Not equivalent to CPCPCM4001A

Unit Descriptor
This unit of competency specifies the outcomes required to carry out work-based risk control processes. It covers the identification of hazards, the assessment of risk, the identification of unacceptable risk and the determination, preparation and completion of a course of action.

Application of the Unit
This unit is to be applied by employees with responsibility for the safety of others, including work activity coordinators, plant operators or equivalent who coordinate workplace activities, team leaders, supervisors and managers.
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure or fitting being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify hazards.
   1.1 Site conditions and functions are analysed to identify and recognise potential hazards.
   1.2 Relevant safety systems information is accessed and analysed to eliminate situations covered by existing and adequate procedures.
   1.3 Type and scope of unresolved hazards and their likely impact are identified.

2 Assess risk.
   2.1 Likelihood of the event happening is considered and determined.
   2.2 Consequence if the event should occur is evaluated and determined.
   2.3 Risk level (likelihood and consequence combined) is considered and determined.

3 Identify unacceptable risk.
   3.1 Criteria for determining the acceptability and unacceptability of the risk are identified or sought from appropriate authority.
   3.2 Risk is evaluated against criteria to identify if it warrants unacceptable risk status, and is either actioned or referred to the appropriate person.

4 Identify and decide on course of action.
   4.1 Range of actions and controls which may eliminate or minimise the risk are identified.
   4.2 All possible options for resolution of the problem and
dealing with the risk are identified and considered.

4.3 Feasible options are subject to detailed analysis, including the identification of resource requirements.

4.4 Most appropriate action for dealing with the situation is selected.

5 Take action.

5.1 Course of action is planned and prepared in detail.

5.2 Resources required for course of action are acquired or obtained.

5.3 Safety information and procedures are accessed and applied throughout the operation.

5.4 Course of action is implemented, observing sustainability principles and concepts.

6 Complete records and reports.

6.1 Information on course of action and implementation of safe operating procedures is communicated to relevant people.

6.2 All hazards and actions from personal risk assessment are recorded as specified by statutory and regulatory authorities’ legislative and workplace requirements.

7 Review effectiveness of risk control measures.

7.1 Risk control measures are periodically reviewed.

7.2 Review findings are used as the basis for adjustment of control measures.

7.3 Information is accessed and documentation and risk management processes are adjusted as required.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access and analyse safety systems information
  - communicate with others
  - complete records and reports and other relevant workplace documentation
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use and interpret non-verbal communication, such as hand signals
  - use language and concepts appropriate to cultural differences
- initiative and enterprise skills to:
  - accurately refer critical unacceptable risk situations to others
  - identify and report to appropriate personnel any faults in tools, equipment or materials
- technical skills to:
  - identify courses of action, initiate action and complete records and reports
  - apply the three steps of identifying work-based hazards, assessing the risk and determining unacceptable risk situations

Required knowledge

- industry terminology
- job safety analysis (JSA) and safe work method statement (SWMS)
- materials safety data sheets (MSDS)
- materials handling methods
- personal risk assessment and control processes (hazard identification through to action)
- personal safety measures
- processes for interpreting plans, specifications, drawings and sketches
- quality assurance systems and standards
- regulatory requirements related to obligations and risk management
- reporting and recording procedures
- risk management theory, including the hierarchy of controls on treatments
- work access and traffic control responsibilities
- workplace and equipment safety requirements
- workplace communication methods
- workplace rules, policies, procedures and regulations
Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:
- locating, interpreting and applying relevant information, standards and specifications
- complying with WHS regulations and commonwealth, state and territory legislation applicable to workplace operations
- complying with organisational policies and procedures, including quality assurance requirements
- individually or as a member of a team, participating in two different circumstances requiring:
  - conduct of a plumbing and services work-based risk assessment to identify the acceptability and unacceptability of risk
  - development and implementation of a work-based risk control activity and action
- in each case ensuring:
  - recording and reporting of the risk control process and outcomes
  - sustainability principles and concepts are applied throughout the work-based risk control processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory, Australian standards or International Standards.
Organisation’s requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the
assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Safety systems information* may include:

- information that may be contained in:
  - codes of practice
  - international standards
  - legislation and regulations
  - manufacturer instructions
  - management plans
  - manager’s rules
  - work health and safety (WHS) policy
  - safe working or job procedures (or equivalent)
- workplace policy, objectives, rules, procedures and assessment techniques that will vary between work locations
- risk assessment terminology, including:
  - being a loss, injury, disadvantage or gain
  - consequence is the outcome of an event or situation expressed qualitatively or quantitatively.
Hazards:  
- are a source of potential harm or a situation with a potential to cause loss  
- controls for hazards should be considered using option types in sequence, from eliminating the hazard, substitution, engineering controls, administrative controls (procedures, etc.) and finally personal protective equipment.

Likelihood:  
- is used as a qualitative description of probability and frequency  
- probability is:  
  - expressed as a number between 0 and 1, with 0 indicating an impossible outcome and 1 indicating an outcome is certain  
  - likelihood of a specific outcome, measured by the ratio of specific outcomes to the total number of possible outcomes.

Risk:  
- criteria for acceptable risk must be determined by the organisation's internal policy, goals and objectives  
- in the absence of other authorities, risk management processes must conform with the relevant and current Australian standard  
- is measured in terms of consequences and likelihood  
- is the chance of something happening that will have an impact upon objectives  
- risk assessment is the process used to determine risk management priorities by evaluating and comparing the level of risk against predetermined standards, target risk levels or other criteria  
- risk identification is the process of determining what can happen, why and how.

Sustainability principles and concepts:  
- cover the social, economic and environmental use of resources to meet current and future needs  
- may include:  
  - use of materials and resources to meet the current needs of society while preserving the environment for the future  
  - disposing of waste material to ensure minimal environmental impact
• energy efficiency
• water efficiency
• environmental, social and economic considerations.

**Information** may include:

• charts and hand drawings
• codes of practice
• International Standards Organisation
• instructions issued by authorised organisational or external personnel
• plans and sketches
• JSA and SWMS
• manufacturer specifications and instructions
• maps
• MSDS
• memos
• organisation work specifications and requirements
• records and reports for risk assessment, such as:
  • accident reports
  • hazard reporting forms
  • incident reports
  • near miss reports
  • shift reports
  • supervisor reports
• regulatory and legislative requirements pertaining to work and the environment
• relevant Australian standards
• safe work procedures relating to work in the plumbing and services sector
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Safe operating procedures** may include:

• emergency procedures, such as:
  • evacuation
  • fire fighting
  • medical and first aid
• recognising and preventing hazards associated with:
  • electricity
  • fire
- gas
- other machines
- other services
- overhead services
- personnel
- restricted access barriers
- traffic control
- water
- work site visitors and the public
- working at heights
- working in proximity to others
- safe work access, including ensuring that:
  - access ways are clear
  - equipment and machinery are away from overhangs and refuelling sites
  - safe distances are maintained from excavations
  - safety systems are installed on roofs
  - work areas are secured from unauthorised access or movement.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

CPCPCM4012A Estimate and cost work

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM4002A

Unit Descriptor
This unit of competency specifies the outcomes required to estimate materials, labour and time requirements and to establish costs for provision of services or products. The unit covers the gaining of information, the estimation of materials, labour and time, the calculation of costs and the associated documentation.

Application of the Unit
This unit of competency supports the development of estimating and costing skills relevant to minor plumbing jobs.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Gather information.
   1.1 Details of customer requirements are obtained through discussion with customer or from information supplied.
   1.2 Plans and specifications are accessed and site is inspected.
   1.3 Details of products and services to be provided are sourced.
   1.4 Delivery point and methods of transportation are determined where necessary.
   1.5 Details are recorded according to workplace procedures.

2 Estimate materials, labour and time.
   2.1 Work, including preparatory tasks, is planned and sequenced.
   2.2 Types and quantities of materials required for product work are estimated.
   2.3 Labour requirements to perform work are estimated.
   2.4 Time requirements to perform work are estimated.
   2.5 Sustainability principles and concepts are observed when preparing for and undertaking work process.
3 Calculate costs.

3.1 Total materials, labour and overhead costs are calculated according to workplace procedures using appropriate equipment.

3.2 Total work cost is calculated, including overheads and mark-up percentages.

3.3 Final cost for work is calculated.

4 Document and verify details.

4.1 Details of costs and charges are documented according to workplace procedures.

4.2 Costs, calculations and other details are verified according to workplace procedures.

4.3 Customer quotation and tender are prepared.

4.4 Details are documented for future reference according to workplace procedures and using relevant information.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - identify customer requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- literacy skills to:
  - complete workplace documentation
  - prepare quotes and tenders
  - record details, including costs and charges
- numeracy skills to:
  - estimate materials and labour required for provision of services or products
  - determine costs for the provision of a quotation or tender in the plumbing and services industry
  - apply calculations

Required knowledge

- estimating and calculating processes
- impact of time on wages and other costs
- job safety analysis (JSA) and safe work method statements (SWMS)
- process for estimating and costing work
- processes for accessing information and for calculating material requirements
- relevant statutory requirements related to estimating and costing work
- SI system of measurements
- relevant Australian standards applicable to the work to be undertaken
- tendering and contracting processes
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the estimation and costing of work
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- estimating and costing three varied jobs in at least Class 1 buildings, including:
  - applying sustainability principles and concepts
  - estimating quantities of material required
  - determining types and amount of labour required to complete the work
  - estimating time required to complete the work
  - estimating overheads associated with the job
  - providing a written quotation and tender for each of the work requirements
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.
Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the
assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Factors for *estimating* and costing must include:

- labour
- materials
- overheads.

**Sustainability principles and concepts:**

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - use of materials and resources to meet the current needs of society while preserving the environment for the future
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact
  - energy efficiency
  - water efficiency.

**Equipment** may include:

- calculators
• computers running appropriate software to estimate and calculate necessary details
• measuring equipment appropriate to work
• stationery.

*Information* may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• regulatory and legislative requirements, particularly those pertaining to:
  • codes of practice
  • contracts
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to estimating and costing work
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPCM4013A Produce 2-D architectural drawings using CAD software

Modification History
Changes to application, element, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM4003A

Unit Descriptor
This unit of competency specifies the outcomes required to produce two-dimensional (2-D) architectural drawings using computer-aided design (CAD) software under limited supervision.

Application of the Unit
This unit of competency supports the needs of project managers, site managers, estimators, forepersons and other plumbing and services and building and construction industry personnel responsible for preparing architectural drawings from project briefs, sketches, drawings and plans for residential and commercial construction projects. The drawings produced and notations included should conform to Australian standards and drawing protocols.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Create a drawing template file.
   1.1 Basic drawing environment is set up.
   1.2 Suitable layering strategy is created.
   1.3 Suitable architectural library is created.
   1.4 Suitable text and dimension styles are created.

2 Produce architectural drawings to relevant Australian standards.
   2.1 **Drawing requirements** are clarified and confirmed.
   2.2 Drawings are produced using appropriate layers.
   2.3 Notation that complies with Australian standards and **drawing protocols** is added to the drawings as required.
   2.4 Dimensions, using appropriate scales according to Australian standards and drawing protocols, are added to the drawings as required.

3 Edit drawing components.
   3.1 Elements that are not required are deleted from an existing drawing.
   3.2 Editing commands are used to modify drawing elements and existing text.
4 Print CAD drawings.

4.1 Page layout for the drawing file is set to suit printing requirements.

4.2 Print parameters for the printer are set.

4.3 Drawings are printed on the correct media.

4.4 Sustainability principles and concepts are observed when preparing for and undertaking work process.

5 Save and back up files.

5.1 Suitable file directories are created for the drawing project.

5.2 Drawing files are saved and backed up correctly to specified drives or directories.

5.3 Saved files are retrieved, renamed and edited as required.

6 Import files.

6.1 Drawing files are inserted correctly into other software applications.

6.2 Text files are imported into CAD drawings from other software applications.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - seek clarification
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- creative design, drawing and drafting skills, using CAD software
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans, drawings, specifications and design briefs
    - documentation from a variety of sources
- numeracy skills to apply measurements and make calculations
- planning and organising skills to coordinate development of sketches and plans
- technology skills to use computers

Required knowledge

- building materials and techniques
- building services
- construction technology
- document controls
- drafting and drawing protocols
- general work health and safety (WHS) principles and responsibilities
- relevant industry standards and codes of practice
- requirements for the production of working drawings
- structural systems
- SI units of measurement
- types and application of working drawings
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services, and building and construction workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparation of CAD drawings, including construction detailing and material identification, for a range of typical National Construction Code (NCC) Type C structures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- given the plans and specifications, producing a 2-D CAD architectural drawing to scale of a plumbing and services layout for a single dwelling (Class 1a) building, ensuring:
  - correct identification of dimensions, symbols, abbreviations and key features of architectural drawings
  - application of sustainability principles and concepts throughout the process of producing 2-D architectural drawings using CAD software.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning
Experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Drawing requirements include:

- details, which may include:
  - area analysis
  - construction notes
  - general notes
  - location of neighbouring buildings
  - services
  - types of drawing, which must include:
    - elevations or projections
    - floor plans
    - sections
    - site plans.

Drawing protocols include:

- abbreviations
- commonly used symbols
- legends
- lettering standards
- numbering
- paper size
- scale
- SI units of measurement.
Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - disposing of waste material to ensure minimal environmental impact
  - energy efficiency.

CPCPCM4014A Prepare simple sketches and drawings

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM4004A

Unit Descriptor
This unit of competency specifies the outcomes required to produce on-site drawings of work required in buildings up to five floors with residential, commercial, industrial or mixed occupancy. Sketches may be used for estimating purposes and show measurements and other requirements for building and construction or fire, mechanical and/or plumbing services.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople, project managers, estimators and builders with a responsibility for preparing sketches and drawings for scoping and estimating work.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare to make sketches and drawings.

1.1 Types of drawings required and key features to be recorded are identified through consultation and reference to relevant job documentation and in conformity with the scope and standard practice of the relevant industry sector.

1.2 Work health and safety (WHS) requirements on site are identified and followed.

1.3 Tools and equipment required for inspection and measurement and for producing the drawings are gathered and checked for safety and serviceability.

2 Create simple sketches and drawings.

2.1 Inspection of the relevant area is carried out and required measurements are taken and recorded.

2.2 Any incursions into the fabric of the building for inspection and measuring purposes are made with the least amount of disruption and made good to the relevant standards and finish.

2.3 Suitable views are selected and simple sketches and drawings created using standard drawing conventions and incorporating relevant codes and standards.

2.4 Sectional drawings of structural elements are created using standard drawing conventions.
2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Notate and process drawings.

3.1 Essential information is recorded on the drawing with symbols and abbreviations according to standard drawing conventions.

3.2 Drawings are labelled, dated and processed according to organisational administration and quality procedures.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - confirm job specifications and requirements orally and in writing
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- creative design, drawing and drafting skills, including use of drafting equipment
- literacy skills to:
  - read and interpret a range of documents, such as design briefs, sketches, drawings and plans
  - read, interpret and apply relevant standards and codes
- numeracy skills to apply measurements and make calculations
- planning and organising skills to:
  - plan and set out work
  - ensure coordinated development of sketches and drawings
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to access and understand site-specific instructions

Required knowledge

- drawing conventions and features, including direction, scale, key, contours, symbols and abbreviations
- drawing techniques
- requirements of relevant codes, standards and statutory requirements
- safe work methods
- other services and penetrations to be considered
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in a workplace or closely simulated workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- producing clear and effective drawings and sketches with appropriate notations and labelling by creating a set of sketches and drawings for a small work project in the relevant field of expertise, including:
  - application of sustainability principles and concepts
  - measurements and details of components, sub-assemblies, products and models
  - correct calculations of required dimensions
  - other drafting details based on measurements and other relevant information
  - notations and labelling.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe
work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the
Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Types of drawings required* include:

- floor plans
- land boundaries and footprint of building
- orthographic drawings
- schematic drawings of wiring and pipework
- sectional views.

*Key features to be recorded* may include:

- for building and construction sketches:
  - ceiling heights and variations
  - doors
  - light fittings and power supplies
  - services
  - wall penetrations
  - walls
- for plumbing services sketches:
  - drains
  - equipment locations
  - fittings
  - incoming water supplies
  - lighting and power supplies
  - obstructions
  - service penetrations
- for fire services sketches:
  - incoming water supplies
  - layout of automatic fire detection and alarm systems
Relevant industry sectors and their requirements include 2-D and 3-D manual sketches and drawings of building and construction work, including:

- all classes of buildings as defined in the National Construction Code:
  - commercial
  - domestic
  - industrial
  - residential

- plumbing services work, including:
  - gas
  - hydrant and hose reel systems
  - residential and domestic fire sprinkler systems
  - sanitary plumbing and drainage
  - stormwater systems
  - water supply and distribution

- fire services work, including:
  - alarm and detection systems
  - commercial and industrial fire sprinkler systems
  - emergency evacuation
  - hydrant and hose reel systems
  - intercommunication warning systems
  - passive protection
  - residential and domestic fire sprinkler systems
  - smoke and heat venting and air control systems
  - special hazards
- mechanical services work, including:
  - air handling systems
  - air conditioning systems
  - refrigeration systems
  - smoke and heat venting systems.

**Work health and safety requirements** may include:
- details of power supplies
- details of all services
- installation of scaffolding
- understanding of hazards located in the area
- use of personal protective equipment.

**Tools and equipment** include:
- recording devices, such as:
  - computers
  - digital cameras
  - pen and paper.

**Sustainability principles and concepts**:
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - disposing of waste material to ensure minimal environmental impact
  - energy efficiency.

**Unit Sector(s)**

**Functional area**

**Unit sector** Plumbing and services

CPCPCM5010A Design complex sanitary plumbing and drainage systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM5000A

Unit Descriptor
This unit of competency specifies the outcomes required to undertake the hydraulic engineering design of complex sanitary plumbing and drainage installation and to prepare specifications for a range of residential, commercial and industrial buildings.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and construction hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Evaluate design parameters.

1.1 Scope of work is established for complex sanitary plumbing and drainage systems for wide span and high-rise building projects.

1.2 Design requirements are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.

1.4 Statutory and regulatory requirements for the design of complex sanitary plumbing and drainage systems are interpreted.

1.5 Australian standards and codes for the design of complex sanitary plumbing and drainage systems are analysed and applied.

1.6 Manufacturer requirements and trade and technical manuals are interpreted.

1.7 Additional research, including a desktop study, is conducted to outline design parameters.

1.8 Performance requirements are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 Layout of pipework systems and type and location of fittings and valves are planned.

2.2 Access chambers and gullies are designed and detailed.

2.3 Pipe sizes, pipe grades, and trapping and ventilation
requirements are calculated for a range of applications.

2.4 Anchor blocks are designed for a range of applications.

2.5 Pipe support is designed for a range of applications.

2.6 Pumpwell, pump and pump control requirements are sized and detailed.

2.7 Approved materials, jointing methods and installation requirements for complex sanitary plumbing and drainage systems are specified.

2.8 Acoustic performance of the sanitary plumbing and drainage system is included in the design.

3 Design and size systems.

3.1 Complex sanitary plumbing and drainage systems are designed for a range of wide span and high-rise building applications.

3.2 Rising main systems are designed.

3.3 Complex sanitary plumbing and drainage systems are designed and sized using computer software packages.

3.4 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans are prepared for a range of complex sanitary plumbing and drainage systems.

4.3 Specification for complex sanitary plumbing and drainage systems is prepared.

4.4 Testing and commissioning schedule is prepared.

4.5 Operation and maintenance manual is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - confirm job specifications and client requirements and to communicate with others to ensure safe and effective work practices
  - use clear and direct questioning to:
    - identify and confirm requirements
    - listen and understand
    - share information
  - use and interpret non-verbal communication
  - use language and concepts appropriate to cultural differences

- initiative and enterprise skills to:
  - develop creative and responsive approaches
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - read and interpret:
    - manufacturer requirements and manuals
    - plans, specifications, drawings and design briefs
    - standards
    - statutory and regulatory requirements
  - produce written information, including:
    - documentation, such as plans, specifications and schedules
    - an operation and maintenance manual

- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of complex sanitary and plumbing drainage systems
  - take initiative and make decisions

- problem-solving skills to analyse requirements, consider options and design an appropriate system

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- common terminology and definitions used in design of complex sanitary plumbing and drainage systems for all classes of building
- National Construction Code
- other relevant Australian standards, codes or standard operating procedures
- principles of technology in the design of hydraulic systems
- procedures for maintaining air balance within the systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving carrying out the effective performance and application of drainage principles and detailing system components used in the drainage industry.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- design, size and document the layout details of a complex sanitary plumbing and drainage system, including a specification for a high rise mixed development building; using two approved sanitary plumbing systems, to an effective height above 25 metres, inclusive of a basement, to include fixtures on each floor level (fixtures are included in the basement) and:
  - applying sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
  - evaluating and documenting design parameters, including client, regulatory, manufacturer and relevant Australian standard and code requirements for a range of complex sanitary plumbing and drainage systems
  - evaluating health risks associated with the sanitary plumbing and drainage system
  - planning and detailing system components, including:
    - access chambers (manholes)
    - gullies
    - anchorage blocks
• pumpwells
• piping systems
• designing and sizing a complex sanitary plumbing and drainage system
• applying drainage principles in the design and sizing of a complex elevated pipe system
• designing and sizing a rising main
• designing and sizing a fully vented or fully vented modified system
• designing and sizing a single stack or single stack modified system
• preparing plans to industry standards for a range of complex sanitary plumbing and drainage systems
• preparing a specification for a complex sanitary plumbing and drainage system
• preparing a testing and commissioning schedule
• preparing an operation and maintenance manual
• complying with WHS regulations applicable to workplace operations
• communicating with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team
leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout of complex sanitary plumbing and drainage systems for applications, including residential, commercial and industrial
- may be for:
  - existing structure being renovated, extended, restored or maintained
  - new projects.

Design requirements may include:

- architectural plans
- building specifications
- fire rating of penetrations
- owner requirements
- pipework identification
- soil quality
- specialist waste applications
- unstable or water-charged ground.

Cost-benefit analysis:

- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of the project
- may include:
  - design styles
  - expected design life
  - labour costs
  - material costs
safety factors
speed of installation
suitability of materials
system choices.

Statutory and regulatory requirements may include:

- Acts and regulations
- local and state government requirements
- preparation of documentation for authorities’ approval.

Australian standards and codes may include:

- AS/NZS3500 National plumbing and drainage
- state or territory requirements
- National Construction Code
- other relevant Australian standards and codes.

Manufacturer requirements may include:

- material specifications
- pump tables
- sizing tables
- recommended specific fixings for pipework
- technical and trade manuals.

Desktop study may include

- architectural and building plans
- developer plans
- manufacturers’ data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
- other reports as available.

Performance requirements must include:

- flow, velocity, pressure and discharge requirements, established using relevant Australian standards, codes and local authority plans.

Layout of pipework systems:

- will be based on principles of economy, serviceability, durability and fit for use
- may include:
- drainage
- elevated pipework
- low pressure pump
- vacuum
- vented stack systems.

**Fittings and valves** may include:
- bends
- junctions
- air admittance valves
- reflux valves
- inspection openings
- expansion joints.

**Access chamber** details may include:
- benching requirements
- flow
- gradient requirements
- inlet and outlet connections
- ladder access
- lids
- open and closed channel
- sizing.

**Gullies** can cover details such as size, location, bedding and concrete support, and also include:
- boundary traps
- disconnector gullies (DG)
- floor waste (FW)
- overflow relief gullies (ORG).

**Calculations** for complex sanitary plumbing and drainage systems may include:
- determination of flow and fixture loadings
- gradient calculations
- interpretation of design charts and tables
- pipe sizing calculations
- reduced level calculations
- self-cleaning velocities.

**Anchor blocks** design elements may include:
- flow forces to be resisted
- keying and anchorage points
- sizes
- soil characteristics.
Pipe supports may include:
- anchors
- bedding
- bracket spacing
- concrete support
- corrosion protection
- cover
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- saddles
- wall and ceiling brackets.

Pumpwell, pump and pump control requirements may include:
- access covers
- automatic controls
- capacity
- chains
- corrosion-resistant materials
- detailing
- emergency storage
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- ladder access
- macerator requirements
- odour control
- pump selection
- pump sizing
- pumpwell sizing
- space requirements
- step irons
- valve requirements
- ventilation
- warning system.

Materials may include:
- cast iron (CI)
- concrete
- copper (CU)
- earthenware (VCP)
- high density polyethylene (HDPE)
- unplasticised polyvinyl chloride (PVC-U)
- other approved material
- fittings and fixtures, including:
  - measures to prevent the spread of fire
  - sound attenuation requirements.

**Jointing methods** may include:
- brazing and threading
- electrofusion welding
- mechanical joints
- rubber ring
- solvent cement welding.

**Installation requirements** must include:
- bedding
- clipping
- concrete support
- fire rating of penetrations
- installation details
- jointing requirements
- level of workmanship.

**Rising main systems** may include:
- approved pressure pipe and fittings
- calculated rise and pump delivery requirements
- pipe velocities
- pump sizing to meet calculated flow conditions.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - effect on the environment due to overflow or leakage
  - water efficiency
  - consideration of the Green Building Council of Australia rating scheme
  - local environment consideration regarding
overflow, disposal and reuse.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.

**Specification** may include:
- bedding
- commissioning
- concrete support and detailing specialised components
- jointing
- access chambers (manholes)
- manufacturer requirements
- materials
- pumps
- safety (WHS)
- support
- testing
- workmanship.

**Testing** may include:
- air pressure
- drainage inspection
- hydrostatic
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:
- charging traps
- checking leaks
- checking for foreign material
- checking for system defects
- checking that system functions as per design
- checking trap water seal retention
- cleaning grates
- system certification.

**Operation and maintenance manual** may include:

- construction drawings
- results of commissioning test
- certification documentation
- maintenance schedules
- manufacturer brochures and technical information
- manufacturer warranties.

**Unit Sector(s)**

**Functional area**

Unit sector: Plumbing and services

CPCPCM5011A Design complex cold water systems

Modification History
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM5001A

Unit Descriptor
This unit of competency specifies the outcomes required to design complex cold water distribution systems in multi-storey buildings, including pressure, gravity feed, pumped systems and storage regulations.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and construction hydraulics.
Application of the unit is relevant to multi-storey residential, commercial and industrial buildings with or without connection to reticulated water supply.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Evaluate design parameters

1.1 Scope of work is established for the distribution of complex cold water systems for wide span and high-rise building projects.

1.2 Design requirements are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Cost-benefit analysis is conducted, comparing a range of materials and system designs.

1.4 Statutory and regulatory requirements for the design of complex cold water distribution systems are interpreted.

1.5 Australian standards and codes for the design of complex cold water distribution systems are analysed and applied.

1.6 Manufacturer requirements and trade and technical manuals are interpreted.

1.7 Additional research, including a desktop study, is conducted to outline design parameters.

1.8 Flow and pressure tests are conducted.

1.9 Performance requirements are established, considering safety of system users or building occupants.
2 Plan and detail system components.

2.1 *Layout of pipework systems*, type and location of *fittings and valves*, and acoustic performance of the system are planned.

2.2 Type, location and requirements for *backflow prevention devices* are detailed.

2.3 *Flush valve system types* and operation are specified.

2.4 Pipe sizes, velocities, flows and residual pressures are calculated for a range of applications.

2.5 *Cold water system components* are detailed or designed.

2.6 *Pump, pump controls and pumproom requirements* are sized and detailed.

2.7 Approved *materials, jointing methods* and *installation requirements* for complex cold water distribution systems are specified.

3 Design and size systems.

3.1 Complex cold water distribution systems are designed for a range of wide span and high-rise building applications.

3.2 Flush valve distribution systems for sanitary ablutions are designed.

3.3 Range of *delivery systems* is designed.

3.4 Complex cold water distribution systems are designed and sized using computer software packages.

3.5 *Sustainability principles and concepts* are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 *Plans and specifications* are prepared for a range of complex cold water distribution systems.

4.3 *Testing* and *commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced, including information on how to properly and safely
maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - Confirm job specifications and client requirements
  - Communicate with others to ensure safe and effective work practices
  - Enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - Use language and concepts appropriate to cultural differences
  - Use and interpret non-verbal communication, such as hand signals

- Initiative and enterprise skills to:
  - Develop creative and responsive approaches
  - Identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- Literacy skills to:
  - Read and interpret:
    - Plans, specifications, drawings and design briefs
    - Standards and manufacturer requirements and manuals
    - Statutory and regulatory requirements
  - Produce written documents, including:
    - Plans, specifications and schedules
    - Operation and maintenance manual

- Planning and organising skills to:
  - Research, collect, organise and understand information relating to the design of complex cold water systems
  - Take initiative and make decisions

- Problem-solving skills to analyse requirements, consider options and design an appropriate system

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technology skills to:
  - Access and understand site-specific instructions in a variety of media
  - Use mobile communication technology

Required knowledge
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- common terminology and definitions used in design of cold water reticulation systems
- National Construction Code
- nature of materials used and effects of performance under various conditions
- other relevant Australian standards, codes or standard operating procedures
- principles of technology used in design of cold water reticulation and hydrant and hose reel systems for all classes of building
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- water quality requirements
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving effective performance and application of drainage principles and detailing of system components used in the drainage industry.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- design, size and document the layout details, including a specification for a high rise mixed development building to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level (fixtures are included in the basement) to include:
  - using two methods of providing a cold water supply
  - a non-drinking supply system
  - a flush valve system
- evaluate and document design parameters, including client, regulatory, manufacturer and Australian standard and code requirements for a range of complex water supply systems
- evaluate health risks associated with the drinking and non-drinking water supplies
- apply regulatory, manufacturer and relevant Australian standard and code requirements for a range of complex cold water distribution systems
- plan and detail system components, including:
  - authority’s connection
  - backflow prevention requirements
  - fixtures and fitments
  - flush valves
meter assemblies
storage tanks
piping systems
pumps
comply with WHS regulations applicable to workplace operations
apply organisational quality procedures and processes
design and size cold water distribution and delivery systems
design and size flush valve systems
prepare a specification for the cold and non-drinking water distribution system
prepare a testing and commissioning schedule
prepare an operation and maintenance manual
apply correct design principles and techniques
apply sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- must include interpretation of plans and specifications
- must include sizing and documenting layout of complex cold water systems for applications, including residential, commercial, industrial and health
- may be for new projects or an existing structure being renovated, extended, restored or maintained.

Design requirements may include:

- architectural plans
- building specifications
- effect of water quality on pipework, plant and equipment
- owner requirements
- pipework and valve identification
- soil quality
- specialist water use applications
- unstable or water-charged ground.

Cost-benefit analysis:

- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising the integrity of the project
- may include:
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitability of materials
Statutory and regulatory requirements may include:

- local and state government requirements
- preparation of documentation for authorities’ approval
- requirements of Acts and regulations.

Australian standards and codes may include:

- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- National Construction Code
- state or territory requirements
- other relevant Australian standards or codes.

Manufacturer requirements may include:

- flow and pressure requirements for fixtures and appliances
- material specifications
- pump tables
- sizing tables
- recommended specific fixings for pipework
- technical and trade manuals.

Desktop study may include collection and interpretation of existing data for design purposes, such as:

- architectural and building plans
- manufacturers’ data
- developer plans
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Flow and pressure tests must include:

- on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa)
- interpretation of flow and pressure tests conducted by a contractor.

Performance requirements may include:

- flow, velocity, pressure and discharge requirements, established using relevant Australian
standards, codes, and state, territory and local government authorities’ plans.

**Layout of pipework systems** may include:
- principles of economy, serviceability, durability and fit for use
- dual feed
- gravity feed
- main pressure
- pumped system
- ring main.

**Fittings and valves** may include:
- fittings:
  - bends
  - elbows
  - tees
  - unions
- valves:
  - backflow prevention
  - excess pressure
  - isolating
  - pressure limiting
  - pressure reduction
  - strainers.

**Backflow prevention devices** may include:
- registered break tank (RBT)
- registered air gap (RAG)
- double-check valve assembly (DCV)
- dual-check valve with intermediate vent (DuCV)
- reduced pressure detector assembly (RPDA)
- reduced pressure zone device (RPZD)
- other approved devices.

**Flush valve system types** may include:
- backflow prevention requirements
- gravity
- mains pressure
- pipe sizing requirements
- storage requirements.
Cold water system components may involve:

- meter assemblies that may be:
  - direct and indirect
  - electronic
  - inferential
  - magnetic
- thrust blocks and their design elements, including:
  - design details for tees, elbows and valves
  - keying and anchorage points
  - sizes
  - soil characteristics
  - velocity and flow forces to be resisted
- pipe supports, including:
  - anchors
  - bedding
  - bracket spacing
  - corrosion protection
  - cover
  - hanging brackets
  - manufacturer-recommended specific fixings
  - material requirements
  - provision for expansion
  - saddles
  - wall and ceiling brackets
- water storage systems, including:
  - air gap
  - automatic controls
  - drain down provision
  - inlet valve design and sizing
  - outlet sizing
  - overflow requirements
  - provision to maintain service while cleaning
  - provision to maintain service while servicing
  - safe tray requirements
  - tank access
  - tank maintenance
  - tank sizes
- water treatment, including:
  - filtration
  - reverse osmosis (RO)
- softening.

**Pump, pump controls and pumproom requirements** must include:
- acoustic performance
- automatic changeover
- automatic controls
- drain down provision
- dual pump provision
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- pressure gauges
- pump selection
- pump sizing
- space requirements
- valve requirements
- variable speed control.

**Materials** may include:
- acrylonitrile butadiene styrene (ABS)
- composite pipework
- copper (Cu)
- cross-linked polyethylene (PE-X)
- polypropylene (PP)
- polybutylene (PB)
- ductile iron cement lined (DICL)
- other approved materials
- fittings and fixtures
- protective coatings.

**Jointing methods** may include:
- brazing
- compression
- electrofusion welding
- flaring
- mechanical joints
- rubber ring joints
- screwing
- soldering
- solvent cement welding
- other approved jointing methods.
Installation requirements must include:

- bedding
- fire rating of penetrations
- clipping
- installation details
- jointing requirements
- level of workmanship
- manufacturer-recommended specific fixings
- pipe support.

Delivery systems may include:

- constant flow variable speed pumps
- gravity feed
- hydropneumatic
- mains pressure system.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - effect on the environment due to overflow or leakage
  - water efficiency
  - consideration of the Green Building Council of Australia rating scheme.

Plans:

- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.
**Specification** may include:

- bedding
- flow requirements
- jointing
- manufacturer requirements
- materials
- residual pressures
- safety (WHS)
- specialised components
- support
- testing
- valve selection
- water treatment
- workmanship.

**Testing** may include:

- air pressure
- defect inspection
- hydrostatic
- mains pressure
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:

- disinfection
- flow test
- leak check
- pressure test
- system certification
- system defects
- system functions as per design
- system purge
- valve operation.

**Operation and maintenance manual** may include:

- as installed drawings
- certification documentation
- maintenance schedules
- manufacturer brochures and technical information
- results of commissioning test
- valve function.
Unit Sector(s)

Functional area

Unit sector: Plumbing and services

Custom Content Section

Not applicable.
CPCPCM5012A Design complex stormwater and roof drainage systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM5002B

Unit Descriptor
This unit of competency specifies the outcomes required to design complex stormwater and roof drainage systems for commercial, industrial and residential properties.

Application of the Unit
This unit of competency supports the needs of experienced plumbers specialising in hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Evaluate design parameters.
   1.1 Client requirements are determined from relevant Australian standards, codes, plans, specifications and client brief.
   1.2 Local government, Environment Protection Authority (EPA), and relevant Australian standards and codes for the design of complex stormwater and roof drainage systems are interpreted.
   1.3 Regulatory requirements for design of complex stormwater and roof drainage systems are analysed and applied.
   1.4 Other documentation relevant to the design is researched, evaluated and applied.
   1.5 Safety of system users or building occupants is considered.

2 Plan system components.
   2.1 Layout of system components is planned according to design parameters and site limitations, and is coordinated with other services.
   2.2 Stormwater detention and retention systems and first-flush stormwater systems are planned and evaluated.
   2.3 Most suitable methods of preventing backflow of sub-soil and stormwater into buildings are determined.
and specified.

2.4 *Treatment and disposal options for stormwater discharge* are evaluated and planned.

2.5 Overland flood path affecting the property and buildings is analysed.

### 3 Design and size systems.

3.1 *Rainfall intensities are determined* and volumes of water are estimated using measurements of different *catchment areas*.

3.2 Methods of collection and disposal of surface run-off water are specified.

3.3 Strategies for harvesting and re-using rainwater are identified and evaluated.

3.4 Sub-soil water types are determined and *stormwater drainage systems* are designed, sized and detailed using appropriate calculations and software applications.

3.5 System components are selected, designed, sized and detailed using appropriate calculations, software applications and *approved materials*.

3.6 *Stormwater systems requiring pumping* are identified and designed using appropriate calculations and software applications, with storage, pump and discharge pipe sizes calculated and specified.

3.7 Correct installation, laying and jointing procedures for materials and components are specified.

3.8 *Sustainability principles and concepts* are applied throughout the design process.

### 4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 *Plans* and *specifications* are prepared for a range of complex stormwater and roof drainage systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - develop creative and responsive approaches
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to read and interpret:
  - charts and hand drawings
  - job drawings
  - manufacturer specifications and instructions
  - material safety data sheets
  - memos
  - organisational work specifications
  - regulatory requirements
  - requirements and instructions issued by authorised organisational or external personnel
  - signage
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of complex stormwater and roof drainage systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- technical skills to:
  - apply design concepts and principles
  - communicate graphical representations and plans
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- relevant Australian standards and codes, including:
  - Australian rainfall and run-off document
  - AS/NZS3500 National plumbing and drainage
  - manufacturer specifications
  - National Construction Code
  - other relevant codes or standard operating procedures relevant to the sector
- terminology and definitions used in hydraulic design
- installation methods used in hydraulic systems
- hazards associated with devices and systems used in the hydraulic sector
- environmental requirements, including:
  - clean-up protection
  - stormwater protection
  - waste management
  - water quality management
- quality assurance requirements, including:
  - EPA
  - internal company quality assurance policy and risk management strategies
  - International Standards Organisation
  - site safety plan
  - workplace operations and procedures
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - safe work procedures relating to planning, sizing and documenting layout of pipework and fixtures
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving production of designs, plans, specifications and supporting documentation for a complex stormwater and roof drainage system.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- design, size and document the layout details, including a specification, of a stormwater system for a site incorporating a high rise mixed development building and a wide span project, such as a school
- evaluate and document design parameters, including client, regulatory, manufacturer and relevant Australian standards and code requirements for a stormwater system
- evaluate health risks associated with the stormwater system
- collect, analyse and evaluate research, including:
  - catchment area
  - survey plans
  - existing services
  - building plans
  - site plans
  - civil drawings
  - reduced levels
  - contour levels
- prepare a plan coordinated with other services for the layout of piping, pits, gullies and other system components according to design parameters and site limitations
- calculate stormwater detention, retention and
harvesting systems

- calculate roof catchment areas and surface run-off volumes
- determine specifications for guttering requirements and size of downpipes
- design sub-soil drainage systems, including sizing for collection, containment and discharge
- create detail drawings, including long sections and cross-sections
- create a design, including size and detail for complex stormwater and roof drainage systems, including:
  - access chambers (manholes)
  - grade of drains
  - holding pits
  - collection sumps
  - detention, retention and harvesting systems
  - other system components
- apply appropriate software in order to design, size and detail selected stormwater systems
- prepare plans for a range of complex stormwater and roof drainage systems
- prepare a specification for a complex stormwater and roof drainage system
- prepare a testing and commissioning schedule
- prepare an operation and maintenance manual
- apply sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
tools and equipment appropriate to applying safe work practices
support materials appropriate to activity
workplace instructions relating to safe work practices and addressing hazards and emergencies
material safety data sheets
research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
- Assessment processes and techniques should as far
as is practical take into account the language,
literacy and numeracy capacity of the candidate in
relation to the competency being assessed.
- Supplementary evidence of competency may be
obtained from relevant authenticated
documentation from third parties, such as existing
supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work
environments and situations that may affect performance. Bold italicised wording, if used in
the performance criteria, is detailed below. Essential operating conditions that may be present
with training and assessment (depending on the work situation, needs of the candidate,
accessibility of the item, and local industry and regional contexts) may also be included.

**Client requirements** may include:
- architectural plans
- briefs
- site conditions
- statutory bodies
- standards and codes
- specifications.

**Local government, Environment Protection Authority, and relevant Australian standards and code**
requirements may include:
- local government requirements, including:
  - Australian rainfall and run-off documentation
  - Integrated Planning Act (IPA)
  - other regulatory requirements
  - standard drawings and details
  - town planning requirements
  - urban design manuals
- treatment requirements, such as:
  - screens
  - silt traps
  - solid removal systems
- environmental requirements to cover water quality management, including:
  - clean-up protection
  - stormwater protection
  - waste management
- Australian standards and codes, including:
Other documentation relevant to the design must include plans, drawings, manuals and reports regarding:

- buildings
- catchment area analysis
- civil drawings
- contour levels
- existing services
- manufacturer requirements and specifications
- reduced levels
- site plans
- stormwater design
- surveys.

System components may include:

- access chambers (manholes)
- channels
- culverts
- downpipes
- fire rating of penetrations
- grated pits
- gullies
- guttering
- inspection chambers
- inspection openings
- kerbs
- piping
- pits.

Treatment and disposal options for stormwater discharge may include:

- treatment options:
  - grass and rock swales
  - lagoons
  - momentum diffusers
  - ponds
  - screens
  - silt traps
  - traps
  - other solid removal systems as determined
- disposal options:
  - connection to stormwater mains

- National Construction Code
- AS/NZS3500 National plumbing and drainage.
- creeks
- harbour
- kerb and street channels
- lakes
- on-site harvesting and reuse
- rainwater collection systems, including tanks and dams
- rivers
- streams.

**Rainfall intensities are determined**
by:
- average rainfall intervals
- roof, surface and subsurface calculations
- site location
- time and concentration.

**Catchment areas** must include:
- land surface catchment areas, including a variety of surface conditions such as grassed and paved areas
- roof catchment areas.

**Stormwater drainage systems** may include:
- access chambers (manholes)
- collection sumps
- detention and retention
- grade of drains
- harvesting
- holding pits
- pump discharge.

**Approved materials** may include:
- piping materials:
  - concrete
  - earthenware or vitrified clay pipe (VCP)
  - fibre cement (FRC)
  - polyvinyl chloride (PVC)
  - other approved materials
- fittings:
  - bends
  - grates
  - gullies
  - junctions
  - non-return valves.
Stormwater systems requiring pumping must include:

- holding tanks
- overflow provisions
- pump and controls
- rising main.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - harvesting and reuse
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - effect on the environment due to overflow or leakage
  - consideration of the Green Building Council of Australia rating scheme.

Plans:

- may include:
  - cross-sections
  - details
  - elevations
  - sections
  - site
- may be produced using:
  - computer generation
  - drawing equipment.

Specification and user manuals may include:

- commissioning
- bedding
- support
- concrete support and detailing specialised components
- jointing
- access chambers (manholes)
- manufacturer requirements
- materials
- pumps
- safety (WHS)
- testing
- workmanship.

**Unit Sector(s)**

**Unit sector** Plumbing and services

**Custom Content Section**

Not applicable.
CPCPCM5013A Design complex (non-solar) heated water systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM5003B

Unit Descriptor
This unit of competency specifies the outcomes required for the design and specification of complex (non-solar) heated water supply and distribution systems for residential, commercial and industrial applications. The unit includes circulating systems, fuel and energy loads and system selection.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Evaluate design parameters.**

   1.1 **Scope of work** is established for heated water supply and distribution systems for wide span and high-rise building projects.

   1.2 **Design requirements**, including the control of Legionella bacteria, are determined from relevant Australian standards, codes, plans, specifications and client brief.

   1.3 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.

   1.4 **Statutory and regulatory requirements** for the design of complex (non-solar) heated water supply and distribution systems are analysed and applied.

   1.5 **Manufacturer requirements** and trade and technical manuals are interpreted.

   1.6 Additional research, including a **desktop study**, is conducted.

   1.7 **Performance requirements** are established, considering safety of system users or building occupants.

2. **Plan and detail system components.**

   2.1 **Layout of pipework systems** and type and location of fittings and valves are planned.

   2.2 **Thermostatic mixing, tempering** and control valves are detailed for a range of applications, and appropriate symbols are used.

   2.3 **Circulating heated water supply systems** are designed and detailed.

   2.4 **Heat trace systems** are designed and detailed.

   2.5 Warm water systems are designed and detailed, including disinfection and bio-control measures.

   2.6 **Calculations for sizing water heaters** are conducted and **methods for the control of expansion** are detailed.

   2.7 Pipe sizes are calculated and **pipe supports** are designed for a range of applications.
2.8 *Manifolding heated water units* are detailed for a range of *water heaters*, and *safe trays and overflows* are specified.

2.9 Approved *materials* and *jointing methods, insulation materials* and *installation requirements* for a range of water heaters and heated water systems are specified.

2.10 Allowance for expansion and contraction is provided.

2.11 Acoustic performance of the system is included in the plan.

3 **Design and size**

   **systems.**

3.1 Complex (non-solar) heated water supply and distribution systems are designed for a range of wide span and high-rise building applications.

3.2 *Circulating systems* are designed and detailed.

3.3 Complex (non-solar) heated water supply and distribution systems are designed and sized using computer software packages.

3.4 *Sustainability principles and concepts* are applied throughout the design process.

4 **Prepare**

   **documentation.**

4.1 Client brief of the desired design is prepared.

4.2 *Plans* are prepared for a range of complex (non-solar) heated water supply and distribution systems.

4.3 *Specification* for a heated water supply and distribution system is prepared.

4.4 *Testing* and *commissioning schedule* is prepared.

4.5 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - confirm job specifications and client requirements
  - communicate with others to ensure safe and effective work practices
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - develop creative and responsive approaches
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - prepare written documentation, including plans, specifications and schedules
  - produce an operation and maintenance manual
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of complex (non-solar) heated water systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- technical skills to apply design concepts and principles
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- application of National Construction Code, relevant Australian standards, codes and
manufacturer specifications

- common terminology and definitions used in design of complex (non-solar) heated water systems
- installation methods and hazards identified in relation to devices and systems used according to relevant Australian standards, codes and standard operating procedures
- nature of materials used and effects of performance under various conditions
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving effective performance and application of principles used to design complex (non-solar) heated water systems.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- design, size and document the layout details, including a specification, for a high rise mixed development building to a minimum of 29 floors, inclusive of a basement to include fixtures on each floor level (fixtures are included in the basement) to include:
  - using two methods of providing a heated water system, one to be gas only and one to incorporate an alternative energy efficient heat source
  - evaluate and document design parameters, including client, regulatory, manufacturer and relevant Australian standard and code requirements for a range of heated water supply and distribution systems
  - evaluate health risks associated with heated water supplies
  - plan and detail system components, including:
    - heat source
    - flue arrangements
    - flow and return systems
    - insulation requirements
    - manifolding systems
    - provision for expansion
    - temperature control device
  - comply with WHS regulations applicable to
workplace operations

- apply organisational quality procedures and processes within context of designing complex heated water systems
- design and size a range of heated water supply and distribution systems
- design and size a range of circulating systems
- prepare plans for a range of heated water supply and distribution systems
- prepare specification for a heated water supply and distribution system
- prepare a testing and commissioning schedule
- prepare an operation and maintenance manual
- apply sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- communicate with others to ensure safe and effective work site operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and
other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**
- must include interpretation of plans and specifications
- must include sizing and documenting layout of heated water supply and distribution systems for applications including residential, commercial, industrial and health
- may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:
- architectural plans
- builder specifications
- fire rating of penetrations
- flue requirements
- owner requirements
- pipework identification
- specialist heated water use applications.

**Cost-benefit analysis:**
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising the integrity of the project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials
  - system choices.

**Statutory and regulatory requirements** must include:
- Acts and regulations
- National Construction Code
• relevant Australian standards and codes, including AS/NZS3500 National plumbing and drainage
• local government and health department requirements.

Manufacturer requirements may include:

• material specifications
• heater maintenance and servicing
• provision for heater pressure and temperature discharge
• pump tables
• sizing tables
• recommended specific fixings for pipework
• technical and trade manuals.

Desktop study may include

• architectural and building plans
• developer plans
• other documents, including:
  • applications
  • brochures
  • forms
  • policies
  • other reports as available.

Performance requirements must include:

• those established using relevant Australian standards, building codes and other relevant documents.

Layout of pipework systems may include:

• dead leg
• pressurised
• thermo convection
• circulating.

Fittings and valves may include:

• fittings:
  • bends
  • tees
  • unions
• valves:
  • backflow prevention
  • cold water expansion
isolating
- non-return, including high pressure non-return
- pressure limiting
- pressure relief
- strainers
- temperature control.

**Thermostatic mixing and tempering** valves may include:
- bimetallic types
- wax capsule.

**Circulating heated water supply system** details may include:
- circulating pump specification
- dead leg minimisation
- flow and return pipework
- circulation
- pipe insulation
- thermal convection circulating.

**Heat trace systems** may include:
- installation requirements
- running costs
- serviceability.

**Calculations for sizing water heaters** may include:
- coefficient of expansion
- daily flows
- energy consumption
- heat losses
- mixed temperatures
- peak demand
- recovery times
- size and quantity of heated water required
- standby versus continual flow
- tariffs
- water expansion.

**Methods for the control of expansion** may include:
- U-bends
- coiled loop
- lyre bend
- offset bends
- proprietary expansion control devices.
Pipe support may include:
- anchors
- bracket spacing
- corrosion protection
- hanging brackets
- material requirements
- provision for expansion
- saddles
- wall and ceiling brackets.

Manifolding heated water units must include:
- balanced flow conditions and valves
- pressure relief requirements.

Water heaters:
- may include:
  - continuous flow
  - heat transfer
  - pressure storage systems
  - open vented storage systems
  - heated source may include:
    - electricity
    - gas
    - heat pump
    - solar
    - solid fuel
    - waste heat.

Safe trays and overflows must include:
- design
- discharge
- materials
- sizes.

Materials may include:
- pipe materials as specified, including:
  - copper
  - composite
  - polymer
  - other approved materials
- flue materials, including stainless steel
- ancillary material, including:
- air relief valve
- heaters
- fittings and fixtures
- insulation
- pumps
- valves.

**Jointing methods** may include:
- brazing
- compression
- electrofusion welding
- flaring
- mechanical joints
- threading.

**Insulation materials** may include:
- fibre glass
- foam
- metal sheathing
- rock wool
- other approved materials.

**Installation requirements** must include:
- fire rating of penetrations
- level of workmanship
- manufacturer-recommended specific fixings
- pipe support
- provision for expansion
- serviceability and access.

**Circulating systems** may include:
- approved pressure pipes and fittings
- balancing valves
- circulating pump and controls
- isolating valves
- thermo cycle
- temperature gauge
- pump sizing to meet calculated flow conditions.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal
environmental impact
- efficient use of material
- efficient energy usage/capital outlay comparison
- selection of energy efficient water heater
- water efficiency
- consideration of the Green Building Council of Australia rating scheme.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.

**Specification** may include:
- support
- jointing
- flow requirements
- manufacturer requirements
- materials
- residual pressures and temperature
- safety (WHS)
- specialised components
- testing
- valve selection
- water treatment
- workmanship.

**Testing** may include:
- air pressure
- defect inspection
- flue operation
- hydrostatic
- mains pressure
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:

- balancing the system
- checking and flushing the system
- disinfection
- flow test
- flue operation
- leak check
- pressure test
- system certification
- system defects
- system functions as per design
- system purge
- temperature setting
- valve operation.

**Operation and maintenance manual** may include:

- as installed drawings
- results of commissioning test
- certification documentation
- heater details, settings and operations
- maintenance schedules
- manufacturer brochures and technical information
- valve function.

CPCPCM5014A Design sewer infrastructure systems

Modification History
Changes to unit title, descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPCM5004A

Unit Descriptor
This unit of competency specifies the outcomes required to design and document sewer infrastructure systems, including specifying responsibilities, procedures and safety standards for sewerage equipment, construction, soil classification, pipelaying techniques and trench construction; analysing factors relating to pumping and tunnelling; and supervising the installation of a sewer infrastructure system.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare and implement sewer contracts.
   1.1 Sewer contracting procedures are implemented.
   1.2 Required qualifications, roles and responsibilities of local authority personnel and contracted parties are documented.

2 Evaluate design parameters.
   2.1 Scope of work is established for sewer infrastructure systems.
   2.2 Design requirements are determined from relevant Australian standards, codes, plans, specifications and client brief.
   2.3 Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.
   2.4 Statutory and regulatory requirements and relevant Australian standards and codes for the design of sewer infrastructure systems are analysed and applied.
   2.5 Manufacturer requirements and trade and technical manuals are interpreted.
   2.6 Additional research, including a desktop study, is conducted to outline design parameters.
   2.7 Factors that contribute to quality, safety and time efficiency are determined.
   2.8 Point of connection to the authority’s system is determined.
   2.9 Safety procedures and regulations for trench safety and for pumping stations are specified.
2.10 *Performance requirements* are established.

2.11 Pipe sizes are assessed using equivalent population (EP) density.

3 Plan and detail system components.

3.1 Soils are tested and classified and characteristics of soil types are analysed.

3.2 *Trenching safety procedures* are detailed and backfilling and compaction methods are specified.

3.3 *Layout of pipework systems* and type and location of fittings, valves and controls are planned.

3.4 *Pipelaying*, dewatering and testing procedures for installation of pipework of varying sizes are specified.

3.5 Self-cleaning velocities, *pipe size and grade, and ventilation requirements are calculated* for a range of systems.

3.6 Sewer connections, *access chambers*, bedding material and support systems are detailed.

3.7 *Requirements for pump station, pumps, controls and equipment* are sized and detailed.

3.8 Approved *materials, jointing methods* and *installation requirements* for sewer infrastructure systems are specified.

3.9 Maintenance procedures of the system are identified.

4 Design and size systems.

4.1 Easements and location for sewer infrastructure systems are identified, including pumping *rising mains*.

4.2 Sewer infrastructure systems are designed for a range of applications.

4.3 Sewer long sections are designed and detailed.

4.4 Pump rising main systems are designed.

4.5 Pumping stations are designed.

4.6 Sewer infrastructure systems are designed and sized using calculations and *computer software packages*. 
4.7 Ventilation requirements are determined and designed.

4.8 *Sustainability principles and concepts* are applied throughout the design process.

5 Prepare documentation.

5.1 Client brief of the desired design is prepared.

5.2 *Plans* and *specification* are prepared for a range of sewer infrastructure systems.

5.3 *Testing* and *commissioning schedule* is prepared.

5.4 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to:
  - develop creative and responsive approaches
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
  - produce written documentation, including:
    - plans, specifications and schedules
    - an operation and maintenance manual

- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of sewer infrastructure systems
  - take initiative and make decisions

- problem-solving skills to analyse requirements, consider options and design an appropriate system

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- application of:
  - relevant Australian standards, including Sewerage Code of Australia
• manufacturer specifications, including hazards identified in relation to devices and systems used
• fire safety requirements
• other codes or standard operating procedures
• pipe sizing procedures
• pump selection and rising main requirements
• ventilation requirements
• regulatory authorities’ requirements
• common terminology and definitions used in the design of sewer infrastructure systems
• nature of materials used and effects of performance under various conditions
• principles of technology in the design of sewer infrastructure systems
• workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparation of designs for two sewer systems for different applications, including plans, specifications and all associated documentation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- design, size and document the installation and layout details for a sewer infrastructure system of a residential development of 50 properties, incorporating a gravity system and pumping station, to include:
  - sewer reticulation mains
  - pump station
  - pump rising main
  - ventilation
  - odour control
- evaluate and document design parameters to relevant Australian standards and codes, and regulatory, client and manufacturer requirements
- specify soil identification and trench safety procedures
- prepare plans and specifications
- prepare testing and commissioning schedules
- prepare operation and maintenance manuals
- apply sustainability principles and concepts throughout the process
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources

This competency is to be assessed using standard and
authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**

- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout of sewer infrastructure systems
  - may be for either new projects or existing sewer mains being extended.

**Design requirements** may include:

- architectural plans
- builder specifications
- Sewerage Code of Australia
- fire safety requirements
- owner requirements
- pipework identification
- flow requirements and sizing of pipework
• ventilation requirements.

Cost-benefit analysis:
• compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising the integrity of the project
• may include:
  • design styles
  • energy costs
  • expected design life
  • labour costs
  • material costs
  • safety factors
  • speed of installation
  • suitable materials.

Statutory and regulatory requirements and relevant Australian standards and codes may include:
• Acts, regulations and commonwealth, state or territory, and local government policies
• AS/NZS3500 National plumbing and drainage
• AS2200 Design charts for water supply and sewerage
• Environmental Protection Authority (EPA)
• National Construction Code
• Sewerage Code of Australia
• other relevant Australian standards and codes.

Manufacturer requirements may include:
• material specifications
• collection and storage systems
• design and installation
• equipment installation
• pump installation
• technical manuals.

Desktop study may include:
• architectural and building plans
• developer’s plans
• equivalent population (EP) density
• manufacturer’s data
• other documents, including:
  • forms
• brochures
• applications
• policies
• regulations
• other reports as available.

Safety procedures and regulations for trench safety:

• may include:
  • analysing factors that determine tunnelling
  • assessing and identifying types of soil requiring tunnel excavation and shoring procedures
  • defining methods of trench installation
  • defining procedures for trench rescue
  • specify safety procedures with reference to:
    • advisory standards
    • compliance standards
    • industry standards
    • Work Health and Safety Act
    • other Acts, codes or regulations relating to trenching
    • working in confined spaces.

Performance requirements are established using relevant Australian standards, codes and local authorities’ requirements may include:

• discharge requirements
• durability
• emergency storage backup
• longevity
• self-cleaning ability
• sufficient capacity.

Trenching safety procedures may include:

• conditions affecting trench stability
• condition of soils disturbed by previous excavations
• effect of water on excavations
• effects of moisture content on excavated trenches
• traffic and vibrations
• confined space safety requirements, e.g. for exhaust emissions
• prevention of trench collapse
• trench collapse procedures
• trench inspection procedures
• trench excavation methods used for different:
- backfilling methods
- bedding methods
- depth
- slope
- support systems
- types.

**Layout of pipework systems** may include:

- gravity
- pumped and rising mains
- vacuum
- identification of easements and location for sewer infrastructure systems, including pumping rising mains
- layout, which must:
  - not unduly affect building integrity and aesthetic appeal
  - have principles of economy, serviceability, durability and fit for use applied.

**Fittings, valves and controls** may include:

- fittings, including:
  - bends
  - flanges
  - junctions
  - inspection openings
  - unions
- valves, including:
  - non-return
  - isolation
- controls, including:
  - level
  - alarms
  - management communication systems.

**Pipelaying** may include:

- cutting, handling and storage procedures
- fittings used for sewerage work
- jointing methods and procedures
- laying procedures for pipework
- methods of dewatering trenches methods of grading and maintaining pipe direction and reduced levels
- methods of placing bedding materials, encasing
pipes, backfilling and compacting
- methods of testing sewer drains
- methods of pressure testing pump rising mains.

Pipe size, pipe grade and ventilation requirement calculations may include:
- determination of flow and loadings
- gradient calculations
- equivalent population (EP) density
- interpretation of design charts and tables
- pipe sizing calculations
- projected flows
- pumping flow rates
- reduced level calculations
- self-cleaning pipe velocities
- stormwater infiltration
- system ventilation.

Access chamber details must include:
- access
- benching
- connections
- covers
- flow and gradient
- open and closed channel
- sizing.

Pump station, pumps, controls and equipment requirements may include:
- access covers
- access ladders
- automatic controls
- capacity
- corrosion-resistant materials
- emergency storage and power supply
- impeller sizing and selection
- inlet and outlet design
- installation and mounting
- odour control
- macerator requirements
- management communication system
- provision for servicing
- pump selection
- pumpwell sizing
- space requirements
- valves
- ventilation
- warning system.

**Materials** may include:
- cast iron (CI)
- concrete
- vitrified clay pipes (VCP)
- polyethylene (PE)
- polypropylene (PP)
- unplasticised polyvinyl chloride (PVC-U)
- other approved material.

**Jointing methods** may include:
- electrofusion welding
- mechanical joints
- rubber ring
- solvent cement welding
- other approved jointing methods.

**Installation requirements** may include:
- bedding
- pipe protection, which may include:
  - cover
  - corrosion
  - impact
  - level of workmanship
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for pipe movement
  - serviceability and access.

**Rising main** systems may include:
- approved pressure pipe and fittings
- calculated rise and pump delivery requirements
- environmental protection
- pump sizing to meet calculated flow conditions
- self-cleaning pipe velocities
- odour control.

**Computer software packages** include:
- manufacturer software
- proprietary design software.
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - consideration of the Green Building Council of Australia rating scheme.

Plans:

- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - site
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.

Specification may include:

- bedding
- commissioning
- excavation requirements
- support
- concrete support and detailing specialised components
- jointing
- access chambers (manholes)
- manufacturer requirements
- materials
- piping
- pumps
- pumping stations
- safety (WHS)
- testing
- workmanship.
Testing may include:

- air pressure
- drainage inspection
- hydrostatic
- performance
- compliance with authorities discharge requirements
- quality assurance (QA) audit.

Commissioning schedule must include:

- system certification
- check for foreign material
- containment
- leak check
- operational
- pumping
- system defects
- system functions as per design
- ventilation
- odour control
- WHS compliance.

Operation and maintenance manual may include:

- as installed drawings
- certification documentation
- emergency procedures
- results of commissioning test
- maintenance schedules
- manufacturer brochures and technical information
- odour control
- WHS requirements
- ventilation.

Custom Content Section

Not applicable.
CPCPDR2021A Locate and clear blockages

Modification History
Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPDR2011A

Unit Descriptor
This unit of competency specifies the outcomes required to locate and clear blockages to sanitary plumbing and drainage with the use of mechanically operated drain clearing machines and attachments, closed circuit television (CCTV) and manually operated drain cleaning tools and equipment where required.

Application of the Unit
This unit of competency supports development of skills to identify and clear common plumbing system blockages using a range of specialist equipment.
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained from job supervisor.
   1.2 Work health and safety (WHS) and environmental requirements associated with locating and clearing blockages are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient locating and clearing of blockage.

2 Locate and clear blockage.
   2.1 Section containing blockage is located and isolated and its material identified.
   2.2 Blockage clearing equipment is selected according to the job.
   2.3 Where necessary, mechanical drain clearing equipment is assembled and used according to manufacturer instructions.
   2.4 Blockage is cleared without causing damage to pipework and fittings.
   2.5 Pipework is tested to confirm blockage is cleared from pipe system.
2.6 Where required, authorities are advised of work completion.

2.7 *Sustainability principles and concepts* are applied throughout the locating and clearing process.

3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job.

3.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

3.3 *Information* is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to locate and clear blockages, such as tree roots and other refuse, from sanitary plumbing, water and sewerage pipe installations and drainage and roof installations using:
  - mechanically operated drain clearing machines and attachments
  - manually operated drain cleaning tools and equipment
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics of different pipes, fittings and fixture supports, including fixing and joining techniques
• correct materials handling processes
• effective isolation processes and procedures
• job safety analysis (JSA) and safe work method statements (SWMS)
• mechanical and hydraulic principles for clearing blockages
• processes of clearing blockages
• properties of water, including pressure and flow rates
• relevant statutory requirements
• SI system of measurements
• workplace and equipment safety requirements
**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to locate and clear blockages
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- locating and clearing blockages from drainage pipework using both manual tools and mechanical equipment, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location and clearance process
  - correct selection and use of appropriate tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

### Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken
at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - blockage clearance tools and equipment
  - dangerous materials
  - identifying and testing for electrical hazards
  - other machines
  - recently filled trenches
  - services
  - surrounding structure and facilities
  - traffic control
  - trip hazards
• work site visitors and the public
• working in confined spaces
• working in proximity to others
• use of tools and equipment
• workplace environment and safety
• use of firefighting equipment
• use of first aid equipment.

**Environmental requirements** cover water quality management and may include:

• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:

• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:

• hacksaw
• hand and power tools
• heating equipment
• manually operated drain cleaning, including plungers and rods
• measuring equipment
• mechanically operated drain clearing machines and attachments, including the use of a sanitary snake
• pipe cameras
• pipe locating equipment
• plungers
• rods.

**Materials** may include:

• cast iron pipework
• concrete
• high density polyethylene (HDPE)
• unplasticised polyvinyl chloride (PVC-U)
• vitrified clay
• other approved materials.
Sustainability principles and concepts:
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - effective water use
  - containment and correct disposal of waste.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job plans
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to locating and clearing blockages
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1 Prepare for work.  
1.1 Plans, drawings and specifications are obtained.
1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing domestic treatment plants are adhered to throughout the work.
1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.
1.6 Work area is prepared to support efficient installation of domestic treatment plants.

2 Identify installation requirements.  
2.1 Position of domestic treatment plant is determined according to plans and specifications and site requirements, and does not cause damage or interference to surrounding structures or services.
2.2 Design and capacity of plant are confirmed to comply with relevant Australian standards and requirements of regulatory authorities, the installation and the site.
2.3 Quantity and type of *materials* required are calculated from plans, drawings and specifications.
2.4 Materials are ordered and checked for compliance with docket and order form, and for acceptable condition.

3 Install domestic treatment plant.  
3.1 Size and location of excavation are marked out to comply with plans, drawings and specifications, installation and site requirements.
3.2 Site is excavated and preparation for installation is undertaken according to installation requirements for the plant, plans, permits and site requirements, ensuring minimal damage to surrounding structures or environment.
3.3 Domestic treatment plant is installed and secured in specified position to prevent movement or damage to plant in compliance with requirements of responsible authority for the installation and inspection of domestic treatment plants.

3.4 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

3.5 Plant is filled with water to prevent flotation as required.

3.6 Excavation is backfilled to specifications.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 **Information** is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - correctly install an approved prefabricated domestic treatment plant
  - excavate plant site for installation purposes
  - identify and accurately report to appropriate personnel faults in tools, equipment or materials

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and jointing techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- load lifting and handling procedures
- principles and techniques of effluent treatment and disposal
- processes for accessing information and for calculating material requirements
- regulations and requirements of regulatory authorities regarding effluent disposal and the installation of domestic treatment plants
- SI system of measurements
- standards applicable to the installation
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install a domestic treatment plant
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, marking out, planning work and installing an approved domestic treatment plant, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken
at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control and hazardous materials and substances
- other machines
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- recently filled trenches
- safe operating procedures, including recognising and preventing hazards associated with:
  - dirt mounds
  - electricity
  - excavation equipment and plant
  - pits
  - poles
  - surrounding structure and facilities
  - trip hazards
- underground services
- uneven and unstable terrain
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- traffic control
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

Environmental requirements cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:
- excavation plant and equipment
- hand and power tools
- ladders
- lifting and load shifting equipment
- manual excavation equipment
- measuring equipment.

Materials may include:
- polymer
- concrete
- other approved materials.

Sustainability principles and concepts:
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - disposing of waste material to ensure minimal environmental impact
• selecting material to ensure minimal environmental impact
• using and recycling material efficiently
• using energy and water efficiently.

**Information** may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing domestic treatment plants
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Unit Sector(s)**

CPCPDR2023A Maintain effluent disinfection systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPDR2013A

Unit Descriptor
This unit of competency specifies the outcomes required to maintain chlorine disinfection systems for domestic treatment plants.

Application of the Unit
This unit of competency supports development of skills to maintain a range of effluent treatment systems.
Site location for work application may be domestic and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) *requirements*, including those related to electrical safety, and *environmental requirements* associated with maintaining effluent disinfection systems are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient maintenance of the effluent disinfection system.

2 Identify system requirements.
   2.1 Where required, maintenance approval is submitted to regulatory authorities according to their requirements.
   2.2 Site is inspected to confirm compliance with standards and authorities' requirements for effluent drainage systems.
   2.3 Detention capacity, effluent flow and effluent disinfection flow in the contact chamber are checked for compliance with regulatory authorities' requirement for effluent disinfection.
   2.4 Quantity and type of materials required are calculated from design drawings and specifications in compliance with standards, local authorities' and manufacturer
requirements, and job plans and specifications.

2.5 Materials are identified, ordered and collected according to workplace procedures.

2.6 Materials are checked for compliance with docket and order form, and for acceptable condition.

2.7 Sustainability principles and concepts are applied throughout the maintenance process.

3 Maintain effluent disinfection system.

3.1 System is maintained according to standards and authorities’ and manufacturers’ requirements to ensure effluent is thoroughly mixed, discharge meets treatment requirements and access is maintained.

3.2 Effluent is tested for total chlorine, and dosage rate is adjusted to achieve the levels and stability required by standards and regulatory authorities.

