limited to:

- domestic scale buildings (similar in characteristics to those of residential dwellings in terms of loading, construction and size and may include small industrial, commercial and public buildings).

Analysis includes:

- 'I' (moment of inertia) values
- base unit mass, density, velocity, acceleration, force and stress
- column changes in length, cross-sectional, restraints, material and eccentricity
- cross-sectional geometry and common structural shapes
- deflections for symmetrically loaded, simply supported timber beams of various shapes,
RANGE STATEMENT

- spans and loads
- directions of wind pressure loads
- force on materials in tension, compression, stress, strain and elasticity
- forces associated with levers identified by direction and value
- forces for co-planar non-current force systems
- load differences, including:
  - dead load
  - live load
  - wind load
  - earthquake load
- minimum bracing requirements
- removal of trusses
- restraints for use with beams
- second area moments and deflection of beams
- simple roof truss transmission force
- structural properties differentiated for common materials
- symmetrically loaded simply supported situations for:
  - bending moments
  - deflection
  - shear forces
  - torsion
  - tension and compression stresses of roof members
- wind forces and wind velocity for bracing.

| 9. Evaluate construction standards and practices. | 8.2. Major structural concepts used to resist earthquakes are identified.  
8.3. Applications are sketched of structural and cladding details to resist earthquakes using appropriate drawing protocol.  
8.4. Factors effecting material selection and installation are nominated.  
9.1. Types, construction standards and practices for the installation/application used for claddings, linings, finishes and coatings are identified and evaluated.  
9.2. Detail drawings of the various types of cladding systems and their fixings are prepared in accordance with relevant design specifications.  
9.3. Suitability of various partition systems for use in office landscaping and layouts are evaluated and deemed appropriate to the function of the office.  
9.4. Preparation of drawings of typical office layouts and selection criteria with specific emphasis on materials choice and functional office design are investigated and deemed appropriate.  
9.5. Types, principles, construction standards and practices of window, door and joinery fabrication and installation are identified and evaluated in accordance with relevant design and construction of structural systems.  
9.6. Basic principles and integration of building services into the building are identified and evaluated in accordance with standard practices and service supply authority legislation.  
9.7. *Structural principles* and the use of these principles are identified.  
9.8. Types, standards and practices for the installation of the services are identified and described in accordance with different forms of project construction. |
ELEMENT

PERFORMANCE CRITERIA

10. Plan for continuing maintenance on a construction project.

10.1. Design principles required for consideration to accommodate and facilitate ongoing maintenance are identified and documented.

10.2. Key services areas of a building project requiring ongoing maintenance are nominated and described.

10.3. Approaches for entering into maintenance agreements for the provision of subsequent services are identified and documented.

10.4. Responsibilities of the various parties involved in a building project during the construction, defects liability and service life periods are identified and documented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems

- communication skills to:
  - communicate legislation and local government requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - BCA
    - plans, specifications and drawings
    - other relevant documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication

- written skills to:
  - document and record issues regarding site establishment, requirements, construction methods and maintenance
  - prepare checklist schedule
REQUIRED SKILLS AND KNOWLEDGE

- evaluate own actions to make judgements about performance and necessary improvements
- numeracy skills to analyse and apply complex mathematical information
- organisational and time management skills to arrange and conduct meetings to timelines
- planning and organisational skills to collect, organise and analyse information
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and the requirements of the DDA with regard to access
- authorities and powers of a building surveyor
- design and construction principles of buildings
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- apply the principles of construction, standards and services, design and maintenance specifications, correct terminology; and the associated reporting of data, findings, recommendations and strategies for at least one commercial, industrial or residential building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
EVIDENCE GUIDE

- confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scheduling, investigation, planning and site establishment** include:

- builders' construction plant and equipment
- contractual arrangements relevant to state or territory building control legislation
- temporary builders' site services.

**Buildings are limited to:**

- three storeys
- a maximum floor area not exceeding 2000 square metres.

**Construction principles for buildings include:**

- adherence to legislative requirements for Building Code 7 of Australia Class 2 to 9 buildings
- design specifications
- evaluation and identification of construction methods
- maintenance specifications
RANGE STATEMENT

Characteristics, uses, maintenance and selection of materials include:

- standards and services in compliance with relevant legislation.
- barriers
- cost effectiveness
- cranes and hoists
- dangerous materials
- environmental safety
- evaluation and assessment of new materials
- gantries
- installation
- manufacture
- new technologies
- recycling
- rubbish removal
- scaffolding systems
- site shed locations
- testing
- transport problems and restrictions, including hoardings.

Types, principles and relevant regulations, including BCA, construction standards and practices include:

- cladding systems, such as:
  - aluminium
  - brick and paving for pedestrians and vehicular traffic
  - brickwork and blockwork
  - bronze
  - coated steel
  - curtain wall
  - fibre reinforced cement
  - glass
  - glass-reinforced polyester resin (GRP)
  - granite
  - in situ concrete (i.e. off-the-form or textured)
  - marble
  - metal and epoxy resin laminates
  - non-load bearing
  - permanent formwork
  - plastics
  - pre-cast concrete (load bearing)
RANGE STATEMENT

- sandwich panels
- stainless steel
- tiles and mosaics
- veneer facings (sandstone)
- dimensional coordination and general principles of:
  - component dimensions
  - controlling dimensions
  - joints and tolerances between control joints and construction joints (vertical and horizontal)
- footing systems, such as:
  - car park construction
  - de-watering
  - grillage
  - ground stabilisation
  - grouted anchors
  - mechanical anchors
  - pad and pedestal footings
  - pier and beam (bored piers and driven piles)
  - piles and cap
  - retaining walls
  - shoring
  - tanking and basement construction
  - underpinning
- plant and equipment, such as:
  - back hoes
  - concrete kibbles and skip
  - concrete pumps
  - crane and grab cranes
  - gantries and similar overhead protection systems
  - generators
  - hoardings
  - hoists
  - pumps, including submersible pumps
  - rock breakers
  - scaffolding
RANGE STATEMENT

- shovels and buckets
- skimmers and scrapers
- temporary lighting systems
- temporary support systems
- well points
- service core construction, such as:
  - ceilings
  - damp proof courses
  - demountable formwork
  - flashings
  - jump formwork
  - membranes
  - openings (floors and roofs)
  - sarking and insulations
  - slip formwork
  - wall and floor cladding
  - walls
- services, such as:
  - communication systems
  - electricity
  - fire services, including fire hydrants and fire hose reels
  - gas
  - heating and cooling systems
  - mechanical ventilation
  - roof water plumbing and drainage
  - sewerage/septic or similar systems of plumbing and drainage
  - smoke control systems
  - sprinklers and similar systems
  - surface drainage
  - telephone
- structural fit-out systems and fixing, such as:
  - cupboard joinery and finishes
  - floor
  - mouldings
  - wall and ceiling finishes and coatings
  - wall and ceiling linings
RANGE STATEMENT

- wet area floor detailing
- structural openings, such as:
  - braced frame and core
  - diagonal bracing superimposed over frame or tube structure.
- door types for internal and external use
- fenestration design based on bracing design
- fire doors
- rigid frame and core
- timber and aluminium-framed windows and doors
- tube structure
- vehicle access doors
- structural systems, such as:
  - structural floor systems
  - structural roof systems
  - structural wall systems
- termite control:
  - which can be mechanical and chemical
  - may include other control systems.

Structural principles relate to:

- loads and forces
- stresses and strains applied to:
  - arches
  - beams
  - braces
  - columns
  - concrete floor slabs
  - load-bearing walls
  - roof frames, including trusses
  - structural footings
  - ties.

</table>
| 1. Read and interpret plans and specifications. | 1.1. Interrelationships between plans and specifications are identified and interpreted.  
1.2. Location and interpretation of key information are identified according to drawings and specifications.  
1.3. Drawing responses are identified in accordance with relevant Australian standards.  
1.4. Application of all documentation is identified and interpreted. |
| 2. Produce draft working drawings. | 2.1. Requirements and criteria for draft working drawings are identified and interpreted.  
2.2. Draft working drawings with annotated construction details are completed in accordance with BCA, relevant state or territory legislation and Australian standards. |
| 3. Produce a set of working drawings for a factory and office complex. | 3.1. Requirement and criteria for working drawings are identified and interpreted.  
3.2. Working drawings are based on research and are in accordance with relevant legislation including the BCA and Australian standards.  
3.3. Building drawings include detailed specifications and are completed to architectural conventions and demonstrate consideration of creativity and innovation.  
3.4. Documentation is compiled to satisfy approval requirements. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
REQUIRED SKILLS AND KNOWLEDGE

- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
  - BCA
  - legislation
  - plans, specifications and drawings
  - relevant Australian standards
  - other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- creative and innovative approaches in relevant drawing tasks
- numeracy skills for the production of drawings
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- drafting and drawing protocols
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- structural, design and construction principles of buildings.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- produce two and three-dimensional drawings for buildings up to three storeys and not exceeding a maximum floor area of 2000 square metres, including at least one orthographic, one isometric and one perspective drawing
- provide drawings to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plans and specifications:

- plans include:
  - building plans
  - details
  - sections and three-dimensional sketches relating to main components of construction
  - finishes and specification notes to a standard suitable for building approval
- specifications include:
  - structural engineering drawings
  - soil tests
  - shop drawings (steel fabrication)
  - survey plans and levels plans for temporary structures and works.
RANGE STATEMENT

**Relevant Australian standards**
- AS1100 Architectural drawing and supplement
- AS1720 Timber structures
- AS3600 Concrete structures
- AS3700 Masonry
- AS4100 Steel structures.

**Draft working drawings**
- area analysis
- BCA Class 2 to 9 buildings
- computer-generated or paper-based presentations
- construction notes
- details
- elevations
- floor plans
- general notes
- location or neighbouring buildings
- plan and specification interpretation
- projections
- sections
- services
- site plans
- two and three-dimensional drawings
- up to three storey buildings not exceeding a floor area of 2000 square metres.

**Building drawings**
- banks and landscaping
- base structure - timber and masonry
- certificate of title to land
- complex roof and wall shapes
- composite construction (e.g. steel and timber)
- conversion of plans and specifications to architectural and building detail
- drawing protocols, including:
  - abbreviations
  - legends
  - lettering standards
  - numbering
  - paper size
  - scale
  - standard units of measurement
  - symbols
  - electrical connections plan
RANGE STATEMENT

- excavation cut and fill
- flashings and box gutters
- general plumbing services plan
- glazing, including window and door schedules
- insulation and sarking
- internal and external wall claddings
- joinery
- land surveyor plans
- large span timber beams and connections, including glue laminated beams
- levels and contours
- research journal in accordance with project aims, comprising:
  - photographs
  - record of site visits
  - sections
  - three-dimensional sketches
- retaining walls
- roof construction
- sewerage connection and easement plan
- soil classification and tests
- stairs
- stormwater connection and easements plan
- timber and masonry
- upper floor construction
- wall construction.

# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify and analyse construction faults on building sites up to three storeys. | 1.1. Information is collected relating to the specific building construction problem.  
1.2. Construction problem for the type of construction is identified relative to original specifications and building material.  
1.3. Construction faults are communicated to appropriate personnel and documented in accordance with standard work practices.  
1.4. Problem solving techniques are used, typical faults and problems are identified and action to rectify is deemed to be in accordance with the BCA. |
| 2. Identify construction techniques, methods and materials nominated in relevant legislation in the BCA and Australian standard. | 2.1. Building terminology is used accurately in the communication of issues.  
2.2. Working drawings and specifications are examined and existing or designed construction problems are identified and evaluated.  
2.3. Alternative methods and materials to meet construction aims and objectives are prepared to the specification nominated in relevant legislation in the BCA and Australian standards.  
2.4. Detailed sketches of available alternative methods and materials available to meet the construction aims and objectives are prepared to specification. |
| 3. Resolve construction faults in construction techniques and methods. | 3.1. Project working drawings and specifications identifying existing or designed construction problems are evaluated.  
3.2. Report identifying available alternative methods and materials to meet the construction aims and objectives is prepared to specification.  
3.3. Detailed sketches of available alternative methods and materials available to meet the construction aims and objectives are prepared to specification. |
| 4. Resolve construction faults using alternative construction methods. | 4.1. Suitable methods from available alternative solutions are evaluated and recommended to resolve the problem in accordance with project aims and objectives.  
4.2. Selected methods are integrated into the project in order to resolve the construction problems in accordance with project aims.  
4.3. Evaluation of available alternative forms of construction is carried out in accordance with project
ELEMENT | PERFORMANCE CRITERIA
---|---
5. Resolve common on-site faults with building materials. | 5.1. Commonly occurring on-site problems with building materials and their causes are evaluated.
 | 5.2. Corrective and preventative measures are identified and implemented.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - communicate construction problem to appropriate personnel
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - evaluate own actions to make judgements about performance and necessary improvements
- read and interpret:
  - Australian standards
  - BCA
  - legislation
  - reports
  - specifications
  - working drawings
- use accurate terminology
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
  - to document construction problem
  - report identifying alternative methods/materials
- teamwork skills to work effectively with others.
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and the requirements of the Disability Discrimination Act (DDA) with regard to access
- authorities and powers of a building surveyor
- design and construction principles of buildings
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.
- terminology, definitions and hazard identification.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- assess construction faults in buildings, determine a rectification strategy and consider alternative construction methods; and the associated reporting of data, findings, recommendations and strategies for at least one residential building project and one commercial building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

| 1. Evaluation of slope instability. | 1.1. Effect of soil and rock strength on slope instability is evaluated and recorded.  
1.2. Modes and mechanics of slope instability are researched and documented.  
1.3. Methods to stabilise slopes are researched and documented according to *standard specifications*. |
| 2. Analyse retaining wall requirements according to the structure. | 2.1. Retaining structures and systems suitable for various situations and *soil types* are identified adhering to *legislative requirements* and the application of footings and geomechanical principles.  
2.2. Active and passive earth pressure and water pressure applicable to various retaining structures is determined.  
2.3. Earth pressures on a gravity retaining wall are determined and analysed according to required structure for stability. |
| 3. Determine footing design requirements according to situation. | 3.1. Net safe bearing pressure for a *footing* on a clay soil is calculated without error.  
3.2. Allowable bearing pressures for footings on granular soil from in-site penetration test results are calculated without error.  
3.3. Long-term consolidation effects for footings on clay soils are analysed and recorded.  
3.4. Behaviour of footings on soils under earthquake conditions is researched and documented. |
| 4. Determine requirements for compaction of soil fill. | 4.1. Maximum *soil properties*, including dry density and moisture content relationship, for a soil is analysed and recorded.  
4.2. Techniques for compaction control and performance of compaction plant in consideration of *maintenance requirements* are identified and documented. |

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - evaluate own actions to make judgements about performance and necessary improvements
- read and interpret:
  - BCA
  - reports
  - specifications
  - working drawings
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to report evaluations
- numeracy skills to interpret and apply complex mathematical information
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- design principles and concepts for footings
- geomechanical engineering principles
- nature of materials and effect on performance
- nature of soil mechanics and effect of performance in problem soils
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural design principles in buildings.
### Evidence Guide

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- assess footing requirements, for at least one commercial building project or equivalent, which includes advice on positioning and sizing
- analyse and report on the soil types and properties for at least two building projects or equivalent
- provide reports to appropriate body/individual as determined by the project brief.

#### Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Standard specifications include industry-standard specifications and may be:

- detailed specifications, addressing specific components such as structural or other requirements
- developed specifications
- preliminary and outline specifications.

Soil types include:

- clay soils
- rock
- saturated granular soils.

Legislative requirements are limited to:

- buildings up to three storeys and not exceeding a maximum floor area of 2000 square metres
- adhering to legislative requirements for BCA relating to Class 2 and 9 buildings.

Application of footings and geomechanical principles

- assessment of geomechanical and footing design for residential and commercial

Approved

© Commonwealth of Australia, 2017

Artibus Innovation
RANGE STATEMENT

includes:

- identification of the nature, composition, classification and distribution of soil type.

**Footing** must be suitable for:

- building type
- site conditions.

**Soil properties** include:

- bulk density
- degree of saturation
- dry density
- moisture content
- porosity
- void ratio.

**Maintenance requirements** include identification of:

- ground water
- surface water
- tree root systems.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - evaluate own actions to make judgements about performance and necessary improvements
  - read and interpret:
    - Australian standards
    - BCA
    - legislation
    - specifications
    - working drawings
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to report evaluations and record requirements
  - numeracy skills to calculate workplace requirements
  - teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- design concepts and principles in relation to service installations
- general services installation terminology, definitions, installation methods and hazards
- nature of materials and effect on performance
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
REQUIRED SKILLS AND KNOWLEDGE

- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- terminology and methods of roof construction used for daylight transmission
- terminology and methods used in artificial lighting
- terminology with reference to items and services that may be used in plumbing, sewerage and drainage systems
- terminology with reference to vertical transportation.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- evaluate the services layout, connection methods and rectification actions for at least one residential and one commercial building project or equivalent, which includes advice on hot and cold water supply, sewerage layout, electrical and electronic installation lighting systems, vertical transportation requirements, and smoke and fire detection and prevention systems
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
EVIDENCE GUIDE

mandatory task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at
EVIDENCE GUIDE

the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Residential and commercial building projects requiring evaluation of services layout include:

- processing of applications
- project milestones
- provision of site access/facilities
- work schedules.

Application of evaluative and corrective methods for services' layout includes:

- electric and electronic installations
- hot and cold water supply
- natural lighting options
- sewerage layout
- smoke and fire preventative systems
- smoke hazard management
- ventilation and air conditioning
- vertical transportation.
RANGE STATEMENT

*Services* include:

- firefighting services, such as:
  - fire and smoke detection and alarm systems (BCA deemed-to-satisfy [DTS] provisions)
  - fire hose reels and fire extinguishers
  - fire hydrants
  - installation of fire stopping and fire collars
  - sprinkler systems (BCA DTS provisions)
- general electric and electronic service systems, including:
  - electrical supply authorities connection to site and distribution facilities (switch room and sub-stations)
  - type of service (emergency power and alternative power sources)
- categories of cabling:
  - computers
  - data
  - emergency lighting and exit signage systems
  - emergency warning and intercommunication systems
  - fire stopping
  - layout of equipment for telephones
  - lift controls and power supplies
  - repair and extension
  - service system safeguards
  - service systems access for maintenance
  - telecommunications connection to site and distribution facilities
- hot water systems, covering:
  - area to be serviced
  - height of installation
  - number of outlets and energy sources available
  - type of occupancy
  - type of system
- lighting systems, covering:
  - brightness
  - emergency and exit signage systems
RANGE STATEMENT

- intensity
- lifespan and installation of fire stopping
- locations for installation
- natural and artificial lighting
- reflections
- terms, including control of glare
- mechanical ventilation
- air-conditioning and air filtration, such as:
  - air conditioning applications
  - air distribution, including mechanical ventilation requirements for enclosed car parks
  - air filtration, including air filters
  - air intake systems
  - ducting and main filter types
  - fire dampers
  - fume discharge systems
  - installation of fire stopping
  - smoke control and exhaust systems
  - warm water and cooling towers
- sewerage connection, such as:
  - graded or vertical discharge pipes
  - inspection shafts and overflow relief gullies (ORGs)
  - local authority sewerage drainage system
  - septic or biochemical treatment unit
- specialised services for:
  - hospitals
  - laboratories
  - smart buildings
- stormwater, covering:
  - connection to local government water drains
  - design
  - downpipes and unground or concealed piping
  - installation and disposal
  - location and construction requirements for eaves and box gutters
  - size
RANGE STATEMENT

- use of soakage pits and on-site water detection systems
- vertical transportation systems, such as:
  - escalators
  - hoists and pedestrian movers
  - lifts
- water supply, such as:
  - single and two stage pumping for multi-function and single function connected services
  - tank storage supply relative to the public water supply and reservoir heights
  - town supply.

Adherence to legislative requirements:

- is limited to residential and commercial buildings up to three storeys and not exceeding a maximum floor area of 2000 square metres
- BCA requirements for Class 2 and 9 buildings.

| 1. Identify structural requirements and loads commonly used in structural design. | 1.1. Assessment of *structural requirements* relating to equilibrium, stability, strength, functionality, economy and aesthetics is undertaken.  
1.2. Different types of loading and unloading methods and the effect on structures are identified and documented in accordance with BCA, relevant Australian standards, suppliers' technical data and empirical methods and *adherence to legislative requirements for BCA Class 2 to 9 buildings*. |
| 2. Analyse effects of force and moments on structural elements. | 2.1. Force, moments and equilibrium of force and the effects on structures are identified and recorded.  
2.2. Equilibrium of forces for co-planar systems in consideration of stability is identified and compared for performance. |
| 3. Analyse properties and behaviour of structural materials. | 3.1. Effect of force on materials in tension, compression, stress, strain and elasticity is identified and recorded.  
3.2. Structural properties and performances are differentiated for common materials and recorded. |
| 4. Identify section properties of structural elements and their effect on structural performance. | 4.1. Cross-sectional geometry and common structural shapes are identified.  
4.2. Section properties and the relationship between first and second area moments, section models and gyration and deflection of beams are identified and compared for performance.  
4.3. Section properties’ values for I (moment of inertia), Z (section modulus) and R (radius) for common sections are determined using tables or standard formulas and compared for performance. |
| 5. Compare performance and properties of spanning elements. | 5.1. Structural considerations of loaded spanning elements for bending moments, shear forces, deflection and torsion are determined and compared for performance.  
5.2. Bending behaviour and performance of loaded support beams of various types, shapes, spans and loads are determined and compared for performance.  
5.3. Effects that connections have upon the structural performance of beams are identified and compared for performance.  
5.4. Principles of slab behaviour in relation to spans and stress distribution are identified and compared for performance. |
ELEMENT | PERFORMANCE CRITERIA
---|---
6. Compare performance criteria for columns. | 6.1. Effect of slenderness ratio that changes in length, cross-sections, connections and materials will have on the strength of a column is determined and compared for performance.
6.2. Eccentric and axial load effect on the strength of column section and materials are determined and compared for performance.
7. Compare methods of stress distribution in connections between structural elements. | 7.1. Transmission of forces between structural elements are identified and interpreted.
7.2. Methods of distributing stresses in connections between structural elements are identified and compared for performance.
8. Determine how loads of various types occur and impinge on a building structure. | 8.1. Differences between types of loading, including dead load, live load, wind load, earthquake load and other load, causing actions are determined and compared for performance.
8.2. Dead loads are determined using BCA and relevant Australian standards.
8.3. Indication of direction of wind pressures on the various surfaces of buildings specified in BCA and relevant Australian standards are determined.
9. Evaluate design of high performance structural elements. | 9.1. Factors that determine the form of long span structural elements, including bending movement, deflection and shear forces, are researched, considered and evaluated.
9.2. Performance in high performance structural elements is identified and evaluated.
9.3. Use of steel to reinforce concrete is investigated and evaluated and the outcomes or results are recorded.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and
REQUIRED SKILLS AND KNOWLEDGE

contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems

communication skills to:
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- evaluate own actions to make judgements about performance and necessary improvements
- read and interpret:
  - BCA
  - legislation
  - relevant Australian standards
  - other relevant documentation
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to report findings and provide reports
- numeracy skills to analyse and apply complex mathematical information
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:
- behaviour of structural members undergoing stress, strain, compression, bending or combined actions
- grading processes and grade markings used to categorise timber and timber products
- nature of materials and effect on performance
- processes for the interpretation of working drawings and specifications
- processes for the preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- structural and design principles for buildings.
Evidence Guide
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

• comply with OHS regulations applicable to workplace operations
• apply organisational management policies and procedures, including quality assurance requirements where applicable
• assess, identify and report on findings for the design, positioning and sizing of structural members of at least one three storey building project or equivalent
• provide reports to appropriate body/individual as determined by the project brief
• apply design principles relating to performance of structural members.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the mandatory task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying
EVIDENCE GUIDE

safe work practices

- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Assessment of structural requirements:

- includes:
  - analysis of engineering drawings
  - evaluation of site physicality
  - identification of safe structural practices
  - may require actual site visits.

Adherence to legislative requirements for BCA Class 2 to 9 buildings is limited to:

- three storey buildings
- not exceeding a maximum floor area of 2000 square metres.

Types of loading include:

- static
- dead
- dynamic
- earthquake
- settlement
- snow
- thermal.
RANGE STATEMENT

High performance structural elements include:
- castellated beams
- connections
- fire resistance
- laminated beams
- prestressed beams and slabs
- trusses
- waffle slabs.

Evaluation of use of steel to reinforce concrete includes:
- bond stress and development length
- carry over movements
- compression reinforcement
- eccentric loading
- location of steel in relation to shear stress
- location of steel in relation to tensile stress
- reinforcement ratio.

| 1. Analyse the purpose and basic intent of the BCA. | 1.1. Objectives of the BCA are analysed for construction in residential and commercial buildings.  
1.2. Conditions of the BCA and the purpose of the respective components are evaluated and documented for relevant building categories and building surveying procedures.  
1.3. Deemed-to-satisfy (DTS) concept for construction to meet BCA requirements is evaluated and documented. |
| 2. Locate and interpret code or standard requirements that are applicable to particular projects. | 2.1. Clauses from the BCA that apply to particular projects are identified and recorded.  
2.2. Prescriptive requirements of relevant BCA clauses are determined.  
2.3. Standards that are referenced in the BCA are identified and recorded.  
2.4. Special requirements that may apply to specific areas are identified and recorded. |
| 3. Classify buildings. | 3.1. Nature of a building is determined, with regard to use and arrangement.  
3.2. BCA criteria are applied to determine the defined classification.  
3.3. BCA requirements are interpreted for multiple classifications. |
| 4. Apply solutions to construction problems for compliance with the BCA. | 4.1. Criteria that will ensure construction methods comply with the BCA are determined.  
4.2. Alternative approaches to a construction problem that will comply with the requirements of the BCA are reported.  
4.3. Appropriate assessment methods used to determine whether a building solution complies with performance requirements and/or DTS provisions of the BCA are chosen and applied. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- ability to recognise procedures, follow instructions, respond to change and contribute to workplace responsibilities, such as current workplace environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

- use and interpret non-verbal communication
- written skills to:
  - document building requirements
  - report alternative approaches to construction problems
- numeracy skills to analyse and apply complex mathematical information
- teamwork skills to work effectively with others.

Required knowledge

Required knowledge for this unit is:

- access requirements for people with a disability and the requirements of the Disability Discrimination Act (DDA) with regard to access
- authorities and powers of a building surveyor
- BCA and primary referenced Australian standards
- criteria for Class 2 to 9 buildings and Guide to BCA
- design, construction and structural principles of buildings
- DTS provisions
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods
- terminology and definitions in relevant documentation.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- classify building construction through the evaluation and interpretation of compliance with the BCA, and associated reporting of data, findings, recommendations and strategies for at least one residential building project and one commercial building project or equivalent in compliance with relevant legislation
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
**EVIDENCE GUIDE**

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

|  | Australian standards and are assessed for compliance.
5.3. Components and their function in the operation of a sprinkler system are checked for pertinence in accordance with BCA and relevant Australian standards.
6. Determine the requirements for sprinklers and drenchers in buildings.
6.1. Functions of sprinkler and drencher systems are recorded.
6.2. Sources of water supply to a sprinkler system are identified and documented in accordance with BCA.
6.3. Components and their function in the operation of a sprinkler system are interpreted.
7. Integrated active fire protection systems and passive fire protection are evaluated to ensure a safe and economical building.
7.1. Active and passive fire protection systems are identified and selected.
7.2. Building examination is carried out to determine the effectiveness of the active and passive fire protection systems according to BCA.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
  - BCA
  - legislation
  - other relevant documentation
- use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication
- written skills to:
  - provide an evaluation
  - report data, findings, recommendations and strategies
- innovation skills to develop creative and responsive approaches
- numeracy skills to calculate workplace requirements
- planning and organisational skills to research, collect, organise and understand information relating to the design of fire-compliant hydraulic systems and to take initiative and make decisions
- problem solving skills to analyse requirements, carry out tests, consider options and design an appropriate system.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- Factory Mutual (FM) approved material specifications
- fire safety engineering guidelines
- fire technology principles in buildings
- National Fire Protection Association (NFPA) specifications
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures
- research methods.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where appropriate
- evaluate and report data, findings and recommendations for the implementation of fire technology strategies for at least one building development project up to three storeys, including smoke detection systems, fire prevention systems, protection and control systems, firefighting equipment, active and passive fire protection systems, sprinkler systems and drencher systems, with respect to compliance with the applicable local government authority, relevant legislation and the BCA
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Installation of active fire protection systems includes:

- new and proposed buildings, for the purposes of highlighting fire technology requirements and solutions in compliance with the BCA.

Building projects requiring assessment of fire technology systems include:

- calculation and processing of application or inspection fees
- project milestones
- provision of site access/facilities
- work schedules.

Buildings are limited to:

- three storeys and a maximum floor area not exceeding 2000 square metres, complying with
RANGE STATEMENT

Fire safety systems include:

- active and passive fire protection systems
- drencher systems
- firefighting equipment
- fire prevention systems
- protection and control systems
- smoke detection systems
- sprinkler systems.

<tbody>
<tr>
<td>1. Distinguish between common law, judicial precedent and legislation.</td>
<td>1.1. Common law in the <em>Australian legal system</em> is analysed and documented.  &lt;br&gt;1.2. Binding and persuasive precedent is analysed and interpreted.  &lt;br&gt;1.3. Relationship between common law and <em>statute law</em> is analysed and documented.  &lt;br&gt;1.4. Delegated legislation and authorities' allocated specific powers are documented.  &lt;br&gt;1.5. Legal practice of reading case law and law updates are appraised and noted.</td>
</tr>
<tr>
<td>2. Identify and interpret the court hierarchy and the civil/criminal jurisdictions of each court.</td>
<td>2.1. Civil/criminal court hierarchy is analysed and documented.  &lt;br&gt;2.2. Details of the <em>types of courts</em> for civil/criminal jurisdiction of each court are analysed and documented.  &lt;br&gt;2.3. System of civil/criminal appeals is identified and documented.  &lt;br&gt;2.4. Jurisdiction that the coroner's court has in regulatory practice and its role in legislative reform are identified and documented.  &lt;br&gt;2.5. Role of legal personnel in the court system is identified and documented.</td>
</tr>
<tr>
<td>3. Identify and interpret courtroom procedures.</td>
<td>3.1. Court examination procedures are identified and documented.  &lt;br&gt;3.2. Role of a judge and jury in a civil/criminal trial and eligibility to attend for jury service are identified and documented.  &lt;br&gt;3.3. Format of a prosecution brief is identified and documented.  &lt;br&gt;3.4. Appropriate manner of entering into and departing courts or tribunals is adhered to.  &lt;br&gt;3.5. Appropriate manner of addressing courts or tribunals is adhered to.  &lt;br&gt;3.6. Relevant legal language is applied.</td>
</tr>
<tr>
<td>4. Identify types of offences and defences within criminal law.</td>
<td>4.1. Presumption of innocence in a criminal case and the burden of proof are analysed and documented.  &lt;br&gt;4.2. General principles of criminal liability are determined.  &lt;br&gt;4.3. Differences between summary and indictable offences are analysed and documented.</td>
</tr>
</tbody>
</table>
ELEMENT | PERFORMANCE CRITERIA
---|---
5. Detail types of evidence admissible in a civil/criminal trial. | 4.4. Types of defences are analysed and documented.  
5.1. *Types of evidence* are analysed and documented.  
5.2. Differences between types of evidence in a court of law are defined and outlined.  
5.3. Evidence rules are identified and documented.

6. Identify the rules of statutory interpretation. | 5. Types of evidence are analysed and documented.  
6.1. Acts of parliament and subordinate legislation as a source of law are analysed and documented.  
6.2. Extrinsic and intrinsic material as they relate to federal, state or territory Interpretation Acts are identified and documented.  
6.3. *Syntactical presumptions* are analysed and documented.  
6.4. General approaches to *statutory interpretation* are identified and analysed.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - address courts/tribunals
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - legislation
    - other relevant documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to record relevant information.

**Required knowledge**
REQUIRED SKILLS AND KNOWLEDGE

Required knowledge for this unit is:

- Australian legal system and applications of law and legal principles in building surveying
- building policy and legislation
- legal terminology, definitions, processes and procedures used in standard court operations
- processes for the administration and preparation of documentation
- relevant federal, state or territory legislation and local government policy and procedures
- research processes and strategies.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- perform research, interpretation and analysis together with attendance and involvement in at least one civil law case and at least one criminal law case impacting on building control legislation, all in accordance with the professional code of conduct and ethics applicable to building control
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability.
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Australian legal system** includes:
- Australian common law system
- laws applicable to building surveying
- professional code of ethics.

**Statute law** includes:
- common law
- judicial precedent
- legislation.

**Types of courts** include:
- civil and criminal jurisdictions.

**Types of evidence** include:
- admissible and inadmissible evidence
- direct
- documented
- hearsay
- oral
- real
- secondary.
RANGE STATEMENT

Federal legislation includes:
- Disability Discrimination Act.

State or territory legislation includes:
- environmental health, planning, OHS and local government by-laws.

Syntactical presumptions include:
- ejusdem generis
- noscitur a sociis.

Statutory interpretation includes:
- golden rule
- literal rule
- mischief rule.

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and
EVIDENCE GUIDE

supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Planning and management of land use includes:

- commercial, industrial and urban land, and may include rural and bush land
- evaluation of land and inspection for the purposes of future planned development projects and the reporting of inspection outcomes
- topographical issues, such as flood liability, bushfire prone areas and the impact of local land legislation.

## Required Skills and Knowledge
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - carry out consultations
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret relevant documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- written skills to:
  - prepare a research plan
  - record relevant information
  - report finding
- interpret data from information collected.

Required knowledge

Required knowledge for this unit is:

- building policy and legislation
- consultation methods, including cultural considerations
- environmental planning and design
- federal, state or territory legislation and local government policy and procedures relevant to building surveying
- heritage preservation
- manual and electronic information systems
- performance measures
- processes for the administration and preparation of documentation
- research processes and strategies.
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- perform research design, and analyse, consult and report findings for at least one major building project in accordance with standard research practices
- provide reports to appropriate body/individual as determined by the project brief.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
EVIDENCE GUIDE

- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and
EVIDENCE GUIDE

supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Research methodology includes:

- consultation
- definitions
- historical data
- material safety data sheets (MSDS)
- reports
- written records.

Research includes:

- building policy and legislation
- design and construction of buildings
- fire engineering
- geomechanics
- heritage preservation
- performance evaluation
- planning and design.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret:
    - drawings
    - legislation
    - plans and specifications
    - other relevant documentation
- report faults with application
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication
- written skills to:
  - report on problems and methods to achieve compliance
  - provide reports to relevant authorities.

Required knowledge

Required knowledge for this unit is:

- authorities and powers of a building surveyor
- nature of materials and effect on performance
- processes for the administration and preparation of documentation
- processes for the interpretation of reports, working drawings and specifications
- relevant federal, state or territory legislation and local government policy and procedures for building surveying
- research methods
REQUIRED SKILLS AND KNOWLEDGE

- structural, design and construction principles of buildings.
EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- comply with OHS regulations applicable to workplace operations
- apply organisational management policies and procedures, including quality assurance requirements where applicable
- apply building surveying procedures and the associated reporting of data, findings, recommendations and strategies for at least one commercial or medium rise residential building project or equivalent
- produce an accurate proposal outlining status of approval, compliance with regulations, and determination of safety procedures for one commercial, industrial or medium rise residential building project
- provide reports to appropriate body/individual as determined by the project brief and according to workplace procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
EVIDENCE GUIDE

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
EVIDENCE GUIDE

separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Application of building surveying procedures to commercial and residential medium rise buildings includes:

- evaluation and interpretation of plans,
- progressive inspection of building work,
- preparation of reports and adherence to legislative requirements for BCA Class 2 to 9 buildings,
- three storeys and a maximum floor area not exceeding 2000 square metres.

Commercial, industrial and residential medium rise buildings are limited to:

Medium rise building projects requiring building surveying include:

- processing of applications
- project milestones
- provision of site access/facilities
RANGE STATEMENT

- work schedules.
- construction
- electrical
- mechanical

</tr>
<tr>
<td></td>
<td>2.5 First draft design is completed and prepared for presentation to the client.</td>
</tr>
<tr>
<td>3 Refine and confirm the design requirements.</td>
<td>3.1 First draft design, together with justifications for departure from the client brief, are explained to relevant supervisor for negotiation with the client.</td>
</tr>
</tbody>
</table>
| | 3.2 Details of variations to the design that the relevant supervisor has negotiated and agreed with the client are
noted and confirmed.

4 Finalise the design.

4.1 Agreed variations to the first draft design are converted to usable data that meets statutory and regulatory authority requirements.

4.2 Variations are incorporated into the design using software capabilities.

4.3 Required explanatory information and margin note detail are incorporated into the design.

4.4 Design is finalised, titled and presented in both plan and elevation form to the relevant supervisor.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - present design plan and negotiate and agree on plan with supervisor
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to prepare an outline action plan and develop and finalise a design
  - creative design, drawing and drafting skills, including use of drafting equipment
  - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - numeracy skills to apply measurements and calculations, including basic calculations of height, areas, volumes and grades
  - planning and organising skills to:
    - ensure coordinated development of sketches and drawings
    - plan and set out work
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technology skills to operate computer-aided design (CAD) software systems.

Required knowledge

Required knowledge for this unit is:

- basic calculations of height, areas, volumes and grades
- CAD software systems and user techniques
- commonly used construction terminology, symbols and abbreviations
- commonly used residential construction materials and their applications
- features of plans and elevations, including orientation, direction, scale, key, contours, symbols and abbreviations
- fundamentals of design in terms of space, access, flow and function
- impact on design of environmental requirements
- impact on design of quality requirements
- project quality requirements
- techniques for reading and interpreting plans.
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with OHS regulations and state and territory legislation applicable to the design function
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- design a residential structure, including:
  - interpreting and confirming a client brief
  - producing, using a CAD system, a first draft design
  - finalising the design and presenting it, in both plan and elevation form, to the client.

Context of and specific resources for assessment

This unit of competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be in accordance with legislation, regulations, codes of practice, organisational safety policies and procedures, and project safety plan and may include:

- emergency procedures related to the design function, such as extinguishing fires
- personal protective equipment prescribed under legislation, regulation and workplace policies and practices
- state or territory legislation and regulations and organisational safety policies and procedures, which include:
  - ergonomics
  - use of materials and equipment
  - workplace environment and safety.

**Scope of work** includes:

- CAD software that accepts and manipulates data to present design options and outcomes, with results possibly represented in two or three dimensional form
- client brief that is a definitive and documented description of the user requirements in terms of dimensions, services, construction materials and other defined requirements
- plans that include a title panel, amendment detail, orientation, legend information, industry symbols and abbreviations, material information and relevant finishes/standards of work
- services in the client brief that include power or plumbing systems
- simple domestic or residential structure, such as a barbecue area, deck, pergola or shed.

**Information** includes:
- CAD software packages and related user information
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions for major equipments
- maps
- memos
- regulatory and legislative requirements pertaining to design of residential structures
- relevant Australian standards
- safe work procedures related to design work
- verbal, written and graphical instructions.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications, where specified.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

5.1. Equipment is selected and checked for serviceability and operation in accordance with OHS legislation.  
5.2. Equipment is safely and effectively operated in accordance with OHS legislation, and used to construct basic project. | 5.2. Equipment is safely and effectively operated in accordance with OHS legislation, and used to construct basic project.
6. Construct a simple project. | 6.1. Work area requirements are prepared in accordance with working drawings, specifications and established work procedures.  
6.2. Set out, levelling, construction and erection or installation of project are implemented in accordance with application and requirements for line, level and plumb in construction projects.  
6.3. Construction project is completed to specification and quality and is checked for conformity to plans and design specifications. | 6.3. Construction project is completed to specification and quality and is checked for conformity to plans and design specifications.
7. Clean up. | 7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. | 7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
REQUIRED SKILLS AND KNOWLEDGE

- documentation from a variety of sources
- drawings and specifications
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic construction techniques
- construction materials
- construction terminology
- hazardous materials
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- material sizes
- materials storage and environmentally friendly waste management
- plans, specifications and drawings
- plumb, line and level
- processes for the calculation of material requirements
- quality requirements
- tools and equipment types, characteristics, uses, limitations and maintenance
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- safely and effectively use tools and equipment
- communicate and work effectively and safely with others
- complete a basic construction project to specifications, complying with OHS requirements, correct and safe use of hand tools and equipment.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Project planning includes:

• assessment of conditions
• determining work requirements
• equipment defect identification
• hazards
• work site inspection.

Information includes:

• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions, where specified
• MSDS
• memos
• regulatory and legislative requirements pertaining to undertaking a basic construction project
RANGE STATEMENT

- relevant Australian standards
- safe work procedures relating to undertaking a basic construction project
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.
- those appropriate to the project.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

Tools and equipment include:

- those appropriate to the project.

Materials include:

- those appropriate to the project.
RANGE STATEMENT

Environmental requirements include:
- noise and dust
- vibration and clean-up management
- waste management.

Statutory and regulatory authorities include:
- federal, state and local authorities administering applicable Acts, regulations and codes of practice.

Quality requirements include:
- internal company quality policy and standards
- manufacturer specifications, where specified
- relevant regulations, including Australian standards
- workplace operations and procedures.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to complete the penetrations and flashings associated with wall and ceiling lining. It does not cover the technical aspects of passive fire systems.

It includes planning and preparation for work, selection and safe use of tools and equipment to complete the penetrations and flashings, restoration of the integrity of the wall or ceiling, and completion of post work clean-up activities.

Application of the Unit

Application of the unit
This unit supports the attainment of skills and knowledge to safely and efficiently complete penetrations and flashings while working with others as a member of a team.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- penetration and flashing techniques
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- services locating techniques
- systems and techniques for safe handling of materials
- types of services and purposes for which penetrations and flashings are required
- types, characteristics, uses and limitations of wall and ceiling lining materials
- types, characteristics, uses and limitations of hand and power tools for wall and ceiling lining
- wall and ceiling industry terminology
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- complete a minimum of three penetration and flashing tasks, including:
  - one for electrical services
  - one for communication services.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- hand and power tools and equipment
EVIDENCE GUIDE

appropriate to the completion of penetrations and flashings
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability

RANGE STATEMENT

Planning and preparation
include:

- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting edges
  - lighting
  - manual handling
  - noise, dust and ventilation
  - power equipment
  - power leads and sources
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- broad knives
- brooms
- electric screw guns
- hand and power drills
- hand saws
- keyhole saws
RANGE STATEMENT

- measuring tapes and rules
- paintbrushes
- plasterboard hammers
- plasterer’s trowels
- scaffold planks
- T squares
- taping knives
- trestles.

**Plant and equipment** include:
- earth leakage protection
- lighting sets
- power activated fasteners
- power routers
- power saws
- small compressor air operated
- small petrol or diesel engine driven generators.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- beads
- cement render
- fibre cement sheets
- finishing materials
- plaster compounds
- plasterboard
- plasterglass sheets
- water resistant plasterboard.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
- waste management.

**Penetration and flashings** include those required for:
- communications
- control joints
- electrical power
- plumbing.

  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment:

- include:
  - broad knives
  - cement sheet cutters (electric and hand)
  - electric screw guns
RANGE STATEMENT

- hand sanding floats
- hand saws
- internal angle taping tools
- keyhole saws (electric and hand)
- measuring tapes and rules
- mixers (electric and hand)
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- taping knives
- T-squares
- may include:
  - electric sanding floats
  - mechanical finishing tools
  - scaffold planks
  - trestles.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:
- adhesives
- arch beads
- base
- casing beads
- corner beads
- fibre cement sheets
- finishing materials
- insulation batts
- perforated paper tape
- plasterboard
- shadowline beads.

Material application is to be in accordance with:
- manufacturer specifications for fibre cement sheeting
- relevant Australian standard (for plasterboard).

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.
RANGE STATEMENT

**Substrates** include:
- battened masonry surfaces
- steel framing
- steel furring channels
- timber framing
- timber or steel battens.

**Curved ceilings** are vaulted ceilings which may be:
- cambered
- elliptical
- pitched
- undulating.

**Curved surfaces** include:
- bulkheads.

**Finishing** is to achieve:
- a smooth, flat, scratch and blemish free surface.

 | compliance with work requirements and minimal wastage.
4.3. Sheets are cut to fit specified **arch** locations with clearance to manufacturer specifications.
4.4. Sheets are fixed to specified arch locations with mechanical fastenings or combined adhesive/fasteners to manufacturer specifications and relevant standards.
4.5. All work is carried out to manufacturer specifications and relevant Australian standards.
5. Joint and finish materials. | 5.1. Compounds for backblocking and jointing are prepared to manufacturer specifications.
5.2. Backblocks are applied to specification.
5.3. Additional design details and features are identified.
5.4. Beading is installed to design requirements.
5.5. Jointing and **finishing** of plasterboard and fibre cement sheeting is completed in accordance with manufacturer specifications.
6. Clean up. | 6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
REQUIRED SKILLS AND KNOWLEDGE

- recognise procedures
- report faults
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- arch types, options, uses and limitations
- job safety analysis (JSA) and safe work method statements
- material safety data sheets
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- techniques for fixing materials to steel and timber frames
- techniques for the application and sanding of topping compound
- techniques for the handling and mixing plaster bag material
- the types, uses and limitations of materials used in installation and fixing tasks
- wall and ceiling terminology
- wall and ceiling tools and equipment types, characteristics, uses and limitations
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- install and finish to specification, one plasterboard arch including:
  - a minimum of two sheets
  - wall and corner junctions
  - application or arch beads, and
  - either mechanical or adhesive fixing systems
- set out to specification of a minimum of one each of segmental, gothic, elliptical, Tudor and ogee arches.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory
EVIDENCE GUIDE

or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to installation and finishing operations
- hand and power tools and equipment appropriate to installation and finishing operations
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
EVIDENCE GUIDE

learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- material safety data sheets (MSDS)
- memos
- regulatory and legislative requirements pertaining to the installation and finishing of
RANGE STATEMENT

- plasterboard and fibre cement sheeting
- relevant Australian standards
- safe work procedures relating to the installation and finishing of plasterboard and fibre cement sheeting
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation

include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - manual handling
  - noise, dust and ventilation
  - power equipment
  - power sources and cables
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.
RANGE STATEMENT

Tools and equipment include:
- broad knives
- cement sheet cutters (electric and hand)
- electric screw guns
- hand saws
- internal angle taping tools
- keyhole saws (electric and hand)
- measuring tapes and rules
- mechanical finishing tools
- mixers (electric and hand)
- paintbrushes
- plasterboard hammers
- plasterer's trowels
- sanding floats (electric and hand)
- taping knives
- trestles and scaffold planks
- T-squares.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:
- adhesives
- arch beads
- base
- casing beads
- corner beads
- fibre cement sheets
- finishing materials
- insulation batts
- perforated paper tape
- plasterboard
- shadowline beads.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Framing includes:
- batten masonry surfaces
- steel framing
- steel furring channels
- timber framing
- timber or steel battens.
RANGE STATEMENT

Material application is in accordance with:
- manufacturer specifications for fibre cement sheeting
- relevant Australian standard (for plasterboard).

Arches include:
- elliptical
- gothic
- may include
- ogees
- segmental
- semi-circular
- three-centred.