3.3 Inspection chamber is returned to normal operation.

3.4 Relevant authorities are advised of the completion of the work and of any continuing inspection and maintenance requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation, including advice of completion and subsequent inspection and maintenance requirements of the system, is completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- Literacy skills to:
  - complete documentation, including advice of completion of work and continuing inspection and maintenance requirements
  - complete other relevant workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - submit request for maintenance approval

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technical skills to maintain an effluent disinfection system for the treatment of secondary effluent in a domestic treatment plant or installations identified by regulatory authorities as requiring an effluent disinfection system

- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Inspection and assessment procedures for effluent disinfection systems
• job safety analysis (JSA) and safe work method statements (SWMS)
• principles of drainage design
• principles of effluent chlorine disinfection and the operation of effluent chlorine disinfection systems, including their adjustment to meet necessary output measures
• processes for accessing information and for calculating material requirements
• relevant statutory and authorities’ requirements related to installing effluent disinfection systems
• SI system of measurements
• standards applicable to the installation
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to maintain effluent disinfection systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, demonstrating the maintenance procedure for an effluent disinfection system for a domestic treatment plant, ensuring:
  - application of sustainability principles and concepts throughout the maintenance process
  - correct identification of maintenance requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and
practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management
- dosage rates of chemicals carried out according to
manufacturers’ specifications
• safe handling and storage of chemicals.

**Quality assurance requirements**
may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment**
may include:
• hand and power tools
• levelling equipment
• lifting equipment
• measuring equipment
• testing equipment.

**Materials**
may include:
• concrete effluent disinfection systems
• fibreglass effluent disinfection systems
• other approved materials.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient water usage
  • handling, storage and correct disposal of waste
• safe handling and storage of chemicals.

**Information**
may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
- plumbing regulations
- relevant Australian standards
- safe work procedures relating to the maintenance of effluent disinfection systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPDR2024A Install stormwater and sub-soil drainage systems

Modification History
Prerequisite unit updated plus minor changes to unit
Not equivalent to CPCPDR2014A

Unit Descriptor
This unit of competency specifies the outcomes required to install stormwater and sub-soil drainage systems to an approved point of discharge.

Application of the Unit
This unit of competency supports development of skills for the installation of stormwater and underground drainage systems.
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

1. **Prepare for work.**
   - 1.1 Plans and specifications are obtained.
   - 1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing stormwater and sub-soil drainage systems are adhered to throughout the work.
   - 1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   - 1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   - 1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.
   - 1.6 Work area is prepared to support efficient installation of the stormwater and sub-soil drainage system.

2. **Determine installation requirements.**
   - 2.1 Position of installation is determined according to plans, specifications and site requirements, including *legal point of discharge*.
   - 2.2 Quantity and type of materials required are calculated from design drawings and specifications and comply with relevant Australian standards, local authorities’ requirements and job plans and specifications.
   - 2.3 *Materials* are identified, ordered and collected according to workplace procedures.
   - 2.4 Materials are checked for compliance with docket and order form, and for acceptable condition.

3. **Install stormwater and sub-soil drainage.**
   - 3.1 Size and location of excavation are marked out to comply with plans and specifications, and installation and site requirements.
   - 3.2 Site is excavated according to plans and specifications, site requirements and relevant Australian standards, ensuring minimum damage to surrounding structures or environment.
3.3 Pipework, and stormwater and sub-soil drainage system are installed according to plans and specifications, site requirements or job instructions, and relevant Australian standards, with consideration given to existing pipework and other services.

3.4 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

3.5 Installation is tested to comply with relevant Australian standards and relevant **statutory and regulatory authorities’** requirements.

3.6 Inspection openings and covers are fitted according to relevant Australian standards and job specifications.

3.7 Excavation is back-filled according to relevant Australian standards and job specifications.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 **Tools and equipment** are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 **Information** is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install a drainage system to take stormwater from a downpipe or surface collection pit, and groundwater to a legal point of discharge
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and jointing techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
• process of installing stormwater and sub-soil drainage systems
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory and authorities’ requirements related to installing stormwater and sub-soil drainage systems
• SI system of measurements
• standards applicable to the installation
• water and air test systems and procedures
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to set out, install and test stormwater and sub-soil drainage systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing a stormwater and sub-soil drainage system, including:
  - a stormwater drain which is to connect from a downpipe to an approved point of discharge
  - a subsoil drain which is to connect to a disposal and collection pit
- both drains are to be at least 4 metres in length, ensuring:
  - applying sustainability principles and concepts
  - correctly identifying location, design and details of proposed installation
  - correctly selecting and using appropriate processes, tools and equipment
  - completing all work to specification
  - complying with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and
the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:
• handling of materials
• hazard control
• hazardous materials and substances
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
  • dirt mounds
  • electricity
  • excavation equipment and plant
  • hazardous materials
  • other machines
- pits
- poles
- recently filled trenches
- surrounding structure and facilities
- traffic control
- trip hazards
- underground services
- uneven and unstable terrain
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Legal point of discharge** may be:

- gutter
- on-site storage tank or disposal pit
- stormwater drain or easement
- sub-soil distribution system or soak well.

**Materials** may include:

- unplasticised polyvinyl chloride (PVC-U), reinforced concrete, cast iron and vitreous clay pipes
- other approved materials.
Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - efficient and legal point of water discharge
  - efficient energy and water use
  - efficient use and recycling of material
  - selecting appropriate components to ensure minimal environmental impact.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- compression cutters
- dropsaws
- files
- grinders
- hacksaws
- hand and power tools
- hand excavating tools
- levelling equipment
- measuring equipment
- mechanical excavating equipment
- testing equipment
- trench shoring equipment.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
- WHS and environmental requirements
- plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing stormwater and sub-soil drainage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPDR2025A Drain work site

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPDR2015A

Unit Descriptor
This unit of competency specifies the outcomes required to remove water from a work site, either temporarily or permanently, through stormwater and sub-soil drainage systems. It includes the installation of submersible and non-submersible type pumps, suitable for pumping unscreened roof water, sub-soil water and surface water.

Application of the Unit
This unit of competency supports development of skills for draining work sites before and during plumbing work. Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with draining a work site are adhered to throughout the work, including electrical safety.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient draining of the work site.

2 Identify installation requirements.
   2.1 Proposed location of stormwater connection points, sumps, wells and *pumps* are determined from plans and specifications.
   2.2 Quantity and type of materials and equipment required are calculated from design drawings and specifications and comply with standards and local authorities’ requirements.
   2.3 *Materials* and equipment are identified, ordered and collected according to workplace procedures.
   2.4 Materials and equipment are checked for compliance with docket and order form, and for acceptable condition.
2.5 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

3 Prepare site.  

3.1 Site is prepared to comply with plans and specifications, installation requirements and consideration for the location of existing services.

3.2 Site is prepared according to plans and specifications, site requirements and standards, ensuring minimum damage to surrounding structures and environment.

3.3 Sedimentation controls are constructed and positioned according to statutory requirements.

4 Install drainage equipment.  

4.1 Sumps and/or wells are installed at specified levels and locations.

4.2 Inlet and discharge points are prepared according to plans, specifications, manufacturer requirements and site-specific drainage requirements.

4.3 Appropriate pumping equipment is positioned in specified suitable location.

4.4 Pipework and/or hoses are connected and installed according to manufacturer requirements.

5 Operate drainage system.  

5.1 Pumps are activated to lower water level to specifications.

5.2 Pump control system is adjusted to meet specification requirements.

5.3 Pumps are maintained according to manufacturer specifications and workplace requirements.

6 Clean up.  

6.1 Ground area is restored, and work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

6.2 **Tools and equipment** are cleaned, checked, maintained and stored according to manufacturer recommendations.
and workplace procedures.

6.3 *Information* is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to complete workplace documentation
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to remove water from a work site, which may be a trench, pit or well, using a pump
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- characteristics of stormwater installations, including capacity and installation procedures
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- positioning and construction of sedimentation and scouring controls
- principles of drainage and installation processes
- process of draining a site
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relevant statutory and authorities’ requirements related to draining work sites
- SI system of measurements
- standards applicable to the work
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to drain a work site
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, draining water from a pit, trench or excavation containing water to a depth of at least half a metre, using a submersible or non-submersible pump; the site must remain effectively drained for the duration of the job, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dangerous materials
  - dirt mounds
  - identifying and testing for electrical hazards
  - other machines
  - pits
  - plant and equipment
• power poles
• recently filled trenches
• site drainage tools
• surrounding structure and facilities
• traffic control
• trees
• trip hazards
• underground services
• uneven and unstable terrain
• work site visitors and the public
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• use of tools and equipment
• workplace environment and safety.

**Environmental requirements**
water quality management and may include:

• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements**
may include:

• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Pumps**

• may include:
  • sludge pumps
  • submersible
  • surface
  • vacuum
  • pump installation may be for temporary or permanent drainage.

**Materials**
may include:

• fittings and jointing
• flexible pipes
• polymer
• other approved materials.
Sustainability principles and concepts:
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - correct positioning and construction of sedimentation and scouring controls according to relevant authorities
  - correct disposal of discharge according to relevant authorities
  - recycling of discharge water where appropriate.

Tools and equipment may include:
- hand and power tools
- manual and mechanical excavation equipment
- measuring and levelling equipment
- pumps
- trench shoring equipment.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to the drainage of work sites
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPDR2026A Install prefabricated inspection openings and enclosures

Modification History
Prerequisite unit updated plus minor changes to unit
Not equivalent to CPCPDR2016A

Unit Descriptor
This unit of competency specifies the outcomes required to install prefabricated inspection openings and enclosures.

Application of the Unit
This unit of competency supports development of inspection access installation. Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing prefabricated inspection openings and enclosures are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of prefabricated inspection openings and enclosures.

2 Identify installation requirements.

2.1 Location of the installation is determined, according to plans, specifications and site requirements.

2.2 Quantity and type of *materials* required are calculated from design drawings and specifications and comply with local authorities’ requirements.

2.3 Quantity and type of materials required are calculated from plans, drawings and specifications.

2.4 Materials are ordered and checked for compliance with docket and order form, and for acceptable condition.
3 Install prefabricated inspection openings and enclosures.

3.1 Site and location of the excavation are marked according to plans and specifications, ensuring existing services are not disturbed.

3.2 Site is excavated and prepared for installation according to plans, specifications and regulatory authorities' requirements, with minimal damage to surrounding structures or the environment.

3.3 Prefabricated inspection opening and enclosure are installed according to plans, specifications and regulatory authorities' requirements.

3.4 *Sustainability principles and concepts* are applied throughout the installation process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to workplace and regulatory authorities' requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install a prefabricated inspection opening and enclosure in a drainage system, including the connection of inlet and outlet pipes
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of pipe fittings and fixture supports, including fixing and jointing techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
• process of installing prefabricated inspection openings and enclosures
• relevant statutory and authorities’ requirements related to installing prefabricated inspection openings and enclosures
• SI system of measurement
• sources of information and processes for calculating material requirements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to set out, assemble, install and test prefabricated inspection openings and enclosures
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing an approved prefabricated inspection opening or enclosure, including the connection of the inlet and outlet pipes, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dangerous materials
  - dirt mounds
  - electricity
  - other machines
  - recently filled trenches
  - surrounding structure and facilities
  - traffic control
- trip hazards
- underground services
- use of tools, plant and equipment
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- chain blocks
- forklifts
- hand and power tools
- hand excavation tools
- hand trolleys
- hoists and jacks
- levelling equipment
- lifting and load shifting equipment, which may also include mechanical excavation equipment
- measuring equipment
- rollers
- trench shoring equipment
- water testing equipment.

**Materials** may include:
- concrete or polymer prefabricated inspection openings and enclosures
- other approved materials.
Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing prefabricated inspection openings and enclosures
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPDR3021A Plan layout of a residential sanitary drainage system

Modification History
Prerequisite unit updated plus minor changes to unit
Not equivalent to CPCPDR3011A

Unit Descriptor
This unit of competency specifies the outcomes required to plan the layout of sanitary drainage systems for residential buildings.

Application of the Unit
This unit of competency supports development of planning skills for sanitary systems. Site location for application of the design will be domestic, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  1.1 *Information,* plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with planning the layout of sanitary drainage systems are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 *Tools and equipment,* including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient planning of sanitary drainage systems’ layouts.

2 Plan system layout.  2.1 Site inspection is undertaken to determine job requirements.

2.2 Quantity, location and type of fixtures are determined from design drawings, plans and elevations.

2.3 Layout of sanitary drainage system is planned according to plans and relevant Australian standards.

2.4 *Sustainability principles and concepts* are applied to the plan.

2.5 *Materials* and *fixtures* required are determined from the proposed design.
2.6 Plans are recorded according to workplace requirements.

3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

3.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

3.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - confirm job specifications and client requirements
  - communicate with others to ensure safe and effective work practices
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to interpret a design to plan the layout of a sanitary drainage system for residential buildings, connecting to the authority's sewer or on-site disposal system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- application of various sanitary fixtures and appliances
- characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques
- design concepts and performance measures for sanitary drainage installations
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of drainage design
- process of planning the layout of sanitary drainage systems
- properties and characteristics of sewage, including temperature implications and
discharges
• pumped discharges
• relevant statutory requirements related to sanitary drainage systems
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to planning the layout of a sanitary drainage system for a residential type building
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout of a sanitary drainage system for a two-storey building requiring connection of five points, including a stack from the second floor to an approved point of discharge, or on-site disposal system, ensuring:
  - application of sustainability principles and concepts when planning the layout of a residential draining system
  - correct identification of details of proposed layout
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information may include:

• charts and hand drawings
• diagrams, sketches and graphics
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• maps
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
• plumbing regulations
• relevant Australian standards
• safe work procedures relating to the design of sanitary drainage systems
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Workplace health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials
• hazard control
• protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
  • dangerous materials and hazardous substances
  • electricity
  • services
  • surrounding structure and facilities
  • trip hazards
  • work site visitors and the public
  • working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• use of tools and equipment
• workplace environment and safety.

**Environmental requirements** may include:

• clean-up protection
• waste management.

**Quality assurance requirements** may include:

• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.
Tools and equipment may include:
- approved testing equipment
- chain blocks
- forklifts
- hand and power tools
- hand excavation tools
- hand trolleys
- hoists and jacks
- levelling equipment
- lifting and load shifting equipment
- measuring equipment
- mechanical excavation equipment
- rollers
- trench shoring equipment.

Sustainability principles and concepts:
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

Materials may include:
- drawing instruments
- measuring equipment and plans, including building plans
- sanitary plans and drainage plans.

Fixtures may include:
- all approved residential fixtures in AS/NZS3500 National plumbing and drainage.

CPCPDR3022A Install below ground sanitary drainage systems

Modification History
Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPDR3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install below ground sanitary drainage systems for sewage and waste discharge from sanitary fixtures to the authorities’ approved point of connection.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria  Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing sanitary drainage systems are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.
   1.6 Location of underground services is identified.
   1.7 Work area is prepared to support efficient installation of sanitary drainage systems.

2. Identify installation requirements.
   2.1 Quantity and type of *materials* required are calculated from existing installations, plans, specifications and site inspections.
   2.2 Allowances for fabrication and assembly are correctly determined and transferred.
   2.3 Materials and equipment are identified, ordered and collected according to workplace procedures.
   2.4 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.
2.5 *Sustainability principles and concepts* are applied throughout the installation process.

3 Install sanitary drainage systems.

3.1 Pipework is set out according to plans and specifications, site requirements or job instructions, with consideration given to the location of existing services and the *authority’s approved point of connection*.

3.2 Pipework is installed according to plans, specifications, standards and workplace procedures and without damage to surrounding environment, existing pipework or other services.

3.3 Connections for alterations, additions or repairs to existing systems are made according to standards and manufacturer specifications.

3.4 Installation is checked for compliance with design drawings, specifications, site requirements, standards and authorities' requirements.

3.5 Installation is *tested* to comply with standards and relevant authorities' requirements.

4 Clean up.

4.1 Installation is backfilled according to standards, and work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - install and test below ground sanitary drains
  - transfer sewage from sanitary fixtures to a sewage authority's point
  - make alterations to existing sanitary drainage
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- hazardous materials
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials relevant to sanitary drainage
- principles of drainage design
- process of installing and testing sanitary drains
- relevant statutory and authority requirements related to installing and fitting off sanitary fixtures
- SI system of measurements
- sources of information and processes for calculating material requirements
- standards applicable to the installation
- water and air test systems and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test sanitary drainage systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing and testing a below ground sanitary drain to connect a bathroom, WC, kitchen, laundry and soil or waste stack (to a minimum of 30 fixture units), where the drain is to be at least 10 metres long and terminate at ground level
- cutting in a branch to connect a new water closet and fixture, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of the proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - identifying and testing for electrical hazards
  - dirt mounds
  - other machines
  - recently filled trenches
  - services
  - surrounding structure and facilities
- traffic control
- trench support
- trees and roots
- trip hazards
- uneven and unstable terrain
- work site visitors and the public
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- bending equipment
- chain blocks
- compression cutters
- dropsaws
- forklifts
- grinders
- hacksaws
- hand and power tools
- hand excavation tools
- hand trolleys
- heating equipment
- hoists and jacks
- levelling equipment and threading
- lifting and load shifting equipment
- measuring equipment
- mechanical excavation equipment
• pipe relining equipment
• rollers
• trench shoring equipment.

**Materials** may include:
• fixtures, which may include all approved residential fixtures as identified in AS/NZS3500 National plumbing and drainage
• polymer pipes and fittings
• other approved materials.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
  • may include:
    • efficient use of material
    • efficient use of water
    • selecting appropriate components and material to ensure minimal environmental impact
    • consideration given to relocation of excess soil.

**Authority’s approved point of connection** may include:
• boundary traps
• non-boundary traps
• on-site treatment plant.

**Testing** may include:
• air, water or vacuum testing.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job plans
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing sanitary drainage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPDR3023A Install on-site disposal systems

Modification History
Prerequisite unit updated plus minor changes to unit
Not equivalent to CPCPDR3013A

Unit Descriptor
This unit of competency specifies the outcomes required to install an on-site effluent disposal system from a domestic treatment plant.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.  

1.1 Plans and specifications are obtained. 

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with the installation of on-site disposal systems are adhered to throughout the work.  

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.  

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.  

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.  

1.6 Work area is prepared to support efficient installation of the on-site disposal system.  

2 Identify work requirements.  

2.1 Position of on-site disposal system is determined according to plans, specifications, authorities’ requirements and relevant Australian standards.  

2.2 Quantity and type of *materials* required are calculated from design drawings and specifications in compliance with relevant Australian standards and local authorities’ requirements.  

2.3 Materials are identified, ordered and collected according to workplace procedures.  

2.4 Materials are checked for compliance with docket and order form, and for acceptable condition.  

3 Install on-site disposal system.  

3.1 Set out is checked for compliance with plans, specifications and authorities’ requirements.  

3.2 Underground services within excavation area are identified and marked.  

3.3 Site is excavated according to requirements for system, plans, permits and site requirements, ensuring minimum damage to surrounding structures or environment.
3.4 *On-site effluent disposal* system is installed according to plans, specifications, relevant Australian standards and regulatory requirements.

3.5 *Sustainability principles and concepts* are applied throughout the installation process.

3.6 System is checked for compliance with relevant Australian standards and regulatory authorities’ requirements and correct operation.

4 Clean up.  

4.1 Excavation is backfilled to specifications, work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to responsible authority and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install perforated pipe in an absorption trench to act as an on-site effluent disposal system from a septic sewerage tank
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Australian standards applicable to the installation
- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- principles and techniques of effluent treatment and disposal
- principles of drainage design
- processes for accessing information and for calculating material requirements
- regulations and requirements of regulatory authorities regarding effluent disposal and the installation of on-site disposal systems
- SI system of measurements
- soil testing requirements and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install on-site disposal systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, determining the requirements for installing:
  - a transpiration or an absorption trench, with the trench being at least three metres in length, running from a distribution pit or outlet of a domestic treatment plant; or a surface or sub-surface irrigation on-site disposal system, ensuring:
    - application of sustainability principles and concepts throughout the installation of on-site disposal systems
    - correct identification of location, design and details of proposed installation
    - correct selection and use of appropriate processes, tools and equipment
    - completing all work to specification
    - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:

• hand and power tools
• levelling equipment
• manual and mechanical excavation equipment
• measuring equipment.

**Materials** may include:

• aggregates
• geotextiles or other approved materials
• perforated pipes
• piping
• sprinklers and fittings.

**On-site effluent disposal** may include:

• absorption
• absorption and transpiration
• absorption and transpiration bed
• domestic treatment plants, including domestic treatment plant or simulated receptacle
• mound system
• irrigation system.
**Sustainability principles and concepts:**

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

**Information may include:**

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

| 1  | Prepare for planning. | 1.1 | Nature and scope of planning task are identified and confirmed. |
|    |                      | 1.2 | **Work health and safety** (WHS) and **environmental requirements** associated with the installation of sanitary drainage systems are adhered to throughout the work. |
|    |                      | 1.3 | Work is organised and sequenced in conjunction with others involved in or affected by work. |
|    |                      | 1.4 | **Tools and equipment** required for planning, sizing and documenting the layout of sanitary drainage systems, including personal protective equipment, are selected and checked for serviceability. |
|    |                      | 1.5 | Work area in which the planning process is to be conducted is prepared. |
| 2  | Identify system requirements. | 2.1 | **Information** and specifications for the required work are obtained and confirmed, if necessary by site inspection. |
|    |                      | 2.2 | Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work. |
|    |                      | 2.3 | Quantity, location and type of take-off points and **legal points of discharge** are determined from development drawings, plans and specifications. |
|    |                      | 2.4 | System is sized according to relevant Australian standards and **statutory and regulatory authorities’** and workplace requirements. |
|    |                      | 2.5 | **Sustainability principles and concepts** are observed. |
when preparing for and undertaking work process.

3 Design system layout.

3.1 Sanitary drainage system is designed according to development plans, specifications, relevant Australian standards and workplace procedures.

3.2 *Materials* required are specified and optimised from proposed design according to relevant Australian standards.

3.3 Plans are recorded according to regulatory authorities’ and workplace requirements.

4 Restore work area.

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Information is accessed and documentation, including work backup, is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation, including recording written plans and completing other relevant workplace documentation, such as work backups
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
    - regulations and relevant Australian standards
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - organise and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to interpret plans and specifications of a multi-unit development to plan, size and document layout of required sanitary drainage system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Australian standards applicable to sanitary drainage systems
- characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques
- computer use, including computer-aided design software for plumbing and construction systems
- design concepts and performance measures for sanitary drainage systems
- handling of hazardous waste
- how to find and access necessary specifications and related information
- infectious diseases relevant to working with plumbing systems
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of drainage
- process of planning, sizing and documenting layout of sanitary drainage systems
- process of treating trade waste to acceptable levels for discharge
- properties and characteristics of sewage, including temperature implications, trade waste requirements and discharge levels
- relevant statutory requirements related to planning, sizing and documenting sanitary drainage systems
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to planning, sizing and documenting the layout of a sanitary drainage system
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the development plans and specification, designing, sizing and documenting the layout details of a sanitary drainage system for a residential unit development comprising at least five two-storey (Class 1) units; and a commercial (Class 6) building, incorporating trade waste to an approved point of discharge or on-site disposal system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of details of the plan
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards, and organisational quality procedures and processes
  - correct identification of trade waste and appropriate treatment processes
  - communicating and working effectively and safely with others.

Context of and specific

This competency is to be assessed using standard and
resources for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Workplace health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements**
- clean-up protection
- stormwater protection
- waste management.

**Tools and equipment**
- computer-aided design (CAD) software
- drawing instruments
- measuring equipment.

**Information**
- charts and hand drawings
- job drawings
- material safety data sheets (MSDS)
- memos
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - National Construction Code
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including AS/NZS3500 National plumbing and drainage: Part 2 Sanitary plumbing and drainage – Acceptable solutions
- safe work procedures relating to planning, sizing and documenting the layout of sanitary drainage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Legal points of discharge**
- gravitational sewer
- on-site disposal system
- vacuum sewer.

**Statutory and regulatory**
- commonwealth, state or territory, and local authorities
Authorities include: administering applicable Acts, regulations and codes of practice.

Sustainability principles and concepts:
• cover the social, economic and environmental use of resources to meet current and future needs
• may include:
  • correctly handling hazardous materials
  • incorporating efficient use of material into the design, including recycling material
  • using efficient design principles throughout to minimal environmental impact
  • using energy and water efficiently.

Materials may include:
• drafting materials
• relevant development plans and specifications.

Unit Sector(s)

Unit sector: Plumbing and services

Custom Content Section
Not applicable.
CPCPDR4012B Design and size stormwater drainage systems

Modification History
Minor editorial changes to performance criteria, required skills and knowledge, range statement and critical aspects
Equivalent to CPCPDR4012A

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document the layout of surface and sub-soil stormwater drainage systems up to legal points of discharge. It covers the preparation for the planning, identification and confirmation of system specifications and requirements, the planning of the system layout and work finalisation processes, including records and documentation.

Application of the Unit
Site location for application of the plan will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for planning.

1.1 Nature and scope of the planning task are identified and confirmed.

1.2 Work health and safety (WHS) and environmental requirements associated with installation of stormwater drainage systems are adhered to throughout the work.

1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work.

1.4 Tools and equipment required for planning, sizing and documenting the layout of stormwater drainage systems, including personal protective equipment, are selected and checked for serviceability.

1.5 Work area in which planning process is to be conducted is prepared.

2 Identify system requirements.

2.1 Information and specifications for required work are obtained and confirmed, if necessary by site inspection.

2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.

2.3 Design criteria are determined from relevant Australian standards and proposed method of installation.

2.4 Stormwater catchment and flow requirements are identified.

2.5 Stormwater pipe size is determined to conform to regulatory authorities’ main or street kerb and relevant Australian standards.
2.6 Stormwater retention pit size, silt and flotation arrestor pit size, rainwater tank size and stormwater overflow discharge locations are determined to suit job requirements.

2.7 System type is selected to suit collection and disposal requirements.

2.8 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

### 3 Design system layout.

3.1 Layout of stormwater drainage system is planned according to plans, specifications, relevant Australian standards and workplace procedures.

3.2 Stormwater disposal system is specified according to job requirements.

3.3 *Materials* required are specified and optimised from proposed design according to relevant Australian standards.

3.4 Plans are recorded according to *statutory and regulatory authorities*’ and workplace requirements.

### 4 Restore work area.

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Information is accessed and documentation, including work backup, is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - identify requirements, including system requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
    - regulations and relevant Australian standards
  - record written plans and complete other relevant workplace documentation, including work backups
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - organise and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to interpret plans and specifications to plan, size and document the layout of a surface and sub-soil stormwater drainage system, incorporating downpipes, pits, tanks and overflow discharge
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
• Australian standards applicable to stormwater drainage systems
• catchment, rainfall intensity and run-off calculations
• characteristics and application of different pipe systems, including their fittings and fixture supports and fixing and joining techniques
• design concepts and performance measures for stormwater and sub-soil drainage systems
• determining levels
• job safety analysis (JSA) and safe work method statements (SWMS)
• principles of water flow and stormwater and sub-soil drainage
• process of planning, sizing and documenting the layout of stormwater and sub-soil drainage systems using relevant sources of information
• relevant statutory requirements related to planning, sizing and documenting stormwater and sub-soil drainage systems
• SI system of measurements
• stormwater installation techniques
• use of computers and relevant computer-aided design (CAD) software
• water tank installation
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to planning, sizing and documenting the layout of a stormwater drainage system
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the development plans and specification, designing, sizing and documenting the layout details of a surface and sub-soil stormwater drainage system for a residential unit development comprising at least five two-storey (Class 1) units; and a commercial (Class 6) building, which includes drainage to the legal point of discharge to the external stormwater drainage network, ensuring:
  - application of sustainability principles and concepts
  - correct identification of plan details
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and
separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements**

Cover water quality management and may include:

• clean-up protection
• stormwater protection
• waste management.

**Stormwater drainage systems**

Will:

• be gravity, pumped and displacement operated
• terminate at point of connection with external stormwater drainage network, including:
  • disposal pit
  • easement
  • gutter
  • on-site storage tank
  • stormwater drain
  • sub-soil disposal system.

**Tools and equipment**

May include:

• CAD software
• drawing instruments
• ladders
• laser measuring devices
• measuring equipment.

**Information** relating to stormwater disposal plans may include:

• authority mains or kerb
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• maximum discharge rates allowed
• memos
• plans and sketches
• organisation work specifications and requirements
• possible locations of stormwater components
• regulatory and legislative requirements, particularly those pertaining to:
- National Construction Code
- WHS and environmental requirements
- plumbing regulations
- relevant Australian standards, including AS/NZS3500 National plumbing and drainage: Part 3 Stormwater drainage
- safe work procedures relating to planning, sizing and documenting the layout of stormwater drainage systems
- signage
- site relative levels
- stormwater flow rates
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Sustainability principles and concepts:**

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - correctly handling hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - harvesting rainwater
  - incorporating efficient use of material into the design, including recycling material
  - preventing environmental contamination
  - using efficient design principles throughout to minimal environmental impact
  - using energy and water efficiently.

**Materials** may include:

- drafting and drawing materials
- relevant plans and specifications.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering application Acts, regulations and codes of practice.

3.5 Plans are recorded according to statutory and regulatory authorities’ and workplace requirements.

4 Restore work area.

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Information is accessed and documentation, including work backup, is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete relevant workplace documentation, including work backups
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications and drawings
    - regulations and relevant Australian standards
  - record written plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - organise and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to interpret plans and specifications to design layout and operational details of a domestic treatment plant disposal system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Australian standards applicable to the treatment system
- design concepts and performance measures for domestic treatment plant disposal systems
• handling of hazardous waste
• infectious diseases
• job safety analysis (JSA) and safe work method statements (SWMS)
• principles of the assessment of land capability for application of effluent
• principles, techniques and characteristics of effluent treatment and disposal
• process of designing domestic treatment plant disposal systems
• properties and characteristics of landscape application areas with suitable plants and vegetation, including:
  • hardiness
  • high and low water requirements
  • maintenance requirements
  • native to the local area implications
  • phosphorus tolerance
• properties and characteristics of soil, including:
  • percentages of sand, silt and clay
  • absorption capacity implications
• relevant statutory and authorities’ requirements related to designing domestic treatment plant disposal systems
• SI system of measurements
• sources of information
• use of computers and relevant computer-aided design (CAD) software
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the design of domestic treatment plant disposal systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the development plans and specification, designing, sizing and documenting the layout of a treatment system for a domestic dwelling, which is compliant with current and relevant environmental and legislative requirements, ensuring:
  - identification, evaluation and incorporation of sustainability principles and concepts into the design
  - correct identification of plan details
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of planning task:**

- absorption may be by absorption trenches or transpiration beds
- disposal may be by absorption, spray or recycling
- process may be anaerobic or aerobic.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with: electricity
• hazardous materials and substances
• other machines
• surrounding structure and facilities
• trip hazards
• underground services
• use of tools and equipment
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Tools and equipment** may include:
• CAD software
• drawing instruments
• measuring equipment.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • National Construction Code
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards, including:
  • AS/NZS3500 National plumbing and drainage: Part 2 Sanitary plumbing and drainage
  • AS/NZ1547 On-site domestic wastewater
management
- safe work procedures relating to the design of domestic treatment plant disposal systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Sustainability principles and concepts:
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - efficient design principles used throughout to minimal environmental impact
  - no environmental contamination
  - efficient use of material incorporated into the design, including recycling of material
  - efficient energy and water use
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact.

Materials may include:
- drafting materials
- relevant plans and specifications.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

CPCPFS2021A Connect static storage tanks for fixed fire protection systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS2011A

Unit Descriptor
This unit of competency specifies the outcomes required to connect static storage tanks to fixed fire protection systems.

Application of the Unit
This unit of competency supports development of skills for connecting storage tanks to water services.
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications are obtained.
1.2 Workplace health and safety (WHS) and environmental requirements associated with connection of static storage tanks are adhered to throughout the work.
1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
1.5 Tools and equipment for connecting static storage tanks, including personal protective equipment, are selected and checked for serviceability.
1.6 Work area is prepared to support efficient connection of static storage tanks.

2 Identify installation requirements. 2.1 Materials required for the installation are determined from plans and specification.
2.2 Materials are selected that comply with standards and job specifications.
2.3 Quantities of materials required are calculated from plans.
2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.
2.5 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.
3 Install and test storage tank.

3.1 Storage tank and associated pipework are set out according to plans, specifications and job instructions.

3.2 Pipe supports and fixings, compliant with standards, are installed to plans and manufacturer specifications.

3.3 Tank, piping and materials are installed according to plans, specifications and standards.

3.4 Jointing systems are compliant with standards.

3.5 Installed system is subjected to pressure testing according to standards or job specification.

3.6 Test data is recorded in format required by job specifications and quality assurance procedures.

3.7 Installation is backfilled according to specifications.

3.8 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - plans and specifications
    - documentation from a variety of sources
  - record test results in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to determine system requirements, and install and test a water distribution system from a static storage tank to a fire protection system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- function and operation of a range of taps and valves
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• operation and components of fire sprinkler systems
• pressure test systems and procedures
• process of connecting static storage tanks
• processes for accessing information and for calculating material requirements
• relevant statutory and authorities’ requirements related to connecting static storage tanks
• SI system of measurement
• structural systems, building materials and building services
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to connect static storage tanks
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- relating the connection of static storage tanks to backflow protection competencies
- given the plans and specifications of a fire protection system, connecting and testing an approved static storage tank to a water distribution pipe system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements, design and details of the proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:
• Australian standards
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:
• chain blocks
• cutting and threading equipment
• elevated work platforms
• forklifts
• hand and mechanical excavation equipment
• hand and power tools
• hand trolleys
• hoists and jacks
• ladders
• lifting and load shifting equipment
• rollers
• scaffolds
• testing equipment
• trench shoring equipment
• welding equipment.

**Materials** may include:
• copper, brass, polymer or cement-lined cast iron pipes
• fibre glass, steel or polymer storage tanks
• galvanised and black steel pipes
• other approved pipes and materials.
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage
  - water usage
  - evaporation
  - silting of tank.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to connecting static storage tanks
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPFS2022A Install portable fire equipment

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS2012A

Unit Descriptor
This unit of competency specifies the outcomes required to install portable fire extinguishers, fire blankets and signage.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Prepare for work.**
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with the installation of portable fire equipment are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 *Tools and equipment* for installing portable fire equipment, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient installation of portable fire equipment.

2. **Identify installation requirements.**
   2.1 Portable fire extinguisher requirements, including *extinguishing agents* and *materials*, are identified from job design criteria and specifications.
   2.2 Portable fire equipment is ordered and collected according to workplace procedures.
   2.3 Portable fire equipment is checked for compliance with standards, docket and order form, and for acceptable condition.
   2.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3. **Install portable fire equipment.**
   3.1 Portable fire equipment is installed and commissioned to authorities' requirements, and plans and specifications.
   3.2 Supports, fixings and signage are installed according to plans, specifications and manufacturer instructions.
4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine requirements and install fire extinguishers, fire blankets and signage
  - install fixing to a range of building surfaces
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing and commissioning portable fire extinguishers
- deemed-to-satisfy provision of the National Construction Code (NCC) for extinguishers
• selection, location, installation and commissioning requirements, including travel distance for portable fire extinguishers and fire blankets as recommended in AS2444 Portable fire extinguishers and fire blankets – selection and location
• relevant statutory and authorities’ requirements related to installing portable fire equipment
• SI system of measurement
• structural systems, building materials and building services
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install portable fire equipment
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for an office complex requiring the installation and commission of water, carbon dioxide (CO2) and powder portable fire extinguishers, fire blankets and signage, installing the appliances, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirement, location and installation of the extinguishers
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• waste management.

**Quality assurance requirements** may include:
• Australian standards
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:
• hand and power tools.

**Extinguishing agents** for portable fire extinguishers may include:
• carbon dioxide gases
• dry chemical and chemical reaction suppression systems
• foam.

**Materials** may include:
• portable fire extinguishers
• supports and brackets.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient use of material
  • efficient energy retention
  • reusing waste water
  • selecting appropriate components to ensure minimal environmental impact.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- organisation work specifications and requirements
- plans, sketches and graphics
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing portable fire equipment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPFS3030A Design pre-calculated fire sprinkler systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS3010A

Unit Descriptor
This unit of competency specifies the outcomes required to design fire sprinkler systems using pre-calculated tables and charts.

Application of the Unit
Work will normally be performed in a design office environment. The design application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.  
1.1 Drawings and job specifications are obtained.  
1.2 Work health and safety (WHS) and environmental requirements associated with design and installation of fire sprinkler systems are adhered to throughout the work.  
1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.  
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.  
1.5 Tools, equipment and materials for the design of fire sprinkler systems, including personal protective equipment, are selected and checked for serviceability.  
1.6 Work area is prepared to support efficient design of fire sprinkler systems.

2 Identify design requirements.  
2.1 Relevant data is extracted from job specifications.  
2.2 Building classification and hazard ratings are established according to standards and other relevant regulations.  
2.3 Water supply needs are established and graphs are drawn for the automatic fire sprinkler system.

3 Design sprinkler system.  
3.1 Sprinkler system is designed according to job specifications, standards, manufacturer recommendations and water supply data.  
3.2 Pipework is sized to manufacturer specifications, standards and pre-calculated tables.  
3.3 Sprinkler heads are selected for appropriate size, spray pattern, temperature and finish.  
3.4 Sprinklers are spaced according to manufacturer specifications, standards and relevant regulations.  
3.5 Pipe layout drawings are prepared according to standards and workplace requirements.
3.6 Computations and other supporting evidence are appropriately documented to support design.

3.7 Fabrication sheets and material lists are prepared.

3.8 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

4 **Clean up.**

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 **Information** is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - document computations and other supporting evidence
  - prepare fabrication sheets, material lists and other relevant workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - collect design data, space sprinkler heads, size pipework using charts and tables, and arrange pipework
  - prepare layout drawings, fabrication sheets and material lists for the installation of the system

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
- function, specifications and operation of system components
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- process of designing fire sprinkler systems using pre-calculated charts and tables
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to designing and installing fire sprinkler systems
- SI system of measurement
- sources of information on performance characteristics of fire sprinkler systems, including theory underpinning pre-calculated charts and tables, and hydraulic calculations
- structural systems, building materials and building services
- technologies for fire sprinkler systems, measurements and drawings
- workplace design standards and safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to test and maintain automatic fire sprinklers
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for an office complex (requiring at least 15 sprinkler heads and two branches), using pre-calculated charts and tables, design a fire sprinkler system indicating the spacing of sprinkler heads, the size and arrangement of pipework to include layout drawings, fabrication sheets and material lists, ensuring:
  - application of sustainability principles and concepts
  - correct identification of the requirement, design and details of the proposed system
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and
practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control, including of electrical hazards
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements**

- Australian standards
may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:

- calculator
- computer design software
- design data
- design tables
- drawing and drafting equipment
- reference materials.

**Materials** may include:

- drafting materials
- plans.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy usage
  - efficient use of material
  - selecting appropriate components (sprinkler head, pump, etc.) to ensure minimal environmental impact.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- NFPA and Factory Mutual performance-based codes of practice
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
- plumbing regulations
- relevant Australian standards
- safe work procedures relating to designing fire sprinkler systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPFS3031A Fabricate and install fire hydrant and hose reel systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS3011A

Unit Descriptor
This unit of competency specifies the outcomes required to fabricate and install fire hydrant and hose reel systems.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Design drawings and job specifications are obtained from relevant authority.

1.2 Work health and safety (WHS) and environmental requirements associated with fabricating and installing fire hydrant and hose reel systems are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 Tools and equipment for fabricating and installing fire hydrant and hose reel systems, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient fabrication and installation of fire hydrant and hose reel systems.

2 Identify installation requirements. 2.1 System requirements are identified from job design criteria, specifications and standards.

2.2 Piping and materials are selected according to standards, design drawings, job specifications and authorities' requirements.

2.3 Below ground piping and materials are checked to ensure compliance with standards and authorities' requirements.

2.4 Required materials and equipment are identified, ordered
and collected according to workplace procedures.

2.5 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.

3 Fabricate, install and test system.

3.1 System is set out according to plans, specifications and job instructions.

3.2 Pipe supports and fixings are installed to plans and manufacturer specifications.

3.3 Piping and materials are installed according to design drawings, job specifications and standards.

3.4 Pipework is connected to the water source according to standards and authorities' requirements.

3.5 Piping system is tested according to standards and job specifications.

3.6 Test data is recorded in format required by job specifications and quality assurance procedures.

3.7 *Sustainability principles and concepts* are applied to installation process.

4 Clean up.

4.1 Work area is cleared and materials are disposed of, reused or recycled according to legislation, codes of practice and job specifications.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to fabricate, install and test fire hydrant pipework from a main, or branch into main, to a hose reel system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials and assemblies relevant to installation of fire hydrant and hose reel systems
- pressure test systems and procedures
- process of fabricating and installing fire hydrant and hose reel systems
- relevant statutory and authority requirements related to fabricating and installing fire hydrant and hose reel systems
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to fabricate and install fire hydrant and hose reel systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of a fire hydrant and hose reel system, installing a leak-free hydrant and hose reel system from an existing branch in a water supply, using approved materials to design criteria and standards, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.
Environmental requirements cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- chain blocks
- elevated work platform
- forklifts
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- levelling equipment
- lifting and load shifting equipment
- manual excavation equipment
- measuring equipment
- mechanical excavation equipment
- rollers
- scaffolds
- trench shoring equipment
- welding equipment.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - correct handling of hazardous materials
  - appropriate recycling of material
  - efficient water use
  - efficient energy retention
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure
minimal environmental impact.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
- safe work procedures relating to fabricating and installing fire hydrant and hose reel systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPFS3034A Install control valve assemblies, actuating devices and local alarms

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS3014A

Unit Descriptor
This unit of competency specifies the outcomes required to install control valve assemblies, actuating devices and local alarms for fire protection systems in commercial, industrial, residential and domestic situations.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained from relevant authority.

1.2 Work health and safety (WHS) and environmental requirements associated with installing control valve assemblies, actuating devices and local alarms are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 Tools and equipment for installing control valve assemblies, actuating devices and local alarms, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of control valve assemblies, actuating devices and local alarms.

2 Identify installation requirements.

2.1 System requirements are identified from job design criteria, specifications and standards.

2.2 Quantities of materials required are calculated from plans and specifications.

2.3 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with standards, docket and order form, and for
acceptable condition.

3 Install and test system components.

3.1 Components are set out according to plans, specifications and job instructions.

3.2 Pipe supports and fixings are installed to plans and manufacturer specifications.

3.3 Assemblies, devices, alarms, piping and materials are installed according to standards, plans and specifications.

3.4 Jointing systems are installed in compliance with standards.

3.5 Installed system is subjected to pressure testing according to standards, plans and specifications.

3.6 Test data is recorded in format required by job specifications and quality assurance procedures.

3.7 **Sustainability principles and concepts** are applied to installation process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 **Information** is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test control valve assemblies, actuating devices and alarms for an automated fire sprinkler system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- function and operation of a range of taps and valves
- job safety analysis (JSA) and safe work method statements (SWMS)
• materials relevant to installation of control valve assemblies, actuating devices and local alarms
• pressure test systems and procedures
• process of installing control valve assemblies, actuating devices and local alarms
• processes for accessing information and for calculating material requirements
• relevant statutory and authorities’ requirements related to installing control valve assemblies, actuating devices and local alarms
• SI system of measurement
• structural systems, building materials and building services
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test control valve assemblies, actuating devices and local alarms
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of an automated fire sprinkler system, installing and testing a control valve assembly, two actuating devices and an alarm to design criteria and standards, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context. 

Assessment is to comply with relevant regulatory or Australian standards' requirements. 

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and
practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• waste management.

**Quality assurance requirements** may include:
• Australian standards
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:
• cutting and threading equipment
• elevated work platforms
• hand and power tools
• ladders
• testing equipment
• welding equipment.

**Materials** may include:
• actuating devices
• control valve assemblies
• local alarms
• pipes or other approved materials.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient use of material
  • correct handling of hazardous materials
  • appropriate recycling of material
  • efficient water use
  • efficient energy use
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.
Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing control valve assemblies, actuating devices and local alarms
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPFS3036A Install special hazard systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS3016A

Unit Descriptor
This unit of competency specifies the outcomes required to install special hazard extinguishing systems, including decommissioning gaseous agent containers and actuation devices.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
All technicians performing work described in this unit that involves the handling of prescribed ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) extinguishing agents must hold an appropriate extinguishing agent handling licence (EAHL).

Pre-Requisites
CPCPCM2043A Carry out WHS requirements
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with installing special hazard extinguishing systems are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Knowledge and understanding of ODS and SGG legislative and industry requirements are applied to install activities for special hazard fire suppression systems.
   1.5 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.6 Tools and equipment for installing special hazard extinguishing systems, including personal protective equipment, are selected and checked for serviceability.
   1.7 Work area is prepared to support efficient installation of special hazard extinguishing systems.

4 Install and test special hazard systems.

4.1 System is set out according to drawings, specifications and job instructions.

4.2 Fixings are installed to plans and manufacturer specifications.

4.3 Pipe supports are compliant with standards, plans and specifications.

4.4 Pipes, fittings and components are installed according to plans, specifications and standards.

4.5 Piping system is subjected to pressure testing according to standards, plans and specifications.

4.6 Test data is recorded in format required by plans, specifications and authorities’ requirements.

4.7 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 *Information* is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test special hazard protection system consisting of an extinguishing agent, piping, actuating devices and sprinkler delivery
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- function and operation of system components
- hazard categories, classes of fire hazard, extinguishing agents and application methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based
codes of practice
- pressure test systems and procedures
- procedures for cylinder anchorage
- process of installing and testing special hazard systems
- relevant statutory and authorities’ requirements related to installing special hazard systems
- requirements for room ventilation and integrity
- SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test special hazard systems
- applying safety requirements throughout work sequence, including electrical safety and the use of personal protective clothing and equipment
- given the plans and system specifications of a special hazard fire suppression system, identifying the requirements and installing one special hazards fire suppression system (not prescribed ODS or SGG extinguishing agent), incorporating a high pressure carbon dioxide gas storage cylinder, connected by piping to a simple distribution system with one actuating device, to design criteria and standards, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirement, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment, including those for use with installed gaseous agent containers and actuation devices
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes, including ODS and SGG regulations, standards, order requirements and organisational quality procedures and processes
  - decommissioning installed gaseous agent
containers and actuation devices using
decommissioning guidelines
  • communicating and working effectively and
    safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and
authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards' requirements.

Resource implications for assessment include:
  • an induction procedure and requirement
  • realistic tasks or simulated tasks covering the
    minimum task requirements
  • relevant specifications and work instructions
  • tools and equipment appropriate to applying safe
    work practices
  • support materials appropriate to activity
  • workplace instructions relating to safe work
    practices and addressing hazards and emergencies
  • material safety data sheets
  • research resources, including industry-related
    systems information.

Reasonable adjustments for people with disabilities
must be made to assessment processes where required.
This could include access to modified equipment and
other physical resources, and the provision of
appropriate assessment support.

Method of assessment

Assessment methods must:
  • satisfy the endorsed Assessment Guidelines of the
    Construction, Plumbing and Services Training
    Package
  • include direct observation of tasks in real or
    simulated work conditions, with questioning to
    confirm the ability to consistently identify and
    correctly interpret the essential underpinning
    knowledge required for practical application
  • reinforce the integration of employability skills
with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect, and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy, and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
safe operating procedures, including recognising and preventing hazards associated with:
- electricity
- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements cover water quality management and may include:
- clean-up protection
- complying with ODS and SGG legislation, codes and regulations, e.g. Ozone Protection and Synthetic Greenhouse Gas Management Act 1989
- preventing emissions of prescribed ODS and SGG extinguishing agents
- waste management.

Quality assurance requirements may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:
- angle grinders
- cutting and threading equipment
- elevated work platforms
- hand and power tools
- ladders
- scaffolds
- testing equipment
- welding equipment.
**Special hazard extinguishing systems** may include:

- carbon dioxide and other gases (such as inergen and argonite)
- chemical reaction and explosion suppression systems
- dry chemical
- foam
- prescribed ODS and SGG extinguishing agents (such as halon and NAF S-III)
- water
- water mist.

**Materials** may include:

- actuating devices
- extinguishing agents, including prescribed ODS and SGG materials or other approved materials
- pipes
- sprinkler and delivery systems.

**Actuation control devices** (also known as actuators) may include:

- electrical operation by signal generated from control and indicating equipment (CIE) panel as part of a fire alarm detection system
- manual operation by direct push lever or pull cable system
- mechanical operation via signal from local control station or fire detector
- pneumatic operation from fire detector (typically heat).

**Documentation** may include:

- corrective action reports
- customer recommendation forms
- equipment recommendation forms
- expense claims
- job cards
- maintenance record system
- manufacturer system documentation
- product documentation
- service agreements
- test results and test reports.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
• disposing of waste material to ensure minimal environmental impact
• efficient energy use
• efficient use and recycling of material
• selecting appropriate components to ensure minimal environmental impact.

**Information** may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• NFPA and Factory Mutual performance-based codes of practice
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing special hazard systems
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPFS3037A Install domestic and residential life safety sprinkler systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS3017A

Unit Descriptor
This unit of competency specifies the outcomes required to install domestic and residential life safety fire sprinkler systems in buildings up to four storeys in height.

Application of the Unit
Site location for work application is domestic and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing domestic and residential life safety sprinkler systems are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 *Tools and equipment* for installing domestic and residential life safety sprinkler systems, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient installation of domestic and residential life safety sprinkler systems.

2 Identify installation requirements.
   2.1 System requirements are identified from plans, specifications and standards.
   2.2 *Materials* selected are to comply with standards.
   2.3 Quantities of materials required are calculated from plans and specifications.
   2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.
   2.5 Materials and equipment are checked for compliance with standards, docket and order form, and for
acceptable condition.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test a fire sprinkler system, including piping, control valve assemblies, actuating devices, alarms and sprinkler heads
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- components and materials relevant to installing domestic and residential life safety sprinkler systems
- function and operation of a range of alarms, actuating devices, sprinkler heads and valves
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- pressure test systems and procedures
- process of installing domestic and residential life safety sprinkler systems
- processes for accessing information and for calculating material requirements
- relevant statutory requirements related to installing domestic and residential life safety sprinkler systems
- SI system of measurement
- structural systems, building materials and building services
- understanding of fire rating
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test domestic and residential life safety sprinkler systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of domestic fire sprinkler system for a single storey dwelling, installing and testing a domestic and residential life safety sprinkler system consisting of a water supply, piping, control valves, actuating devices, alarms and sprinkler heads to design criteria and standards, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and
practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• waste management.

**Quality assurance requirements** may include:
• Australian standards
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:
• cutting and threading equipment
• elevated work platforms
• hand and power tools
• ladders
• silver brazing equipment
• testing equipment
• welding equipment.

**Materials** may include:
• actuating devices
• control valve assemblies
• local alarms
• post-chlorinated PVC (PVC-C), steel or copper pipes or other approved materials
• sprinkler heads.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient water use
  • efficient energy use
  • efficient use and recycling of material
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.
**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- NFPA and Factory Mutual performance-based codes of practice
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing domestic and residential life safety sprinkler systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPFS3038A Test and maintain fire hydrant and hose reel installations

Modification History

Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPF3018A

Unit Descriptor

This unit of competency specifies the outcomes required to test and maintain fire hydrant and hose reel installations in commercial and domestic situations. The unit requires the conduct of routine testing and maintenance of fire hydrant and hose reel installations in the full range of domestic and commercial situations.

Application of the Unit

Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

CPCPCM2043A Carry out WHS requirements
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans, specifications, maintenance manuals, previous maintenance reports and equipment data are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with testing and maintaining fire hydrant and hose reel installations are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 Tools, equipment and materials for testing and maintaining fire hydrant and hose reel installations, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient testing and maintenance of fire hydrant and hose reel installations.

2 Perform routine maintenance.
   2.1 Maintenance tasks detailed in maintenance schedule are performed to specification.
   2.2 Mechanical equipment and system components are checked with appropriate instruments according to standards and job specifications.
2.3 Faulty items or components are identified and appropriate service procedure is selected.

3 Repair and replace faulty components and test job.

3.1 Equipment is safely isolated according to regulations and health and safety requirements.

3.2 Faulty items or components are removed using appropriate tools, equipment and procedures.

3.3 Replaceable items are selected from manufacturers' catalogue.

3.4 Replacement or service items are fitted according to manufacturer recommendations and site specifications.

3.5 Adjustments are made to equipment or components to ensure specifications are met.

3.6 Operational check of system is carried out to ensure compliance with job specifications.

3.7 Maintenance report is documented in format required by maintenance specification.

3.8 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - conduct operational checks to confirm system is operating to specification
  - diagnose faults and undertake necessary repairs or replacement of faulty components
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- function and operation of system components
- job safety analysis (JSA) and safe work method statements (SWMS)
• National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
• process of testing and maintaining fire hydrant and hose reel installations
• relevant statutory and authority requirements related to testing and maintaining fire hydrants and hose reel installations
• SI system of measurement
• structural systems, building materials and building services
• test apparatus and procedures
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to test and maintain fire hydrants and hose reel installations
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given four faulty fire hydrants and hose reel installations, conducting routine testing and maintenance to diagnose and repair faults and perform component service, ensuring:
  - application of sustainability principles and concepts
  - correct identification of the requirement and conduct of testing and maintaining the installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.
Environmental requirements may include:
- clean-up protection
- waste management.

Quality assurance requirements may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:
- elevated work platforms
- hand and power tools
- ladders
- scaffolds
- testing equipment.

Materials may include:
- fire hydrants
- fittings and connections
- hoses
- hose reels.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy usage
  - efficient use and recycling of material
  - efficient water usage, harvesting and/or disposal.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- NFPA and Factory Mutual performance-based codes of practice
- organisation work specifications and requirements

Unit sector       Plumbing and services

Custom Content Section

Not applicable.
CPCFS3040A Conduct basic functional testing of water-based fire-suppression systems

Modification History

Prerequisite unit updated
Minor change to sustainability PC
Not equivalent to CPCFS3020A

Unit Descriptor

This unit of competency specifies the outcomes required to complete weekly, monthly, and six-monthly inspection and testing procedures to verify that water-based fire-suppression systems function as intended. The unit involves working safely, isolating plant and interfaces, conducting compliance tests, visually inspecting, identifying non-compliance defects, fulfilling mandatory reporting requirements, and resetting water-based fire-suppression systems.

Application of the Unit

This unit of competency supports fire protection technicians responsible for functional testing of water-based fire suppression systems. It does not apply to load or flow testing of water-based fire-suppression systems or pressure reducing or limiting valves. Individuals operate within the scope of their defined roles and responsibilities and perform the functional tests as part of their work duties and according to work procedures and relevant Australian standards, to verify that equipment functions as intended. The unit must be applied strictly according to relevant state or territory legislative and industry requirements.

Licensing/Regulatory Information

The fire protection technician is not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state or territory regulations). Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.
Pre-Requisites

CPCPCM2043A Carry out WHS requirements
OR BOTH:
CPPCMN2002A Participate in workplace safety arrangements
AND
CPPFES2006A Prepare for installation and servicing operations

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Apply compliance requirements to service operations.
   1.1 Legislative and industry requirements are interpreted, confirmed and applied to organisational requirements.
   1.2 Preparations are made for the conduct of functional testing according to organisational requirements.

2 Conduct inspections and record results.
   2.1 Workplace procedures are followed and risk control measures applied when inspecting water-based fire-suppression systems.
   2.2 Key control valves are identified and their functions determined with reference to manufacturer instructions to allow routine inspection activities according to
legislative and industry requirements.

2.3 Plant and other system interfaces that must be isolated to allow the inspection activities are identified.

2.4 Visual inspections are conducted as described in legislative and industry requirements.

2.5 Inspection results are recorded according to legislative and industry requirements.

2.6 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Conduct testing and record results.

3.1 Test methods are implemented according to legislative and industry requirements.

3.2 Routine testing procedures are conducted according to the required frequency schedule to verify the system functions as intended.

3.3 Test results are compared with legislative and industry requirements.

3.4 Results are documented according to legislative and industry requirements.

3.5 Report is prepared and forwarded to relevant persons for action according to legislative and industry requirements.

3.6 System is reinstated according to organisational requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - record and report information neatly and legibly
  - read and apply work instructions and specifications
  - read and record measurements
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- technical skills to:
  - identify system components
  - operate valves, switches and levers to test system operation
  - work safely when applying workplace housekeeping procedures

Required knowledge

- basic principles of operation and purpose of components of water-based fire suppression systems:
  - accelerators and exhausters
  - alarm ‘dry’ (i.e. deluge) control valve assembly components
  - alarm ‘wet’ control valve assembly components
  - batteries
  - circulation and system pressure relief valves
  - isolation and control valves
  - pressure and flow switches
  - pressure gauges
  - pump controllers and ancillary equipment for control and indication
  - pumpsets
  - retard chambers
  - solenoid valves
  - sprinkler heads
  - system block plans
- system pressure gauge schedules
- water motor alarm gong
- water supply tanks: atmospheric, pressure and suction with priming tanks
- general operation of water-based systems
- general operation of a gauge
- key features of legislation, regulations and codes applicable to inspecting and testing water-based fire-suppression systems
- metric and imperial pressure gauge readings
- systems and components:
  - air compressors fitted to systems
  - circulation and system pressure relief valves
  - controls on the pumpset controller panel:
    - fuel gauges
    - indicators
    - main isolating switch
  - flow switches and associated testing equipment
  - isolating valves associated with water-based fire-suppression system
  - main water supply underground key-operated valve location
  - pressure gauges
  - pumpsets associated with water-based fire-suppression system
  - pump starting switches
  - suction inlet strainers or screen on a static water supply for the water-based fire-suppression system
  - system block plan requirements for design details of systems installed since 1972
  - system main alarm bell and/or alarm strobe indicating building entry point for emergency personnel
  - system pressure gauge schedules, where required
  - system pressure maintenance or jacking pumps
  - water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication/interface
  - water supply tanks, water level indicators and automatic inflow valves
- terminology used in relation to water-based fire-suppression system
- water supply tanks:
  - atmospheric
  - pressure
  - suction with priming tanks
- water-based systems applications, as defined in AS 2118 Automatic fire sprinkler systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of practical demonstration of basic functional testing of a range of water-based fire-suppression systems.

If all relevant aspects of evidence cannot be demonstrated in a work environment, the remainder should be assessed through realistic simulations, projects, or oral questioning on case study scenarios.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply sustainability principles and concepts when conducting basic functional testing of water-based fire-suppression systems
- apply safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- complete tasks according to the relevant Australian standard
- conduct inspection and testing tasks specified in the weekly, monthly and six-monthly frequency schedule
- perform functional testing of the following water-based fire-suppression systems:
  - alternate wet or general systems with no pumpset system
  - alternate wet or general systems with pumpset system and tank
  - residential or domestic systems
  - combined sprinkler and hydrant systems
  - deluge systems
  - pre-action or recycle systems.

Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- adequate water supply and draining or recycling arrangements to operate water-based fire-suppression systems
- operational water-based fire-suppression systems
- pictures and cut-away sections of control assemblies and
valves to show operation.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

**Guidance information for assessment**

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPFS3041A Inspect and test fire pumpsets
- CPCPFS3042A Conduct annual functional testing of complex water-based fire-suppression systems
- CPCPFS3043A Conduct functional water flow testing.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Legislative and industry requirements** may include:

- dangerous goods regulations
- licensing arrangements
- environmental regulations
- WHS legislation, regulations and codes
- relevant commonwealth and state or territory building Acts, regulations and codes, such as National Construction Code (NCC)
- relevant Australian standards, such as:
  - AS 1851 Maintenance of fire protection systems and equipment
  - note: Australian standards are frequently revised and users must always check for currency and amendments
- other relevant legislation relating to fire suppression equipment, including:
  - international shipping codes
  - marine codes for different Australian states
  - requirements of Australian petroleum industry.

**Organisational requirements** may be located in quality assurance and procedures manuals and may include:

- client-specific contractual requirements
- documentation and information systems and processes
- legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to service operation
- use of electronic job scheduling and communication devices.

**Water-based fire-suppression systems** are defined in AS 2118 Automatic fire sprinkler systems, and include:

- alternate wet or dry systems
- combined sprinkler or hydrant systems
- deluge systems
- dry systems
- pre-action or recycle systems
- residential and domestic systems
- tail-end systems
- wet and general systems.
**Key control valves** may include those:

- specified in AS 2118 Automatic fire sprinkler systems
- installed in:
  - associated control valve trim
  - activation small bore pipework to the alarm and control valve assembly.

**System interfaces** may include:

- components, such as:
  - flow switches
  - pressure switches
  - tamper switches
  - valve positioning switches
- devices that operate signals between the water-based fire-suppression system and other services, such as:
  - building heating, ventilation and cooling (HVAC) services
  - fire brigade monitoring providers
  - other life safety systems, such as:
    - warning systems
    - fire indicator panel (FIP).

**Sustainability principles and concepts:**

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - efficient use of material
  - efficient energy and water use
  - rain harvesting and disposal.

**Testing procedures** may include:

- organisational procedures for conducting testing activities according to AS 1851 Maintenance of fire protection systems and equipment, including procedures for:
  - checking desiccant condition (air dryer or crystals, water separator bowl) and cleaning or replacing as required
  - checking oil level and visually assessing condition of oil on air compressor.

**Frequency schedules** may include:

- schedules of work conducted at regular frequencies as defined in AS 1851 (general section) that relate to the work scope for weekly, monthly, and six-monthly inspection and testing schedules.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Apply compliance requirements to service operations.
   1.1 Legislative and industry requirements are interpreted, confirmed and applied to organisational requirements.
   1.2 Location and equipment are checked for compliance with legislative and industry requirements, and action is taken according to organisational requirements.
   1.3 Preparations are made for functional inspection and testing according to organisational requirements.

2 Conduct inspections and record results.
   2.1 Workplace procedures are followed and risk control measures are applied when inspecting fire pumpsets.
   2.2 Fire pumpset controls are identified and their function determined, with reference to manufacturer instructions in order to conduct inspections and tests according to legislative and industry requirements.
   2.3 Plant and other system interfaces that must be isolated to
allow the inspection activities are identified.

2.4 Visual inspections are conducted as described in legislative and industry requirements.

2.5 Fire pumpset inspection results are recorded against requirements according to legislative and industry requirements.

2.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Conduct tests and record results.

3.1 Methods for tests are implemented according to legislative and industry requirements.

3.2 Routine *testing procedures* are conducted according to the required *frequency schedule* to verify that the system functions as intended.

3.3 Test results are compared with legislative and industry requirements.

3.4 Results are documented according to legislative and industry requirements.

3.5 Report is completed and forwarded to relevant persons for action according to legislative and industry requirements.

3.6 System is reinstated according to organisational requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - read and comply with work instructions and specifications
  - read and record measurements
  - record and report information neatly and legibly
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- technical skills to:
  - operate valves, switches and levers to test system operation
  - use hand and power tools
  - work safely when performing work tasks, including workplace housekeeping procedures

Required knowledge

- application of fire pumpsets as defined in AS 2941 Fixed fire protection installations – Pumpset systems and AS 2118 Automatic fire sprinkler systems, and used in systems
- basic principles of hydraulics:
  - basic head or pressure calculation for height per metre
  - metric and imperial pressure scales
  - properties of water:
    - three states of matter
    - incompressible
- basic principles of operation and purpose of components:
  - accumulators
  - batteries
  - circulation and system pressure relief valves
  - compression ignition pumpset drivers
  - electrical pumpset drivers
  - engine starting and control or monitor batteries
- header tanks
- impellers
- isolating valves associated with pumpsets
- jacking or jockey pumps
- multi-stage pumps
- pressure gauges
- pump controllers and ancillary equipment for control and indications
- pump drivers
- pump glands and seals
- pump performance curves
- pump starting devices
- pumpset couplings
- safety guards
- system pressure gauge schedules
- water supply tanks:
  - atmospheric
  - pressure
  - suction with priming tanks
- general operation of pumpsets:
  - cooling systems
  - design speed requirements
  - exhaust systems
  - fuel systems
  - full load operation
  - normal running operation
  - pre-start and post-start checks
  - pumpset controllers
  - starting and stopping methods
  - suction and discharge connections and pressure readings
- terminology used in relation to pumpsets
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of practical demonstration of inspecting and testing a range of types of fire pumpsets at customers’ premises.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply sustainability principles and concepts when inspecting and testing fire pumpsets
- apply safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- conduct inspection and testing for the scheduled weekly, monthly and six-monthly activities according to the relevant Australian standard and on the following pumpsets:
  - compression ignition pumpset used as a booster pumpset on a sprinkler/hydrant system fed from:
    - town mains supply
    - static water supply
  - dual drive electric and compression ignition pumpset
  - electrical pumpset used as a:
    - booster pumpset on a sprinkler/hydrant system fed from a town mains supply or a static water supply
    - jacking pump or hose reel pump.

Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- adequate water supply and draining or recycling arrangements to operate pumpsets under full load
- operational pumpsets
- pictures and cut-away sections of pumpsets to show operation.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Property
Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPFS3040A Conduct basic functional testing of water-based fire-suppression systems
- CPCPFS3042A Conduct annual functional testing of complex water-based fire-suppression systems
- CPCPFS3043A Conduct functional water flow testing
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative and industry requirements may include:
- dangerous goods regulations
- environmental regulations
- licensing arrangements
- WHS legislation, regulations and codes
- relevant commonwealth and state or territory building Acts, regulations and codes, such as National Construction Code (NCC)
- relevant Australian standards, such as:
  - AS 1851 Maintenance of fire protection systems and equipment
  - note: Australian standards are frequently revised and users must always check for currency and amendments
- other relevant legislation relating to fire protection equipment, including:
  - international shipping codes
  - marine codes for different Australian states
  - requirements of Australian petroleum industry.

Organisational requirements may be located in quality assurance and procedures manuals and may include:
- client-specific contractual requirements
- documentation and information systems and processes
- legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to service operation
- use of electronic job scheduling and communication devices.

Checking for compliance may include:
- undertaking commissioning tests detailed in relevant Australian standards and manufacturers’ documents to verify performance of an installed, repaired or altered piece of equipment or system
- applying inspections, tests and survey requirements to equipment and systems, according to relevant Australian standards, to determine that they are:
  - capable of operating as intended when originally installed
  - still suitable for the fire hazard or risk being protected, as
no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified

- providing the coverage and protection needed to meet original design and performance requirements
- reviewing documentation to verify that installed systems comply with legislative and industry requirements, such as:
  - building’s essential services or fire safety measures listing
  - relevant commonwealth and state or territory building Acts, regulations and codes
  - relevant Australian standards listed on essential service listing
  - environmental regulations.

**Action** may include:

- advising client
- documenting non-compliance
- making equipment safe
- reporting, as required.

**Pumpset types** may include:

- those used in fire protection systems that comply with Australian standards, such as:
  - AS 1851 Maintenance of fire protection systems and equipment
  - AS 2118 Automatic fire sprinkler systems
  - AS 2419 Fire hydrant installations
  - AS 2941 Fixed fire protection installations – Pumpset systems
  - AS CA-1962 Automatic sprinkler installations
  - NFPA 20 Standard for the installation of stationary fire pumps for fire protection (US).

**System interfaces** may include:

- components, such as:
  - flow switches
  - pressure switches
  - tamper switches
  - valve positioning switches
- devices that operate signals between the pumpset and other services, such as:
  - building monitoring services
  - other life safety systems, such as:
• warning systems
• fire indicator panel (FIP)
• security monitoring services.

**Sustainability principles and concepts:**
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - efficient use of material
  - efficient energy and water use
  - rain harvesting and disposal.

**Testing procedures include:**
- activities that comply with requirements of AS 1851
  Maintenance of fire protection systems and equipment to verify the following pump functions:
  - pump starts at correct pressure
  - pump supplies correct kPa at no flow condition requirements.

**Frequency schedules include:**
- schedules of work conducted at regular frequencies as defined in AS 1851 (general section) that relate to the work scope for weekly, monthly, and six-monthly inspection and testing schedules.

**Unit Sector(s)**

**Competency field**

**Unit sector**
Plumbing and services

**Custom Content Section**
Not applicable.
CPCPFS3042A Conduct annual functional testing of complex water-based fire-suppression systems

Modification History
Prerequisite unit updated
Minor change to sustainability PC
Not equivalent to CPCPFS3022A

Unit Descriptor
This unit of competency specifies the outcomes required to complete annual inspection and testing procedures to verify that complex water-based fire-suppression system equipment functions as intended.
The unit involves working safely, isolating and resetting water-based fire-suppression systems, conducting compliance tests, visually inspecting, identifying non-compliance defects, and fulfilling mandatory reporting requirements.

Application of the Unit
This unit of competency supports fire protection technicians responsible for annual functional testing of water-based fire protection systems, including functional water flow tests. Individuals operate within the scope of their defined roles and responsibilities and perform the functional water flow tests as part of their work duties to verify that equipment functions as intended, according to work procedures and relevant Australian standards.
The unit must be applied strictly according to relevant state and territory legislative and industry requirements.