Finishing is to achieve:
- a smooth, flat, scratch and blemish-free surface.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- **communication skills to:**
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic combustion theory
- dry wall passive fire-rated T-systems installation techniques and processes
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- range of materials commonly used in the installation of dry wall passive fire-rated systems
- regulations and building codes related to dry wall passive fire-rated systems
- tools and equipment used in the installation of dry wall passive fire-rated systems
- types and specifications for dry wall passive fire-rated systems related to steel stud and timber stud walls, shaft walls, timber joists and suspended ceilings
- wall and ceiling terminology
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- install to specification a minimum of three dry wall passive fire-rated systems with:
  - one for a steel stud wall
  - one covering columns and beams
  - one comprising a multiple layer system.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
EVIDENCE GUIDE

- materials relevant to the installation of dry wall passive fire-rated systems
- hand and power tools and equipment appropriate to the installation of dry wall passive fire-rated systems
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice,

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different
work environments and situations that may affect performance. Bold italicised
wording, if used in the performance criteria, is detailed below. Essential operating
conditions that may be present with training and assessment (depending on the work
situation, needs of the candidate, accessibility of the item, and local industry and
regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised
  organisational or external personnel
- manufacturer specifications and instructions,
  where specified
- MSDS
- memos
- regulatory and legislative requirements
  pertaining to the installation of dry wall
  passive fire-rated systems
- relevant Australian standards
- safe work procedures relating to the
  installation of dry wall passive fire-rated
RANGE STATEMENT

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

Tools and equipment:

- systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - cutting tools
  - lighting
  - manual handling
  - noise, dust and ventilation
  - power equipment
  - power sources and cables
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.
- include:
  - broad knives
  - caulking guns
RANGE STATEMENT

- hammers
- measuring tapes and rules
- power drills
- power leads
- screwguns
- squares
- tin snips
- trowels
- may include:
  - C clamps
  - locking saws and drop saws
  - masonry drills
  - saw stools
  - setting boxes.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials for fire-rated systems include:
- base compound coats
- finishing coats
- fire grade metal studs and track
- fire grade plasterboard sheeting
- fire sealants
- perforated paper tapes
- vermiculite or equivalent product.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Dry wall passive fire-rated systems are to comply with relevant Australian standards and codes and:
- columns and beams
- steel stud two-hour system
- may include:
  - shaft walls
  - suspended ceilings
  - timber joist ceilings
  - timber stud walls.

Fixings and fasteners for
### RANGE STATEMENT

Installation of fire-rated systems include:

- 30 mm and 40 mm L type screws
- 30 mm and 45 mm W type screws
- 30 mm, 40 mm, 50 mm, 60 mm plasterboard nails
- metal masonry anchors
- wafer head screws.

**Penetrations** include those related to:

- authorised piping
- communications
- control joints
- electrical power.

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Set out. | 2.1. Ceiling grid is set out to job drawings and in accordance with manufacturer specifications.  
2.2. Alignment levels for ceiling are set out as shown on job drawings. |
| 3. Install suspension system. | 3.1. Suspension rods are fixed to underside of soffit and structural members with masonry anchors, bolts and screws at prescribed centres and to manufacturers’ instructions.  
3.2. Suspended framework is assembled and connected to suspension rods in accordance with specifications and manufacturers’ instructions.  
3.3. *Suspension system* is fastened and checked for looseness and rattles.  
3.4. Bridging framework is fixed to both sides of service ducts to *support* suspension system. |
| 4. Install lining materials. | 4.1. Lining materials are installed according to design pattern set out on job drawings, and to specifications.  
4.2. Edges of lining materials are cut, concealed or finished to match pre-finished edges.  
4.3. Openings and penetrations for lighting, diffuser, hatches and sprinkler heads are provided as shown on |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
The job drawings. 4.4. Trims and beads are fixed at junctions with other building elements and surfaces as shown on job drawings.
5. Clean up. 5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 5.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:
- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current
REQUIRED SKILLS AND KNOWLEDGE

work site environmental and sustainability frameworks and management systems

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- suspended ceiling installation techniques and processes, including levelling
- suspended ceiling installation, tools and equipment types, uses and limitations
- suspended ceiling materials and their preparation and applications
- wall and ceiling terminology
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- install a minimum of two suspended ceilings, including one exposed and one concealed type to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to the installation of suspended ceilings
- hand and power tools and equipment
EVIDENCE GUIDE

appropriate to the installation of suspended ceilings
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to the installation of suspended ceilings
- relevant Australian standards
- safe work procedures relating to the installation of suspended ceilings
- signage
- verbal, written and graphical instructions
RANGE STATEMENT

Planning and preparation include:

- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - lighting
  - manual handling
  - noise, dust and ventilation
  - power equipment
  - power sources and cables
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment:

- electric screw guns
- hammers
- manual levelling devices
- measuring tapes and rules
- nail bags
- power drills
RANGE STATEMENT

- power leads
- power saws
- spanners
- spirit levels
- squares
- trestles
- may include:
  - air compressors and hoses
  - laser levelling devices
  - nail guns
  - planks
  - pop riveters
  - system scaffolding.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- base coats
- fibre cement sheeting
- finishing coats
- infill panels and various surfaces
- insulation materials
- plasterboard
- suspended ceiling components.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Suspension systems include:

- concealed or exposed components, including:
  - anchors and bolts
  - cross beams, rails and runners
  - droppers and suspension rods
  - furring channels
  - main beams, rails and runners
  - spacer bars.

Support structures include:

- reinforced concrete ceiling and floor slabs
- timber and steel floor, ceiling and rod framing.

3.2. Hazardous material is identified for separate handling by authorised personnel.  
3.3. Wall and floor tiling material and components are handled, recovered and transferred from job location and stored in designated storage area according to MSDS and workplace requirements. |
| 4. Clean up. | 4.1. Work area is cleared and waste materials are disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion
REQUIRED SKILLS AND KNOWLEDGE

procedures

- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- handling wall and floor tiling materials techniques
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS and hazards associated with solvents, adhesives and cement and epoxy-based grouts
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- wall and floor tiling materials, their qualities and applications
- wall and floor tiling processes and sequences
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications for a bathroom wall and floor to be tiled, receive and confirm quantity and quality compliance; handle, sort, stack and distribute the tiles, materials and components to support the performance of the task; prepare and mix the required adhesives and mortar, grouting and finishes required for the job; and clean up and store or dispose of excess and waste materials on the completion of the job, ensuring:
  - correct identification of tiling requirement
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and
EVIDENCE GUIDE

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to handling wall and floor tiling materials
- hand and power tools, plant and equipment appropriate to handling wall and floor tiling materials
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. - general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- measuring and marking
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques and procedures for using wall and floor tiling tools and equipment
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, follow work instructions, operating procedures and inspection practices to use the wall and floor tiling tools and equipment listed in the range statement for their appropriate application, ensuring:
  - correct identification, selection and use of appropriate processes, tools and equipment
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to using wall and floor tiling tools and equipment
- hand and power tools, plant and equipment appropriate to using wall and floor tiling tools and equipment
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
RANGE STATEMENT

- memos
- regulatory and legislative requirements pertaining to using wall and floor tiling tools and equipment
- relevant Australian standards
- safe work procedures relating to using wall and floor tiling tools and equipment
- signage
- verbal, written and graphical instructions

- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.
RANGE STATEMENT

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Selection and operation of hand and power tools and equipment involve:
- correct application
- effective operation
- identification.

Tools and equipment:
- include:
  - buckets
  - caulk guns
  - levelling equipment:
    - straight edges
    - line levels
    - stringlines
    - spirit levels
    - water levels
  - lump hammers
  - measuring tapes and rules
  - nippers
  - pointed grouters
  - rags
  - rubber mallets
  - scrapers
  - shovels
  - spacers and wedges
  - sponges
  - squares
  - squeegees
  - straight edges
  - tile cutters and scribes
  - trowels
  - wet and dry diamond saws
  - wooden floats
- may include:
  - adhesive mixers
  - beating machines
  - concrete mixers
  - grouting machines
RANGE STATEMENT

- masonry drill bits
- screeding machines
- plant and equipment, including:
  - small petrol or diesel engines
  - small compressors
- power tools, including:
  - power drills
  - power leads
  - small generators.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Prepare materials for tiling application. | 2.1. Floor and wall tiling materials are checked for product suitability, conformity to specification and compatibility with surface material, preparation and installation technique.  
2.2. Activities for material preparation are identified from specifications, and manufacturers' or supervisor's instructions.  
2.3. Material preparation is carried out to satisfy the requirements of the application process. |
| 3. Prepare underlay and sheeting substrate. | 3.1. Assistance with underlay preparation is provided under instructions and supervision.  
3.2. Substrate surface is finished to approved surface standards with joints flush and sealed. |
| 4. Prepare render substrate surface. | 4.1. Surface-mounted construction units and attachments are safely detached, removed or arranged for removal from area and stored.  
4.2. Substrate structure is identified and surfaces are cleaned to remove all contaminants and loose material in accordance with supervisor's instructions.  
4.3. Materials for splash coat are proportioned and mixed to instructions ready for application to wet surface. |
ELEMENT PERFORMANCE CRITERIA

4.4. Horizontal and vertical surrounds are prepared for tiling process in accordance with type of tile and specified finish.

4.5. Materials for render coat are proportioned and mixed to instructions ready for application.

4.6. Surface is scratched, rendered, cured and dried to instructions in accordance with specifications for tile application.

5. Clean up.

5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- surface preparation materials and techniques
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum (using a combination of underlay, render and mechanical and chemical techniques), prepare a bathroom work area for wall and floor tiling; prepare a timber bathroom floor and pointed fibre cement sheet wall for tiling; and prepare a concrete bathroom floor and pointed fibre cement sheet wall for tiling, ensuring:
  - correct identification of requirement and completion of the preparation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific

This competency is to be assessed using standard
资源和授权工作方法，安全要求和环境约束。

评估基本支撑知识通常将在离线背景中进行。

评估应符合相关法规或澳大利亚标准的要求。

资源评估包括：
- 工作地点或模拟工作地点
- 用于准备表面的材料
- 可适用于准备表面的工具、植物和设备
- 模拟可涉及的强制性任务要求
- 规格和工作说明。

评估此单元的竞争力可能与同时在正常工作角色中执行的其他单元进行联合评估。

为有残疾的人士进行合理的调整必须在需要时对评估过程进行。这可能包括访问修改的设备和其他物理资源，以及提供适当的支持评估。

评估方法

评估方法必须：
- 满足建设、管道和服务业培训包认可的评估指南
- 包括在真实或模拟的工作条件下直接观察任务，通过提问来确认能够一致地识别并正确解释基本的支撑知识，以用于实际应用
- 强化与工作场所任务和工作角色相结合的职业能力
- 确保竞争力得到验证并能够转移到其他情况和环境中。

有效性和充分的证据要求：

EVIDENCE GUIDE

resources for assessment

and authorized work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- workplace location or simulated workplace
- materials relevant to preparing surfaces for tiling
- hand and power tools, plant and equipment appropriate to preparing surfaces for tiling
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
EVIDENCE GUIDE

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions,
RANGE STATEMENT

where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to preparing surfaces for tiling
- relevant Australian standards
- safe work procedures relating to preparing surfaces for tiling
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation

include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.
RANGE STATEMENT

**Tools and equipment** include:
- brooms
- brushes
- buckets
- caulking guns
- cement sheet cutters
- concrete mixers
- electrical leads
- hammers
- hose and water sprays
- ladders
- levelling equipment
- lump hammers
- measuring tapes and rules
- mortar boards
- nippers
- pointed grouters
- power drills and screwdrivers
- power grinders and sanders
- rags
- rubber mallets
- sanding blocks
- saws
- scrapers
- shovels
- spacers and wedges
- spatulas
- sponges
- squares
- squeegees
- straight edges
- stringlines
- trowels
- wet and dry diamond saws
- wheelbarrows
- wire brushes
- wooden floats
- work platforms.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
RANGE STATEMENT

- workplace operations and procedures.
  - include:
    - adhesives
    - caulkimg compound
    - cement mortar (with and without additives)
    - clouts
    - cornice adhesive
    - fixings and fasteners
    - patching materials
    - plasterboard nails
    - pre-mixed and mixed fillers
    - sand and cement
    - self-tapping screws
    - soft sheet nails
    - wall board adhesive
    - may include:
      - acoustic underlay material
      - crack suppression membrane.

Environmental requirements include:
- clean-up management
- dust and noise
- sedimentation control
- vibration
- waste management.

Underlay material may be:
- acoustic
- in sheet or liquid form
- provide for crack suppression (in membrane form).

Substrate preparation includes:
- chemical and mechanical preparation of surfaces
- rendering to provide a flat surface
- use of underlay material.

Substrate surface materials include:
- fibre cement sheets or other lining material or cladding of a similar nature
- painted surfaces
- pre-cast cladding
- solid plaster
- stone, concrete, timber, waterproof plasterboard, masonry and brick/block
- terrazzo
RANGE STATEMENT

Surface-mounted construction includes:

- wall and floor tiles.
- aluminium framework fixing
- attachment of steel brackets or fabricated units
- brick or block walls or abutments
- curtain walling fixing
- fitment units
- formwork and falsework construction
- light steel partition walls
- stair installations
- timber partition walls.

Types of tiles include:

- ceramic
- glass
- granite
- marble
- porcelain
- stone
- terracotta.

Surfaces include:

- blockwork
- brickwork
- ceramic or fibro cement underlay
- concrete walls
- fibre cement sheet
- rendered surfaces
- timber
- other approved waterproof surfaces.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
REQUIRED SKILLS AND KNOWLEDGE

- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- control joints
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques in fixing tiles to floors and step/stairs, including preparation of substrates
- tiling materials, including tiles, adhesives, mortar, grouting and substrates, their qualities, characteristics, preparation, techniques, applications, limitations and finishing
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
  - tile 4 square metres of a concrete bathroom floor using a sand and cement mortar mix
  - tile 4 square metres of a timber floor, laid on the diagonal with a half tile border, using adhesive
  - tile 4 square metres of a concrete floor with marble tiles, using adhesive
  - tile a minimum of three steps of 900mm width and 115mm risers and treads, including an expansion joint
  - ensuring:
  - correct identification of requirement and completion of the tiling
  - correct selection and use of appropriate processes, tools and equipment
EVIDENCE GUIDE

- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to fixing floor tiles
- hand and power tools, plant and equipment appropriate to fixing floor tiles
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
EVIDENCE GUIDE

• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

**Information** includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to fixing floor tiles
- relevant Australian standards
- safe work procedures relating to fixing floor tiles
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices

- power drills
- power leads
- rags
- rubber mallets
- sanding blocks
- saws
- scrapers
- shovels
- spacers and wedges
- spatulas
- sponges
- squares
- squeegees
- straight edges
- stringlines
- tile cutters and scribes
- trowels
- wet and dry diamond saws
- wheelbarrows
RANGE STATEMENT

- wire brushes
- wooden floats
- may include:
  - concrete mixers
  - masonry drill bits
  - power grinders
  - power sanders.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- adhesives
- caulking compounds
- cement mortar (with and without additives)
- grout
- sealers
- tiles.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
- waste management.

**Types of tiles** include:
- ceramic
- glass
- granite
- marble
- porcelain
- stone
- terracotta.

**Substrates** include:
- approved waterproof substrates
- compressed FC sheeting
- concrete
- fibre cement underlay
- rendered concrete
- timber.

Tiles are **fixed** using:
- adhesives
- cement mortar
- cement mortar with adhesive additive.

**Grout** may be:
- cementitious
- epoxy.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
REQUIRED SKILLS AND KNOWLEDGE

- read and interpret:
  - documentation from a variety of sources
  - drawings and specifications
- recognise procedures
- report faults
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- control joints
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques in fixing tiles to walls and corners, including preparation of substrates
- tiling materials, including tiles, adhesives, mortar, grouting and substrates, their qualities, characteristics, preparation, techniques, applications, limitations and finishing
REQUIRED SKILLS AND KNOWLEDGE

- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
  - tile the front and return of a standard 1500mm timber framed bath, including a straight hob between the bath and wall, using adhesive to fix the tiles; tiles are not to be proud of the bath and coving to floor is to allow for control joints as required
  - tile the front and return of a standard 1500mm bricked bath, including a straight hob between the bath and wall, using mortar to fix the tiles; tiles are not to be proud of the bath and coving to floor is to allow for control joints as required
  - work to be completed ensuring:
    - correct identification of requirement and completion of the tiling
    - correct selection and use of appropriate
EVIDENCE GUIDE

- processes, tools and equipment
- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- workplace location or simulated workplace
- materials relevant to fixing wall tiles
- hand and power tools, plant and equipment appropriate to fixing wall tiles
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills
EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and
RANGE STATEMENT

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to fixing wall tiles
- relevant Australian standards
- safe work procedures relating to fixing wall tiles
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
RANGE STATEMENT

- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- brooms
- brushes
- buckets
- caulkking guns
- cement sheet cutters
- hammers
- hose and water sprays
- ladders
- levelling equipment
- lump hammers
- measuring tapes and rules
- mortar boards
- nippers
- pointed grouters
- power drills
- power leads
- rags
- rubber mallets
- sanding blocks
- saws
- scrapers
- shovels
- spacers and wedges
- spatulas
- sponges
- squares
- squeegees
- straight edges
- stringlines
- tile cutters and scribes
- trowels
RANGE STATEMENT

- wet and dry diamond saws
- wheelbarrows
- wire brushes
- wooden floats
- may include:
  - concrete mixers
  - masonry drill bits
  - power grinders
  - power sanders.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:

- adhesives
- caulking compound
- cement mortar (with and without additives)
- grout
- tiles.

Environmental requirements include:

- clean-up management
- dust and noise
- vibration
- waste management.

Substrate includes:

- approved waterproof substrates
- blockwork
- brickwork
- concrete
- fibre cement sheet
- rendered surfaces
- timber.

Types of tiles include:

- ceramic
- glass
- granite
- marble
- porcelain
- stone
- terracotta.

Tiles may be fixed using:

- adhesives
- cement mortar
- cement mortar with adhesive additive.
RANGE STATEMENT

Grout may be:
- cementitious
- epoxy.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Repair damaged tilework. | 2.1. *Damaged or defective* tiles are removed avoiding damage to surrounding tiles.  
2.2. Old bedding is cleaned and cleared to allow placement of replacement tile.  
2.3. Replacement *tiles* are selected and cut where applicable to match existing face, size, colour and pattern.  
2.4. Tiles are fitted and *fixed* to maintain alignment with joints to uniform spacing.  
2.5. Grouting is carried out and tile face cleaned to specified finish. |
| 3. Clean up. | 3.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.  
3.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences

1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Prepare pattern and materials for tiling. | 2.1. Suitable architectural or historical period is identified and a range of appropriate *patterns* is produced.  
2.2. Style of tile is selected to conform with the elements of design.  
2.3. Colour and shape of tile are selected to conform with specifications and the geometry of the project.  
2.4. Details of pattern and selected *tiles* are confirmed with *client*. |
| 3. Form decorative design. | 3.1. Tiles are set out to required shape and size to conform to pattern and *decorative design*.  
3.2. Examples of border, beading and strip returns are laid out.  
3.3. Tiles are cut, as necessary, to complete the pattern set out.  
3.4. Wall and floor tile joints are aligned plumb and square and cut tiles are positioned. |
| 4. Prepare substrate. | 4.1. *Substrate surfaces* are prepared to specification and standard.  
4.2. Location of tiles is set out or marked directly onto |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
the surface in accordance with job drawings and specification.

5. Fix tiles. | 5.1. Adhesive/mortar is applied to set out area.
5.2. Wall tiles are laid from a selected position to ensure correct set out.
5.3. Floor tiles are set out and laid from the centre, if necessary, to even set out.
5.4. Border tiles are laid and adjusted to suit set out.
5.5. Surface is finished in accordance with job specifications.

6. Grout tiles. | 6.1. Tiled surface is cleaned free of dust and adhesive.
6.2. Grout is mixed and applied in accordance with manufacturer specifications and to meet job requirements.
6.3. Finished surface is cleaned and polished with dry cloth to specifications.

7. Clean up. | 7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
7.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
REQUIRED SKILLS AND KNOWLEDGE

- report faults
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- decorative tiling materials, including tiles, adhesives, mortar, grouting and substrates, their characteristics, preparation, methods, application and finishing
- decorative tiling techniques
- design reproduction and application methods
- general construction terminology
- heritage tiles and patterns
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- workplace and equipment safety requirements.
Evidence Guide

- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, select, set out and lay heritage style wall tiles and decorative strips to a 2 square metre wall finished to differing heights; and select, set out and lay tessellated floor tiles and a decorative border to an L-shaped area of approximately 1.5 square metres, ensuring:
  - correct identification of requirement and completion of the tiling
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements.
EVIDENCE GUIDE

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to decorative tiling
- hand and power tools, plant and equipment appropriate to decorative tiling
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
RANGE STATEMENT

- memos
- regulatory and legislative requirements pertaining to decorative tiling
- relevant Australian standards
- safe work procedures relating to decorative tiling
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
RANGE STATEMENT

- buckets
- caulking guns
- levelling equipment
- lump hammers
- measuring tapes and rules
- meter heating devices
- nippers
- pointed grouters
- power drills
- rags
- rubber mallets
- scrapers
- shovels
- spacers and wedges
- sponges
- squares
- squeegees
- straight edges
- stringlines
- tile cutters and scribes
- trowels
- wooden floats
- may include:
  - concrete mixers
  - masonry drill bits.

Quality requirements include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials include:
- adhesives
- caulking compound
- cement mortar (with and without additives)
- grout
- patterns
- tiles.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
RANGE STATEMENT

• waste management.

Patterns are to be formed from:

• principles of design relating to the architectural style required.

Types of tiles include:

• ceramic
• glass
• porcelain
• stone
• terracotta
• tessellated.

Client includes:

• a builder
• a customer
• an architect
• an interior designer.

Decorative design is to conform to:

• advanced setting out techniques to achieve a whole room joint alignment or heritage effect.

Substrate surfaces include:

• fibre cement sheet
• brickwork
• blockwork
• concrete walls
• timber
• rendered surfaces
• other waterproof surfaces.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Prepare materials. | 2.1. Work area for mosaic fixing is prepared for the requirements of the task.  
2.2. Mosaic sheets are checked for conformity to size, pattern, colour and characteristics in accordance with plans and specifications.  
2.3. Mosaic work is set out to be symmetrical, balanced and produce minimal waste in accordance with specifications and standards.  
2.4. Adhesive is selected, prepared and mixed in accordance with standard work practices, manufacturer recommendations and specifications. |
| 3. Prepare substrate. | 3.1. *Substrate* surfaces are prepared for application of render.  
3.2. Render is mixed to specification.  
3.3. Substrate surfaces are rendered to specified thickness, standard and finish.  
3.4. Surface is cleaned free of contaminants and loose material ready for tile application. |
| 4. Fix mosaic to flat surfaces. | 4.1. Prepared mosaic sheets or tiles are marked to identify the section of application. |

7. Grout tile face. | 7.1. Tiled surface is cleaned free of dust and adhesive.
 | 7.2. Oxides are selected and grout is mixed and applied to mosaic surface in accordance with manufacturer specifications and to meet job requirements.
 | 7.3. Finished mosaic surface is cleaned and polished with dry cloth to specifications.
8. Clean up. | 8.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
 | 8.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools,
REQUIRED SKILLS AND KNOWLEDGE

equipment or materials

- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- mosaic tiling materials, including tiles, adhesives, mortar, grouting and substrates, their characteristics, preparation, methods, application and finishing
- mosaic tiling methods and set out procedures
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, prepare and lay 2 square metres of mosaic tile (half in adhesive and half in render and lay) for a bathroom wall; prepare and lay mosaic tile to a hob and return; and prepare and lay paper-based mosaic tile to a column of more than 360mm radius and at least 1m high, ensuring:
  - correct identification of requirement and completion of the tiling
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific

This competency is to be assessed using standard and authorised work practices, safety requirements
EVIDENCE GUIDE

resources for assessment

and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to mosaic tiling
- hand and power tools, plant and equipment appropriate to mosaic tiling
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
REQUIRED SKILLS AND KNOWLEDGE

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- measurement and calculations
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- techniques for setting out and fixing tiles to curved surfaces
- tiling materials, including tiles, adhesives, mortar, grouting and substrates, their qualities, characteristics, preparation, techniques, applications, limitations and finishing
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tile a circular concrete column of a minimum of 360mm diameter and 1m high abutting a concrete flat wall, continuing the tiling to the floor (to 150mm radius) from the column; and tile a standard door archway in a fibre cement sheet wall, including vertical returns and soffit, ensuring:
  - correct identification of requirement and completion of the tiling
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific

This competency is to be assessed using standard and authorised work practices, safety requirements...
EVIDENCE GUIDE

resources for assessment

Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to tiling curved surfaces
- hand and power tools, plant and equipment appropriate to tiling curved surfaces
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

...and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
RANGE STATEMENT

- memos
- regulatory and legislative requirements pertaining to tiling curved surfaces
- relevant Australian standards
- safe work procedures relating to tiling curved surfaces
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment:

- include:
RANGE STATEMENT

- brooms
- brushes
- buckets
- caulking guns
- cement sheet cutters
- hammers
- hose and water sprays
- ladders
- levelling equipment
- lump hammers
- measuring tapes and rules
- mortar boards
- nippers
- pointed grouters
- power drills
- power leads
- rags
- rubber mallets
- sanding blocks
- saws
- scrapers
- shovels
- spacers and wedges
- spatulas
- sponges
- squares
- squeegees
- straight edges
- stringlines
- templates
- tile cutters and scribes
- trowels
- wet and dry diamond saws
- wheelbarrows
- wire brushes
- wooden floats
- may include:
  - concrete mixers
RANGE STATEMENT

- masonry drill bits
- power grinders
- power sanders.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- adhesives
- caulking compound
- cement mortar (with and without additives)
- grout
- tiles.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
- waste management.

**Templates** are made from:
- hardboard
- plywood
- sheet metal.

**Wall surfaces** include:
- approved waterproof surfaces
- blockwork
- brickwork
- concrete
- fibre cement sheet
- rendered surfaces
- timber.

**Types of tiles** include:
- ceramic
- glass
- granite
- marble
- porcelain
- stone
- terracotta.

**Tiles are fixed using**:
- adhesives
- cement mortar
- cement mortar with adhesive additive.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant **information**, confirmed and applied for **planning and preparation** purposes.  
 1.2. **Safety (OHS)** requirements are followed in accordance with safety plans and policies.  
 1.3. Signage and barricade requirements are identified and implemented.  
 1.4. **Tools and equipment** selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
 1.5. Material quantity requirements are calculated in accordance with plans and specifications and **quality requirements**.  
 1.6. **Materials** appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
 1.7. **Environmental requirements** are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Set out tiling job. | 2.1. Levels of pool or spa are identified and established in accordance with specifications.  
 2.2. Size of tile to be used is determined in accordance with curvature of pool or spa.  
 2.3. **Pool or spa surface** is divided into sectional shapes involving whole tiles and cut tiles.  
 2.4. Sections are determined by considering sheet sizes of tiles and maintaining straight lines where possible.  
 2.5. Cross-centre lines are marked out on pool or spa surface.  
 2.6. Curved surface is set out to form regular shapes running down and through base.  
 2.7. Tapered sections are set out in highly curved and concave areas, whereby tiles are cut leading to and into the base. |
| 3. Tile straight lines and full sheet sections of surface. | 3.1. Paper patterns are marked and cut to shape of section or layout directed to prepare sheets or tiles.  
 3.2. Spacing is determined and adjusted to ensure minimum cutting in these sections.  
 3.3. Prepared sheets or tiles are marked to identify with |
ELEMENT | PERFORMANCE CRITERIA
---|---
section of application.
3.4. Specified waterproof adhesive is prepared for application to manufacturer specifications.
3.5. Tiles are laid working from coping down, maintaining parallel to cross-centre lines and regular face alignment.

4. Lay tiles to tapered sections.
4.1. Tapered areas are set out where applicable, to allow for full tile at top.
4.2. Tile sizes and shapes are determined and set out.
4.3. Shaped tiles are cut to designed set out and to specified tolerance.
4.4. Adhesive is applied and tiles are laid maintaining alignment to set out lines and surface of tiles.

5. Lay tiles to curved sections.
5.1. Template is set out and cut to ensure conformity to tile surface for curve in both dimensions.
5.2. Pad tiles are positioned accurately and fixed to line, to maintain uniform spacing and taper.
5.3. Adhesive is applied and tiles are laid maintaining alignment to template line and surface of tiles.
5.4. Tiles are fixed to walls, plumb, maintaining levels and curvature of wall in both dimensions to specifications.

6. Tile surface.
6.1. Tile spacings are cleaned and excess adhesive is removed from surface to receive grout.
6.2. Specified grout is mixed and applied according to manufacturer specifications.
6.3. Tiled surface is cleaned and polished with dry cloth to specifications.

7. Clean up.
7.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
7.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and hazards associated with solvents, adhesives and cement or epoxy-based grouts
- materials storage and environmentally friendly waste management
- measurement and calculations
REQUIRED SKILLS AND KNOWLEDGE

- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- pool and spa tiling materials
- processes for the calculation of material requirements
- quality requirements
- techniques in tiling pools and spas
- tiling curved and tapered surfaces
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, tile a three dimensional corner of a pool or spa with the wall coving into the floor; the floor is to fall (1 in 10) in one direction, with detail including copers and a mosaic water line, ensuring:
  - correct identification of requirement and completion of the tiling
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
EVIDENCE GUIDE

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- workplace location or simulated workplace
- materials relevant to tiling pools and spas
- hand and power tools, plant and equipment appropriate to tiling pools and spas
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinfore the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
EVIDENCE GUIDE

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements
RANGE STATEMENT

pertaining to tiling pools and spas
- relevant Australian standards
- safe work procedures relating to tiling pools and spas
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation
Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

Safety (OHS)
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - concealed services (water, power and gas)
  - lighting
  - traffic control
  - restricted access barriers
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
  - workplace environmental requirements and safety.

Tools and equipment
Tools and equipment include:

- brooms
- brushes
- buckets
RANGE STATEMENT

- hose and water sprays
- ladders
- levelling equipment
- lump hammers
- measuring tapes and rules
- nippers
- pointed grouters
- rags
- rubber mallets
- scrapers
- spacers/wedges
- spatulas
- sponges
- squares
- squeegees
- straight edges
- stringlines
- templates
- tile cutters and scribes.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- tiles
- adhesives
- cement mortar with adhesive additive
- grout.

**Environmental requirements** include:
- clean-up management
- dust and noise
- vibration
- waste management.

**Pool or spa surfaces** may be:
- curved in two dimensions
- flat
- tapered.

**Types of tiles** include:
- ceramic
- glass
- granite
- marble
- porcelain
- stone
RANGE STATEMENT

- terracotta.

Templates may be made from:
- plywood
- hardboard
- sheet metal.

Tiles are fixed using:
- adhesives
- cement mortar with adhesive additive.

Application

This unit of competency specifies the mandatory work health and safety training required prior to undertaking construction work. The unit requires the person to demonstrate personal awareness and knowledge of health and safety legislative requirements in order to work safely and prevent injury or harm to self and others. It covers identifying and orally reporting common construction hazards, understanding basic risk control measures, and identifying procedures for responding to potential incidents and emergencies. It also covers correctly selecting and fitting common personal protective equipment (PPE) used for construction work.

This unit meets the general construction induction training requirements of:

- Part 1.1 Definitions and Part 6.5 of the Model Work Health and Safety Regulations;
- Division 11 of Part 3 of the Occupational Safety and Health Regulations 1996 for Western Australia; and
- Division 3 of Part 5.1 of the Occupational Health and Safety Regulations 2007 for Victoria.

It is expected that site-specific induction training will be conducted prior to conducting construction work.

Licensing, legislative, regulatory or certification requirements apply to this unit. Relevant work health and safety state and territory regulatory authorities should be consulted to confirm jurisdictional requirements.

Pre-requisite Unit

Nil
Unit Sector
Construction

Elements and Performance Criteria

Elements describe the essential outcomes. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions.

1. Identify health and safety legislative requirements of construction work.
   1.1. Basic roles, responsibilities and rights of duty holders are identified and explained according to *jurisdictional health and safety legislative requirements*.
   1.2. Duty of care requirements are identified.
   1.3. Construction safe work practices are identified and explained.

2. Identify construction hazards and risk control measures.
   2.1. Basic principles of risk management are identified.
   2.2. Construction hazards are identified and discussed.
   2.3. Purpose and use of PPE are identified and demonstrated.
   2.4. Measures for controlling hazards are identified.

3. Identify health and safety communication and reporting processes.
   3.1. Health and safety documents are identified and discussed.
   3.2. Roles of designated health and safety personnel are identified and explained.
   3.3. Safety signs and symbols are identified and explained.
   3.4. Procedures for reporting hazards, incidents and injuries are identified.

4. Identify incident and emergency response
   4.1. Procedures for responding to incidents and emergencies are identified and explained.
   4.2. Procedures for accessing first aid are identified.
procedures. 4.3. Types and purpose of fire safety equipment are identified and discussed.

**Foundation Skills**

This section describes the language, literacy, numeracy and employment skills essential to performance in this unit but not explicit in the performance criteria.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance feature</th>

Range of Conditions

This section specifies work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Bold italicised wording, if used in the performance criteria, is detailed below.

*Jurisdictional health and safety legislative requirements* must include at least one of the following state and territory Acts or their equivalent:

- Australian Capital Territory: Work Health and Safety Act 2011
- New South Wales: Work Health and Safety Act 2011
- South Australia: Work Health and Safety Act 2012
- Victoria: Occupational Health and Safety Act 2004
- Western Australia: Occupational Safety and Health Act 1984.

Performance Evidence

A person demonstrating competency in this unit must satisfy the requirements of the elements, performance criteria, foundation skills, and range of conditions of this unit, in addition to the specific performance and knowledge evidence described below.

The person must:

- identify and orally report two construction hazards
- orally explain how risk could be reduced or removed in relation to those two hazards
- select appropriate personal protective equipment (PPE) to control the risk
- orally explain basic procedures for responding to incidents and emergencies, including types and purpose of the following fire safety equipment:
  - fire blankets
  - fire extinguishers, including water, carbon dioxide, powder and foam
  - hose reels and mains
- identify and orally explain the meaning of required safety signs and symbols
- orally explain the purpose of job safety analyses (JSAs), safe work method statements (SWMS) and safety data sheets (SDS)
- orally explain the roles of the following designated health and safety personnel:
  - first aid officers
  - work health and safety representatives
  - work health and safety committee members
  - supervisors.

The person must also demonstrate correctly fitting to themselves the PPE listed below:

- eye protection
- hearing protection
- hard hat
- high visibility retro reflective vest.
Knowledge Evidence

A person must demonstrate knowledge of:

- basic duty of care, and the roles, rights and responsibilities of business owners and workers in relation to working safely while undertaking construction work
- basic meaning of the terms ‘hazard’ and ‘risk’
- basic principles of risk management, including the following five steps in order:
  - identify hazard
  - assess risk
  - consult and report
  - control hazard
  - review
- basic procedures for accessing first aid
- construction hazards, including those relating to:
  - asbestos
  - confined spaces
  - electrical: power lines, cords and equipment
  - excavations and trenches, including underground services
  - dust
  - falling objects
  - hazardous substances and dangerous goods
  - hot and cold work environments
  - manual handling
  - noise
  - plant and equipment operation
  - traffic and mobile plant
  - unplanned collapse
  - ultraviolet radiation
  - working at heights, including scaffolding
- construction work that requires a high risk work licence
- types, purpose and use of PPE used in construction, as specified in the performance evidence, and including safety footwear, harnesses and respiratory protection, and ultraviolet (UV) protective clothing and sunscreen
- construction emergencies, including:
  - chemical spill
  - fire
  - injury to personnel
  - structural collapse
  - toxic or flammable vapour emission
  - vehicle or mobile plant accident
- construction incidents, including:
  - incidents resulting in personal injury or damage to property
  - near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence
- safe work practices that should be followed in construction work, including:
accessing and using site amenities for drinking water, hand washing and toilets
following safety procedures when performing work tasks and using equipment
identifying and reporting hazards, incidents and injuries in the workplace
keeping the work area clean, tidy and free from debris
not using or being affected by drugs and/or alcohol while at work
preventing bullying and harassment in the workplace
selecting and using required PPE
smoking only in designated areas
storing and removing waste and debris in designated areas
meanings and symbols associated with construction safety signs, symbols and tags, including:
emergency information signs: exits, emergency equipment and first aid
fire signs: location of fire alarms and firefighting equipment
hazard signs and symbols: danger and warning
regulatory signs and symbols: prohibition, mandatory and limitation or restriction
safety and lockout tags: danger and out-of-service tags.

Assessment Conditions
The following must be present and available to learners during assessment activities:
• equipment:
  • all of the PPE listed in the performance evidence
• specifications:
  • state or territory Act relevant to the location of the learner, as specified in the range of conditions.

The assessment of performance evidence must be done by direct observation of the learner by an assessor, either by an assessor observing the learner physically and/or by an assessor observing the learner via audio and visual media in real time.

Assessor requirements
As a minimum, assessors must satisfy the assessor requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment. Assessors must hold the unit CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry, or its successor.

CPCCWP2001A Handle waterproofing materials

Modification History
Not Applicable

Unit Descriptor

Unit descriptor This unit of competency specifies the outcomes required to safely handle waterproofing materials manually and mechanically, including their storage requirements.

It includes the preparation, handling, sorting, stacking and disposal of waterproofing products, materials and components in the application of waterproofing systems, including the disposal of waste.

Application of the Unit

Application of the unit This unit of competency supports the attainment of skills and knowledge to handle waterproofing materials while working with others as a member of a team.

ELEMENT PERFORMANCE CRITERIA

4. Handle and remove waste materials.

4.1. Waste waterproofing materials and components are handled in accordance with material safety data sheets (MSDS) and regulatory requirements.

4.2. Hazardous material is identified for separate handling.

4.3. Non-toxic waste materials are removed and disposed of using appropriate procedures.

4.4. Dust suppression procedures are used to minimise health risk to work personnel and others.

5. Clean up.

5.1. Work area is cleared and waste materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
REQUIRED SKILLS AND KNOWLEDGE

- use and interpret non-verbal communication, such as hand signals
- written skills to record results of checks and tests and relevant work completion procedures
- evaluate own actions and make judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- communication processes - verbal and signalling
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- MSDS and hazards associated with waterproofing materials
- materials storage and environmentally friendly waste management
- measurement and calculation
- plans, drawings and specifications
- processes for the calculation of material requirements
- quality requirements
- techniques of handling waterproofing materials
- waterproofing materials associated with application systems
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications for the application of a waterproofing system (either internal, external, below ground or remedial):
  - confirm the adequacy and condition of the materials required to prepare for the application
  - safely and effectively manually and mechanically handle them before and during the application
  - dispose or recycle waste and surplus materials for the project.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge
EVIDENCE GUIDE

will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- workplace location or simulated workplace
- materials relevant to the handling of the specific waterproofing applications
- hand and power tools, plant and equipment appropriate to the handling of waterproofing materials
- realistic tasks covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the
EVIDENCE GUIDE

• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions, where specified
• MSDS
• memos
RANGE STATEMENT

- regulatory and legislative requirements pertaining to handling waterproofing materials
- relevant Australian standards
- safe work procedures relating to handling waterproof materials
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
RANGE STATEMENT

- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

*Tools and equipment* required for the handling of waterproofing material is dependent on the waterproofing system being applied and may include:

- angle grinders
- brooms
- brushes
- buckets
- caulking guns
- chisels, including cold chisels
- cutting blades
- dumpy, laser and water levels
- electric drills and screwdrivers
- electric hammers
- extension leads
- fusion rollers
- gas burners and torches
- hammers
- hoses
- measuring tapes and rules
- mixers and mixing apparatus
- moisture meters
- nylon rollers
- plant, including:
  - excavating equipment
  - heat welders
  - high pressure water equipment
  - hot air welders
  - impact drills
  - pumps
- pressure injection equipment, including:
  - cartridge applications
  - compressors
  - pumps
  - vacuum pumps
- pressure rollers
- scissors
- seam probes
- solvent applicators
RANGE STATEMENT

- spirit levels
- straight edges
- trowels
- vacuum cleaners
- wood floats.

**Quality requirements** include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Environmental requirements** include:

- clean-up management
- dust and noise
- stormwater management
- vibration
- waste management.

**Materials** include:

- cement-based waterproofing systems
- hot mix bituminous felt material membranes
- injected materials
- liquid sealants or sealant devices
- sheet and sprayed material membranes.

**Waterproofing materials** required to prepare for waterproofing are dependent upon the system of waterproofing being applied and include:

- waterproofing material or membrane for the application which may be:
  - drainage cells
  - geotech fabric
  - liquid applied, including:
    - acrylic
    - cementitious-based
    - injection
    - polyurethane
  - primers and adhesives
  - protection boards
  - sheet:
    - bentonite composites
    - butanol
    - ethylene cop bitumen (ECB)
    - ethylene propylene diene monomer rubber (EPDM)
    - polyvinyl chloride (PVC).

**Sorting of materials:**

- may be according to:
  - ease of identification
RANGE STATEMENT

- job allocation
- material type and size
- task sequence
- may be applied:
  - for external and below ground level wet areas
  - for internal waterproofing
  - to prepare substrate for waterproofing installation
  - to remedy waterproofing techniques.

Stored/stacked materials are protected by:

- barricading
- covering
- secured (hazardous materials)
- signage
- tying and banding.

Dust suppression procedures include:

- covering
- spraying with water
- use of vacuum cleaner.

Waste materials include:

- banding straps
- broken or damaged materials and components
- cardboard
- loose material
- packing pieces
- paper
- plastic.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.5. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Identify hand and power tools. | 2.1. Types and functions of hand and power tools to be used in the waterproofing work are identified.  
2.2. Methods of operation of hand and power tools are identified from specifications, standards and manufacturers’ instructions.  
2.3. Specific OHS requirements for specific hand and power tools are identified and applied.  
2.4. Personal protective equipment (PPE) required for operation of the tools is identified in accordance with regulatory and workplace requirements. |
| 3. Select tools for work. | 3.1. *Tools and equipment* are selected consistent with job requirements.  
3.2. Tools, including leads and hoses, are checked for tags, serviceability and safety and any faults are reported to supervisor.  
3.3. Power tools guards, guides and controls are checked and maintained in accordance with manufacturer recommendations.  
3.4. Equipment to hold or support material during operation is selected and inspected for faults.  
3.5. Pre-operational checks, including lubricants, hydraulic fluid and water, are completed in accordance with manufacturer recommendations. |
<p>| 4. Use tools. | 4.1. Power and compressed air supply to work area are connected to the area of work in accordance with regulatory and workplace requirements and codes of practice. |</p>

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- applications, limitations and method of operation and maintenance of hand and power tools, plant and equipment applicable to waterproofing tasks
- communication processes - verbal and signalling
- general construction terminology
- job safety analysis (JSA) and safe work method statements
REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS) and hazards associated with the use of waterproofing tools, plant and equipment
- materials storage and environmentally friendly waste management
- measurement and calculation
- plans, drawings and specifications
- quality requirements
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, follow work instructions and operating procedures to safely and effectively use appropriate tools, plant and equipment for the preparation of the substrate for waterproofing and the application of at least one of the following applications:
  - an internal wet area
  - an external wet area
  - a below ground level wet area
  - a remedial waterproofing project
- ensuring:
  - correct selection and use of appropriate processes, tools and equipment
  - no damage to tools, plant and equipment
  - completing all work to specification
  - compliance with regulations, standards and
EVIDENCE GUIDE

organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- hand and power tools, plant and equipment appropriate to waterproofing tasks
- realistic tasks covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. schedule.

2.9. Application of bond-breaker/fillet system forming part of the waterproofing installation is identified as fit for purpose.

2.10. Potential faults, and contingencies and techniques to address them are identified.

3. Select and prepare materials.

3.1. Water proofing material is checked for conformity to specification and compatibility with substrate material and that the proposed application is in accordance with manufacturer specifications.

3.2. Substrates to be waterproofed are prepared to manufacturer specification.

3.3. Substrates are prime coated with waterproofing material in line with manufacturer specification.

3.4. Flashings are prepared to job requirements and ready for placement and fixing to job specifications.

3.5. Reinforcing material is set out and cut to requirements of area waterproofing junctions and surface requirements, in accordance with manufacturer specifications and job requirements.

3.6. Waterproofing membrane is prepared for installation to wet area surface in accordance with job and manufacturer specifications.

3.7. Waterproofing material is mixed or prepared for application to surface in accordance with manufacturer specifications and job requirements.

4. Clean up.

4.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

4.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.
REQUIRED SKILLS AND KNOWLEDGE

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- building structures and work scheduling
- characteristics and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations and requirements
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- material safety data sheets (MSDS) and the handling of hazardous materials
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
REQUIRED SKILLS AND KNOWLEDGE

- plant, tools and equipment types, characteristics, uses and limitations
- preparation for waterproofing processes and waterproofing techniques
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- waterproofing process materials, including durability, compatibility, applications and protection requirements
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, given the plans and specifications of a waterproofing construction process:
  - read and interpret the plans to assess the specified product's suitability for the work
  - identify the structure and building process, building program and site constraints
  - plan the waterproofing process, identifying the materials and the tools and equipment specifically required for the selected process or membrane
  - confirm plans and specifications on site, including measurements and levels
  - interpret and apply MSDS and manufacturers' instructions and codes
  - prime the substrate and prepare for the application of the membrane, ensuring:
EVIDENCE GUIDE

- correct identification of requirement and preparation for the installation
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- workplace location or simulated workplace
- materials relevant to preparing for waterproofing construction processes
- hand and power tools, plant and equipment appropriate to preparing for waterproofing construction processes
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning
EVIDENCE GUIDE

- knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

- work site inspection.
- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
RANGE STATEMENT

- lighting
- power cables, including overhead service trays, cables and conduits
- restricted access barriers
- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment required to prepare for waterproofing:

- include:
  - measuring tapes and rules
  - mixer and mixing apparatus
  - moisture meters
  - spirit levels
  - straight edges
- may include:
  - brushes
  - cutting blades
  - dumpy, laser and water levels
  - evacuating equipment and pumps
  - fans
  - floodlights
  - rollers
  - scissors
  - vacuum cleaners.

Quality requirements include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

Materials required to prepare for waterproofing include:

- adhesives
- primers
- sheet:
RANGE STATEMENT

- bentonite composites
- butanol
- ethylene cop bitumen (ECB)
- ethylene propylene diene monomer rubber (EPDM)
- polyvinyl chloride (PVC)
- waterproofing material or membrane for the application may be liquid applied:
  - acrylic
  - cementitious-based
  - injection
  - polyurethane.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Performance requirements include:
- cost
- detail relating to materials
- provision of site access and facilities
- quality assurance
- quality and standards of work
- standard procedures and practices
- work schedules.

Design requirements include:
- making an assessment of suitability for the construction process
- selection and preparation of identified materials.

Work site visit permits liaison with others and the confirmation of details such as:
- levels
- measurements
- moisture content
- risk assessment
- schedules
- structure
- substrates
- termination requirements.

Waterproofing process may be applied:

Wet areas include:
- bathrooms
RANGE STATEMENT

- decks
- en suites
- food preparation areas
- foundation works
- kitchens
- laundries
- lift pits
- patios
- planter boxes
- retaining walls
- roofs
- showers
- slabs
- stair wells.

**Structural** considerations include:
- design principles
- drainage requirements
- environmental factors:
  - allowing water flow
  - slope, fall and grade of surfaces
  - water run-off and impact on adjoining property
  - hydrostatic pressures
  - substrate type and condition
  - waterproofing protection.

Considerations in **water exclusion** include:
- capillary action
- causes of water penetration:
  - leakage through wall and floor finishes
  - penetration at joints and junctions
  - movement from shrinkage
  - accumulated drainage
  - failure of or damage to waterproofing system corners and terminations
  - curing times of compounds and their applications
  - damp proof courses and flashings
  - direction of fall of substrate or decorative finish
  - hydrostatic pressure
  - impact of environmental conditions
  - joining
RANGE STATEMENT

- shelf life of waterproofing products
- surface applications and protection requirements
- use of bond-breakers
- use of sealants
- waste allowances
- perimeter treatment, including:
  - pressure seals
  - over flashing
  - thermal shrinkage (expansion and contraction).

**Waterproofing installation** may be applied as:

- a liquid
- a sheet
- injected material.

**Substrates** include:

- aerated autoclaved concrete materials:
  - Hebel
  - Thermolite
- blockwork
- brickwork
- cement render
- ferrous and non-ferrous piping
- fibrous cement sheeting
- pre-cast concrete
- PVC
- reinforced in situ concrete
- timber and timber-based products
- wet area plasterboard.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to repair and prepare different material surfaces that form part of the application of waterproofing within the construction process.
It includes the inspection, preparation for, and repair and finishing of surfaces prior to the application of the waterproofing process.