Licensing/Regulatory Information
The service technician is not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state or territory regulations).
Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Apply compliance requirements to service operations.

1.1 Legislative and industry requirements are interpreted, confirmed and applied to organisational requirements.

1.2 Location and equipment are checked for compliance with legislative and industry requirements, and action is taken according to organisational requirements.

1.3 Preparations are made for conducting annual functional testing according to organisational requirements on complex components of water-based fire-suppression systems.

2 Conduct inspections and record results.

2.1 Workplace procedures are followed and risk control measures applied when inspecting water-based fire-suppression systems.

2.2 Key control valves are identified and their functions determined with reference to installation drawings in order to conduct routine inspection and tests according
to legislative and industry requirements.

2.3 Visual inspections are conducted on complex components as described in legislative and industry requirements.

2.4 Inspection results are recorded according to legislative and industry requirements.

2.5 Visual *installation and design survey* inspections are conducted according to legislative and industry requirements.

2.6 Installation and design survey report is prepared according to legislative and industry requirements.

2.7 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Conduct testing and record results.

3.1 Plant and other *system interfaces* to be isolated are identified to allow testing according to legislative and industry requirements.

3.2 Test methods for complex components are used according to legislative and industry requirements.

3.3 Testing procedures are conducted on complex components at required *frequency schedule* to verify that system functions as intended.

3.4 Test results are compared with legislative and industry requirements.

3.5 Results are documented according to legislative and industry requirements.

3.6 Report is prepared and forwarded to persons for action according to legislative and industry requirements.

3.7 System is reinstated according to organisational requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- interpersonal skills to relate to people from a range of social and cultural backgrounds
- customer service skills
- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - read and comply with work instructions and specifications
  - read and record measurements
  - record and report information neatly and legibly
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- technical skills to:
  - operate valves, switches and levers to test system operation
  - work safely when applying workplace housekeeping procedures

Required knowledge

- definitions of basic principles of operation and purpose of components of complex water-based fire protection systems
- general operation of a gauge
- general operation of complex water-based fire-suppression systems
- metric and imperial pressure gauge readings
- systems:
  - air compressors fitted to systems
  - circulation and system pressure relief valves
  - controls on the pumpset controller panel:
    - fuel gauges
    - indicators
    - main isolating switch
  - flow switches and associated testing equipment
  - isolating valves associated with water-based fire-suppression system
  - pressure gauges
  - pressure reducing equipment
  - pumpsets associated with water-based fire-suppression system
- pump starting switches
- purpose and key requirements of system block plan for installations installed since 1972
- suction inlet strainers and screens on a static water supply for water-based fire-suppression system
- system main alarm bell and/or alarm strobe indicating building entry point for emergency personnel
- system pressure gauge schedules, where required
- water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication/interface
- water supply tanks, water level indicators and automatic inflow valves
- water supply underground key-operated valve location
- terminology used in relation to water-based fire-suppression systems
- water-based fire-suppression system applications as defined in AS 2118 Automatic fire sprinkler systems or AS 2419 Fire hydrant installations
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of practical demonstration of the inspection and testing procedures to verify that complex water-based fire-suppression system equipment functions as intended.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply sustainability principles and concepts when conducting annual functional testing of complex water-based fire-suppression systems
- apply safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- conduct relevant annual inspection and test requirements (other than water flow testing) according to the current Australian standard on water-based fire suppression systems, including complex components for the following systems:
  - general sprinkler systems with no pumpset system
  - general sprinkler systems with pumpset system and tank
  - combined sprinkler and hydrant systems
  - deluge systems
  - pre-action or recycle systems
  - pressure reducing valves
  - pressure relief valves
- perform an installation and design survey on a Class 5 to 9 building of at least 5 stories or greater than 10,000 square metre building to produce an inspection report on:
  - pipework external condition
  - sprinkler head condition
  - sprinkler head obstructions
  - sprinkler head location and spacing
  - sprinkler head compatibility and ambient conditions (RTI and sprinkler head and spray pattern)
  - external sprinkler requirements
  - design standard suitable for current building occupation requirements, such as classification and storage heights.

Context of and specific resources for Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant...
assessment

regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- adequate water supply and draining or recycling arrangements to operate water-based fire-suppression system
- necessary tools, specialist equipment, manuals and relevant documentation
- operational water-based fire-suppression system
- pictures and cut-away sections of control assemblies and valves to show operation
- training and assessment record book.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPFS3040A Conduct basic functional testing of water-based fire-suppression systems
- CPCPFS3041A Inspect and test fire pumpsets
- CPCPFS3043A Conduct functional water flow testing.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Legislative and industry requirements** may include:

- dangerous goods regulations
- environmental regulations
- licensing arrangements
- WHS legislation, regulations and codes
- relevant commonwealth and state or territory building Acts, regulations and codes, such as National Construction Code (NCC)
- relevant Australian standards, such as:
  - AS 1851 Maintenance of fire protection systems and equipment
  - note: Australian standards are frequently revised and users must always check for currency and amendments
- other relevant legislation relating to fire protection equipment, including:
  - international shipping codes
  - marine codes for different Australian states
  - requirements of Australian petroleum industry.

**Organisational requirements** may be located in quality assurance and procedures manuals and may include:

- client-specific contractual requirements
- documentation and information systems and processes
- legal and organisational policy and guidelines
- legislation relevant to service operation
- personnel practices and guidelines outlining work roles, responsibilities and delegations
- use of electronic job scheduling and communication devices.

**Checking for compliance** may include:

- applying inspections, tests and survey requirements to equipment and systems, according to relevant Australian standards, to determine that they are:
  - capable of operating as intended when originally installed
  - still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has occurred since the equipment or system was installed or last modified
  - providing the coverage and protection needed to meet
Conduct annual functional testing of complex water-based fire-suppression systems

- original design and performance requirements
- reviewing documentation to verify that installed systems comply with legislative and industry requirements, such as:
  - building’s essential services or fire safety measures listing
  - relevant commonwealth and state or territory building Acts, regulations and codes
  - relevant Australian standards listed on essential service listing
  - environmental regulations.

**Action** may include:
- advising client
- documenting non-compliance
- making equipment safe
- reporting, as required.

**Annual functional testing:**
- is inspection, testing and surveying according to AS 1851 Maintenance of fire protection systems and equipment for water-based fire-suppression systems
- includes:
  - annual frequency inspection, testing and surveying activities, except water flow proving testing
  - operating:
    - pressure reducing valves to verify operation is at required pressures
    - pressure relief valves to verify operation is at required pressures
    - accelerator/exhauster and double interlock valves to verify operation is at required pressures and delivery time on dry pipe or pre-action systems.

**Complex components** may include:
- components of a water-based fire-suppression system associated with:
  - double interlock systems
  - pressure reducing systems
  - accelerator/exhauster systems.

**Water-based fire-suppression systems** include systems defined in:
- AS 2118 Automatic fire sprinkler systems (known as the SAA code for automatic fire sprinkler systems)
- AS 2419 Fire hydrant installations, including systems such as:
  - alternate wet and dry systems
- combined sprinkler and hydrant systems
- deluge systems
- dry systems
- hydrant systems
- pre-action or recycle systems
- residential and domestic systems
- tail-end systems.

**Key control valves** may include those:
- specified in AS 2118 Automatic fire sprinkler systems
- installed in the:
  - associated control valve trim
  - activation small bore pipework to the alarm and control valve assembly.

**Installation and design survey** may include:
- annual survey required by AS 1851 Maintenance of fire protection systems and equipment to determine that water-based fire-suppression system's design and installation are not impaired by changes to:
  - building structure
  - occupant use
  - environment
- conducted from floor level to identify:
  - design standard suitable for current building occupation requirements:
    - building classification
    - storage heights
  - external sprinkler requirements
  - pipework corrosion or damage
  - sprinkler head:
    - compatibility and ambient conditions
    - head condition
    - head location and spacing
    - head obstructions
    - spray pattern
    - temperature rating and response time index (RTI).

**Sustainability principles and concepts:**
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
efficient use of material
efficient energy and water use
rain harvesting and disposal.

**System interfaces** may include:

- components, such as:
  - flow switches
  - pressure switches
  - tamper switches
  - valve positioning switches
- devices that operate signals between the water-based fire-suppression system and other services, such as:
  - building heating, ventilation and cooling (HVAC) services
  - fire brigade monitoring providers
  - other life safety systems, such as:
    - warning systems
    - fire indicator panel.

**Frequency schedules** are:

- schedules of work conducted at regular frequencies as defined in AS 1851 Maintenance of fire protection systems and equipment (general section) that relate to the work scope for annual inspection, and testing and survey maintenance schedules.

**Unit Sector(s)**

**Competency field**

**Unit sector** Plumbing and services

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Apply compliance requirements to service operations.
   1.1  *Legislative and industry requirements* are confirmed and applied to *organisational requirements*.
   1.2  Location and equipment are *checked for compliance* with legislative and industry requirements and *action* is taken according to organisational requirements.

2  Prepare system and equipment to conduct functional water flow proving test.
   2.1  Workplace procedures are followed and risk control measures applied when setting up on *water-based fire-suppression systems*.
   2.2  Appropriate *test points* are identified.
   2.3  *Water flow test equipment* required is identified according to manufacturer instructions and legislative and industry requirements.
   2.4  Required water flow test equipment is attached according to manufacturer instructions and organisational requirements.
   2.5  Relevant plant and other *system interfaces* are identified and isolated according to organisational requirements.
   2.6  Water supply isolating valves are located, types of
valves identified, and valves operated as required to isolate water supplies according to organisational requirements.

2.7 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

### 3 Conduct functional water flow proving and load test, and record results.

3.1 Test methods are implemented according to frequency schedule and legislative and industry requirements.

3.2 Tests are conducted on each water supply, as required, to verify that systems function as intended.

3.3 Test results are compared with legislative and industry requirements.

3.4 Results are documented according to legislative and industry requirements.

3.5 Report is prepared and forwarded to relevant persons for action according to legislative and industry requirements.

3.6 System is reinstated according to organisational requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - interpret data from a range of flow testing equipment
  - read, understand and comply with work instructions and specifications
  - read, understand and record measurements
  - record and report information neatly and legibly

- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks

- technical skills to:
  - attach flow and pressure test equipment according to manufacturer specifications
  - check test equipment for calibration and operation according to manufacturer specifications
  - interconnect test equipment into recording devices
  - operate valves, switches and levers to test system operation
  - use:
    - portable tachometer on pump shaft to read speed
    - clamp or tong current meter to read motor operating current
    - throttling control valve to control water flow
  - work safely when applying workplace housekeeping procedures

Required knowledge

- basic principles of hydraulics
- basic principles of operation and purpose of components of a water-based fire protection system:
  - alarm ‘dry’ (i.e. deluge) control valve assembly components
  - alarm ‘wet’ control valve assembly components
  - booster valve assembly
  - circulation and system pressure relief valves
  - compression ignition engine governing controls
  - differential pressure gauges
  - hand tachometers
- hydrant landing valve assembly
- isolation and control valves
- manometers
- orifice plates
- Pitot tube water flow test instrument
- pressure and flow switches
- pressure gauges
- pump controllers and ancillary equipment for control and indication
- pumpsets
- solenoid valves
- system block plans
- system pressure gauge schedules
- throttling valves
- ultrasonic flow measuring equipment
- ultrasonic thickness gauges
- Venturi devices
- water supply tanks: atmospheric, pressure and suction with priming tanks
- general operation of a pumpset, covering:
  - compression ignition engine governing control devices
  - cooling systems
  - design speed requirements
  - exhaust systems
  - fuel systems
  - full load operation
  - normal running operation
  - pre-start and post-start checks
  - pumpset performance curve
  - pumpset controllers
  - starting and stopping methods
  - suction and discharge connections and pressures readings
- general operation of water-based fire-suppression systems
- terminology used in relation to water-based fire-suppression systems
- water-based fire-suppression system components:
  - air compressors fitted to control valves
  - circulation and system pressure relief valves
  - controls on the pumpset controller panel:
    - fuel gauges
    - indicators
    - main isolating switch
  - electric motor specification plate
- flow switches and associated testing equipment
- isolating valves associated with water-based fire-suppression system
- mains water supply underground key-operated valve location
- most hydraulically disadvantaged testing point on a system hose reel and hydrant system
- pressure gauges
- pumpsets associated with water-based fire-suppression systems
- pump starting switches
- suction inlet strainers or screen on a static water supply for water-based fire-suppression system
- system block plans
- system main alarm bell or alarm strobe indicating building entry point for emergency personnel
- system pressure gauge schedules
- water supply tanks, water level indicators and automatic inflow valves
- water-based fire-suppression system control and alarm valves and ancillary equipment for control and alarm operation indication or interface
- water-based fire-suppression system applications, as defined in AS 2118
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by observation of practical demonstration of basic functional water flow testing of a range of water-based fire-suppression systems.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply sustainability principles and concepts when conducting functional water flow testing
- apply safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- conduct functional water flow testing of the following water-based fire-suppression systems:
  - deluge systems
  - hydrant systems
  - pre-action or recycle systems
  - residential and domestic systems
  - wet and general systems with no pumpset system
  - wet and general systems with pumpset system and tank.

Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- adequate water supply and draining or recycling arrangements to operate the water-based fire-suppression system
- calibrated water flow measuring and pressure gauge equipment
- operational water-based fire-suppression systems.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential
underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPFS3041A Inspect and test fire pumpsets.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Legislative and industry requirements may include:

- relevant commonwealth and state or territory building Acts, regulations and codes, such as National Construction Code (NCC)
- relevant Australian standards, such as:
  - AS 1851 Maintenance of fire protection systems and equipment
  - note: Australian standards are frequently revised and users must always check for currency and amendments
- relevant legislation relating to testing of fire protection equipment, including:
  - dangerous goods regulations
  - environmental regulations
  - international shipping codes
  - licensing arrangements
  - marine codes for different Australian states
  - work health and safety (WHS) legislation, regulations and codes
  - requirements of Australian petroleum industry.

Organisational requirements may be located in quality assurance and procedures manuals and may include:

- client-specific contractual requirements
- documentation and information systems and processes
- legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to service operation
- using electronic job scheduling and communication devices.

Checking for compliance may include:

- undertaking commissioning tests detailed in relevant Australian standards and manufacturers’ documentation to verify performance of an installed, repaired or altered piece of equipment or system
- applying inspections, tests and survey requirements to equipment and systems, according to relevant Australian standards, to determine that they are:
  - capable of operating as intended when originally installed
  - still suitable for the fire hazard or risk being protected, as no change in occupancy or use of the area protected has
occurred since the equipment or system was installed or last modified

- providing the coverage and protection needed to meet original design and performance requirements
- reviewing documentation to verify that installed systems comply with legislative and industry requirements, such as:
  - building’s essential services or fire safety measures listing
  - environmental regulations
  - relevant commonwealth and state or territory building Acts, regulations and codes
  - relevant Australian standards listed on essential service listing.

**Action** may include:

- advising client
- documenting non-compliance
- making equipment safe
- reporting, as required.

**Water-based fire-suppression systems** are defined in AS 2118 Automatic fire sprinkler systems and AS 2419 Fire hydrant installations, and may include:

- alternate wet and dry systems
- combined sprinkler and hydrant systems
- deluge systems
- dry systems
- hydrant systems
- pre-action or recyle systems
- residential and domestic systems
- tail-end systems
- alternate wet and general systems.

**Test points** are:

- specific locations where test equipment can be attached to measure and record water flow and pressure to meet legislative and industry requirements.

**Water flow test equipment** may include:

- differential pressure gauges
- hand tachometers
- manometers
- orifice plates
- Pitot tube water flow test instrument
- ultrasonic flow measuring equipment
- ultrasonic thickness gauges
- Venturi devices.
System interfaces may include:

- components such as flow, pressure, tamper and valve positioning switches that operate signals between the water-based fire-suppression system and other services, such as:
  - building heating, ventilation and cooling (HVAC) services
  - fire brigade monitoring providers
  - other life safety systems, such as:
    - warning systems
    - fire indicator panel.

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - efficient use of material
  - efficient energy and water use
  - rain harvesting and disposal.

Frequency schedules include:

- schedules conducted at regular frequencies, as defined in AS 1851, and relating to weekly, monthly, and six-monthly inspection and testing activities.

CPCPFS3044A Install distribution and range pipes

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

- Outcomes changed to include reference to draining down. References to sustainability and work health and safety strengthened
- Range of other minor editorial changes

Not equivalent to CPCPFS3032A Install distribution and range pipes

Unit Descriptor
This unit of competency specifies the outcomes required to install distribution and range pipes to carry all commonly used fire extinguishing agents, above and below ground. The installation may involve a new system or an alteration (extension or modification) to an existing system.

Application of the Unit
This unit of competency supports the work of fire protection industry personnel responsible for installing distribution and range pipes. Site location for work may be commercial, industrial or residential, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements may apply to this unit. Candidates are advised to check for regulatory requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  
1.1 Approved plans and specifications are obtained from relevant authority.
1.2 Work health and safety (WHS) requirements associated with installing distribution and range pipes, and workplace environmental requirements are identified and applied to task planning.
1.3 Quality assurance requirements are identified according to workplace requirements.
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
1.5 Tools and equipment for installing distribution and range pipes, including personal protective equipment, are selected and checked for serviceability.
1.6 Work area is prepared to support efficient installation of distribution and range pipes.

2 Identify installation requirements.  
2.1 System requirements are identified from job design criteria, specifications and standards.
2.2 Quantities of required materials are calculated from plans and specifications.
2.3 Allowances for fabrication and assembly are correctly determined and transferred.
2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.
2.5 Materials and equipment are checked for compliance with standards, docket and order form, and acceptable condition.

3 Install piping system.

3.1 WHS requirements, workplace environmental requirements and quality requirements are applied to work tasks.

3.2 When altering existing systems, system is *isolated and drained down* to allow connection without causing water damage.

3.3 Pipework is set out according to drawings, specifications and job instructions.

3.4 Pipe supports and fixings are installed according to plans, manufacturer specifications, and relevant codes and standards.

3.5 Piping and materials are installed according to design drawings, job specifications and standards.

3.6 *Mechanical jointing systems* are installed according to design drawings, job instructions and standards.

3.7 *Sustainability principles and concepts* are applied to installation.

4 Clean up.

4.1 Work area is cleared, with materials disposed of or recycled according to *statutory and regulatory authority* requirements.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to regulatory authorities’ and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - determine pipe installation requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
  - plan and sequence tasks with others
  - plan and set out work
- problem-solving skills to:
  - determine and use safe draining down methods
  - report faults in tools, equipment or materials to appropriate personnel
- reading skills to interpret drawings and specifications
- teamwork skills to work with others to action tasks
- technical skills to use tools and equipment required to install distribution and range pipes and related components
- technology skills to:
  - access site-specific instructions in a variety of media
  - use mobile communication technology
- writing skills to complete workplace checklists and forms

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- excavation processes and procedures required for installation of below-ground pipework
- levelling and alignment processes to ensure correct installation of pipework
- materials required to install distribution and range pipes
- processes for calculating material requirements
- properties and characteristics of water, including pressure and flow rates
- relevant statutory and authority requirements relating to installing distribution and range pipes
- requirements of job safety analyses (JSA) and safe work method statements (SWMS)
- SI system of measurement
- sources of relevant information relating to pipe installation requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications to install or modify distribution and range pipes
- apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, given the plans and specifications of an automated fire sprinkler system:
  - install distribution and range pipes to provide a free-flowing and leak-free water supply to at least three branches to design criteria and standards, ensuring correct identification of location, design and details of proposed installation
  - relocate two sprinklers in an existing system, including draining down the system
- complete work, ensuring:
  - application of sustainability principles and concepts
  - correct selection and use of appropriate processes, tools and equipment
  - completion of work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - effective communication with others
- safe work practices.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.
Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets, job safety analyses and safe work method statements
- research resources, including industry-related systems information.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to identify and interpret the essential underpinning knowledge required for practical application.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety**

- handling of materials
requirements must comply with commonwealth, state and territory legislation and regulations, and may include:

- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - workplace environmental health and safety.

Distribution and range pipes may include:

- all pipework downstream from the alarm valve, both above and below ground
- pipes composed of materials, including:
  - chlorinated polyvinyl chloride (CPVC)
  - copper
  - ductile iron
  - galvanised steel
  - high density polyethylene (HDPE)
  - mild steel
  - stainless steel
  - unplasticised polyvinyl chloride (UPVC).

Environmental requirements:

- cover water quality management
- may include:
  - clean-up protection
  - stormwater protection
  - waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA) requirements
- internal company quality assurance policy and risk management strategy
- International Standards Organisation (ISO) standards
- site safety plans
- workplace operations and procedures.

Tools and equipment

- angle grinders
- bending equipment
may include:  
- chain blocks  
- cutting and threading equipment  
- elevated work platforms (EWP)  
- forklifts  
- hand and power tools, including hand excavation tools  
- hand trolleys  
- hoists and jacks  
- ladders  
- lifting and load shifting equipment  
- measuring equipment  
- mechanical excavation equipment  
- rollers  
- scaffolds  
- welding equipment.

**Materials** may include:  
- fittings  
- fixings  
- hangers  
- jointing materials  
- pipe work  
- supports.

**Isolating and draining down** must include:  
- identifying the correct system  
- isolating:  
  - alarm initiating devices  
  - alarm signalling equipment  
  - control and indicating equipment (CIE)  
  - emergency warning system  
  - water supply  
  - operating the main drain valve  
  - identifying and operating low drain point valves, if present  
  - checking system for residual water pressure  
  - applying drain-down water management techniques to prevent water damage.

**Mechanical jointing systems** may include:  
- mechanical tees  
- roll grooved:  
  - couplings  
  - elbows  
  - tees.

**Sustainability principles and concepts:**  
- cover the current and future social, economic and environmental use of resources  
- may include efficient:  
  - energy use
• use and recycling of material
• water use, harvesting and disposal.

Statutory and regulatory authorities may include:
• state or territory statutory authority
• statutory plumbing authority.

Information may include:
• charts and hand drawings
• diagrams or sketches
• instructions issued by authorised organisational or external personnel
• memos
• organisation’s work requirements
• regulatory and legislative requirements, particularly those relating to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing distribution and range pipes
• safety data sheets (SDS)
• signage
• verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
• work bulletins
• work schedules, plans and specifications.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- numeracy skills to apply measurements and calculations

- planning and organisational skills to:
  - plan and sequence tasks with others
  - plan and set out work

- problem-solving skills to:
  - determine and use safe draining down methods
  - identify and report faults in tools, equipment or materials to appropriate personnel

- reading skills to interpret drawings and specifications

- teamwork skills to work with others to action tasks

- technical skills to use tools and equipment required to fit off sprinkler heads, controls and ancillary equipment

- technology skills to:
  - access site-specific instructions in a variety of media
  - use mobile communication technology

- writing skills to complete workplace checklists and forms

Required knowledge

- fire sprinkler systems for commercial, industrial or residential application
- functions and operation of a range of taps and valves
- processes for calculating material requirements
- properties and characteristics of water, including pressure and flow rates
- relevant statutory and authority requirements relating to installing sprinkler heads, system controls and ancillary equipment
- requirements of job safety analyses (JSA) and safe work method statements (SWMS)
- SI system of measurement
- sources of information relating to fitting off sprinkler heads, controls and ancillary equipment
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications to install sprinkler heads, system controls and ancillary equipment
- apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum the ability to, given the plans and specifications of a simple automated fire sprinkler system, install at least two sprinkler heads, a flow switch and a pressure switch, ensuring:
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - effective communication with others
  - safe work practices
  - application of sustainability principles and concepts.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to identify and interpret the essential underpinning knowledge required for practical application.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- workplace environmental health and safety.

System controls may include:

- flow switches
- multiple jet controls (MJC s)
- pressure switches
- solenoids.

Environmental requirements may include:

- cover water quality management
- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA) requirements
- internal company quality assurance policy and risk management strategy
- International Standards Organisation (ISO) standards
- site safety plans
- workplace operations and procedures.

Tools and equipment may include:

- chain blocks
- cutting and threading equipment
- elevated work platforms (EWPs)
- forklifts
- hand and power tools
- hand trolleys
- hoists and jacks
- hole saws
- ladders
- lifting and load shifting equipment
- manufacturer sprinkler keys
- scaffolds
- torque wrench
- welding equipment.
Sprinkler systems may include:
- deluge
- dry pipe
- pre-action
- storage sprinklers
- wall wetting
- water mist
- wet pipe.

Materials may include:
- flow switches
- MJC
- pressure switches
- sprinkler heads
- solenoids.

Isolation and draining down must include:
- identifying the correct system
- isolating:
  - alarm initiating devices
  - alarm signalling equipment
  - control and indicating equipment (CIE)
  - emergency warning system
  - water supply
  - operating the main drain valve
  - identifying and operating low drain point valves, if present
  - checking system for residual water pressure
  - applying drain-down water management techniques to prevent water damage.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include efficient:
  - energy use
  - use and recycling of material
  - water use, harvesting and disposal.

Statutory and regulatory authorities may include:

  - plan and set out work
- problem-solving skills to:
  - determine safe draining down methods
  - identify and report faults in tools, equipment or materials to appropriate personnel
- reading skills to interpret drawings and specifications
- teamwork skills to work with others to action tasks
- technical skills to use tools and equipment required to test the integrity of water-based fire protection systems using pressure
- technology skills to:
  - access site-specific instructions in a variety of media
  - test fire protection systems for pressure, using air and water as testing media
  - use mobile communication technology
- writing skills to:
  - record test results
  - complete checklists and forms

Required knowledge

- components and operation of fire sprinkler systems and fire hydrant systems
- functions and operation of a range of taps and valves
- properties and characteristics of water pressure and flow rates
- relevant statutory and authority requirements relating to testing fire protection systems for pressure
- requirements of job safety analyses (JSA) and safe work method statements (SWMS)
- SI system of measurement
• test procedures for sprinkler and hydrant systems
• workplace and equipment safety requirements that apply to the use of pressure testing equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications to test the integrity of water-based fire protection systems using pressure
- apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, given both a fire sprinkler system and a fire hydrant system, the ability to conduct an air pressure test on one and a water pressure test on the other to achieve design and performance specifications of each system, ensuring:
  - application of sustainability principles and concepts
  - identification of requirements, design and details of the systems
  - selection and use of appropriate processes, tools and equipment
  - isolation and draining down of system and repair of leaks
  - completion of work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - effective communication with others
- safe work practices.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
realistic tasks or simulated tasks covering the minimum task requirements
relevant specifications and work instructions
tools and equipment appropriate to applying safe work practices
support materials appropriate to activity
workplace instructions relating to safe work practices and addressing hazards and emergencies
safety data sheets, job safety analyses and safe work method statements
research resources, including industry-related systems information.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to identify and interpret the essential underpinning knowledge required for practical application.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with commonwealth, state and
- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
territory legislation and regulations, and may include:

- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of first aid equipment
  - use of pressure-testing equipment
  - workplace environmental health and safety.

**Environmental requirements:**

- cover water quality management

  may include:

  - clean-up protection
  - stormwater protection
  - waste management.

**Quality assurance requirements** may include:

- Australian standards
- Environment Protection Authority (EPA) requirements
- internal company quality assurance policy and risk management strategy
- International Standards Organisation (ISO) standards
- site safety plans
- workplace operations and procedures.

**Tools and equipment** may include:

- elevated work platforms (EWPs)
- fall protection devices
- hand and power tools
- ladders
- scaffolds
- testing equipment.

**Sustainability principles and concepts:**

- cover the future social, economic and environmental use of resources

  may include efficient:

  - energy use
  - use and recycling of materials
  - water use, harvesting and disposal.

**Types and locations of tests** are to be determined according to the type of

- manufacturer
- Australian standards
- regulatory authority.
system and the requirements of:

**Isolation and draining down** must include:
- identifying the correct system
- isolating:
  - alarm initiating devices
  - alarm signalling equipment
  - control and indicating equipment (CIE)
  - emergency warning system
  - water supply
  - operating the main drain valve
  - identifying and operating low drain point valves, if present
  - checking system for residual water pressure
  - applying drain-down water management techniques to prevent water damage.

**Statutory and regulatory authorities** may include:
- state or territory statutory authority
- statutory plumbing authority.

**Information** may include:
- charts, drawings and sketches
- instructions issued by authorised organisational or external personnel
- memos
- organisation’s work requirements
- regulatory and legislative requirements, particularly those relating to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to the use of pressure testing equipment for ensuring the integrity of fire protection systems
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Unit Sector(s)**

Plumbing and services

Not applicable.
CPCFS3047A Test and maintain automatic fire sprinklers

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

- Outcomes changed to include references to draining down and recharging. References to sustainability and work health and safety strengthened
- Range of other minor editorial changes

Not equivalent to CPCFS3039A Test and maintain automatic fire sprinklers

Unit Descriptor
This unit of competency specifies the outcomes required to test and maintain automatic fire sprinkler installations in the full range of commercial, industrial or residential situations.

Application of the Unit
This unit of competency supports the work of fire protection industry personnel responsible for testing and maintaining automatic fire sprinklers.

Site location for work may be commercial, industrial or residential, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
Licensing, legislative, regulatory or certification requirements may apply to this unit.
Candidates are advised to check for regulatory requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

| 1 | Prepare for work. | 1.1 Plans, specifications, maintenance manuals, previous maintenance reports, and equipment data are obtained and reviewed. |
|   |                  | 1.2 **Work health and safety (WHS) requirements** associated with testing and maintaining automatic fire sprinklers, and workplace **environmental requirements**, are identified and applied to planning. |
|   |                  | 1.3 **Quality assurance requirements** are identified according to workplace requirements. |
|   |                  | 1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work. |
|   |                  | 1.5 **Tools, equipment and materials** for testing and maintaining automatic fire sprinklers, including personal protective equipment, are selected and checked for serviceability. |
|   |                  | 1.6 Work area is prepared to support efficient testing and maintenance of automatic fire sprinklers. |

| 2 | Perform routine maintenance tasks. | 2.1 Maintenance tasks detailed in maintenance schedule are performed to specification. |
|   |                                  | 2.2 Mechanical equipment and system components are checked using appropriate instruments according to standards and job specifications. |
|   |                                  | 2.3 Faulty items or components are identified and appropriate service procedure is selected. |
3 Repair or replace faulty components and test job.

3.1 WHS requirements, workplace environmental requirements and quality requirements are applied to work tasks.

3.2 System is isolated and drained down, as required, to complete tasks without causing water damage.

3.3 Faulty items or components are removed using appropriate procedures, tools and equipment.

3.4 Replacement items or components are selected and fitted according to manufacturer recommendations and site specifications.

3.5 Adjustments are made to equipment or components to ensure specifications are met.

3.6 System is recharged with water according to specifications.

3.7 Operational check of system is carried out to ensure compliance with job specifications.

3.8 Maintenance report is documented in format required by maintenance specification.

3.9 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Clean up.

4.1 Work area is cleared and waste materials disposed of or recycled according to statutory and regulatory authority requirements.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to regulatory authorities’ and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
  - plan and sequence tasks with others
  - plan and set out work
- problem-solving skills to determine safe draining down methods
- reading skills to interpret drawings and specifications
- teamwork skills to work with others to action tasks
- technical skills to use tools and equipment required to test and maintain automatic fire sprinklers
- technology skills to:
  - access site-specific instructions in a variety of media
  - use mobile communication technology
- writing skills to:
  - record test results
  - complete workplace checklists and forms

Required knowledge

- function and operation of automatic fire sprinkler systems and components
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- relevant statutory and authority requirements relating to testing and maintaining automatic fire sprinkler systems
- requirements of job safety analyses (JSA) and safe work method statements (SWMS)
- SI system of measurement
- structural systems, building materials and building services that support or surround automatic fire sprinkler systems
- automatic fire sprinkler test apparatus and procedures
workplace and equipment safety requirements that apply to testing and maintaining automatic fire sprinklers
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications to test and maintain automatic fire sprinklers
- apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, given a faulty automatic fire sprinkler system, the ability to conduct routine testing and maintenance to diagnose and repair faults and perform component service or replacement, ensuring:
  - application of sustainability principles and concepts
  - conduct of operational checks to confirm system is operating to specification
  - isolation and draining down of the system, as required
  - diagnosis of faults and conduct of necessary repairs or replacement of faulty components
  - identification and accurate reporting of faults in tools, equipment or materials to appropriate personnel
  - identification of the requirement for, and then the conduct of, system testing and maintenance
  - selection and use of appropriate processes, tools and equipment
  - completion of work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - effective communication with others
  - safe work practices.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills,
contingency management skills and job role environment skills

- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets, job safety analyses and safe work method statements
- research resources, including industry-related systems information.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to identify and interpret the essential underpinning knowledge required for practical application.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present...
with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety requirements** must comply with commonwealth, state and territory legislation and regulations, and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - workplace environmental health and safety.

**Environmental requirements**: may include:

- cover water quality management
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- Environment Protection Authority (EPA) requirements
- internal company quality assurance policy and risk management strategy
- International Standards Organisation (ISO) standards
- site safety plans
- workplace operations and procedures.

**Tools and equipment** may include:

- hand and power tools
- ladders
- scaffolds
- testing equipment.

**Materials** may include:

- actuating devices
- alarms initiating devices
- control valve assemblies
- fittings and connections
- sprinkler heads.
Isolation and draining down must include:

- identifying the correct system
- isolating:
  - alarm initiating devices
  - alarm signalling equipment
  - control and indicating equipment (CIE)
  - emergency warning system
  - water supply
- operating the main drain valve
- identifying and operating low drain point valves, if present
- checking system for residual water pressure
- applying drain-down water management techniques to prevent water damage.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include efficient:
  - energy use
  - use and recycling of material
  - water use, harvesting and disposal.

Statutory and regulatory authorities may include:

- state or territory statutory authority
- statutory gasfitting authority
- statutory plumbing authority.

Information may include:

- charts, drawings and sketches
- instructions issued by authorised organisational or external personnel
- memos
- organisation’s work requirements
- regulatory and legislative requirements, particularly those relating to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating testing and maintaining automatic fire sprinklers
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

CPCPFS3048A Install fixed fire pumpsets

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to install fixed fire pumpsets, including the pump base, power sources, pumps, pipework and associated components.

Application of the Unit

This unit of competency supports the work of fire protection industry personnel responsible for installing fixed fire pumpsets.
Site location for work may be commercial, industrial or residential and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this unit. Candidates are advised to check for regulatory requirements.

Pre-Requisites

CPCPCM2043A Carry out WHS requirements
or both:
CPPCMN2002A Participate in workplace safety arrangements
and
CPPFES2006A Prepare for installation and servicing operations

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Approved plans and specifications are obtained from statutory and regulatory authority.

1.2 Work health and safety (WHS) requirements associated with installing fixed fire pumpsets, and workplace environmental requirements, are identified and applied to planning.

1.3 Quality assurance requirements are identified according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and according to work and statutory and regulatory authority requirements.

1.5 Tools and equipment for installing fixed fire pumpsets, including personal protective equipment, are selected and checked for serviceability.

1.6 Sustainability principles and concepts are applied to work preparation and application.

2 Identify installation requirements.

2.1 Site is inspected and location for fixed fire pumpset is determined.

2.2 Pump base requirements are identified from information, drawings and specifications.

2.3 Materials and components required for installation of fixed fire pumpset are identified and ordered according to workplace procedures.
2.4 Materials and components are collected and checked for acceptable condition and compliance with relevant Australian standards, docket and order form.

2.5 Work area is prepared to support efficient installation of fixed fire pumpsets.

3 Install fixed fire pumpsets.

3.1 WHS requirements, workplace environmental requirements and quality requirements are applied to work tasks.

3.2 Pump base is set out to comply with drawings and specifications.

3.3 Pump base is installed according to drawings and specifications.

3.4 Fixed fire pumpsets are installed according to relevant Australian standards, drawings, specifications and manufacturer instructions.

3.5 Pumpset pipework and associated pumpset valves are installed according to job specifications, Australian standards and manufacturer requirements.

3.6 Pipework, connections and pumpset valves are checked for water tightness and correct operation.

3.7 Piping system is pressure tested and results are recorded according to specifications.

3.8 Pumpset is tested according to specifications and test data is recorded in required format.

4 Clean up.

4.1 Work area is cleared and waste materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to regulatory authorities’ and workplace requirements.
Required Skills and Knowledge

Required skills

- Communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Numeracy skills to apply measurements and calculations

- Planning and organisational skills to:
  - plan and sequence tasks with others
  - plan and set out work

- Problem-solving skills to report faults in tools, equipment or materials to appropriate personnel

- Reading skills to interpret drawings and specifications

- Teamwork skills to work with others to action tasks

- Technical skills to use tools and equipment required to install fixed fire pumpsets

- Technology skills to:
  - access site-specific instructions in a variety of media
  - use mobile communication technology

- Writing skills to complete workplace documentation

Required knowledge

- Atmospheric pressure measurements and principles in relation to fixed fire pumpset performance

- Fixing techniques for mounting fixed fire pumpsets

- Levelling and alignment requirements for correct installation of fixed fire pump and motor

- Operation of fixed fire pumpsets and pumpset valves

- Performance measures for fixed fire pumpsets

- Power sources for fixed fire pumpsets, including operation and interaction of power sources

- Properties of water, including pressure and flow rates

- Relevant statutory and authority requirements relating to installing fixed fire pumpsets

- Requirements of job safety analyses (JSA) and safe work method statements (SWMS)

- SI system of measurements

- Australian standards applicable to the installation of fixed fire pumpsets

- Pressure testing equipment and procedures
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- locate, interpret and apply relevant information, Australian standards and specifications to install fixed fire pumpsets
- apply safety requirements throughout the work sequence, including electrical requirements and the use of personal protective clothing and equipment
- given the plans and specifications, plan the layout, and then install and test a fixed fire pumpset, ensuring:
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completion of work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - application of sustainability principles and concepts
  - effective communication with others
  - safe work practices.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work
practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• safety data sheets, job safety analyses and safe work method statements
• research resources, including industry-related systems information.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to identify and interpret the essential underpinning knowledge required for practical application.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Statutory and regulatory authority may include:
• commonwealth, state or territory and local authorities administering applicable Acts, regulations and codes of practice.

Work health and safety requirements must comply with commonwealth, state and territory legislation and
• handling of materials
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and
regulations, and may include:

- preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - workplace environmental health and safety.

**Fixed fire pumpsets** may include:

- centrifugal
- diesel driven, including:
  - close coupled
  - long coupled with mechanical joints
- electrically driven
- hydrant, hose reel or sprinkler pumpsets
- multi-outlet
- multi-stage
- positive displacement.

**Environmental requirements:**

- may include:
  - clean-up protection
  - stormwater protection
  - waste management.

**Quality assurance requirements** may include:

- Environment Protection Authority (EPA) requirements
- environment policy
- internal company quality assurance policy and risk management strategy
- International Standards Organisation (ISO) standards
- site safety plans
- workplace operations and procedures.

**Tools and equipment** may include:

- chain blocks
- concreting tools
- forklifts
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- measuring and alignment tools
- pressure testing equipment
- rollers.

**Information** may include:
- charts and hand drawings
- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- memos
- organisation’s work requirements
- regulatory and legislative requirements, particularly those relating to:
  - building codes
  - plumbing regulations
  - relevant Australian standards
  - WHS and environmental requirements
- safe work procedures relating to installing fixed fire pumpsets
- safety data sheets (SDS)
- signage
- verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
- work bulletins
- work schedules, plans and specifications.

**Materials** may include:
- fixings
- pipe fabrication materials, such as:
  - black steel
  - copper
  - galvanised steel
  - polyvinyl chloride (PVC)
  - steel braided hose
- pipe supports.

**Components** may include:
- control panels
- diesel cooling system
- diesel exhaust system
- discharge expansion coupling
- eccentric reducer
- flow switches
- fuel tanks
- gauges
- hydro pneumatic accumulator, also known as bladder tank
- jacking pump
- pipework, including:
  - annubar
  - circulation
  - discharge
  - drainage
  - suction
  - tank return lines
- power sources, which may be:
  - diesel
  - electric
- pressure switches
- pump base
- pumps
- starting devices
- valves, including:
  - circulation
  - isolation
  - pressure limiting
  - pressure reducing
  - pressure relief.

CPCPFS3049A Conduct preventive maintenance on fixed fire pumpsets

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to conduct preventive maintenance on circulatory systems, packed glands and special valves associated with fixed fire pumpsets.

Application of the Unit

This unit of competency supports the work of fire protection industry personnel responsible for preventive maintenance of fixed fire pumpsets, excluding mechanical overhaul of both pump and power source. Site location for work may be commercial, industrial or residential, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this unit. Candidates are advised to check for regulatory requirements.

Pre-Requisites

CPCPCM2043A Carry out WHS requirements
or both:
CPPCMN2002A Participate in workplace safety arrangements
and
CPPFES2006A Prepare for installation and servicing operations

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans, **information**, specifications, maintenance manuals, previous maintenance reports and equipment data are obtained and reviewed.

1.2 **Work health and safety (WHS) requirements** associated with conducting preventive maintenance of fixed fire pumpsets, and workplace **environmental requirements**, are identified and applied to planning.

1.3 **Quality assurance requirements** are identified according to workplace requirements.

1.4 Tasks specified in relevant maintenance schedules or standards are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 **Tools, equipment and materials** for maintaining fire protection special pump valves, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient preventive maintenance of fixed fire pumps.

1.7 Pump is **isolated** according to workplace requirements before conducting maintenance tasks.

1.8 **Sustainability principles and concepts** are observed when preparing for work process.
| 2 | Perform preventive maintenance tasks on pump circulatory system. | 2.1 | WHS requirements, workplace environmental requirements and quality requirements are applied to work tasks. |
|   |                                                                 | 2.2 | Cooling line strainer is disassembled, screen is removed and inspected, and materials found are identified and reported. |
|   |                                                                 | 2.3 | Screen is cleaned and strainer is reassembled according to workplace procedures. |
|   |                                                                 | 2.4 | Operation of circulatory valve is checked and valve is replaced if required. |
|   |                                                                 | 2.5 | Pump is de-isolated, start test is conducted, and water flow is checked at tundish or sight gauge. |
| 3 | Perform preventive maintenance tasks on packing glands.         | 3.1 | WHS requirements, workplace environmental requirements and quality requirements are applied to work tasks. |
|   |                                                                 | 3.2 | Pump packing gland housing is disassembled and gland plate is removed. |
|   |                                                                 | 3.3 | Packing is removed using appropriate packing extractors and disposed of according to workplace and environmental requirements. |
|   |                                                                 | 3.4 | Gland is repacked according to manufacturer requirements. |
|   |                                                                 | 3.5 | Gland plate is reinstalled and adjusted according to manufacturer and workplace requirements. |
|   |                                                                 | 3.6 | Pump is de-isolated, operated and checked to ensure packing gland leak rate complies with manufacturer requirements. |
| 4 | Perform preventive maintenance tasks on special pump valves.    | 4.1 | WHS requirements, workplace environmental requirements and quality requirements are applied to work tasks. |
|   |                                                                 | 4.2 | Pump pipework is drained down according to workplace requirements and checked to ensure there is no residual water pressure. |
4.3 **Special valves** are disassembled and housing is inspected according to manufacturer and workplace requirements.

4.4 **Internal components of special valves** are inspected and replacements installed according to manufacturer and workplace requirements.

4.5 Special valves are reassembled, pump is de-isolated and system is checked for correct operation according to manufacturer and workplace requirements.

5 Report anomalies and complete documentation.

5.1 Inspection and testing results are recorded and anomalies reported according to legislative and industry requirements.

5.2 Preventive maintenance documentation is completed and forwarded to relevant persons for action according to legislative and industry requirements.

6 Clean up.

6.1 Work area is cleared and waste materials disposed of or recycled according to statutory and regulatory authority requirements.

6.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - follow and give instructions
  - identify and report anomalies and faults to appropriate personnel
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- numeracy skills to apply measurements and calculations
- planning and organisational skills to:
  - plan and sequence tasks with others
  - plan and set out work
- reading skills to interpret drawings and specifications
- teamwork skills to work with others to action tasks
- technical skills to use tools and equipment required for preventive maintenance of fixed fire pumpsets
- technology skills to:
  - access site-specific instructions in a variety of media
  - use mobile communication technology
- writing skills to complete workplace documentation

Required knowledge

- components and operation of fixed fire pumpsets, including valves
- isolation and draining-down procedures
- job safety analyses (JSA), safety data sheets (SDS) and safe work method statements (SWMS)
- properties and characteristics of water, including pressure and flow rates
- relevant statutory and authority requirements relating to preventive maintenance of fixed fire pumpsets
- SI system of measurement
- signs of deterioration and wear on valve housings
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications
- apply sustainability principles and concepts
- apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, given a diesel-driven, packed gland fixed fire pumpset, perform preventive maintenance on:
  - circulatory system
  - packing gland
  - pressure relief valve
  - pressure reducing valve
- correct selection and use of appropriate processes, tools and equipment
- completion of work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- effective communication with others
- safe work practices.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task
requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets, job safety analyses and safe work method statements
- research resources, including industry-related systems information.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to identify and interpret the essential underpinning knowledge required for practical application.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** may include:

- charts, drawings and sketches
- instructions issued by authorised organisational or external personnel
- memos
organisation’s work requirements
regulatory and legislative requirements, particularly those relating to:
- building codes
- WHS and environmental requirements
- plumbing regulations
relevant Australian standards
safe work procedures relating to preventive maintenance on fixed fire pumpsets
safety data sheets (SDS)
signage
verbal, written and graphical instructions, including manufacturer specifications and instructions where specified
work bulletins
work schedules, plans and specifications.
handling of materials
hazard control
personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
safe operating procedures, including recognising and preventing hazards associated with:
- electricity
- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
use of firefighting equipment
use of pressure testing equipment
workplace environmental health and safety.
cover water quality management
may include:
- clean-up protection
- stormwater protection
- waste management.

**Work health and safety requirements** must comply with commonwealth, state and territory legislation and regulations, and may include:

**Environmental requirements:**

**Quality assurance requirements** may include:

- Australian standards
- Environment Protection Authority (EPA) requirements
- internal company quality assurance policy and risk
Tools, equipment and materials may include:

- hand and power tools
- ladders
- replaceable components, such as:
  - diaphragms
  - gaskets
  - gland packing materials
  - O-rings
  - springs
- scaffolds
- testing equipment.

Isolating procedures may be conducted on:

- alarm initiating devices
- alarm signalling equipment
- control and indicating equipment (CIE)
- emergency warning system
- power sources
- water supply.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include efficient:
  - energy use
  - use and recycling of material
  - water use, harvesting and disposal.

Draining-down procedures include:

- operating the main drain valve
- identifying and operating low drain point valves, if present
- checking system for residual water pressure
- applying drain-down water management techniques to prevent water damage.

Special valves may include:

- pressure reducing
- pressure limiting
- pressure relief.

Internal components of special valves may include:

- diaphragms
- gaskets
- O-rings
- restrictors
- springs.

CPCPFS4021A Commission domestic and residential fire suppression sprinkler systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS4011A

Unit Descriptor
This unit of competency specifies the outcomes required to test and commission domestic and residential fire suppression sprinkler systems in buildings up to four storeys in height.
It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the systems, and work finalisation processes including records and documentation.

Application of the Unit
Site locations for work application will be domestic and residential, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Prepare for work.

   1.1 Plans and specifications are obtained.

   1.2 Work health and safety (WHS) and environmental requirements associated with commissioning domestic and residential fire suppression sprinkler systems are adhered to throughout the work.

   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

   1.5 Tools, equipment and materials for commissioning domestic and residential fire suppression sprinkler systems, including personal protective equipment, are selected and checked for serviceability.

   1.6 Work area is prepared to support efficient commissioning process.

2  Identify system requirements.

   2.1 System design requirements are identified and confirmed from job specifications and according to standards.

   2.2 Commissioning requirements for domestic and residential fire suppression sprinkler systems are identified according to standards, authorities'
requirements and job specifications.

3 Test and commission system.

3.1 Sprinkler systems are checked to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.

3.2 Operation of system is tested according to job specifications, manufacturer recommendations and authorities' requirements and is adjusted as required.

3.3 System is commissioned and maintained to ensure correct operation according to standards, and manufacturer and job specifications.

3.4 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Clean up work area.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- Literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technical skills to test and commission domestic and residential fire suppression sprinkler systems

- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Components and materials of fire suppression sprinkler systems
- Job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- Pressure test systems and procedures
• process of installing, testing and commissioning domestic and residential fire suppression sprinkler systems
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory requirements related to commissioning domestic and residential fire suppression sprinkler systems
• SI system of measurements
• standards applicable to the service
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to testing and commissioning domestic and residential fire suppression sprinkler systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- testing and commissioning a fire suppression sprinkler system for a residential complex containing a minimum of a communal catering and living area and multiple residential quarters (or equivalent) and a fire suppression sprinkler system for a domestic residence containing a minimum of two rooms, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design specification and details of proposed service
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - where at least one of the systems is for a complex of not less than three storeys
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:
• Australian standards
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:
• hand and power tools
• test equipment.

**Materials** may include:
• actuating devices
• alarms
• control valve assemblies
• unplasticised polyvinyl chloride (PVC-U), steel or copper pipes and other approved materials
• sprinkler heads.

**Domestic and residential fire suppression sprinkler systems** may include:
• actuating devices
• alarms
• control valve assemblies
• piping
• sprinkler heads.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include efficient water usage, harvesting and/or disposal.
Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including AS2118 Automatic fire sprinkler systems
- safe work procedures relating to testing and commissioning domestic and residential fire suppression sprinkler systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPFS4022A Commission and maintain special hazard fire suppression systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS4012A

Unit Descriptor
This unit of competency specifies the outcomes required to test, commission and maintain special hazard fire suppression systems.
It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the systems, and conduct of systems maintenance and work finalisation processes, including records and documentation.

Application of the Unit
Site location for work application may be either domestic or residential, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
All technicians performing work described in this unit that involves the handling of prescribed ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) extinguishing agents must hold an appropriate extinguishing agent handling licence (EAHL).

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with commissioning special hazard fire suppression systems are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Apply knowledge and understanding of ODS and SGG legislative and industry requirements to commission, inspect, test and maintain activities for special hazard fire suppression systems.

1.5 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.6 Tools, equipment and materials for commissioning and maintaining special hazard fire suppression systems, including personal protective equipment, are selected and checked for serviceability.

1.7 Work area is prepared to support efficient commissioning process.
2 Identify system requirements.

2.1 Service design requirements are identified and confirmed from job specifications and are according to standards.

2.2 Testing and commissioning requirements of special hazard fire suppression systems are identified according to standards, authorities' requirements and job specifications.

3 Test and commission system.

3.1 Special hazard fire suppression systems are checked to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.

3.2 Operation of system is tested according to job specifications, manufacturer recommendations and authorities' requirements, including ODS and SGG legislative requirements, and is adjusted as required.

3.3 System is commissioned to ensure correct operation according to standards, and manufacturer and job specifications.

4 Maintain system.

4.1 Service and maintenance requirements are identified from manufacturer specifications or authorities' requirements.

4.2 Replacement components are checked and fitted periodically and as required according to specifications.

4.3 Maintenance and repair of system are conducted observing maintenance schedule described in current Australian standard, and manufacturer and/or authorities' requirements, including ODS and SGG legislative requirements.

4.4 Sustainability principles and concepts are observed when preparing for and undertaking work process.
5 Clean up work area.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to test, commission and maintain a special hazard protection system consisting of an extinguishing agent, piping, actuating devices and sprinkler delivery
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Environment Protection Authority (EPA) requirements, particularly in relation to ODS
- function and operation of components and qualities of materials of special hazards systems
- hazard categories, classes of fire hazard, extinguishing agents and application methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- pressure test systems and procedures
- procedures for cylinder anchorage and handling
- processes for accessing information and for calculating material requirements
- actuator handling process of installing, testing and commissioning special hazard systems
- relevant statutory requirements related to commissioning domestic and residential fire suppression sprinkler systems
- requirements for room ventilation and integrity
- SI system of measurements
- standards applicable to the service
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to testing and commissioning special hazard fire suppression systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- testing and commissioning one special hazard fire suppression system (not prescribed ODS or SGG extinguishing agent), being a gaseous, chemical or fluid-based system; and inspect, test and maintain one prescribed ODS or SGG system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design specification and details of proposed service
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or...
Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- complying with ODS and SGG legislation, codes and regulations, e.g. Ozone Protection and Synthetic Greenhouse Gas Management Act 1989
- preventing emissions of prescribed ODS and SGG extinguishing agents
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- hand and power tools
- test equipment.

**Materials** may include:
- actuating devices
- alarms
- control valve assemblies
- unplasticised polyvinyl chloride (PVC-U), steel or copper pipes or other approved materials
- special hazard fire suppression agents, including prescribed ODS and SGG materials
- sprinkler heads.

**Special hazard fire suppression systems** may include:
- carbon dioxide and other gases (such as inergen and argonite)
- chemical reaction and explosion suppression systems
- dry chemical
- foam
- prescribed ODS and SGG extinguishing agents (such as halon and NAF S-III)
• water
• water mist.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient energy use
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

**Information** may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements, including ODS and SGG legislation, codes and regulations
  • plumbing regulations
• relevant Australian standards, including AS2118 Automatic fire sprinkler systems and AS1851 Maintenance of fire protection systems and equipment
• safe work procedures relating to testing and commissioning special hazard fire suppression systems
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPFS4023A Commission fire system pumpsets

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Minor change to unit title
Not equivalent to CPCPFS4013A

Unit Descriptor
This unit of competency specifies the outcomes required to test and commission fire system pumpsets.
It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of systems, and work finalisation processes, including records and documentation.

Application of the Unit
Site location for work application may be either domestic or residential, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with commissioning fire system pumpsets are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 Tools, equipment and materials for commissioning fire system pumpsets, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient commissioning process.

2 Identify pumpset requirements. 2.1 System design requirements are identified and confirmed from job specifications and are according to standards.
   2.2 Testing and commissioning requirements of fire system pumpsets are identified according to standards, authorities’ requirements and job specifications.
### 3 Test and commission pumpsets.

<table>
<thead>
<tr>
<th>3.1</th>
<th>Fire system pumpsets and <strong>pump controls</strong> are checked to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities’ requirements.</th>
</tr>

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to test and commission a fire system pumpset
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- job safety analysis (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- performance measures for fire system pumpsets
- process of installing, testing and commissioning fire system pumpsets
- processes for accessing information and for calculating material requirements
- properties of water, including pressure, flow rates and atmospheric pressure
- relevant statutory requirements related to commissioning fire system pumpsets
- SI system of measurements
- standards applicable to installing and commissioning fire system pumpsets
- test systems, equipment and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to testing and commissioning fire system pumpsets
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- testing and commissioning one fire system pumpset, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design specification and details of proposed set
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
realistic tasks or simulated tasks covering the minimum task requirements
relevant specifications and work instructions
tools and equipment appropriate to applying safe work practices
support materials appropriate to activity
workplace instructions relating to safe work practices and addressing hazards and emergencies
material safety data sheets
research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct,
indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structures and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.
Environmental requirements cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:
- hand and power tools
- test equipment.

Materials may include:
- fire pumpsets.

Fire system pumpsets may include:
- centrifugal
- close coupled, long coupled with mechanical joints or belt driven by an electric or petrol and diesel motor
- multi-stage turbine
- positive displacement
- submersible and electric and compression ignition driven pumps.

Pump controls may include:
- automatic, including float, level, flow or pressure switches
- manual.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy usage
  - efficient water usage, harvesting and/or disposal.
Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including AS2118 Automatic fire sprinkler systems
- safe work procedures relating to testing and commissioning fire system pumpsets
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPFS4024A Design residential and domestic fire sprinkler systems

Modification History

Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS4014A

Unit Descriptor

This unit of competency specifies the outcomes required to design domestic and residential fire sprinkler systems using hydraulic calculations.
It covers preparation for the work, determination of system requirements, detailed design and recording of system plans, and work finalisation processes.

Application of the Unit

Site location for work application will be domestic and residential, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for design process.
   1.1 Nature and scope of design task are identified and confirmed.
   1.2 Work health and safety (WHS) and environmental requirements associated with designing residential and domestic fire sprinkler systems are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Work is organised and sequenced in conjunction with others involved in or affected by the work.
   1.5 Tools, equipment and materials required for designing domestic and residential fire sprinkler systems, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area in which the design process is to be conducted is prepared.

2 Determine system requirements.
   2.1 Information and specifications for the required work are obtained and confirmed, if necessary by site inspection.
   2.2 Regulations and standards relevant to the work are consulted and applied to all aspects of the work.
   2.3 Relevant data is extracted from plans and specifications.
   2.4 Building classification and hazard ratings are established according to standards and other relevant regulations.
3 Design sprinkler system

3.1 Water supply needs are established and graphs are drawn for the automatic fire sprinkler system.

3.2 Pipework is sized to manufacturer specifications and standards using hydraulic calculations.

3.3 Sprinkler system is designed to meet plans, specifications, standards, manufacturer recommendations and water supply data.

3.4 Sprinkler heads are selected for appropriate size, spray pattern, temperature and finish.

3.5 Sprinklers are spaced according to manufacturer specifications, standards and relevant statutory and regulatory authority regulations.

3.6 Pipe layout drawings are prepared according to standards and workplace requirements.

3.7 Computations and other supporting evidence are appropriately documented to support design.

3.8 Materials required are specified and optimised according to standards from the proposed design.

3.9 Fabrication sheets and material lists are prepared.

3.10 Plans are recorded according to regulatory authorities’ and workplace requirements.

3.11 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Restore work area

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment used in the design process are refurbished and left according to workplace procedures.

4.3 Information is accessed and documentation, including work backup, is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- collecting design data, spacing sprinkler heads, and sizing and arranging pipework using hydraulic calculations
- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - document computations and other supporting evidence
  - prepare fabrication sheets, material lists and other relevant workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - develop domestic and residential fire sprinkler system designs using hydraulic calculations
  - prepare layout drawings, fabrication sheets and material lists for system installation
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
• calculating and measuring techniques and their application
• components and materials of fire suppression sprinkler systems and their operating characteristics
• design techniques and technology
• job safety analysis (JSA) and safe work method statements (SWMS)
• National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
• process of designing fire sprinkler systems
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory requirements related to commissioning domestic and residential fire suppression sprinkler systems
• SI system of measurements
• standards applicable to the design
• workplace and equipment safety requirements

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the design of domestic and residential fire sprinkler systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- using hydraulic calculations, designing a fire sprinkler system for a residential complex containing a minimum of a communal catering and living area and multiple residential quarters (or equivalent) and also a fire sprinkler system for a domestic residence containing a minimum of two rooms, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design specification and details of proposed service
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and authorised work practices, safety requirements and
for assessment

Environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

CPCPFS4025A Commission fire alarm and detection system interface devices

Modification History

Changes to unit title, descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPFS4005A
Unit Descriptor

This unit of competency specifies the outcomes required to commission fire alarm and detection interface systems. It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of the system interface devices, and work finalisation processes, including records and documentation.

Application of the Unit

This unit of competency supports the needs of experienced tradespeople with responsibility for testing and commissioning fire alarm and detection system interface devices. Site location for work application may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

The skills and knowledge described in this unit require a licence to practise in a workplace where plant and equipment interface devices operate at voltages above extra low voltage (e.g. 50 V a.c. or 120 V d.c.). However other conditions may apply in some jurisdictions subject to regulations related to electrical and plumbing work. Practice in the workplace and during training is also subject to regulations directly related to work health and safety and where applicable contracts of training, such as apprenticeships.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.  
1.1 Plans and specifications are obtained.  
1.2 *Work health and safety* (WHS) requirements associated with the workplace environment and commissioning fire alarm and detection system interface devices are adhered to throughout the work.  
1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.  
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.  
1.5 *Tools and equipment* for commissioning fire alarm and detection system interface devices, including personal protective equipment, are selected and checked for serviceability.  
1.6 Work area is prepared to support efficient commissioning process.  
1.7 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

2 Identify system requirements.  
2.1 System design requirements are identified and confirmed from job specifications and according to *relevant standards*.  
2.2 Requirements of fire alarm and detection system commissioning are identified according to relevant Australian standards, *statutory and regulatory authorities’* requirements and job specifications.

3 Test and commission system.  
3.1 Fire alarm and detection system interface devices are checked to ensure type and installation conform to relevant Australian standard, job specifications, manufacturer recommendations and authorities' requirements.  
3.2 Operation of system interface devices is tested according to job specifications, manufacturer recommendations.
and authorities’ requirements and adjusted as required.

3.3 System interface devices are commissioned and maintained to ensure correct operation according to relevant standards, and manufacturer and job specifications.

4 Clean up work area.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to able to coordinate and action tasks, work with others and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - disconnect and reconnect system interface devices and associated wiring
  - reconfirm operation of control and indicating equipment (CIE)
  - use mobile communication technology

Required knowledge

- components and materials of fire alarm and detection system interface devices
- correct location and setting of interface devices to meet system design standards
- difference between extra low voltage and low voltage system interface wiring connection
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing, testing and commissioning fire alarm and detection system interface devices
- properties of water, including pressure and flow rates
- relevant statutory requirements related to commissioning fire alarm and detection system interface devices, including automatic smoke and heat venting systems, air handling systems, and emergency warning and intercommunication systems
- SI system of units
- sources of information and processes for calculating suitable replacement of interface devices
- standards applicable to the service
- systems operations and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing, planning and conducting system commissioning procedures for one fire alarm and detection system and completing all associated documentation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to commissioning fire alarm and detection system interface devices
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- commissioning one fire alarm and detection system interface device, including one pressure switch and one flow switch, plus an actuator and a control and indicating panel, ensuring:
  - applying sustainability principles and concepts
  - correctly identifying location, design specification and details of the system
  - correctly selecting and using appropriate processes, tools and equipment
  - completing all work to specification
  - complying with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective equipment, including that prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Quality assurance requirements** may include:
- Environment Protection Authority
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- hand and power tools
- test equipment.

**Commissioning fire alarm and detection system interface devices**:
- may include verifying interface device operations, including:
  - alarm volume
  - annunciators
  - audible, visible and combination alarms
  - controls
  - coordination of alarm signals with other services
  - dispatching systems
  - public reporting systems
  - signal transmission
  - tactile alarm appliances for people with disabilities
  - zone alarms
- interface devices may include:
  - pressure switches
  - flow switches
  - actuators
  - solenoids
  - valve monitoring devices.
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy usage
  - efficient water usage, including harvesting and disposal.

Relevant standards may include:

- AS1670.1 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Fire
- AS2118.1 Automatic fire sprinkler systems Part 1 – General requirements
- AS1851 Maintenance of fire protection systems and equipment.

Statutory and regulatory authority include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

CPCPFS4026A Commission firefighting appliances

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Detailed licensing information included
Not equivalent to CPCPFS4006A

Unit Descriptor
This unit of competency specifies the outcomes required to commission firefighting appliances.
It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of appliances, and work finalisation processes, including records and documentation.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople with responsibility for testing and commissioning firefighting appliances.
Site location for work application may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) requirements associated with workplace environment and commissioning firefighting appliances are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 *Tools and equipment* for commissioning firefighting appliances, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient commissioning process.

2. Identify system requirements.
   2.1 Equipment requirements are identified and confirmed from job specifications and according to relevant standards.
   2.2 Requirements of firefighting appliance commissioning are identified according to standards, statutory and regulatory authorities’ requirements and job specifications.
3 Test and commission system.

3.1 Firefighting appliances are checked to ensure type and installation conform to standards, job specifications, manufacturer recommendations and authorities' requirements.

3.2 Operation of appliances is tested according to standards, job specifications, manufacturer recommendations and authorities' requirements and is adjusted as required.

3.3 Appliances are commissioned and maintained to ensure correct operation according to standards, and manufacturer and job specifications.

3.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 Clean up work area.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Australian standards applicable to relevant appliances
- components and materials of firefighting equipment and appliances
- job safety analysis (JSA) and safe work method statements (SWMS)
- pressure requirements of hose reel systems
- process of installing, testing and commissioning firefighting equipment and appliances
- relevant statutory requirements related to commissioning firefighting equipment and appliances
- SI system of units
- sources of information and processes for the calculation of requirements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing, planning and conducting commissioning procedures for firefighting appliances for a residential building of four storeys and completing all associated documentation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, standards and specifications to the commissioning of firefighting appliances
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• commissioning firefighting appliances, including portable fire appliances, wheeled fire extinguishers, delivery lay flat hose and fire hose reel systems, ensuring:
  • application of sustainability principles and concepts
  • correctly identifying location, design specification and details of system
  • correctly selecting and using appropriate processes, tools and equipment
  • completing all work to specification
  • complying with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials, including hazardous materials and substances
• hazard control
• personal protective equipment, including that prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
  • electricity
  • other machines
  • surrounding structure and facilities
  • trip hazards
  • underground services
  • use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Quality assurance requirements** may include:

- Environment Protection Authority
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:

- hand and power tools
- test equipment.

**Commissioning firefighting appliances** covers testing and commissioning firefighting appliances, including:

- delivery lay flat fire hose
- fire blankets
- fire hose reel systems
- portable fire appliances
- wheeled fire extinguishers.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Relevant standards** may include:

- AS/NZS1841 Portable fire extinguishers - general requirements
- AS/NZS1850 Portable fire extinguishers – classification, rating and performance testing
- AS1851 Maintenance of fire protection systems and equipment
- AS2441 Installation of fire hose reels
- AS2444 Portable fire extinguishers and blankets - selection and location
- AS/NZS3504 Fire blankets
- AS3565 Meters for water supply
- AS4077 Fire protection – fire extinguishing media: halogenated hydrocarbons
- AS4078 Fire protection – fire extinguishing media: carbon dioxide
- AS4265 Wheeled fire extinguishers
- AS/NZS4353 Portable fire extinguishers – aerosol type.

_Sustainability principles and concepts:_

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy usage
  - disposing of waste material to ensure minimal environmental impact
  - efficient use and recycling of material.

CPCPFS4027A Commission fire sprinkler systems

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to commission fire sprinkler systems. It covers preparing for the work, identifying and confirming system specifications and requirements, physically testing and commissioning systems, and finalising work processes, including completing records and documentation.

Application of the Unit

This unit of competency supports the work of fire protection industry personnel responsible for commissioning fire sprinkler systems.
Work may be undertaken on commercial or industrial buildings, which may be new work sites or existing structures being renovated, extended, restored or maintained.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this unit. Candidates are advised to check for those requirements.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>

<td>2.5</td>
<td>Pipework is inspected and confirmed as functional, or jointing and supporting defects are reported.</td>
</tr>
</tbody>
</table>
2.6 Valves are inspected for different commissioning tests to confirm correct type, adequate labelling, and orientation in required position.

2.7 Pressure gauge schedule, block plan and interface diagram are confirmed as corresponding to design requirements.

2.8 Water supply components, including any installed pumpsets, are checked and verified against design requirements.

2.9 Changes to the building or existing conditions that could affect component performance are identified.

3 Conduct pressure tests and restore system to normal pressure.

3.1 Static air-pressure test is conducted to confirm integrity of the system, and results are recorded according to relevant standards and workplace requirements.

3.2 High pressure hydraulic test is conducted to confirm integrity of the system, and results are recorded according to relevant standards and workplace requirements.

3.3 Leaks are identified and reported.

3.4 System is drained and re-charged at normal pressure according to relevant standards and workplace requirements.

4 Conduct functional tests.

4.1 Water supply functional proving test is conducted, and results are recorded according to relevant standards.

4.2 Functional tests of system components and interfaces are conducted, and results recorded according to relevant standards and design requirements.

4.3 Tests are conducted according to environmental and sustainability requirements.

5 Finalise commissioning process.

5.1 System functionality and compliance with design specifications are confirmed.

5.2 Componentry is set to operational function and pipework is charged with water according to specifications.
5.3 Tools, equipment and materials are checked and stored and work area is left in good order.

5.4 Documentation is completed and processed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - determine commissioning test requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identify and report faults in tools, equipment or materials to appropriate personnel

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks in consultation with other relevant personnel
  - set out work

- reading skills to interpret drawings and specifications

- teamwork skills to work with others to action tasks

- technical skills to use tools and equipment to commission sprinkler systems

- technology skills to:
  - access site-specific instructions in a variety of media
  - use mobile communication technology

- writing skills to record results of functional tests and complete other workplace documentation

Required knowledge

- design and installation performance requirements of relevant installation standards, such as:
  - National Fire Protection Association (NFPA)
  - Factory Mutual performance-based codes of practice
  - Australian Standard AS 2118.1 Automatic fire sprinkler systems

- industry and regulatory requirements for commissioning fire sprinkler systems

- job safety analyses (JSA), safety data sheets (SDS) and safe work method statements (SWMS)

- performance measures for fire sprinkler systems as referenced in design drawings and specifications

- properties of water, including pressure, flow rates and atmospheric pressure
- SI system of measurements
- standards applicable to installing and commissioning fire sprinkler systems
- workplace and equipment safety requirements, including personal protective equipment requirements relevant to the job
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications to testing and commissioning fire sprinkler systems
- apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to commission:
  - one wet system connected to fixed pumpsets
  - one wet system connected to town main supply
  - one pre-action fire sprinkler system
- commissioning must ensure:
  - correct identification of location, design specification and details of proposed system
  - correct selection and use of appropriate processes, tools and equipment
  - completion of work to specification
  - compliance with regulations, standards and workplace quality procedures and processes
  - effective communication with others
  - safe work practices.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets, job safety analyses and safe work method statements
- research resources, including industry-related systems information.

**Method of assessment**

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to identify and interpret the essential underpinning knowledge required for practical application.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Fire sprinkler systems* may include:

- deluge
- dry pipe
- pre-action
• storage sprinklers
• wall wetting
• water mist
• wet pipe.

**Approving authority** may be:
• client representative
• council representative
• fire brigade official
• fire protection consultant engineer
• insurance company representative
• system designer.

**Documentation** may include:
• as-installed drawings
• design calculations
• logbooks
• operator manuals.

**Industry, legislative and workplace requirements** may include:
• codes and standards
• environmental and sustainability
• licensing
• quality assurance
• workplace health and safety.

**Tools and equipment** may include:
• digital tachometers
• flow testing equipment
• hand tools
• laser levels
• measuring devices
• personal protective equipment
• pressure gauges.

**Fire sprinkler system components** may include:
• air compressors
• alarm valves
• ball valves
• brackets
• discharge nozzles
• flow switches
• pipework
• pressure gauges
• pressure reducing valves
• pressure relief valves
• pressure switches
• pumpsets
• solenoids
• sprinkler heads
• water supply valves.
Functional tests may include checking the effective operation of:

- brigade booster connections
- control and actuator mechanisms, such as:
  - pressure switches
  - flow switches
- control valves, such as:
  - pressure reducing
  - pressure relief
  - tank inflow
- interfaces to other systems, including:
  - booster pumps
  - building services
  - control indicating equipment (CIE)
  - control of booster pumpsets
  - fire detection
  - heating, ventilation and air conditioning (HVAC)
  - occupant warning systems
  - valve monitoring controls
- remote water proving points
- water supply components, such as tank infill and suction lines.

Not applicable.
CPCPFS5010A Design fire-compliant hydraulic services

Modification History
Changes to descriptor, performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPFS5000A

Unit Descriptor
This unit of competency specifies the outcomes required to design fire protection systems for hydraulic services in wide span and high-rise buildings. The fire protection systems ensure that hydraulic services maintain integrity, insulation and structural adequacy in case of fire.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance of experienced tradespeople in a consultancy or supervisory capacity in relation to fire-compliant hydraulic service design. It involves interpretation of plans and specifications and the design, detailing and documentation of fire-compliant hydraulic services for applications including residential, commercial and industrial and may be for new projects or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Evaluate design parameters.

1.1 Fire and non fire-rated compartments of buildings are evaluated and the application of evaluation to hydraulic services is specified.

1.2 Design requirements are determined from plans, specifications and client brief.

1.3 Cost-benefit analysis is conducted, comparing a range of pipe materials, system designs and penetration protection systems.

1.4 Statutory, regulatory, Australian and New Zealand standards and relevant building code requirements for the design of fire-compliant hydraulic services are interpreted and applied.

1.5 Manufacturer requirements and trade and technical manuals are interpreted and applied.

1.6 Additional research, including a desktop study, is conducted and performance requirements are established.

2 Plan and detail system components.

2.1 Layout of pipework systems and type and location of fire check materials are planned.

2.2 Approved fire-rated materials, penetration techniques, insulation and filler materials are specified to
appropriate fire-resistance level.

2.3 **Pipe fixings** are designed for a range of applications.

2.4 Pipework for sprinklered and non-sprinklered areas is designed for a range of applications.

2.5 **Installation requirements** are specified.

2.6 **Compliance inspection** is conducted.

3 Design and size systems.

3.1 Fire-compliant hydraulic services are designed for a range of wide span and high-rise building applications.

3.2 Range of **fire-compliant duct systems** is designed using **fire-rated building materials**.

3.3 Hydraulic services using non fire-rated materials are designed to comply with building fire ratings.

3.4 Fire-compliant hydraulic distribution systems are designed and sized using computer software packages.

3.5 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

4 Prepare documentation.

4.1 **Plans** are prepared and detailed for a range of fire-compliant hydraulic services.

4.2 **Specification** for fire-compliant hydraulic services is prepared.

4.3 **Compliance report** is prepared.

4.4 **Operation and maintenance manual** is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - develop creative and responsive approaches
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - read and interpret drawings, specifications and documentation from a variety of sources, including:
    - Australian standards
    - National Construction Code
    - WHS and environmental requirements
    - plumbing regulations
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and reports
- numeracy skills to:
  - apply measurements and calculations
  - interpret data
- planning and organising skills to:
  - plan and sequence tasks with others
  - research, collect, organise and understand information relating to the design of fire-compliant hydraulic systems
  - take initiative and make decisions
- problem-solving skills to:
  - analyse requirements
  - consider options
• design an appropriate system
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to:
  • apply design principles relating to hydraulic systems
  • use tools and equipment, including:
    • computer-aided design (CAD) software
    • drawing instruments
    • measuring equipment
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• requirements of state regulatory authorities, Australian standards and manufacturer specifications
• application of terminology, definitions, installation methods and hazards identified in relation to devices and systems used, according to:
  • AS/NZS3500 National plumbing and drainage
  • environmental requirements
  • manual of authorisation procedures for plumbing and drainage products (MP52)
  • other standards, codes or standard operating procedures
• quality assurance requirements, including:
  • Environment Protection Authority
  • internal company quality assurance policy and risk management strategy
  • International Standards Organisation
  • nature of materials used and effects of performance under various conditions
  • site safety plan
  • workplace operations and procedures
• variety of applications of technology principles in design of fire-compliant hydraulic services for all classes of building
• workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing designs and associated documentation for fire-compliant hydraulic services for two different categories of wide span and high-rise buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer, NCC and Australian and New Zealand standard requirements for a range of fire-compliant hydraulic services
- planning and detailing system components, including:
  - applying sustainability principles and concepts
  - conducting a compliance inspection
  - designing fire-compliant hydraulic systems
  - designing fire-compliant systems for fire-rated materials
  - designing fire-compliant systems for non fire-rated materials
  - ducts
  - fire check collars
  - insulation and filler materials
  - penetrations
  - preparing a compliance report
  - preparing a specification for fire-compliant hydraulic services
  - preparing an operation and maintenance manual.

Context of and specific resources

This competency is to be assessed using standard and
authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Design requirements** may include:

- architectural specifications
- builder specifications
- design of fire-compliant hydraulic services should ensure that hydraulic services maintain the integrity, insulation and structural adequacy of a building in case of fire.
- owner requirements
- specialist design applications.

**Cost-benefit analysis** includes:

- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising the integrity of the project.
Statutory, regulatory, Australian and New Zealand standards and relevant building code requirements may include:

- AS/NZS3500 National plumbing and drainage manual of authorisation procedures for plumbing and drainage products (MP52)
- material and authorisation standards specified by:
  - statutory plumbing authority
  - local authority
  - National Construction Code (NCC)
- relevant Acts, regulations and local and state government policies
- relevant fire standards.

Manufacturer requirements may include:

- material specifications
- technical and trade manuals.

Desktop study may include:

- collection and interpretation of existing data for design purposes from:
  - architectural and building plans
  - council requirements
  - developer requirements
  - regulatory requirements
  - environmental, social and economic considerations
  - other documents and reports as appropriate.

Performance requirements may include:

- Australian and New Zealand standards
- NCC requirements
- local authority performance requirements
- site and application specific performance requirements.

Layout of pipework systems:

- may include:
  - car park systems
  - concealed pipework
  - duct systems
  - exposed pipework
  - fire-rated pipework
  - non fire-rated pipework
• sprinklered and non-sprinklered areas
• should have principles of economy, serviceability, durability and fit for use applied.

**Fire check materials** may include:
• fire pillows
• fire-rated sealants
• smoke seals
• range of intumescent collars.

**Fire-rated materials** may include:
• fittings
• pipework
• valves.

**Penetration techniques** may include:
• concrete floors
• fire and smoke doors
• fire dampers
• galvanised decking systems
• ply formwork systems
• post and pre-tensioned concrete flooring systems
• pre-cast flooring systems.

**Insulation and fill materials** may include:
• caulking compounds
• fibreglass
• fire pillows
• foams
• proprietary fill materials
• rock wool.

**Fire-resistance level** may include:
• insulation
• integrity
• structural adequacy.

**Pipe fixings** may include fire and load-rated:
• bedding and thrust blocks
• corrosion protection
• cover
• masonry fixing
• material requirements
• pipe supports spacings and locations
• vertical support fixing.

**Installation requirements** may include:
• corrosion and element protection
• installation details
• jointing requirements
• supports
• workmanship and quality control.

**Compliance inspection** may include checking that:
• approved materials appropriate to fire-rated compartments and required fire-resistance level are used
• clipping and insulation comply with regulatory requirements
• fire compartments are not compromised by hydraulic services
• installation is appropriate for the fire-resistance level.

**Fire-compliant duct systems** may include:
• brick
• concrete
• masonry
• plasterboard.

**Fire-rated building materials** may include:
• brick
• concrete
• masonry
• plasterboard
• other building materials as applicable.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
  • efficient use of material
  • efficient energy usage
  • efficient use and recycling of material
  • disposing of waste material to ensure minimal environmental impact
- efficient water usage, harvesting and/or disposal
- lifecycle cost-benefit analysis
- consideration of the Green Building Council of Australia rating scheme.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - sections
  - schematics, which may be produced using:
    - computer generation
    - drawing equipment.

**Specification** may include:
- jointing
- manufacturer
- materials
- supports and specialised components
- valve selection
- workmanship and quality control.

**Compliance report** may include:
- conclusions
- documentation of the compliance inspection
- evaluation of findings.

**Operation and maintenance manual** may include:
- detailed alternative (fire-engineered) solutions
- maintenance requirements
- system plans
- yearly inspection requirements.

**Unit Sector(s)**

**Functional area**
Unit sector  Plumbing and services

**Custom Content Section**

Not applicable.
CPCFSS5011A Design fire sprinkler systems

Modification History
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCFSS5001A

Unit Descriptor
This unit of competency specifies the outcomes required to design and size fire sprinkler systems and to detail and specify the layout, materials, components, water storage requirements, and flow and pressure requirements for fire sprinkler systems in buildings.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople responsible for designing fire sprinkler systems.
Site location for work application may be for new projects or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Evaluate design parameters.
   1.1 **Scope of work** is established for design of fire sprinkler systems for wide span and high-rise building projects.
   1.2 **Design requirements** are determined from plans, specifications and client brief.
   1.3 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.
   1.4 **Fire department, statutory, regulatory, Australian and New Zealand standards and relevant building code requirements** for the design of fire sprinkler systems are interpreted and applied.
   1.5 **Manufacturer requirements** and trade and technical manuals are interpreted and applied.
   1.6 Flow and pressure requirements are established, **flow and pressure tests** are conducted and council main flows and pressures are established.
   1.7 Additional research, including a **desktop study**, is conducted and **performance requirements** are established.
| 2 | Plan and detail system components. | 2.1 | **Layout of pipework systems** and type and location of **fittings and valves** are planned. |
|   |                                  | 2.2 | Type, location and requirements for **backflow prevention devices** and **alarm and valve assemblies** are detailed. |
|   |                                  | 2.3 | Pipe sizes, velocities, flows and pressures are **calculated** for a range of applications. |
|   |                                  | 2.4 | Approved **materials, jointing methods** and sprinkler heads for fire sprinkler systems are specified. |
|   |                                  | 2.5 | Smoke alarm systems, **booster assemblies**, booster relay and jacking pumps are designed and detailed. |
|   |                                  | 2.6 | **Pipe fixings** are designed for a range of applications. |
|   |                                  | 2.7 | **Water storage systems** and **pump, pump controls and pumproom requirements** are sized and detailed. |
|   |                                  | 2.8 | **Test points and associated drainage systems** are designed and sized. |
|   |                                  | 2.9 | **Installation requirements** are specified. |
| 3 | Design and size systems.         | 3.1 | Fire sprinkler systems are designed for a range of wide span and high-rise building applications. |
|   |                                  | 3.2 | Combined water supply, fire hydrant and hose reel and sprinkler systems are designed for a range of wide span and high-rise building applications. |
|   |                                  | 3.3 | Sprinkler systems for Grades 1, 2 and 3 water supplies are designed. |
|   |                                  | 3.4 | Range of **sprinkler system configurations** is designed. |
|   |                                  | 3.5 | Fire sprinkler systems are designed and sized using computer software packages. |
|   |                                  | 3.6 | **Sustainability principles and concepts** are observed when preparing for and undertaking work process. |
4 Prepare documentation.  

4.1 *Plans* are prepared and detailed for a range of fire sprinkler systems.

4.2 *Specification* for a fire sprinkler system is prepared.

4.3 *Testing and commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to:
  - develop creative and responsive approaches
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - read and interpret plans, specifications and documentation from a variety of sources, including:
    - Australian standards
    - National Construction Code
    - WHS and environmental requirements
    - plumbing regulations
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and reports

- numeracy skills to:
  - apply measurements and calculations
  - interpret data

- planning and organising skills to:
  - plan and sequence tasks with others
  - research, collect, organise and understand information relating to the design of fire sprinkler systems
  - take initiative and make decisions

- problem-solving skills to analyse requirements, carry out tests, consider options and design an appropriate system

- teamwork skills to work with others to action tasks and relate to people from a range of
cultural and ethnic backgrounds and with varying physical and mental abilities

- **technical skills to:**
  - apply design principles relating to hydraulic systems
  - use tools and equipment, including drawing instruments, measuring equipment and computer-aided design (CAD) software

- **technology skills to:**
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including:
  - AS/NZS2118 Automatic fire sprinkler systems – general requirements
  - AS/NZS3500 National plumbing and drainage
  - AS2200 Design charts for water supply and sewerage
  - environmental requirements
  - hazards associated with devices and systems used in the hydraulic sector
  - installation methods used in hydraulic systems
  - other standards, codes or standard operating procedures
  - terminology and definitions used in hydraulic design

- quality assurance requirements, including:
  - Environment Protection Authority
  - internal company quality assurance policy and risk management strategy
  - International Standards Organisation
  - nature of materials used and effects of performance under various conditions
  - site safety plan
  - workplace operations and procedures

- variety of applications of technology principles in design of fire sprinkler, hydrant and hose reel systems for all classes of building

- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing designs and associated documentation for fire sprinkler systems for two different categories of wide span and high-rise buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, fire authority, regulatory, manufacturer, NCC and Australian and New Zealand standard requirements for a range of fire sprinkler systems
- planning and detailing system components, including:
  - applying sustainability principles and concepts
  - alarm and valve assemblies
  - preparing a specification for a fire sprinkler system
  - preparing a testing and commissioning schedule
  - preparing an operation and maintenance manual
  - preparing plans for a range of fire sprinkler systems
  - sprinkler heads
  - water storage systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must
relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** includes:
- interpretation of plans and specifications
- sizing and documenting layout of fire sprinkler systems for applications, including residential, commercial and industrial.

**Design requirements** may include:
- architectural specifications
- builder specifications
- owner requirements
- relevant statutory authorities
- specialist design applications.

**Cost-benefit analysis** may include:
- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising project

Fire department, statutory, regulatory, Australian and New Zealand standards and relevant building code requirements may include:

- relevant Acts, regulations and local and state government policies
- AS/NZS2118 Automatic fire sprinkler systems - general requirements
- AS2419 Fire hydrant installations – system design, installation and commission
- material and authorisation standards specified by:
  - National Construction Code (NCC)
  - statutory authorities.

Manufacturer requirements may include:

- material specifications and standards
- pump tables
- sizing tables
- sprinkler heads and components
- technical and trade manuals.

Flow and pressure tests may include:

- results of flow and pressure tests conducted by a contractor
- on-site measurement of flow (l/s) and pressure (kPa).

Desktop study may include:

- collection and interpretation of existing data for design purposes from:
  - architectural and building plans
  - council requirements
  - developer requirements
  - regulatory requirements
  - environmental, social and economic considerations
- other documents and reports as appropriate.

Performance requirements may include:

- flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local statutory authorities’ plans.

Layout of pipework systems:

- may include:
  - appropriate water supply
- grid systems
- ring main
- tree system
- should have principles of economy, serviceability, durability and fit for use applied.

**Fittings and valves** may include:
- fittings:
  - mechanical fittings
  - bends
  - elbows
  - tees
  - unions
- valves:
  - backflow prevention
  - pressure relief
  - isolating
  - pressure limiting
  - pressure reduction
  - strainers
  - water-saving devices.

**Backflow prevention devices**: may be testable or non-testable devices and installed as:
- individual protection
- zone protection
- containment protection.

**Alarm and valve assemblies** may include:
- wet
- dry
- deluge
- pre-action
- mechanical and electrical alarms
- ancillaries and trims.

**Calculations** may include:
- hazard classification
- hydraulic
- pressure and flow
- density of discharge
- velocity
- volume
- friction
- area of operation (including shapes).

**Materials may include:**
- chlorinated polyvinyl chloride (CPVC)
- copper
- steel
- fittings and fixtures
- other approved materials.

**Jointing methods may include:**
- silver braze
- welded
- solvent welded
- flanged
- mechanical joints
- threaded
- other approved methods of jointing.

**Booster assemblies may include:**
- cabinet and block plans
- non-return and isolating valves
- fire appliance (hard stand) access
- pressure gauges
- appropriate booster assembly.

**Pipe fixings may include fire and load rated:**
- masonry fixing
- vertical support fixing
- pipe supports spacings and locations
- bedding and thrust blocks
- corrosion protection
- cover
- material requirements.

**Water storage systems may include:**
- automatic controls
- inlet valve design and sizing
- outlet valve design and sizing
- overflow requirements
- safe tray requirements
- tank sizes
- vortex plates
- tank siting.

**Pump, pump controls and pumproom requirements** may include:
- manual and/or automatic controls
- inlet and outlet design requirements
- installation and mounting requirements
- pump selection
- space requirements
- electrical supply requirements
- valve requirements
- ventilation requirements
- heating
- exhaust extraction.

**Test points and associated drainage systems** may include:
- design and sizing of collection points and tundishes to prevent spillage, overflow and damage to building finishes
- design and sizing of drainage systems to cater for maximum flow conditions
- specification of materials for systems, including copper, polyvinyl chloride (PVC) and galvanised piping
- other approved materials.

**Installation requirements** may include:
- corrosion and elements protection
- installation details
- jointing requirements
- supports
- workmanship and quality control.

**Sprinkler system configurations** may include:
- deluge
- drencher
- dry
- pre-action
- special hazard
- wet.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal
environmental impact
- efficient use of material
- efficient energy usage
- efficient use and recycling of material
- disposing of waste material to ensure minimal environmental impact
- efficient water usage, harvesting and/or disposal
- life cycle cost-benefit analysis
- consideration of the Green Building Council of Australia rating scheme.

Plans may include:
- axonometrics
- cross-sections
- details
- elevations
- isometrics
- schematics, which may be produced using:
  - computer generation
  - drawing equipment
- sections
- submission for client approval
- pipework fabrication sheets and stores lists
- service coordination.

Specification may include:
- support and specialised components
- jointing
- manufacturer
- materials
- valve selection
- quality control/workmanship.

Testing may include:
- air pressure test
- hydrostatic test
- flush system
- quality assurance (QA) audit.

Commissioning schedule may include:
- direct inspection
- flow test
- system operation.
Operation and maintenance manual may include:

- hydraulic calculations and water supply details
- as installed drawings
- relevant standards of maintenance of all maintainable equipment
- manufacturer data
- system description and operating instructions
- certificate reference.

CPCPFS5012A Design fire hydrant and hose reel systems

Modification History
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPFS5002A

Unit Descriptor
This unit of competency specifies the outcomes required to design fire hydrant, hose reel and storage systems to Australian and New Zealand standards, the National Construction Code (NCC) and other relevant legislative requirements in order to meet fire protection standards.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and construction hydraulics.

Licensing/Regulatory Information
The design of fire hydrants, hose reels and storage systems must comply with Australian and New Zealand standards, the National Construction Code (NCC) and other relevant legislative requirements in order to meet fire protection standards.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Evaluate design parameters.
   1.1 Scope of work is established for fire hydrants, hose reels and distribution systems for wide span and high-rise building projects.
   1.2 Design requirements are determined from plans, specifications and client brief.
   1.3 Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.
   1.4 Fire department, statutory and regulatory requirements and Australian and New Zealand standards for the design of fire hydrants, hose reels and distribution systems are analysed, interpreted and applied.
   1.5 Manufacturer requirements and trade, technical and sizing manuals are interpreted.
   1.6 Additional research, including a desktop study, is conducted to outline design parameters.
   1.7 Flow and pressure tests are conducted.
   1.8 Performance requirements are established.

2. Plan and detail system components.
   2.1 Layout of pipework and type and location of fittings and valves are planned.
   2.2 Type, location and requirements for backflow prevention devices are detailed.
   2.3 Pipe sizes, velocities, flows and pressures are calculated for a range of applications.
2.4 Approved materials, jointing methods and installation requirements are specified.

2.5 Hydrant booster, standpipe and hose reel assemblies are detailed.

2.6 Thrust blocks are designed for a range of applications.

2.7 Pipe fixings are designed for a range of applications.

2.8 Pump, pump controls and pumproom requirements are sized and detailed.

2.9 Water storage systems are designed and detailed.

3 Design and size systems.

3.1 Fire hydrant and hose reel systems are designed for a range of wide span and high-rise building applications.

3.2 Combined water supply, fire hydrant, hose reel and sprinkler systems are designed for a range of wide span and high-rise building applications.

3.3 Range of delivery systems is designed.

3.4 Fire hydrant and hose reel systems are designed and sized using computer software packages.

3.5 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Prepare documentation.

4.1 Plans are prepared for a range of fire hydrant and hose reel systems.

4.2 Block plan is prepared for booster cabinet according to Australian and New Zealand standards.

4.3 Specification for a fire hydrant and hose reel system is prepared.

4.4 Testing and commissioning schedule is prepared.

4.5 Operation and maintenance manual is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to:
  - develop creative and responsive approaches
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and reports
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to:
  - apply measurements and calculations
  - interpret data

- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of fire-compliant hydraulic systems
  - take initiative and make decisions

- problem-solving skills to:
  - analyse requirements
  - carry out tests
  - consider options
  - design an appropriate system
  - identify typical faults and action required to rectify problems

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to apply design concepts and principles relating to hydraulic systems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- Australian and New Zealand standards, manufacturer specifications, NCC and other applicable codes or standard operating procedures relevant to the sector
- hazards associated with devices and systems used in the hydraulic sector
- installation methods used in hydraulic systems
- nature of materials used and effects of performance under various conditions
- terminology and definitions used in hydraulic design
- workplace safety requirements, including relevant statutory regulations, codes and standards
## Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving effective performance and application of principles used to design fire hydrant and hose reel systems.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- establishing and evaluating design parameters for a range of fire hydrant and hose reel systems
- planning system components for a range of fire hydrant and hose reel systems, including:
  - application of sustainability principles and concepts
  - booster assemblies
  - hose reels
  - hydrants
  - storage tanks
  - thrust blocks
- complying with WHS regulations applicable to workplace operations
- applying organisational quality procedures and processes within context of restoring plastered surfaces to conservation requirements
- designing and sizing a range of fire hydrant and hose reel systems
- developing a checklist with all information and formulas required to carry out flow and pressure tests
- preparing plans for a range of fire hydrant and hose reel systems
- preparing a specification for a fire hydrant and hose reel system
- preparing a testing and commissioning schedule
• producing an operation and maintenance manual
• communicating with others to ensure safe and effective work site operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** may include:

- interpretation of plans and specifications
- sizing and documenting layout of fire hydrant and hose reel systems, including:
  - combined fire sprinkler, hydrant and hose reel systems
  - combined hydrant and hose reel systems
  - emergency egress
  - separate hydrant and hose reel systems
- equipment that may be for residential, commercial
Design requirements may include:

- architectural specifications
- builder specifications
- owner requirements
- specialist water use applications
- relevant statutory authorities.

Cost-benefit analysis may include:

- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising project
- life cycle cost-benefit analysis.

Statutory and regulatory requirements may include:

- Acts and regulations
- local and state government policies.

Australian and New Zealand standards may include:

- AS/NZS3500 National plumbing and drainage: Part 1
- AS2419 Fire hydrant installations – system design, installation and commission
- AS2441 Installation of fire hose reels
- AS/NZS2118 Automatic fire sprinkler systems – general requirements
- NCC.

Manufacturer requirements may include:

- material specifications and standards
- pump tables
- sizing tables
- technical and trade manuals.

Desktop study may include:

- collection and interpretation of existing data for design purposes from:
  - architectural and building plans
  - council requirements
  - developer requirements
  - regulatory requirements
  - environmental, social and economic
considerations

- other documents and reports as appropriate.

**Flow and pressure tests** may include:

- results of flow and pressure tests
- on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa).

**Performance requirements** may include:

- flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local statutory authority’s plans.

**Layout of pipework** may include:

- dual feed
- ring main
- single pipe.

**Fittings and valves** may include:

- fittings:
  - mechanical fittings
  - bends
  - elbows
  - tees
  - unions
- valves:
  - backflow prevention
  - pressure relief
  - isolating
  - pressure limiting
  - pressure reduction.

**Materials** may include:

- copper
- galvanised steel
- fittings and fixtures
- other approved materials.

**Jointing methods** may include:

- flanged
- mechanical joints
- silver braze
- threaded
- welded
other approved methods of jointing.

**Installation requirements** may include:
- corrosion and elements protection
- installation details
- jointing requirements
- supports
- workmanship and quality control.

**Booster and standpipe assemblies** may include:
- cabinet and block plans
- non-return and isolating valves
- fire appliance (hard stand) access
- pressure gauges
- suction and delivery outlets
- testing points
- signage.

**Hose reel assemblies** may include:
- Australian standards’ requirements for clearances and requirements
- non-return and backflow prevention valves
- pipe sizes.

Design elements of **thrust blocks** may include:
- designed and installed to AS/NZS3500
- design details for tees, elbows and valves
- keying and anchorage points
- sizes
- soil characteristics
- velocity and flow forces to be resisted.

**Pipe fixings** may include:
- bedding and thrust blocks
- corrosion protection
- covers
- masonry fixing
- material requirements
- pipe supports spacings and locations
- vertical support fixing.

**Pump, pump controls and pumproom requirements** may include:
- electrical supply requirements
- heating
include:
- inlet and outlet design requirements
- installation and mounting requirements
- manual and automatic controls
- pump selection
- space requirements
- valve requirements
- ventilation requirements.

**Water storage systems** may include:
- inlet valve design and sizing
- outlet valve design and sizing
- overflow requirements
- safe tray requirements
- tank sizes
- vortex plates.

**Delivery systems** may include:
- gravity feed
- mains pressure
- pump supply.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
  - may include:
    - selecting appropriate material to ensure minimal environmental impact
    - efficient use of material
    - efficient energy usage
    - efficient use and recycling of material
    - disposing of waste material to ensure minimal environmental impact
    - efficient water usage, harvesting and/or disposal
    - life cycle cost-benefit analysis
    - consideration of the Green Building Council of Australia rating scheme.

**Plans** may include:
- axonometrics
- cross-sections
- details
- elevations
- isometrics
• schematics, which may be produced using:
  • computer generation
  • drawing equipment
  • sections
  • submission for client approval
  • pipework fabrication sheets and stores lists
  • service coordination.

**Specification** may include:
• support and specialised components
• jointing
• manufacturer
• materials
• valve selection
• workmanship and quality control.

**Testing** may include:
• air pressure test
• flow
• hydrostatic test.

**Commissioning schedule** may include:
• checking and flushing the system
• inspecting for defects
• flow testing
• checking system operation.

**Operation and maintenance manual** may include:
• as installed drawings
• certificate reference
• hydraulic calculations and water supply details
• manufacturer data
• relevant standards of maintenance of all maintainable equipment
• system description and operating instructions.

CPCPGS3046A Install LPG systems in caravans, mobile homes and mobile workplaces

Modification History
Prerequisite unit updated
Changes throughout unit, including unit title and critical aspects
Not equivalent to CPCPGS3016A

Unit Descriptor
This unit of competency specifies the outcomes required to determine the requirements for installing and commissioning liquefied petroleum gas (LPG) systems with an operating pressure not exceeding 2.75 kPa in caravans, mobile homes and mobile workplaces.

Application of the Unit
Site location for work application may be a purpose-built workshop or customer’s premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify LPG system requirements.

1.1 Plans, specifications and any special instructions are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with installing and commissioning LPG systems in caravans, mobile homes and mobile workplaces are adhered to throughout the work.

1.3 Quality assurance requirements for company operations are identified and adhered to.

1.4 Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.

1.5 System capacity is calculated to ensure adequacy for the required load and compliance with relevant Australian standards and installation requirements.

1.6 Appropriate regulator and piping are identified in terms of size, connection sizes and capacity, according to relevant Australian standards and installation requirements.

1.7 Location of cylinders, appliances and piping set out is identified according to job requirements and in compliance with relevant Australian standards and installation requirements.

1.8 Quantity of piping, components and fittings is estimated in compliance with relevant Australian standards and installation requirements.
2 Prepare for installation. 2.1 Materials, equipment, appliances and cylinders are ordered and checked for compliance with docket and order form, and for acceptable condition.

2.2 Appropriate tools and equipment for installing and commissioning LPG systems in caravans, mobile homes and mobile workplaces, including personal protective equipment, are identified and selected.

2.3 Work is planned in conjunction with others involved in or affected by the work.

2.4 Work area and materials are prepared to support efficient installation of the system.

2.5 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Install LPG system, including flue and ventilation. 3.1 Cylinders, regulators, associated pipework, appliances and fixings are installed in compliance with manufacturer requirements, relevant Australian standards and installation requirements.

3.2 Ventilation requirements are determined and installed according to relevant Australian standards.

4 Test and commission LPG system. 4.1 Appropriate test equipment is selected.

4.2 System is tested according to relevant Australian standards and manufacturer requirements.

4.3 System is commissioned according to relevant Australian standards and manufacturer requirements.

4.4 Test data is recorded in format required by regulatory and installation requirements.

4.5 Compliance plates and signage are located and fitted according to statutory and regulatory authorities’ requirements, relevant Australian standards and installation requirements.
5 Clean up.  
5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 *Information* is accessed and documentation completed according to statutory requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to determine requirements, and install and commission LPG systems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- process for determining material requirements
- procedures for installing and commissioning gas systems in caravans, mobile homes and
mobile workplaces
- properties of gas, gas safety, combustion principles, gas pressures, and cylinder installation and ventilation requirements
- relevant statutory requirements related to installing LPG systems
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission LPG systems in caravans, mobile homes and mobile workplaces
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for a project, determining the requirements for, installing, testing and commissioning LPG systems in either a caravan, mobile home or mobile workplace by determining the gas load, storage capacity and ventilation requirements for two gas appliances, ensuring:
  - application of sustainability principles and concepts throughout the installation process
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Integrated Framework Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
  • confined spaces
  • electricity
  • hazardous materials and substances
  • service lines
  • surrounding structures and facilities
  • trip hazards
• use of tools and equipment
• work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

Environmental requirements

• clean-up protection
may include: • waste management.

**Quality assurance requirements** may include:

• Australian standards
• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Materials:**

• copper tubing
• fittings
• fixing materials
• flue systems
• gas cylinders
• gas-operated appliances
• gas hose assemblies
• gas regulators
• other approved materials
• are to comply with job specifications and appropriate standards for gas installations.

**Tools and equipment** may include:

• files
• flaring tools
• hacksaws
• hand trolleys
• hoists and jacks
• lifting and load shifting equipment
• measuring equipment
• power cutting tools
• pressure testing equipment
• silver brazing equipment
• spanners
• wrenches.

**LPG system** may include:

• approved appliances
• cylinders
• flue systems
• piping
• regulators.

**Sustainability principles and concepts:**

• cover the social, economic and environmental use of resources to meet current and future needs
• may include:
• selecting appropriate materials
• efficient use and recycling of material
• using energy efficient appliances
• disposing of waste material appropriately.

**Statutory and regulatory authorities** may include:

• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Information** may include:

• charts and hand drawings
• plans and sketches
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• recognised formulas or tables accepted by the regulatory authority
• regulatory and legislative requirements, particularly those pertaining to:
  • WHS and environmental requirements
  • plumbing and/or gasfitting authority regulations
• relevant Australian standards
• safe work procedures relating to determining requirements, and installing and commissioning LPG systems in caravans, mobile homes and mobile workplaces
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Identify LPG system requirements.
   1.1 Plans, specifications and any special instructions are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with installing and commissioning LPG and gas detection systems in marine craft are adhered to throughout the work.
   1.3 Quality assurance requirements for company operations are identified and adhered to.
   1.4 Gas load and design requirements are determined from plans, specifications, and job drawings or workplace instructions.
   1.5 System capacity is calculated to ensure adequacy for the required load and compliance with relevant Australian standards and installation requirements.
   1.6 Appropriate regulator and piping are identified in terms of size, connection sizes and capacity, according to relevant Australian standards and installation requirements.
   1.7 Location of cylinders, appliances and piping set out is identified according to job requirements and in compliance with relevant Australian standards and installation requirements.
   1.8 Quantity of piping, components and fittings is estimated in compliance with relevant Australian standards and installation requirements.
2 Prepare for installation.

2.1 Materials, equipment, appliances and cylinders are ordered and checked for compliance with docket and order form, and for acceptable condition.

2.2 Appropriate tools and equipment for installing and commissioning LPG systems and gas detection in marine craft, including personal protective equipment, are identified and selected.

2.3 Work is planned in conjunction with others involved in or affected by the work.

2.4 Work area and materials are prepared to support efficient installation of the system.

2.5 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Determine and install LPG systems.

3.1 Cylinders, regulators, associated pipework, appliances and fixings are installed in compliance with manufacturer requirements, relevant Australian standards and installation requirements.

3.2 Gas detection system requirements are determined and installed according to relevant Australian standards and manufacturer requirements.

3.3 Low voltage wiring is installed according to manufacturer instructions.

3.4 Ventilation requirements are determined and installed according to relevant Australian standards.

4 Test and commission LPG and detection systems.

4.1 Appropriate test equipment is selected.

4.2 Systems are tested and commissioned according to relevant Australian standards and manufacturer requirements.

4.3 Test data is recorded in format required by regulatory and installation requirements.

4.4 Compliance plates and signage are located and fitted according to statutory and regulatory authorities’ requirements, relevant Australian standards and
installation requirements.

5  Clean up.  

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 *Information* is accessed and documentation completed according to *statutory* requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and set out work
  - plan work with others

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - confirm that the gas detection system complies with Australian standards
  - determine requirements, and install and commission LPG systems

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
requirements and procedures relating to electrical safety and requisite precautions
procedures for accessing relevant information, including codes and technical standards
job safety analysis (JSA) and safe work method statements (SWMS)
process for determining material requirements
procedures for installing and commissioning gas systems in marine craft
properties of gas, gas safety, combustion principles, gas pressures, cylinder installation, ventilation and gas detection requirements
relevant statutory requirements relating to installing LPG systems in marine craft
SI system of measurements
workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission LPG systems in marine craft
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for a project, determining the requirements for, installing, testing and commissioning LPG and gas-detection systems in a marine craft by determining the gas load, storage capacity and ventilation requirements for a gas appliance, ensuring:
  - application of sustainability principles and concepts when installing the LPG systems
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints. Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Integrated Framework Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of
the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - confined spaces

CPCPGS3048A Install gas pressure control equipment

Modification History
Prerequisite unit updated
Minor changes throughout the unit
Not equivalent to CPCPGS3018A

Unit Descriptor
This unit of competency specifies the outcomes required to install and commission gas control and regulating equipment for consumer gas piping carrying natural gas (NG), liquefied petroleum gas (LPG), or tempered liquefied petroleum gas (TLPG) up to 200kPa.
This unit requires the determination of the requirements for gas control and regulating equipment (for pressures up to 200kPa), and its installation, testing and commissioning according to standards.
The design requirements of this unit are limited to the application of the design to layout and installation.

Application of the Unit
Site location for work application may be a customer's premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Identify requirements for gas pressure control equipment.

   1.1  Plans, specifications and any special instructions are obtained.

   1.2  *Work health and safety* (WHS) and *environmental requirements* associated with installing gas pressure control and regulating equipment are adhered to throughout the work.

   1.3  *Quality assurance requirements* for company operations are identified and adhered to.

   1.4  Gas load and design requirements are determined from design drawing or workplace instructions.

   1.5  Available gas pressure is measured and suitability of supply determined.

   1.6  Calculations are recorded in format required by job specification or workplace requirements.

   1.7  Selected gas pressure controls and regulator, specified locations and venting requirements are checked for compliance against standards and workplace requirements.

   1.8  Quantity and type of materials are estimated from design drawing or on-site dimensions.

   1.9  *Materials*, pipe fittings and components are selected to comply with standards and regulatory authorities'
requirements.

2  Prepare for installation.
  
2.1 Materials, equipment and cylinders are ordered and checked for compliance with docket and order form, and for acceptable condition.

2.2 Appropriate tools and equipment for the installation, including personal protective equipment, are identified and selected.

2.3 Work is planned in conjunction with others involved in or affected by the work.

2.4 Work area and materials are prepared to support efficient installation of equipment.

3  Install and commission control and regulating equipment.

3.1 Gas control and regulating equipment is installed in compliance with standards and statutory and regulatory authorities' requirements.

3.2 Appropriate test apparatus is selected for commissioning the control and regulating equipment.

3.3 Commissioning is carried out according to standards, and authorities' and manufacturer requirements, and the commissioning data is recorded in format required by the authority or job specification.

3.4 Pressure is correctly adjusted to comply with standards and job specification.

3.5 Sustainability principles and concepts are applied throughout the installation process.

4  Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine requirements for gas control and regulating equipment (for pressures up to 200kPa)
  - install, test and commission gas control and regulating equipment according to standards
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- electrical safety and requisite precautions
- gas pressure control equipment
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for installing and testing gas pressure control and regulating equipment
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory requirements related to installing and commissioning gas control and regulating equipment
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission gas pressure control equipment
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications for the installation of gas pressure control and regulating equipment, determining the requirements, and installing, testing and commissioning a single and a two-stage gas regulator, ensuring:
  - it operates to appropriate reduced pressure
  - application of sustainability principles and concepts throughout
  - correctly identifying requirements, and installing and commissioning pressure control and regulating equipment
  - correctly selecting and using appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
  • hazardous materials and substances
  • service lines
  • surrounding structures and facilities
  • trip hazards
  • use of tools and equipment
  • work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements**
include:
- clean-up protection
- waste management.

**Quality assurance requirements**
may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Materials** for installing gas pressure control and regulating equipment:
- may include:
  - copper tubing
  - fitting and fixing materials
  - gas cylinders
  - gas pressure regulators
  - non-metallic hose assemblies
  - stainless steel
  - other approved materials
- are to comply with job specifications and appropriate standards for gas installations.

**Tools and equipment** may include:
- chain blocks
- flaring tools
- forklifts
- grinders
- hacksaws
- hand trolleys
- hoists and jacks
- ladders
- load and lifting equipment
- measuring equipment
- rollers
- scaffolding
- silver brazing equipment
- spanners
- testing equipment
- wrenches.

**Gas control and regulating equipment** is to include:

- over-pressure regulators, including internal relief and over-pressure shut off (OPSO) valve.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate components to ensure minimal environmental impact
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to installing and
testing gas pressure control and regulating equipment
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPGS3049A Install Type A gas appliance flues

Modification History
Prerequisite unit updated
Minor changes throughout the unit
Not equivalent to CPCPGS3018A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test flues for Type A gas appliances.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Design drawings, specifications and data are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with installing Type A gas appliance flues are adhered to throughout the work.

1.3 Quality assurance requirements for company operations are identified and adhered to.

1.4 Appropriate work notices and required documentation are completed and dispatched according to statutory and regulatory authorities’ requirements.

1.5 Tasks are planned in conjunction with others involved in or affected by the work.

1.6 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.7 Work area is prepared to support efficient installation of Type A gas flues.

2 Identify flue requirements.

2.1 Proposed flue location, installation requirements and route are determined.

2.2 Dimensions and load are determined from design drawing or instruction and manufacturer instructions.

2.3 Size of flue, flue material and components are determined according to relevant Australian standards, regulatory authorities’ requirements and manufacturer instructions.

2.4 Ventilation requirements are calculated in compliance
with relevant Australian standards and are determined as appropriate for job specifications.

2.5 Quantity and type of *materials* required are estimated from design drawing or on-site inspection and ordered according to workplace requirements.

3 Install and test flue.

3.1 Flue is installed in compliance with relevant Australian standards and job specifications.

3.2 *Sustainability principles and concepts* are applied throughout the installation.

3.3 Flue is weather-proofed according to manufacturer specifications and site requirements.

3.4 Flue is tested for operation and adjusted as required according to manufacturer specifications.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test flues for Type A gas appliances
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- energy efficiency of appliances
- how to access relevant information, including codes and technical standards
• job safety analysis (JSA) and safe work method statements (SWMS)
• material requirements determination process
• procedures for installing and testing flues for Type A gas appliances, including flashing of penetrations
• properties of gas, gas safety, combustion principles, pressure and flow rates
• relevant statutory requirements related to installing and testing Type A gas appliance flues
• SI system of measurements
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements for installing and testing Type A gas appliance flues
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications, installing and testing a fan-assisted flue and a natural draught flue, ensuring:
  • application of sustainability principles and concepts throughout the installation
  • correct identification of location, design and details of proposed installations
  • correct selection and use of appropriate
processes, tools and equipment
- completion of all work to specification
- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and
correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and
regulations and may include:

- workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- chain blocks
- drills
- flaring tools
- forklifts
- grinders
- hacksaws
- hand and power tools
hand trolleys
hoists and jacks
ladders
lifting and load shifting equipment
limited height scaffolding
measuring equipment
rollers
spanners
testing equipment and instruments
tin snips
wrenches.

**Type A gas flues:**

- may include:
  - balanced
  - individual appliance
  - multiple flues
  - natural draught
  - other approved fluing methods

- may be required by:
  - decorative heaters
  - ducted heating systems
  - heated water storage
  - instant heated water heaters
  - space heaters
  - wall ovens.

**Materials** include Type A gas appliance flue components and materials that:

- include:
  - flashing materials, including lead and sheet metal or other approved materials
  - stainless steel and fibre cement
  - twin wall flues
  - may include proprietary flashings
  - are to comply with appropriate Australian standards for installing and testing Type A gas appliance flues.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources

- may include:
  - efficient energy use
- efficient use and recycling of material
- correct handling of hazardous materials
- disposing of waste material to ensure minimal environmental impact
- selecting appropriate components to ensure minimal environmental impact.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
  - relevant Australian standards
  - safe work procedures relating to installing and testing Type A gas appliance flues
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPGS3050A Install Type B gas appliance flues

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPGS3020A

Unit Descriptor
This unit of competency specifies the outcomes required to install flue systems for Type B gas appliances.
Work may also involve the installation of power flue applications.
The design requirements of this unit are limited to the application of the design to layout and installation.

Application of the Unit
Site location for work application may be a customer's premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Work plans, specifications and any special instructions are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing flues for Type B gas appliances are adhered to throughout the work.
   1.3 *Quality assurance requirements* for company operations are identified and adhered to.
   1.4 Approval of system design is obtained according to *statutory and regulatory authority* and workplace requirements.
   1.5 Tasks are planned in conjunction with others involved in or affected by the work.
   1.6 Sequence of work is prioritised to suit job requirements.
   1.7 *Tools and equipment* are selected consistent with installing a *Type B appliance* flue and checked for serviceability.

2 Identify flue requirements.
   2.1 Details of dimensions and loads are checked for compliance with plans and specifications.
   2.2 Size of flue is calculated according to authorities’ requirements and is appropriate for type of appliance.
2.3 Flue is selected for type of appliance and its determined route, in compliance with relevant Australian standards.

2.4 Quantity and type of materials for the installation are calculated from plans and specifications.

3 Install flue.

3.1 Preparatory work, including any penetration of walls and roofs, is performed according to industry and workplace requirements.

3.2 Installation is completed without damage or distortion to surrounding environment or other services.

3.3 Flue is installed in compliance with relevant Australian standards and authorities’ requirements.

3.4 Sustainability principles and concepts are applied throughout the installation.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and set out work
  - plan work with others

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to install flues for Type B gas appliances

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
• material requirements determination process
• procedures for installing Type B appliances, including roof and wall penetration and flashing
• properties of gas, gas safety, combustion principles, pressure and flow rates
• relevant statutory requirements related to installing flues for Type B appliances
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications for the installation of Type B appliance flues
- applying safety requirements throughout the work sequence, including the electrical safety requirements and use of personal protective clothing and equipment
- given the plans, specifications and regulatory authority approval, installing a mild steel flue from a boiler flue spigot to terminate above the roofline, ensuring:
  - application of sustainability principles and concepts throughout the installation
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised wording, if used in the performance criteria, may also be included.

*Work health and safety* is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** may include:

• clean-up protection
• waste management.

**Quality assurance requirements** may include:

• Australian standards
• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:

• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

• chain blocks
• forklifts
• grinders and ladders
• hacksaws
• hand and power tools
• hand trolleys
• hoists
• jacks
• lifting and load shifting equipment
• manual metal arc welding equipment
• measuring equipment
• metal inert gas (MIG) and tungsten inert gas (TIG) welding equipment
• oxy welding cutting equipment
• restricted height scaffolding and elevated work platform
• rollers
• tin snips.
**Type B appliances:**
- are complex gas installations of greater than 10 megajoules (MJ) rating for which there is no approval scheme
- flue materials and installation of Type B appliance flues are to conform to relevant Australian standards.

**Type B flue materials:**
- may include:
  - fibre cement
  - mild steel
  - stainless steel
  - other approved materials
- are to comply with the relevant Australian standards for Type B gas appliance flues.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate components and material
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
- recognised formulas or tables accepted by the
regulatory authority
- relevant Australian standards
- safe work procedures relating to installing Type B appliance flues
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for purging.
   1.1 Design drawing and specification are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with purging consumer gas piping systems are adhered to throughout the work.
   1.3 Quality assurance requirements for company operations are identified and adhered to.
   1.4 Work is planned in conjunction with others involved in or affected by the work.
   1.5 Appropriate tools and equipment for the conduct of purging, including personal protective equipment, are identified, selected and checked for serviceability.
   1.6 Work area and materials are prepared to support efficient purging of consumer gas piping system.

2 Identify purge requirements.
   2.1 Installation is checked to ensure compliance with standards and relevant specifications.
   2.2 Volume of piping system is determined from design drawing and standards, and calculations are recorded in format required by job specification.
   2.3 Method of purging is selected in compliance with standards and authorities' requirements.
2.4 Purge medium is selected in compliance with standards, and calculations of the purge medium volume are recorded in format required by job specification.

3  Carry out and test purge operation.
   3.1 Outlet point for purge gas is located and purge site is checked for ignition sources.
   3.2 Purge is carried out according to standards or statutory and regulatory authorities’ requirements and sustainability principles and concepts.
   3.3 Completion of purge is verified by test equipment, or by recognised and approved workplace testing procedures.

4  Clean up.
   4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.
   4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
   4.3 Information is accessed and documentation completed according to installation requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine purging requirements of a consumer gas piping system in terms of volume, method and medium of purge
  - conduct purging and testing for its completeness
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
characteristics of materials used in the purging process
- effect of heat on the materials used during the purging and testing process
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for purging gas piping systems, including isolation processes and procedures
- properties of gas, gas safety, combustion principles, ignition principles, pressure and flow rates
- relevant statutory requirements related to purging gas piping systems
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for determining requirements, and purging and testing consumer gas piping systems
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment; and eliminating possible ignition sources
- given the plans and specifications, purging, testing and recording the purge operations (one to be a fuel to inert purge and the other to be an inert to fuel purge) for a consumer gas piping system of greater than 0.03 cubic metres, which includes a subsidiary meter, ensuring:
  - application of sustainability principles and concepts
  - correct identification of method, medium, calculations and procedures to purge the piping system
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and
the practical requirements of the workplace

- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - electricity
  - service lines
  - surrounding structures and facilities
  - trip hazards
• use of tools and equipment
• work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** may include:

• clean-up protection
• waste management.

**Quality assurance requirements** may include:

• Australian standards
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:

• barriers
• buckets
• gas detector
• hand and power tools
• ladders
• purge stacks
• restricted height scaffolding
• signs
• testing equipment.

**Purging:**

• may occur before commencing work and on completion of work using either air, fuel gas or an inert gas on pipe volumes up to and exceeding 0.03 cubic metres, to applicable regulatory requirements
• installation to be purged, calculations, method, medium and conduct of purging is to conform to standards or requirements of local regulatory authority
• methods of purging are to include:
  • fuel to inert purge
  • inert to fuel purge.
Materials for purging may include:
- compressed air
- nitrogen
- carbon dioxide
- fuel gas.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - appropriate purging medium that has minimal environmental impact
  - efficient use of purge medium.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
  - recognised formulas or tables accepted by the regulatory authority
  - relevant Australian standards
  - safe work procedures relating to purging and testing consumer gas piping systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPGS3052A Maintain Type A gas appliances

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPGS3022A

Unit Descriptor
This unit of competency specifies the outcomes required to perform basic maintenance on Type A gas appliances.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Appliance specifications and servicing and manufacturer manuals are obtained for planned work activity.

1.2 Work health and safety (WHS) and environmental requirements associated with maintenance of Type A gas appliances are adhered to throughout the work.

1.3 Quality assurance requirements for company operations are identified and adhered to.

1.4 Tools and equipment are selected consistent with maintaining Type A gas appliances, checked for serviceability, and any faults are reported to supervisor.

1.5 Tasks are planned in conjunction with others involved in or affected by the work.

1.6 Work area is prepared and materials identified to support the efficient conduct of maintenance of Type A gas appliances.

2 Identify maintenance requirements.

2.1 Appliance is checked to ensure installation complies with standards and manufacturer requirements.

2.2 Electrical safety check is carried out according to authorities’ procedures and data is recorded in format required by job specification.
2.3 Test equipment is used to support visual inspection and to conduct testing according to statutory and regulatory authorities’ requirements.

2.4 Sustainability principles and concepts are applied throughout the purging process.

3 Conduct maintenance.

3.1 Maintenance tasks are carried out according to specifications and manufacturer requirements.

3.2 Appliances are checked for operation according to specifications, standards and manufacturer recommendations.

3.3 Faults and malfunctions are identified and reported according to workplace requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
- undertaking routine basic maintenance on Type A gas appliances, including gas, mechanical and appliance construction components

**Required knowledge**

- documentation and reporting requirements
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for maintaining and testing Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory requirements related to maintaining Type A gas appliances
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements and maintain Type A gas appliances
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
- given the plans and specifications, performing cleaning and routine basic adjustment to two Type A appliances, checking gas supply pressures, effective operation and flue condition, ensuring:
  - application of sustainability principles and concepts
  - correct identification of maintenance procedures and requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements**
include:

• clean-up protection
• waste management.

**Type A gas appliances:**

• are badged appliances of less than 500 megajoules (MJ) for which an Australian Gas Association (AGA) approval scheme exists

  • include:
    • decorative heaters
    • ducted heating systems
    • gas stoves and hot plates
    • heated water storage
    • instant heated water heaters
    • space heaters.

**Quality assurance requirements**
may include:

• Australian standards
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Tools and equipment** may include:

• chain blocks
• forklifts
• hand and power tools
• hand trolleys
• hoists and jacks
• lifting and load shifting equipment
• measuring equipment
• rollers
• spanners
• test equipment and instruments, including:
  • manometers
  • multi-meters
- neon testers
- volt sticks
- wrenches.

Maintenance of Type A gas appliances:
- includes cleaning or adjusting gas components, including:
  - burners
  - pilots
  - regulators
  - thermocouples
  - thermostats
  - temperature and pressure relief (TPR) valves
- also includes rectifying simple gas supply problems, including meters and regulators
- is to comply with appropriate Australian standards.

Materials for the maintenance of Type A gas appliances:
- may include:
  - piping materials
  - regulators and meters
  - Type A gas appliances
  - other approved materials
- are to comply with appropriate standards for maintaining Type A gas appliances.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include appropriate purging medium that has minimal environmental impact.

Information may include:
- charts and hand drawings
- diagrams, sketches or graphics
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
• maps
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing and gasfitting authority regulations
• relevant Australian standards
• safe work procedures relating to maintaining Type A gas appliances
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPGS3053A Disconnect and reconnect Type A gas appliances

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPGS3023A

Unit Descriptor
This unit of competency specifies the outcomes required to disconnect and reconnect services from Type A gas appliances operating on natural gas (NG), or liquefied petroleum gas (LPG), or tempered liquefied petroleum gas (TLPG) up to 200kPa.
The work is confined to disconnecting and reconnecting a like appliance.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Prepare for work.  1.1  Appliance and equipment specifications and appropriate manufacturer manuals are obtained.

1.2  Work health and safety (WHS) and environmental requirements associated with disconnecting and reconnecting Type A gas appliances are adhered to throughout the work.

1.3  Quality assurance requirements for company operations are identified and adhered to.

1.4  Tools, equipment and materials are selected consistent with disconnecting and reconnecting services, are checked for serviceability, and faults are reported.

1.5  Appropriate test equipment is selected for the job.

1.6  Tasks are planned in conjunction with others involved in or affected by the work.

2  Identify appliance requirements.  2.1  Appropriate appliance for gas supply type is selected according to job specification.

2.2  Appliance installation is checked to ensure its compliance with relevant Australian standards.

2.3  Appliance is checked for safe operation and its performance is checked against specification.
2.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Disconnect and reconnect equipment.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to disconnect and reconnect Type A gas appliances from mechanical services, gas, water, air and other services to allow replacement, repair or maintenance
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- ignition and combustion principles relating to conveyed materials or materials used in
confined work spaces

- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for disconnecting and reconnecting Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory requirements related to disconnecting and reconnecting Type A gas appliances
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications for disconnecting and reconnecting Type A gas appliances
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, effectively isolating, disconnecting and reconnecting at least two Type A gas appliances, involving at least two gas types, ensuring:
  - application of sustainability principles and concepts
  - correct identification of procedure and sequence of work
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- All assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
use of tools and equipment
work site visitors and the public
working at heights
working in proximity to others
use of firefighting equipment
use of first aid equipment
workplace environment and safety.

Environmental requirements may include:
- clean-up protection
- waste management.

Type A gas appliances:
- are badged appliances of less than 500 megajoules (MJ) for which an approval scheme exists.

Quality assurance requirements may include:
- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:
- ladders
- lifting and load shifting equipment, which may also include:
  - chain blocks
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - measuring equipment
  - spanners
  - test equipment and instruments
  - wrenches.

Materials may include:
- piping materials
- Type A gas appliances.
Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
  - relevant Australian standards
  - safe work procedures relating to disconnecting and reconnecting Type A gas appliances
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPGS3054A Calculate and install natural ventilation for Type A gas appliances

Modification History
Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPGS3024A

Unit Descriptor
This unit of competency specifies the outcomes required to calculate and install natural ventilation for Type A gas appliances operating on natural gas (NG), liquefied petroleum gas (LPG) or tempered liquefied petroleum gas (TLPG) not exceeding 200kPa.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Design drawings, specifications and any special instructions are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with calculating and installing natural ventilation for Type A gas appliances are adhered to throughout the work.

1.3 Quality assurance requirements for company operations are identified and adhered to.

1.4 Appropriate work notices and required documentation are completed and dispatched according to authorities' requirements.

1.5 Tasks are planned in conjunction with others involved in or affected by the work.

1.6 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.7 Work area is prepared to support efficient calculation and installation of natural ventilation for Type A gas appliances.
2 Identify natural ventilation requirements.  
2.1 Gas load and design requirements are determined from design drawings, plans, specifications and given information.  
2.2 Source and path of air supply are determined to comply with standards, plans and specifications of the job.  
2.3 Free ventilation area is calculated in required format and confirmed as being according to standards, plans and specifications.  
2.4 Ventilation openings are calculated in required format and positioned in compliance with standards.  
2.5 Quantity and type of materials and other components required are estimated from design drawing or on-site dimensions and ordered according to workplace requirements.

3 Install ventilation and test appliance.  
3.1 Ventilation is installed in compliance with building codes and standards without damage to the building structure, surrounding environment or other services.  
3.2 Appliance and flues are tested and adjusted where necessary for operation and compliance with standards.  
3.3 Sustainability principles and concepts are applied throughout the installation.

4 Clean up.  
4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.  
4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.  
4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- calculating, installing and testing natural ventilation for Type A gas appliances
- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
• mechanical ventilation and associated interlocks
• procedures for calculating, installing and testing natural ventilation for Type A gas appliances
• properties of gas, gas safety, combustion principles, pressure and flow rates
• relevant statutory requirements related to natural ventilation requirements for Type A gas appliances
• SI system of measurements
• workplace and equipment safety requirements

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:
• locating, interpreting and applying relevant information, standards and specifications for calculating, installing and testing natural ventilation for Type A gas appliances
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications, calculating and installing natural ventilation for a minimum of three different Type A gas appliances, ensuring:
  • application of sustainability principles and concepts
  • correct identification of location, design and details of proposed installations
  • correct selection and use of appropriate...
processes, tools and equipment
• completing all work to specification
• compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning
knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and
- handling of materials
- hazard control
- personal protective clothing and equipment
regulations and may include:

- prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Ventilation:**

- may be natural or mechanical
- may be required for:
  - type one decorative gas log fire
  - type two decorative gas log fire
  - ducted heating systems
  - gas stoves and hot plates
  - storage water heaters
  - continuous flow water heaters
  - space heaters.

**Quality assurance requirements** may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- National Construction Code
- site safety plan
- workplace operations and procedures.
**Tools and equipment** may include:
- grinders
- hand and power tools
- ladders
- measuring equipment
- restricted height scaffolding
- test equipment and instruments.

**Materials**:  
- are to comply with appropriate standards for installing ventilation for Type A gas appliances
- include Type A gas appliances and ventilation materials, including grills
- may include louvres and ducting.

**Sustainability principles and concepts**:  
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage
  - considering energy efficiency requirements.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
  - recognised formulas or tables accepted by the regulatory authority
  - relevant Australian standards
  - safe work procedures relating to calculating and installing natural ventilation for Type A gas
appliances
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3055A Install gas sub-meters

Modification History
Prerequisite unit updated
Changes to unit title, descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPGS3025A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test gas sub-meters for gas consumer piping systems.

Application of the Unit
Site location for work application may be a customer's premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Identify gas piping system requirements.
   1.1 Plans, specifications and any special instructions are obtained.
   1.2 \textit{Work health and safety} (WHS) and \textit{environmental requirements} associated with installation of gas sub-meters are adhered to throughout the work.
   1.3 \textit{Quality assurance requirements} for company operations are identified and adhered to.
   1.4 Gas load requirements are determined from specifications or given information.
   1.5 Size of meter is determined according to standards, \textit{statutory and regulatory authorities’} and installation requirements.
   1.6 Meter is located according to specifications or instructions, and complies with standards, and authorities’ and installation requirements.
   1.7 Quantity and type of \textit{materials} to conform to authorities’ requirements and appropriate standards are estimated from specifications or on-site dimensions.
2 Prepare for installation.  

2.1 Meter and materials are ordered and checked for compliance with docket and order form, and for acceptable condition.

2.2 Appropriate *tools and equipment* for installing meter, including personal protective equipment, are identified, selected and checked for serviceability.

2.3 Appropriate testing equipment is selected.

2.4 Work is planned in conjunction with others involved in or affected by the work.

2.5 Work area and materials are prepared to support efficient installation of meter.

3 Install and test gas sub-meter.  

3.1 Support and installation method, including any fixings, are selected to comply with manufacturer instructions, standards and installation requirements.

3.2 Pipe section is isolated.

3.3 Meter is installed according to plans and specifications, and complies with standards and authorities' requirements.

3.4 Installation is purged and meter is tested according to standards and authorities' requirements.

3.5 Leaks are located and repaired, and installation is retested.

3.6 Test data is recorded in format required by regulating authority and installation requirements.

3.7 *Sustainability principles and concepts* are applied throughout the installation.

4 Clean up.  

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
4.3 *Information* is accessed and documentation completed according to installation requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - literacy skills to:
    - complete workplace documentation
    - read and interpret:
      - documentation from a variety of sources
      - plans and specifications
    - record data in writing
  - numeracy skills to apply measurements and calculations
  - planning and organising skills to:
    - plan and set out work
    - plan work with others
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technical skills to install and test gas sub-meters for domestic residences
  - technology skills to:
    - access and understand site-specific instructions in a variety of media
    - use mobile communication technology

Required knowledge

- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
• procedures for installing and testing gas sub-meters
• properties of gas, gas safety, combustion principles, pressure and flow rates
• relevant statutory and authorities’ requirements related to installing and testing gas sub-meters
• SI system of measurements
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, standards and specifications for installing and testing gas sub-meters
• applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
• given the plans and specifications, installing and testing a gas sub-meter for a domestic residence, ensuring:
  • sustainability principles and concepts are applied throughout the installation
  • correct identification of location and operation of the meter
  • correct selection and use of appropriate processes, tools and equipment
  • completing all work to specification
  • compliance with regulations, standards and
organisational quality procedures and processes
- communicating and working effectively and safely with others.

CPCPGS3056A Install gas piping systems

Modification History
Prerequisite unit updated
Changes to performance criteria and required skills
Not equivalent to CPCPGS3031A

Unit Descriptor
This unit of competency specifies the outcomes required to select, install and test gas consumer piping carrying natural gas (NG), liquefied petroleum gas (LPG), or tempered liquefied petroleum gas (TLPG) up to 200kPa.

Application of the Unit
Site location for work application may be a customer's premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A  Carry out WHS requirements
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify gas piping system requirements.
   1.1 Building plans and specifications and any special instructions are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with installing gas piping systems are adhered to throughout the work.
   1.3 Quality assurance requirements for company operations are identified and adhered to.
   1.4 Gas load and design requirements are determined from design drawing or given information.
   1.5 Size of piping is calculated according to relevant Australian standards, authorities' and workplace requirements.
   1.6 Set out of piping systems is according to design drawing or instruction and complies with relevant Australian standards, authorities' and workplace requirements.
   1.7 Quantity and type of materials to conform to appropriate relevant Australian standards are estimated from design drawings or on-site dimensions.
2 Prepare for installation.

2.1 **Materials** and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.

2.2 Appropriate **tools and equipment** for piping system installation, including personal protective equipment, are identified, selected and checked for serviceability.

2.3 Appropriate testing equipment is selected.

2.4 Work is planned in conjunction with others involved in or affected by the work.

2.5 Work area and materials are prepared to support efficient installation of the system.

3 Install and test piping system.

3.1 Support system and installation method, including fixings, are selected to comply with manufacturer instructions, relevant Australian standards and workplace requirements.

3.2 Pipe system is installed and jointed according to design drawing or instruction and complies with relevant Australian standards and workplace requirements.

3.3 System is tested according to job requirements, relevant Australian standards and workplace requirements.

3.4 Leaks are located and repaired and system is retested.

3.5 **Sustainability principles and concepts** are applied throughout the installation process.

3.6 System is purged of air according to relevant Australian standards.

3.7 Test data is recorded in format required by regulating authority and workplace requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations.
and workplace procedures.

4.3 *Information* is accessed and documentation completed according to regulatory and organisational requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to determine pipe requirements and install and test gas piping systems where the installation conforms to relevant Australian standards or requirements of the local regulatory authority
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics of piping materials, joining methods, fittings and sealants
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
• job safety analysis (JSA) and safe work method statements (SWMS)
• material requirements determination process
• procedures for installing and testing gas piping systems, including brazing and mechanical pipe jointing
• properties of gas, gas safety, combustion principles, pressure and flow rates
• relevant statutory requirements related to installing and testing gas piping systems
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to determine requirements, and installing and testing consumer gas piping systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, determining the requirements, installing and testing two gas piping systems, each comprising at least two materials and serving two Type A gas appliances; one being an NG pipeline from the outlet of a meter and the other being an LPG pipeline from a storage cylinder or tank, ensuring:
  - application of sustainability principles and concepts
  - correct identification of design and details of proposed piping system
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and
the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
• trip hazards
• use of installation tools and equipment
• work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** may include:

• clean-up protection
• waste management.

**Quality assurance requirements** may include:

• Australian standards
• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Materials** may include:

• acceptable fittings and joints
• copper
• corrosion control materials
• mechanical jointed steel
• polyethylene (PE) and composite pipes
• unplasticised polyvinyl chloride (PVC-U)
• other approved materials.

**Tools and equipment** may include:

• chain blocks
• crimpers
• flaring tools and silver brazing equipment
• hacksaws
• hand and power tools
• hand trolleys
• hoists and jacks
• lifting and load shifting equipment and ladders
• measuring equipment
• oxy and arc welding equipment
- pipe benders
- rollers
- spanners
- test instruments
- testing equipment
- threading equipment
- wrenches.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - choice of energy and water-efficient appliances
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

**Information may include:**

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
  - relevant Australian standards
  - safe work procedures relating to installing and testing gas piping systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
- work schedules, plans and specifications.

Unit Sector(s)

Unit sector Plumbing and services

Custom Content Section

Not applicable.
CPCPGS3057A Size consumer gas piping systems

Modification History
Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPGS3032A

Unit Descriptor
This unit of competency specifies the outcomes required to size consumer gas piping carrying natural gas (NG), liquefied petroleum gas (LPG) or tempered liquefied petroleum gas (TLPG) not exceeding 200kPa.

Application of the Unit
Site location for work application may be either a workplace or customer’s premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

    3.2  *Information* is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - seek information from relevant authorities
  - use language and concepts appropriate to cultural differences
  - use interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- technical skills to size consumer gas piping supplying appliances at an operating pressure not exceeding 200 kPa
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- appliance pressure requirements and gas consumption requirements
- characteristics of piping materials, joining methods, fittings and sealants
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for sizing consumer gas piping systems
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to sizing consumer gas piping
systems

- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements and sizing of gas piping systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, sizing consumer gas piping systems of at least two materials for up to five appliances each, at least one of them being a two-stage LPG system, ensuring:
  - application of sustainability principles and concepts
  - correctly identifying the sizing requirements of proposed piping system
  - correctly selecting and using appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.
Quality assurance requirements may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
  - relevant Australian standards
  - safe work procedures relating to determining requirements and sizing consumer piping systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
- work schedules, plans and specifications.

Custom Content Section

Not applicable.
CPCPGS3059A Install LPG storage of aggregate storage capacity up to 500 litres

Modification History
Prerequisite unit updated
Minor changes throughout the unit
Not equivalent to CPCPGS3034A

Unit Descriptor
This unit of competency specifies the outcomes required to select, locate, install and test liquefied petroleum gas (LPG) storage facilities with a storage capacity of up to 500 litres; install either single or multiple cylinders; and test associated piping systems. The storage is connected to consumer piping systems with operating pressures not exceeding 200kPa.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify LPG storage requirements.

1.1 Design, drawings, specifications and any special instructions are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with the installation of LPG storage facilities are adhered to throughout the work.

1.3 Quality assurance requirements for company operations are identified and adhered to.

1.4 Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.

1.5 Storage capacity is checked for compliance with regulatory authority and installation requirements.

1.6 Type of storage is determined according to job and installation requirements.

1.7 Cylinder and type of system (one or two-stage) are selected according to standards, job and installation requirements.

1.8 Appropriate regulators are determined to meet capacity and load of the system according to installation requirements.

1.9 Appropriateness of selected location to provide the required service is established in compliance with
standards and installation requirements.

1.10 Quantity of materials required is calculated from design, drawings and specifications in compliance with installation requirements.

2 Prepare for installation.

2.1 **Materials** and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.

2.2 Appropriate tools and equipment for storage facility installation, including personal protective equipment, are identified, selected and checked for serviceability.

2.3 Appropriate testing apparatus is selected.

2.4 Work is planned in conjunction with others involved in or affected by the work.

2.5 Work area and materials are prepared to support efficient installation of the system.

3 Install and test LPG storage system.

3.1 Cylinder supports and base, piping, fittings and components are selected in compliance with standards and installation requirements.

3.2 Size and method of connection are selected in compliance with standards and installation requirements.

3.3 Cylinder valve is purged according to standards.

3.4 System from cylinder outlet is tested, purged and regulator adjusted to be gas-tight, in compliance with regulatory authority and installation requirements.