Application of the Unit

Application of the unit
This unit of competency supports the attainment of skills and knowledge to prepare surfaces for waterproofing application while working with others as a member of a team.

Licensing/Regulatory Information

This unit contains employability skills.

### Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1.  Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant *information*, confirmed and applied for *planning and preparation* purposes.  
1.2. *Safety (OHS)* requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. *Tools and equipment* selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and *quality requirements*.  
1.6. *Materials* appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. *Environmental requirements* are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2.  Prepare work area. | 2.1. Area to be waterproofed is identified from plans and specifications.  
2.2. *Surface* to be waterproofed is *inspected and tested* to determine appropriateness of the installation and any contaminants, moisture or incompatible materials.  
2.3. Ventilation is provided in accordance with material safety data sheets (MSDS).  
2.4. Run-off and environmental controls are provided in accordance with regulatory and workplace requirements.  
2.5. Work area is prepared for the *waterproofing* processes in accordance with manufacturer specifications.  
2.6. Surface mounted *wet area* construction units, fixtures and attachments are detached, removed or arranged for removal from the work area and stored.  
2.7. Building structure service penetrations, cavities or knockout sections are cleaned of unwanted materials or debris in accordance with good building practice.  
2.8. Cross cavity flashings and overlapping are inspected for damage and fitness for purpose. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- building structures and work scheduling
- characteristics, compatibility and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations and requirements
- contaminants in waterproofing processes
- flashing and termination detailing
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- levels and falls
- material safety data sheets (MSDS) and the handling of hazardous materials
- materials handling, storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- preparation surfaces for waterproofing application techniques
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- waterproofing process materials, including durability, compatibility, applications and protection requirements
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum, prepare for the waterproofing of a bathroom on a suspended concrete slab, with fibrous cement sheeted walls at the corner junction of a masonry wall, ensuring:
  - correct identification of requirement and preparation for the work
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.
EVIDENCE GUIDE

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to preparing surfaces for the waterproofing application
- hand and power tools, plant and equipment appropriate to preparing surfaces for the waterproofing application
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances
EVIDENCE GUIDE

assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to preparation of surfaces for the waterproofing application
- relevant Australian standards
RANGE STATEMENT

Planning and preparation include:

- safe work procedures relating to preparation of surfaces for the waterproofing application
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of tools and equipment
RANGE STATEMENT

- workplace environmental requirements and safety.

**Tools and equipment** include:
- angle grinders
- brooms
- brushes
- buckets
- caulking guns
- chisels, including cold chisels
- cutting blades
- dumpy levels, laser and water levels
- electric drills and screwdrivers
- electric hammers
- evacuating equipment
- extension leads
- floodlights and fans
- hammers
- high pressure water equipment
- measuring tapes and rules
- mixers and mixing apparatus
- moisture meters
- pump
- rollers
- scissors
- spirit levels
- straight edges
- trowels
- vacuum cleaners
- wood floats.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials** include:
- acid etching compounds
- brick, block and stone
- caulking compounds
- cleaning and degreasing agents
- concrete
- fibreglass
- masonry
- metal (ferrous and non-ferrous)
### RANGE STATEMENT

- non-metallic
- plaster
- primers
- proprietary fillers and binders
- sand and cement
- sheet material
- timber.

**Environmental requirements**

- clean-up management
- dust and noise
- sand clean-up management
- vibration
- waste management.

**Surface** defects include:

- cracked or damaged brick or block work
- cracks and splits
- holes
- inadequate substrate fall
- inappropriate fixings
- incompatible materials
- loose fittings, pipework and work stops
- missing, cracked or damaged substrate
- moisture
- out of plumb and level surfaces
- rough imperfect surfaces
- sandy, loose and flaked surface materials
- sheet flutter and soundness
- substrate drumming
- surface depressions or dents.

**Inspection and testing** are to determine:

- preparatory requirements
- performance of the repair
- filling
- priming work prior to installation of the waterproofing system.

**Waterproofing** processes may be applied to:

- below ground
- external
- internal.

**Waterproofing** may be applied as:

- a liquid
- a sheet
- injected material.
RANGE STATEMENT

Wet areas include:
- bathrooms
- en suites
- food preparation areas
- foundation works
- kitchens
- laundries
- lift pits
- patios and decks
- planter boxes
- retaining walls
- roofs
- showers
- slabs
- stair wells.

Substrates include:
- aerated autoclaved concrete materials:
  - Hebel
  - Thermolite
- blockwork
- brickwork
- cement render
- ferrous and non-ferrous piping
- fibrous cement sheeting
- pre-cast concrete
- polyvinyl chloride (PVC)
- reinforced in situ concrete
- timber and timber-based products
- wet area plasterboard.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan and prepare. | 1.1. Work instructions and operational details are obtained using relevant information, confirmed and applied for planning and preparation purposes.  
1.2. Safety (OHS) requirements are followed in accordance with safety plans and policies.  
1.3. Signage and barricade requirements are identified and implemented.  
1.4. Tools and equipment selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement.  
1.5. Material quantity requirements are calculated in accordance with plans and specifications and quality requirements.  
1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.  
1.7. Environmental requirements are identified for the project in accordance with environmental plans and regulatory obligations and applied. |
| 2. Identify waterproofing system. | 2.1. Below ground area to be waterproofed is identified from job drawings and specifications or diagnosed for damp fault area.  
2.2. Area is inspected for structural and surface defects in accordance with job and manufacturer specifications.  
2.3. Appropriate waterproofing systems and products are identified, analysed and selected for water exclusion in accordance with job and manufacturer specifications and with material safety data sheet (MSDS) directions.  
2.4. Range of waterproofing materials is checked for product suitability, conformity to specification and compatibility with surface material, preparation and waterproofing installation technique.  
2.5. Type of waterproofing material is identified in accordance with job specification, state of structure and job safety requirements of MSDS directions. |
| 3. Prepare for waterproofing installation. | 3.1. Below ground wet area site set out, building alignment and finished levels are checked to conform with specified location, structure and dimensions in |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | accordance with drawings and specifications.
3.2. | Moisture content in substrate is identified.
3.3. | Appropriateness of the system of waterproofing selected for the structure or work is confirmed.
3.4. | Below ground wet area site levels are checked for conformity to drawings and specifications.
3.5. | Requirement for shoring of the work site is identified and arranged.
3.6. | Access to installation area is assessed for adequacy and safety to allow for the installation over the full surface of the work area.
3.7. | Provision for drainage is identified and confirmed with supervisor or hydraulic consultant as being appropriate for the installation.
3.8. | Existing flashings, new flashings and termination seals are prepared to job requirements and made ready for placement and fixing to job and manufacturer specifications.
3.9. | Waterproofing material, quantity and product type are confirmed as conforming to job specification, state of structure and job safety requirements, and MSDS direction.
3.10. | Substrate is prepared to a smooth and uniform finish with fillets and falls fitted in accordance with manufacturers' instructions and good building practices.
3.11. | Surface of structure to be waterproofed is prepared and primed ready for waterproofing application in accordance with job specification and manufacturers' specifications and recommendations.
4. | Apply waterproofing.
4.1. | Waterproofing system is applied to primed surface of structure to correct thickness and in accordance with manufacturers' job specification.
4.2. | Bond breaker/fillets are installed in accordance with manufacturer specifications.
4.3. | Waterproofing material/system is installed using methods and materials consistent with manufacturers' specifications.
4.4. | Termination seals are installed using methods and materials consistent with manufacturers' specifications.
4.5. | Completed below ground waterproofing installation is checked for conformity to manufacturer
ELEMENT  PERFORMANCE CRITERIA

4.6. Waterproofing material/system is protected and drained using methods and materials consistent with manufacturers’ specifications and good building practice.

4.7. Final inspection of site is undertaken and sign-off and handover of work is carried out in accordance with workplace requirements.

5. Clean up.

5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- below ground level waterproofing materials, processes and techniques
- characteristics and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- MSDS
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- shoring techniques and requirements
- termination and overflashing detailing
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum waterproof a basement wall excavated in a clay work site, with:
  - the wall of masonry block and with a concrete column at mid span
  - the wall and column supported on a strip concrete footing
  - a cavity wall above the block wall
  - the site is to be backfilled and access to the bottom edge of the footing currently not available
  - the appropriate root resistant waterproofing material selected
  - drainage and protection of the waterproofing provided
  - ensuring:
    - correct identification of requirement and installation of the waterproofing system
EVIDENCE GUIDE

- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- proposed termination detailing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to waterproofing below ground level wet areas
- hand and power tools, plant and equipment appropriate to waterproofing below ground level wet areas
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills
EVIDENCE GUIDE

with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
RANGE STATEMENT

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos

- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:

- angle grinders
- brooms
- brushes
- buckets
- caulking guns
- chisels, including cold chisels
- cutting blades
- dumpy, laser and water levels
- electric drills and screwdrivers
- electric hammers
- excavating equipment
- extension leads
- gas burners and torches
- hammers
- high pressure water equipment
- measuring tapes and rules
- mixers and mixing apparatus
- moisture meters
- pumps
- rollers
- scissors
- shoring equipment
- spirit levels
- straight edges
- trowels
- vacuum cleaners
- wood floats.

**Quality requirements** include

- Australian standards
- internal company quality policy and standards
RANGE STATEMENT

relevant regulations, including:  
- manufacturer specifications  
- workplace operations and procedures.

Waterproofing **materials** include:
- adhesives  
- drainage cells  
- drainage piping
  - for below ground application, which may be:
    - liquid applied, including:
      - acrylic  
      - bituminous  
      - cementitious-based  
      - injection  
      - polyurethane
    - sheet, including:
      - bentonite composites  
      - butanol  
      - ethylene cop bitumen (ECB)  
      - ethylene propylene diene monomer rubber (EPDM)  
      - polyvinyl chloride (PVC)
    - waterproofing materials, including:
      - geotech fabric  
      - protection board  
      - substrate primer.

**Environmental requirements** include:
- clean-up management  
- dust and noise  
- vibration  
- waste management.

**Below ground** applications include:
- external and internal vertical walls constructed below ground level and under slab waterproofing barriers  
- foundation work  
- lift pits  
- pools and ponds  
- retaining walls  
- retention tanks  
- stair wells  
- tanks  
- water storage areas  
- underground residential and commercial
RANGE STATEMENT

spaces, such as:
- basements
- car parks
- storage areas.

**Inspection** and identification of the waterproofing system include:
- preparation of the substrate and waterproofing material
- application to a below ground level wet area
- the process:
  - testing
  - drainage
  - protection of the membrane system and flashings.

**Structural** considerations include:
- below ground environmental factors, including:
  - water run-off and impact on adjoining property
  - allowing water flow
  - slope, fall and grade of surfaces
- design principles
- drainage requirements
- hydrostatic pressures
- structural movement
- substrate type and condition
- waterproofing protection.

**Waterproofing systems** include:
- below ground waterproofing material should be:
  - cement-based waterproofing systems
  - liquid sealants or sealant devices
  - not subject to biological attack
  - root resistant
  - sheet and sprayed material membranes.
- capillary action
- causes of water penetration, including:
  - leakage through wall and floor finishes
  - penetration at joints and junctions
  - movement from shrinkage
  - accumulated drainage
- failure of or damage to waterproofing system
- corners and terminations
- curing times of compounds and their
RANGE STATEMENT

- applications
- damp proof courses and flashings
- direction of fall of substrate or decorative finish
- hydrostatic pressure
- impact of environmental conditions
- joining
- perimeter treatment, including:
  - pressure seals cross cavity and over flashing
  - thermal shrinkage (expansion and contraction)
- shelf life of waterproofing products
- surface applications and protection requirements
- use of bond-breakers
- use of sealants
- waste allowances.

Substrates include:

- aerated autoclaved concrete materials:
  - Hebel
  - Thermolite
- blockwork
- brickwork
- cement render
- ferrous and non-ferrous piping
- fibrous cement sheeting
- pre-cast concrete
- PVC
- reinforced in situ concrete
- timber and timber-based products
- wet area plasterboard.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
REQUIRED SKILLS AND KNOWLEDGE

- use a range of mobile technology, such as two-way radio and mobile phones
- voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- assessment and appreciation of moisture content in substrate materials
- characteristics and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations
- general construction terminology
- internal waterproofing materials, processes and techniques
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
- MSDS
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- termination and flashing principals
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
  - waterproof a bathroom incorporating:
    - lap up a wall
    - appropriate penetrations
    - wastes and hobs
  - install and detail a hobless frame shower enclosure and a bath that abuts a masonry connection wall, ensuring:
    - correct identification of requirement and installation of the waterproofing
    - correct selection and use of appropriate processes, tools and equipment
    - completing all work to specification
    - correct termination and overflashing.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements
EVIDENCE GUIDE

and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards' requirements.
Resource implications for assessment include:
- workplace location or simulated workplace
- materials relevant to waterproofing internal wet areas
- hand and power tools, plant and equipment appropriate to waterproofing internal wet areas
- realistic activities covering the mandatory task requirements
- specifications and work instructions.
Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role
EVIDENCE GUIDE

and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to waterproofing internal wet areas
RANGE STATEMENT

- relevant Australian standards
- safe work procedures relating to waterproofing internal wet areas
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
RANGE STATEMENT

- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment** include:
- angle grinders
- brooms
- brushes
- buckets
- caulking guns
- chisels, including cold chisels
- cutting blades
- electric drills and screwdrivers
- fans
- floor scrapers
- hammers
- heat welders
- hot air welders
- lights
- measuring tapes and rules
- moisture meters
- nylon rollers
- pressure rollers
- fusion rollers
- scissors
- seam probes
- solvent applicators
- spirit levels
- straight edges
- vacuum cleaners.

**Quality requirements** include relevant regulations, including:
- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Materials for internal application** include:
- adhesives
- drainage cell
- liquid applied, including:
  - acrylic
  - cementitious-based
  - injection
  - polyurethane
- protection board
RANGE STATEMENT

- sheet, including:
  - bentonite composites
  - butanol
  - ethylene cop bitumen (ECB)
  - ethylene propylene diene monomer rubber (EPDM)
  - polyvinyl chloride (PVC)
  - substrate primer.

Environmental requirements include:
- clean-up management
- dust and noise
- vibration
- waste management.

Identification of the waterproofing system includes:
- preparation of the substrate and waterproofing material
- application to an internal wet area.
- process:
  - testing
  - drainage
  - protection of the membrane system.

Waterproofing systems include:
- cement-based waterproofing systems.
- hot mix bituminous felt material membranes
- liquid sealants
- sealant devices
- sheet and sprayed material membranes.

Considerations in water exclusion include:
- capillary action
- causes of water penetration, including:
  - leakage through wall and floor finishes
  - penetration at joints and junctions
  - movement from shrinkage
  - accumulated drainage
  - failure of or damage to waterproofing system corners and terminations
  - curing times of compounds and their applications
  - damp proof courses and flashings
  - direction of fall of substrate or decorative finish
  - hydrostatic pressure
  - impact of environmental conditions
RANGE STATEMENT

- joining
- perimeter treatment, including:
  - pressure seals and over flashing
  - thermal shrinkage (expansion and contraction)
- shelf life of waterproofing products
- surface applications and protection requirements
- use of bond breakers
- use of sealants
- waste allowances.

Structural considerations include:
- design principles
- drainage requirements
- environmental factors, including:
  - water run-off and impact on adjoining property
  - allowing water flow
  - slope, fall and grade of surfaces
- hydrostatic pressures
- movement
- substrate type and condition
- waterproofing protection.

Internal wet area applications include:
- bathrooms
- en suites
- laundries
- showers
- other wet process areas.

Wet area fixtures include:
- bidets
- pre-cast baths
- shower bases
- sink units
- trough units
- urinals
- vanity units
- water closets.

Substrates include:
- aerated autoclaved concrete materials:
  - Hebel
  - Thermolite
- blockwork
- brickwork
RANGE STATEMENT

- cement render
- ferrous and non-ferrous piping
- fibrous cement sheeting
- pre-cast concrete
- PVC
- reinforced in situ concrete
- timber and timber-based products
- wet area plasterboard.

ELEMENT PERFORMANCE CRITERIA

- fitness for purpose.

4.7. Waterproofing materials and system are protected and drained using methods and materials consistent with manufacturers’ specification and good building practice.

4.8. Final inspection of site is undertaken and sign-off and handover of work are carried out in accordance with workplace requirements.

5. Clean up.

5.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.

5.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
REQUIRED SKILLS AND KNOWLEDGE

- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- below ground level waterproofing materials, processes and techniques
- characteristics and applications of waterproofing materials and adhesives
- construction systems and waterproofing considerations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- MSDS
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- termination, cross cavity and overflashing requirements
- testing procedures for waterproof membrane systems
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
  - waterproof a concrete slab balcony in a cavity brick building with an integrated rendered brick planter box
  - waterproof a fibrous cement balcony in a cavity brick building where the structural floor levels have a step down of no less than 100mm from internal to external; the balcony is to cross fall to a gutter or drainage and detailing is to be provided through threshold cross-section, indicating how waterproofing would terminate at handrail posts (which are through bolted to the floor frame under the deck)
  - both tasks are to be undertaken ensuring:
    - correct identification of requirement and installation of the waterproofing
    - correct selection and use of appropriate
EVIDENCE GUIDE

processes, tools and equipment
• completing all work to specification
• correct termination and flashing detailing
• appropriate membrane testing and application of protection techniques.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• workplace location or simulated workplace
• materials relevant to waterproofing external wet areas
• hand and power tools, plant and equipment appropriate to waterproofing external wet areas
• realistic activities covering the mandatory task requirements
• specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
EVIDENCE GUIDE

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
RANGE STATEMENT

**Information** includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to waterproofing external wet areas
- relevant Australian standards
- safe work procedures relating to waterproofing external wet areas
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Planning and preparation** include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

**Safety (OHS)** is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
RANGE STATEMENT

- surrounding structures
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of tools and equipment
- workplace environmental requirements and safety.

Tools and equipment:

- include:
  - angle grinders
  - brooms
  - brushes
  - buckets
  - caulking gun
  - chisels, including cold chisels
  - cutting blades
  - electric drills and screwdrivers
  - electric hammers
  - extension leads
  - gas burners and torches
  - hammers
  - laser and water levels
  - measuring tapes and rules
  - mixer and mixing apparatus
  - moisture meter
  - rollers
  - scissors
  - spirit level
  - straight edge
  - torches
  - trowels
  - vacuum cleaner
  - wood float

- may include:
  - automatic levels
RANGE STATEMENT

- excavating equipment
- high pressure water equipment
- pumps.

*Quality requirements* include relevant regulations, including:

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

*Materials* for below ground application may be:

- liquid applied, including:
  - acrylic
  - cementitious-based
  - injection
  - polyurethane
- sheet, including:
  - bentonite composites
  - butanol
  - ethylene cop bitumen (ECB)
  - ethylene propylene diene monomer rubber (EPDM)
  - polyvinyl chloride (PVC)
- waterproofing materials, including:
  - adhesives
  - drainage cell
  - geotech fabric
  - protection board
  - substrate primer.

*Environmental requirements* include:

- clean-up management
- dust and noise
- vibration
- waste management.

*Identification* includes:

- preparation of the substrate and the waterproofing material
- application to an external wet area
- process, including testing, drainage and protection of the membrane system and flashings.

*Waterproofing systems* include:

- cement-based waterproofing systems
- hot mix bituminous felt material membranes
- liquid sealants or sealant devices
- sheet and sprayed material membranes.
RANGE STATEMENT

Considerations in **water exclusion** include:

- capillary action
- causes of water penetration, including:
  - leakage through wall and floor finishes
  - penetration at joints and junctions
  - movement from shrinkage
  - accumulated drainage
  - failure of or damage to waterproofing system
- damp proof courses and flashings
- corners and terminations
- curing times of compounds and their applications
- direction of fall of substrate or decorative finish
- hydrostatic pressure
- impact of environmental conditions
- joining
  - perimeter treatment, including:
    - pressure seals
    - cross cavity
    - over flashing
    - thermal shrinkage (expansion and contraction)
- shelf life of waterproofing products
- surface applications and protection requirements
- use of bond-breakers
- use of sealants
- waste allowances.

External **wet area** applications include:

- awnings
- balconies
- external vertical walls
- planter boxes
- roofs.

**Substrates** include:

- aerated autoclaved concrete materials:
  - Hebel
  - Thermolite
- blockwork
- brickwork
- cement render
RANGE STATEMENT

- ferrous and non-ferrous piping
- fibrous cement sheeting
- pre-cast concrete
- PVC
- reinforced in situ concrete
- timber and timber-based products
- wet area plasterboard.

Structural considerations include:

- design principles
- drainage requirements
- hydrostatic pressures
- structural movement
- substrate type and condition
- environmental factors, including:
  - allowing water flow
  - slope, fall and grade of surfaces
  - water run-off and impact on adjoining property
  - waterproofing protection.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - recognise procedures
  - report faults
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to record results of checks and tests and relevant work completion procedures
  - evaluate own actions and make judgments about performance and necessary improvements
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
  - organisational skills, including the ability to plan and set out work
  - respond to change and contribute to workplace responsibilities, such as current work site environmental and sustainability frameworks and management systems
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technological skills to:
    - use a range of mobile technology, such as two-way radio and mobile phones
    - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- characteristics and applications of remedial waterproofing materials
- construction systems and waterproofing considerations
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- materials storage and environmentally friendly waste management
REQUIRED SKILLS AND KNOWLEDGE

- MSDS
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- principles and considerations of water exclusion
- processes for the calculation of material requirements
- quality requirements
- remedial waterproofing materials, processes and testing techniques
- workplace and equipment safety requirements.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures including quality requirements
- safely and effectively operate and use tools, plant and equipment
- communicate and work effectively and safely with others
- as a minimum:
  - repair a crack in a concrete basement wall or a suspended car park slab, identifying remedial waterproofing method to be used, determining the type of material to be used and the repair requirement (e.g. spacing of injection ports/packers if using an injection method), and testing the application
  - inject a chemical damp course into a solid 230 brick wall/party wall and a cavity brick wall, plugging each procedure with epoxy plug, ensuring:
    - correct identification of requirement and installation of the waterproofing
    - correct selection and use of appropriate processes, tools and equipment
    - completing all work to specification.

Context of and specific resources

This competency is to be assessed using standard and
EVIDENCE GUIDE

for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- workplace location or simulated workplace
- materials relevant to remedial waterproofing processes
- hand and power tools, plant and equipment appropriate to remedial waterproofing processes
- realistic activities covering the mandatory task requirements
- specifications and work instructions.

Assessment of this unit of competency may be in conjunction with assessment of other units commonly performed at the same time in normal job roles.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and
EVIDENCE GUIDE

the practical requirements of the workplace

• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions, where specified
• MSDS
• memos
• regulatory and legislative requirements pertaining to remedial waterproofing processes
RANGE STATEMENT

- relevant Australian standards
- safe work procedures relating to remedial waterproofing processes
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Planning and preparation include:

Safety (OHS) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances, including cement and curing agents
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
  - earth leakage boxes
  - lighting
  - power cables, including overhead service trays, cables and conduits
  - restricted access barriers
  - surrounding structures
  - traffic control
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
RANGE STATEMENT

- use of tools and equipment
- workplace environmental requirements and safety.

**Tools and equipment**

- angle grinders
- chisels
- electric drills and screwdrivers
- hammers
- impact drills
- measuring tapes and rules
- mixing equipment
- pressure injection equipment, including:
  - cartridge applications
  - compressors
  - hoses
  - pumps
  - vacuum pumps
- spirit levels
- straight edges.

**Quality requirements**

- Australian standards
- internal company quality policy and standards
- manufacturer specifications
- workplace operations and procedures.

**Remedial injection materials**

- cementitious products
- epoxies
- expanding polyurethane foam
- polyurethane resin systems
- silicon, silane and siloxane products
- single and dual component resins.

**Environmental requirements**

- clean-up management
- dust and noise
- vibration
- waste management.

**Identification**

- preparation of the waterproofing material
- application to a structural substrate.

**Defects** that may be addressed using injection methods include:

- cracks in concrete walls and floors
- damp or wet areas occurring in structures.