3.5 Test data is recorded in format required by regulatory authority and installation requirements.

3.6 **Sustainability principles and concepts** are applied to work process.
4 Clean up

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 **Tools and equipment** are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 **Information** is accessed and documentation completed according to installation requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas storage facilities
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory requirements related to installing and testing gas storage facilities
- SI system of measurements
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and select, locate, install and test LPG storage systems
- applying safety requirements throughout the work sequence, including applying electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, determining the LPG storage facility requirements and installing and testing two LPG storage facilities up to 500 litre capacity, with operating pressures not exceeding 200kPa, of which one is a multiple cylinder installation, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed storage installation
  - correct selection and use of appropriate processes, tools and equipment
• completing all work to specification
• compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:
• handling of materials
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and
workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Materials** for installing LPG storage facilities:
- may include:
  - cylinder supports and bases
  - copper tubing
  - fitting and fixing materials
  - gas cylinders
  - gas regulators
  - non-metallic hose assemblies
  - stainless steel
  - other approved materials
- are to comply with job specifications and appropriate standards for the storage of LPG.
**Sustainability principles and concepts:**
- cover the current and future social; economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use and recycling of material
  - efficient energy usage
  - disposing of waste material to ensure minimal environmental impact.

**Tools and equipment may include:**
- chain blocks
- forklifts
- grinders
- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- manual brazing equipment
- measuring equipment
- rollers
- testing equipment.

**Information may include:**
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify installation requirements.
   1.1 Building plans and specifications and any special instructions are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with installing LPG storage facilities are adhered to throughout the work.
   1.3 Quality assurance requirements for company operations are identified and adhered to.
   1.4 Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.
   1.5 Storage capacity is checked for compliance with regulatory authorities’ and installation requirements.
   1.6 Appropriate regulators are determined to meet capacity and load of the system according to installation requirements.
   1.7 Appropriateness of selected location to provide required service is established in compliance with standards and installation requirements.
   1.8 Quantity of required materials is calculated from design, drawings and specifications in compliance with installation requirements.
2 Prepare for installation.  

2.1 **Materials** and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.

2.2 Appropriate **tools and equipment** for installation of storage facility, including personal protective equipment, are identified, selected and checked for serviceability.

2.3 Appropriate testing apparatus is selected.

2.4 Work is planned in conjunction with others involved in or affected by the work.

2.5 Work area and materials are prepared to support efficient installation of system.

3 Install and test LPG storage system.

3.1 LPG containers, piping, fittings and components are installed in compliance with standards and installation requirements.

3.2 Regulators and associated pipework are installed in compliance with standards and installation requirements.

3.3 Regulators are adjusted to provide working pressure in compliance with standards and installation requirements.

3.4 System is purged according to standards.

3.5 System is tested in compliance with standards and installation requirements.

3.6 Test equipment is removed and test data recorded in format required by regulatory authority and installation requirements.

3.7 **Sustainability principles and concepts** are applied throughout the installation process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
4.3 **Information** is accessed and documentation completed according to installation requirements.

4.4 Relevant authorities and supervisors are advised of job completion in compliance with regulatory and installation requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - Access information
  - Determine requirements
  - Enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - Follow instructions
  - Inform relevant authorities and supervisors of completion of job
  - Use language and concepts appropriate to cultural differences
  - Use and interpret non-verbal communication, such as hand signals
- Initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- Literacy skills to:
  - Complete workplace documentation
  - Read and interpret:
    - Documentation from a variety of sources
    - Plans and specifications
  - Record data in writing
- Numeracy skills to apply measurements and calculations
- Planning and organising skills to:
  - Plan and set out work
  - Plan work with others
- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- Technical skills to select, locate, install and test LPG storage facilities
- Technology skills to:
  - Access and understand site-specific instructions in a variety of media
  - Use mobile communication technology

Required knowledge

- Electrical safety and requisite precautions
- How to access relevant information, including codes and technical standards
- Job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas storage facilities
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and testing gas storage facilities
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and select, locate, install and test LPG storage systems
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
- given the plans and specifications for a gas storage facility of capacity greater than 500 litres (but less than 8KL), determining the requirements, installing and testing first and second stage piping installation from an LPG storage container located and installed to specifications, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed storage installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements include:
- clean-up protection
- waste management.

Quality assurance requirements may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Materials for installing LPG storage facilities:
- may include:
  - container supports and bases
  - copper tubing
  - fitting and fixing materials
  - gas containers (500L–8KL)
  - gas regulators
  - non-metallic hose assemblies
  - other approved materials
- are to comply with job specifications and appropriate standards for the storage of LPG.

Tools and equipment may include:
- brazing equipment
- chain blocks
- flaring tools
- forklifts
- grinders
- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- lifting and load shifting equipment
- measuring equipment
- rollers
- pressure testing equipment.

**Installation** is normally a two stage system and:
- may be from storage container:
  - to point of use, requiring regulators
  - from storage to a second stage regulator
- installation and materials are to be according to relevant standards.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy usage
  - selecting appropriate material to ensure minimal environmental impact.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to determining requirements, and installing and testing LPG storage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3061A Install and commission Type A gas appliances

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Performance criterion and item in required knowledge section added
Not equivalent to CPCPGS3058A Install and commission Type A gas appliances

Unit Descriptor
This unit of competency specifies the outcomes required to install and commission Type A gas appliances approved for use with natural gas (NG) or liquefied petroleum gas (LPG) up to 200kPa.
Type A gas appliances are badged appliances of less than 500 megajoules (MJ) for which an approval scheme exists. They include but are not limited to space heaters, ducted heating systems, heated water storage, instant heated water heaters, decorative heaters, and gas stoves and hot plates.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Building plans and specifications and any special instructions are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with installing and commissioning Type A gas appliances are adhered to throughout the work.

1.3 Quality assurance requirements for company operations are identified and adhered to.

1.4 Appropriate work notices and required documentation are completed and dispatched according to the authorities’ requirements.

1.5 Tasks are planned in conjunction with others involved in or affected by the work.

1.6 Tools, equipment and materials, including personal protective equipment, are selected and checked for serviceability.

1.7 Work area is prepared to support efficient installation of Type A gas appliances.

2 Identify appliance requirements 2.1 Appropriate appliance for the gas supply type is selected according to the job specification, ensuring the currency of the Australian Gas Association (AGA) or Australian Liquefied Petroleum Gas Association (ALPGA) approval number.

2.2 Existing piping is checked to ensure its compliance with relevant Australian standards and that its capacity is
adequate for the additional load.

2.3 Appliance is located in conformance to regulatory requirements and relevant Australian standards, and is appropriate for appliance use and for piping, flue and ventilation requirements.

3 Determine installation requirements.

3.1 Appropriate pipe fittings and components for the installation are selected according to relevant Australian standards.

3.2 Size of branch line is calculated according to regulating authorities’ requirements.

3.3 Ventilation openings and source of air supply are determined that conform to relevant Australian standards and format required by the job specifications.

3.4 Quantity and type of materials and other components required are estimated from design drawing or on-site dimensions.

3.5 Requirements for natural gas or LPG appliance regulator installation are determined.

4 Install appliance.

4.1 Piping system is installed according to design drawing or instruction and relevant Australian standards.

4.2 Pipe system is tested according to relevant Australian standards and regulatory authorities’ requirements.

4.3 Appliance is installed according to relevant Australian standards and manufacturer instructions and without damage or distortion to surrounding environment or other services.

4.4 Sustainability principles and concepts are applied throughout the installation.

5 Commission appliance.

5.1 Electrical safety check is conducted.

5.2 Consumer piping is purged and joints are reconnected according to workplace requirements.

5.3 Appropriate testing instrument is selected and operated, with data being recorded according to workplace
5.4 Pipe system is tested according to relevant Australian standards and statutory and regulatory authorities’ requirements.

5.5 Appliance is adjusted and reassembled and operation is checked according to manufacturer specifications.

5.6 Appropriate test is carried out to ensure that there is no leakage or spillage of combustion products into the circulating air system.

5.7 Operation of appliance is explained to customer.

6 Clean up.

6.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

6.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

6.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete work notices and other relevant documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and commissioning Type A gas appliances, including flashing
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine the requirements for installing and commissioning Type A gas appliances
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing and commissioning a water heater, space heater, and cooking appliance; at least one of which is to be a domestic installation, one a commercial installation, and one a fan assisted flued appliance, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
correct selection and use of appropriate processes, tools and equipment
completing all work to specification
compliance with regulations, relevant Australian standards and organisational quality procedures and processes
communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards' requirements.
Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- research resources, including industry-related systems information
- safety data sheets.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising...
and preventing hazards associated with:

- electricity
- hazardous materials and substances
- identifying and testing for electrical hazards
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:

- chain blocks
- drills
- flaring tools
- forklifts
- hacksaws
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- limited height scaffolding
- measuring equipment
- rollers
- silver brazing equipment
- spanners
• test equipment and instruments
• tin snips
• wrenches.

**Materials** for installing and commissioning Type A gas appliances:

• are to include Type A:
  • gas appliances
  • piping materials
  • flues
  • ventilation materials and components
• are to comply with relevant Australian standards for installing and commissioning Type A gas appliances.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • choice of energy and water-efficient appliances
  • efficient use and recycling of material
  • correct handling of hazardous materials
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

**Information** may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing and gasfitting authority regulations
• recognised formulas or tables accepted by the regulatory authority
• relevant Australian standards
• safe work procedures relating to installing and commissioning Type A gas appliances
• safety data sheets (SDS)
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPGS4011C Design and size consumer gas installations

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Reference to standard updated in required knowledge section
Equivalent to CPCPGS4011B Design and size consumer gas installations

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document a consumer's gas installation, including consumer piping operating up to a pressure of 200kPa, fluing, ventilation and appliance installation associated with natural gas (NG), simulated natural gas (SNG), liquefied petroleum gas (LPG) and tempered liquefied petroleum gas (TLPG) for a building of minimum four floors and multiple buildings supplied through one gas source (billing meter or storage tank).
It covers preparing for work, determining gas installation design requirements, detailed planning of the layout, and completing work finalisation processes, including records and documentation.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
Work associated with this unit is undertaken within the scope of AS5601 Gas installations and local licensing requirements (gas, electrical and plumbing).

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for planning
   1.1 Nature and scope of planning task are identified and confirmed.
   1.2 Work health and safety (WHS) and environmental requirements associated with planning, sizing and documenting layout of gas installations are adhered to throughout the work.
   1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work.
   1.4 Tools and equipment required for planning, sizing and documenting layout of gas installations, including personal protective equipment, are selected and checked for serviceability, and faults are rectified or referred for action.
   1.5 Work area in which planning process is to be conducted is prepared.

2 Identify system requirements.
   2.1 Information and specifications for required work are obtained and confirmed, if necessary by site inspection.
   2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.
   2.3 Quantity, location and type of take-off materials and fixtures are determined from plans and specifications.
   2.4 Gas installations are sized according to relevant Australian standards, and statutory and regulatory authority and workplace requirements.
### 3 Plan system layout

3.1 Layout of gas installations is planned according to building plans, relevant Australian standards and workplace procedures.

3.2 *Materials* required are specified and optimised according to relevant Australian standards from proposed design.

3.3 Plans are recorded according to regulatory authorities’ and workplace requirements.

3.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

### 4 Restore work area

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Information is accessed and documentation, including work backup, is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - access and understand site-specific instructions in a variety of media
  - read and interpret:
    - documentation from a variety of sources
    - regulations, relevant Australian standards, plans, specifications and drawings
  - record plans in writing and complete workplace documentation
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - organise and sequence tasks with others
  - plan and set out work
- technical skills to plan, size and document layout of gas installations for single and multiple buildings consisting of a minimum of four floors
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- AS/NZS 5601 Gas installations, including the use of tables
- building and construction industry terminology
- drawing and sketching techniques, including the use of conventional symbols
- gas safety, including combustion characteristics and effects
- general electrical safety requirements
- impact of ventilation on design
- job safety analysis (JSA) and safe work method statements (SWMS)
- planning, sizing and layout of gas installations
- processes for accessing information and for calculating material requirements
- relevant statutory and authority requirements related to planning, sizing and layout of gas installations
- SI system of measurement
- types and properties of fuel gas, including pressure and flow rates
- types, characteristics, uses and limitations of gas pipe work and reticulation materials, including joining techniques and systems
- use of computers and computer-aided design (CAD) software
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to the planning, sizing and layout of gas installations
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- designing, sizing and documenting the layout of three gas installations, which are to include any combinations covering:
  - pipe sizing and pressures up to 200kPa
  - at least one NG installation
  - at least one LPG installation
  - at least one domestic installation
  - at least one commercial installation
  - a caravan installation
  - a marine installation, including the installation of an LPG leak detection system in a mono hull vessel
- installations planned and documented must include:
  - multiple buildings
  - a two stage LPG system
  - five or more gas appliances
  - domestic and commercial Type A gas appliances
  - a common flue system
  - a minimum of three piping materials
• an over-pressure protection device
• a subsidiary meter
• plans and documentation should ensure:
  • application of sustainability principles and concepts
  • identification, evaluation and incorporation of sustainability principles and concepts into the design
  • correct identification of location, design and details of proposed services
  • correct selection and use of appropriate processes, tools and equipment
  • completion of all work to specification
  • compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  • communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and
other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electrical components and safety
  - gas fires and explosions
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- air pollution
- clean-up protection
- environmental protection
- waste management.

**Gas installations** may include:

- liquefied petroleum gas
- natural gas
- simulated natural gas
- tempered liquefied petroleum gas.
**Tools and equipment** may include:
- computers running appropriate CAD software
- drawing instruments
- measuring equipment.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - gas regulations
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including AS5601 Gas installations
- safe work procedures relating to planning, sizing and documenting the layout of gas installations
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Materials** may include:
- building plans and specifications.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - use of efficient design principles to ensure minimal environmental impact
  - incorporation of efficient use of material into...
the design, including recycling of material
- choice of efficient energy and water appliances
- correct handling of hazardous materials
- disposing of waste material to ensure minimal environmental impact.

| 2 | Disassemble and assemble Type A gas appliances. |
| 2.1 | Appliance specifications and servicing and manufacturer manuals are obtained and analysed to confirm assembly and disassembly techniques and sequences. |
| 2.2 | Preliminary diagnosis is completed to focus and minimise disassembly requirement. |
| 2.3 | Disassembly and reassembly are carried out safely and in a sequential manner. |
| 2.4 | Appliance is assessed to ensure it complies with relevant standards and manufacturer specifications prior to commissioning and return to service. |
### 3 Diagnose and remedy electrical and electronic circuitry faults.

#### 3.1 Electrical safety checks and isolation procedures are completed and recorded to manufacturer and other authorities’ requirements before servicing work is commenced.

#### 3.2 Electrical circuit and wiring diagrams are read and correctly interpreted to identify potential fault pathways and locations.

#### 3.3 Appropriate testing techniques, procedures and equipment are selected and applied to diagnose faults in circuit wiring, components and ignition systems.

#### 3.4 Cause of fault is determined and confirmed.

#### 3.5 Most appropriate corrective action is selected after a complete analysis of options.

#### 3.6 Repair, replacement and adjustment action is taken according to manufacturer specifications or service manuals.

#### 3.7 Appliance is assessed to ensure it complies with relevant standards and manufacturer specifications prior to commissioning and return to service.

### 4 Diagnose and remedy gas system faults on Type A gas appliances.

#### 4.1 Electrical and gas safety checks and isolation procedures are completed and recorded to manufacturer and other authorities’ requirements before servicing work is commenced.

#### 4.2 Gas system plans and diagrams are read and correctly interpreted to identify potential fault pathways and locations.

#### 4.3 Appropriate testing techniques, procedures and equipment are selected and applied to diagnose gas system faults.

#### 4.4 Flue gases are analysed according to recognised industry practice and local authorities’ requirements.

#### 4.5 Cause of fault is determined and confirmed.

#### 4.6 Most appropriate corrective action is selected after a complete analysis of options.
4.7 Repair, replacement and adjustment action is taken according to manufacturer specifications or service manuals.

4.8 Appliance is assessed to ensure it complies with relevant standards and manufacturer specifications prior to commissioning and return to service.

5 Clean up work area.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

5.2 Tools and equipment are cleaned, checked, serviced and stored according to manufacturer recommendations and workplace procedures.

5.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - read and interpret:
    - documentation from a variety of sources
    - regulations, standards, plans, specifications and drawings
    - record plans in writing and complete workplace documentation
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - organise and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - prepare for the work, fault diagnosis, disassembly, repair and replacement, reassembly and completion of work finalisation processes
  - service equipment and complete job records
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- AS5601 Gas installations, including the use of tables
- basic electrical theory, including:
- characteristics of electromotive force (EMF)
- characteristics of fuses, circuit breakers, residual current devices and earthing systems
- combustion characteristics and effects
- conduction
- current flow
- ignition systems
- insulation
- isolation procedures
- Ohm's law
- burners and burner adjustment
- characteristics of conversion from one gas type to another
- classification of appliances and identification of related components
- electrical safety, including isolation procedures and requisite precautions
- gas appliance regulators
- gas appliance thermostats
- gas safety, including:
  - combustion characteristics and effects
  - isolation procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- operation of flame failure systems used in Type A gas appliances
- processes for accessing information and for calculating material requirements
- SI system of measurement
- types and properties of fuel gas, including pressure and flow rates
- workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements and maintain Type A gas appliances
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment; and isolating appliances from gas and electrical services
- performing the following servicing activities and functions:
  - application of sustainability principles and concepts
  - disassembly, reassembly, testing and recommissioning of a minimum of two different Type A gas appliances
  - conduct evaluative tests on electrical and electronic components, including central processing units, printed circuit boards and associated parts, in order to diagnose and remedy faults and malfunctions
  - conduct evaluative tests on gas systems to diagnose and remedy faults and malfunctions on the components listed in the range statement
  - convert a Type A gas appliance to operate on another gas type, according to AS5601, any local utility's requirements and manufacturer specifications
- servicing activities and function should ensure:
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Work health and safety* is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electrical components and safety
  - gas fires and explosions
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

Environmental requirements may include:
• air pollution
• clean-up protection
• waste management.

Type A gas appliances:
• are badged appliances of less than 500 megajoules (MJ) for which an Australian Gas Association (AGA) and Australian Liquefied Petroleum Gas Association (ALPGA) approval scheme exists
• include:
  • decorative heaters
  • ducted heating systems
  • gas stoves and hot plates
  • heated water storage
  • instant heated water heaters
  • space heaters
• mechanical components and gas appliance systems, which may include:
  • combustion chambers
  • heat exchangers
  • primary flues.

Quality assurance requirements may include:
• AGA requirements
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• maintenance of Type A gas appliances complying with appropriate Australian standards
• site safety plan
• workplace operations and procedures.

Tools and equipment may include:
• lifting and load shifting equipment, including:
  • chain blocks
• forklifts
• hand trolleys
• hoists and jacks
• rollers
• measuring equipment
• test equipment and instruments, including:
  • dual probe voltage tester
  • manometers
  • multi-meters
  • megohmmeter
  • hand and power tools
  • spanners
  • wrenches.

**Materials** for the maintenance of Type A gas appliances:

• may include:
  • piping materials
  • regulators and meters
  • Type A gas appliances
  • other approved materials

• are to comply with appropriate standards for the maintenance of Type A gas appliances.

**Statutory and regulatory authorities** include:

• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Sustainability principles and concepts**:

• cover the current and future social, economic and environmental use of resources

• may include:
  • efficient energy use
  • efficient use and recycling of material
  • correct handling of hazardous materials
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

**Testing techniques** include de-energised and energised tests,

• capacitors
• electric motors
which may include:

- heat activated switches
- ignition systems (basic, ignition and re-ignition, flame safeguard systems, hot surface ignition)
- printed circuit boards
- relay time delay and conventional
- solenoid coils
- thermistors
- thermostats, direct and indirect wired
- time clocks, mechanical and electronic
- transformers.

Adjustment and calibration are to include:

- dip switches
- fan limit controls
- fan speed settings
- heat anticipators
- thermostats.

Corrective action, such as component removal and replacement, is to include:

- burners
- combination controls
- fans
- pilots
- rail cocks, thermostats and associated components
- solenoid valve regulators
- thermocouples.

Information may include:

- charts and hand drawings
- diagrams, sketches and graphics
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations

© Commonwealth of Australia, 2017
Artibus Innovation
- relevant Australian standards, including AS/NZS3000 Electrical installations, AS/NZS4836 Safe working on low-voltage electrical installations, AS5601 (AG601) Gas installations
- safe work procedures relating maintaining Type A gas appliances
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS4023B Install, commission and service Type B gas appliances

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Reference to standards updated in required knowledge section and range statement
Equivalent to CPCPGS4023A Install, commission and service Type B gas appliances

Unit Descriptor
This unit of competency specifies the outcomes required to install, commission and service Type B gas appliances, from the gas isolation valve and electrical isolation switch to the flue spigot on the appliance, according to current and relevant standards.

Application of the Unit
This unit of competency supports the needs of appropriately qualified experienced persons with a responsibility for interpreting and applying pre-existing design specifications; gaining approvals from authorities; preparing for work; installing gas system components and associated electrical or electronic components and controls; testing, adjusting, commissioning and servicing Type B gas appliances; and completing work finalisation processes, including formal recording and reporting requirements.

Licensing/Regulatory Information
Before satisfying this unit, the candidate requires a restricted electrical licence or equivalent to connect and disconnect appliances according to the requirements of the particular State or Territory.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Obtain authority to undertake work on Type B gas appliances.

1.1 Design specification for Type B gas appliance to be installed and commissioned is accessed, analysed, interpreted and confirmed through a detailed site inspection.

1.2 Design specification matters requiring clarification are resolved through liaison with designer and gas authorities.

1.3 Formal authority to proceed with installation and commissioning is obtained before commencing work, according to regulatory and code of practice requirements.

1.4 Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.

2 Prepare for work.

2.1 Work health and safety (WHS) requirements associated with the workplace environment and installing, commissioning and servicing Type B gas appliances are accessed, interpreted and followed throughout the work.

2.2 Gas system components, electrical or electronic components and controls, and other required installation materials are identified from the design specification and obtained for the work.

2.3 Component specifications and manufacturer servicing manuals are obtained for planned work activity.

2.4 Tasks are planned in conjunction with others involved in
or affected by the work.

2.5 **Tools and equipment**, including personal protective equipment, are selected consistent with installation, commissioning and servicing needs and checked for serviceability, and any faults are rectified or reported.

2.6 **Quality assurance requirements** for the work sequences are identified and followed.

2.7 Work area is prepared to support efficient installation, commissioning and servicing of Type B gas appliance.

2.8 Gas system and electrical safety checks and isolation procedures are completed and recorded to manufacturer and other authorities’ requirements before commencing work.

2.9 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

### Install Type B gas appliances.

3.1 Appliance components, including *valve trains, burners* and associated pipework and flue systems, are installed according to approved design specifications.

3.2 Ventilation systems are installed according to approved design specifications.

3.3 Electrical components, including terminations, are installed according to design specifications and regulatory requirements.

3.4 Electrical wiring and wiring enclosures are installed according to design specifications and regulatory requirements.

3.5 Installations are visually inspected at each stage of the work to ensure compliance with specifications and absence of damaged or faulty equipment and materials.

### Commission and test Type B gas appliances.

4.1 **Testing and servicing** equipment appropriate to the requirement is selected, checked and prepared for use.

4.2 Gas and electrical safety checks and isolation procedures, including purging, are completed and recorded to manufacturer and other authorities’ requirements before testing and commissioning are
commenced.

4.3 *Operational parameters of individual components* are tested and adjusted to conform to specifications.

4.4 Appliance operations are tested first without and then with fuel, adjustments are completed as necessary and results recorded according to approving authorities’ requirements.

4.5 Flue gases are analysed according to recognised industry practice and other authorities’ requirements.

5 Service Type B gas appliances.

5.1 Nature and possible cause of faults or out of specification performance are identified from defect reports or operational records.

5.2 Electrical and gas safety checks and isolation procedures are completed and recorded to manufacturer and other authorities’ requirements before servicing work is commenced.

5.3 Plans and diagrams are read and correctly interpreted to identify potential gas system and electrical fault pathways and locations.

5.4 Appropriate testing techniques, procedures and equipment are selected and applied to diagnose system faults or discrepancies.

5.5 Cause of fault or out of specification performance is identified and confirmed.

5.6 Options for correction are thoroughly analysed and most appropriate corrective action is selected.

5.7 Repair, replacement or adjustment is made according to manufacturer specifications or service manuals.

5.8 Appliance is assessed to ensure compliance with relevant standards and manufacturer specifications prior to recommissioning and returning to service.
6 Clean up work area.

6.1 Work area is cleared and materials disposed of, reused or recycled according to commonwealth, state and territory legislation and workplace procedures.

6.2 Tools and equipment are cleaned, checked, serviced and stored according to manufacturer recommendations and workplace procedures.

6.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - liaise with designer and authorities
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- Literacy skills to:
  - complete workplace documentation, including recording test results
  - read and interpret:
    - defect reports
    - design specification
    - documentation from a variety of sources
    - operational records
  - submit work notices

- Numeracy skills to interpret and apply mathematical information

- Planning and organising skills to plan work with others

- Technical skills to:
  - follow safe work procedures relating to the installation, commissioning and servicing of Type B appliances
  - interpret information, including:
    - charts and hand drawings
    - plans, sketches and graphics
    - instructions issued by authorised organisational or external personnel
    - job drawings
    - manufacturer specifications and instructions
    - maps
    - material safety data sheets (MSDS)
    - memos
- organisation work specifications and requirements
- plans, diagrams and specifications
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- Australian standards, including the use of tables:
  - AS3814 (AG501) Industrial and commercial gas appliances
  - AS5601 (AG601) Gas installations/AS/NZS5601
  - relevant aspects of AS3814 Industrial fuel fired appliances, AS2593 Boilers – Unattended and limited attendance and AS/NZS3000 Electrical installations
- basic electrical theory, including:
  - Ohm's law
  - current flow
  - conduction
  - insulation
  - ignition systems
  - characteristics of fuses, circuit breakers, residual current devices and earthing systems
  - characteristics of electromotive force (EMF)
  - electrical safety, including isolation procedures and requisite precautions
  - electrical terminology and conventional symbols
- flue gas analysis techniques and processes
- gas terminology and conventional symbols
- gas safety, including:
  - isolation procedures
  - combustion characteristics and effects
- job safety analysis (JSA) and safe work method statements (SWMS)
- programmable logic controller (PLC) systems, including remedial programming techniques
- purging requirements, techniques and critical calculation processes
- SI system of units
- sources of information and processes for the calculation of material requirements
- types and properties of fuel gas, including pressure and flow rates
- types, characteristics, uses and limitations of electrical and electronic componentry and
control systems
- types, characteristics, uses and limitations of Type B gas appliance components
- ventilation techniques and calculation processes
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving planning and conducting the installation of at least one significant Type B gas appliance.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:
- locating interpreting and applying relevant information, standards and specifications to determine requirements of and maintain Type B appliances
- applying safety requirements throughout the work sequence, including:
  - using personal protective clothing and equipment
  - isolating appliances from gas and electrical services
  - planning and conducting installation of at least one significant Type B appliance, which includes:
    - application of sustainability principles and concepts
    - obtaining required authorities
• planning work
• installing gas, ventilation and electrical componentry
• installing electrical control system
• completing all required tests and sequences
• commissioning the appliance
• completing all required documentation
• communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
Design specification may include:
- air controls
- combustion air blowers
- flame safe guards
- gas pressure regulation
- gas valve trains
- manual shut-off valves
- markings and instructions
- materials
- over-pressure protection systems
- process controls
- safety shut-off valve systems.

Type B gas appliances:
- include those above 10 megajoules (MJ) for which a certification scheme does not exist
- may use:
  - combination fuels
  - liquefied petroleum gas
  - natural gas
  - tempered liquefied petroleum gas
- may have special requirements for design and operation, including:
  - after burners – process
  - air gas mixing machines and mixing blowers
  - atmosphere generators and special atmospheres
  - direct gas fired air heaters
  - high input gas fired appliances
  - incinerators and generators
  - multi-fuel firing systems
  - ovens – direct fired
  - smoke ovens – direct fired
  - stationary gas engines and turbines
  - steam and heated water boilers
  - water heaters
- Type B appliance operation specifications will include:
  - flame establishment periods
  - interlocks
  - operation of gas appliance and burners
  - operational sequences
  - start gas rates
• planning installation of a Type B gas appliance will include determination of site suitability and confirmation of the appropriateness of:
  • electrical supply
  • gas supply and sizing
  • proposed appliance security and lighting measures
  • proposed component handling and positioning measures
  • proposed foundation and supports
• commissioning procedure for a Type B appliance, including:
  • preliminary inspection
  • activation run without fuel
  • activation run with fuel
  • operation and completion stages.

Regulatory and code of practice requirements include:

• statutory and regulatory authorities’ requirements that may include:
  • statutory plumbing authority
  • statutory gasfitting authority
• state or territory and local statutory regulatory authority and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing and/or gasfitting authority regulations
• environmental regulatory requirements may include:
  • air pollution
  • clean-up protection
  • waste management
• relevant Australian standards, including:
  • AS3814 Industrial fuel fired appliances
  • AS2593 Boilers - Unattended and limited attendance
  • AS/NZS3000 Electrical installations
  • AS/NZS4836 Safe working on low-voltage electrical installations
  • AS5601 (AG601) Gas installations/AS/NZS5601
Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electrical components and safety
  - gas fires and explosions
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

Tools and equipment may include:

- hand tools, such as wrenches and spanners
- measuring equipment
- power tools
- testing equipment and instruments, including:
  - manometer
  - multi-meter
  - dual probe voltage tester
  - flue gas analysis equipment
  - hand pump pressure kit
  - Pitot tube
  - insulation resistance tester
  - megohmmeter
  - power point tester
  - neon tester
  - volt stick
- lifting and load shifting equipment, including:
- hand trolleys
- rollers
- forklifts
- chain blocks
- hoists and jacks.

**Quality assurance requirements** may include:
- Australian Gas Association (AGA) requirements
- Environment Protection Authority
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

**Valve trains** include:
- flow and ratio controls
- gas pressure regulators and controllers
- manual isolation valves
- safety shut-offs.

**Burners** include:
- atmospheric
- nozzle
- oxygen enhanced
- packed power
- pre-mix.

**Testing and servicing** of Type B gas appliances will require:
- use of a hand-held programmer to monitor circuit conditions and to edit program (to make minor changes)
- materials that comply with appropriate standards for the maintenance of Type B gas appliances.

**Operational parameters of individual components** include:

- air flows
- all safety and operating controls
- combustion conditions
- gas rates
- purge times.

CPCPIG2021A Design domestic urban irrigation systems

Modification History
Prerequisite unit added to unit
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPIG2011A

Unit Descriptor
This unit of competency specifies the outcomes required to prepare basic designs and irrigation drawings for domestic irrigation systems.

Application of the Unit
Work is normally undertaken in a drafting office environment. Location for drawing and design application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Site survey is conducted of proposed irrigation area according to client requirements.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with design of domestic irrigation systems are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.
   1.5 *Tools and equipment* for preparing basic irrigation designs and drawings are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient design of domestic irrigation systems.

2 Identify drawing requirements.
   2.1 Areas requiring irrigation and *system design components* are identified.
   2.2 *Information* is obtained on the soil type, ground slope, contours and prevailing wind.
   2.3 Underground services, buildings, paths and other permanent structures are located and noted.
   2.4 Water supply is located and its influence on design requirements is determined.
   2.5 Appropriate emitters are selected to suit function and
3 Design irrigation system

3.1 Site plan is drawn to include structures, paths and property boundaries.

3.2 Garden areas are sketched to include locations of lawns, garden beds, trees, vegetable patches or ferneries.

3.3 Pipe runs and water emitters are sketched to design requirements.

3.4 Sizes of pipes are calculated using standard data and information is recorded in required format.

3.5 List of materials is compiled to include number and type of water emitters, control valves, quantities of pipes, fittings and components.

3.6 Sustainability principles and concepts are applied throughout the design process.

3.7 Drawing and design are submitted for approval.

4 Clean up

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - compile list of materials
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record information
- technical skills to design and draw a domestic urban irrigation system, including:
  - identifying material requirements
  - selecting and locating components
  - site layout
  - site requirements and structures
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- job safety analysis (JSA) and safe work method statements (SWMS)
- processes and workplace requirements for basic irrigation design
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relevant statutory and authority requirements related to drawing and installing irrigation systems
- SI system of measurement
- specifications of the range of irrigation products available
- standards applicable to the installation
- technologies for irrigation measurement and drawings
- various types of irrigation systems, including types of materials and components used
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the design of domestic irrigation systems
- applying safety requirements throughout the work sequence, including electricity safety requirements and the use of personal protective clothing and equipment
- given the site plan and specifications for the irrigation of a 200 square metre garden (of lawn, shrubs, trees and flowers), designing and preparing a drawing of the system, incorporating automatic timers and controls, varying sprinkler heads and zones, and indicating the materials required (by number and type), ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed system
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.
Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- calculator
- computer design software
- drawing and drafting equipment
- laser measuring devices
- measuring equipment.

System design components may include:

- backflow prevention devices
- controls
- pipework
- valves
- water emitters, which may include:
  - drip emitters
  - gear drive
  - impact
  - in-line turbo drippers
  - mist sprays
  - oscillating
  - pop up
  - pulsating
- selection of water emitters, based on:
  - automatic control systems
  - manufacturer specifications
  - physical site conditions
  - site requirements
  - subsoil systems
  - types of plants requiring irrigated water.
Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- maps
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to the design of domestic irrigation systems
- signage
- sketches and plans, including job plans
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials may include:
- drafting and drawing equipment
- plans.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - minimising water wastage
  - considering use of alternative water supply
  - selecting appropriate components and material to ensure minimal environmental impact.

CPCPIG3021A Set out, install and commission irrigation systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPIG3011A

Unit Descriptor
This unit of competency specifies the outcomes required to set out, install and commission irrigation systems.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

1. **Prepare for work.**

   1.1 Plans and specifications are obtained.

   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with setting out, installing and commissioning irrigation systems are adhered to throughout the work.

   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

   1.5 *Tools and equipment* for setting out, installing and commissioning irrigation systems, including personal protective equipment, are selected and checked for serviceability.

   1.6 Work area is prepared to support efficient setting out, installation and commissioning of irrigation systems.

2. **Identify installation requirements.**

   2.1 Irrigation system requirements are identified from plans, specifications and relevant *information*.

   2.2 Underground services are located and identified.

   2.3 Flow rate and water pressure are checked for compliance with plans and specifications.

   2.4 Piping and system components are selected to comply with standards, plans and specifications.

   2.5 *Materials* and equipment are identified, ordered and collected according to workplace procedures.

   2.6 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- **communication skills to:**
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- **initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials**
- **literacy skills to:**
  - compile list of materials
  - complete workplace documentation and record information
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- **numeracy skills to apply measurements and calculations**
- **planning and organising skills to:**
  - plan and sequence tasks with others
  - plan and set out work
- **teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities**
- **technical skills to install pipework, controls, valves, backflow prevention devices and water emitters for an irrigation system and its commissioning**
- **technology skills to:**
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of setting out, installing and commissioning irrigation systems
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• protection of drinking water supplies
• relevant statutory and authority requirements related to installing and commissioning irrigation systems
• SI system of measurement
• standards applicable to the installation
• various types of irrigation systems, including types of materials and components used
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to set out, install and commission irrigation systems
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
- given the plans or specifications, determining the system requirements, setting out, installing and commissioning an irrigation system sourced from an isolating valve to supply four water emitters of varying type and requiring a solenoid valve, ensuring:
  - application of sustainability concepts and principles
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dirt mounds
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - other machines
  - pits
  - poles
  - recently filled trenches
• surrounding structure and facilities
• traffic control
• trees
• trip hazards
• underground services
• uneven and unstable terrain
• use of tools and equipment
• work site visitors and the public
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
• chain blocks
• forklifts
• hand and power tools
• hand excavation equipment
• hand trolleys
• hoists and jacks
• ladders
• lifting and load shifting equipment
• mechanical excavation equipment
• rollers
• trench shoring equipment
• water flow and water test equipment.
Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to setting out, installing and commissioning irrigation systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Materials may include:

- copper tube, polyethylene, stainless steel and PVC-U pipes
- joints and components
- system components, including:
  - automatic controls
  - back flow prevention devices
  - low voltage solenoid valves
  - water emitters
- water emitters, which may include:
  - drip emitters
  - hear drive
  - impact
  - in-line turbo drippers
  - mist sprays
  - oscillating
  - pop up
  - pulsating
- selection of water emitters, based on:
• automatic control systems
• manufacturer specifications
• physical site conditions
• site requirements
• sub-soil systems
• types of plants requiring irrigated water.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient use of material
  • minimising water wastage
  • considering usage of alternative water supply
  • protection of drinking water supply
  • selecting appropriate components and material to ensure minimal environmental impact.

CPCPIG3022A Install and commission domestic irrigation pumps

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPIG3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install and commission domestic irrigation pumps.

Application of the Unit
Site location for work application is domestic, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Irrigation plans and specifications are obtained and site is inspected.

1.2 Work health and safety (WHS) and environmental requirements associated with installing and commissioning domestic irrigation pumps are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for installing and commissioning domestic irrigation pumps, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation and commissioning of domestic irrigation pumps.

2 Identify installation requirements.

2.1 Irrigation system requirements are identified from plans, specifications and relevant information.

2.2 Pump and installation materials are selected according to type, installation, range of flow rates, operating head and delivery distance.

2.3 Pump is identified, ordered and collected according to workplace procedures.

2.4 Pump is checked for compliance with standards, docket
and order form, and for acceptable condition.

3 Install and commission pump.

3.1 Pumpset out position is compliant with irrigation plans and manufacturer recommendations.

3.2 Pump base is installed according to plans and specifications and *sustainability principles and concepts*.

3.3 Pump is positioned and fixed onto base.

3.4 Suction and discharge lines are connected to pump according to manufacturer specifications.

3.5 Piping is pressure tested according to job specifications.

3.6 Operation of pump is tested and adjusted to achieve effective operation according to job and manufacturer specifications.

3.7 Test data is recorded and documented in format required by quality assurance procedures.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record and document test data
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and commission a centrifugal domestic irrigation pump
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipes and fittings, including:
  - fixing and joining techniques and methods
  - flow rates
  - job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• mechanical, hydraulic and electrical principles
• process of installing and commissioning domestic irrigation pumps
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory and authority requirements related to installing and commissioning domestic irrigation pumps
• SI system of measurement
• various types of domestic irrigation pumps
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:
• locating, interpreting and applying relevant information, standards and specifications to install and commission domestic irrigation pumps
• applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
• given the plans and specifications for a domestic irrigation system, installing and commissioning for operation, a centrifugal pump (25mm suction and 25mm delivery), ensuring:
  • application of sustainability principles and concepts
  • correct identification of location, design and
details of proposed installation
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

CPCPMS2021A Assemble mechanical services components

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS2011A

Unit Descriptor
This unit of competency specifies the outcomes required to assemble mechanical services components for heating and cooling systems prior to their installation.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with assembly of mechanical services components are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient assembly of mechanical services components.

2 Identify fabrication requirements.

2.1 Fabrication requirements are identified from plans, specifications and relevant information.

2.2 Quantity and type of materials and components required are calculated from plans and specifications.

2.3 Materials are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with standards and docket and order form, and for acceptable condition with faults reported.
3 Assemble components.

3.1 Dimensions for fabrication and assembly are determined and transferred.

3.2 Relevant standards, codes and symbols are interpreted.

3.3 Selected development method is identified as appropriate and applied according to workplace procedures and sustainability principles and concepts.

3.4 Calculations are performed to determine job requirements.

3.5 Material is marked out in conformance with determined measurements.

3.6 Dimensions are checked for accuracy and compliance with plans and specifications.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - Access information
  - Determine requirements
  - Enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - Follow instructions
  - Report faults
  - Use language and concepts appropriate to cultural differences
  - Use and interpret non-verbal communication, such as hand signals

- Initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- Literacy skills to:
  - Complete workplace documentation
  - Read and interpret:
    - Documentation from a variety of sources
    - Plans and specifications

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - Plan and sequence tasks with others
  - Plan and set out work

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technical skills to fabricate and assemble mechanical services components prior to installation in heating, cooling and ventilation systems

- Technology skills to:
  - Access and understand site-specific instructions in a variety of media
  - Use mobile communication technology

Required knowledge

- Characteristics of materials used in the required assembly
- Classification of assembly types and identification of assembly components
- Job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- mechanical and hydraulic principles
- personal protective equipment characteristics and use
- operation requirements of equipment used for fabricating and assembling components
- SI system of measurement
- types of fasteners, fixings and sealants
- WHS regulations relevant to assembly of irrigation components
- workplace operating procedures, including required standards for assembly
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to assemble mechanical services components
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, assembling and connecting a heating coil to a boiler and a fan and duct work for a warm air heating system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of assembly
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken
at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - traffic control
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working in proximity to others
  - use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- hand and power tools
- heating, cutting and bending equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
  - welding equipment.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
- WHS and environmental requirements
- plumbing regulations
- relevant Australian standards
- safe work procedures relating to the assembly of mechanical services components
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials may include:**
- components of steel, copper, brass, polymer materials or other approved materials
- insulating materials for piping and ducting
- metal piping
- sheet metal.

**Components may include:**
- boilers
- chillers
- duct work
- fired and unfired pressure vessels
- heat exchangers and condensers
- pipework
- structural sections.

**Fault reporting:**
- may be written or verbal
- is to be according to company's workplace procedures.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - correct handling of hazardous materials
  - appropriate recycling of material
  - selecting appropriate components to ensure minimal environmental impact.
Unit Sector(s)

Functional area

Unit sector: Plumbing and services

Custom Content Section

Not applicable.
CPCPMS3031A Fabricate and install steel pressure piping

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement
Not equivalent to CPCPMS3011A

Unit Descriptor
This unit of competency specifies the outcomes required to determine installation requirements and to fabricate, install and test steel pressure piping. It applies to pipe systems with operating pressures not exceeding 1750kPa and 200°C.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans, specifications and any special instructions are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with fabricating and installing steel pressure piping are adhered to throughout the work.
   1.3 Quality assurance requirements for company operations are identified and adhered to.
   1.4 Work is planned in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.
   1.5 Tools and equipment are identified, selected and checked for serviceability.
   1.6 Work area and materials are prepared to support efficient fabrication and installation of steel pressure piping.

2 Identify installation requirements
   2.1 Pipework configuration is identified from authorities’ requirements, plans, specifications and relevant information.
   2.2 Allowances for fabrication and/or assembly are determined and transferred.
   2.3 Quantity and type of materials required are calculated from plans and specifications according to regulatory authorities’ and workplace requirements.
   2.4 Materials are identified, ordered and collected according
to workplace procedures.

2.5 Materials are checked for compliance with docket and order form and for acceptable condition, and faults are reported.

3 Fabricate, install and test pipe system.

3.1 System is set out in compliance with design drawings or instructions.

3.2 Fixings and supports are installed to manufacturer requirements, job plans, specifications and workplace requirements.

3.3 Pipe system is fabricated and jointed according to job plans, specifications and manufacturer requirements for mechanical type joints.

3.4 Pipe system is installed in specified location without damage or distortion to pipework or surrounding environment or other services.

3.5 Sustainability principles and concepts are applied throughout the installation process.

3.6 Pipe system is tested and documented to comply with job specification, authorities' requirements, relevant Australian standards, codes of practice and workplace requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - document pipes system test
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - cut and weld with oxy-acetylene and arc welding
  - mechanical bend, joint, fix and test mild steel pressure piping systems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- fabrication, installation and testing process for pressure pipe systems
- job safety analysis (JSA) and safe work method statements (SWMS)
• processes for accessing information and for calculating material requirements
• properties of conveyed materials, including pressure, flow rates and temperature requirements
• relevant statutory authorities’ requirements and Australian standards related to fabricating, installing and testing pressure pipe systems
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements, and fabricate, install and test pressure pipe systems
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and the use of personal protective clothing and equipment
- given the plans and specifications, applying pipe cutting and welding skills by using oxy-acetylene and arc welding equipment for piping up to DN50 to include:
  - butt welding a pipe joint in DN40 piping in the fixed horizontal position
  - welding DN40 and 50 mild steel branch joints
  - constructing a DN80 header with DN20, 40 and 50 branch joints using the oxy-acetylene method
  - welding 50mm and 80mm flanges to mild steel pipe
  - welding blank ends into DN80 mild steel pipe
  - fabricating, installing and testing a DN40 steel pipeline from a flanged header to mechanical plant, incorporating two changes of direction with one position butt welded with oxy welding, plus an arc welded flange incorporating a branch for testing purposes
- completed task is to be tested to the required pressure, and the soundness of all joints and the system, ensuring:
  - application of sustainability principles and
concepts throughout the installation

- correct diameters are used, system is manufactured to required dimensions, and branches, bends, flanges, etc. are square
- correct identification of design and details of proposed pressure pipe system
- correct selection and use of appropriate processes, tools and equipment
- completion of all work to specification
- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools, plant and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- ozone protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities**

- commonwealth, state or territory, and local authorities administering applicable Acts,
include: regulations and codes of practice.

**Tools and equipment** may include:
- hand and power tools
- mechanical bending equipment and threading equipment
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolding
- oxy and arc welding equipment
- testing equipment.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to fabricating, installing and testing pressure pipe systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

**Materials** for fabricating, installing and testing pressure pipe systems
- cutting and welding gases
- mechanical joint systems and fittings with variable
may include: diameters up to DN100
- steel pipes
- threaded pipe fittings
- weldable pipe fittings.

**Fault reporting:**
- may be written or verbal
- is to be according to company's workplace procedures.

**Pipes may convey:**
- compressed air refrigerants and low temperature applications, including chilled water and refrigerated gases
- condensate
- fuel oil
- water and other liquids.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

CPCPMS3032A Select and fit insulation and sheathing

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPMS3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install insulating sheathing on hot and cold piping, fittings and vessels. It includes the selection of insulation materials.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with selecting and installing insulating sheathing are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient selection and installation of insulating sheathing.

2 Identify insulation requirements.

2.1 *Insulation materials* are selected that comply with plans, specifications and relevant *information*.

2.2 Quantity and type of materials required are calculated from plans and specifications.

2.3 Allowances for fabrication and assembly are determined.

2.4 Materials are identified, ordered and collected according to workplace procedures.

2.5 Materials are checked for compliance with docket and order form and for acceptable condition, and *faults are reported*.

3 Install insulation.

3.1 Surfaces to be insulated are cleaned of dirt, rust, scale and grease.

3.2 Insulating materials, including *sheathing*, are installed according to plans and specifications.

3.3 *Vapour barriers* are applied to suit job requirements.

3.4 *Sustainability principles and concepts* are applied
throughout the installation.

4 Clean up.  
4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- technical skills to select and install appropriate thermal insulation sheathing to sections of both hot and cold piping, fittings and vessels associated with refrigeration and cooling and heating systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- correct waste disposal and recycling processes
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials handling processes
- WHS regulations relevant to insulation and sheathing
- personal protective equipment requirements and use
- processes of selecting and insulating pipes, fittings and vessels
- SI system of measurement
- techniques for cutting, fabricating and assembling metal sheathing
- techniques for fixing insulating materials to piping and vessels
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to select and install insulating sheathing to piping, fittings and vessels
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, insulating 2 metres of small bore heating line with at least one change in direction; 2 metres of refrigeration line with at least one change in direction, and metal sheath at least 2 metres of pipework with at least one change in direction, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
  • hazardous materials and substances
  • identifying and testing for electrical hazards
  • service lines
  • surrounding structures and facilities
  • trip hazards
  • use of tools and equipment
Environmental requirements may include:
- clean-up protection
- waste management.

Quality assurance requirements may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
- dust masks and respirators
- fall protection equipment
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
- measuring equipment
- swaging machines
- pittsburgh lock forming machine
- sheet metal rollers
- spot welder.
Insulation materials may be:

- chemically blown PVC nitrile rubber sponge in tubular or sheet form
- closed cell
- flexible
- hydrous calcium silicate with fibrous reinforcement in preformed sections
- polyisocyanurate (PIR) foam in preformed sections
- powder form and jute fibre in strip form
- resin-bonded glass fibre in flexible blanket or preformed sections
- resin-bonded mineral wool in flexible blanket form
- rigid polyurethane foam in preformed sections
- other approved materials.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to selecting and installing insulating sheathing to hot and cold piping, fittings and vessels
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Fault reporting:

- may be written or verbal
- is to be according to company's workplace procedures.
**Sheathing** may include:
- aluminium
- aluminium and zinc coated steel
- stainless steel
- zinc coated steel
- other approved materials.

**Vapour barriers** may include:
- mastic or plastic type filling compounds and adhesives
- reinforced aluminium foil and polyethylene tubular jacket.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy retention
  - selecting appropriate products, components and material to ensure minimal environmental impact.

CPCPMS3033A Install small bore heating systems

Modification History
Prerequisite unit updated
Minor changes to unit
Not equivalent to CPCPMS3013A

Unit Descriptor
This unit of competency specifies the outcomes required to install small bore hydronic heated water heating systems.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A    Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with installing small bore heating systems are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.
   1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient installation of small bore heating systems.

2 Identify system requirements.
   2.1 Configuration of pipework is checked for compliance with plans, specifications, authorities’ requirements and other relevant information.
   2.2 Position of pipes and heating units is determined from plans, specifications or site requirements, so as not to cause damage or interference to surrounding structures.
   2.3 Allowances for fabrication or assembly are determined and transferred.
   2.4 Quantity and type of piping materials and other materials required are calculated from plans and specifications.
2.5 Materials are identified, ordered and collected according to workplace procedures.

2.6 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported.

3 Fabricate, install and commission heating system.

3.1 System is set out to comply with plans and specifications.

3.2 Fixings and supports are installed to manufacturer recommendations, and plans and specifications.

3.3 Pipe system is installed and jointed in compliance with plans, specifications and manufacturer requirements for mechanical type joints.

3.4 Heating system unit is installed according to plans, specifications and manufacturer requirements.

3.5 Heating system is installed in specified location without damage or distortion to pipework, surrounding environment or other services.

3.6 Sustainability principles and concepts are applied throughout the installation process.

3.7 Heating system is tested to comply with job specification, regulatory authorities’ requirements, and relevant Australian standards and codes of practice; and details are recorded in required format.

3.8 Heating system is checked and adjusted for correct operation and balance, including the setting of nominated temperature and adding appropriate inhibitor.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation
  - document heating system test
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - determine system requirements
  - install and commission a heating system

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different fixing and joining techniques and methods
- effective isolation processes and procedures
• electrical and electronic principles and safety requirements
• job safety analysis (JSA) and safe work method statements (SWMS)
• WHS regulations relevant to installation of small bore systems
• personal protective equipment requirements and use
• processes of installing and commissioning small bore heating systems
• properties of water, including pressure and flow rates
• SI system of measurement
• statutory requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, relevant Australian standards and specifications to install and commission small bore heating systems
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications and using a combination of copper tube and non-metallic piping, installing a two-pipe heating system to either a panel radiator, skirting convector or a unit heater; the installation should have a minimum of DN20 flow and return with DN15 branches, connected to a boiler and heat exchanger and heating source, ensuring:
• application of sustainability principles and concepts throughout the installation
• correct identification of requirements and details of proposed installation
• correct selection and use of appropriate processes, tools and equipment
• completion of all work to specification
• compliance with regulations, relevant Australian standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards’ requirements.
Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the
Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate,
accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** are to cover:

- clean-up protection
- ozone protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.
**Tools and equipment** may include:
- hand and power tools
- heating and bending equipment
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolding
- measuring equipment
- silver brazing equipment
- welding equipment.

**Information** may include:
- charts and hand drawings
- diagrams and sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing small bore heaters
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Piping materials** may include:
- copper (Cu)
- polybutylene (PB)
- polyethylene (PP)
- steel pipes
• other approved materials.

**Materials** may include:
• fixings and supports
• heaters (panel, skirting and unit)
• pipe materials
• other approved materials.

**Fault reporting:**
• may be written or verbal
• is to be according to company's workplace procedures.

**Heating system** may include:
• panel radiators
• skirting convectors
• unit heaters.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient energy and water use
  • efficient use and recycling of material
  • correct handling of hazardous materials
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

CPCPMS3034A Install medical gas pipeline systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3014A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test medical gas pipeline systems.

Application of the Unit
Site location for work application is commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Prepare for work.  
   1.1  Plans and specifications are obtained and work requirements are identified.
   1.2  *Work health and safety* (WHS) and *environmental requirements* associated with installation of medical gas pipeline system are adhered to throughout the work.
   1.3  *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4  Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.
   1.5  *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.
   1.6  Work area is prepared to support efficient installation of medical gas pipeline systems.

2  Identify system requirements.  
   2.1  Configuration of system is checked for compliance with plans, specifications, standards, authorities’ requirements and relevant *information*.
   2.2  Position of pipes, supports, fixings and terminals are determined from plans and specifications or site requirements, so as not to cause damage or interference to surrounding structures.
   2.3  Allowances for fabrication or assembly are determined and transferred.
   2.4  Quantity and type of *materials*, including *types of*
2.5 Materials are identified, ordered and collected according to workplace procedures.

2.6 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition and faults are reported.

3 Fabricate, install, purge and test pipeline system.

3.1 Medical gas pipeline system is set out to comply with plans, specifications, standards and authorities’ requirements.

3.2 Fixings and supports are installed to comply with plans, specifications, standards, authorities’ requirements and manufacturer recommendations.

3.3 Pipe system and terminal units are positioned and labelled in compliance with plans, specifications, standards and manufacturer requirements.

3.4 Pipeline system is installed in specified location without damage or distortion to pipework, surrounding environment or other services.

3.5 Pipeline system is pressure tested to comply with job specification, regulatory authorities’ requirements, standards and regulations, and details are recorded in required format.

3.6 Pipeline system is purged according to standards and authorities’ requirements.

3.7 Sustainability principles and concepts are applied throughout the installation.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace
requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation
  - document pipeline system pressure test
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - determine system requirements
  - install, test and purge a medical gas pipeline system

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- job safety analysis (JSA) and safe work method statements (SWMS)
• WHS regulations relevant to medical gas pipeline systems
• personal protective equipment requirements and use
• pressure testing procedures and equipment
• processes and requirements of installing, testing and purging medical gas pipeline systems
• SI system of measurement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install medical gas pipeline systems
- applying safety requirements throughout the work sequence, including equipotential bonding procedures and the use of personal protective clothing and equipment
- given the plans and specifications, installing and testing at least three medical gas pipeline systems (each with a different medical gas) from a manifold system to terminal units and fittings, ensuring:
  - application of sustainability principles and concepts
  - cleanliness and sterility of finished system
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** may include:
• clean-up protection
• ozone protection
• waste management.

**Quality assurance requirements** may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
• hand and power tools
• heating and bending equipment
• silver brazing equipment.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing medical gas pipeline systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** for installing medical gas pipeline systems are to include:
- fittings and supports
- labels
- pipe materials
- purging gases
- terminal units.

**Types of medical gas pipelines** may include:
- carbon dioxide
- medical breathing air
- medical suction
- mixtures of medical gases
- nitrous oxide
- standard oxygen
- surgical tool gas.

**Fault reporting**:
- may be written or verbal
- is to be according to company's workplace procedures.

**Medical gas pipeline system** includes:
- fixtures and labels
- gas pipeline
- terminal units and fittings.

**Sustainability principles and concepts**:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy retention
  - selecting appropriate products and components to ensure minimal environmental impact.

CPCPMS3035A Install and test ducting systems

Modification History

Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3015A

Unit Descriptor

This unit of competency specifies the outcomes required to install and test ducting systems used for ventilation systems, heating and/or cooling systems, and exhaust systems.

Application of the Unit

Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

CPCPCM2043A Carry out WHS requirements

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* installing and testing ducting systems are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.
   1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient installation and testing of ducting systems.

2 Identify system requirements.
   2.1 Quantity and type of *ducting system materials*, including in-duct equipment, are calculated from plans, specifications and relevant *information*.
   2.2 Allowances for fabrication or assembly are determined and transferred.
   2.3 *Materials* are identified, ordered and collected according to workplace procedures.
   2.4 Materials and equipment are checked for compliance with standards, docket and order form, and acceptable condition and *faults are reported*. 
3 Install and insulate duct system.

3.1 System is set out to comply with plans and specifications.

3.2 Duct supports and fixings are positioned to comply with plans, specifications and manufacturer recommendations.

3.3 Duct work is installed according to plans and specifications.

3.4 Circumferential joints are assembled and sealed according to plans, specifications and manufacturer recommendations.

3.5 Duct system is installed in specified location, without damage or distortion to surrounding environment or other services and according to standards.

3.6 Insulation materials are fixed according to plans and specifications.

3.7 Insulation materials are installed in specified location without damage to surrounding environment and according to plans, specifications, standards and manufacturer recommendations.

3.8 **Diffusers and terminal devices** are installed according to plans and specifications and with no damage to ceiling or finished surfaces.

3.9 **Sustainability principles and concepts** are applied throughout the installation.

4 Test duct work system.

4.1 Test requirements are determined from plans and specifications.

4.2 Appropriate test equipment is selected for specified tests.

4.3 Duct system is tested under pressure according to instructions and workplace procedures.

4.4 Leak sources are identified and repaired using specified procedures and materials, to ensure correct flow operation.

4.5 Details of test data are recorded in format required by
5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - document ducting system tests
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install, insulate and test ducting for ventilation, heating, cooling and exhaust systems, including in-duct equipment
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- applicable Australian standards
- application of flow rates, pressure and volume principles to testing procedures
- characteristics of materials used in the system being tested
- electrical and electronic principles and safety requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- WHS regulations relevant to the work activity
- personal protective equipment requirements and use
- processes of installing, insulating and testing ducting
- SI system of measurement
- statutory requirements
- system types and identification of system components
- techniques for setting out, assembling, fixing and jointing duct work systems and components, including insulation and acoustic materials
- types of repairs for detected leaks in the duct work system
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test small ducting systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing, insulating, testing and balancing from a plenum box or chamber a supply of heated air to three outlet grills; the installation shall incorporate hard and flexible duct work, including one transition piece and dampeners, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- duct lifter
- hand and power tools
- in-duct equipment, including:
  - fire dampers
  - noise attenuation fittings
  - volume control dampers
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
- measuring equipment
- pittsburgh lock forming machine
- sheet metal rollers
- spot welders
- test equipment, including:
  - manometers
  - micro-manometers.

**Ducting system materials:**
- may include:
  - diffusers
  - ducting
  - fixings and supports
  - in-duct equipment
  - insulation
  - joints
  - plenum box and chamber
  - terminal devices
- may be:
  - flexible
  - sheet metal
  - a combination.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing and testing ducting heaters
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.
Materials:

- may include:
  - ducting:
    - fixings and supports
    - sheet metal:
      - flexible
      - combination
    - in-duct fittings:
      - plastic
      - sheet metal
    - insulation
  - insulation and acoustic materials may be:
    - acoustic and non-acoustic materials
    - externally insulated
    - fibreglass tissue factory bonded to the insulation
    - flexible aluminium laminate fabric
    - perforated double-sided aluminium foil factory bonded to the insulation
    - perforated zincanneal or other metal sheet fixed in the duct so that continuous insulation is obtained
    - resin-bonded mineral wool or glass fibre in faced or unfaced semi-rigid batt or board form, weight 20 to 100 kg and m³
  - sheet materials
  - surface facings of PVC-coated fibreglass mesh factory bonded to the insulation
  - thermal and acoustic insulation for duct work and air handling equipment, handling air between 2 and 65°C
  - thermal insulation and sound absorption materials of resin-bonded mineral wool or glass fibre in unbound flexible blanket form, weight 20 to 65 kg and m³.

Fault reporting:

- may be written or verbal
- is to be according to company's workplace procedures.

Diffusers and terminal devices may include:

- combined diffusers
- control devices
- cushion heads
- grills
- light fittings
- outlets taken directly from duct and on flexible branch
- pressure-reducing devices
- registers
- variable air volume (VAV) boxes.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use and recycling of material
  - efficient energy retention
  - ensuring integrity of ductwork system
  - selecting appropriate products and components to ensure minimal environmental impact.

CPCPMS3036A Install air handling units

Modification History
Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3016A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test air heating, cooling and ventilation plenums or enclosures.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  
1.1 Plans and specifications are obtained.  
1.2 Work health and safety (WHS) and environmental requirements installing and testing air handling units are adhered to throughout the work.  
1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.  
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.  
1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.  
1.6 Work area is prepared to support installation and testing of air handling units.

2 Identify installation requirements.  
2.1 Requirements for components and materials are determined from plans, specifications and relevant information.  
2.2 Assembly methods are identified from plans and specifications.  
2.3 Materials and components are identified, ordered and collected according to workplace procedures.  
2.4 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition; and faults are reported.
3 Set out, assemble and test air handling units.

3.1 *Air handling unit* is set out in compliance with plans and specifications.

3.2 Components and equipment are positioned according to plans and specifications.

3.3 Equipment is installed according to job and manufacturer specifications.

3.4 Assembly is checked for compliance with plans and specifications.

3.5 *Air handling unit* is tested for correct operation.

3.6 Details of test data are recorded in required format.

3.7 *Sustainability principles and concepts* are applied throughout the installation process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - document pipeline system pressure test
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test an air handling plenum, which is part of an air heating, cooling and ventilation system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- effect of machinery vibrations on structures, ducts and fittings
- electrical and safety requirements
- equipment installation techniques that limit the transfer of vibrations from plant and
- equipment to other components
- job safety analysis (JSA) and safe work method statements (SWMS)
- WHS regulations relevant to the work activity
- personal protective equipment requirements and use
- processes of installing and testing air handling units
- SI system of measurement
- statutory requirements
- techniques for setting out, assembly and fixing and jointing requirements for duct work systems
- testing, balancing and commissioning of air handling units
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install air handling units
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing a plenum chamber that includes a fan, coil, filter and dampers, including supports and brackets and any fixing requirements, allowing for anti-vibration and ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as possible take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environment requirements may include:
- clean-up protection
- waste management.

Quality assurance requirements may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
  - duct lifter
  - measuring equipment.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
organisation work specifications and requirements
plans and sketches
regulatory and legislative requirements, particularly those pertaining to:
building codes
WHS and environmental requirements
plumbing regulations
relevant Australian standards
safe work procedures relating to installing and testing air handling units
signage
verbal, written and graphical instructions
work bulletins
work schedules, plans and specifications.

Materials and components may include:
- coils
- fans
- filters
- motors
- sheet metal:
  - galvanised iron
  - zincalume
  - other approved metals.

Fault reporting:
- may be written or verbal
- is to be according to company’s workplace procedures.

Air handling units may contain:
- coils
- fans
- filters
- other equipment items.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy retention
  - selecting appropriate products and components
to ensure minimal environmental impact.

CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements installing split air conditioning are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of split air conditioning.

2 Identify installation requirements.

2.1 Quantity and type of material required for installation are determined from plans, specifications and relevant information.

2.2 Materials are identified, ordered and collected according to workplace procedures.

2.3 Requirements for other services are identified and connection is planned according to regulatory requirements.

2.4 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition and faults are reported.
3 Install and test system.

3.1 Installation is set out in compliance with plans and specifications.

3.2 Existing services are located and installation process is adjusted accordingly to avoid any disturbance.

3.3 Preparatory work is carried out to specifications without unnecessary damage to surrounding structures or environment.

3.4 Structural supports are installed in compliance with plans and specifications.

3.5 Ducting and control panels are installed according to authorities' requirements, manufacturer recommendations, plans and specifications.

3.6 System is installed to manufacturer recommendations, plans and specifications.

3.7 Sustainability principles and concepts are applied throughout the installation.

3.8 Installation is tested according to specifications, codes or standards for the application.

3.9 Test results are documented in required format.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- **communication skills to:**
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- **literacy skills to:**
  - complete workplace documentation
  - document pipeline system pressure test
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- **numeracy skills to apply measurements and calculations**

- **planning and organising skills to:**
  - plan and sequence tasks with others
  - plan and set out work

- **teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities**

- **technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials**

- **technology skills to:**
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
  - undertake preparatory work that may be needed, including penetration through building structure, installation of structural supports and installation of plinths

**Required knowledge**

- characteristics and application of different assemblies, including fixing and jointing techniques and methods
- effective isolation processes and procedures
- electrical safety requirements
- environmental impact of gases and Environment Protection Authority (EPA) requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- materials handling techniques
- WHS regulations relevant to the work activity
- personal protective equipment requirements and use
- operating principles of air conditioning and refrigeration systems
- processes of installing and testing split air conditioning systems
- SI system of measurement
- statutory requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install split air conditioning
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing and pressure testing a single-head split system air conditioner, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

CPCPMS3038A Install air conditioning control equipment

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3018A

Unit Descriptor
This unit of competency specifies the outcomes required to install air conditioning control equipment for the control of pressure, temperature, flow rate, humidity and density.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements installing air conditioning control equipment are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of air conditioning control equipment.

2 Identify installation requirements.

2.1 Appropriate controller and necessary materials are selected according to plans and specifications, manufacturer recommendations and relevant information.

2.2 Controller position is identified from plans and specifications, and with consideration of location of existing services.
3 Install control equipment.

3.1 *Air conditioning* system is shut down and isolated according to appropriate codes of practice and WHS requirements.

3.2 Control equipment is installed to specification or manufacturer instructions and *faults are reported*.

3.3 *Sustainability principles and concepts* are applied throughout the installation.

3.4 Control equipment is positioned in specified location without damage or distortion to surrounding environment or other services.

3.5 Manual-handling techniques are used according to WHS requirements.

4 Calibrate and test control equipment.

4.1 Control equipment is calibrated according to manufacturer recommendations and job specifications.

4.2 Correct operation of system control equipment is checked against operational specification.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - plan and sequence tasks
  - plan and set out work

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Effective isolation processes and procedures
- Electrical and safety requirements
- Job safety analysis (JSA) and safe work method statements (SWMS)
- WHS regulations relevant to the work activity
- Personal protective equipment requirements and use
• operating principles of air conditioning and refrigeration systems
• power and maintenance access requirements for control units
• process of installing and testing air conditioning control equipment
• SI system of measurement
• statutory requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install air conditioning control equipment
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing a control valve, a thermostat and flow, pressure and limit switches for an air conditioning system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation and location
  - correct operation of the system and equipment
  - correct selection and use of appropriate processes, tools and handling of equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** may include:
• clean-up protection
• waste management.

**Quality assurance requirements** may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
• hand and power tools
• ladders
• lifting and load shifting equipment, including:
  • chain blocks
  • elevated work platforms
  • forklifts
  • hand trolleys
  • hoists and jacks
  • rollers
  • scaffolds
• measuring equipment
• test equipment, including:
  • multi-meters
  • pressure gauges
  • thermometers
  • anemometer
  • differential pressure gauges.

**Air conditioning control equipment** may include:
• control switches
• control valves
- damper motors
- flow switches
- limit switches
- pressure switches
- solenoid valves
- thermostats.

**Materials** may include:
- air conditioning controls for installation.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing air conditioning control equipment
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

**Air conditioning** may be:
- electric
- hydraulic
- pneumatic
- self-contained
- a combination.

**Fault reporting:**
- may be written or verbal
- is to be according to company’s workplace procedures.
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - appropriate recycling of material
  - correct handling of hazardous materials
  - efficient use of material
  - selecting appropriate products and components to ensure minimal environmental impact.

CPCPMS3039A Maintain mechanical services equipment

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3019A.

Unit Descriptor
This unit of competency specifies the outcomes required to perform general maintenance of heating, ventilating and air conditioning systems and associated mechanical equipment (air distribution systems, hydronic systems and control systems).

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A  Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  
1.1 Plans and specifications are obtained.  
1.2 Work health and safety (WHS) and environmental requirements maintaining mechanical services equipment are adhered to throughout the work.  
1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.  
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.  
1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.  
1.6 Work area is prepared to support efficient maintenance of mechanical services equipment.

2 Perform routine maintenance.  
2.1 Maintenance tasks detailed in routine maintenance schedule are carried out to specification and in line with relevant information.  
2.2 Mechanical equipment and system components are checked with appropriate instruments.  
2.3 Faulty items or components are identified, faults reported and maintenance procedure selected.
3 Repair and replace faulty components and test job.

3.1 Equipment is safely isolated according to regulations and WHS requirements.

3.2 Faulty items or components are removed using appropriate tools, equipment and procedures.

3.3 Replaceable items are selected from manufacturers' catalogue or serviceable items are fitted according to manufacturer or site specifications.

3.4 System adjustments are made to equipment or components to comply with specifications.

3.5 Operational check is carried out on system to ensure its compliance with job specification.

3.6 Maintenance report is documented in format required by the maintenance specification.

3.7 Sustainability principles and concepts are applied throughout the repair, replacement and testing procedures.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete workplace documentation
  - document maintenance report
  - read and interpret:
    - documentation from a variety of sources
    - maintenance schedule
    - manufacturer catalogues
    - plans, specifications and drawings

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - conduct routine maintenance on air distribution and hydronic heating, ventilating and air conditioning systems
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- air-conditioning and refrigeration principles
- electrical safety principles
- effect of bacteria in water, and potential impact on health
- job safety analysis (JSA) and safe work method statements (SWMS)
- mechanical and hydraulic principles
- personal protective equipment requirements and use
- operating principles of system components used in mechanical services equipment
- processes of maintaining mechanical services equipment
- SI system of measurement
- WHS regulations relevant to the work activity
- workplace and statutory requirements for mechanical services equipment
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to maintain mechanical services equipment
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- for air distribution equipment, given the plans and specifications, replacing, realigning and tensioning pulleys and belts; check vibration mountings and flexible connections; lubricate bearings; clean air filters, coils and blades; and check system for leaks
- for hydronic systems, given the plans and specifications, replacing gland valves and O rings, replacing and adjusting pump glands, cleaning drains, adjusting operating control valves and settings, replacing chemical dosing systems when required and checking water system for leaks
- for both air distribution and hydronic systems, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed maintenance
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and
safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
• identifying and testing for electrical hazards
• service lines
• surrounding structures and facilities
• trip hazards
• use of tools and equipment
• work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- potential health hazards
- waste management.

**Quality assurance requirements** may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- health warnings
- International Standards Organisation
- site safety plan
- water treatment requirements
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- elevated work platforms
- hand and power tools
- ladders
- scaffolds
- test equipment
- tachometer.

**Routine maintenance** may include:

- aligning drives
- checking vibration isolation
- cleaning filters and strainers (air and water systems)
- cleaning equipment drains
- cleaning finned coils
- lubricating bearings
- V belt tensioning.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- program maintenance schedules, plans and specifications
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - confined space entry
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to maintaining mechanical services equipment
  - signage
  - verbal, written and graphical instructions
  - work bulletins.

**Fault reporting:**
- may be written or verbal
- is to be according to company's workplace procedures.

**System adjustments** may include:
- check of settings
- operational check of control valves
- pipe and duct system check for leaks
- volume control and fire check operation.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
- efficient use of material
- correct handling of hazardous materials
- appropriate recycling of material
- selecting appropriate products and components to ensure minimal environmental impact.

CPCPMS3040A Install and maintain evaporative air cooling systems

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3020A

Unit Descriptor
This unit of competency specifies the outcomes required to install and maintain evaporative air cooling systems.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* installing evaporative air cooling systems are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation and maintenance of evaporative air cooling systems.

2 Identify installation requirements.  2.1 Quantity and type of materials required for installation are determined from plans and specifications.

2.2 *Materials* are identified, ordered and collected according to workplace procedures.

2.3 Requirements for other services are identified and connection is planned according to regulatory requirements.

2.4 Materials and equipment are checked for compliance with standards, and docket and order form, and for acceptable condition.
3 Install and test unit.

3.1 Installation is set out in compliance with plans, specifications and relevant information.

3.2 Existing services are located and installation process is adjusted accordingly to avoid any disturbance.

3.3 Preparatory work, including installation of piping and isolating valve and roof penetration and flashing, is carried out to specifications without unnecessary damage to surrounding structures or environment.

3.4 Structural supports are installed in compliance with plans and specifications and National Construction Code.

3.5 Ducting and control panels are installed according to authorities' requirements, plans, specifications and manufacturer recommendations.

3.6 System is installed to plans, specifications and manufacturer recommendations.

3.7 Installation is tested according to specification, code or standards for the application.

3.8 Sustainability principles and concepts are applied throughout the installation and maintenance process.

3.9 Test results are documented in required format.

4 Maintain unit.

4.1 Service and maintenance requirements are identified from manufacturer specifications or authorities' requirements.

4.2 Replacement components are checked and fitted periodically and as required according to specification.

4.3 Other services to the unit and maintenance operations are conducted, observing manufacturer and authorities' requirements.
5 Clean up.  

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
  - document test results
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - undertake associated penetration and flashing of the roof, provision of water, and installation of required duct work
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different assemblies, including fixing and jointing
• techniques and methods
  • effect of bacteria in water, and health implications
  • effective isolation processes and procedures
  • job safety analysis (JSA) and safe work method statements (SWMS)
  • materials handling techniques
  • WHS regulations relevant to the work activity
  • personal protective equipment requirements and use
  • processes of installing and testing evaporative air cooling systems
  • roof penetration and flashing
  • SI system of measurement
  • statutory requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install evaporative units
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing an evaporative air cooling system on a roof, including flashing the roof penetration; installing a plenum box and duct work to three diffusers; connecting cold water to an isolation valve within 1 metre of the appliance; connecting and completing installation testing, and commissioning its operation, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and authorised work practices, safety requirements and
for assessment

Environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - manual handling
  - service lines
  - surrounding structures and facilities
  - trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
  - measuring equipment
  - roof safety equipment
  - test equipment.

**Materials** may include:
- control panels
- diffusers
- ducting materials
- evaporative air cooling systems
- grills
- insulation.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards and building codes
- safe work procedures relating to installing evaporative cooling systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Preparatory work** that may need to be completed includes:

- ensuring structural integrity of roof
- installing piping and isolating valve
- installing piping and isolating valve in roof cavity
- installing plinths
- installing structural supports
- installing roof penetration and flashing for the unit.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
  - may include:
    - efficient use of material
    - correct handling of hazardous materials
    - appropriate recycling of material
    - efficient water use
    - efficient energy retention
• reuse of waste water
• selecting appropriate products, components and material to ensure minimal environmental impact.

Other services to units may include:
• electrical connections
• water supply.

CPCPMS3041A Install domestic solid fuel burning appliances

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPMS3021A

Unit Descriptor
This unit of competency specifies the outcomes required to interpret compliance requirements for domestic solid fuel burning appliance installation, plan and negotiate installation details with clients, and install appliances and flues to meet compliance and quality requirements. Work in this area must be completed according to relevant legislative, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
Regulatory mechanisms may apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for installation.

1.1 Installation information for domestic solid fuel burning appliances is interpreted and compliance requirements confirmed according to organisational, manufacturer and legislative requirements.

1.2 Installation permits are checked or obtained as necessary in consultation with client and local authority.

1.3 Installation sites are inspected and appliance installation locations confirmed as suitable or alternative locations negotiated with clients.

1.4 Location preparation work required by other contractors is arranged in consultation with client.

1.5 Heat sensitivities of building materials at appliance installation locations are confirmed, and heat protection strategies are confirmed with clients.

1.6 Tasks are planned and equipment and materials are gathered and checked according to organisational requirements.

1.7 Sustainability principles and concepts are observed when preparing for and undertaking work process.

2 Install appliance.

2.1 Appliance location is measured and marked according to compliance requirements.

2.2 Floor protection material is measured and cut or made up and installed according to compliance requirements.

2.3 Appliance is positioned and clearance distances are
checked to confirm compliance.

2.4 Appliance is installed according to compliance and organisational requirements.

3 Install flue.

3.1 Flue dimensions and components are checked and additional sections or components obtained as required to meet compliance requirements.

3.2 Locations and dimensions of ceiling and roof penetrations are calculated, measured, marked and checked according to compliance and organisational requirements.

3.3 Penetrations are made with minimal damage to host materials and according to specifications and organisational requirements.

3.4 Structural supports are installed according to plans and specifications.

3.5 Opening is prepared in compliance with specifications, manufacturer recommendations and regulations.

3.6 Flue and associated components are installed according to compliance and organisational requirements.

3.7 Flashings and sealants are applied to restore integrity of ceilings and roofs according to compliance and organisational requirements.

3.8 Penetration is performance tested to ensure correct fit of completed installation, and remedied as required.

4 Finalise installation.

4.1 Installed appliance and associated components are checked for complete and correct installation according to compliance and organisational requirements.

4.2 Installation site is restored and equipment is cleaned, checked and stored according to organisational requirements.

4.3 Operation of appliance is demonstrated to clients and factors affecting optimum performance are explained.

4.4 Conformance certificate is prepared and processed according to compliance and organisational
requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - report faults
  - use language and concepts appropriate to cultural differences
- literacy skills to:
  - complete written documentation, such as:
    - appliance conformance certificates
    - installation compliance certificates
    - local authority permit applications
  - read and interpret instructions, specifications and standards, such as:
    - AS/NZS 2918 Domestic solid fuel burning appliances – installation
    - compliance certification plates on appliances
    - guidelines and updates for legislation and regulations regarding domestic solid fuel burning appliances
    - manufacturer installation instructions and specifications
  - numeracy skills to apply measurements and calculations
  - planning and organising skills to plan and set out work
  - teamwork skills to:
    - work with others to action tasks
    - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

Required knowledge

- factors affecting selection of installation locations for appliances
- factors affecting compliance and non-compliance of domestic solid fuel burning appliances
- heat damage protection requirements for appliances
- legislation, regulations and standards that apply to the installation and emissions of domestic solid fuel burning appliances
- heat-response categories of construction materials:
  - heat sensitive
  - heat tolerant
- heat resistant
- installation requirements for different types of domestic solid fuel burning appliances
- job safety analysis (JSA) and safe work method statements covering:
  - asbestos recognition and reporting requirements
  - manual handling of appliances
  - personal protective equipment (PPE) for different tasks and situations
  - working safely at heights
  - worksite housekeeping
- quality requirements
- principles and products of combustion
- requirements and methods for maintaining structural integrity of buildings, roof structures and existing roof coverings
- SI system of measurement
- structure and function of flue elements and principles of flue draw, and effects of:
  - bends and horizontal sections
  - climatic conditions
  - surrounding buildings and trees
- types of domestic solid fuel burning appliances and methods for safe operation
- types and condition of wood used as fuel and impacts on:
  - efficiency of appliances
  - emissions
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply safety requirements throughout the work sequence, including:
  - work with or near electricity
  - select and use processes, tools and equipment
  - use PPE
  - work at heights
- communicate and work effectively and safely with others
- apply sustainability principles and concepts while installing solid fuel burning appliances
- locate, interpret and apply information, standards and specifications relevant to the installation of domestic solid fuel burning appliances
- install at least two different domestic solid fuel burning appliances according to client, compliance and workplace requirements; appliances may be for:
  - central-heating
  - cooking
  - space-heating
  - water-heating
  - combinations of applications
  - fireplace inserts
  - free-standing
  - in-built
  - non-tested.

Context of and specific resources for

This unit of competency is to be assessed using standard and authorised work practices, safety requirements and environmental
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on
competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Installation information** may include:
- AS/NZS 2918 Domestic solid fuel burning appliances – installation (Australian standards are frequently revised and users must always check for currency)
- client requirements
- compliance certification plates on appliances
- JSA
- manufacturer instructions and specifications
- National Construction Code (NCC)
- safe work method statements
- work order.

**Domestic solid fuel burning appliances** may include:
- appliances for:
  - central-heating
  - cooking
  - space-heating
  - water-heating
  - combinations of applications
- fireplace inserts
- free-standing
- in-built

Compliance requirements may include:

- Australian standards, such as:
  - AS/NZS 2918 Domestic solid fuel burning appliances – installation
  - AS/NZS3500 Plumbing and drainage (set)
- clearance distances to heat sensitive materials, including:
  - ceilings
  - curtains
  - furniture
  - timbers
  - walls
- codes of practice, such as HB39 Installation code for metal roof and wall cladding
- emissions compliance certification plate
- manufacturer specifications
- NCC
- types and dimensions of floor protection.

Legislative requirements may include:

- commonwealth, state and territory, and local legislation and regulations relating to:
  - emissions
  - installation permits
  - work health and safety.

Inspection of installation sites may include:

- assessing height and proximity of neighbouring buildings and trees
- determining structural elements and building materials, especially in regard to presence of asbestos; areas to be assessed include:
  - ceilings
  - floors
  - roofs
  - walls
- measuring dimensions of furniture and fittings close to appliance locations
- finding and noting locations of:
  - electricity
  - power points
- rooftop outlets for heating, ventilation and air-conditioning (HVAC) systems
- structural elements of buildings.

**Appliance installation locations** should:
- allow clearance distances and accessibility clearance according to manufacturer specifications or AS/NZS 2918 Domestic solid fuel burning appliances – installation
- be suitable for installation of flue according to manufacturer specifications or AS/NZS 2918 Domestic solid fuel burning appliances – installation
- be suitable for operation of fans, if required
- comply with emissions compliance requirements
- comply with health and safety requirements
- minimise discomfort caused by cool air draught
- provide optimum heat circulation.

**Heat protection strategies:**
- should include:
  - compliant floor protection
  - compliant clearance distances
- may include:
  - additional shielding
  - reduced compliant clearance distances.

**Equipment and materials** may include:
- appliances and associated components
- drills
- flashing roof materials, including:
  - fibreglass
  - laminate
  - metal roof covers of concealed or pierce fixed types
- plastic building sheets for walls and roofs
- polyethylene
- rainwater goods
- straw or wool
- thermal insulation of reflective foil
- fixings, which may include:
  - metal self drilling and tapping screws
  - rivets
  - sealants such as silicon and solder
- grinders
- hammers
• ladders
• PPE
• rivet gun
• saws
• sealant applicators
• sealants
• steel tape
• tile cutters
• tin snips.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
  • efficient use and recycling of material
  • efficient energy and water use
  • disposing of waste material to ensure minimal environmental impact.

**Factors affecting optimum performance**
• general cleaning and maintenance requirements
• type and condition of fuel used in appliances.

**Unit Sector(s)**

CPCPMS4011B Design, size and lay out heating and cooling systems

Modification History

Minor changes throughout the unit
Equivalent to CPCPMS4011A

Unit Descriptor

This unit of competency specifies the outcomes required to design, size and document the layout of heating and cooling systems for multi-floor structures.
It covers preparing for the work, identifying and confirming system specifications and requirements, designing system layout, and work finalisation processes, including records and documentation.

Application of the Unit

This unit applies:
to ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75kPa and a maximum velocity of 12.5 metres per second piping systems conveying heating and chilled water operating at a maximum pressure of 700kPa or a maximum temperature of 100°C, and systems having a maximum output of 50kW and total air quantities not exceeding 950 litres per second.
Site location for the application of the plan will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for design.
   1.1 Nature and scope of design task are identified and confirmed.
   1.2 *Work health and safety* (WHS) and *environmental requirements* planning, sizing and documenting the layout of heating and cooling systems are adhered to throughout the work.
   1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work.
   1.4 *Tools and equipment* required for designing, sizing and documenting the layout of heating and cooling systems, including personal protective equipment, are selected and checked for serviceability.
   1.5 Work area in which design process is to be conducted is prepared.

2 Identify system requirements.
   2.1 Information and specifications for required work are obtained and confirmed, if necessary by site inspection.
   2.2 *Statutory and regulatory authorities'* requirements relevant to work are consulted and applied to all aspects of the work, using relevant *information*.
   2.3 Heating and cooling requirements are determined from building drawings, plans and specifications.
   2.4 *Air conditioning* or *small bore heating system* is sized to provide for required heating and cooling load and to provide required piping and ducting according to standards, and regulatory authorities' and workplace
requirements.

2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Design system layout.

3.1 Layout of heating and cooling system is designed according to building plans, relevant standards and workplace procedures.

3.2 *Materials* required are specified and optimised according to standards from the proposed design.

3.3 Plans are recorded according to regulatory authorities' and workplace requirements.

4 Restore work area.

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Documentation, including work backup, is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete written workplace documentation, including:
    - work backup
    - record plans
  - read and interpret:
    - documentation from a variety of sources
    - regulations, standards, plans, specifications and drawings

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - interpret plans and specifications to design, size and document the layout of heating and cooling systems for multi-floor buildings up to a height of six floors

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
• characteristics and application of different fixing and joining techniques and methods
• characteristics and application of pipe and ducting systems, including their fittings and fixture supports and fixing and joining techniques
• design concepts and performance measures for heating and cooling systems
• effective isolation processes and procedures
• electrical and electronic principles and safety requirements
• environmental impact of gases and Environment Protection Authority (EPA) requirements
• job safety analysis (JSA) and safe work method statements (SWMS)
• principles, operation and characteristics of heating and cooling systems
• process of designing, sizing and documenting the layout of heating and cooling systems
• properties of water and air, including pressure and flow rates
• relevant information sources for the work activity
• relevant statutory requirements related to designing, sizing and documenting the layout of heating and cooling systems
• SI system of measurements
• standards applicable to heating and cooling systems
• use of computers and relevant computer-aided design (CAD) software
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to planning, sizing and documenting the layout of a heating and cooling system
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, designing, sizing and documenting the layout details of a domestic heating and cooling system requiring a minimum heat load of 150 megajoules (MJ) per hour plus a commercial heating and cooling system for a structure with at least four floors, ensuring:
  - application of sustainability principles and concepts
  - correct identification of details of the plan
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Tools and equipment** may include:
• computers running appropriate CAD software
• drawing instruments
• measuring equipment.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to designing, sizing and documenting heating and cooling systems
• signage
• verbal, written and graphical instructions
• work bulletins
- work schedules, plans and specifications.

**Air conditioning** may include:
- evaporative cooling system
- hydronic heating system
- hydronic cooling system
- warm air system
- refrigerated air conditioning system.

**Small bore heating systems** include:
- boilers
- piping
- radiators.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - use of efficient design principles throughout
  - incorporating efficient use of material in the design
  - design that ensures minimal environmental impact
  - choice of appropriate components and equipment to ensure minimal environmental impact.

**Materials** may include:
- drafting materials and equipment
- relevant structure plans and specifications.

CPCPMS4022A Commission air and water systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS4002A

Unit Descriptor
This unit of competency specifies the outcomes required to test and commission air and water heating and cooling systems.
It covers preparing for the work, determining testing requirements, preparing systems for balancing, and the physical balancing, testing and commissioning of the systems and completion of work finalisation processes, including recording.

Application of the Unit
This unit applies to:
- ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75kPa and a maximum velocity of 12.5 metres per second
- piping systems conveying heating and chilled water operating at a maximum pressure of 700kPa or a maximum temperature of 100°C, with a maximum output of 50kW and total air quantities not exceeding 950 litres per second.

Site location for work application will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  
1.1 Information, plans and specifications are obtained.  
1.2 Work health and safety (WHS) and environmental requirements testing and commissioning air and water systems are adhered to throughout the work.  
1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.  
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities' requirements.  
1.5 Tools and equipment for testing and commissioning air and water systems, including personal protective equipment, are selected and checked for serviceability.  
1.6 Work area is prepared to support efficient testing and commissioning process.

2 Determine testing requirements.  
2.1 Equipment is checked for safe operation and correct functioning.  
2.2 Equipment performance data is checked against plans, specification requirements and other relevant information.  
2.3 Instruments and associated equipment suitable for measuring quantities are selected according to job specification.
3 Prepare system for balancing.

3.1 Dampers are set in the open or specified position and operational check of system-related fans and ducting is carried out according to workplace procedures.

3.2 Automatic control devices are energised to provide maximum demand for airflow.

3.3 Piping system is checked for flow direction and leaks, and operational check of system and related pumps is carried out.

3.4 All manual and automatic valves are set in the specified position.

4 Balance, test and commission system.

4.1 Valves or throttling devices are adjusted to achieve specified water flow ratings.

4.2 Air volumes moved by system fans are measured.

4.3 Dampers and terminal devices are correctly adjusted to achieve specified airflow ratings.

4.4 Automatic controls and devices are set to specified settings.

4.5 Testing and balancing of system is carried out according to job specification, manufacturer recommendations and sustainability principles and concepts.

4.6 Test and monitored results are documented in format required by job specification and/or manufacturer.

5 Restore work area.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test and monitored results

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - test, balance and commission air conditioning, heating and ventilation ducting and piping systems

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- application of mechanical, hydraulic, electric and electronic principles and safety requirements
- design concepts, tests and performance standards for measuring various water and air
• effect of bacteria in water, and potential impact on health
• environmental impact of gases and Environment Protection Authority (EPA) requirements
• job safety analysis (JSA) and safe work method statements (SWMS)
• operating principles and characteristics of system components used in water and air systems
• performance standards for balancing systems
• processes of commissioning air and water systems
• relevant information sources for the work activity
• relevant statutory requirements related to installing, testing, balancing, commissioning and operation of air and water systems
• SI system of measurements
• standards applicable to testing, balancing and commissioning air and water systems
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to testing, balancing and commissioning air and water systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to balance and commission an air conditioning system (up to 150 megajoules) for a domestic situation and a commercial air conditioning system for a structure of at least four floors, plus balance and commission a hydronic water heating system for a structure of at least four floors, ensuring:
  - application of sustainability principles and concepts
  - correct identification of details of the plan
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

CPCPMS4023A Design compressed air systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS4003A

Unit Descriptor
This unit of competency specifies the outcomes required to design and size compressed air distribution systems and prepare system plans and specifications.

Application of the Unit
This unit of competency supports the needs of experienced plumbers with responsibility for providing consultancy or supervision in the evaluation and design of compressed air systems.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

| 1 | Evaluate design parameters. | 1.1 | Scope of work for the design of compressed air systems is established. |
|   |                             | 1.2 | *Client requirements* are determined from plans, specifications and client brief. |
|   |                             | 1.3 | *Cost-benefit analysis* is conducted comparing a range of materials and system designs. |
|   |                             | 1.4 | *Statutory, regulatory and Australian and New Zealand Standard requirements* for the design of compressed air systems are interpreted, analysed and applied. |
|   |                             | 1.5 | *Manufacturer requirements* and trade and technical manuals are interpreted. |

|   |                      | 4.3 Testing and commissioning schedule is prepared. |
|   |                      | 4.4 Operation and maintenance manual is produced. |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - report faults with application
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication

- literacy skills to:
  - read and interpret:
    - codes, legislation and standards
    - documentation from a variety of sources
    - plans and specifications
    - regulatory authorities’ requirements
  - numeracy skills to apply measurements and calculations
  - planning and organising skills to plan for and set out work

Required knowledge

- nature of materials and effect of their performance in a variety of conditions
- WHS and organisational quality procedures and processes
- principles of technology in the design of compressed air systems
- terminology, definitions, installation methods, applications and hazards identified in relation to compressed air devices and systems used according to Australian and New Zealand standards and other standards, codes or standard operating procedures
- work drawings and specifications
- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- apply sustainability principles and concepts associated with the design
- identify electrical hazards associated with the design
- evaluate and document design parameters including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of compressed air systems
- produce appropriate layouts for compressed air systems according to manufacturers’ and regulatory requirements
- calculate pipe sizes according to regulations and manufacturers’ requirements
- design and size a compressed air system using appropriate software
- prepare plans for a range of compressed air systems to industry standards
- prepare a specification for a compressed air system
- prepare a testing and commissioning schedule
- prepare an operation and maintenance manual.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the
assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Client requirements** may include:
- architectural specifications
- builders’ specifications
- owner requirements
- specialist use applications.

**Cost-benefit analysis:**
- compares the range of suitable treatment and disposal options, materials, system choices, disinfection options, water savings and environmental benefits compared to initial and ongoing maintenance costs.

**Statutory, regulatory and Australian and New Zealand standard requirements** include:
- Acts
- Australian and New Zealand standard requirements
- industry standards
- local and state government policies, including group and strata titling
- National Construction Code
- regulations.
Manufacturer requirements may include:
- material specifications
- sizing tables
- technical and trade manuals.

Desktop study may include collection and interpretation of existing data for design purposes in:
- architectural and building plans and other documents, including:
  - applications
  - brochures
  - forms
  - policies
  - reports
  - council plans
  - developer plans
  - manufacturer data.

Performance requirements may include:
- Australian and New Zealand standards
- local authority plans
- operational pressures and compressed air consumption
- pressure and air quality.

Layout of pipework systems may include:
- building integrity and aesthetic appeal should not be unduly effected by pipework
- principles of economy, serviceability, durability and fit for use should be applied.

Fittings and valves may include:
- bends
- couplings
- isolating valves
- pressure relief valves
- tees
- unions.

System calculations may include:
- air consumption
- compressed air volume and storage
- distribution pressures
- energy
• interpretation of design charts and tables
• pipe sizing.

**Equipment and components** may include:
• air filtering equipment, including proprietary filtering systems and air scrubbing systems
• capacity and size
• compressed air appliances, including air-operated tools, machinery and equipment
• moisture removal methods
• mounting and installation requirements
• oiling equipment
• reciprocating compressors
• single and multi-stage compressors
• valves, pressure controls and components.

**Materials** may include:
• approved pressure-rated materials
• copper
• steel.

**Jointing methods** may include:
• brazing
• mechanical joints
• threading.

**Installation requirements** may include:
• clipping
• installation details
• jointing requirements
• level of workmanship.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • using efficient design principles throughout
  • incorporating efficient use of material in the design
  • design that ensures minimal environmental impact
  • choice of appropriate components and equipment.
Plans:  
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - Indian ink
  - pencil
  - pigment liner.

Specification may include:
- appliances
- clipping
- detailing of specialised components
- jointing
- manufacturer requirements
- materials
- valves
- workmanship.

Testing may include:
- flow testing
- inspection checklist
- leak testing
- pressure testing
- quality assurance (QA) audit.

Commissioning schedule may include:
- check fit for purpose
- check for burrs and obstructions
- commission appliances
- purge system
- remove contaminants.

Operation and maintenance manual may include:
- check for blockages
- leak detection
- regular inspections
- regular maintenance requirements.

CPCPMS5010A Design steam generation and distribution systems

Modification History
Changes to unit title, descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS5000A

Unit Descriptor
This unit of competency specifies the outcomes required to design steam generation and distribution systems, including pipe and valve sizing, material selection, and the preparation and specification of documentation for steam distribution systems.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

### 2.8 Pipe supports
Pipe supports are designed for a range of applications.

### 2.9 Materials, jointing methods, and installation requirements
Approved materials, jointing methods, and installation requirements for steam generation and distribution systems are specified.

### 3 Design and size systems.

#### 3.1 Steam distribution systems are designed for a range of applications.

#### 3.2 Steam distribution systems are designed and sized using calculations and computer software packages.

#### 3.3 Sustainability principles and concepts are applied throughout the design.

### 4 Prepare documentation.

#### 4.1 Plans and specifications are prepared for a range of steam generation and distribution systems.

#### 4.2 Testing and commissioning schedule is prepared.

#### 4.3 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to develop creative and responsive approaches
- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - manufacturer requirements and manuals
    - plans, specifications, drawings and design briefs
    - statutory and regulatory requirements and standards
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - research, collect, organise and understand information relating to the design of steam generation and distribution systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.
- technical skills to prepare and specify steam distribution system plans
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
- common terminology and definitions used in design of steam generation and distribution systems for all classes of building, including industry terminology such as:
  - absolute pressure
  - enthalpy
  - enthalpy of evaporation and of saturated steam
  - enthalpy of saturated water
  - gauge pressure
  - heat and heat transfer
  - latent heat
  - specific enthalpy
  - specific heat capacity
- principles of technology in the design of steam generation and distribution systems
- requirements of commonwealth, state or territory regulatory authorities, relevant Australian standards, codes and manufacturer specifications, including hazards identified in relation to devices and systems used
- SI system of units related to steam
- terms, including relevant Australian standard and code definitions, manufacturer terms and naming conventions
- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- apply sustainability principles and concepts throughout the design of the system
- design, size and document layout details, including a specification for a 100-bed three-storey hospital incorporating a laundry
- evaluate and document design parameters to relevant Australian standards, codes, regulations, and client and manufacturer requirements for a steam generation and distribution system
- design and size a steam generation and distribution system using appropriate software
- prepare testing and commissioning schedules
- produce operation and maintenance manuals
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
minimum task requirements

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct,
indirect and supplementary evidence. Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed. Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** must include:

- barriers to heat transfer
- effects of air in a steam system
- heat transfer
- interpreting plans and specifications, and sizing and documenting layout of steam generation and distribution systems for residential, commercial and industrial applications for either new projects or an existing structure being renovated, extended, restored or maintained
- principles and properties of steam systems, including:
  - characteristics of condensation
  - methods of condensate removal
- steam applications, including commercial, manufacturing, institution and machinery and equipment operation
- working with types of steam and steam quality, including:
  - dry steam
  - flash steam
  - properties of steam at varying pressures
  - superheated steam
  - wet steam.
**Design requirements** may include:
- architectural plans
- builder specifications
- boiler selection
- fire safety requirements
- flow requirements and sizing of pipework
- owner requirements
- pipework identification
- ventilation requirements.

**Cost-benefit analysis:**
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of the project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials.

**Statutory and regulatory requirements and relevant Australian standards and codes** may include:
- Acts, regulations and commonwealth, state or territory, and local government requirements
- National Construction Code
- relevant Australian standards and codes.

**Manufacturer requirements** may include:
- material specifications
- recommended specific fixings for pipework
- sizing tables
- technical and trade manuals.

**Desktop study** must include:
- architectural and building plans
- developer plans
- documents, including:
  - applications
  - brochures
- forms
- other reports as available
- manufacturer data
- policies.

**Performance requirements** may include:
- steam generation and consumption, and steam and pressure quality, established using relevant Australian standards, codes and manufacturer information.

**Layout of pipework systems:**
- must include:
  - principles of economy, serviceability, durability and fit for use
  - location of pipework (fire rating of enclosure)
  - should not unduly affect building integrity and aesthetic appeal.

**Fittings and valves** may include:
- fittings:
  - bends
  - couplings
  - condensate traps
  - steam traps
  - steam headers
  - steam strainers
  - tees
  - unions
- valves:
  - isolating valves
  - pressure relief valves.

**Pipe size calculations** must include:
- energy
- pressure
- sizing
- storage
- volume.

**Steam appliances:**
- may include:
  - calorifiers
• industrial applications
• kitchen and laundry appliances
• sterilisers
• water heaters
• details must include:
  • components
  • construction
  • electronic controls
  • methods of temperature and pressure control.

**Boilers:**

• may include:
  • coal
  • electric
  • fire tube
  • gas
  • oil
  • packaged
  • solid fuel
  • water tube
• factors to be considered when selecting a boiler must include:
  • advantages and disadvantages of boiler types
  • capacity and size
  • designs based on anticipated use
  • energy sources
  • methods of reducing heat losses
  • pressure controls and components
  • storage requirement calculations
  • suitable time period between refilling
  • valves.

**Steam circuits must include:**

• condensate return
• feed pumps
• feed tanks
• headers
• steam distribution
• water treatment.
Steam trap types and their operation:
- types, which may include:
  - mechanical
  - thermodynamic
  - thermostatic
  - other applicable types
- operation, which must include:
  - installation
  - location.

Steam injection must include:
- noise control
- open ended pipe
- proprietary
- sparge pipe.

Insulation:
- may include:
  - fibreglass
  - rock wool
- insulation protection, including:
  - plastic
  - sheet metal.

Pipe supports may include:
- anchors
- bracket spacing
- corrosion protection
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion.

Materials may include:
- copper
- steel
- other approved materials.

Jointing methods may include:
- brazing
- mechanical joints
- threading
- welding.
Installation requirements may include:

- pipe protection:
  - cover
  - corrosion
  - impact
  - fire rating
  - level of workmanship
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for expansion
  - provision for drainage of condensation
  - serviceability and access.

Designed may include:

- cost relating to performance, including:
  - milestones
  - standard procedures
  - standards of work
  - work schedules
- prescriptive designs, including detail relating to:
  - materials and quality of work
  - nominated subcontractors
  - provision of on-site facilities and site access
  - quality assurance.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient energy usage
  - water usage
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact.

Plans:

- may include:
  - axonometrics
  - cross-sections
- details
- elevations
- isometrics
- schematics
- sections
- may be produced using:
  - computer generation
  - drawing equipment.

**Specification** may include:
- boiler selection
- fire safety
- flow requirements
- jointing
- manufacturer requirements
- materials
- residual pressures
- specialised components
- support
- testing
- valve selection
- workmanship
- work health and safety (WHS).

**Testing** may include:
- defect inspection
- flow
- inspection checklist
- leak
- pressure
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:
- boiler
- check for foreign material
- containment
- leak check
- operation
- pump
- system certification
- system defects
- system functions as per design
- treatment system.

*Operation and maintenance manual* may include:

- as installed drawings
- certification documentation
- maintenance schedules
- manufacturer brochures and technical information
- system operational procedures
- regular water quality testing
- results of commissioning test.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication

- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - manufacturer requirements and manuals
    - statutory and regulatory requirements and standards

- initiative and enterprise skills to develop creative and responsive approaches

- numeracy skills to:
  - apply formulas and calculate air displacements and returns
  - calculate heat loads

- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of air conditioning and ventilation systems
  - take initiative and make decisions

- problem-solving skills to analyse requirements, carry out tests, consider options and design an appropriate system

- teamwork skills to be able to work with others and action tasks and relate to people from a range of cultural ethnic backgrounds and varying physical and mental abilities.

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
- air psychometrics and the use of psychometric charts
- requirements of the National Construction Code, relevant Australian standards and other applicable codes or standard operating procedures relevant to the sector
- compliance with WHS and organisational quality procedures and processes
- hazards associated with devices used in air conditioning and ventilation systems
- heat load calculations
- installation methods used in air conditioning and ventilation systems
- nature of materials and effect of performance
- plans and specifications
- terminology and definitions used in air conditioning and ventilation systems
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

This unit of competency could be assessed by:

- developing an air conditioning and ventilation system for a given project, including the schedule of works and job specification
- preparing a graphical presentation of an air conditioning or ventilation system solution with specifications.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum, provide evidence of the ability to:

- design, size and document the layout details for an air conditioning and ventilation system for a 10 storey residential building with ground floor shops and basement car park
- evaluate and document design parameters to relevant Australian standards, codes, regulatory, client and manufacturer requirements for system components, including:
  - air conditioning units
  - ducting systems
  - controls
  - fans
  - zones
- develop an appropriate checklist for tests to be carried out on the system, including formulas required to carry out an air balance
- conduct tests, record and evaluate test results, and prepare a report
- prepare testing and commissioning schedules for air conditioning and ventilation systems
- prepare operation and maintenance manuals for air
conditioning and ventilation systems
• apply sustainability principles and concepts throughout the air conditioning and ventilation system design
• communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning
knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work may include:
- interpreting plans and specifications
- sizing and documenting layout for air conditioning and ventilation systems, including residential and
commercial systems
• new projects or an existing structure being
  renovated, extended, restored or maintained.

**Design requirements** must include:
• architectural plans
• building specifications
• fire safety
• National Construction Code
• owners
• tenants
• air-flow requirements and sizing of duct work.

**Specific use conditions** may include:
• age and activity of occupants
• computer requirements
• food preparation
• smoke exhaust
• wet-bulb and dry-bulb temperature and humidity.

**Psychometric evaluation** may include:
• absolute, specific and relative humidity
• air composition
• air properties, including:
  • density
  • expansion coefficient
  • kinematic viscosity
  • Prandtl number
  • specific heat
  • temperature
  • thermal conductivity
• altitude, density and volume
• determination of the air condition using a
  psychometric or Mollier chart, showing:
  • dewpoint temperature
  • dry-bulb temperature
  • enthalpy
  • humidity ratio
  • relative humidity
  • specific volume
  • wet-bulb temperature.
Calculation of heat loads must include:

- assessment of factors affecting heat load, including:
  - building materials
  - insulation
  - number of personnel
  - number of windows
  - room dimensions
  - usage
  - weather effects
- using:
  - calculations and computer software systems
  - heat load calculation methods and formulas.

Building heat losses may include:

- construction materials
- insulation materials
- maintaining plenum
- occupancy
- room sizes.

Desktop study may include:

collection and interpretation of data for design purposes in:

- architectural and building plans
- developer plans
- manufacturer data
- documents:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Legislation, standards and other relevant documentation is to be according to commonwealth, state and territory legislation and regulations and may include:

- WHS requirements, such as:
  - growth and distribution of *Legionella pneumophila* bacteria and other water and airborne infectious bacterial agents
  - handling of materials, including hazardous materials and substances
  - hazard control
  - organic and inorganic contaminants
  - personal protective clothing (PPE) and equipment
  - use of first aid equipment
- use of tools and equipment
- workplace environment and safety
- environmental requirements, including water quality management, which may include the breeding of mosquitoes
- quality assurance requirements, including:
  - AS1100 Technical drawing materials
  - AS/NZS1668 Ventilation systems: Parts 1 and 2
  - AS/NZS1677 Refrigerating systems
  - AS/NZS 3666 Handling microbial systems
  - Environment Protection Authority (EPA)
  - internal company quality assurance policy and risk management strategy
  - International Standards Organisation
  - site safety plan
  - workplace operations and procedures
- specifications and operational manuals for:
  - commissioning and testing
  - components installation
  - fittings
  - manufacturer specifications, literature and data
  - materials
  - pumps
  - systems
  - valves.

**Specifications** may include:
- air-flow requirements
- equipment selection
- fire safety
- jointing
- manufacturer requirements
- materials
- safety (WHS)
- specialised components
- support
- testing
- workmanship.

**Plans:**
- may include:
  - axonometrics
Design and sizing:

- may include designs that are prescriptive and include detail relating to:
  - cost
  - materials and quality of work
  - milestones
  - nominated subcontractors
  - provision of on-site facilities and site access
  - quality assurance
  - space allowances
  - standard procedures
  - work schedules
- design parameters must include:
  - client requirements
  - legislative requirements
  - WHS requirements
  - user requirements in relation to zoning
- design and sizing may be produced using:
  - computer generation
  - drawing equipment
  - with reference to calculations, tables, regulations and manufacturer specifications.

Applications may include:

- amenities
- basement carpark
- food preparation
- residential and commercial premises.

Sustainability principles and

- cover the current and future social, economic and environmental use of resources
concepts:  
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage/capital outlay comparison.

Tests and testing equipment must include:
- air pressure
- air velocity
- air volume
- humidity
- Pitot tubes
- sound power levels
- temperature.

Testing may include:
- air flow
- climate control
- defect inspection
- inspection checklist
- performance quality assurance (QA) audit.

Commissioning schedule may include:
- acoustic performance
- balancing
- system certification
- check for foreign material
- leak check
- system defects
- system functions as per design.

Operation and maintenance manual may include:
- as installed drawings
- certification documentation
- results of commissioning test
- maintenance schedules
- manufacturer brochures and technical information
- regular water quality testing
- system operation.
Unit Sector(s)

Functional area

Unit sector: Plumbing and services

Custom Content Section

Not applicable.
CPCPMS5012A Design sound attenuated hydraulic services

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS5002A

Unit Descriptor
This unit of competency specifies the outcomes required to design sound attenuated hydraulic services, determine relevant installation details and prepare specifications for a range of residential, commercial and industrial buildings.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and construction hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 **Scope of work** is established for sound attenuated hydraulic services for wide span and high-rise building projects.

1.2 **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Sound transmission categories and levels are identified from relevant Acts, codes and standards, and are evaluated for residential, commercial and industrial premises.

1.4 Sound transmission values of building and structural elements and materials are evaluated.

1.5 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.

1.6 National Construction Code, statutory and regulatory requirements and Australian standards for the design of sound attenuated hydraulic services are analysed and applied.

1.7 **Manufacturer requirements** and trade and technical manuals are interpreted.

1.8 Factors that contribute to quality, safety and time efficiency are determined.

1.9 Additional research, including a *desktop study*, is conducted to outline design parameters.

1.10 **Performance requirements** are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 Causes of **noise generation** in hydraulic services are identified and analysed.

2.2 **Layout of** sound-attenuated *pipework systems* is planned.

2.3 **System calculations** are performed for a range of sound attenuated hydraulic services.
2.4 *Pumped hydraulic systems* are sound attenuated.

2.5 *Pipe supports* are designed for a range of applications.

2.6 Approved *materials* and *installation requirements* for sound attenuated hydraulic services are specified.

3 Design and size systems.

3.1 Sound attenuated hydraulic services are designed and sized for a range of applications.

3.2 *Material combinations* are identified and documented to achieve sound attenuation requirements.

3.3 Pump installations are sound attenuated.

3.4 Sound attenuated hydraulic services are designed and evaluated using calculations and computer software packages.

3.5 *Sustainability principles and concepts* are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 *Plans* and *specifications* are prepared for a range of sound attenuated hydraulic services.

4.3 Report on sound attenuated hydraulic services for a range of applications is prepared.

4.4 *Testing* and *commissioning schedule* is prepared.

4.5 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements

- initiative and enterprise skills to develop creative and responsive approaches

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and set out work
  - research, collect, organise and understand information relating to the design of sound attenuated hydraulic services
  - take initiative and make decisions

- problem-solving skills to analyse requirements, consider options and design an appropriate system

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - determine relevant installation details for sound-attenuated hydraulic services
  - prepare specifications for sound attenuated hydraulic services

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- application of relevant Australian standards and codes, National Construction Code, manufacturer specifications, and other relevant standard operating procedures relevant to the sector
- common terminology and definitions used in the design of sound attenuated hydraulic services for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of sound attenuated hydraulic services
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum, provide evidence of the ability to:

- design and document the details for sound-attenuated hydraulic services installation, including a specification for a high-rise mixed development building; using an approved sanitary plumbing and domestic drinking water system to a minimum of 29 floors.
- evaluate and document design parameters, to relevant Australian standard and codes, and regulatory, client and manufacturer requirements for a range of sound-attenuated hydraulic services components must include:
  - clipping
  - pipe enclosures
  - insulation
  - sound-attenuated pipework
- prepare reports on sound-attenuated hydraulic services for a range of applications
- prepare specifications for a range of sound-attenuated hydraulic services
- prepare testing and commissioning schedules
- apply sustainability principles and concepts throughout the design process
- communicate with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**

- must include:
  - documenting layout of sound attenuated hydraulic services, including reduction of noise transfer for residential, commercial and industrial applications
  - interpreting plans and specifications
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:

- architectural plans
- building specifications
- acoustic performance of fixtures, fittings and equipment
• building construction materials
• fire rating of penetrations
• owner requirements
• pipe enclosures
• pipework identification
• specialist applications.

**Cost-benefit analysis:**

• compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
• may include:
  • design styles
  • energy costs
  • expected design life
  • labour costs
  • material costs
  • safety factors
  • speed of installation
  • suitable materials
  • system choices.

**Statutory and regulatory requirements and Australian standards may include:**

• Acts, regulations and commonwealth, state or territory, and local government requirements
• National Construction Code
• AS/NZS3500 National plumbing and drainage
• AS2200 Design charts for water supply and sewerage
• other relevant Australian standards.

**Manufacturer requirements may include:**

• analysis of sound transmission values
• acoustic performance of fixtures, fittings and equipment
• specifications
• technical and trade manuals.

**Desktop study may include collection and interpretation of data for design purposes in:**

• architectural and building plans
• developer plans
• manufacturer data
• documents, which may include:
applications
brochures
forms
policies
other reports as available.

Performance requirements may include:

- flow, velocity, pressure and discharge requirements established using relevant Australian standards, codes and local government authority plans
- noise rating of habitable areas.

Noise generation must include:

- acoustic performance of fixtures, fittings and equipment
- high velocity
- high pressure
- linking of building compartments by pipework
- loose pipework
- pumped hydraulic systems
- system design
- quick action valves
- water hammer.

Layout of pipework systems:

- must include:
  - concealed pipework
  - pipe enclosures
  - exposed pipework
  - fire-rated pipework
  - should have principles of economy, serviceability, durability and fit for use applied
  - should not unduly affect building integrity and aesthetic appeal.

System calculations must include:

- sound criteria for habitable rooms
- noise insulation characteristics of materials
- sound transmission values of plumbing pipework and building materials.

Pumped hydraulic systems may include:

- circulating systems
- compressed air systems
- pressurised water mains
- pump and pump rising mains
- pumproom
- sanitary rising mains
- steam systems.

**Pipe supports** cover fixings that do not impinge on sound attenuation of the hydraulic service, and may include:

- anchors
- bracket spacing
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- separation and insulation between pipework, supports and building structure.

**Materials** may include:

- expanded foam rubber
- glasswool
- rockwool
- lead vinyl
- other approved materials.

**Installation requirements**:

- may be for:
  - sanitary plumbing
  - drinking and non-drinking water supply
  - alternative water supply
  - stormwater drainage
  - siphonic stormwater systems
  - pumping systems
- must include:
  - fire rating
  - level of workmanship
  - manufacturer installation requirements
  - pipe support
  - serviceability and access.

**Material combinations** may include:

- pipe enclosures
- floor, wall and ceiling systems
- separation and insulation distances.
Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - consideration of the Green Building Council of Australia rating scheme
  - selecting appropriate components to ensure minimal environmental impact.

Plans:
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - sections
  - schematics, which may be produced using:
    - computer generation
    - drawing equipment.

Specification may include:
- jointing
- manufacturer requirements
- materials
- performance criteria
- safety (WHS)
- selection of suitable acoustic rated fixtures, fittings and equipment
- separation and insulation between pipework, supports and building structure
- support
- workmanship.

Testing may include:
- compliance testing
- quality assurance (QA) audit
- performance
- sound measurement (dB).
**Commissioning schedule** must include:
- system certification
- insulation gap filling
- system defects
- system functions as per design.

**Operation and maintenance manual** may include:
- as installed drawings
- results of commissioning test
- certification documentation
- maintenance schedules
- manufacturer brochures and technical information.

CPCPMS5013A Design hydronic heating and cooling systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS5003A

Unit Descriptor
This unit of competency specifies the outcomes required to design hydronic heating and cooling systems, determine relevant installation details and prepare system specifications for a range of residential, commercial and industrial buildings.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.
   1.1 **Scope of work** for hydronic heating and cooling systems is established.
   1.2 **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.
   1.3 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.
   1.4 **Statutory and regulatory requirements and relevant Australian standards and codes** for the design of hydronic heating and cooling systems are analysed and applied.
   1.5 **Manufacturer requirements** and trade and technical manuals are interpreted.
   1.6 Additional research, including a **desktop study**, is conducted to outline design parameters.
   1.7 Factors that contribute to quality, safety and time efficiency are determined.
   1.8 **Performance requirements** are established, considering safety of system users or building occupants.

2 Plan and detail system components.
   2.1 **Layout of pipework systems**, and type and location of fittings, valves and controls are planned.
   2.2 **Pipe size requirement calculations** are performed for a range of applications according to regulations and manufacturer requirements.
   2.3 **System components and circuits** are specified.
   2.4 **Pump and compressor systems** are detailed.
   2.5 Distribution flows, velocities and pressures are specified for a range of applications.
   2.6 **Insulation** is specified.
   2.7 **Pipe supports** are designed for a range of applications.
2.8 Approved materials, jointing methods and installation requirements for hydronic heating and cooling systems are specified.

2.9 Allowance for expansion and contraction is provided.

3 Design and size systems.

3.1 Hydronic systems and circuits are designed for a range of applications.

3.2 Hydronic systems are designed and sized using calculations and computer software packages.

3.3 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specifications are prepared for a range of hydronic heating and cooling systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - Communicate with others to ensure safe and effective work practices
  - Confirm job specifications and client requirements
  - Enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - Use language and concepts appropriate to cultural differences
  - Use and interpret non-verbal communication

- Literacy skills to:
  - Prepare written documentation, including:
    - Operation and maintenance manual
    - Plans, specifications and schedules
  - Read and interpret:
    - Plans, specifications, drawings and design briefs
    - Standards and manufacturer requirements and manuals
    - Statutory and regulatory requirements

- Initiative and enterprise skills to develop creative and responsive approaches

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - Plan and set out work
  - Research, collect, organise and understand information relating to the design of hydronic heating and cooling systems
  - Take initiative and make decisions

- Problem-solving skills to analyse requirements, consider options and design an appropriate system

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technical skills to:
  - Determine relevant installation details for hydronic heating and cooling systems
  - Prepare system specifications for hydronic heating and cooling systems

- Technology skills to:
  - Access and understand site-specific instructions in a variety of media
  - Use mobile communication technology
Required knowledge

- application of National Construction Code or relevant Australian standards and codes, manufacturer specifications and operating procedures relevant to the sector
- common terminology and definitions used in design of hydronic heating and cooling systems for all classes of building
- drafting principles
- nature of materials used in hydronic heating and cooling systems and effects of performance under various conditions
- principles of technology in the design of hydronic heating and cooling systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum, provide evidence of the ability to:

- design, size and document the layout details for a hydronic heating and cooling system, including a specification for a high-rise mixed development building to a minimum of 29 floors, inclusive of a basement to include fixtures on each floor level (fixtures are included in the basement), including:
  - applying sustainability principles and concepts throughout the design to achieve a star rating under the Green Council of Australia rating scheme
  - evaluating and documenting design parameters, including client, regulatory, manufacturer and relevant Australian standard and code requirements for a range of hydronic heating and cooling systems
  - producing an appropriate layout for hydronic heating and cooling systems, planned according to manufacturer and regulatory requirements
  - calculating pipe sizes according to regulations and manufacturer requirements
  - designing hydronic circuits
  - designing and sizing hydronic systems using calculations and appropriate computer software
  - preparing plans and specifications for a range of hydronic heating and cooling systems
  - preparing testing and commissioning schedules
  - preparing operation and maintenance manuals
  - communicating with others to ensure safe and
effective workplace operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- must include:
  - interpretation of plans and specifications
  - principles and properties of hydronic systems, including:
    - barriers to heat transfer
    - conduction
    - convection
- heat transfer
- principles of hydronic circuits
- principles of pressure and energy related to hydronic systems
- properties of water steam and gases used for hydronic systems
- radiation

- hydronic applications, which may include:
  - chiller circuits for air conditioning and refrigeration applications
  - concrete floor heating circuits
  - heat removal applications
  - manufacturing and industrial applications
  - room heating circuits for residential, commercial and industrial heating applications
  - timber floor heating circuits
  - sizing and documenting layout of hydronic heating and cooling systems for residential, commercial or industrial applications for either new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** may include:

- architectural plans
- building specifications
- interpretation and application of mechanical services drawings and symbols
- fire rating of penetrations
- owner requirements
- pipework identification
- specialist hydronic applications.

**Cost-benefit analysis:**

- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
- speed of installation
- suitable materials
- system choices.

**Statutory and regulatory requirements and relevant Australian standards** may include:
- Acts, regulations and commonwealth, state or territory, and local government requirements
- industry standards
- National Construction Code
- other relevant Australian standards.

**Manufacturer requirements** include:
- sizing tables
- specifications
- recommended specific fixings for pipework
- technical and trade manuals.

**Desktop study** may include collection and interpretation of data for design purposes in:
- architectural and building plans
- developer plans
- manufacturer data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

**Performance requirements** must include:
- hydronic heating and cooling system requirements, including temperature and safety requirements, established using relevant Australian standards, codes and manufacturer information.

**Layout of pipework systems**:
- must include:
  - flow, velocity, pressure and discharge requirements established using relevant Australian standards, codes and local government authority requirements
  - location of pipework (fire rating of enclosure)
  - compliance with hydronic principles
  - should not unduly affect building integrity and aesthetic appeal.
should have principles of economy, serviceability, durability and fit for use applied.

**Fittings and valves** may include:
- fittings:
  - bends
  - elbows
  - tees
  - unions
  - couplings
  - strainers
- valves:
  - excess pressure
  - flow and isolating
  - pressure limiting
  - pressure reduction.

**Pipe size requirement calculations** must include:
- energy
- flow and velocity
- pressure
- sizing
- temperature
- volume and storage.

**System components and circuits**:
- boilers may include:
  - advantages and disadvantages of boiler types
  - capacity and size
  - coal
  - electric
  - energy sources
  - fire tube
  - gas
  - heat exchanger
  - methods of reducing heat losses
  - oil
  - packaged
  - pressure controls and components
  - solid fuel
  - valves
  - water tube
- factors to be considered when selecting a boiler hydronic circuit must include:
  - circulating pump appliances
  - flow and return pipework
  - pipework grades
  - valves and fittings
- cooling towers must include:
  - bacteriological safety
  - collection
  - construction
  - disinfection
  - fans
  - maintenance
  - size
  - sprays
- chillers and refrigerant plant must include:
  - engineered systems
  - packaged plants
  - proprietary commercial and industrial equipment and assemblies
- hydronic appliances must include:
  - calorifiers
  - components
  - concrete construction
  - electronic controls
  - heat exchangers
  - methods of temperature and pressure control
  - radiators
  - timber floor heating systems
  - types
  - water heaters.

**Pump and compressor systems** must include:
- chilled water pumps
- circulating pumps
- refrigeration compressors
- other applications as required.

**Insulation** may include:
- felt
- fibreglass
• insulation protection, including:
  • plastic
  • sheet metal
  • rock wool.

**Pipe supports** may include:
• anchors
• bracket spacing
• corrosion protection
• hanging brackets
• manufacturer-recommended specific fixings
• material requirements
• provision for expansion
• saddles.

**Materials** may include:
• copper (Cu)
• steel
• other approved materials.

**Jointing methods** may include:
• brazing
• mechanical joints
• threading
• other approved jointing methods.

**Installation requirements** may include:
• pipe protection, which may include:
  • cover
  • corrosion
  • impact
  • fire rating
  • level of workmanship
  • manufacturer-recommended specific fixings
  • pipe support
  • provision for expansion
  • serviceability and access.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient use of material
- efficient energy use/capital outlay comparison
- water efficiency
- reuse of water, such as rainwater, greywater and recycled non-drinking water
- consideration of the Green Building Council of Australia rating scheme
- selecting appropriate components to ensure minimal environmental impact.

Plans:
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - sections
  - schematics, which may be produced using:
    - computer generation
    - drawing equipment.

Specification may include:
- bedding
- support
- flow requirements
- jointing
- manufacturer requirements
- materials
- residual pressures
- safety (WHS)
- specialised components
- testing
- valve selection
- water treatment
- workmanship.

Testing may include:
- defect inspection
- flow testing
- inspection checklist
- leak testing
- pressure testing
- quality assurance (QA) audit.
Commissioning schedule must include:

- system certification
- flue balancing
- flow test
- leak check
- pressure test
- system purge
- system defects
- system functions as per design
- valve operation
- checking fit for purpose
- removing contaminants.

Operation and maintenance manual may include:

- as installed drawings
- certification documentation
- check for blockages
- leak detection
- maintenance schedules
- manufacturer brochures and technical information
- regular inspection
- regular maintenance requirements.
- results of commissioning test
- valve function.

Unit Sector(s)

CPCPPS5000B Design gas bulk storage systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPPS5000A

Unit Descriptor
This unit of competency specifies the outcomes required to design gas bulk storage systems, determine relevant installation details and prepare system specifications for a range of residential, commercial and industrial buildings.

Application of the Unit
This unit of competency supports the development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

1. Evaluate design parameters.

1.1 *Scope of work* for gas bulk storage systems is established.

1.2 *Design requirements* are determined from plans, specifications and client brief.

1.3 *Cost-benefit analysis* is conducted comparing a range of pipe materials and system designs.

1.4 *Statutory and regulatory requirements and Australian and New Zealand standards* for the design of gas bulk storage systems are analysed and applied.

1.5 *Manufacturer requirements* and trade and technical manuals are interpreted.

1.6 Additional research, including a *desktop study*, is conducted to outline design parameters.

1.7 *Performance requirements* are established.

2. Plan and detail system components.

2.1 Layout of a liquefied petroleum gas (LPG) bulk storage installation is determined according to regulatory authorities.

2.2 Site plans for bulk installations are prepared, including *layout of pipework systems*.

2.3 Fire protection systems are specified according to Australian and New Zealand standards and deluge systems are detailed.

2.4 *Control valves and fittings* are designed and detailed.

2.5 Content gauges are analysed and located according to code requirements, and *meters* and regulators are specified.

2.6 Vaporisers are evaluated and specified and vaporisation rates are calculated.

2.7 *System calculations* are performed for a range of applications according to regulations and manufacturer requirements.
2.8 *Pipe fixings* are designed for a range of applications.

2.9 Approved *materials, jointing methods* and *installation requirements* for gas bulk storage systems are specified.

3 Design and size systems.

3.1 Gas bulk storage systems and circuits are designed for a range of applications.

3.2 Deluge systems are designed.

3.3 Gas bulk storage systems are designed and sized using computer software packages.

4 Prepare documentation.

4.1 *Plans* are prepared for a range of gas bulk storage systems.

4.2 *Specification* for a gas bulk storage system is prepared.

4.3 *Testing* and *commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - documentation from a variety of sources
    - standards and manufacturer requirements and manuals
    - plans, specifications, drawings and design briefs
    - statutory and regulatory requirements
  - initiative and enterprise skills to develop creative and responsive approaches
  - numeracy skills to apply measurements and calculations
  - planning and organising skills to:
    - research, collect, organise and understand information relating to the design of gas bulk storage systems
    - take initiative and make decisions
  - problem-solving skills to analyse requirements, consider options and design an appropriate system
  - teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
  - technical skills to:
    - determine relevant gas storage installation details
    - prepare gas storage system specifications

**Required knowledge**

- common terminology and definitions used in design of gas bulk storage systems for all
classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of gas bulk storage systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of gas bulk storage systems
- planning and detailing system components, including:
  - meters
  - pipes
  - regulators
  - valves
  - vaporisers
- designing a deluge system
- designing and sizing gas bulk storage systems using appropriate software
- preparing plans for a range of gas bulk storage systems to industry standards
- preparing specifications for gas bulk storage system installations
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices and relevant to planning processes, including calculators
- support materials appropriate to activity, including computers and software
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at
different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** includes:

- interpretation of plans and specifications
- principles of operation of various types of LPG components and fault conditions in LPG components
- sizing and documenting layout of gas bulk storage installations, including fire protection systems, such as:
  - chemical injection
  - extinguishers
  - hose reels
  - hydrants
  - monitors
  - portable and fixed types of firefighting equipment
  - spray systems.

**Design requirements** must include:

- architectural specifications
- builder specifications
owner requirements
specialist gas use applications.

Cost-benefit analysis:
comparisons the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.

Statutory and regulatory requirements and Australian and New Zealand standards must include:
- Acts, regulations and local and state government policies, including group and strata titling
- AS/NZS1596 The storage and handling of LP gas
- AS2430 Classification of hazardous areas
- AS5601 (AG601) Gas installations
- National Construction Code.

Manufacturer requirements include:
pump tables
sizing tables
specifications
technical and trade manuals.

Desktop study includes collection and interpretation of existing data for design purposes in:
- architectural and building plans
council plans
developer plans
other documents, including:
  - applications
  - forms
  - other reports as available.

Performance requirements must include:
operational and safety requirements, established using Australian and New Zealand standards, and local and state authority plans.

Layout of pipework systems must:
- not unduly affect building integrity and aesthetic appeal
  - have principles of economy, serviceability, durability and fit for use applied.

Control valves and fittings may include:
- valves:
  - applications of valves and code requirements for
installation
- emergency shutdown valves
- excess flow valves
- hydrostatic relief valves
- individual valve types

fittings:
- bends
- inspection openings
- junctions
- meters
- reflux valves
- staged regulators
- traps
- vaporisers.

**Meters** include:
- mass flow
- positive displacement
- turbine.

**System calculations** must include:
- determination of flow and appliance loadings
- interpretation of design charts and tables
- pipe sizing calculations.

**Pipe fixings** include:
- anchors
- bedding
- bracket spacing
- concrete support
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

**Materials** include:
- concrete
- copper
- fittings and valves
- high density polyethylene (HDPE)
- measures to prevent the spread of fire.
**Jointing methods** include:
- brazing
- mechanical joints
- solvent cement welding
- threading.

**Installation requirements** include:
- bedding
- clipping
- concrete support
- installation details
- jointing requirements
- level of workmanship.

**Plans** include:
- axonometrics
- cross-sections
- details
- elevations
- isometrics
- schematics, which may be produced using:
  - computer generation
  - drawing equipment
  - sections.

**Specification** includes:
- clipping
- details of specialised components
- jointing
- manufacturer requirements
- materials
- valves
- workmanship.

**Testing** includes:
- air pressure test
- gas leak test
- quality assurance (QA) audit.

**Commissioning schedule** must include:
- flow testing
- leak check
- vaporisation rate check.
Operation and maintenance manual may include:

- leak detection
- regular maintenance requirements
- safety inspection
- yearly inspection.

Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

| 1 | Evaluate design parameters. | 1.1 | **Scope of work** for industrial gas systems is established. |
|   |                           | 1.2 | **Design requirements** are determined from plans, specifications and client brief. |
|   |                           | 1.3 | **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs. |
|   |                           | 1.4 | **Statutory and regulatory requirements, codes and Australian and New Zealand standards** for the design of industrial gas systems are analysed and applied. |
|   |                           | 1.5 | **Manufacturer requirements** and trade and technical manuals are interpreted. |
|   |                           | 1.6 | Additional research, including a *desktop study*, is conducted to outline design parameters. |
|   |                           | 1.7 | Factors that contribute to quality, safety and time efficiency are determined. |
|   |                           | 1.8 | **Performance requirements** are established. |
| 2 | Plan and detail system components. | 2.1 | **Layout of pipework systems** and type and location of *fittings and valves* are planned. |
|   |                           | 2.2 | **Valve trains** are designed and specified for a range of industrial gas installations. |
|   |                           | 2.3 | Interlocks and accessories are designed and detailed and components are analysed, selected and located. |
|   |                           | 2.4 | Methods for protection from harsh environments, heat and vibration and combustion air systems are selected. |
|   |                           | 2.5 | Air systems, appliances, closed loop systems, and burner systems and controls are detailed and specified. |
|   |                           | 2.6 | Remote filling systems and pipework are detailed for a given installation and designed according to the IEC. |
|   |                           | 2.7 | **System calculations** are performed for a range of industrial gas installations. |
|   |                           | 2.8 | Approved *materials, jointing methods, pipe fixings* and |
installation requirements for industrial gas systems are specified.

| 3 | Design and size systems. | 3.1 | Industrial gas systems are designed for a range of applications. |
|   |                          | 3.2 | Industrial gas systems are designed and sized using computer software packages. |

| 4 | Prepare documentation.   | 4.1 | Plans are prepared for a range of industrial gas systems. |
|   |                          | 4.2 | Specification for an industrial gas system is prepared. |
|   |                          | 4.3 | Testing and commissioning schedule is prepared. |
|   |                          | 4.4 | Operation and maintenance manual is produced. |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements

- initiative and enterprise skills to develop creative and responsive approaches

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of industrial gas systems
  - take initiative and make decisions

- problem-solving skills to analyse requirements, consider options and design an appropriate system

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to design industrial gas systems and components in compliance with IEC requirements

Required knowledge

- application of:
  - Australian standards, including AS5601 (AG601) Gas installations
  - manufacturer specifications, including hazards identified in relation to devices and
systems used

- other codes or standard operating procedures
- state regulatory authorities’ requirements
- common terminology and definitions used in the design of industrial gas systems
- principles of technology in the design of industrial gas systems
- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

- This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- A person who demonstrates competency in this unit must be able to provide evidence of:
  - evaluating and documenting design parameters, including:
    - client
    - Gas Act 1965 and amendments
    - manufacturer and Australian and New Zealand standard requirements for a range of industrial gas systems
  - regulatory
  - planning and detailing system components, including:
    - burners
    - controls
    - regulators
  - designing and sizing industrial gas systems
  - preparing plans for a range of industrial gas systems to industry standards
  - preparing specifications for industrial gas systems
  - preparing testing and commissioning schedules
  - producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at
different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work must include:

- interpreting plans and specifications
- sizing and documenting layout of industrial gas systems for applications, including:
  - characteristics
  - compatibility
  - dimensions
  - location
  - patterns
  - quantities
  - sizes
  - surfaces
  - types of product and service.

Design requirements must include:

- architectural specifications
- builder specifications
- owner requirements
- specialist use applications.

**Cost-benefit analysis:**
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.

**Statutory, regulatory requirements, codes and Australian and New Zealand standards** include:
- Acts, regulations and local and state government policies, including group and strata titling
- AS/NZS1596 The storage and handling of LP gas
- AS5601 (AG601) Gas installations
- Gas Act 1965 and amendments
- gas regulations
- National Construction Code
- other Australian and New Zealand standards.

**Manufacturer requirements** include:
- material specifications
- pump tables
- sizing tables
- technical and trade manuals.

**Desktop study** includes collection and interpretation of existing data for design purposes in:
- architectural and building plans
- council plans
- developer plans
- other documents, including:
  - forms
  - applications
  - other reports as available.

**Performance requirements** include:
- pipe grades, cover, flow conditions and discharge requirements, established using Australian and New Zealand standards and local authority plans.

**Layout of pipework systems** must:
- have principles of economy, serviceability, durability and fit for use applied
- not unduly affect building integrity and aesthetic appeal.
**Fittings and valves** include:
- meters
- regulators
- relief valves.

**Valve trains** must include:
- analysing the operation of valve components
- sizing and selecting components using manufacturer data.

**System calculations** must include:
- calculation of explosion relief
- calculation of purge times
- determination of flow and consumption
- interpretation of design charts and tables
- pipe sizing calculations.

**Materials** include:
- copper (Cu)
- fittings and appliances, including measures to prevent the spread of fire
- high density polyethylene (HDPE).

**Jointing methods** include:
- brazing
- gluing
- mechanical joints
- solvent cement welding
- threading.

**Pipe fixings** include:
- anchors
- bracket spacing
- corrosion protection
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

**Installation requirements** include:
- clipping
- installation details
- jointing requirements
- level of workmanship.
Plans include:
- axonometrics
- cross-sections
- details
- elevations
- isometrics
- schematics, which may be produced using:
  - computer generation
  - drawing equipment
  - sections.

Specification includes:
- clipping
- details of specialised components
- jointing
- manufacturer requirements
- materials
- valves
- workmanship.

Testing includes:
- air pressure test
- gas leak test
- quality assurance (QA) audit.

Commissioning schedule must include:
- flow testing
- leak check
- vaporisation rate check.

Operation and maintenance manual may include:
- leak detection
- regular maintenance requirements
- safety inspection
- yearly inspection.

Unit Sector(s)

Functional area

Unit sector  Plumbing and services
Custom Content Section

Not applicable.
CPCPPS5002B Design gas reticulation systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPPS5002A

Unit Descriptor
This unit of competency specifies the outcomes required to design and size gas reticulation systems, including determining material, placement and ventilation requirements. The unit also covers the analysis and interpretation of relevant gas codes and standards, the preparation of documentation for testing and commissioning, and testing for safe operation.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 Scope of work for gas reticulation systems is established.

1.2 Design requirements are determined from plans, specifications and client brief.

1.3 Cost-benefit analysis is conducted comparing a range of pipe materials and system designs.

1.4 Statutory and regulatory requirements and Australian and New Zealand standards for the design of gas reticulation systems are analysed and applied.

1.5 Manufacturer requirements and trade and technical manuals are interpreted.

1.6 Additional research, including a desktop study, is conducted to outline design parameters.

1.7 Performance requirements are established.

2 Plan and detail system components.

2.1 Layout of pipework systems and type and location of fittings and valves are planned.

2.2 Pipe sizes are calculated for a range of applications.

2.3 Ventilation and flue requirements are specified for a range of applications.

2.4 Gas metering and measurement of gas consumption are conducted.

2.5 Distribution pressures and specifications of regulators and appliances are detailed for a range of applications.

2.6 Cylinder and tank systems are designed and detailed.

2.7 Safety, ignition, thermostat and gas control devices are specified in compliance with relevant standards and codes.

2.8 Pipe fixings are designed for a range of applications.

2.9 Approved materials, jointing methods and installation requirements for gas reticulation systems are specified.
3 Design and size systems.

3.1 Gas reticulation systems are designed for a range of applications.

3.2 Gas reticulation systems are designed and sized using computer software packages.

4 Prepare documentation.

4.1 *Plans* are prepared for a range of gas reticulation systems.

4.2 *Specification* for a gas reticulation system is prepared.

4.3 *Testing* and *commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- analysing and interpreting relevant gas codes and standards
- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to develop creative and responsive approaches
- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of gas reticulation systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine material, placement and ventilation requirements for a gas reticulation system
  - prepare documentation for testing and commissioning a gas reticulation system
  - test a gas reticulation system for safe operation
Required knowledge

- common terminology and definitions used in design of gas reticulation systems for all classes of building
- principles of technology used in design of gas reticulation systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of gas reticulation systems
- producing an appropriate layout for gas reticulation systems planned according to manufacturer and regulatory requirements
- calculating pipe sizes according to regulations and manufacturer requirements
- designing and sizing gas reticulation systems using appropriate software
- preparing plans for a range of gas reticulation systems
- preparing specifications for gas reticulation systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:
- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout of gas reticulation systems for applications, including residential, commercial and industrial
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.

Design requirements must include:
- architectural specifications
- builder specifications
- owner requirements
- specialist use applications.

Cost-benefit analysis:
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.

Statutory and regulatory
- Acts, regulations and local and state government
requirements and Australian and New Zealand standards include:
- policies, including group and strata titling
- AS/NZS1596 The storage and handling of LP gas
- AS5601 (AG601) Gas installations
- Gas Act 1965 and amendments
- gas regulations
- gas utility and supplier information and requirements
- industry standards
- manufacturer requirements
- National Construction Code.

Manufacturer requirements include:
- material specifications
- pump tables
- sizing tables
- technical and trade manuals.