**Waterproofing surface applications**

- floor surfaces
- roof surfaces
- standard wet areas
RANGE STATEMENT

Remedial waterproofing systems include:
- barrier of silicon to stop rising damp
- concrete crystallisation or by injection
- concrete repair injection hydrostatic barrier coatings
- membranes
- saturants on an external wall (in case of flood).

Substrates include:
- aerated autoclaved concrete materials:
  - Hebel
  - Thermolite
- blockwork
- brickwork
- cement render
- ferrous and non-ferrous piping
- fibrous cement sheeting
- pre-cast concrete
- polyvinyl chloride (PVC)
- reinforced in situ concrete
- timber and timber-based products
- wet area plasterboard.

Unit Sector(s)

Unit sector Construction

Co-requisite units

Co-requisite units Nil
Functional area

Functional area
CPCMCM7001A Plan and manage complex projects

Modification History
Not Applicable
Unit Descriptor

This unit of competency specifies the outcomes required of senior managers responsible for identifying, planning, controlling and finalising complex projects.

The unit addresses the management of projects of significant scope and duration, for example, the development and implementation of a major new program or service, or the construction or design of a significant new piece of infrastructure.

The environment in which the project is managed is also complex and involves the management of a project team which typically will include staff with diverse skill sets. The management of complex projects also involves significant reporting requirements.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body.

Application of the Unit

This unit supports the attainment of skills and knowledge required for competent workplace performance in organisations of all sizes. It will support managers in all sectors of the construction industry who must exercise the skills necessary to ensure projects are planned and managed effectively in order to deliver the required outcomes on time and within budget.

The unit may be contextualised to the specific needs, and skills and knowledge requirements, of all sectors within the construction industry provided the essential outcomes of the unit are not changed.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
# Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Identify the strategic and operational needs of the project during the planning phase. | 1.1. The project's *strategic context* and requirements are identified and considered.  
1.2. The organisation's strategic and business plans and their output requirements are identified and considered.  
1.3. Client requirements and the impact of *legislation and industry codes and standards* are identified and fully explored.  
1.4. A *risk management analysis* is conducted and a risk management plan is developed and documented. |
| 2. Prepare the project plan. | 2.1. Precise *specifications and terms of reference* for the project are defined and documented.  
2.2. Project budget is identified, specified to a level that can be used for the management of sub-tasks, and documented.  
2.3. Skills needed for the successful completion of the project are defined.  
2.4. Physical and other resources required to support the project are defined, documented and secured.  
2.5. Timelines, schedules and critical path for the project are developed and documented, taking into consideration contingencies and planning for time slippages.  
2.6. A consultation strategy or process that will be used to inform clients, contractors and other interested parties of the project's progress, and seek their input as required, is defined and documented. |
| 3. Assemble the project team and commence work. | 3.1. Appropriate project team members are secured and briefed regarding the project, their roles, levels of delegated responsibility and the outcomes to be achieved.  
3.2. Effective communication processes are put in place to coordinate work and inform team members of progress.  
3.3. Clear reporting processes for team members are identified and communicated. |
| 4. Manage the project. | 4.1. Project progress is monitored according to project plan requirements, using appropriate *project management tools* and methodologies.  
4.2. Team members are supported and their output is managed against the key performance indicators |
<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>

<tbody>
<tr>
<td></td>
<td>identified in the project plan.</td>
</tr>
<tr>
<td></td>
<td>4.3. Corrections, changes and additions are made to the project plan in light of changing circumstances to ensure project aims and outcomes are met.</td>
</tr>
<tr>
<td></td>
<td>4.4. Resourcing to support the project is monitored and corrections are made to reflect changing circumstances.</td>
</tr>
<tr>
<td></td>
<td>4.5. Reporting of overall project progress is made to senior management and/or funding bodies as required and in line with the project plan.</td>
</tr>
</tbody>
</table>

5. Finalise the project.

| 5.1. | The project is finalised in line with the project plan. |
| 5.2. | Required handover to staff members responsible for the ongoing implementation or maintenance of project products or services is conducted efficiently, effectively and in line with organisational procedures. |
| 5.3. | Project team members and relevant stakeholders are debriefed about the conduct of the project and the outcomes achieved. |
| 5.4. | A report is prepared analysing the strengths and weaknesses of the project plan and the conduct of the project. |

6. Use the project to contribute to improved policies and processes.

| 6.1. | Opportunities for wider organisational learning, including changes to processes or policies generated by the project, are identified and analysed. |
| 6.2. | Opportunities for future further developments following project completion are forwarded for consideration by senior management. |
| 6.3. | The strategic impact of the project is considered and fed into the organisation's ongoing strategic planning processes. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- project planning and execution
REQUIRED SKILLS AND KNOWLEDGE

- risk management planning
- time management
- high level written and oral communication
- human resource management
- team leadership
- numeracy skills for budgeting and financial management
- proactive thinking
- decision making
- high level problem solving
- research
- critical and analytical thinking
- comparative analysis
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
- skills specific to fire systems design, including:
  - operating computer software packages and systems, including:
    - proprietary project management software
    - proprietary hydraulic calculation software
    - proprietary estimating software
    - parametric modelling software
- language and literacy skills for:
  - searching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including architectural, structural, mechanical, hydraulic and electrical
  - researching and evaluating competing technologies in new products and systems
  - reviewing and commenting on reports (e.g. consultant fire engineer), including building, insurance and corporate

Required knowledge

- budgets and financial plans
- concepts of risk management planning and processes
- tools and models of project management
- reporting mechanisms
- relevant legislation, codes, standards, and sustainability requirements and ratings,
REQUIRED SKILLS AND KNOWLEDGE

including:
- energy conservation
- water conservation
- organisational frameworks and functions, including:
  - industry associations
  - enterprises
  - government bodies
- knowledge specific to fire systems design, including:
  - fire engineering principles, including:
    - engineered solutions
    - innovative fire systems
    - fire modelling
  - roles and responsibilities of relevant building project personnel, including:
    - architect
    - lead contractor
    - mechanical engineer
    - hydraulic engineer
    - electrical engineer
  - computer software functions and operation, including relevant proprietary software
  - relevant current legislation, codes and standards, including:
    - building Acts
    - building regulations
    - infrastructure supply regulations
    - the Building Code of Australia
    - Australian standards for fire systems
    - international standards for fire systems
    - other fire system standards commonly required by building insurers
  - passive fire safety elements:
    - identification of passive elements
    - impact of fire systems design on passive elements
    - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
  - water-based fire systems technology and components, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
### REQUIRED SKILLS AND KNOWLEDGE

- early suppression fast response (ESFR)
- hydrants, hose reels and monitors
- water supply tanks
- fire pump sets
- detection and warning systems technology and components, including:
  - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems
- technology and components of special hazard fire systems, including:
  - foam systems (low expansion, medium expansion and high expansion)
  - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
  - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical systems' technology and components, including:
  - powder
  - wet chemical
# Evidence Guide

## EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the management of a complex project and should include establishing, using and evaluating effective project management processes.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the successful design, implementation, management and finalisation of a complex project, including the management of planning processes, scheduling, human resources, reporting and response to contingencies
- the ability to ensure projects undertaken are aligned with and support organisational strategies and requirements
- the ability to learn from project outcomes and refine and improve future project management processes.

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- access to codes and standards
- access to legislation relevant to the jurisdiction and the project being undertaken
- project documentation, including design or

<td>• theoretical texts and other information to support the assessment of the unit’s required skills and knowledge</td>
</tr>
<tr>
<td></td>
<td>• relevant computer software packages and suitable hardware.</td>
</tr>
</tbody>
</table>

## Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

## Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different
## RANGE STATEMENT

Work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>The strategic context for the project will include the operating environment in which the project will be conducted. For example:</th>
<th>• fire systems design sector, including the development of high risk and high value fire systems design projects.</th>
</tr>
</thead>
</table>
| Legislation and industry codes and standards that may impact on the project design and delivery will be sector specific. For the fire systems design sector they may include: | • building Acts  
• building regulations  
• infrastructure supply regulations  
• the Building Code of Australia  
• Australian standards for fire systems  
• international standards for fire systems  
• other fire system standards commonly required by building insurers, including the U.S. National Fire Protection Association (NFPA) standards. |
| Risk management analysis may include consideration of: | • public liability  
• safety of staff  
• workers compensation claims  
• business continuity (e.g. emergency plans for activities to continue in the event of loss of building, equipment or systems)  
• property development and maintenance  
• changing government policy or funding arrangements  
• environmental concerns (e.g. pollution, hazardous waste, tree retention policies). |
| Specifications and terms of reference for the project may include an accurate and complete: | • definition of the project aims  
• description of the outcomes to be achieved using, wherever possible, the nomination of clear metrics  
• description of all stakeholders  
• description of the project parameters (scope of operations, flexibilities involved, etc.)  
• identification of the budget  
• specification of the timescale  
• specification of the communication strategy to be used. |
### RANGE STATEMENT

**Project management tools** typically will be computer-based and may:

- be in-house or proprietary software
- use critical path analysis
- incorporate the use of Gantt or PERT charts
- incorporate scheduling and reporting templates.

CPCCM7002A Manage the quality of projects and processes

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to establish performance measures, and review and improve the management and accountability of processes and projects.
The unit covers the importance of the need for quality control and responsibility for the provision of service outcomes to customers. The management and driving of organisational change is a major focus of the unit.
Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit supports the attainment of skills and knowledge required for competent workplace performance in organisations of all sizes. It will support managers with responsibility in all sectors.
The unit may be contextualised to the specific needs, and knowledge and skill requirements, of all industries provided the essential outcomes of the unit are not changed. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Establish the parameters for the delivery of a quality project or process. | 1.1. *Concepts, principles and tools of quality management and continuous improvement* are researched and analysed.  
1.2. Extensive research is undertaken to determine the current and future service requirements of customers.  
1.3. Recommended or anticipated changes to services and processes are communicated to senior management for review. |
| 2. Establish and implement performance measurement strategies. | 2.1. Financial and *non-financial* performance measures and evaluation criteria for the specific project or service delivery are established and agreed upon by relevant stakeholders and communicated to relevant staff and service providers.  
2.2. Appropriate financial and non-financial benchmarks are determined and agreed to by relevant stakeholders.  
2.3. Project and services are monitored to ensure they meet identified needs and service expectations.  
2.4. Feedback from customers is communicated to relevant areas within the organisation and incorporated into performance reviews.  
2.5. Trends in *customer/stakeholder satisfaction* and service usage are monitored to identify opportunities for improvements to services or processes.  
2.6. Issues of responsiveness and accessibility are reviewed and reported. |
| 3. Facilitate accountability for project and service outcomes. | 3.1. Project management systems, *reporting mechanisms* and processes are established and communicated to staff and *service providers*.  
3.2. The results of service reviews against desired targets are reported according to standard organisational procedures.  
3.3. Tenders and contracted works are regularly monitored and adverse variations in established performance targets are immediately addressed.  
3.4. Quality and efficiency of operational processes are measured and documented.  
3.5. Service shortfalls are analysed and resolved in line with company policies and procedures, including customer service standards. |
<p>| 4. Develop and | 4.1. The need for change in organisational processes and |</p>

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- high level management and leadership skills
- ability to identify and evaluate potential obstacles to change
- analysis of organisational systems, processes and activities
- problem solving and creative thinking skills to develop a range of possible options
- developing a range of possible options in solving problems
- numeracy skills for:
  - calculating measures of performance
  - analysing financial reports
- language and literacy skills for:
  - communicating service requirements and recommended improvement plans
  - researching
REQUIRED SKILLS AND KNOWLEDGE

- accessing, reading, interpreting and applying current relevant legislation, codes and standards
- computer skills for:
  - word processing
  - spreadsheets
  - emails
  - internet searching
- negotiation and conflict management

Required knowledge

- change management processes
- continuous improvement processes
- computer software functions and operation
- knowledge specific to fire systems design, including:
  - relevant current legislation, codes and standards, including:
    - building Acts
    - building regulations
    - infrastructure supply regulations
    - the Building Code of Australia
    - Australian standards for fire systems
    - international standards for fire systems
    - other fire system standards commonly required by building insurers
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- water-based fire systems technology and components, including:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
- detection and warning systems technology and components, including:
  - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
### REQUIRED SKILLS AND KNOWLEDGE

- smoke control systems
- emergency lighting systems
- technology and components of special hazard fire systems, including:
  - foam systems (low expansion, medium expansion and high expansion)
  - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
  - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical systems' technology and components, including:
  - powder
  - wet chemical
**Evidence Guide**

### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the establishment and implementation of performance parameters and measures to ensure the accountability and effective delivery of projects and processes.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular, the person should demonstrate:

- knowledge of the concepts, principles and tools used in quality management and continuous improvement processes
- knowledge of the concepts, principles and tools of change management
- the mathematical ability to calculate benchmarks and monitor performance
- research skills
- analytical and report writing skills
- leadership skills that facilitate quality outcomes and organisational change
- the ability to learn from project outcomes and refine and improve future processes.

#### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian Standards' requirements.

Resource implications for assessment include:

- access to relevant codes and standards
- access to legislation relevant to the jurisdiction and the project being undertaken
### EVIDENCE GUIDE

- project, process or service documentation
- research resources, including product, process or technology information and data applicable to the workplace
- theoretical texts and other information to support the assessment of the unit's required skills and knowledge
- relevant computer software packages and suitable hardware.

### Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

---

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - complete written reports and other relevant documentation
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - negotiate with employers
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - read and interpret:
    - documentation from a variety of sources
    - material safety data sheets (MSDS)
    - signs
    - work safety procedures and instructions
  - report hazards, risks and faults in equipment

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- how instructions are conveyed in the workplace
- how work schedules, charts, bulletins and memos are used
- industry-relevant technology to support oral communication
- industry terminology
- job safety analysis (JSA) and safe work method statements (SWMS)
- personnel records and their maintenance
- standardised signage
- visual signalling procedures
- workplace documentation requirements
- workplace English
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- accessing and interpreting written work safety procedures, job instructions, job processes, equipment and operator instructions
- applying sustainability principles and concepts
- completing workplace documentation in relation to work, stores and tools and equipment and personal and workplace administration
- communicating effectively using mandatory visual methods, including:
  - establishing communication
  - lateral and vertical movement direction
  - request for a face-to-face meeting
  - stop or cancel last communication
  - communicating with others in a clear and accurate manner
- receiving, clarifying and confirming oral work instructions
- reviewing personnel records and completing personal information input proformas.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured
learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Oral communication with others* is an integral part of routine work that includes communication with supervisors, contractors, co-workers and clients. It:

- may include:
  - languages other than English
  - oral (face to face or remote)
  - signage
  - visual or written
- must include:
  - acknowledgments
  - oral communications media, including:
    - face to face
    - indirect method, such as phone or two-way radio
  - requests for information
  - safety briefings
• work instructions.

**Visual communication** must include:
• establishing communication
• lateral and vertical movement direction
• other signals appropriate to the task and workplace
• request for a face-to-face meeting
• stop or cancel last communication.

**Written communication** may include:
• dockets and order forms
• emails
• equipment logs
• equipment operator instructions
• input and output documents
• personnel records
• plans, drawings and specifications
• schedules and rosters
• servicing checklists
• site safety statistics
• SMS text
• training records
• work instructions and procedures
• work safety procedures or equivalent
• work signage.

**Sustainability principles and concepts:**
• cover the social, economic and environmental use of resources to meet current and future needs
• may include:
  • efficient use and recycling of material
  • energy efficiency.

**Unit Sector(s)**
**Functional area**

Not applicable.
CPCPCM2040A Read plans and calculate plumbing quantities

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2004A

Unit Descriptor
This unit of competency specifies the outcomes required to use and interpret plans and specifications associated with construction work, and accurately complete measurements and calculations to establish quantities of materials for the plumbing and services industry.
The unit requires the interpretation of plans, drawings and specifications to interpret requirements, and making measurements and calculations to determine quantities of plumbing materials.

Application of the Unit
This unit of competency supports skills to read and interpret plans for a variety of plumbing and services applications.
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained. It may be a customer's premises or employer's workplace, either on or off-site.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans, drawings, specifications and standards are obtained and required calculations are identified.

1.2 Work health and safety (WHS) requirements associated with reading plans, calculating plumbing requirements and the workplace environment are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Work area and materials are prepared to support the efficient reading of plans and the calculation of plumbing requirements.

2 Identify types of plans and drawings and their functions.

2.1 Plans and drawings used in the plumbing industry are identified.

2.2 Key functions of each type of drawing are identified.

2.3 Key users of drawings are identified.

3 Identify commonly used scales, symbols and abbreviations.

3.1 Commonly used scales, symbols and abbreviations are used.

3.2 Function of legend is understood and identified.

4 Locate and identify key features on a plan.

4.1 Key features and dimensions of sectional details and elevations on a plan are identified and located.

4.2 Location and types of services are identified.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - request relevant documentation and information
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete relevant workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record calculations, measurements and material quantities
- numeracy skills to apply measurements and calculations
- plan-reading skills, including:
  - boundaries
  - easements (sewer, stormwater, etc.)
  - existing services
  - orientation
  - pedestrian and vehicular access
  - preservation orders
  - set backs
  - site features
  - site geography, including levels
  - surrounding buildings and fences
- planning and organising skills to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

Required knowledge

- job safety analysis (JSA) and safe work method statements (SWMS)
- measurements, calculations and quantities
- range of plans and specifications relevant to the plumbing and services industry
- relevant Acts, regulations and codes of practice
- simple industry calculations
- symbols, dimensions, terminology and key features of plans
- tools, equipment and materials relative to plans, drawings and specifications
- work schedules, work plans, charts, work bulletins and memos
- workplace safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for reading plans and calculating plumbing quantities
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for a project, completing the following in respect of interpreting the plans and determining quantities:
  - apply sustainability principles and concepts
  - identify type and purpose of the plan and drawing
  - identify its dimensions, symbols, abbreviations, key features, title and reference date (as current version)
  - identify material types from the specifications, measurements and calculations, indicating items of plumbing material required, ensuring:
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured...
learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control, including of electrical hazards
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Quality assurance requirements** may include:

- Australian standards
- environmental policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk
management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Types of *drawings* may include:
- drainage plans
- elevations and sections
- floor plans
- hydraulic plans
- mechanical services and drainage plans
- sanitary plans
- sewerage plans
- site plans
- specifications.

Key features of detailed *elevations and plans* may include:
- boundaries
- building lines
- cross-sections of construction details
- easements
- layout of rooms
- location of works relative to other buildings
- orientation
- service locations
- shape of building and structure
- type of construction
- type of structure, including structural members
- vertical and horizontal measurements.

*Measurements* may include:
- all dimensions used in plumbing
- laser or similar technology
- SI units of measurement
- the use of:
  - calipers
  - dividers
  - rulers
  - squares
  - tape measures.

*Calculations*:
- are to be performed manually or with the aid of a
Materials for reading plans and calculating plumbing quantities may include:

- drawings
- plans
- specifications.

Information may include:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to reading plans and calculating plumbing requirements
- verbal, written and graphical instructions, including:
  - charts and hand drawings
  - plans and sketches
- job drawings
- material safety data sheets (MSDS)
- memos
- plans and specifications
- signage
- work bulletins
- work schedules.

Key features of **specifications** may include:

- material details
- preferred suppliers
- quality of finishes
- quantities
- specific skill requirements.

**Tools and equipment** may include:

- calculators
- laser measuring devices
- rulers, dividers, tape measures or squares.

CPCPCM2041A Work effectively in the plumbing and services sector

Modification History
Prerequisite unit updated
Content on sustainability added to PC and range statement
Minor updates to content throughout
Changed critical aspects
Not equivalent to CPCPCM2021A

Unit Descriptor
This unit of competency specifies the outcomes required to prepare for and sustain effective work within the plumbing and services sector of the building and construction industry. It requires the ability to accept instructions, work with others, plan activities and perform tasks, as well as participate in workplace planning and meetings. Outcomes include effective participation in a plumbing and services workplace to promote a harmonious and efficient work environment.
The unit covers the identification and clarification of the sector work context and setting, acceptance of workplace responsibility by the individual, working in a team, individual career path improvement and participation in meetings.

Application of the Unit
This unit of competency supports understanding of the structure and employment conditions in the sector, and its regulatory and other requirements.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

<table>

</table>
2.3 Work is completed to the standard expected in the workplace and according to guidelines, directions, instructions and organisational requirements.

2.4 Variations and difficulties affecting work requirements are identified through regular reviews and action is taken to report these issues to appropriate personnel.

2.5 Additional support or modification of arrangements to improve work outcomes is communicated clearly to appropriate personnel.

3 Work in a team.

3.1 Workplace goals and the contributions to be made by teams are identified.

3.2 Individual contributions to team activities are identified, agreed and reviewed periodically with the team.

3.3 Defined roles and strengths of other team members are identified.

3.4 Assistance and encouragement are provided to other team members wishing to enhance their role and the role of the team.

3.5 Ground rules for team operations are reviewed and changes are made through team consultative processes.

3.6 Team improvements are initiated and encouraged from team members.

3.7 Causes of disharmony and other barriers to achievement are promptly resolved or referred to the appropriate party for resolution.

4 Participate in identifying and pursuing own development needs and processes.

4.1 The competencies for the workplace are identified.

4.2 Organisational structure, career paths and own development opportunities appropriate to the workplace are identified.

4.3 Steps are taken, in consultation with appropriate personnel, to identify own learning needs for future work requirements.

4.4 Appropriate opportunities to learn and develop required competencies are identified and pursued with the
appropriate people.

5 Participate in workplace meetings.

5.1 Meeting procedures and objectives are identified and applied.

5.2 Points of view and comments, including agreement and dissent are presented in a logical, persuasive and orderly manner.

5.3 Points of view of other members are given due consideration.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand in order to consult with colleagues, communicate work progress, report problems, request support, work in a team and participate in meetings
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - interpret information from a variety of sources
  - record work priorities and deadlines
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - use computers and download relevant information
  - use mobile communication technology
  - access and understand site-specific instructions in a variety of media

**Required knowledge**

- basic conflict management
- basic job and skill analysis techniques
- interpersonal communication
- job safety analysis (JSA) and safe work method statements (SWMS)
- meeting procedures
- plumbing and services streams and career structure and requirements, including business opportunities and requirements
- regulatory, legislative, standards and codes of conduct pertaining to the plumbing and services sector
- relevant industrial awards and agreements
- relevant legislative provisions covering discrimination and equal employment opportunity
- site and team work structure and methods
- training and development opportunities
• work communication procedures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- applying sustainability principles and concepts
- communicating and working effectively and safely with others
- complying with commonwealth, state and territory WHS legislation applicable to workplace operations
- complying with organisational policies and procedures, including quality assurance requirements
- an understanding of employment in, and economic, public health and safety importance of, the plumbing and services sector
- identifying personal development needs
- identifying relevant standards and industry codes of practice
- identifying workplace codes of conduct
- identifying employment conditions and their source
- understanding of regulatory requirements within the plumbing and services industry
- locating, interpreting and applying relevant information, standards and specifications
- participating in workplace meetings
- identifying actions to manage workplace and/or personal conflict situations
- setting personal and work team goals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Plumbing and services sector employment conditions may include:

• bulletins and newsletters
• enterprise agreements
• enterprise procedures for handling industrial disputes and grievances
• industrial awards
• industry and workplace codes of practice
• workplace agreements.

Responsibilities and obligations must include:

• codes of conduct
• job description and employment arrangements
• organisation’s policy relevant to work role
• skills, training and competencies
• supervision and accountability requirements,
Work health and safety requirements are to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control, including of electrical hazards
- identifying hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use and recycling of material
  - efficient energy and water use
  - disposing of waste material to ensure minimal environmental impact.

Organisational requirements may be included in:

- access and equity principles and practices
- anti-discrimination and related policy
- business and performance plans
- ethical standards
- goals, objectives, plans, systems and processes
- legal and organisation policy, guidelines and requirements
- quality and continuous improvement processes
- standards and defined resource parameters.

Team:

- may be referred to as crews, gangs, shifts or other industry accepted terms
- may include employer organisation and worksite organisation.
Team members may include:
- coach or mentor
- employee representative
- peers and work colleagues
- employer, supervisor or manager
- other relevant personnel.

Own learning needs may include:
- assessment processes
- competency achievement and maintenance processes
- formal vocational education
- on-the-job training and job rotation
- professional development
- recognition of prior learning.