Desktop study includes collection and interpretation of existing data for design purposes in:
- architectural and building plans
- council plans
- developer plans
- other documents, including:
  - applications
  - forms
  - other reports as available.

Layout of pipework systems must:
- have principles of economy, serviceability, durability and fit for use applied
- not unduly affect building integrity and aesthetic appeal.

Fittings and valves include:
- bends
- couplings
- regulators
- tees
- unions.

Calculations must include:
- energy
- gas volume
- pressure
- sizing
- storage.

**Ventilation and flue requirements**

must include:

- appliance flue design and ventilation requirements according to standards, regulations and gas authorities’ requirements.

**Specifications of regulators**

include:

- adjustment procedures of regulators
- excessive pressure protection types of regulators
- gas regulation method
- identification, analysis and documentation of regulator faults
- principles of operation
- selection and installation requirements
- sizing of regulators
- types of gas regulators.

**Specifications of appliances**

include:

- commercial appliances
- components
- construction of the appliance
- domestic appliance design
- electronic controls
- industrial appliances.

**Design of cylinder and tank systems**

is based on:

- anticipated use
- appropriate time period between refilling
- gas storage requirements calculations.

**Pipe fixings**

include:

- anchors
- bracket spacing
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

**Materials**

include:

- copper (Cu)
- fittings and fixtures
- galvanised steel
• polyethylene (PE)
• unplasticised polyvinyl chloride (PVC-U).

**Jointing methods** include:
• brazing and threading
• gluing
• mechanical joints
• rubber ring
• solvent cement welding.

**Installation requirements** include:
• clipping, bedding and installation detail
• installation requirements for mobile, marine installation and portable appliances (high and low-pressure)
• jointing requirements
• level of workmanship.

**Plans** include:
• axonometrics
• cross-sections
• details
• elevations
• isometrics
• schematics, which may be produced using:
  • computer generation
  • drawing equipment
  • sections.

**Specification** includes:
• appliances
• bedding
• clipping
• details of specialised components
• jointing
• manufacturer requirements
• materials
• valves
• workmanship.

**Testing** includes:
• bubble leak testing
• electronic gas leak detection
• flow testing
- inspection checklist
- pressure testing
- quality assurance (QA) audit.

**Commissioning schedule** must include:
- checking for burrs and obstructions
- commissioning appliances
- confirming fit for purpose
- purging system
- removing contaminants.

**Operation and maintenance manual** includes:
- check for blockages
- leak detection
- regular inspection
- regular maintenance requirements.

**Unit Sector(s)**

**Functional area**

**Unit sector** Plumbing and services

**Custom Content Section**

Not applicable.
CPCPPS5009B Analyse and report on technical plumbing systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPPS5009A

Unit Descriptor
This unit of competency specifies the outcomes required to analyse and report on technical aspects of plumbing systems. It entails analysis of plumbing systems, processes, legislation, practices, materials, installation methods, and safety procedures and impacts. It covers the preparation and publishing of plumbing and services technical reports.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Select and analyse a plumbing system or aspect of a plumbing system.**
   1.1 *Plumbing system or aspect of a plumbing system* is selected with a view to improve or better understand the system or aspect of the system.
   1.2 Detailed and comprehensive *analysis* is made of the plumbing and hydraulic system or aspect of the system and impacts are identified and documented.

2. **Research and trial the system.**
   2.1 Appropriate comprehensive *literature review and research* are undertaken.
   2.2 Alternative solutions are trialled and evaluated for suitability.
   2.3 Results from *evaluations* are documented.

3. **Evaluate and report on the system or aspect of the system.**
   3.1 System or aspect of the system is evaluated, identifying *alternatives and redundancies*.
   3.2 *Conclusions* are drawn and changes *recommended*.
   3.3 Comprehensive and professional *report* is produced.
   3.4 Report is *published* to increase the body of knowledge within the plumbing and hydraulic field.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- planning and organising skills to collect, organise and analyse information
- problem-solving skills to analyse information and check integrity of data
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - carry out research to develop own learning and capabilities in relevant field of plumbing and hydraulics
  - identify hazards, including identifying hazard categories according to Australian and New Zealand standards, legislation and manufacturer specifications
- technology skills to use technology and the internet to identify and access relevant information

Required knowledge

- design principles relating to performance of plumbing systems and their components
- plumbing systems, including plumbing system components and impact of various components
- workplace and equipment safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- analysing and evaluating plumbing systems
- trialling and evaluating alternative solutions
- complying with WHS regulations applicable to workplace operations
- applying organisational quality procedures and processes within context of analysing and reporting on technical plumbing systems
- writing a report to professional standards
- making appropriate supported recommendations
- using appropriate techniques to publish reports
- communicating with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
tools and equipment appropriate to applying safe work practices, including computers, software and calculators
workplace instructions relating to safe working practices and addressing hazards and emergencies
material safety data sheets
research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as
is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Plumbing system** may include:
- air conditioning
- compressed air
- hose reels
- hydrants
- roofing
- sanitary plumbing and drainage
- sprinklers
- steam
- stormwater
- trade waste
- ventilation
- wastewater
- water supply.

**Aspect of a plumbing system** may include:
- backflow prevention
- flows
- materials
- solar heating
- trapping
- valves
- ventilation
- water heating.
Analysis may include:
- durability, longevity and practicality
- health issues and concerns
- impacts, including:
  - environmental
  - financial
  - health
  - personal
  - system processes or aspect of the system
- legislation
- materials
- needs or desired outcomes
- practices and work or installation methods
- safety systems and practices
- sustainability.

Literature review and research may include:
- industry personnel
- internet
- journals
- legislation and standards
- manufacturers’ literature
- textbooks
- trade publications.

Evaluations should:
- draw together key aspects of the project
- identify interrelationships of elements identified through the analysis.

Alternatives and redundancies may include:
- changes in community expectations
- changes in legislation
- duplication of tasks and processes
- new work practices
- outdated practices and systems, for example systems and processes replaced by new technologies.

Conclusions may be drawn:
- on any or all aspects of the project but must be supported by analysis and research.

Recommendations should point to
- changes in materials to reduce impacts on cost,
future directions and may include:
• health, safety and the environment
• changes in work practices
• deletion of old systems and procedures
• legislation changes
• new systems and procedures.

Report:
• should cover:
  • outline of the project
  • research and literature review
  • analysis
  • evaluation
  • alternative solutions
  • conclusions
  • recommendations
• may be in any recognised and professional format
• must be appropriately referenced.

Report may be published:
• in journals
• in textbooks
• in trade publications
• on the internet.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Evaluate structural, architectural and mechanical services drawings.
   1.1 Plans, elevations and sections are evaluated.
   1.2 Multidisciplinary terminology is applied.
   1.3 Service components are located.
   1.4 Cast-in services are identified and located.

2 Overlay plans to ensure feasibility of building the service.
   2.1 Reduced levels are checked to ensure compliance.
   2.2 Drawings are overlayed to check for building services and building element clashes.
   2.3 Service clashes are identified and rectified by design modification liaising with consultants.

3 Coordinate penetrations.
   3.1 Product specifications, architectural finishes and structural elements are used to position penetrations.
   3.2 Design modifications are made to ensure compliance.
   3.3 Plans and documentation are updated to reflect design modifications.

4 Prepare a duct and penetration plan.
   4.1 Duct and penetration information is collated.
   4.2 Duct and penetration plan is prepared for a complex building project.
   4.3 Maintenance access and testing provisions are located.
### 5 Coordinate fire services and emergency exit requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- **Communication skills to:**
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- **Literacy skills to:**
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
- **Numeracy skills to apply measurements and calculations**
- **Planning and organising skills to coordinate, plan and set out work**
- **Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities**
- **Technical skills to:**
  - coordinate services and penetrations in a building to minimise clashes with work on other building services
  - draw accurate plans and develop specification lists
  - ensure structural integrity of a building

**Required knowledge**

- process of applying technical knowledge, including drafting principles and understanding of services
- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- coordinating hydraulic service plans to ensure compliance and resolution of clashes
- selecting and applying appropriate techniques to prepare a penetration plan for a complex building project
- complying with WHS regulations applicable to workplace operations
- applying organisational quality procedures and processes
- preparing detailed drawings for service risers
- preparing elevation and plan details for sanitary stack connections within the duct
- preparing a detailed drawing of a service penetrating a beam
- preparing checklists for use in coordinating services
- communicating with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
• tools and equipment appropriate to applying safe work practices, including computers, software and calculators
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's
demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Plans** may include:

- architectural and base building plans
- interpretation of building services
- specifications for an appropriate building.

**Service components** include:

- beams
- lights
- mechanical
- registers
- ventilating.

**Building services** include:

- air conditioning
- data and communications
- electrical
- fire
- gas
- hot and cold water supply
- mechanical
- sanitary plumbing and drainage
stormwater
trade waste
ventilation.

**Ducts** and positioning may be affected by:

- building stress zones
- clearances
- other services
- positioning of reinforcing steel
- pre and post-tensioning bars
- regulatory requirements
- required services location
- slab thickenings.

**Duct and penetration plan** may include:

- cast-in pipework
- detail drawings of duct layout beam penetrations
- floor plan showing all ducts and penetrations
- highlighted potential problem areas or building set-out elements
- scale dimensions and sizes for all ducts and penetrations to gridlines.

**Penetrations are positioned** to take into account:

- branches
- fire collars and their operation
- junction
- other services to fit within the duct.

**Unit Sector(s)**

**Functional area**

Unit sector: Plumbing and services

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to specify procedures to locate and maintain piping systems. The unit requires a range of applications, including pipefreezing equipment and procedures, sewer and drain camera equipment and procedures, under-road boring equipment and procedures, robotic sewer repair, chemical grout systems and procedures, and high-pressure drain cleaning equipment and procedures.

Application of the Unit
Application of the unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
Not Applicable

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret drawings, specifications and documentation from a variety of sources
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- maintaining piping systems
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- specifying procedures to locate piping systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:
REQUIRED SKILLS AND KNOWLEDGE

- common terminology and definitions used in the specification of piping system maintenance procedures
- nature of materials used and effects of performance under various conditions
- principles of technology in the specification of piping system maintenance procedures
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- specifying equipment and procedures to be used for the location of pipes and services
- specifying pipe-freezing equipment and procedures
- specifying sewer and drain camera equipment and procedures
- specifying under-road boring equipment and procedures
- specifying robotic sewer repair and chemical grout systems and procedures
- specifying high-pressure drain cleaning equipment and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
EVIDENCE GUIDE

- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability
EVIDENCE GUIDE

and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Applications for pipe and service locating equipment include:

- burst water pipes
- excavations where existing services may be located
- locating existing services for new connections.

Locating equipment includes:

- electronic detection equipment
- metal detectors
- sound detection equipment.

Operating procedures include:

- defining the application, equipment operation and equipment limitations.

Safety procedures include:

- access restrictions
- electrical safety
- equipment safety requirements
- excavation safety
- personal protective equipment.
RANGE STATEMENT

**Pipe-freezing equipment** include:
- applications where interruption to water supply is not an option
- burst water mains
- maintenance
- repairs.

**Sewer and drain camera** uses include:
- inspection of pipework
- location of damaged pipework
- root intrusion identification.

**Under-road boring equipment** uses include:
- installation of new services where damage to roads and structures is undesirable or cost prohibitive
- replacement of services.

**Robotic sewer repair and chemical grout systems** include re-lining of:
- damaged sewers
- stormwater drains
- water mains.

**Trenchless pipe repair systems** include:
- polyethylene sleeves
- stainless steel sleeves
- other pipelining materials.

**High-pressure drain cleaning equipment** includes blocked:
- manholes
- sewers
- stormwater drains.

**Unit Sector(s)**

Unit sector: Plumbing and services

**Co-requisite units**

Co-requisite units: Nil
Functional area

Functional area
CPCPPS5015B Inspect plumbing and drainage systems

Modification History
Addition of sustainability content to performance criterion

Equivalent to CPCPPS5015A

Unit Descriptor
This unit of competency specifies the outcomes required to conduct inspections of hydraulic systems for a range of residential, commercial and industrial buildings to ensure compliance with Australian and New Zealand standards and local authority and operational performance requirements.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
Inspections of hydraulic systems must comply with Australian and New Zealand standards and local authority and operational performance requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

| 1 | Specify local authority inspection requirements. | 1.1 | Local authority inspection requirements for hydraulic systems are specified according to legislation and standards. |
|   |                                               | 1.2 | *Approved materials* are specified for different applications. |
|   |                                               | 1.3 | Installation requirements are specified in compliance with manufacturer manuals and regulatory requirements. |

| 2 | Develop inspection procedures. | 2.1 | *Administrative procedures* for inspection projects are developed. |
|   |                                | 2.2 | *Inspection checklists* are developed. |

| 3 | Conduct inspections | 3.1 | Communication channels are established with relevant site personnel and stakeholders. |
|   |                    | 3.2 | Inspection routes and schedules are planned and detailed. |
|   |                    | 3.3 | Work health and safety (WHS) guidelines and *sustainability principles and concepts* are applied to inspections, and personal protective equipment is worn. |
|   |                    | 3.4 | Inspections are conducted to assess compliance with regulatory requirements and professional workmanship standards. |
|   |                    | 3.5 | On-site *as-constructed plans* are hand sketched and measurements are taken. |
3.6 *Dispute-resolution techniques* are implemented as necessary when non-compliance is identified.

3.7 *Testing procedures* are implemented.

3.8 Inspection and testing results are accurately recorded.

4 **Prepare reports.**

4.1 *Inspection reports* are prepared using on-site records, including as-constructed plans.

4.2 Recommendations are detailed and reported.

4.3 Rectification schedules are produced.

5 **Enforce compliance.**

5.1 Breaches of relevant regulation or standard are detailed.

5.2 Infringement notices are issued and relevant follow-up procedures are implemented.

5.3 In cases of non-compliance, *enforcement action* is implemented with infringement notices.

6 **Maintain records.**

6.1 Inspection diary is maintained.

6.2 Inspection records are processed according to established administrative procedures.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - establish communication channels
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - develop administrative procedures and checklists
  - issue infringement notices
  - maintain records
  - prepare inspection reports
  - read and interpret:
    - documentation from a variety of sources
    - manufacturer manuals and regulations
    - plans, specifications and drawings
  - record inspection and testing results
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- technical skills to inspect hydraulic systems for a range of residential, commercial and industrial buildings to ensure compliance with Australian and New Zealand standards and local authority and operational performance requirements

Required knowledge

- common terminology and definitions used in the design of plumbing and drainage systems
- nature of materials used and effects of performance under various conditions
- principles of technology used in the design of plumbing and drainage systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- specifying local authority inspection requirements for hydraulic systems according to legislation and standards
- developing administrative procedures for inspection projects
- implementing dispute-resolution techniques
- conducting compliance inspections
- taking relevant measurements and sketching on-site as-constructed plans
- implementing testing procedures
- preparing inspection reports
- detailing breaches to regulations or standards
- maintaining an inspection diary.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications,
codes, design concepts and construction schedules

- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Hydraulic systems** include:
- fire services
- gas services
- mechanical services
- sanitary plumbing and drainage
- stormwater drainage
- trade waste
- water supply.

**Approved materials** are identified from Australian and New Zealand standards and include:
- fittings
- fixtures
- pipes.

**Administrative procedures** must include:
- file management
- inspection allocation
- inspection records
- logging inspections.

**Inspection projects** include:
- hydraulic consultant
- local authority
- plumbing supervisor.
Inspection checklists: • include:
  • approved installation methods
  • authorised materials
  • project section
• comply with:
  • Australian and New Zealand standards
  • distances
  • limitations
  • National Construction Code
  • other regulatory requirements.

Sustainability principles and concepts: • cover the social, economic and environmental use of resources to meet current and future needs
• may include:
  • selecting appropriate components and material
  • choosing efficient products
  • using material efficiently
  • storing and disposing of hazardous material to ensure minimal environmental impact.

As-constructed plans include layout of:
• fire services pipework
• gas pipework
• mechanical services pipework
• sanitary plumbing and drainage pipework
• stormwater pipework
• trade waste drainage systems
• water supply pipework.

Dispute-resolution techniques include:
• active listening techniques
• non-threatening body language
• power neutral relationships
• other recognised dispute avoidance and resolution techniques.

Testing procedures include:
• air pressure tests
• compliance checklist
• gas leak detection
- hydrostatic tests
- mirror tests
- quality assurance (QA) audit
- sound testing.

**Inspection reports** include:
- defect
- inspection
- performance
- quality assurance.

**Enforcement action** includes:
- fines
- legal action
- notification to plumbing licensing body
- penalties.

**Unit Sector(s)**

**Functional area**

**Unit sector** Plumbing and services

CPCPPS5023A Design solar water heating systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5003A

Unit Descriptor
This unit of competency specifies the outcomes required to design efficient, cost effective solar water heating systems for residential, commercial and industrial applications using proprietary components and manufacturer design information.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople with a responsibility for designing solar water heating systems for residential, commercial and industrial buildings.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Evaluate design parameters.**
   1.1 *Scope of work* for solar water heating system design is established.
   1.2 *Design requirements* are determined from relevant Australian standards, codes, plans, specifications and client brief.
   1.3 Locations of solar collectors are assessed and effect of each location on *efficiency* is evaluated.
   1.4 *Cost-benefit analysis* is conducted comparing a range of materials and system designs.
   1.5 Environmental and community benefits of solar water heating systems are evaluated.
   1.6 *Statutory and regulatory requirements and relevant Australian standards and codes* for the design of solar water heating systems are analysed and applied.
   1.7 *Manufacturer requirements* and trade and technical manuals are interpreted.
   1.8 Additional research, including a *desktop study*, is conducted to outline design parameters.
   1.9 *Performance requirements* are established, considering safety of system users or building occupants.
   1.10 Factors that contribute to quality, safety and time efficiency are determined.

2. **Plan and detail system components.**
   2.1 *Layout of pipework systems*, and type and location of *fittings and valves*, are planned.
   2.2 Range configuration and application of *proprietary solar heated water systems*, and materials and valves to be selected, are evaluated.
   2.3 *Solar water heating system calculations* are performed.
   2.4 Typical configuration of a hydraulic circuit (flow and return) and its *components* for a pumped-storage solar water heating system is designed.
2.5 Water quality and water pre-treatment methods are specified.

2.6 Suitable types and levels of insulation for system components are specified and a range of *methods to prevent freezing and protect from over performance* is detailed.

2.7 *Pipe size, velocity, flow and pressure calculations* are performed for a range of applications.

2.8 *Pipe supports* are designed for a range of applications.

2.9 Approved *materials, jointing methods* and *installation requirements* for solar water heating systems are specified.

2.10 Allowance for expansion and contraction is provided.

3  **Design and size systems.**

3.1 *Solar collectors* are selected to meet the installation requirements.

3.2 Residential, commercial and industrial solar water heating systems are designed.

3.3 Solar pre-heat systems are designed.

3.4 Solar pool and spa heating systems are designed.

3.5 Solar water heating systems are designed and sized using calculations and computer software packages.

3.6 *Sustainability principles and concepts* are applied throughout the design process.

4  **Prepare documentation.**

4.1 Client brief of the desired design is prepared.

4.2 *Plans* and *specifications* are prepared for a range of solar water heating systems.

4.3 *Testing* and *commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to develop creative and responsive approaches

- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements

- numeracy skills to interpret data and to apply measurements and calculations

- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of solar water heating systems
  - take initiative and make decisions

- problem-solving skills to analyse requirements, consider options and design an appropriate system

- technical skills to design solar water heating systems

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- application of:
  - relevant Australian standards, including AS/NZS3500 National plumbing and
- drainage
- manufacturer specifications, including hazards identified in relation to devices and systems used
- other codes or standard operating procedures
- state or territory regulatory authorities’ requirements
- common terminology and definitions used in design of solar water heating systems
- principles of technology used in design of solar water heating systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- design, size and document the layout details using two methods of providing solar-heated water systems;
  - one to be a gas-boosted commercial solar system; one to be a heat pump-boosted system
- develop a specification for each of the following projects:
  - a high-rise mixed development building to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level (fixtures are included in the basement)
  - a wide span project, such as a school
- specifications for each of the projects, to include:
  - evaluating and documenting design parameters, including client, regulatory, manufacturer and relevant Australian standard and code requirements for a range of solar water heating systems
  - evaluating health risks associated with heated water supplies
  - conducting a cost-benefit analysis
  - planning and detailing system components, including:
    - circulating systems
    - solar collectors
    - valve and piping systems
- designing a range of residential, commercial and
industrial solar water heating systems
- designing solar pre-heat systems
- designing solar pool and spa heating systems
- preparing plans and specifications for a range of solar water heating systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals
- applying sustainability principles and concepts throughout the design
- communicating with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package

• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

• reinforce the integration of employability skills with workplace tasks and job roles

• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in
the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** must include:
- interpreting plans and specifications, and sizing and documenting layout of solar water heating systems for applications including residential, commercial and industrial buildings for new projects or an existing structure being renovated, extended, restored or maintained
- heat transfer mechanism analysis, including conduction, convection and radiation (long wave and short wave), and the evaluation of transmittance, absorption and emittance properties of materials used in solar collectors
- solar radiation calculations, including:
  - calculations of efficiency
  - calculations of radiation falling on collectors
  - daily, monthly and yearly calculations.

**Design requirements** may include:
- architectural plans
- building specifications
- fire rating of penetrations
- frost protection
- integration with other heat sources
- limitations of various systems
- overheating protection
- owner requirements
- pipework identification
- specialist heated water use applications.

**Efficiency** must include:
- angle of collector in relation to latitude
- comparison of demand and efficiency curves for various types of solar collectors
- current and potential shading
- direction in relation to north
- efficiency in relation to:
  - ambient temperature
  - flow
  - location
  - pollution
  - prevailing wind conditions
• magnetic north as opposed to true north.

**Cost-benefit analysis:**

• compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising the integrity of the project
• may include:
  • design styles
  • energy costs
  • expected design life
  • labour costs
  • material costs
  • safety factors
  • speed of installation
  • suitable materials
• comparison and evaluation of capital cost, simple pay back and lifecycle cost of solar and other heat sources
• comparison of initial set-up costs to the energy savings available and establishment of cost-recovery period.

**Statutory and regulatory requirements and relevant Australian standards and codes**

• Acts, regulations, and commonwealth, state or territory, and local government requirements
• Australian standards:
  • AS/NZS3500 National plumbing and drainage
  • AS2200 Design charts for water supply and sewerage
  • AS2369.1 Materials for solar collectors for swimming pool heating – rubber materials
  • AS2369.2 Materials for solar collectors for swimming pool heating – flexible or plasticised polyvinyl chloride
  • AS/NZS2535.1 Test methods for solar collectors – thermal performance of glazed liquid heating collectors including pressure drop
  • AS/NZS2712 Solar and heat pump water heaters design and construction
  • AS3634 Solar heating systems for swimming pools
  • AS/NZS4234 Solar water heaters domestic and heat pump – calculation of energy consumption
- AS/NZS4445.1 Solar heating domestic water heating systems performance rating procedure using indoor test methods
- DR04527 Amendment 1 to AS/NZS2712 Solar water heaters design and construction
- National Construction Code.

**Manufacturer requirements** may include:

- heater maintenance and servicing
- material specifications
- provision for heater pressure and temperature discharge
- protection for freezing and overheating
- recommended specific fixings for pipework
- sizing tables
- technical and trade manuals
- limitations of use.

**Desktop study** may include:

- collection and interpretation of data for design purposes, such as:
  - architectural and building plans
  - developer plans
  - manufacturer’s data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available
- local authorities’ requirements
- area suitability for solar
- shadow studies
- comparison of performance of various types of solar water heaters in terms of design, location and predicted solar fraction.

**Performance requirements** are established using relevant Australian standards, codes, commonwealth, state or territory and local authority plans and may include:

- flow rate requirements
- pressure
- system design
- velocity
- water quality and its effect on the system.
**Layout of pipework systems:**
- must include:
  - dual feed
  - ring main
  - single pipe
- should not unduly affect building integrity and aesthetic appeal
- should have principles of economy, serviceability, durability and fit for use applied.

**Fittings and valves may include:**
- fittings:
  - bends
  - elbows
  - tees
  - unions
- valves:
  - backflow prevention
  - excess pressure
  - frost protection devices
  - isolating
  - location of valves
  - over temperature
  - pressure limiting
  - pressure reduction
  - strainers.

**Proprietary solar heated water systems may include:**
- alternative supplementary fuel sources, including:
  - coal
  - electricity
  - fuel oil
  - gas
  - heat pump
  - waste heat recovery (mechanical plant)
  - wood
- circulating systems
- clarifiers
- close coupled, split systems
- direct and indirect heating systems
- heat exchange systems
- heated water heaters
- pool heaters
- solar pre-heaters
- spa heaters
- storage systems
- sun track systems.

**Solar water heating system calculations** may include:
- area locality
- circulation calculations
- energy balance equation
- flow calculations
- heat loss calculations, covering:
  - collector losses
  - overnight losses
  - standing losses
- incoming water temperature
- temperature and energy equations
- varying inlet temperature and flow rate effect on the performance of a solar collector
- volume calculations.

**Components** may include:
- collectors
- differential controllers
- electronics
- expansion tanks
- filters
- fittings
- flow and return pipework
- heat exchangers
- insulation
- overflows
- pumps
- safe trays
- storage vessels
- suitable type and size of circulating pumps
- supplementary heat sources
- support frames
- timers and mechanical components
- valves
- water treatment.
Methods to prevent freezing and protect from over performance may include:
  - circulating systems
  - drain back systems
  - dump valves
  - heat trace systems
  - indirect systems
  - insulation.

Pipe size, velocity, flow and pressure calculations must include:
  - rate of discharge
  - temperature
  - velocities
  - volume.

Pipe supports may include:
  - anchors
  - bracket spacing
  - corrosion protection
  - hanging brackets
  - manufacturer-recommended specific fixings
  - material requirements
  - provision for expansion
  - saddles.

Materials may include:
  - copper (Cu)
  - other approved materials.

Jointing methods may include:
  - brazing
  - compression
  - flaring
  - mechanical joints
  - other approved jointing methods.

Installation requirements include:
  - pipe protection, which may include:
    - corrosion
    - impact
    - fire rating
    - level of workmanship
    - manufacturer-recommended specific fixings
    - pipe support
- provision for expansion
- serviceability and access
- system structure support.

**Solar collector** design may include:
- collector housing
- fin and tube collectors
- glass
- insulation
- pipe collectors
- pre-heat systems
- sun tracking systems
- vacuum tube.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy use/capital outlay comparison
  - selecting energy efficient water heater
  - reusing water, such as rainwater, greywater and recycled non-drinking water
  - consideration of the Green Building Council of Australia rating scheme
  - selecting appropriate components to ensure minimal environmental impact.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.
**Specification** may include:

- support
- jointing
- flow requirements
- manufacturer requirements
- materials
- safety (WHS)
- specialised components
- testing
- valve selection
- workmanship.

**Testing** may include:

- air pressure
- defect inspection
- hydrostatic
- mains pressure
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:

- balancing the system
- checking and flushing the system
- checking and maintaining heat transfer fluid levels
- temperature setting
- disinfection
- flow test
- leak check
- pressure test
- system certification
- system defects
- system functions as per design
- valve operation.

**Operation and maintenance manual** may include:

- as installed drawings
- certification documentation
- results of commissioning test
- heater detail, setting and operations
- maintenance schedules
- manufacturer brochures and technical information
- valve function
- safety management system
- system detail, setting and operations.
Unit Sector(s)

Functional area

Unit sector Plumbing and services

Custom Content Section

Not applicable.
CPCPPS5024A Conduct a water audit and identify water-saving initiatives

Modification History
Changes to unit descriptor, application, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5004A

Unit Descriptor
This unit of competency specifies the outcomes required to identify wasted water and leaks in pipework and fixtures and, where water use reduction is possible, types of water-saving devices that are appropriate. The unit also requires the preparation of a report that reflects this assessment.

Application of the Unit
This unit of competency supports the development of skills and knowledge required to conduct water and energy audits and recommend water-saving initiatives in relation to plumbing services and construction hydraulics.
Application of the unit is relevant to multi-storey residential, commercial and industrial buildings with or without connection to reticulated water supply.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Calculate water use.

1.1 *Scope of work* for conducting water audits is established.

1.2 *Client requirements* are identified from relevant Australian standards, codes, plans, specifications and client brief.

1.3 *Types of flow and pressure-measuring devices*, and their use and location are specified.

1.4 *Flow and pressure tests* are conducted and flows at outlets are measured.

1.5 Actual water use is compared to ideal use, and the difference is calculated.

1.6 *Statutory and regulatory requirements* for the use of water are interpreted and applied.

1.7 *Manufacturer requirements* and trade and technical manuals are interpreted.

1.8 *Desktop study* is conducted and *performance requirements* are established.

2 Identify excessive water and energy use.

2.1 *Leak identification processes* are implemented, considering safety of system users or building occupants.

2.2 Flows are measured and evaluated against relevant standards and user requirements.

2.3 Suitability of existing fixtures and fittings is evaluated.
2.4 Water use times are identified and compared to optimal timing.

2.5 Existing inefficient system conditions, such as dead legs, are identified and analysed.

2.6 Pressure test is conducted and consequences of high and low pressures are identified and compared to industry standards.

2.7 Energy saving associated with reduction in water use is evaluated.

3 Evaluate methods to conserve water and energy.

3.1 Flow restrictors, sensors and pressure-limiting devices are identified for a range of applications.

3.2 Automatic systems are identified for a range of applications.

3.3 Alternative processes and practices are evaluated for optimum water and energy savings.

3.4 Alternative fixtures and fittings are evaluated for optimum water and energy savings.

3.5 Rainwater harvesting techniques and processes are applied.

3.6 Recycling and re-use processes are designed.

3.7 Sustainability principles and concepts are applied throughout water audit process.

4 Report findings.

4.1 Cost-benefit analysis is conducted, including the investment return period.

4.2 Water and energy audit report is prepared.

4.3 Resultant environmental benefits and water and energy savings are identified and reported.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- **communication skills to:**
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- **literacy skills to:**
  - prepare a water and energy audit report
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements

- **initiative and enterprise skills to:**
  - comply with WHS and organisational quality procedures and processes
  - develop creative and responsive approaches to conserving water and energy

- **numeracy skills to apply measurements and calculations**

- **planning and organising skills to:**
  - research, collect, organise and understand information relating to water use
  - take initiative and make decisions

- **problem-solving skills to:**
  - analyse requirements
  - carry out tests
  - consider options
  - recommend appropriate water and energy saving measures

- **teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities**

- **technical skills to:**
  - accurately apply design principles relating to hydraulic systems, design concepts, measurements and calculations
  - apply and interpret documentation from a wide range of sources, including legislation, standards, drawings and specifications

- **technology skills to:**
CPCPSS024A Conduct a water audit and identify water-saving initiatives

- access and understand site-specific instructions in a variety of media
- use mobile communication technology

**Required knowledge**

- hazards associated with devices and systems used in the hydraulic sector
- installation methods used in hydraulic systems
- nature of materials and effect of their performance in a variety of conditions
- preparation and interpretation of plans and specifications
- requirements of commonwealth, state or territory regulatory authorities, relevant Australian standards and codes, manufacturer specifications, National Construction Code (NCC) and other relevant codes, standards and operating procedures
- terminology and definitions used in hydraulic design
- variety of applications of technology principles in design of water and energy-efficient usage systems for all classes of building
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It could be assessed on its own or as part of an integrated assessment activity involving audit of water and energy use in at least two different types of building and the preparation of comprehensive reports.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- conduct a water audit and identify water saving initiatives for a:
  - 50 unit residential building
  - 20 floor commercial office building
  - a commercial laundry
- including:
  - applying sustainability principles and concepts throughout the audit and identifying water-saving initiatives
  - conducting pressure and flow measurements
  - interpreting and applying statutory and local government requirements for the use of water
  - reporting water wasting practices and processes, including leaks
  - specifying sensors and automatic systems for a range of applications
  - recommending recycling and re-use processes
  - preparing a water and energy audit report
  - conducting a cost-benefit analysis, including investment return period
  - identifying and reporting on environmental
benefits and water savings
- applying sustainability principles and concepts throughout the water audit and identify water-saving initiatives
- communicating with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and
correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** must include:

- compiling reports
- identifying:
  - procedures, practices and products to reduce
Conduct a water audit and identify water-saving initiatives

- water and energy consumption
- wasted water
- water-saving initiatives
- producing a cost-benefit analysis.

**Client requirements** must include:
- compliance with regulatory requirements
- more efficient use of water resources
- reduction in water and energy costs
- maintaining satisfactory system performance.

**Types of flow and pressure-measuring devices**

- applications, which may include:
  - domestic cold and heated water supply
  - cooling towers
  - industrial processes
  - irrigation
  - mechanical
  - sanitation
  - trade waste
- measuring methods, which may include:
  - direct
  - electronic
  - hand-held
  - indirect
  - in-line
  - mechanical.

**Flow and pressure tests** may include:

- interpretation of flow and pressure tests conducted by a contractor
- on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa).

**Statutory and regulatory requirements** may include:

- Acts, regulations and commonwealth, state or territory, and local government regulations
- National Construction Code
- other relevant Australian standards and codes.

**Manufacturer requirements** must include:

- flow and pressure requirements.
**Desktop study** includes:

- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- research and evaluation of water-saving products, processes and procedures currently available.

**Performance requirements** must include:

- maintenance of flow, velocity, pressure and discharge requirements of the client, using relevant Australian standards, National Construction Code, or other relevant codes and standards.

**Leak identification processes** may include:

- electronic leak detection
- listening devices
- measuring equipment
- cameras.

**Sensors** may include:

- pressure switches
- flow switches
- high and low level
- moisture.

**Automatic systems** may include:

- electronic and mechanical timer
- pressure-activated
- user-activated.

**Alternative processes and practices** may include:

- change in personal water habits
- change in timing
- discontinuation of a process
- irrigation before sunrise and after sunset
- lower water pressures
- modifying a process
- modifying wash-down cleaning procedures and order of operation
- rainwater harvesting and usage
- running dishwashers and washing machines with full loads
- testing pipe systems with air instead of water
- using water-efficient appliances and fixtures
- waste water collection and reuse.
Alternative fixtures and fittings may include:
- drip systems
- irrigation systems
- low-energy and water-use appliances, such as:
  - air cooling towers
  - dishwashers
  - dual flush low volume toilet flushing systems
  - tapware
  - waterless and sensor control urinals
  - washing machines
- low-flow shower roses
- outlet-flow control devices
- pressure control devices.

Rainwater harvesting must include:
- collection, storage and distribution of rainwater, including the use of tanks and dams.

Recycling and re-use processes may include:
- black water treatment and reuse options
- industrial processes
- grey water treatment and reuse options
- recovery of test water, such as fire.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy usage/capital outlay comparison
  - selecting water efficient appliances and fixtures
  - using alternative water supplies
  - consideration of the Green Building Council of Australia rating scheme.

Cost-benefit analysis compares:
- installation, set-up and running costs against the capital investment to determine the cost recovery period
- the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
**Water and energy audit report** is a comprehensive report written to industry standards that includes:

- client brief
- analysis
- results
- methodology
- conclusions
- recommendations.

**Unit Sector(s)**

CPCPPS5025A Design grey water re-use systems

Modification History
Changes to unit title, descriptor, application, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5005A

Unit Descriptor
This unit of competency specifies the outcomes required to design grey water re-use systems. The unit requires the ability to consider legislation, risk implications, and collection, treatment, diversion and storage options when designing these systems.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople with a responsibility for designing grey water re-use systems.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 **Scope of work** is established for design of grey water reuse systems for wide span and high-rise building projects.

1.2 **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Potential household or community **health and environmental risks** are identified and **measures to protect public health** are identified and implemented.

1.4 **Cost-benefit analysis** is conducted.

1.5 **National water programs, statutory and regulatory requirements, and relevant Australian standards and codes** for the design of grey water re-use systems are interpreted, analysed and applied.

1.6 **Manufacturer requirements** and trade and technical manuals are interpreted.

1.7 Additional research, including a *desktop study*, is conducted to outline design parameters.

1.8 **Performance requirements** are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 Primary, secondary and advanced secondary treatment and tertiary systems are detailed.

2.2 **Layout of pipework systems** and type and location of *fittings, valves, controls* and other system components are planned.

2.3 Changes to building drainage system are designed and detailed, and inspection requirements are identified.

2.4 Diversion, storage, disposal, wet weather storage, and *land application options* are evaluated and detailed, problems are identified and solutions applied.

2.5 Stored and pressurised grey water systems for irrigation, sanitary flushing and other approved use are detailed.
2.6 Storage tanks and approved disposal options are designed and detailed.

2.7 Pipe size and pump duty calculations are made and pumpwell, pump and pump control requirements are sized and detailed.

2.8 Approved materials and jointing methods for grey water re-use systems are evaluated, pipe supports are designed and installation requirements are specified.

3 Design and size systems.

3.1 Grey water reuse systems are designed for a range of residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems.

3.2 Grey water reuse systems are designed to ensure that the system can be properly and safely maintained.

3.3 Grey water reuse systems are designed and sized using calculations and computer software packages.

3.4 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specifications are prepared for a range of grey water re-use systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to develop creative and responsive approaches
- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- numeracy skills to:
  - apply measurements and calculations
  - interpret data
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of grey water re-use systems
  - take initiative and make decisions
  - problem-solving skills to analyse requirements, consider options and design an appropriate system
- technical skills to apply design concepts and principles relating to hydraulic systems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- approved installation methods are identified
• hazards associated with devices and systems used in the hydraulic sector
• nature of materials and effect of their performance in a variety of conditions
• organisational quality procedures and processes
• principles of technology in the design of grey water re-use systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
• required Australian standards, codes, manufacturer specifications, National Construction Code (NCC) and operating procedures relevant to the sector
• terminology and definitions used in hydraulic design
• work drawings and specifications
• work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- design, size and document the layout details, including a specification for a high-rise mixed development building and a wide span project, such as a school or industrial complex, including:
  - evaluating and documenting design parameters, including client, regulatory, manufacturer and relevant Australian standard code requirements for a range of grey water re-use systems

- planning and detailing system components, including:
  - storage tanks
  - system overflow
  - treatment systems
  - piping systems
  - plumbing systems
  - usage systems

- designing and sizing a grey water reuse system

- preparing plans and specifications for a range of grey water reuse systems to industry standards

- preparing testing and commissioning schedules

- preparing operation and maintenance manuals

- applying sustainability principles and concepts throughout the system design

- communicating with others to ensure safe and effective work site operations.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**

- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout of grey water re-use systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.
**Design requirements** must include:

- architectural plans
- building specifications
- owner requirements
- pipework identification
- sizing of pipework
- backflow protection of drinking and non-drinking water supply systems
- water treatment
- specialist water use applications.

**Health and environmental risks** include:

- health risks, which may include:
  - abdominal pain
  - acute enteritis
  - bacillary dysentery
  - chest pain
  - cholera
  - common colds
  - coughing
  - diarrhoea
  - digestive and nutritional disturbances
  - dysentery
  - fever
  - gastroenteritis
  - giardiasis
  - helminthes, including flukes and worms
  - hepatitis
  - hookworm disease
  - infectious hepatitis
  - meningitis
  - muscle aches
  - neurological symptoms, including nervousness and insomnia
  - poliomyelitis
  - respiratory infections, such as pneumonia
  - restlessness
  - salmonellosis (food poisoning)
  - taeniasis
  - toxoplasmosis
- typhoid fever
- vomiting
- weight loss
- environmental risks, which may include:
  - algal blooms
  - excess nutrient loads
  - fish kills
  - oxygen depletion.

**Measures to protect public health** must include:
- auditing
- contact avoidance
- contact minimisation
- disinfection and sterilisation
- education
- legislation
- licensing
- maintenance
- separation barriers
- set back distances
- timing discharges
- wet weather storage.

**Cost-benefit analysis** compares:
- the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project, such as suitable treatment, disposal options and disinfection options
- water savings and environmental benefits compared to initial and ongoing maintenance costs.

**National water programs, statutory and regulatory requirements, relevant Australian standards, and codes** may include:
- Acts and regulations
- Australian standard requirements, including:
  - AS/NZS1546 On-site domestic wastewater treatment units
  - AS/NZS1547 On-site domestic wastewater management
  - AS/NZS3500 National plumbing and drainage
  - AS2200 Design charts for water supply and sewerage
- National Construction Code
commonwealth, state or territory government policies, including health departments.

**Manufacturer requirements** must include:
- material specifications
- grey water treatment systems
- pump installation
- pipe sizing
- storage systems
- technical and trade manuals.

**Desktop study** may include collection and interpretation of data for design purposes in:
- architectural and building plans
- developer plans
- manufacturer data
- other documents, including:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

**Performance requirements** may include:
- compliance limits for:
  - bacteria levels
  - chlorine levels
  - nutrients
  - pH
  - phosphates
- requirements established using relevant Australian standards, codes and local authority plans, including:
  - cover
  - discharge
  - flow conditions
  - pipe grades.

**Layout of pipework systems:**
- may include:
  - drainage systems
  - elevated pipework systems
  - gravity systems
  - pumped and rising mains
• stack systems, may include:
  • fully vented
  • fully vented modified
  • single stack
  • single stack modified
  • waste stack
  • two-pipe system
  • reduced velocity aerator system
• should not unduly affect building integrity and aesthetic appeal
• includes location of pipework (fire rating of enclosure)
• should demonstrate principles of economy, serviceability, durability and fit for use.

**Fittings, valves and controls must include:**
• backflow prevention devices
• irrigation control systems
• isolating valves
• level indicators
• pump controls.

**Land application options may include:**
• surface irrigation
• subsurface irrigation
• spray irrigation.

**Storage tanks may include:**
• connections
• containment
• location
• material
• overflow provision
• pumps
• sizing
• support
• switches
• valves
• vermin control.

**Pipe size and pump duty calculations may include:**
• calculating pipe sizing
• calculating pressure and flow requirements
• determining flow and fixture loadings
• interpreting design charts and tables.

**Pumpwell, pump and pump control requirements** may include:

• automatic controls
• capacity
• corrosion-resistant materials
• detailing
• high and low-level water controls and alarms
• inlet and outlet design requirements
• installation and mounting requirements
• macerator requirements
• pump sizing
• pumpwell sizing
• selection of pump type
• valve requirements
• warning system.

**Materials** may include:

• copper (Cu)
• polypropylene (PP)
• polybutylene (PB)
• polyethylene (PE)
• unplasticised polyvinyl chloride (PVC-U)
• other approved material.

**Jointing methods** may include:

• brazing
• compression joints
• electrofusion welding
• mechanical joints
• solvent cement
• threading
• other approved jointing methods.

**Pipe supports** include:

• anchors
• bedding
• bracket spacing
• concrete support
• corrosion protection
• manufacturer-recommended specific fixings
• material requirements
• provision for expansion
• saddles.

**Installation requirements** may include:

• pipe protection, which may include:
  • cover
  • corrosion
  • impact
  • fire rating
  • level of workmanship
  • manufacturer-recommended specific fixings
  • pipe support
  • provision for expansion
  • serviceability and access.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
  • efficient use of material
  • efficient energy usage/capital outlay comparison
  • local environment consideration
  • water efficiency
  • reuse of greywater
  • consideration of the Green Building Council of Australia rating scheme.

**Plans:**

• may include:
  • axonometrics
  • elevations
  • details
  • cross-sections
  • isometrics
  • sections
  • schematics, which may be produced using:
    • computer generation
    • drawing equipment.

**Specification** may include:

• backflow prevention
- flow requirements
- jointing
- manufacturer requirements
- materials
- residual pressures
- safety (WHS)
- specialised components
- storage
- support
- testing
- valve selection
- water treatment
- workmanship.

**Testing** may include:

- air pressure
- backflow protection
- defect inspection
- drainage inspection
- hydrostatic
- performance:
  - flow
  - pressure
- water quality
- quality assurance (QA) audit.

**Commissioning schedule** may include:

- balancing disposal system
- flow and pressure adjustments
- leak check
- pump settings
- pressure test
- safety requirements
- system certification
- system flushing
- system defects
- system functions as per design
- system purge
- valve operation
- ventilation
- vermin control.
Operation and maintenance manual may include:

- as installed drawings
- certification documentation
- land application compliance checks
- maintenance schedules
- manufacturer brochures
- ongoing maintenance requirements
- pump maintenance
- regular inspections
- results of commissioning test
- safety management system
- surface ponding checks
- system detail, setting and operations
- valve function
- system operational parameter adjustments and checks, including:
  - chlorine levels
  - dissolved oxygen
  - nitrates
  - pH
  - phosphates
  - suspended solids
  - water quality.

CPCPPS5026A Design rainwater collection, storage, distribution and re-use systems

Modification History
Changes to unit descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5006A

Unit Descriptor
This unit of competency specifies the outcomes required to design systems for the collection, storage, distribution and re-use of rainwater for drinking and non-drinking uses, including irrigation, toilet flushing and other uses approved by relevant authorities.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to the design of systems for the collection, storage, distribution and re-use of rainwater.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

#### 1 Evaluate design parameters

1.1 **Scope of work** is established for rainwater harvesting systems for wide span and high-rise building projects.

1.2 **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Potential **contamination** sources are analysed and solutions are applied.

1.4 Rainfall patterns and required rainwater storage volumes are established.

1.5 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.

1.6 **Statutory, regulatory requirements and relevant Australian standards and codes** for the design of rainwater harvesting systems are interpreted, analysed and applied.

1.7 **Manufacturer requirements** and trade and technical manuals are interpreted.

1.8 Additional research, including a **desktop study**, is conducted to outline design parameters.

1.9 **Performance requirements** are established, considering safety of system users or building occupants.

#### 2 Plan and detail system

2.1 **Tank type and location** are specified.

2.2 **Layout of pipework systems** and type and location of
components.  

2.3 **First-flush systems** are designed and detailed.

2.4 **Filtration systems** and **water contamination solutions** are specified.

2.5 **Pipe size calculations** are completed for a range of applications.

2.6 Separation of services and backflow prevention devices are designed and detailed.

2.7 Approved non-contaminating **materials** and **jointing methods** for rainwater harvesting are specified and **pipe supports** are designed.

2.8 **Pump and ancillary requirements** are sized and detailed.

2.9 **Installation requirements** are specified.

2.10 Water treatment is specified according to state and territory health requirements.

2.11 Vermin protection is specified according to manufacturer and state and territory requirements.

2.12 Allowance for expansion and contraction is provided.

3 **Design and size systems.**

3.1 Rainwater harvesting systems are designed and detailed for a range of residential, commercial and industrial applications.

3.2 **Rainwater reuse systems** are designed and detailed.

3.3 Rainwater harvesting systems are designed and sized using calculation and computer software packages.

3.4 **Sustainability principles and concepts** are applied throughout the design process.

4 **Prepare documentation.**

4.1 Client brief of the desired design is prepared.

4.2 **Plans** and **specifications** are prepared for a range of rainwater harvesting systems.
4.3 *Testing and commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- **Communication skills to:**
  - Communicate with others to ensure safe and effective work practices
  - Confirm job specifications and client requirements
  - Enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - Use language and concepts appropriate to cultural differences
  - Use and interpret non-verbal communication, such as hand signals
- **Literacy skills to:**
  - Prepare documentation, including:
    - Operation and maintenance manual
    - Plans, specifications and schedules
  - Read and interpret:
    - Plans, specifications, drawings and design briefs
    - Standards and manufacturer requirements and manuals
    - Statutory and regulatory requirements
- **Initiative and enterprise skills to develop creative and responsive approaches
- **Numeracy skills to apply measurements and calculations
- **Planning and organising skills to:**
  - Research, collect, organise and understand information relating to the design of rainwater collection, storage, distribution and re-use systems
  - Take initiative and make decisions
- **Problem-solving skills to analyse requirements, consider options and design an appropriate system
- **Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- **Technical skills to design systems for the collection, storage, distribution and reuse of rainwater for drinking and non-drinking uses
- **Technology skills to:**
  - Access and understand site-specific instructions in a variety of media
  - Use mobile communication technology

**Required knowledge**

- Common terminology and definitions used in the design of rainwater collection, storage,
distribution and re-use

- key features of work plans and specifications
- nature of materials used and effects of performance under various conditions
- organisational quality procedures and processes
- principles of technology in the design of rainwater collection, storage, distribution and reuse for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
- relevant Australian standards, codes, manufacturer specifications, National Construction Code and operating procedures relevant to the sector
- terminology and definitions used in hydraulic design
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- design, size and document the layout details, including a specification for a high-rise mixed development building and a wide span project, such as a school or industrial complex.
- evaluate and document design parameters, including rainfall, client, regulatory, manufacturer and relevant Australian standard requirements and storage capacity for a range of rainwater harvesting systems.
- plan and detail system components, including:
  - authority connection
  - backflow prevention requirements
  - filters
  - fixtures and fittings
  - piping systems
  - pumps
  - storage
  - water treatment
- design and size rainwater harvesting and reuse systems
- prepare plans and specifications for a range of rainwater harvesting and reuse systems to industry standards
- prepare testing and commissioning schedules
- prepare operation and maintenance manuals
- apply sustainability principles and concepts throughout the design to achieve a green star rating
- communicate with others to ensure safe and
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be
transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**

- must include:
  - interpreting plans and specifications
  - rainfall analysis
  - sizing and documenting layout of rainwater harvesting systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking
Design requirements must include:

- Architectural plans
- Building specifications
- Owner requirements
- Pipework identification
- Sizing of pipework
- Backflow protection of drinking and non-drinking water supply systems
- Water treatment
- Specialist water use applications.

Contamination may include:

- Bacterial
- Heavy metal
- Inorganic
- Odour
- Organic
- Taste
- Silt
- Viral
- Vermin.

Cost-benefit analysis:

- Compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.
  - May include:
    - Design styles
    - Energy costs
    - Expected design life
    - Labour costs
    - Material costs
    - Safety factors
    - Speed of installation
    - Suitable materials.

Statutory, regulatory requirements and relevant Australian standards:

- Acts and regulations, commonwealth, state or territory and local government requirements
- AS/NZS3500 National plumbing and drainage
and codes include:
- AS2200 Design charts for water supply and sewerage
- National Construction Code.

Manufacturer requirements may include:
- material specifications
- pipe sizing
- pump installation
- storage system
- technical and trade manuals
- other relevant documents.

Desktop study may include collection and interpretation of data for design purposes in:
- architectural and building plans
- developer plans
- manufacturer data
- other documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Performance requirements must include:
- compliance limits for:
  - bacteria levels
  - nutrients
  - pH
  - silt control
  - vermin protection
  - overflow discharge requirements
- requirements established using relevant Australian standards, codes and local authority plans, including:
  - cover
  - discharge
  - flow conditions
  - pipe grades.

Tank type and location may include:
- tank type:
  - concrete
  - fibreglass
• metal
• polymer
• other approved materials
• tank location may include:
  • above-ground
  • in-ground.

**Layout of pipework systems:**
• may include:
  • gravity systems
  • pumped systems
• should not unduly affect building integrity and aesthetic appeal
• should have principles of economy, serviceability, durability and fit for use.

**Fittings, valves and controls**
• include:
  • backflow prevention devices
  • inspection openings
  • irrigation control systems
  • isolating valves
  • level indicators
  • pump controls.

**First-flush systems**
• may include:
  • electronic
  • float-activated
  • mechanical
  • volume-activated.

**Filtration systems**
• may include:
  • overflow devices
  • sand
  • screens
  • settlement tanks
  • strainers.

**Water contamination solutions**
• include:
  • disinfection
  • ultraviolet.

**Pipe size calculations**
• must include:
  • determination of flow
  • interpretation of design charts and tables
- pipe sizing calculations
- reduced level calculations.

**Materials** may include:
- copper (Cu)
- polyethylene (PE)
- polypropylene (PP)
- polybutylene (PB)
- unplasticised polyvinyl chloride (PVC-U)
- other approved material.

**Jointing methods** may include:
- brazing
- compression joints
- electrofusion welding
- mechanical joints
- solvent cement
- threading
- other approved jointing methods.

**Pipe supports** may include:
- anchors
- bedding
- bracket spacing
- concrete support
- corrosion protection
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- saddles.

**Pump and ancillary requirements** may include:
- automatic controls
- pump duties
- corrosion-resistant materials
- level controls and alarms
- pump selection and pump sizing, based on:
  - flow
  - velocity
  - lift
  - probable simultaneous demands.
Installation requirements may include:

- pipe protection, which may include:
  - cover
  - corrosion
  - impact
  - fire rating
  - level of workmanship
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for expansion
  - serviceability and access.

Rainwater reuse systems must include:

- roof water collection
- storage may include:
  - tanks
  - open in-ground (dam)
- water treatment
- pumps
- approved drinking and non-drinking use.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy use/capital outlay comparison
  - water use
  - evaporation
  - local environment consideration
  - overflow disposal/reuse
  - consideration of the Green Building Council of Australia rating scheme
  - selecting appropriate components to ensure minimal environmental impact.

Plans:

- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
• schematics
• may be produced using:
  • computer generation
  • drawing equipment.

*Specification* may include:
• backflow prevention
• flow requirements
• jointing
• manufacturer requirements
• materials
• residual pressures
• safety (WHS)
• specialised components
• storage
• support
• testing
• valve selection
• water treatment
• workmanship.

*Testing* must include:
• air pressure
• backflow protection
• defect inspection
• drainage inspection
• hydrostatic
• performance:
  • flow
  • pressure
• water quality
• quality assurance (QA) audit.

*Commissioning schedule* must include:
• balancing disposal system
• flow and pressure adjustments
• leak check
• pressure test
• pump settings
• safety requirements
• system certification
• system defects
• system flushing
• system functions as per design
• system purge
• valve operation
• ventilation
• vermin control.

Operation and maintenance manual may include:
• as installed drawings
• certification documentation
• maintenance schedules
• manufacturer brochures
• ongoing maintenance requirements
• pump maintenance
• regular inspections
• results of commissioning test
• safety management system
• system detail, setting and operations
• valve function
• system operational parameter adjustments and checks, including:
  • disinfection
  • first flush devices
  • pH
  • silt control
  • suspended solids
  • water quality.

Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Evaluate design parameters.

1.1 *Scope of work* for irrigation systems is established.

1.2 *Design requirements* are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 *Cost-benefit analysis* is conducted comparing a range of pipe materials and system designs.

1.4 *Statutory and regulatory requirements and relevant Australian standards and codes* for the design of irrigation systems are interpreted, analysed and applied.

1.5 *Manufacturer requirements* and trade and technical manuals are interpreted.

1.6 Additional research, including a *desktop study*, is conducted to outline design parameters.

1.7 *Flow and pressure tests* are conducted.

1.8 *Water sources, volumes and areas to be irrigated* are established.

1.9 *Soil types* are analysed and categorised, and impacts on irrigation systems are documented.

1.10 Factors that contribute to quality, safety and time efficiency are determined.

1.11 *Performance requirements* are established, considering safety of system users or building occupants.
2 Plan and detail system components.

2.1 *Layout of pipework systems* and type and location of *fittings, valves and controls* are planned.

2.2 Type, location and requirements for *backflow prevention devices* are detailed.

2.3 Pipe sizes, velocities, flows and pressures are calculated for a range of applications.

2.4 Approved *materials* and *jointing methods* for irrigation systems are specified.

2.5 *Sections and components of the irrigation system* are detailed.

2.6 *Pipe supports* are designed for a range of applications.

2.7 *Pump enclosure and control requirements* are sized and detailed.

2.8 *Installation requirements* are specified for irrigation management system.

2.9 Water storage requirements are determined.

2.10 Allowance for pipe movement is made.

3 Design and size systems.

3.1 Irrigation systems are designed for a range of residential, commercial, industrial, sporting and agricultural *applications*.

3.2 Range of *delivery systems and layout* are designed.

3.3 Irrigation systems are designed and sized using calculations and computer software packages.

3.4 Required water application is determined to establish and maintain plant life.

3.5 *Sustainability principles and concepts* are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 *Plans* and *specifications* are prepared for a range of irrigation systems.
4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- initiative and enterprise skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of irrigation systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to design irrigation systems to National Construction Code, relevant Australian standards, and other relevant legislative requirements
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- application of National Construction Code or relevant Australian standards and codes,
manufacturer specifications, and operating procedures relevant to the sector
• common terminology and definitions used in the design of irrigation systems
• nature of materials used and effects of performance under various conditions
• principles of technology used in design of irrigation systems for a range of applications
• work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- design, size and document layout details of an irrigation system, including a specification for a:
  - sports oval incorporating stormwater collection and use, with a mains pressure drinking water top-up and with chemical additives
  - a landscaped area for a mixed development site connected to a main pressure recycled (non-drinking) water main
- evaluate and document design parameters to relevant Australian standards and codes, and regulatory, client and manufacturer requirements.
- plan and detail system components that include:
  - backflow prevention devices
  - irrigation management-control system
  - pumping requirements
  - water delivery outlets
  - piping requirements
- design and size two irrigation systems, using appropriate calculations and computer software for specific applications
- prepare testing and commissioning schedules
- prepare operation and maintenance manuals
- apply sustainability principles and concepts throughout the design
- communicate with others to ensure safe and effective work site operations.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**

- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout irrigation systems and documenting layout irrigation systems for applications, including residential, sporting and agricultural properties
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.
Design requirements must include:

- architectural plans
- backflow requirements
- interpretation and application of irrigation services, drawings and symbols
- irrigation management system
- owner requirements
- precipitation and evaporation rates
- pumping requirements
- required water application to establish and maintain plant life
- source of irrigation water
- sprinkler head spacings
- system requirements
- water storage requirements.

Cost-benefit analysis:

- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design styles
  - expected design life
  - labour costs
  - material costs
  - required water application to establish and maintain plant life
  - safety factors
  - speed of installation
  - suitability of materials
  - system choices
  - use of recycled or alternative water.

Statutory and regulatory requirements and relevant Australian standards and codes may include:

- Acts, regulations and commonwealth, state or territory, and local government requirements
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- National Construction Code
- state or territory health department requirements
- other relevant Australian standards or codes.
Manufacturer requirements may include:

- irrigation management system
- material specifications
- pump tables
- sprinkler head performance
- sub-surface irrigation
- technical and trade manuals.

Desktop study may include collection and interpretation of data for design purposes in:

- architectural and building plans
- site layout plans, which may include:
  - sports ovals
  - golf courses
  - residential, commercial, industrial and agricultural properties
  - local government parks
- manufacturer data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Flow and pressure tests may include:

- interpretation of flow and pressure tests
- on-site measurement of flows (l/s), velocity (m/s) and pressure (kPa).

Water sources, volumes and areas to be irrigated may include:

- sources:
  - drinking water
  - non-drinking (recycled) water
  - rain water
  - grey water
  - creeks
  - dams
  - lakes
  - rivers
  - streams
  - tanks
other approved water sources
volumes and areas:
• amount and duration of water supply
• areas to be irrigated
• number of control stations required
• total amount and flow rate required for each control station.

Soil types may include:
• gravels
• light, medium and heavy clays
• loams
• rock
• sands.

Performance requirements may include:
• flow, velocity, pressure and discharge requirements, established using relevant Australian standards, codes and manufacturer information
• required water application to establish and maintain plant life.

Layout of pipework systems:
• may include:
  • distribution
  • dual feed systems
  • range pipes
  • ring main
  • single pipe
  • control stations
• should not unduly affect aesthetic appeal and building integrity
• should have principles of economy, serviceability, durability and fit for use applied.

Fittings, valves and controls may include:
• fittings:
  • bends
  • elbows
  • sprinkler heads
  • tees
  • unions
• valves:
• backflow prevention
• excess pressure
• isolating
• pressure limiting
• pressure reduction
• strainers
• controls:
  • irrigation management system
  • control stations
  • control wiring
  • nodes.

Backflow prevention devices may include:
• double-check valve assembly (DCV)
• dual-check valve with intermediate vent (DuCV)
• pressure type vacuum breaker (PVB)
• reduced pressure zone device (RPZD)
• registered air gap (RAG)
• registered break tank (RBT)
• reduced pressure detector assembly (RPDA)
• reduced pressure zone device (RPZD)
• other approved backflow prevention devices
• may be located as:
  • individual protection
  • zone protection
  • containment protection.

Materials may include:
• composite pipework
• copper (Cu)
• cross-linked polyethylene (PE-X)
• polypropylene (PP)
• polybutylene (PB)
• polyvinyl chloride (PVC)
• other relevant materials.

Jointing methods include:
• brazing
• compression
• electrofusion welding
• flaring
• mechanical joints
rubber ring joints
screwing
soldering
other approved jointing methods.

Sections and components of the irrigation system must include:

irrigation stations:
- number, size, area, volume of water required, delivery requirements, operation and activation of stations, sprinkler patterns, location and distribution of sprinkler heads, obstacle avoidance, water minimisation, waste minimisation and timing

manifold systems:
- manifolds to stations, headers, branches, timers, isolators, servo valves, electronics, power supplies and manual activation

sensors:
- moisture sensors, soil sensors, temperature sensors, humidity sensors, weather stations and computer automation

automatic controls:
- station controllers, servo valves, isolating valves, water tractors and timers

sprinklers, drippers and irrigators:
- sprinkler heads, sprinkler flows, impact sprinklers, gear-driven sprinklers, water tractors, water cannons, tape drippers, individual drippers, flow controlled drippers, in-ground irrigation tapes and root inhibitor systems

sprinkler patterns:
- head to head, square, triangular, circular, quarter overlap, half overlap, full overlap, double overlap and other overlap patterns.

Pipe supports may include:

thrust blocks
bedding
bracket spacing
corrosion protection
cover
manufacturer-recommended specific fixings
material requirements
provision for pipe movement.
**Pump enclosure and control requirements** may include:

- acoustic performance
- automatic change-over
- automatic controls
- dual-pump provision
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- irrigation management control system
- pressure gauges
- pump controls
- pump selection
- pump sizing
- pump housing
- space requirements
- valve requirements
- variable speed control.

**Installation requirements** may include:

- pipe connection:
  - bedding and backfilling
  - corrosion
  - cover
  - ground stability
  - impact
- level of workmanship
- manufacturer recommendations
- pipe support
- provision for pipe movement
- serviceability and access.

**Applications:**

- may include:
  - agricultural crops
  - garden irrigation
  - golf courses
  - greenhouses
  - lawn watering
  - local government parks
  - nurseries
  - sports ovals
should also cover:
- individual crop water requirements
- types of plants and their respective crop factors.

**Delivery systems and layout** may include:
- main delivery
- number and design of control stations
  - design includes:
    - avoiding obstacles
    - irregular shapes
    - minimising water wastage
    - range of irrigation applications
  - range pipes
  - ring mains
  - size and water delivery of sprinklers
  - sprinkler head patterns and placement.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
  - may include:
    - selecting appropriate material to ensure minimal environmental impact
    - efficient use of material
    - efficient energy usage/capital outlay comparison
    - water efficiency
    - reuse of water, such as rainwater, grey water and recycled non-drinking water
    - consideration of the Green Building Council of Australia rating scheme.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
  - may be produced using:
    - computer generation
• drawing equipment.

**Specification** may include:

- bedding
- flow requirements
- irrigation management control system
- jointing
- manufacturer requirements
- materials
- pumps
- residual pressures
- safety (WHS)
- specialised components
- sprinkler head selection
- storage tanks
- support
- testing
- valve selection
- water treatment
- workmanship.

**Testing** may include:

- defect inspection
- hydrostatic
- mains pressure
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:

- system certification
- flow test
- leak check
- pressure test
- system purge
- system defect
- system functions as per design
- valve and system operation.

**Operation and maintenance manual** includes:

- as installed drawings
- results of commissioning test
- certification documentation
- maintenance schedules
- manufacturer brochures and technical information
- operational procedures
- valve function.

CPCPPS5028A Design trade waste pre-treatment systems

Modification History
Changes to unit descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5008A

Unit Descriptor
This unit of competency specifies the outcomes required to design trade waste pre-treatment systems for commercial and industrial premises prior to discharge to authority’s point of sewer connection. The unit requires identification of appropriate installation details and preparation of specifications.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Evaluate design parameters.**
   
   1.1 *Scope of work* is established for trade waste pre-treatment systems prior to discharge to authority’s point of sewer connection.
   
   1.2 *Design requirements* are determined from relevant Australian standards, codes, plans, specifications, authorities’ requirements and client brief.
   
   1.3 *Statutory and regulatory requirements and relevant Australian standards and codes* for the design of trade waste pre-treatment systems are analysed and applied.
   
   1.4 *Trade waste applications* are analysed and a *cost-benefit analysis* is conducted, comparing a range of pipe materials and system designs.
   
   1.5 *Manufacturer requirements* and trade and technical manuals are interpreted.
   
   1.6 Additional research, including a *desktop study*, is conducted to outline design parameters.
   
   1.7 *Performance requirements* are established, considering safety of system users or building occupants.

2. **Plan and detail system components.**
   
   2.1 *Layout of pipework systems* and type, and location of fittings and controls are planned.
   
   2.2 *Solid removal systems* are planned and detailed.
   
   2.3 *Grease and oil interceptors, neutralising chambers and wash-down areas* incorporating stormwater exclusion are planned and detailed.
2.4 Diffused air flotation systems are planned and detailed.

2.5 *Bacterial treatment processes* and *combined and specialised treatment processes* are detailed for a range of commercial and industrial applications.

2.6 General housekeeping procedures are incorporated to minimise discharge of trade waste.

2.7 *System calculations* are performed for a range of applications.

2.8 *Pumpwell, pumps, controls and equipment requirements* are sized and detailed.

2.9 *Pipe supports* are designed for a range of applications.

2.10 Approved *materials, jointing methods and installation requirements* for trade waste pre-treatment systems are specified.

3 **Design and size systems.**

3.1 Trade waste pre-treatment systems are designed and sized for a range of applications using calculations and *computer software packages*.

3.2 *Sustainability principles and concepts* are applied throughout the design process.

4 **Prepare documentation.**

4.1 Client brief of the desired design is prepared.

4.2 *Plans and specifications* are prepared for a range of trade waste pre-treatment systems.

4.3 *Testing and commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

• communication skills to:
  • communicate with others to ensure safe and effective work practices
  • confirm job specifications and client requirements
  • enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  • use language and concepts appropriate to cultural differences
  • use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to develop creative and responsive approaches
• literacy skills to:
  • prepare written documentation, including:
    • operation and maintenance manual
    • plans, specifications and schedules
  • read and interpret:
    • plans, specifications, drawings and design briefs
    • standards and manufacturer requirements and manuals
    • statutory and regulatory requirements
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • research, collect, organise and understand information relating to the design of trade waste pre-treatment systems
  • take initiative and make decisions
• problem-solving skills to analyse requirements, consider options and design an appropriate system
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to recommend general housekeeping procedures to minimise trade waste
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge

• relevant Australian standards, codes, manufacturer specifications, National Construction Code (NCC), relevant authorities’ requirements and operating procedures relevant to the
sector

- hazards associated with devices and systems used in the hydraulic sector
- design of the options for the pre-treatment of trade waste
- approved installation methods for trade waste pre-treatment systems
- key features of work plans and specifications
- nature of materials and effect of their performance in a variety of conditions
- organisational quality procedures and processes
- terminology and definitions used in hydraulic design
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide, as a minimum, evidence of the ability to:

- design, size and document the installation and layout details for a trade waste pre-treatment system, including a specification for two of the following:
  - commercial kitchen
  - vehicle mechanical workshop
  - commercial laundry
  - metal plating process
- evaluate and document design parameters to relevant Australian standards, codes, client information, local authorities’ trade waste policy, and manufacturer installation requirements
- evaluate health risks associated with the trade waste system
- plan and detail system components, including pre-treatment systems and piping systems
- design and size trade waste systems
- design and size wash-down and stormwater exclusion systems
- prepare plans and specifications for the trade waste pre-treatment installations to industry standards
- prepare schedules for testing and commissioning
- produce operation and maintenance manuals
- apply sustainability principles and concepts throughout installations
- communicate with others to ensure safe and effective workplace operations.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**

- must include:
  - interpreting plans and specifications
  - sizing and documenting layout of trade waste pre-treatment systems for commercial and industrial applications
- may be for new projects or an existing structure being renovated, extended, restored or maintained.
Design requirements must include:
- architectural plans
- building specifications
- cleaning and maintenance procedures
- installation requirements
- odour control
- owner requirements
- pipework identification
- sizing
- trade waste treatment
- ventilation.

Statutory and regulatory requirements and relevant Australian standards and codes may include:
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- commonwealth, state or territory and local governments requirements
- National Construction Code
- other relevant Australian standards and codes.

Trade waste applications may include:
- chemical facilities
- commercial and industrial facilities that produce a liquid waste stream
- commercial and industrial laundry
- food preparation facilities
- laboratories
- motor vehicle workshops
- photography development facilities
- wash-down facilities.

Cost-benefit analysis:
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
• speed of installation
• suitable materials
• authorities’ requirements.

**Manufacturer requirements** may include:
• containment
• design and installation
• installation space
• material specifications
• pipe sizing
• pump installation
• storage systems
• technical and trade manuals
• ventilation.