Meetings:
- involve small team, section and workplace meetings
- may be formal or informal
- involve notification and scheduling, including:
  - local coordination of procedural and operational issues
  - organising time, place and purpose
  - task discussions.

Unit Sector(s)

CPCPCM2043A Carry out WHS requirements

Modification History
Changes to application, elements and performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2023A

Unit Descriptor
This unit of competency specifies the outcomes required to carry out work health and safety (WHS) requirements through safe work practices in a plumbing and services work environment.
The unit requires the performance of work in a safe manner through awareness of risks, work requirements and the planning and performance of safe work practices with concern for personal safety and the safety of others.
It includes the initial response to workplace emergencies; the safe use of electricity; the identification of hazardous materials, including asbestos; and compliance with legislated work safety practices.

Application of the Unit
This unit of competency supports safe work practices for the plumbing and services industry. Site location for work application may be either domestic or commercial and may be a new work site or an existing structure or fitting being renovated, extended, restored or maintained. It could also be conducted in an on or off-site workshop or at a customer’s premises.
The unit does not cover the removal of asbestos, which is a licensed activity.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Participate in workplace induction.
   1.1 Workplace induction is received.
   1.2 Location of emergency equipment is identified.
   1.3 Current workplace emergency and evacuation procedures are identified.
   1.4 Identify safe working conditions with employer.
   1.5 Identify employee and employer rights and responsibilities regarding safe working conditions.

2 Assess risks.
   2.1 Hazards in the work area are identified, assessed and reported to designated personnel.
   2.2 WHS issues and risks in the work area are identified, assessed and reported to designated personnel.
   2.3 Safe work practices, procedures and instructions are followed.
   2.4 WHS, hazard, accident or incident reports are completed according to workplace procedures and statutory and regulatory authorities and legislation.

3 Identify hazards and hazardous materials on work site.
   3.1 Hazardous materials on a work site are identified, secured and tagged using appropriate signs and symbols; and if appropriate, handled and used according to company and legislated procedures.
   3.2 Measures for controlling risks and construction hazards are applied effectively and immediately.
3.3 **Asbestos-containing materials (ACM) are identified** on a work site and reported to designated personnel.

4 Plan and prepare for safe work practices.

4.1 Quality assurance requirements of company operations and safe work practices are identified and adhered to.

4.2 Personal protective equipment (PPE) is selected, correctly fitted and used according to the requirements of the job.

4.3 Tools and equipment are selected consistent with safe work practice requirements, checked for serviceability, and any faults are reported to supervisor.

4.4 Required barricades, hoardings and signage are determined and erected at job location.

4.5 Material safety data sheets (MSDS) are identified and applied.

4.6 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

5 Use safe work practices to carry out work.

5.1 Work is carried out safely and according to state or territory statutory requirements and company policy.

5.2 **Safety hazards** and common workplace accidents and incidents are identified in the course of work and reported according to policy.

5.3 Industry, site and personal safety rights and responsibilities are applied.

5.4 Prohibited tools and equipment in areas with identified asbestos are identified and isolated.

5.5 Firefighting equipment is selected and used according to type of fire and correct operating procedures.

5.6 Current site emergency and first aid procedures are followed.
6  Maintain safety of self and others.

6.1 Safety signs, identified in terms of colour and shape, symbols and alarms, are adhered to.
6.2 Hazardous chemicals and materials are identified, handled and stored, maintaining the safety to self, others and the environment.
6.3 Incidents are reported according to legislative requirements and workplace procedures.
6.4 Common causes of accidents in the industry are identified and prevention measures implemented in line with site induction.
6.5 Site area is maintained to prevent incidents and accidents and protect self and others.

7  Use electricity safely.

7.1 Safest supply and route for electrical supply are determined.
7.2 Leads are supported and placed according to regulations.
7.3 Power board visual check is conducted.
7.4 Leads and equipment are checked for tags and visual damage.
7.5 Electrical hazards are identified and reported.

8  Apply emergency response.

8.1 Emergencies are identified.
8.2 Emergency response is provided according to company procedures and requirements.
8.3 Details of actions taken are reported according to company procedures and requirements using appropriate communications.

9  Clean up work site area.

9.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.
9.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations.
and standard work practices.

9.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - complete written reports and other relevant documentation
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - evaluate safety issues in the workplace and determine appropriate action
  - recognise WHS hazards, including asbestos, and take all opportunities to alleviate safety problems in a variety of construction work sites and environments
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools or materials
- literacy skills to read and interpret:
  - documentation from a variety of sources
  - MSDS
  - work safety procedures and instructions
- self-management skills to deal calmly and effectively with any potential safety problems and work closely with other team members and supervisors to ensure safe working conditions are maintained
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- asbestos management code relating to prevention of exposure
- job safety analysis (JSA) and safe work method statements (SWMS)
- manual handling techniques
- MSDS
- relevant legislation, regulations and workplace requirements relating to WHS, including hazard reduction and personal safety
- requirements for working in confined spaces and at height, including on roofs
• tools and equipment prohibited from being used near identified ACM
• risk assessment
• safe work practices in normal working environment
• types, possible location and risks of ACM, including serpentine and amphobile groups and their use in common building materials
• workplace and equipment safety requirements
• workplace hazards and their precautions and reduction
• workplace response to emergencies
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications for applying safe work practices in the workplace
- apply safety requirements throughout the performance of work sequences, including electrical requirements and personal protective clothing and equipment
- apply sustainability principles and concepts
- undertake site and workplace induction
- correctly identify the location of ACM
- understand and apply policies and procedures for reporting presence of ACM to designated personnel
- assess workplace risks and interpret and apply safe work practices
- understand workplace requirements for emergency response, including evacuation procedures
- correctly locate and identify workplace firefighting and other safety equipment and appliances
- correctly select and use appropriate processes, tools and equipment
- safely complete all work to specification
- comply with regulations, standards and workplace instructions, procedures and processes, including reporting and documentation
- communicate and work effectively and safely with others.

## Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further
learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace induction** may include:

- first aid officers and kits
- personnel competent and/or licensed in the safe handling of asbestos
- site induction work site locations
- specific site WHS issues
- specific site requirements.

**Safe work practices** are to be according to state and territory legislation and regulations and may include:

- handling of materials
- hazard control procedures and procedures for handling hazardous materials and substances
- PPE prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.
Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Identifying and reporting asbestos-containing materials:

- includes recognising common types of ACM that may be found in construction materials and buildings
- covers asbestos rope/fabrics, asbestos cement sheeting, asbestos cement piping and lagging on pipes, bituminous waterproof membrane, millboard, asbestos flues, sheeting under ceramic or vinyl floor or wall tiles in wet areas
- involves reporting ACM to person in control of the workplace as set out in the relevant Asbestos Management Code.

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate components and material
  - choosing efficient products
  - using material efficiently
  - storing and disposing of hazardous material to ensure minimal environmental impact.

Safety hazards may include:

- hazards and risks associated with tools and equipment
- inflammable materials and fire hazards
- lifting practices
- lighting, gases, electricity and water
- spillage, waste and debris
- toxic and hazardous substances
- working at heights
- working in confined spaces.

Emergencies may include:

- accidents
- fires
- injuries
- sudden illness.
Emergency response may include:
- common site signs
- equipment tags
- facility or location signs
- safety barricades and warning signs
- site direction
- traffic signs
- workplace evacuation involving staff and customers.

Functional area

Unit sector: Plumbing and services

Custom Content Section

Not applicable.
CPCPCM2045A Handle and store plumbing materials

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2025A

Unit Descriptor
This unit of competency specifies the outcomes required to safely handle and store plumbing materials and to identify and address environmental concerns and associated hazards, including the disposal of waste.
It addresses work health and safety (WHS) and environmental requirements to minimise risk to the health and safety of personnel and to the environment.

Application of the Unit
The unit applies to work conducted in a stores holding facility, a work vehicle or on a worksite.
Site location for work application may be a new construction site, an existing structure being renovated or extended, service restoration or maintenance, an on or off-site workshop, a work vehicle or a customer's premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Work health and safety and environmental requirements associated with handling and storage of plumbing materials are adhered to throughout the work.
   1.2 Personal protective equipment (PPE) is selected, correctly fitted and used according to the requirements of the job.
   1.3 Quality assurance requirements for company operations are identified and adhered to.
   1.4 Environmental and waste management requirements are identified and applied.
   1.5 Tools and equipment for handling materials and goods, non-hazardous waste and liquids are selected for the job requirements, checked for serviceability and any faults reported to supervisor.
   1.6 Run-off devices are installed and the maintenance process is determined.
   1.7 Material safety data sheets (MSDS) are located and interpreted for plumbing materials to be handled.

2 Identify hazard and risk control information and measures.
   2.1 Hazards are identified and reported to designated personnel according to workplace procedures.
   2.2 Procedures, instructions and information for controlling hazards and risks are identified and adhered to.
   2.3 Procedures for dealing with accidents, fires and emergencies are adhered to.
3 Handle, sort and stack materials.

3.1 Handling characteristics of materials are identified and safe manual handling techniques are applied.

3.2 Materials are identified, selected, stored, stacked, stockpiled and protected clear of traffic ways, for ease of identification, retrieval, prevention of damage and cross-contamination according to legislative, manufacturer and workplace requirements.

3.3 Signage and barricades are erected to isolate stored materials from workplace traffic or access.

3.4 Hazardous material is identified for separate handling by authorised persons.

4 Store and transport materials.

4.1 Materials are stored and transported correctly and safely according to MSDS and statutory and regulatory authorities' requirements.

4.2 Hazardous material is identified for separate storage, transport and handling by authorised persons.

4.3 Materials, including flammable liquid and material, gases, bulk liquids and petroleum products are stored in their allocated areas and identified bins and containers according to workplace requirements.

4.4 Hazardous materials are transported and handled according to regulatory requirements, including appropriate signage, markings and safety precautions.

4.5 Environment is protected through correct storage and handling of materials.

4.6 Sustainability principles and concepts are observed when preparing for and undertaking work process.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools, equipment and signage are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
5.3 Spilt liquids and waste material are removed and disposed of according to environmental and safety plans and workplace requirements.

5.4 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - complete written workplace documentation
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - report hazards and follow instructions
  - use and interpret non-verbal communication, such as hand signals
  - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to read and interpret plans, specifications and documentation from a variety of sources
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to identify handling and storage requirements for materials used in a plumbing work environment, including identifying, handling and disposing of hazardous and non-hazardous waste
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- categories of materials and their safe handling, storage and transport requirements
- environmental plans, air and water contamination, erosion and sedimentation
- job safety analysis (JSA) and safe work method statements (SWMS)
- MSDS
- WHS and environmental legislation and requirements
- types of waste and their disposal, including an awareness only of the requirements for asbestos handling and disposal
- workplace hazard reporting and hazard handling procedures
- workplace processes and procedures
- workplace safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for handling and storing plumbing materials
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- completing the following in respect of handling and storing plumbing materials:
  - identify categories of hazardous and non-hazardous waste and indicate specific handling and disposal requirements
  - indicate the requirement for handling and storing hazardous materials
  - indicate the requirement for transporting hazardous materials, such as oxy-acetylene cylinders
  - plan the layout of a facility for the storing and stacking of pipes, fittings, components, non-hazardous liquids and flammable liquids, and materials in a workshop or work site
  - plan the layout of a work vehicle for the carriage of plumbing materials
- carrying out the above work, ensuring:
  - application of sustainability principles and concepts
  - correct identification of handling, storing and disposal procedures
  - correctly addressing WHS and environmental
concerns

- correct selection and use of appropriate processes, tools and equipment
- completion of all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communication and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to
confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be
- handling of materials
according to commonwealth, state and territory legislation and regulations and may include:

- hazard control
- hazardous materials and substances
- hazards, such as:
  - airborne contamination
  - electrical
  - faulty or damaged components or fittings
  - fires
  - gas leaks
  - hazardous waste, such as asbestos
  - unsafe storage of materials
  - unsafe work practices
  - water contamination
  - water egress
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

*Environmental requirements* are to address:

- air pollution precautions
- clean-up protection
- waste management
- water course protection.

*Quality assurance requirements* may include:

- Australian standards
- Environment Protection Authority (EPA)
- environmental policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

*Information* may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- MSDS
- memos
- organisational work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
  - relevant Australian standards
  - safe work procedures relating to handling and storing plumbing materials, including the disposal of waste
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

**Materials** may include:

- gaseous
- liquid
- solid.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Sustainability principles and concepts**:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - efficient use and recycling of materials and resources
  - disposing of waste material.

**Tools and equipment** may include manual handling equipment, such as:

- barriers
- chain blocks
- forklifts
- hand trolleys
- hoists and jacks
- rollers
- signage.

4 Select appropriate power tools.

4.1 Appropriate personal protective equipment is selected, correctly fitted and used.

4.2 *Power tools* are selected consistent with the needs of the job according to conventional work practice.

4.3 Power tools are visually checked for tags, serviceability and safety according to WHS requirements and any faults are reported to supervisor according to enterprise procedures.

4.4 Equipment is selected to secure, position or support materials for power tool application.

5 Use appropriate power tools.

5.1 Material is located and secured in position for power tool application.

5.2 Power tools are safely and effectively used in application processes.

5.3 Power tools are safely located when not in use.

5.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

6 Clean up work area

6.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

6.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

6.3 *Information* is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - report faults and follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Initiative and enterprise skills to:
  - identify and report to appropriate personnel any faults in tools, equipment or materials
  - identify, correctly apply and effectively operate tools

- Literacy skills to:
  - complete workplace documentation
  - read and interpret documentation from a variety of sources

- Planning and organising skills to plan and set out work

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Function and purpose of hand and power tools used in plumbing applications
- Job safety analysis (JSA) and safe work method statements (SWMS)
- Workplace safety requirements and WHS legislation
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- demonstrating compliance with WHS regulations applicable to workplace operations
- adopting and carrying out correct procedures prior to, during and after use of hand and power tools
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- safely operating ten different hand tools and five different power tools for their appropriate application
- carrying out the above work, ensuring:
  - there is no damage to materials, tools or equipment
  - all work is completed to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others
  - application of sustainability principles and concepts.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken
at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control, including of electrical hazards
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** may include:

- air pollution precautions
- clean-up protection
- noise pollution precautions
- water course protection
- waste management.
Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- Environmental policy
- Internal company quality assurance policy and risk management strategy
- International Standards Organisation
- Manufacturer requirements
- Site safety plans
- Workplace operations and procedures.

Appropriate plumbing hand tools may include:

- Caulking guns
- Copper tube cutters
- Copper tube expanders
- Customised tools to meet manufacturer specifications
- Files and rasps
- Hacksaws
- Ladders
- Other specialist tools for water services
- Oxy-acetylene
- Pipe benders
- Pipe dies
- Pipe wrenches
- Pop riveters
- Screwdrivers
- Spirit levels
- Squares
- Tin snips
- Tube benders
- Tube flaring tools
- Wood saws.

Appropriate plumbing power tools may include:

- Compactor (wacker)
- Compressed air tools
- Drop saw
- Electric dies (up to 100mm)
- Electric drills
- Electric nibbler
- Generator
- grinder
- hydraulic tools and equipment
- large rotary drills
- petrol diamond saws
- power saws.

**Sustainability principles and concepts:**
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate tools and equipment
  - efficient use and recycling of tools and equipment
  - disposing of waste material to ensure minimal environmental impact
  - energy efficiency
  - water efficiency.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- relevant Australian standards
- safe work procedures relating to operating hand and power tools, and disposing of waste
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPCM2047A Carry out levelling

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2027A

Unit Descriptor
This unit of competency specifies the outcomes required to plan and use levelling equipment to establish, record and apply those levels to the plumbing and services industry.

Application of the Unit
This unit of competency supports skills to undertake levelling operations for application in the plumbing and services industry.
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Requirements of the job are determined and various levels are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with levelling activities are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

2 Perform levelling.

2.1 Height to be transferred is identified from drawings, plans or instructions.

2.2 Levelling equipment is set up and operated according to manufacturer instructions, workplace procedures and relevant Australian standards.

2.3 Levels are taken, recorded and marked according to job requirements and workplace procedures within the required tolerance and specifications.

2.4 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Clean up.

3.1 Work area is cleared and materials are disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

3.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations.
and workplace procedures.

3.3 *Information* is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - determine requirements, follow instructions and access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- technical skills to operate levelling equipment to read, record, establish and check:
  - levels: horizontal, vertical and at gradient used for the placement of plumbing and services
  - recording levels at specific points along a set out
  - recording and checking levels in drainage and sanitary excavations and plumbing services
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- different types of levelling equipment, their applications and their method of operation
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of establishing, recording and checking levels and alignment
- relevant statutory requirements related to establishing, recording and checking levels
• simple calculations relating to carrying out levelling
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for the establishment, recording and checking of levels
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- using either a pipe laser, rotary laser or automatic level and either boning rods or string line
- grading a pipe (or equivalent) over 10 metres on a grade to a tolerance of + or - 5mm, ensuring:
  - applying sustainability principles and concepts
  - correctly identifying, recording and checking level
  - correctly selecting and using appropriate processes, tools and equipment
  - completing all work to specification
  - complying with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of
the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control, including of electrical hazards
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Quality assurance requirements** may include:

- environmental policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- relevant Australian standards
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:

- hand tools
- measuring equipment
- string line.

**Levelling equipment** may include:

- boning rods
- rotating laser level
• pipe laser level
• spirit level
• water level.

**Sustainability principles and concepts:**
• cover the social, economic and environmental use of resources to meet current and future needs
• may include:
  • efficient use and recycling of tools and equipment
  • disposing of waste material to ensure minimal environmental impact
  • energy efficiency
  • water efficiency.

**Information may include:**
• building codes
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• WHS and environmental requirements
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to plumbing and gasfitting authority regulations
• relevant Australian standards
• safe work procedures relating to handling and storing levelling equipment
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPCM2048A Cut and join sheet metal

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPCM2028A

Unit Descriptor
This unit of competency specifies the outcomes required to cut and join sheet metal associated with the fabrication, installation and repair functions of the plumbing sector.

Application of the Unit
This unit of competency supports metal fabrication work used in plumbing applications. Site location for work application may be either domestic or commercial and may be a new work site or an existing structure or fitting being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans, drawings and specifications are obtained from supervisor for planned work activity.

1.2 Work health and safety (WHS) and environmental requirements associated with cutting and joining sheet metal are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient cutting and joining of sheet metal.

2 Identify joining requirements. 2.1 Selected sheet metal is checked for compliance with plans and specifications.

2.2 Joining materials are selected to comply with plans and specifications.

2.3 Sealants, fixing materials and sheet metal materials are checked for compatibility and are appropriate for the job.
3 Cut and join sheet metal.

3.1 Sheet metal is marked out according to plans and specifications.

3.2 Sheet metal is cut to pattern using appropriate cutting tool.

3.3 Laps are measured and shaped for joining using appropriate tools and equipment according to plans and specifications.

3.4 Surface is prepared and cleaned of grease and other contaminants.

3.5 Sheet metal is joined to comply with plans and specifications, avoiding damage to surrounding surfaces.

3.6 Joins are cleaned and visually inspected ensuring materials are correctly aligned, joined and sealed.

3.7 Sustainability principles and concepts are applied throughout the cutting and joining process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - cut and join sheet metal in the fabrication of plumbing components and select suitable joins and sealants for the application and material
  - identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- appropriateness of different fastening methods for different applications
- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- characteristics of various metal materials and their compatibility with different joining
methods
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- organisational quality procedures and processes within the context of cutting and joining of sheet metal
- SI system of measurement
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, standards and specifications for cutting and joining sheet metal
- apply safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications:
  - cut and join items of sheet metal demonstrating a range of commonly used joining techniques and the use of approved sealants
  - plan the layout, fabricate and assemble a sheet metal product incorporating at least three joining techniques, ensuring:
    - application of sustainability principles and concepts
    - correct identification of requirements and details of proposed joins and assemblies
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and
the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control, including of electrical hazards
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.
Environmental requirements may include:

- clean-up protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- environmental policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- guillotines
- hand and power tools
- measuring equipment
- other special joining tools and machines
- soldering equipment
- tin snips.

Materials may include:

- rivets
- self-drilling and tapping fasteners
- sheet metal, including:
  - colour coated
  - copper
  - galvanised
  - zincalume
  - aluminium
  - lead
  - zinc
  - silicon and other sealants.

Types of joins may include:

- grooved seam
- knock up
- lap
- Pittsburgh lock
- resistance (spot) weld
- riveted and screwed
- solder.
Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate components and material
  - choosing efficient products
  - using material efficiently.

CPCPCM2049A Cut using oxy-LPG-acetylene equipment

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2029A

Unit Descriptor
This unit of competency specifies the outcomes required to use oxy-LPG-acetylene equipment to carry out basic cutting of mild steel in support of plumbing applications and fabrication to meet job specifications.

Application of the Unit
This unit of competency supports skills for specific plumbing oxy-LPG-acetylene cutting activities but does not cover specialist cutting and welding skills.
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Job drawings and specifications are obtained from job supervisor and job requirements are adhered to.

1.2 Work health and safety (WHS) and environmental requirements associated with cutting with oxy-LPG-acetylene are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability.

1.6 Work area is prepared to support efficient cutting with oxy-LPG-acetylene.

2 Identify cutting requirements.

2.1 Cutting requirements are identified from plans and specifications.

2.2 Safety precautions are undertaken prior to cutting in compliance with the job specification and standards.

3 Perform cuts and inspect.

3.1 Oxy-LPG-acetylene cutting equipment is set up according to manufacturer guidelines.

3.2 Tip size is selected as appropriate for the materials to be cut.
3.3 Cutting pressures are adjusted to manufacturer recommendations for the materials to be cut.

3.4 Materials are prepared for cutting according to plans and specification and sustainability principles and concepts.

3.5 Materials are marked out and clamped prior to cutting.

3.6 Flame is set and cuts are performed according to the specified cutting procedures to effect a clean cut.

3.7 Completed cuts are visually inspected for compliance with job specifications, and defects are repaired using appropriate techniques.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to:
  - identify and report to appropriate personnel any faults in tools, equipment or materials
  - mark out and accurately cut mild steel up to 8mm thick and mild steel pipe up to 100mm diameter without manual force

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- dangers of high pressure settings with oxy-LPG-acetylene equipment
- job safety analysis (JSA) and safe work method statements (SWMS)
- operating principles of oxy-LPG-acetylene equipment
- organisational quality procedures and processes within the context of oxy cutting
- potential fumes and health and safety risks from high temperatures on materials
- properties of materials and the effect of heat on the properties of metal
- relevant WHS regulations and PPE requirements
- SI system of measurement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to cutting with oxy-LPG-acetylene
- applying safety requirements throughout the work sequence, including the use of PPE
- given the plans and specifications, marking out and cutting the following items of plumbing material:
  - using hand-held oxy-LPG-acetylene cutting equipment, cut 150mm x 150mm sheet of mild steel sheet (up to 8mm thick) into three equal pieces
  - using hand-held oxy-LPG-acetylene cutting equipment cut up to 8mm mild steel disc to fit a DN40 to DN100 diameter mild steel pipe
  - using hand-held oxy-LPG-acetylene cutting equipment, cut three holes to suit up to DN50 branch pipes into a length of up to DN100 diameter mild steel pipe
- marking out and cutting should ensure:
  - application of sustainability principles and concepts
  - a clean cut and fit of the materials
  - correct identification of requirements and details of proposed cuts
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
• pressurised and inflammable gases
• surrounding structure and facilities
• trip hazards
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• use of tools and equipment
• workplace environmental requirements and safety.

**Environmental requirements** cover:
• clean-up protection
• waste management.

**Quality assurance requirements** may include:
• Australian standards
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:
• grinders and clamps
• hand and power tools
• measuring equipment
• oxy cutting equipment.

**Materials** may include:
• LPG
• acetylene gases
• oxygen
• mild steel pipe (up to DN100)
• mild steel sheet (up to 8mm thick).

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
• efficient use and selection of materials
• recycling materials.

CPCPCM2050A Mark out materials

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2030A

Unit Descriptor
This unit of competency specifies the outcomes required to mark out plumbing materials prior to fabricating piping, steel sections, ducting and sheet materials, roofing and cladding.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained from job supervisor and job requirements are determined.
   1.2 Work health and safety (WHS) and environmental requirements associated with marking out of materials are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 Tools and equipment, including personal protective equipment (PPE), are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient marking out of materials.

2 Determine job requirements.
   2.1 Selected materials are checked for compliance with plans and specifications.
   2.2 Quantity and type of material required are calculated from plans and specifications.
   2.3 Job requirements and development methods are determined from plans and specifications.
3  Mark out job.

3.1  Dimensions for fabrication and assembly are determined and transferred.

3.2  Relevant standards, codes and symbols are interpreted.

3.3  Selected development method is applied as appropriate and according to workplace procedures and sustainability principles and concepts.

3.4  Calculations are performed to specified job requirements.

3.5  Material is marked out in compliance with specified measurements.

3.6  Dimensions are checked for accuracy and compliance with plans and specifications.

4  Clean up.

4.1  Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.2  Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3  Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to:
  - identify and report to appropriate personnel any faults in tools, equipment or materials
  - mark out plumbing materials according to plans and specifications for the fabrication of plumbing components and applications

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- identification and correct use of measuring and marking out equipment
- impact of accurate marking out on fabrication process, work time and finished work quality
- job safety analysis (JSA) and safe work method statements (SWMS)
- operation requirements of equipment used for measuring and calculating
- processes of marking out plumbing materials
- relevant WHS regulations and PPE requirements
- SI system of measurement
- sources of information on characteristics and applications of materials being marked out
- workplace operating procedures, including required standards for marking out

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- giving instructions
- locating, interpreting and applying relevant information, standards and specifications to marking out materials
- applying safety requirements throughout the work sequence, including the use of PPE
- given the plans and specifications and using any of the three development methods, marking out and measuring the following items of plumbing material:
  - roofing sheets
  - copper tubing
  - polymer pipe
  - steel pressure pipe
  - and one of the following:
    - a square and a round penetration in a roofing sheet
• sheet metal square to round ducting transition
• develop a sheet metal cone
• develop a piece of duct work using parallel line method
• all the above carried out, ensuring:
  • application of sustainability principles and concepts
  • correct identification of requirements and details of proposed markings
  • correct selection and use of appropriate processes, tools and equipment
  • completing all work to specification
  • compliance with regulations, standards and organisational quality procedures and processes
  • communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of
appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:
- handling of materials
- hazard control
- hazardous materials and substances
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - dangerous materials
  - surrounding structure and facilities
  - trip hazards
  - work site visitors and the public
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** cover:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- adjustable bevels
- dividers
- protractors
- rulers
- scribes
- squares
- tape measures.

**Development methods** may be:
- parallel line development
- radial line development
- triangulation.

**Sustainability principles and concepts:**
- cover the social, economic and environmental use of resources to meet current and future needs
  - may include:
    - selecting appropriate material to ensure minimal environmental impact
    - efficient use and selection of materials.

**Materials** may include:
- cladding and timber
- insulating materials for roofing, piping and ducting
- piping (metal and non-metallic)
- roof sheeting (metal, fibreglass and plastic)
- sheet metal
- steel sections.

CPCPCM2052A Weld using oxy-acetylene equipment

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPCM2032A

Unit Descriptor
This unit of competency specifies the outcomes required to weld/braze metals associated with the fabrication, installation and repair of plumbing components and systems, using oxy-acetylene equipment.

Application of the Unit
This unit of competency supports the development of oxy-acetylene welding skills used in plumbing work but not specialist welding skills used in other occupations. Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  
   1.1 Plans and specifications are obtained from job supervisor.  
   1.2 Work health and safety (WHS) and environmental requirements associated with oxy-acetylene welding tasks are adhered to throughout the work.  
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.  
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.  
   1.5 Personal protective equipment applicable to oxy-acetylene welding is selected and checked for serviceability.  
   1.6 Work area is prepared to support efficient welding with oxy-acetylene equipment.  
   1.7 Sustainability principles and concepts are observed when preparing for and undertaking work process.

2 Prepare materials and welding equipment.  
   2.1 Weld requirements are identified from plans and specifications or given information.  
   2.2 Materials to be welded are identified and selected according to workplace procedures.  
   2.3 Material is cleaned and prepared using appropriate tools and techniques according to workplace procedures.  
   2.4 Welding equipment, including cylinders and regulators, are assembled and set up according to workplace
procedures.

2.5 Welding tips, settings and consumables are selected to meet job requirements and welding procedures according to workplace procedures.

3 Perform welding.

3.1 Materials are welded to job requirements using safe welding practices.

3.2 Appropriate action is taken to report or remedy defects in materials or welding equipment, including adjustments to settings and welding technique.

3.3 Welds are cleaned according to workplace requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.2 *Tools and equipment* are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to weld mild steel plate, non-ferrous materials and pipe by oxy-acetylene welding
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- dangers associated with oxy-acetylene welding in the fabrication and installation of plumbing systems
- effect of heat on the properties and shape of welded metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- operating principles of oxy-acetylene welding equipment
- organisational quality procedures and processes within the context of oxy-acetylene welding
- SI system of measurement
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for oxy-acetylene welding
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications, welding two of the following:
  - a flat butt weld up to 6mm mild steel plate, 150mm long
  - a vertical butt weld up to 6mm mild steel plate, 150mm long
  - a rotated butt weld around up to DN100 mild steel pipe located in a horizontal position and rotated during welding
  - silver braze fabricated non-ferrous pipes, fittings and components
- welding should ensure:
  - application of sustainability principles and concepts
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a
period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control and hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - pressurised and inflammable gases
  - surrounding structure and facilities
- trip hazards
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Sustainability principles and concepts**: cover the social, economic and environmental use of resources to meet current and future needs may include:
- selecting appropriate material to ensure minimal environmental impact
- efficient use of materials
- recycling material.

**Materials** may include:
- copper (Cu)
- copper alloy
- low carbon mild steel (plate and pipe)
- oxy-LPG-acetylene.

**Tools and equipment** may include:
- clamps
- hand and power tools
- jigs
- measuring equipment
- oxy-acetylene welding equipment.
Unit Sector(s)

Unit sector: Plumbing and services

Custom Content Section

Not applicable.
CPCPCM2053A Weld using manual metal arc welding equipment

Modification History
Prerequisite unit updated
Changes to unit title, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2033A

Unit Descriptor
This unit of competency specifies the outcomes required to weld metals associated with the fabrication and installation of plumbing components, using manual metal arc welding equipment.

Application of the Unit
This unit of competency supports development of arc welding skills used in plumbing work, but not specialist welding skills used in other occupations. It has particular application to mechanical services but may be applied in all plumbing streams.
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications are obtained from job supervisor.

1.2 Work health and safety (WHS) and environmental requirements associated with manual metal arc welding tasks are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient performance of arc welding.

1.7 Sustainability principles and concepts are observed when preparing for and undertaking work process.

2 Identify welding requirements. 2.1 Welding requirements are identified from plans and specifications or given information.

2.2 Materials to be welded are identified and selected according to workplace procedures.

2.3 Location of welds is identified according to workplace procedures and job specifications.
3 Prepare materials and equipment for welding.
   3.1 *Materials* are cleaned and prepared for welding.
   3.2 Tools and techniques appropriate to the preparation of materials to be welded are identified.
   3.3 Welding equipment is set up and correct electrodes are selected according to workplace procedures and job specifications.

4 Weld items.
   4.1 Materials are welded according to plans and specifications and job requirements using safe welding practices.
   4.2 Appropriate action is taken to report faults or remedy defects in materials or welding equipment, including adjustments to settings, electrodes and welding technique.

5 Clean up
   5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.
   5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
   5.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to weld mild steel plates by manual metal arc welding
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- dangers associated with manual metal arc welding plumbing components
- effect of heat on the properties and shape of welded metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- operating principles of manual metal arc welding equipment
- organisational quality procedures and processes within the context of manual metal arc welding
• SI system of measurement
• workplace and equipment safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for manual metal arc welding
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications and using manual metal arc welding equipment:
  - weld butt joint in mild steel plate up to 8mm, 150mm long
  - fillet weld mild steel plate up to 8mm, 150mm long
  - pad weld mild steel plate up to 8mm, 150mm long
- welding should ensure:
  - application of sustainability principles and concepts
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.
Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control and hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with the use of welding systems, including:
  - dangerous materials
  - electricity
  - hot metals
  - surrounding structure and facilities
  - trip hazards
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements may include:

- clean-up protection
- waste management.
Quality assurance requirements may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:
- hand and power tools
- manual metal arc welding equipment
- measuring equipment.

Sustainability principles and concepts:
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use and selection of materials
  - recycling of material.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - plumbing regulations
  - building codes
  - WHS and environmental requirements
- relevant Australian standards
- safe work procedures relating to manual metal arc welding
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
Materials may include:
- electrodes.
- mild steel plates.

CPCPCM2054A Carry out simple concreting and rendering

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPCM2034A

Unit Descriptor
This unit of competency specifies the outcomes required to perform minor repairs and undertake minor concreting and rendering tasks.

Application of the Unit
This unit of competency supports development of basic concreting skills needed for plumbing applications.
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  

1.1 Job requirements are determined and various levels are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with levelling activities are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.5 Sustainability principles and concepts are applied.

2 Place concrete.  

2.1 Concrete mixture is prepared to meet job and manufacturer requirements.

2.2 Formwork or excavation area is cleaned of excess material and debris prior to concrete placement.

2.3 Concrete is safely transported by an approved method.

2.4 Concrete is placed in formwork or placement site to specified depth ensuring all cavities are filled.

2.5 Concrete is screeded to the alignment of formwork and project specified datums.

2.6 Surface of concrete is finished according to specifications.
3 Place rendering.  

3.1 Render mixture is prepared to meet manufacturer requirements.

3.2 Render is safely transported by an approved method.

3.3 Render is applied in the required location.

3.4 Surface of render is finished according to specifications.

4 Clean up.  

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- **communication skills to:**
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report hazards
  - use and interpret non-verbal communication, such as hand signals
  - use language and concepts appropriate to cultural differences

- **initiative and enterprise skills to:**
  - contribute to workplace responsibilities, such as current work site environmental or sustainability frameworks, or management systems
  - evaluate own actions and make judgements about performance and necessary improvements
  - identify and report to appropriate personnel any faults in tools, equipment or materials

- **literacy skills to complete workplace documentation**

- **planning and organising skills to plan and set out work**

- **self-management skills to:**
  - recognise procedures
  - respond to change

- **teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities**

- **technology skills to:**
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- basic levelling techniques
- categories of materials and their safe handling, storage and transport requirements
- concrete and plastering materials
- concreting and plastering techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- material safety data sheets (MSDS)
- WHS and environmental legislation and requirements
- plans, drawings and specifications
• processes for the calculation of material requirements
• simple formwork and reinforcing componentry
• types of waste and their disposal, including an awareness only of the requirements for asbestos handling and disposal
• workplace safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications as required to carry out concreting and rendering to a simple form
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications, carrying out one of the following:
  - bench an access chamber
  - install thrust blocks
  - pipe penetration through a floor or wall
  - place concrete as required within AS/NZS3500 National plumbing and drainage: Part 1.2 Water supply – Acceptable solutions
  - pour a concrete slab up to 600mm square
  - repair concrete up to 600mm square
  - repair pipe chases in a brick wall
- all activities carried out should ensure:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed tasks
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to plans and specification
  - compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- electrical safety
- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- National Construction Code (NCC)
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- brooms
- bull floats
- edging tools
- hand floats (steel and wood)
- levels
- shovels
- stipple devices
- trowels
- wheel barrows.

**Sustainability principles and concepts:**
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - appropriate material selection to ensure minimal environmental impact
  - efficient use of materials
  - recycling of material
  - minimal water wastage.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to handling and storing plumbing materials, including the disposal of waste
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPCM2055A Work safely on roofs

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM2035A

Unit Descriptor
This unit of competency specifies the outcomes required to perform safe work practices when undertaking plumbing work on roofing structures.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify work safety requirements.
   1.1 Scope of task and proposed work practices and activities are identified and documented according to workplace procedures, statutory and regulatory authorities’ requirements and relevant information.
   1.2 Work health and safety (WHS) and environmental requirements associated with working safely on roofs are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Site is inspected to determine layout and physical condition, condition of structure, prevailing weather conditions, equipment requirements and potential hazards.
   1.5 Safety equipment is identified, selected and checked for serviceability according to workplace requirements.
   1.6 Certification of suitability of structure to support the safety system is obtained.

2 Prepare for work.
   2.1 Work procedures and instructions for the task are identified.
   2.2 Materials, tools and equipment, including personal protective equipment, are selected and checked for serviceability.
   2.3 Fall protection and perimeter protection equipment is inspected and installed, ensuring adequacy for work and conformance to regulatory requirements.
2.4 **Roof safety system** is installed according to workplace and regulatory requirements.

2.5 Appropriate signage and barricades are selected and installed.

3 Perform work on roof.

3.1 Access from ground to work area is checked to ensure it is safe and according to regulatory requirements.

3.2 Fall protection and personal safety requirements are applied according to regulatory requirements.

3.3 Manual handling of materials and equipment is undertaken according to regulatory requirements.

3.4 Roof materials and equipment are located on roof, ensuring that they are safely secured and distributed to eliminate risk of distorting or collapsing the building framework.

3.5 Safety system is checked periodically for compliance with regulations according to workplace procedures, and **faults are reported**.

3.6 Risk control measures are monitored to ensure that they are effective and appropriate to the task and work environment.

3.7 Risk control measures are reassessed, as required, according to changed work practices and/or site conditions, and alterations are undertaken within scope of authority.

3.8 **Sustainability principles and concepts** are applied throughout the work process.

4 Clean up.

4.1 Safety system is dismantled according to sequence and removed from work site.

4.2 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.3 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
4.4 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - conduct a safety assessment of a roof work site
  - identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete written workplace documentation
  - document scope of work and work practices
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- technical skills to provide necessary safety measures, including the installation of a roof safety system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- job safety analysis (JSA) and safe work method statements (SWMS)
- nature of work undertaken on roofs
- processes of providing for safe work practices
- relevant statutory and regulatory authorities’ requirements related to working safely on roofs
- risks associated with photovoltaic (solar) panels and systems
- roof safety equipment and systems and considerations to facilitate working safely on roofs
- SI system of measurement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for working safely on roofs
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for the roof working area of a corner, extending at least 4 metres in either direction and greater than 1.8m high, provide for erection, maintenance and dismantling of the fall and perimeter protection requirements for the site, incorporating handrails and footwalk or harnesses and harness fixing points for safe personal and stores access to the roof, stores and equipment locations; and risk assessment, ensuring:
  - application of sustainability principles and concepts
  - correct identification of risks and safety requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
- Validity and sufficiency of evidence requires that:
  - competency will need to be demonstrated over a
period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Guidance information for assessment

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Statutory and regulatory authorities

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- material safety data sheets (MSDS)
- memos
organisation work specifications and requirements
plans and sketches
regulatory and legislative requirements, particularly those pertaining to:
building codes
WHS and environmental requirements
plumbing regulations
relevant Australian standards
safe work procedures relating to working on roofs
signage
verbal, written and graphical instructions
work bulletins
work schedules, plans and specifications.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control, including of electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - photovoltaic (solar) panels
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

Environmental requirements may include:

- clean-up protection
- ozone protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk
management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** include:
- fall protection
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
- perimeter protection
- signage and barricades.

**Roof safety systems** include:
- footwalks
- handrails
- harness fixing points
- kickboards
- safety harness
- scaffolds.

**Fault reporting** include:
- may be written or verbal
- is to be according to company's workplace procedures.

**Sustainability principles and concepts:**
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate components and material
  - choosing efficient products
  - using material efficiently.

CPCPCM3021A Flash penetrations through roofs and walls

Modification History
Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM3011A

Unit Descriptor
This unit of competency specifies the outcomes required to set out, cut and flash a roof and wall penetration.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Prepare for work.  
1.1 Plans and specifications are obtained from job supervisor and site inspection.
1.2 Work health and safety (WHS) and environmental requirements associated with the flashing of penetrations through roofs and walls are adhered to throughout the work.
1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.
1.6 Work area is prepared to support efficient flashing of penetrations through roofs and walls.
1.7 Sustainability principles and concepts are applied throughout the installation process.

2  Identify flashing requirements.  
2.1 Roof and wall penetrations are identified from plans and specifications.
2.2 Penetrations are assessed to allow for the location of existing and future services.
2.3 Material requirements are calculated from the job specification, in compliance with standards.
2.4 Materials are identified, ordered and collected according to workplace procedures.
2.5 Materials and equipment are checked for compliance with docket and order form, and for acceptable condition.

3 Flash penetrations. 3.1 Fabrication is undertaken according to plans and specifications.

3.2 Penetration is positioned and cut in compliance with plans, specifications and site measurements.

3.3 Structural supports are installed according to plans, specifications and the building code.

3.4 Opening is prepared in compliance with plans and specifications, manufacturer recommendations and regulations.

3.5 Proprietary or purpose-made flashing is fitted according to standards, plans, specifications and regulations.

3.6 Where required, sealant is applied in compliance with specifications and manufacturer recommendations.

3.7 Penetration is performance tested to ensure correct fit of completed installation, and remedied as required.

4 Clean up. 4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge
This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources
  - record material quantities
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- characteristics of various roofing and wall cladding materials and their compatibility with different joining methods
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of flashing roof and wall penetrations
- relevant WHS regulations and fall protection codes and requirements
- relevant statutory requirements related to the flashing of roof and wall penetrations
- SI system of measurement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the flashing of penetrations through roofs and walls
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications, set out, cut and flash penetrations through openings within a range of up to 300mm diameter and up to 300mm square, one through a roof and one through a wall, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of the proposed penetration
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further
learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - dangerous materials
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of drilling and cutting tools
  - work site visitors and the public
  - working at heights
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- National Construction Code
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- fall protection equipment
- hand and power tools
- ladders
- measuring equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists
  - jacks
  - restricted height scaffolds
  - rollers.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - appropriate material selection to ensure minimal environmental impact
  - rainwater harvesting
- choice of efficient products
- efficient use of material
- recycling of material.

**Materials** used for flashing roof penetrations may include approved materials, such as:

- fibreglass
- laminate
- metal roof covers of concealed or pierce fixed types
- plastic building sheets for walls and roofs
- polyethylene
- rainwater goods
- thermal insulation of reflective foil
- fixings, which may include:
  - metal self drilling and tapping screws
  - rivets
  - sealants (approved silicone and solder)
  - or other approved materials.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to the flashing of roof penetrations
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPCM3022A Weld polyethylene and polypropylene pipes using fusion method

Modification History
Prerequisite unit updated
Changes to unit title, descriptor, application, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM3012A

Unit Descriptor
This unit of competency specifies the outcomes required to fusion weld polyethylene (PE) and polypropylene (PP) (approved as per Australian standards) polymer pipes, and test joints in polymer pipe up to DN100 for water, sanitary and stormwater application only.

Application of the Unit
This unit of competency supports development of skills for polymer pipe welding using a variety of fusion techniques.
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources
  - record material quantities
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - prepare surfaces in line with the material selected and the chosen weld technique
  - fusion welding, visual inspection and testing joints in approved polymer pipes up to DN100
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- dangers associated with fusion welding of polymer pipe
- effect of heat on the properties of polymer pipe
- job safety analysis (JSA) and safe work method statements (SWMS)
- operating principles of fusion welding equipment
- organisational quality procedures and processes within the context of fusion welding of polymer pipe
- relevant WHS regulations and PPE requirements
- SI system of measurement
- surface preparation in the welding process
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to perform fusion welding of approved polymer pipes
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, butt fusion welding two joints and electro-fusion weld one socket joint up to DN100 on approved polymer pipes, using appropriate fusion welding processes and a visual inspection to manufacturer recommendations or other approved methods, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed cuts
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dangerous materials
  - electricity
  - surrounding structure and facilities
  - trip hazards
  - use of polymer pipe welding equipment
• work site visitors and the public
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• use of tools and equipment
• workplace environment and safety.

**Environmental requirements** cover:
• air pollution precautions
• clean-up protection
• waste management.

**Quality assurance requirements** may include:
• Environment Protection Authority (EPA)
• environmental policy
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice
• industry guidelines
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• statutory requirements
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:
• approved polymer welding equipment
• approved surface preparation equipment and material
• hand and power tools
• measuring equipment.

**Materials** may include:
• polyethylene
• polypropylene
• polybutylene.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • appropriate material selection to ensure minimal
environmental impact
- efficient use and recycling of material
- efficient energy usage
- disposing of waste material to ensure minimal environmental impact.

**Welding requirements** may include:
- identifying pipe diameters
- identifying welding machine type and operating data
- materials and pipes supplied being compatible for welding from specifications
- preparation according to pipe manufacturer specifications
- welding temperature, welding time and cooling time according to manufacturer specifications.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to the fusion welding of approved polymer pipes
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPCM3023A Fabricate and install non-ferrous pressure piping

Modification History
Prerequisite unit updated
Changes to application, performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPCM3013A

Unit Descriptor
This unit of competency specifies the outcomes required to determine installation requirements and to fabricate, install and test non-ferrous pressure pipe.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications and any special instructions are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with the fabrication and installation of non-ferrous pressure piping are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient fabrication and installation of non-ferrous pressure piping.

2 Identify installation requirements. 2.1 Pipework configuration is identified from plans, specifications and authorities’ requirements.

2.2 Position of pipes and equipment is determined from plans and specifications, site requirements and so as not to cause damage or interference to surrounding structures or fittings.

2.3 Measurements for fabrication or assembly are determined and transferred.

2.4 Quantity and type of *materials* required are calculated from plans and specifications according to regulatory authorities and workplace requirements.
2.5 Materials are identified, ordered and collected according to workplace procedures.

2.6 Materials are checked for compliance with docket and order form, and for acceptable condition.

3 Fabricate, install and test pipe system.
   
   3.1 System is set out in compliance with design drawings or instructions.

   3.2 Fixings and supports are installed to manufacturer requirements, job plans, specifications and standards.

   3.3 Pipe system is fabricated and jointed according to plans, standards and manufacturer requirements.

   3.4 Pipe system is installed in specified location without damage or distortion to pipework or surrounding environment or other services.

   3.5 Pipe system is tested and documented to comply with job specification, authorities' requirements, standards, codes and installation requirements.

   3.6 *Sustainability principles and concepts* are applied throughout the installation process.

4 Clean up.
   
   4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

   4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

   4.3 *Information* is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources
  - record material quantities
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to join non-ferrous pipe materials by mechanical and manual means, prefabricate components, and fix and test the system for soundness
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- fabrication, installation and testing process for non-ferrous pressure pipe systems
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes for accessing information and for calculating material requirements
- properties and characteristics of conveyed materials, including pressure, flow rates and
temperature implications
- relevant statutory authorities’ requirements and standards related to fabricating, installing and testing non-ferrous pressure pipe systems
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for the determination of requirements, fabrication, installation and testing of non-ferrous pressure pipe systems
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications, fabricating, installing and testing a DN20 copper line from a supply point to outlets with two changes in direction, using both silver brazing and mechanical joints supported and clipped according to relevant standards and with a branch to be fabricated for testing purposes, as well as branches connecting at least two other non-ferrous materials, ensuring:
  - application of sustainability principles and concepts
  - diameters are correct and system is manufactured to required dimensions and branches, bends and flanges are square
  - correct identification of design and details of proposed non-ferrous pressure pipe system
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - use of fabrication tools and equipment
- dangerous materials
- service lines
- surrounding structure and facilities
- traffic control
- trip hazards
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- National Construction Code
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- elevated work platforms
- hand and power tools
- heating equipment
- ladders
- mechanical bending equipment
- silver brazing equipment
- testing equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolding.
Materials may include:
- aluminium tubes
- copper
- copper alloy
- polymer pipes
- stainless steel
- other approved materials.

Sustainability principles and concepts:
- cover the social, economic and environmental use of resources to meet current and future needs
  - may include:
    - appropriate material selection to ensure minimal environmental impact
    - minimising water wastage
    - efficient use of material
    - material selection
    - recycling material.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to determining, fabricating, installing and testing non-ferrous pressure pipe systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