**Desktop study** may include collection and interpretation of existing data for design purposes in:
• architectural and building plans
• developer plans
• manufacturer data
• documents, which may include:
  • applications
  • brochures
  • forms
  • policies
  • other reports as available
• trade waste publications.

**Performance requirements** must:
• establish acceptable discharge standards for the relevant authority
• comply with relevant Australian standards, codes and local authorities’ requirements.

**Layout of pipework systems**: may include:
• location of pipework (fire rating of enclosure)
• trade waste plumbing and drainage
• pumped systems
• accessibility
• should not unduly affect building integrity and aesthetic appeal
• should have principles of economy, serviceability, durability and fit for use applied.
**Fittings** may include:

- bends
- junctions
- reflux valves
- inspection openings
- expansion joints.

**Solid removal systems** may remove:

- bone
- dirt
- grit
- metal
- paper
- plastic
- rubbish
- sand
- silt
- wood
- other solid contaminants.

**Grease and oil interceptors** may include:

- coalescing plate separators
- dissolved air flotation (DAF)
- grease traps
- skimmers
- vertical separators.

**Neutralising chambers** may neutralise:

- acid
- alkaline
- chemicals.

**Wash-down areas** may include:

- bin
- commercial and industrial wash-down processes that may or may not require stormwater diversion
- floor
- vehicle
- machinery.

**Bacterial treatment processes** may include:

- aerobic
- anaerobic
- facultative and specialised bacteria for the removal of grease and other contaminants.

**Combined and specialised treatment processes** may include:
- bacterial treatment
- cooling pits
- diffused air flotation systems
- neutralising chambers
- solid removal systems
- specialised treatment.

**System calculations** must include:
- calculating gradient
- interpreting design charts and tables
- calculating pipe sizing
- calculating reduced level
- determining flow and fixture loadings
- sizing treatment system
- storage tank capacity.

**Pumpwell, pumps, controls and equipment requirements** may include:
- access covers
- automatic controls
- capacity
- chains
- corrosion-resistant materials
- detailing
- emergency storage
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- ladder access
- odour control
- macerator requirements
- pump selection
- pump sizing
- pumpwell sizing
- space requirements
- step irons
- valve requirements
- ventilation
- warning system.
Pipe supports include:
- anchors
- bedding
- bracket spacing
- concrete support
- corrosion protection
- cover
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- saddles
- provision for expansion
- wall and ceiling brackets.

Materials may include:
- pipes may include:
  - cast iron or epoxy lined
  - earthenware or vitrified clay pipe (VCP)
  - polyethylene (PE)
  - polypropylene (PP)
  - other approved material
- fittings and fixtures, including sound attenuation requirements.

Jointing methods may include:
- electrofusion welding
- mechanical joints
- rubber ring
- threading.

Installation requirements may include:
- bedding
- pipe protection, which may include:
  - cover
  - corrosion
  - impact
  - fire rating
  - level of workmanship
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for expansion
  - serviceability and access.
**Computer software packages** include:
- proprietary design software
- manufacturer software.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - effect on the environment due to overflow or leakage
  - material selected to convey the type of discharge
  - water efficiency.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.

**Specification** may include:
- access chambers (manholes)
- bedding
- commissioning
- concrete support and detailing specialised components
- jointing
- manufacturer requirements
- materials
- pumps
• safety (WHS)
• support
• testing
• workmanship.

**Testing** may include:

• air pressure
• compliance with authorities’ discharge requirements
• drainage inspection
• hydrostatic
• performance
• quality assurance (QA) audit.

**Commissioning schedule** may include:

• checking for foreign material
• checking system defects
• checking that system functions as per design
• containment
• leak check
• operational commissioning
• pump commissioning
• system certification
• treatment system commissioning.

**Operation and maintenance manual** may include:

• as installed drawings
• certification documentation
• results of commissioning test
• maintenance schedules
• manufacturer brochures and technical information
• odour control
• regular treatment system maintenance
• regular water quality testing
• ventilation
• water auditing.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.  
1.1 Scope of work is established for pump system requirements for wide span and high-rise building projects.

1.2 Pump duties are established.

1.3 Design requirements are determined from plans, specifications, system demands and client brief.

1.4 Cost-benefit and life cycle analysis is conducted comparing a range of pump alternatives, materials and system designs.

1.5 Statutory and regulatory requirements and Australian standards and codes for the design of pump systems are analysed, interpreted and applied.

1.6 Manufacturer requirements and trade, technical and sizing manuals are interpreted.

1.7 Additional research, including a desktop study, is conducted to outline design parameters.

1.8 Flow and pressure tests of hydraulic system are conducted.

1.9 Performance requirements are established, considering safety of system users or building occupants.

2 Plan and detail system components.  
2.1 Pump, controls and pumproom requirements are sized and detailed.

2.2 Layout of pipework systems and type and location of fittings, valves and controls are planned.

2.3 Pipe sizes, velocities, flows and pressures are calculated for a range of applications.

2.4 Energy sources are specified for a range of hydraulic pumping applications.

2.5 Pump plinths and pump mountings are designed for a range of applications.

2.6 Pump impellers are sized and selected.
2.7 Approved materials, jointing methods and installation requirements are specified.

2.8 Allowance for vibration is provided.

3 **Design and size systems.**

3.1 Pump systems are designed for a range of wide span and high-rise building applications.

3.2 Pump acoustic performance is evaluated.

3.3 Net positive suction head calculations are performed.

3.4 Design principles are applied for optimal performance of pump systems.

3.5 Range of delivery systems is designed.

3.6 Pump systems are designed and sized using calculations and computer software packages.

3.7 Sustainability principles and concepts are applied throughout the design process.

4 **Prepare documentation.**

4.1 Client brief of the desired design is prepared.

4.2 Plans and specification details are prepared for a range of pump systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - liaise with others to publish reports
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Literacy skills to:
  - apply design concepts and principles relating to hydraulic systems and undertake a literature review
  - produce report to a professional standard
  - read and interpret:
    - documents and resources identified through the literature review
    - plans, specifications and drawings
    - standards, manufacturer requirements and manuals
    - statutory and regulatory requirements
    - other relevant documentation
  - undertake document analysis, including impacts and evaluation results

- Initiative and enterprise skills to develop creative and responsive approaches

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - research, collect, organise and understand information relating to the design of pump systems
  - take initiative and make decisions

- Problem-solving skills, including the ability to:
  - identify typical faults and action required to rectify problems
  - analyse requirements, consider options and design an appropriate system

- Technical skills to:
  - design associated piping and components for hydraulic systems
  - specify, select and size pumps

- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- hazards associated with pumping equipment used in hydraulic systems
- key features of work plans and specifications
- approved installation methods for pump systems
- principles of technology in the design of pump installations for hydraulic systems
- relevant Australian standards, codes, manufacturer specifications, National Construction Code (NCC) and operating procedures relevant to the sector
- research methods, report writing and publishing, including who to contact and how to publish reports
- terminology and definitions used in pump installation
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum provide evidence of the ability to:

- design, size and document required pumping systems for the hydraulic services installation required for a high-rise mixed development building to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level (fixtures are included in the basement) and a wide span project (such as a school or industrial complex) to include:
  - applying sustainability principles and concepts throughout the design of pump system
  - evaluating and documenting design parameters to relevant Australian standards, codes, and hydraulic system client, regulatory and manufacturer requirements
  - planning and detailing system components, including:
    - ancillaries
    - control panel
    - fittings
    - flow switches
    - mounting
    - piping
    - plinths
    - pressure switches
    - pump duty
  - complying with WHS regulations applicable to workplace operations
- applying organisational quality procedures and processes
- using appropriate calculations and computer software
- developing a cost-benefit lifecycle analysis for a range of systems
- preparing plans and specification
- preparing a testing and commissioning schedule
- preparing an operation and maintenance manual
- communicating with others to ensure safe and effective work site operations
- producing safety and emergency procedures.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the
candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**
- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout of pump systems for wide span and high-rise building projects
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Pump types may include:**
- centrifugal
- circulating
- constant flow variable speed
- macerator
- multiple stage
- piston
- positive displacement
- submersible
- vacuum
- variable speed control.

**Pump duties must include:**
- constant pressure
- flow rate
- head
- velocity.

**Design requirements may include:**
- acoustic performance
- architectural plans
- available flow and pressure from authority’s main
- building specifications
- fire safety
- owner’s requirements
- pipework identification
- pump duty
- sizing of pipework
- ventilation
- vibration
- viscosity of fluids.
Cost-benefit and life cycle analysis:

- includes balancing initial cost with durability, longevity, maintenance and ongoing fuel and energy cost requirements
- compares the range of suitable materials, pumps and system designs available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials.

Statutory and regulatory requirements may include:

- Acts and regulations, and commonwealth, state or territory, and local government requirements.

Australian standards and codes may include:

- AS/NZS3500 National plumbing and drainage
- AS2419 Fire hydrant installations – system design, installation and commission
- AS/NZS1547 On-site domestic wastewater management
- AS2200 Design charts for water supply and sewerage
- National Construction Code
- other relevant Australian standards.

Manufacturer requirements may include:

- material installation specifications
- pump tables
- pipe sizing
- recommended installation and fixings for pipework
- technical and trade manuals
- ventilation requirements.

Desktop study may include collection and interpretation of data

- architectural and building plans
- developer plans
for design purposes in:

- manufacturer data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Flow and pressure tests may include:

- on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa).

Performance requirements include:

- flow, velocity, pressure and discharge requirements, to satisfy the requirements of the hydraulic system.

Pump, controls and pumproom requirements may include:

- acoustics
- ancillaries
- automatic controls
- inlet and outlet design
- installation and mounting
- plinths
- pump sizing and selection
- space
- ventilation
- vibration.

Layout of pipework systems may include:

- access
- identification
- insulation
- isolation
- maintenance
- principles of economy, serviceability, durability and fit for use
- replacement.

Fittings and valves may include:

- fittings:
  - bends
  - flanges
  - inlet and outlet pressure gauges
• tees
• unions
• valves:
  • air relief
  • excess pressure
  • isolating
  • non-return
  • pressure limiting
  • pressure reduction
  • strainers
  • vibration couplings.

**Energy sources** may include:
• diesel and diesel-electric generator sets
• electrical, single phase and three-phase
• petrol.

**Pump plinth** bases designed to resist forces exerted by pump may include:
• concrete
• masonry
• timber
• steel.

**Pump mountings** may include:
• anchoring bolts
• inertia pads
• rubber and synthetic
• spring loaded
• vibration mounts.

**Materials:**
• piping may include:
  • copper (Cu)
  • galvanised steel
  • stainless steel
  • polyethylene (PE)
  • polypropylene (PP)
  • polybutylene (PB)
  • other approved material
• pumps may include:
  • cast iron
  • bronze
- stainless steel
- other appropriate materials.

**Jointing methods** may include:
- brazing
- electrofusion welding
- mechanical joints
- other approved jointing method.

**Installation requirements** may include:
- pipe protection, which may include:
  - corrosion
  - impact
  - fire rating
  - level of workmanship.
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for vibration
  - serviceability and access
  - thrust brackets.

**Delivery systems** may include:
- circulation
- constant flow variable speed pump
- hydropneumatic
- lift
- pressure
- rising main
- vacuum.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - effect on the environment due to pump or pipe failure
  - pump efficiency.
**Plans:**

- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.

**Specification** may include:

- acoustic performance
- fire safety
- jointing
- manufacturer requirements
- materials
- pump duty
- residual pressures
- safety (WHS)
- specialised components
- support
- testing
- valve selection
- vibration control
- workmanship.

**Testing** may include:

- defect inspection
- hydrostatic
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:

- system certification
- exhaust pipe check
- flow check
- leak check
- pressure check
- system purge
- system defects
- system functions as per design
- valve operation
- acoustic performance.

*Operation and maintenance manual* may include:

- as installed drawings
- results of commissioning test
- certification documentation
- emergency shut-down procedures
- maintenance schedules
- manufacturer brochures and technical information
- valve function.

CPCPPS5032A Design siphonic stormwater drainage systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5012A

Unit Descriptor
This unit of competency specifies the outcomes required to design siphonic stormwater drainage systems, determine installation details, and prepare specifications for a range of residential, commercial and industrial buildings.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 *Scope of work* is established for siphonic stormwater drainage systems.

1.2 *Design requirements* are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 *Siphonic system attributes* are evaluated and *cost-benefit analysis* is conducted, comparing a range of pipe materials and system designs.

1.4 *Statutory and regulatory requirements and relevant Australian standards and codes* for the design of siphonic stormwater drainage systems are analysed and applied.

1.5 Stormwater design manuals, *manufacturer requirements* and trade and technical manuals are interpreted.

1.6 Additional research, including a *desktop study*, is conducted to outline design parameters.

1.7 Factors that contribute to quality, safety and time efficiency are determined.

1.8 *Performance requirements* are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 Siphonic stormwater drainage systems are integrated with the building structure.

2.2 Volume of roof water and stormwater is calculated using a range of approved methods.

2.3 *Layout of pipework systems*, and type and location of *fittings* are planned.

2.4 *Pipe size and flow requirements are calculated* for a range of applications according to stormwater collection requirements.

2.5 *Pipe supports* are designed for a range of applications.

2.6 Approved *materials and components, jointing methods*
and installation requirements for siphonic stormwater drainage systems are specified.

3 Design and size systems.

3.1 Siphonic stormwater drainage systems are designed for a range of applications.

3.2 Catchment areas are calculated, collection points determined, and siphonic systems sized.

3.3 Siphonic stormwater drainage systems are designed and sized using calculations and computer software packages.

3.4 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specification are prepared for a range of siphonic stormwater drainage systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to develop creative and responsive approaches

- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements

- numeracy skills to:
  - apply measurements and calculations
  - interpret data

- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of siphonic stormwater systems
  - take initiative and make decisions

- problem-solving skills to analyse requirements, consider options and design an appropriate system

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - determine installation details for siphonic stormwater drainage systems
  - prepare specifications for siphonic stormwater drainage systems

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- common terminology and definitions used in design of siphonic stormwater drainage systems for residential, commercial and industrial buildings
- drafting principles
- nature of materials used and effects of performance under various conditions
- procedures for estimating volume of stormwater run-off from rainwater collection areas
- principles of technology in the design of siphonic stormwater drainage systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum provide evidence of the ability to:

- design, size and document the layout details, including a specification of a siphonic system for a site incorporating a high-rise mixed development building and a wide span project (such as a school) to include:
  - applying sustainability principles and concepts throughout
  - evaluating and documenting design parameters to relevant Australian standards, codes and manufacturer requirements for a range of siphonic stormwater drainage systems
  - evaluating health risks associated with the siphonic system
  - designing and sizing siphonic stormwater drainage systems using appropriate calculations and computer software
  - selecting materials and components for compliance, fit for purpose, durability, compatibility and cost-effectiveness
  - preparing testing and commissioning schedules
  - producing operation and maintenance manuals
  - communicating with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and
the practical requirements of the workplace.

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** must include:

- calculation of rainfall intensities in given catchment areas, including:
  - average rainfall intervals
  - meteorological information
  - rainfall intensities
  - stormwater collection area calculations
  - time and concentration
- interpretation of plans and specifications
- sizing and documenting layout of siphonic stormwater drainage systems for residential, commercial and industrial applications and for
either new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:
- owner requirements
- architectural plans
- building specifications
- pipework identification
- catchment area
- approved point of discharge
- acoustic performance.

**Siphonic system attributes** must include:
- availability
- cost
- installation requirements
- risks
- site conditions.

**Cost-benefit analysis:**
- compares range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- must include:
  - design styles
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation.

**Statutory and regulatory requirements and relevant Australian standards and codes** may include:
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- commonwealth, state or territory requirements and local governments requirements
- National Construction Code
- other relevant Australian standards and codes.

**Manufacturer requirements** may include:
- material specifications
- sizing tables
Desktop study may include collection and interpretation of existing data for design purposes in:

- architectural and building plans
- manufacturer data
- developer plans
- other documents, including:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Performance requirements may include:

- pipe flow velocities, flow conditions and discharge requirements, established using relevant Australian standards, codes and local authorities’ requirements.

Layout of pipework systems:

- must include:
  - acoustic performance
  - amenity of the building
  - clipping and pipe support
  - fireproofing
  - function of the building
  - impingement on floor heights
  - location of pipework (fire rating of enclosure)
  - materials to be used
  - size of penetrations
  - type of building structure
- should not unduly affect building integrity and aesthetic appeal
- should have principles of economy, serviceability, durability and fit for use applied.

Fittings may include:

- bends
- junctions.

Pipe size and flow requirement

- discharge
**Calculations** may include:
- flow
- manufacturers’ tables
- sizing, according to relevant Australian standards and codes
- velocity
- volumes.

**Pipe supports** may include:
- anchors
- bracket spacing
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

**Materials and components** may include:
- appropriate materials specified, based on fit for purpose, durability, compatibility and cost-effectiveness, including:
  - copper (Cu)
  - polyethylene (PE)
  - polypropylene (PP)
  - stainless steel
  - other approved material
- components, may include:
  - clips
  - fasteners
  - fittings
  - pipework
  - siphonic collection inlets.

**Jointing methods** may include:
- brazing
- electrofusion welding
- mechanical joints
- rubber ring
- other approved jointing methods.

**Installation requirements** must include:
- pipe protection, which may include:
  - corrosion
• impact
• fire rating
• level of workmanship
• manufacturer-recommended specific fixings
• pipe support
• provision for expansion
• serviceability and access.

Computer software packages may include:

• manufacturer software
• proprietary design software.

Sustainability principles and concepts:

• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
  • efficient use of material
  • efficient energy usage/capital outlay comparison
  • effect on the environment due to overflow or leakage
  • consideration of the Green Building Council of Australia rating scheme.

Plans:

• may include:
  • axonometrics
  • elevations
  • details
  • cross-sections
  • isometrics
  • schematics
  • sections
• may be produced using:
  • computer generation
  • drawing equipment.

Specification may include:

• commissioning
• bedding
• support
• jointing
• manufacturer requirements
• materials
• testing
• workmanship
• work health and safety (WHS).

**Testing** may include:

• hydrostatic test
• inspection
• performance
• quality assurance (QA) audit.

**Commissioning schedule** may include:

• system certification
• checking for foreign material
• checking leaks
• cleaning grates
• system defects
• system functions as per design.

**Operation and maintenance manual** may include:

• as installed drawings
• certification documentation
• results of commissioning test
• maintenance schedules
• manufacturer brochures and technical information
• check for blockages
• leak detection
• regular inspection
• regular maintenance requirements.

**Unit Sector(s)**

**Functional area**

**Unit sector** Plumbing and services

CPCPPS5033A Design vacuum sewerage systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5013A

Unit Descriptor
This unit of competency specifies the outcomes required to design vacuum sewerage systems, determine installation details, and prepare specifications for a range of residential, commercial and industrial buildings, using proprietary components.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 **Scope of work** is established for vacuum sewerage systems designed for sewer infrastructure systems and high-rise building projects.

1.2 **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 **Vacuum sewerage system attributes** are evaluated and a **cost-benefit analysis** is conducted, comparing a range of pipe materials and system designs.

1.4 **Statutory and regulatory requirements and relevant Australian standards and codes** for the design of vacuum sewerage systems are analysed and applied.

1.5 **Manufacturer requirements** and trade and technical manuals are interpreted.

1.6 Additional research, including a *desktop study*, is conducted to outline design parameters.

1.7 Factors that contribute to quality, safety and time efficiency are determined.

1.8 **Performance requirements** are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 **Layout of pipework systems** and type and location of fittings, valves and controls are planned.

2.2 Sewerage loading is calculated using equivalent population (EP) density for a residential development in excess of 25 dwellings and National Construction Code for a high-rise project.

2.3 **Pipe size calculations** are performed for a range of applications according to regulations and manufacturer requirements.

2.4 **Pipe supports** are designed for a range of applications.

2.5 **Vacuum pumping station and pump control requirements** are sized and detailed.
2.6 Approved materials, jointing methods and installation requirements for vacuum sewerage systems are specified.

2.7 Approved point of discharge to authority’s main is determined.

2.8 Acoustic performance of the system is included in the plan.

3 Design and size systems.

3.1 Vacuum sewerage systems are designed for a range of applications.

3.2 Vacuum sewerage systems are designed and sized using calculations and computer software packages.

3.3 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specifications are prepared for a range of vacuum sewerage systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to develop creative and responsive approaches
- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- numeracy skills to:
  - apply measurements and calculations
  - interpret data
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of vacuum sewerage systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine installation details for vacuum sewerage systems
  - prepare specifications for vacuum sewerage systems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- relevant Australian standards, including Sewerage Code of Australia
- manufacturer specifications, including hazards identified in relation to devices and systems used
- fire safety requirements
- other codes or standard operating procedures
- pipe-sizing procedures
- pump selection and rising main requirements
- ventilation requirements
- odour control
- regulatory authorities’ requirements
- nature of materials used and effects of performance under various conditions
- common terminology and definitions used in the design of vacuum sewer systems
- principles of technology in the design of sewer infrastructure systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum, provide evidence of the ability to:

- design, size and document the installation and layout details for a vacuum infrastructure sewer system for a:
  - residential development of 50 properties, incorporating:
    - vacuum sewage collection chambers
    - vacuum sewer mains
    - vacuum pump station
    - pump rising main
    - ventilation
    - odour control
  - high-rise mixed development building, to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level (fixtures are included in the basement), incorporating:
    - vacuum pump station
    - vacuum sanitary drainage system
    - pump rising main
    - ventilation
    - odour control
  - apply sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluate and document design parameters, including client, regulatory and manufacturer requirements and relevant Australian standards and codes for a range of complex sanitary plumbing and drainage systems
- evaluate health risks associated with the sanitary
plumbing and drainage system

- calculate pipe sizes according to regulations and manufacturer requirements
- design and size vacuum sewerage systems using appropriate calculations and computer software
- select materials and components for compliance, fit for purpose, durability, compatibility and cost-effectiveness
- prepare a testing and commissioning schedule
- produce an operation and maintenance manual
- communicate with others to ensure safe and effective workplace operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if
used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**
- must include:
  - interpreting plans and specifications
  - sizing and documenting layout of vacuum sewage systems, including residential, commercial and industrial
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:
- acoustic performance
- architectural plans
- building specifications
- fire safety requirements
- flow requirements and sizing of pipework
- odour control
- owner requirements
- pipework identification
- Sewerage Code of Australia
- vacuum pumping station
- ventilation requirements.

**Vacuum sewerage system attributes** must include:
- availability
- cost
- flexibility
- installation requirements
- low water usage
- risks
- sewerage loading
- site conditions.

**Cost-benefit analysis:**
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - energy costs
  - expected design life
- labour costs
- material costs
- safety factors
- speed of installation
- suitability of design.

**Statutory and regulatory requirements and relevant Australian standards and codes** may include:

- Acts, regulations and commonwealth, state or territory, and local government requirements
- Sewerage Code of Australia
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- Environmental Protection Authority (EPA)
- National Construction Code
- other relevant Australian standards or codes.

**Manufacturer requirements** may include:

- material specifications
- collection and storage systems
- design and installation
- equipment installation
- pump installation
- selection of compatible sanitary fixtures
- technical manuals.

**Desktop study** may include collection and interpretation of data for design purposes in:

- architectural and building plans
- developer plans
- manufacturer data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - sewer detail maps
  - other reports as available.

**Performance requirements** may include:

- discharge requirements
- durability
- emergency storage and/or power backup
- longevity
- noise level
- self-cleaning ability
- sufficient capacity.

**Layout of pipework systems:**

- sewer infrastructure systems must include consideration of:
  - cover
  - grade
  - location of vacuum pump station
  - location vacuum sewage collection chambers
  - odour control
  - pipe access
  - ventilation

- high-rise building projects must include consideration of:
  - acoustic performance
  - amenity of the building
  - clamping and pipe support
  - location of pipework (fire rating of enclosure)
  - function of the building
  - impingement on floor heights
  - materials to be used
  - size of penetrations
  - type of building structure

- should not unduly affect building integrity and aesthetic appeal
- should include principles of economy, serviceability, durability and fit for use should be applied.

**Fittings, valves and controls**

- fittings:
  - bends
  - elbows
  - inspection and maintenance access
  - tees
  - unions

- valves:
  - backflow prevention
  - isolating
  - non-return
- strainers
- vacuum diaphragm valve
- controls:
  - pneumatic control switch assembly
  - vacuum management system.

**Pipe size calculations** must include:
- determining flow and fixture loadings
- EP density
- calculating gradient
- interpreting design charts and tables
- determining self-cleaning velocities
- manufacturer requirements
- probable simultaneous demand.

**Pipe supports** may include:
- bedding
- bracket spacing
- concrete support
- corrosion protection
- cover
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- thrust blocks
- wall and ceiling brackets.

**Vacuum pumping station and pump control requirements** may include:
- access covers
- automatic controls
- capacity
- corrosion-resistant materials
- detailing
- emergency storage
- emergency power supply
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- macerator requirements
- odour control
- pneumatic control switch assembly
pump selection
pump sizing
pumpwell sizing
space requirements
vacuum pump systems
valve requirements
ventilation
warning system.

**Materials:**

- appropriate materials specified based on:
  - compatibility
  - cost effectiveness
  - durability
  - fit for purpose
- may include:
  - copper (Cu)
  - polyethylene (PE)
  - polypropylene (PP)
  - polyvinyl chloride (PVC)
  - stainless steel
  - other approved material.

**Jointing methods** may include:

- brazing
- electrofusion welding
- flanged
- mechanical joints
- rubber ring
- solvent cement welding
- threading.

**Installation requirements** may include:

- acoustic performance
- bedding
- pipe protection, which may include:
  - cover
  - corrosion
  - impact
  - grade
  - level of workmanship.
- fire rating
• manufacturer-recommended specific fixings
• pipe support
• provision for pipe movement
• serviceability and access.

**Computer software packages** may include:

• manufacturer software
• proprietary design software.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
  • efficient use of material
  • capital outlay/energy usage comparison
  • positive effect on the environment in regard to no potential overflow or leakage
  • water efficient
  • consideration of the Green Building Council of Australia rating scheme
  • local environment consideration overflow disposal/reuse.

**Plans:**

• may include:
  • axonometrics
  • cross-sections
  • details
  • elevations
  • isometrics
  • schematics
  • site
  • sections
• may be produced using:
  • computer generation
  • drawing equipment.

**Specification** includes:

• access chambers (manholes)
• bedding
• commissioning
- concrete support and detailing specialised components
- jointing
- manufacturer requirements
- materials
- odour control
- pump rising main
- safety (WHS)
- selection of compatible sanitary fixtures
- support
- testing
- vacuum pump station
- vacuum sewage collection chambers
- vacuum sewer mains
- ventilation
- workmanship.

*Testing* may include:
- compressed air test
- flow testing
- hydrostatic test
- inspection checklist
- performance
- vacuum
- quality assurance (QA) audit.

*Commissioning schedule* must include:
- system certification
- check for foreign material
- checking leaks
- emergency procedures
- system defects
- system functions as per design.

*Operation and maintenance manual* includes:
- as installed drawings
- results of commissioning test
- certification documentation
- maintenance schedules
- manufacturer brochures and technical information
- operating procedures.

CPCPRF2022A Select and install roof sheeting and wall cladding

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPRF2012A

Unit Descriptor
This unit of competency specifies the outcomes required to select and install roof sheeting, steel battens and wall cladding for roofs. It includes the selection and installation of non-metallic roof materials associated with metal roofing (excluding roof tiles and slate) and of insulation materials.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained from site inspection.
   1.2 Work health and safety (WHS) and environmental requirements selecting and installing roof sheeting and wall cladding are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.
   1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient selection and installation of roof sheeting and wall cladding.

2 Identify insulation requirements.
   2.1 Level of insulation from rain and other noise, condensation control and heat transfer reduction is determined.
   2.2 Installation method, insulation supports and insulation materials are identified to meet performance requirements, plans, specifications, regulatory authorities’ requirements and relevant information.
   2.3 Quantity and type of insulation materials required are calculated from design drawings and specifications in compliance with local authorities’ requirements.
3 Select sheeting, cladding and non-metallic materials.

3.1 Appropriate roof sheeting and wall cladding are identified to comply with design specifications.

3.2 Quantity and type of manufactured roof coverings and/or fittings required are calculated from design drawings and specifications in compliance with local authorities' requirements.

3.3 Manufactured non-metallic roof materials are identified from plans and specifications and verified as compliant with design requirements and regulatory authorities' requirements.

3.4 Proposed roof and wall coverings, sealant, non-metallic materials, fixing materials, roofing and catchments are selected and checked for compatibility.

3.5 Materials, including insulation, are identified, ordered and collected according to workplace procedures.

3.6 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported.

4 Install roof sheeting or wall cladding.

4.1 Safety mesh and thermal insulation are fixed according to relevant Australian standards, job specification and manufacturer requirements.

4.2 Sheets are marked and trimmed prior to fixing and cut edges are treated according to manufacturer specifications.

4.3 Sheets, cladding and non-metallic materials are fixed in compliance with relevant Australian standards and manufacturer specifications.

4.4 Sustainability principles and concepts are applied throughout the installation.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations.
and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete written workplace documentation
  - document scope of work and work practices
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to apply measurements and calculations

- planning and organising skills to plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - select and install non-metallic roof materials associated with metal roofing (excluding roof tiles and slate) and insulation materials

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
• job safety analysis (JSA) and safe work method statements (SWMS)
• processes of selecting and installing roof sheeting and wall cladding
• relevant WHS regulations and fall protection codes and requirements
• relevant statutory requirements related to installing roof sheeting and wall cladding, including non-metallic materials
• SI system of measurement
• types of fasteners, fixings and sealants and their application to the installation of roof coverings
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to selecting and installing roof coverings and wall cladding
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, calculating the requirements and selecting and installing roof sheeting, wall cladding and insulation for two roof structures, each roof structure being a minimum of 4 square metres area, one of which incorporates 2 square metres of non-metallic roof sheeting
- both installations may include insulation, flashings and cappings, using the pierced and concealed fastening methods, ensuring:
  - application of sustainability principles and concepts throughout the installation
  - correct identification of requirements and details of proposed installation
  - correct fit of the completed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and
safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- elevated work platforms
- fall protection equipment
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
• measuring equipment.

**Roof sheeting** may include:
• metal and non-metallic (clear and coloured) sheets
• other approved materials.

**Installation** may include:
• fitting safety mesh and rainwater fittings.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
  • relevant Australian standards
  • safe work procedures relating to selecting and installing roof sheeting and wall cladding
  • signage
  • verbal, written and graphical instructions
  • work bulletins
  • work schedules, plans and specifications.

**Insulation materials** may include:
• batts
• interlocking sections
• loose fill
• rolls.

**Materials** for selecting and installing roof sheeting and wall cladding may include:
• approved roof battens
• cappings
• fixings and fasteners
• flashings
• insulation, including:
  • fibreglass
- laminate
- polyethylene
- reflective foil
- straw
- wool
- insulation supports, including:
  - plaster board
  - timber board
  - wire mesh
- metal roof covers of concealed or pierce fixed types
- moulds
- plastic building sheets for walls and roofs
- rain water goods, including:
  - aluminium
  - copper
  - fibreglass
  - polycarbonate
  - stainless steel
  - steel
  - zincoalume
- rivets and sealants
- self drilling and tapping screws
- trims
- other approved materials.

**Fault reporting:**
- may be written or verbal
- is to be according to company's workplace procedures.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

order form and for acceptable condition, and faults are reported.

2.4 Work area and materials are prepared to support efficient installation.

2.5 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Install storage system.

3.1 Set out complies with design drawings or instructions.

3.2 Preparatory work, including installation of tank stand or standing, is carried out to specification without damage to surrounding structures or existing services.

3.3 System is installed according to job specification and statutory and regulatory authorities’ requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to:
  - apply calculations and measurements
  - interpret data
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for commissioning water storage tanks for use
- processes for accessing information and for calculating material requirements
• properties of water, including:
  • effect of gravity and atmospheric pressure
  • procedures for maintaining water quality
  • sources of contamination and impurities
• regulations and requirements pertaining to collecting and storing drinking water and non drinking water
• relevant statutory requirements related to collecting and storing roof water
• SI system of measurements
• water storage installation processes
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications for determining requirements, planning and installing storage tanks for drinking water
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, completing the following in respect of roof water collection and storage systems:
  - calculate the water catchment area of a roof, the gutter and downpipe materials required and the amount of water storage required for a given job
  - determine system requirements from plans and specifications according to local authorities’ requirements
  - planning the layout and installation of a storage tank of not less than 1000 litres capacity, incorporating an inlet connection and a first flush device from a roof catchment area, and an overflow to be connected to an approved stormwater point of discharge, ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed storage
    - correct selection and use of appropriate processes, tools and equipment
• completing all work to specification
• compliance with regulations, relevant Australian standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning.
knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and

- handling of materials
- hazard control
- personal protective clothing and equipment
regulations and may include: prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Roof water collected and stored** may be for:
- drinking or non-drinking purposes.

**Quality assurance requirements** may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Storage tanks** may be of:
- any authorised material.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to determining, preparing and installing collection and storage systems for roof water
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** for installing storage tanks are to include:

- water storage tanks, and components of authorised materials that comply with local authorities’ requirements, such as:
  - coated steel materials
  - metal guttering
  - PVC
  - sealants
  - tank stand.

**Fault reporting:**

- may be written or verbal
- is to be according to company's workplace procedures.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - rainwater harvesting
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.
Installation covers:

- both gravity and pump retrieval systems.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- hand and power tools
- ladders
- levelling equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - excavation equipment
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
- measuring equipment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained for component to be designed and fabricated.

1.2 Work health and safety (WHS) and environmental requirements associated with the design and fabrication of curved roof coverings are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability and faults are reported.

1.6 Work area is prepared to support efficient design and fabrication of curved roof coverings.

2 Design covering.

2.1 Roofing material is selected that is suitable for the fabrication process, job requirements and relevant information.

2.2 Curvature of roof covering is ascertained and used to determine the starting and finishing points of curves.

2.3 Design and freehand sketch of roof covering are created to form the basis of fabrication patterns.

2.4 Fabrication patterns are drawn based on design and
freehand sketch of roof covering.

2.5 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

3 **Fabricate covering.**

3.1 **Material** list is determined from patterns and calculations.

3.2 Method of fabrication, tools and machinery for fabrication are determined to suit job requirements.

3.3 Roof covering is marked out according to drawings, patterns, or calculations and prefabricated.

3.4 Components are marked and packaged for delivery to point of installation.

4 **Clean up.**

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Literacy skills to:
  - complete written workplace documentation
  - develop materials list
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- Characteristics of various metals and finishes
- Design concepts and performance measures for curved roof coverings
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of designing and fabricating curved roof coverings
- relevant statutory and regulatory authority requirements related to metal roofs
- SI system of measurement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for the design and fabrication of curved roof coverings
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of a bull nosed verandah roof incorporating one internal and one external angle, designing and fabricating the curved roof coverings, ensuring:
  - application of sustainability principles and concepts
  - correct identification of design criteria and fabrication requirements
  - fabrication conforms with the design requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- drafting equipment
- hand and power tools
- lifting and load shifting equipment, including:
  - chain blocks
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - machinery for shaping the roof material
  - measuring equipment.

**Fault reporting:**
- may be written or verbal
- is to be according to company workplace procedures.

**Curved roof covering** may be:
- barrel shaped
- concave
- convex
- hyperbolic
- paraboloid.

**Information may include:**
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to the design, and fabrication of coverings for curved roofs
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Fabrication patterns may be:**
- actual size or scaled.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

**Materials may include:**
- drawing materials
- manufacturer catalogues and specifications
- metal roof sheeting of concealed or fixed type and accessories.
Unit Sector(s)

Functional area

Unit sector: Plumbing and services

Custom Content Section

Not applicable.
CPCPRF3021A Receive roofing materials

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPRF3011A

Unit Descriptor
This unit of competency specifies the outcomes required to coordinate the delivery, receipt and handling of roofing materials on a site.

Application of the Unit
Site location for work application may be either domestic or commercial and may be an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  
1.1 Plans and specifications are obtained and confirmed by site visit.  
1.2 *Work health and safety* (WHS) and *environmental requirements* materials handling are adhered to throughout the work.  
1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.  
1.4 *Tools and equipment*, including personal protective equipment and barricades and signs, are selected and checked for serviceability.  
1.5 Work area is prepared to support efficient receipt of roofing materials.

2 Plan delivery.  
2.1 Plans, specifications, *material* quantity details and other relevant *information* are interpreted to determine amount and type of material to be delivered to site.  
2.2 Site is visited to determine capacity, identify risks and hazards, and identify load-handling methods and techniques.  
2.3 Spot load limits on roof frame structure are obtained from structural engineer.  
2.4 Loads are sequenced according to job requirements and work site capacity.  
2.5 Orders are placed specifying items, quantities and sequence of delivery of each load.
2.6 Deliveries are planned and sequenced in conjunction with others involved in or affected by their arrival.

3 Receive delivery of materials.

3.1 Employees are informed of delivery process.

3.2 Access to site for crane and other support vehicles and equipment is cleared and provided.

3.3 Delivery sites and spot load sites and material securing equipment are prepared.

3.4 Safety barricades and signs are positioned.

3.5 Loads are moved from delivery vehicle to spot load positions or other determined site location.

3.6 Loads are covered and secured to prevent damage according to standards and manufacturer requirements, and faults are reported.

3.7 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Clean up.

4.1 Safety barricades and signs are removed.

4.2 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.3 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.4 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform employees of delivery process
  - plan and sequence deliveries with others
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply calculations
- planning and organising skills to:
  - coordinate receipt of deliveries of roofing materials to a work site
  - plan and set out work
  - sequence the delivery of materials
- relocating materials and securing them within the site
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- application of relevant regulations and workplace procedures
- deployment of relevant human and physical resources and facilities
- identification and correct use of equipment, processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- methods of working and correct selection and use of equipment relevant to work activity
- relevant WHS regulations and fall protection codes and requirements
- relevant statutory requirements related to transportation and storage of roofing materials
- SI system of measurement
- techniques and procedures for delivery of roof plumbing materials
- workplace planning and estimation processes for delivery of roof plumbing materials
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to receiving roofing materials
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of a roofing project, assessing roofing material requirements, sequencing their delivery to correspond with a planned construction project, receiving the materials (including the location of spot points) and securing arrangements, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of their delivery
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - lifting and placement of loads
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
• work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:

- barricades and signage
- fall protection equipment
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers.

**Materials** that may be received include:

- blanket and batt types
- industrial roof components
- laminate
- metal rainwater products
- metal roof covers of concealed or pierce fixed types
- metal self drilling and tapping screws
- plastic building sheets for walls and roofs
- prefabricated roofing components
- rainwater goods
- rivets and sealants (silicon and solder)
• thermal insulation of reflective foil.

**Information** may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to receiving roofing materials
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Fault reporting:**

• may be written or verbal
• is to be according to company's workplace procedures.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient use and recycling of material
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

CPCRF3022A Fabricate and install roof drainage components

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCRF3012A

Unit Descriptor
This unit of competency specifies the outcomes required to fabricate and install roof drainage components and rainwater goods for commercial and residential roof systems.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained and confirmed by site inspection.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with fabricating and installing roof drainage components are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities*’ requirements.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support the fabrication and installation of roof drainage components.

2 Identify installation requirements.

2.1 Rainwater management system is identified as suitable for preventing rainwater penetration into building structure.

2.2 *Roof drainage components* required for installation are identified from drawings and specifications.

2.3 *Fabrication patterns* are drawn based on design and freehand sketch of roof drainage.

2.4 Quantity, type and sizing of drainage components, rainwater materials and accessories required are calculated from drawings and specifications in compliance with relevant Australian standards, local authorities’ requirements and relevant *information*.

2.5 Box gutter support system is fabricated according to relevant Australian standard.

2.6 *Materials* are identified from drawings, specifications, patterns and/or calculations and ordered and collected according to workplace procedures.

2.7 Materials and equipment are checked for compliance.
3 **Fabricate roof drainage components.**

3.1 Method of fabrication, tools and machinery requirements are determined to suit job requirements.

3.2 Materials are marked out from drawings to fabricate roof drainage components.

3.3 Roof drainage components are fabricated in compliance with relevant Australian standards, drawings, specifications and site measurements.

3.4 Components are marked, packaged and prepared for delivery and installation according to workplace procedures.

4 **Set out and install roof drainage components.**

4.1 Components are checked for compliance with docket and order form and for acceptable condition, and arranged in order of installation.

4.2 Roof drainage components are set out to comply with job specifications and site measurements.

4.3 Structural supports are installed in compliance with job specifications.

4.4 Roof drainage components are jointed in compliance with job specifications and relevant Australian standards.

4.5 Roof drainage system is installed according to relevant Australian standards and job specifications.

4.6 *Sustainability principles and concepts* are applied throughout the installation.

4.7 System is performance tested for satisfactory installation and remedied.

5 **Clean up.**

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations.
5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to select, fabricate, joint and install gutter and downpipe systems to effectively drain a roof to an authorised discharge point
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- capacity of fabrication machinery involved in the production of roof drainage components
- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- characteristics of various metals and finishes
- corrosion prevention treatment requirements of cut sheets
- design concepts and performance measures for roof drainage components
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- joining of materials
- processes of fabricating, jointing and fixing roof drainage components
- relevant WHS regulations and fall protection codes and requirements
- relevant statutory requirements related to fabricating and installing roof drainage components
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the fabrication and installation of roof coverings
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to the fabrication and installation of roof drainage components
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of a roof-management system for a roofed area of at least 4 square metres, determining the requirements, selecting, fabricating and installing:
  - valley gutter
  - box gutter, to include a sump or rainhead and overflow
  - eaves gutter and downpipe system, complete with gutter supports, expansion joints and caps
- ensuring:
  - application of sustainability principles and concepts throughout the installation
  - correct identification of requirements and details of proposed installation
  - correct fit of the completed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- drawing equipment
- fall protection equipment
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
- rollers
- measuring equipment.

**Roof drainage components** may include:

- box gutters
- downpipes
- eaves gutters
- gutter support system
- parapet gutters
- rainwater heads
- siphonic drainage downpipe systems and materials
- standing overflows
- sumps
- valley gutters.

**Fabrication patterns** may be:

- actual size or scaled.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to fabricating and installing roof drainage components
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** for fabricating and installing roof drainage components

- fibreglass
- laminate
- metal gutter and structural supports
may include:

- metal rainwater goods
- metal roof covers of concealed or pierce fixed types
- metal self drilling and tapping screws
- plastic building sheets for walls and roofs
- polyethylene
- PVC sheet goods
- rivets and sealants
- thermal insulation of reflective foil
- roof tiles.

Fault reporting:

- may be written or verbal
- is to be according to company's workplace procedures.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - rainwater harvesting
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

CPCPRF3023A Fabricate and install external flashings

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPRF3013A

Unit Descriptor
This unit of competency specifies the outcomes required to fabricate and install external flashings for roof and ceiling installations.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

| 1 Prepare for work. | 1.1 Plans and specifications are obtained and confirmed by site inspection. |
| 1.2 Work health and safety (WHS) and environmental requirements associated with fabricating and installing external flashings are adhered to throughout the work. |
| 1.3 Quality assurance requirements are identified and adhered to according to workplace requirements. |
| 1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements. |
| 1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability. |
| 1.6 Work area is prepared to support efficient fabrication and installation of external flashings. |

| 2 Identify installation requirements. | 2.1 External flashings to be installed are identified and working drawings and patterns are developed from job drawings, plans, specifications, site measurements and relevant information. |
| 2.2 Materials, coatings, fixings, sealants and fasteners are checked for compliance with plans, specifications and standards and are compatible with adjacent materials and catchment. |
| 2.3 Materials are identified, ordered and collected according to workplace procedures. |
2.4 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and faults are reported.

3 Fabricate and install external flashings.

3.1 External flashings are fabricated in compliance with standards, plans, specifications and site measurements.

3.2 Support framework is set out where required and fixed to comply with plans, specifications and manufacturer recommendations.

3.3 Thermal insulation, where required, is set and fixed according to plans, specifications and cladding manufacturer's recommendations.

3.4 Sustainability principles and concepts are applied throughout the installation.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- design concepts and performance measures for various external flashings
- electrolysis and problems associated with the use of dissimilar metals
• job safety analysis (JSA) and safe work method statements (SWMS)
• processes of fabricating and installing external flashings
• relevant WHS regulations and fall protection codes and requirements
• relevant statutory requirements related to installing external flashings
• SI system of measurement
• types of fasteners, fixings and sealants and their application to the fabrication and installation of external flashings
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the fabrication and installation of external flashings
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications:
  - fabricate and install a minimum of 2 square metres of metal ceiling and associated soffits
  - fabricate and install metal flashings to include an apron, parapet, apron wall, hanging and step, each up to a length of 1.5 metres
  - install a metal fascia up to 2 metres in length, including one external angle and one internal angle
- all fabrication and installation, ensuring:
  - application of sustainability principles and concepts throughout the installation
  - correct identification of requirements and details of the proposed installations
  - correct fit of the completed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Work health and safety* is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- National Construction Code
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- hand and power tools
- ladders
- levelling equipment,
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
- measuring equipment
- perimeter guard rails.

**External flashings** may include:
- metal ceilings
- associated soffits and fascias.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to fabricating and installing external flashings
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** for fabricating and installing external flashings may include:
- cappings
- flashings
- insulation materials, such as foil laminate
- lead
- metal rainwater goods
- metal self drilling and tapping screws
- moulds
- rivets and sealants
- trims
- other approved materials.

**Fault reporting:**
- may be written or verbal
- is to be according to company workplace
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy use
  - selecting appropriate components to ensure minimal environmental impact.

CPCPRF3024A Install roof components

Modification History
Prerequisite unit updated
Minor changes throughout unit, including addition of photovoltaic (solar) panels to range statement
Not equivalent to CPCPRF3014A

Unit Descriptor
This unit of competency specifies the outcomes required to select and install industrial type roofing components in roofs.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with selecting and installing industrial roof components are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient selection and installation of industrial roof components.

2 Identify installation requirements.

2.1 Industrial roof components are identified from plans and specifications and are compatible with adjacent materials and other relevant information.

2.2 Proposed sealant, fixing materials, and roofing and flashing materials are selected and checked for compliance with plans, specifications and relevant Australian standards.

2.3 Materials are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance
with docket and order form and for acceptable condition, and faults are reported.

2.5 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

2.6 Location of installation and opening size are identified from plans and manufacturer specifications.

2.7 Location is checked for obstructions that may affect the installation.

3 **Install roof components.**

3.1 Where required, the industrial component is erected to comply with manufacturer recommendations.

3.2 Industrial roof component is set out to comply with plans, specifications and site measurements.

3.3 Structural supports are installed to comply with plans and specifications.

3.4 Openings are prepared to comply with plans, specifications and relevant Australian standards.

3.5 Mullions, frames, baffles, sheeting and louvre blades are located and fixed to comply with manufacturer recommendations.

3.6 Component is installed to comply with plans, specifications and manufacturer requirements.

3.7 Flashing and waterproofing, including proprietary or purpose-made flashing, are installed to comply with relevant Australian standards, plans, specifications, manufacturer recommendations and regulatory authorities’ requirements.

3.8 Installation is performance tested and remedied as required.

4 **Clean up.**

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
4.3 Documentation is completed according to workplace requirements.
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- **communication skills to:**
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- **literacy skills to:**
  - complete written workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- **numeracy skills to apply measurements and calculations**

- **planning and organising skills to:**
  - plan and sequence tasks with others
  - plan and set out work

- **teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities**

- **technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials**

- **technology skills to:**
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
• processes of erecting and installing industrial roof components
• relevant WHS regulations and fall protection codes and requirements
• relevant statutory requirements related to installing roof components
• SI system of measurement
• types of fasteners, fixings and sealants and their application to the installation of roof components
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements, plan and install industrial components in roofs
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of an industrial roof, determine the material requirements, selecting and installing two of the following components in a roof (one on a ridge line and another in roof sheeting, which may include insulation):
  - thermal vent or a skylight
  - non-mechanised ventilator unit
  - manual box-type louvre unit
  - continuous roof ventilator (ridge or slope mounted), ensuring:
    - application of sustainability principles and concepts
    - correct identification of requirements and details of proposed installations
    - completed installation must fit
    - correct selection and use of appropriate processes, tools and equipment
    - completing all work to specification
    - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement

CPCPRF3025A Install roof coverings to curved roof structures

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPRF3015A

Unit Descriptor
This unit of competency specifies the outcomes required to set out and install roofing to hyperbolic, paraboloid, barrel vault roof, curved roof and bull-nosed roof structures.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

| 1 | Prepare for work. | 1.1 | Plans and specifications are obtained and confirmed by site inspection. |
|   |                   | 1.2 | **Work health and safety** (WHS) and **environmental requirements** installing curved roof structures are adhered to throughout the work. |
|   |                   | 1.3 | **Quality assurance requirements** are identified and adhered to according to workplace requirements. |
|   |                   | 1.4 | Tasks are planned and sequenced in conjunction with others involved in or affected by the work and **statutory and regulatory authorities’ requirements**. |
|   |                   | 1.5 | **Tools and equipment**, including personal protective equipment, are selected and checked for serviceability. |
|   |                   | 1.6 | Work area is prepared to support efficient installation of roof coverings to **curved roof structures**. |

| 2 | Identify installation requirements. | 2.1 | Quantity and type of manufactured roof covering, and fittings and equipment required, are calculated from design drawings and specifications in compliance with relevant Australian standards, local authorities’ requirements and relevant **information**. |
|   |                                   | 2.2 | Proposed sealant, fixing materials, roofing and flashing materials are selected and checked for compatibility. |
|   |                                   | 2.3 | **Materials** and equipment are identified, ordered and collected according to workplace procedures. |
|   |                                   | 2.4 | Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and **faults are reported**. |
|   |                                   | 2.5 | **Sustainability principles and concepts** are observed when preparing for and undertaking work process. |
3 Install roof coverings.

3.1 Safety mesh and thermal insulation are fixed according to relevant Australian standards, job specification and manufacturer requirements.

3.2 Sheets are marked and trimmed prior to fixing and cut edges are treated according to manufacturer specifications.

3.3 Roof covering is installed according to manufacturer specifications.

3.4 Roof covering is performance tested and remedied.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
• processes of fixing covering to curved roof structures
• relevant WHS regulations and fall protection codes and requirements
• relevant statutory requirements related to installing roof coverings to curved roof structures
• SI system of measurement
• types of fasteners, fixings and sealants and their application to the installation of roof coverings
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements, and plan the layout and installation of roof coverings to curved roof structures
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, calculating the requirements and installing the roof covering to a bull-nose or curved roof structure, incorporating one internal and one external corner, ensuring:
  - application of sustainabilty principles and concepts
  - correct identification of requirements and details of proposed installation
  - covering fits the structure
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and
the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Work health and safety* is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
• work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:
• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
• cranes
• fall protection equipment
• hand and power tools
• ladders
• levelling equipment
• lifting and load shifting equipment, including:
  • chain blocks
  • elevated work platforms
  • forklifts
  • hand trolleys
  • hoists
  • restricted height scaffolds
  • rollers
• measuring equipment.
Curved roof structure may be:

- barrel shaped
- concave
- convex
- hyperbolic
- paraboloid.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing roof coverings to curved roof structures
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Materials for installing roof coverings to curved roofs may include:

- blanket and batt types
- curved metal roof covers of concealed or pierce fixed types
- metal rain water goods
- metal self drilling and tapping screws
- plastic building sheets for walls and roofs
- rivets and sealants
- thermal insulation of reflective foil laminate
- other approved materials.

Fault reporting:

- may be written or verbal
- is to be according to organisational workplace procedures.
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - thermal heat reflection and retention
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

3 **Manufacture roofing materials.**

3.1 *Materials* are marked out from drawings and/or patterns to fabricate roof coverings and components.

3.2 Roof components are fabricated according to plans and specifications.

4 **Prepare for installation.**

4.1 Quantity and type of manufactured roof covering and fittings required are calculated from design drawings and specifications in compliance with relevant Australian standards and regulatory requirements.

4.2 Proposed sealant, fixing materials, and roofing and flashing materials are selected and checked for compatibility.

4.3 Materials and equipment are identified, ordered and collected according to workplace procedures.

4.4 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and *faults are reported.*

5 **Install roof covering and components.**

5.1 Safety mesh and thermal insulation are fixed according to relevant Australian standards, job plans and specifications, and manufacturer requirements.

5.2 Required rainwater goods are installed according to relevant Australian standards, plans and specifications.

5.3 Sheets are marked and trimmed prior to fixing and cut edges are treated according to manufacturer specifications.

5.4 Sheets are fixed in compliance with relevant Australian standards and manufacturer specifications.

6 **Clean up.**

6.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

6.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
6.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of manufacturing and installing composite roof systems
- relevant WHS regulations and fall protection codes and requirements
- relevant statutory requirements related to installing composite roof systems
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the fabrication and installation of roof coverings
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:
- locating, interpreting and applying relevant information, relevant Australian standards and specifications to install composite roof systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, calculating the requirements and selecting, fabricating and installing a composite roof system (i.e. gable, Dutch gable, skillion or hip), including insulation and rainwater goods, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- fall protection equipment
- hand and power tools
- ladders
- levelling equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
  - measuring equipment.

**Installation** may include:
- insulation
- rainwater fittings
of: • safety mesh.

Composite roofs include a combination of: • Dutch gable • gables • hip • skillion.

Information may include: • charts and hand drawings • instructions issued by authorised organisational or external personnel • manufacturer specifications and instructions • material safety data sheets (MSDS) • memos • organisation work specifications and requirements • plans and sketches • regulatory and legislative requirements, particularly those pertaining to: • building codes • WHS and environmental requirements • plumbing regulations • relevant Australian standards • safe work procedures relating to installing composite roofs • signage • verbal, written and graphical instructions • work bulletins • work schedules, plans and specifications.

Sustainability principles and concepts: • cover the current and future social, economic and environmental use of resources • may include: • efficient energy use • rainwater harvesting • efficient use and recycling of material • correct handling of hazardous materials • thermal heat reflection and retention • disposing of waste material to ensure minimal environmental impact • selecting appropriate components to ensure minimal environmental impact.
Materials for installing roof composite roofs may include:

- metal roof covers of concealed or pierce fixed types
- metal self drilling and tapping screws
- plastic building sheets for walls and roofs
- rain water goods
- rivets and sealants
- thermal insulation of reflective foil laminate, fibreglass, polyethylene, straw or wool
- other approved materials.

Fault reporting:

- may be written or verbal
- is to be according to company’s workplace procedures.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

## 1 Prepare for planning.

1.1 Nature and scope of planning task are identified and confirmed.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with planning, sizing and documenting the layout of roof drainage systems are adhered to throughout the work.

1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work.

1.4 *Tools and equipment* required for planning, sizing and documenting the layout of roof drainage systems, including personal protective equipment, are selected and checked for serviceability.

1.5 Work area in which planning process is to be conducted is prepared.

## 2 Identify system requirements.

2.1 *Information* and specifications for the required work are obtained and confirmed, if necessary by site inspection.

2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work, including statutory and regulatory authorities’ requirements.

2.3 Roof catchment areas and design flows are determined from rainfall data and relevant Australian standards.

2.4 Quantity and size of gutters, sumps, rain heads and downpipes are determined according to relevant Australian standards, plans and specifications.

## 3 Plan system layout.

3.1 Layout of roof drainage system is planned according to development plans, specifications, relevant Australian standards and workplace procedures.

3.2 Required *materials* and *components of roof drainage system* are specified and optimised according to relevant Australian standards from the proposed design.

3.3 Plans are recorded according to regulatory authorities'
3.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

### 4 Restore work area.

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - regulations, relevant Australian standards, plans, specifications and drawings
  - record plans
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- accessing relevant information sources for the work activity and the processes for the calculation of catchment areas and design flows
- capacity of fabrication machinery involved in the production of roof draining components
- Australian standards applicable to roof drainage
- capillary action, thermal expansion and fabrication techniques to prevent leaking
characteristics of various metals and finishes
- computers and computer-aided design (CAD) software
- corrosion prevention treatment requirements of cut sheets
- design concepts and performance measures for various roof draining components for all types of roofs
- electrolysis and problems associated with the use of dissimilar metals
- implications of climate variations for the design of roof draining components
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of planning, sizing and documenting the layout of roof drainage systems
- relevant statutory requirements related to planning, sizing and documenting the layout of roof drainage systems
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the planning, sizing and layout of roof drainage systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to design, size and document the layout of a roof drainage system for three varied roof types, including at least one type incorporating eaves gutter and one type for a commercial building incorporating box gutters, sumps or rain heads, ensuring:
  - application of sustainability principles and concepts
  - correct identification of details of the plan
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

• clean-up protection
• stormwater protection
• waste management.

**Tools and equipment** may include:

• computers running appropriate CAD software
• drawing instruments
• ladders
• laser measuring devices
• measuring equipment.

**Information** may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • National Construction Code
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards, including:
  • AS/NZS3500 National plumbing and drainage: Part 3.2 Stormwater drainage
  • SAA and SNZ HB 114:1998 Guidelines for design of eaves and box gutters
• safe work procedures relating to planning, sizing and documenting the layout of roof drainage systems
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Statutory and regulatory authorities**
include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Materials** for design of roof drainage systems may include:
- drafting and drawing materials
- plans and specifications
- manufacturer catalogues and specifications.

**Components of roof drainage system** may include:
- downpipes
- gutters
- rain heads
- sumps.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient design principles are used throughout to minimal environmental impact
  - efficient use of material are incorporated in the design including recycling of material
  - rainwater harvesting concepts are applied
  - efficient energy usage
  - disposing of waste material to ensure minimal environmental impact.

CPCSN3011B Plan layout of a residential sanitary plumbing system

Modification History
Minor changes throughout the unit
Equivalent to CPCSN3011A

Unit Descriptor
This unit of competency specifies the outcomes required to plan the layout, size and install a sanitary plumbing system for residential buildings.

Application of the Unit
Site location for application of the design will be domestic, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Not applicable

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Information, plans and specifications are obtained for planned work activity.

1.2 Work health and safety (WHS) and environmental requirements associated with planning the layout of sanitary plumbing systems are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for planning the layout of sanitary plumbing systems, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient planning of the layout of sanitary plumbing systems.

2 Plan system layout.

2.1 Site inspection is undertaken to determine job requirements.

2.2 Quantity, location and type of fixtures are determined from design drawings, plans and elevations and other relevant information.

2.3 Layout of sanitary plumbing system is planned according to plans and relevant Australian standards.

2.4 Materials and fixtures required are determined from proposed design.

2.5 Sustainability principles and concepts are observed when preparing for and undertaking work process.

2.6 Plans are recorded according to workplace requirements.
3 Clean up.

3.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

3.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

3.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record plans

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials:

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- application of various sanitary and drainage fixtures and appliances
- characteristics and the application of different pipe systems, including their fittings and fixture supports, and fixing and joining techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of drainage
• principles of sanitary plumbing
• process of planning the layout of sanitary plumbing systems
• relevant statutory requirements related to sanitary plumbing systems
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the layout of a sanitary plumbing system for a residential type building
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout for a sanitary plumbing system of a three-storey residence, which includes a range of residential fixtures, connecting all fixtures to a legal point of discharge, ensuring:
  - sustainability principles and concepts are applied
  - correct identification of details of the plan
  - appropriate sequencing of work and identification of materials and resources required
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - application of sustainability principles and concepts
- communicating and working effectively
and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to
be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and
- electrical risks and hazards
- handling of materials
- hazard control
regulations and may include:

- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Fixtures** are to include:

- all authorised residential fixtures.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
• plumbing regulations
• relevant Australian standards
• safe work procedures relating to the design of sanitary plumbing systems
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Sanitary plumbing system may include:
• elevated pipework
• fully vented
• fully vented modified
• revass
• single stack
• single stack modified
• other approved methods.

Materials may include:
• drawing instruments
• measuring equipment
• plans, including building plan, sanitary plan and drainage plan.

Sustainability principles and concepts:
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient energy use
  • efficient use and recycling of material
  • correct handling of hazardous materials
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPSN3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install pipework from soil and wastewater fixtures to a stack or drain.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained and fixture position is determined.

1.2 Work health and safety (WHS) and environmental requirements associated with installing sewage discharge pipes are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for installing sewage discharge pipes, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of sewage discharge pipes.

2 Identify installation requirements.

2.1 Position of discharge pipes is determined according to plans and specifications, relevant Australian standards, site requirements and other relevant information and does not cause damage or interference to surrounding structures.

2.2 Quantity and type of materials required are calculated from design drawings and specifications and comply with relevant Australian standards and authorities’ requirements.
2.3 Allowances for fabrication and assembly are determined and transferred.

2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.5 Materials and equipment are checked for compliance with relevant Australian standards, docket and order forms, and for acceptable condition.

2.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Install and test pipe system.

3.1 *Pipe system* is set out to comply with plans, specifications and relevant Australian standards.

3.2 Fixings and supports are installed to manufacturer recommendations, job plans and specifications, and relevant Australian standards.

3.3 Pipes are installed and jointed according to relevant Australian standards, without damage or distortion to pipework, surrounding environment and other services.

3.4 Pipe system is tested to comply with relevant Australian standards and adjusted.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different materials, pipe fittings and supports, including fixing and joining techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
• process of installing sewage discharge pipes
• processes for accessing information and for calculating material requirements
• properties and characteristics of sewage, including temperature implications and discharges
• relevant statutory requirements related to installing discharge pipes
• SI system of measurements
• standards applicable to the installation
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install sewage discharge pipes
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications and using any two approved materials, installing two fixture discharge pipes:
  - direct to a below-ground drain
  - direct to drain via elevated pipework, which includes at least one expansion fitting
  - waste fixture to a drain via a gully (a combination of soil and waste fixtures must be included), ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed installations
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dirt mounds
  - electricity
Environmental requirements: cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements: may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities: include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment: may include:
- dropsaw
- hacksaw
- hand and power tools
- heating equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
• forklifts
• hand trolleys
• hoists and jacks
• limited height scaffolding
• rollers
• measuring equipment
• threading and bending equipment.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing sewage discharge pipes
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Materials** may include:
• any material authorised for use.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient energy use
  • efficient use and recycling of material
  • correct handling of hazardous materials
  • disposing of waste material to ensure minimal environmental impact
• selecting appropriate components to ensure minimal environmental impact.

Pipe systems may include:
• direct or indirect to drains
• direct to stack
• elevated pipework.

CPCPSN3023A Fabricate and install sanitary stacks

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPSN3013A

Unit Descriptor
This unit of competency specifies the outcomes required to fabricate and install sanitary stacks for soil and waste discharges.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained for the planned work activity.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with fabricating and installing sanitary plumbing systems are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

1.5 *Tools and equipment* for fabricating and installing sanitary plumbing systems, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient planning, fabrication and installation of sanitary plumbing systems.

2 Identify installation requirements.

2.1 Venting requirements are checked for compliance with requirements of relevant Australian standards, plans and specifications.

2.2 Stack design and branch positions are checked for compliance with relevant Australian standards, authorities’ requirements, job plans and specifications, and relevant *information*.
2.3 Position of sanitary stacks is determined from plans, specifications, relevant Australian standards and site requirements and so as not to cause damage and interference to surrounding structures.

2.4 Quantity and type of materials required are calculated from design drawings and specifications and comply with relevant Australian standards and local authorities' requirements.

2.5 Allowances for fabrication and assembly are determined and transferred.

2.6 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.7 Materials and equipment are checked for compliance with relevant Australian standards, docket and order forms, and for acceptable condition.

2.8 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Fabricate, install and test pipe system.

3.1 Plumbing system is set out to comply with job plans, specifications and relevant Australian standards.

3.2 Fixings and supports are installed to manufacturer recommendations, relevant Australian standards, plans and specifications.

3.3 Pipes are fabricated, installed and jointed in specified location according to job plans, specifications and relevant Australian standards, without causing damage or distortion to pipework or surrounding environment and other services.

3.4 Pipe system is tested to comply with relevant Australian standards and adjusted.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and the application of different pipe fittings and fixture supports, including fixing and joining techniques
- classification of assembly types and identification of assembly components
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials handling processes
- performance measures and characteristics of the materials used in the required soil and waste stack assembly
- process of fabricating and installing sanitary stacks
- processes for accessing information and for calculating material requirements
- product and service standards applicable to the installation
- properties of soil and waste discharges, including temperature and corrosive discharges
- relevant statutory requirements related to installing stacks, discharge pipes and vents
- SI system of measurements
- systems of sanitary plumbing
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- given instructions, locating, interpreting and applying relevant information, Australian standards and specifications to fabricate and install a sanitary stack for a residential building.
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, fabricating and installing a sanitary stack system of plumbing, to connect future fixtures from two floor levels; with fixtures to include a WC, bath, basin, shower and floor waste gully at each floor with fabrication of at least two branches in copper tube (minimum of DN50), ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and

the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dirt mounds
  - electricity
  - hazardous materials and substances
  - other machines
  - recently filled trenches
  - surrounding structure and facilities
• traffic control
• trip hazards
• underground services
• use of tools and equipment
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

Environmental requirements cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

Quality assurance requirements may include:
• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

Statutory and regulatory authorities include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

  • chain blocks
  • elevated work platforms
  • forklifts
  • hand trolleys
  • hoists and jacks
  • restricted height scaffolding
- rollers
- measuring equipment
- threading and bending equipment.

**Information may include:**
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to fabricating and installing sanitary stacks
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials may include:**
- copper (Cu)
- polymer
- cast iron
- other approved materials.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure
minimal environmental impact.

Plumbing systems may include:
- elevated pipework
- fully vented
- fully vented modified
- revass
- single stack
- single stack modified
- other approved methods.

CPCPSN3024A Install and fit off sanitary fixtures

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPSN3014A

Unit Descriptor
This unit of competency specifies the outcomes required to install and fit off sanitary fixtures. It applies to the installation of sanitary plumbing, including the connection of discharge pipes to sanitary plumbing and drainage, including soil and waste fixtures.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 **Work health and safety** (WHS) and **environmental requirements** associated with installing and fitting off sanitary fixtures are adhered to throughout the work.

1.3 **Quality assurance requirements** are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and **statutory and regulatory authorities’ requirements**.

1.5 **Tools and equipment**, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation and fitting off of sanitary fixtures.

2 Identify installation requirements.

2.1 Position of **sanitary fixtures** is determined according to plans, specifications and site requirements.

2.2 Quantity and type of **materials**, including **pipe materials** required, are calculated from design drawings and specifications.

2.3 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.
2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 **Install and fit off sanitary fixtures.**

3.1 Set out is checked for compliance with design drawings, manufacturers’ instructions, relevant authorities’ requirements and *information*.

3.2 Fixtures are positioned and installed to comply with plans, specifications and manufacturer requirements.

3.3 Fixtures, components and pipework are assembled, installed and tested to manufacturer requirements, job specification and relevant Australian standards.

3.4 Fixtures are installed and connected without damage or distortion to fixture, pipework, surrounding environment or other services.

3.5 Completed installation is checked for correct functioning and compliance with specifications.

4 **Clean up.**

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace written documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record written plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install sanitary plumbing, including connecting discharge pipes to sanitary plumbing and drainage and installing sanitary fixtures
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and the application of different pipe fittings and fixture supports, including fixing and joining techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- performance measures and characteristics of sanitary fixtures
- process of installing and fitting off sanitary fixtures
- processes for accessing information and for calculating material requirements
- relevant statutory, authority and manufacturer requirements related to installing and fitting off sanitary fixtures
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install and fit off sanitary fixtures
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, setting out, installing and fitting off the following sanitary fixtures: a water closet, shower base, sink, bath, basin, dishwashing machine, and a wall hung urinal, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of the proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - services
  - surrounding structure and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
working at heights
working in confined spaces
working in proximity to others
use of firefighting equipment
use of first aid equipment
workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- hand and power tools
- heating, cutting and bending equipment
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolding
  - rollers
  - measuring equipment.

**Sanitary fixtures** are as authorised and may include:
- basins
- baths
- clothes washing machines
- dishwashing machines
- shower bases
- sinks
- spa baths
- troughs
- wall hung urinals
- water closets.

**Materials** to connect sanitary fixtures may include:
- copper (Cu)
- copper alloy
- high density polyethylene (HDPE)
- polyvinyl chloride (PVC)
- sanitary fixtures
- stainless steel pipes
- other approved materials.

**Pipe materials** may include:
- copper
- copper alloy
- polymer
- stainless steel pipes
- other approved materials.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
  - may include:
    - efficient energy and water use
    - efficient use and recycling of material
    - use of sustainable water efficient products
    - correct handling of hazardous materials
    - disposing of waste material to ensure minimal environmental impact
    - selecting appropriate components to ensure minimal environmental impact.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing and fitting off sanitary fixtures
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPSN3025A Install pre-treatment facilities

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPSN3015A

Unit Descriptor
This unit of competency specifies the outcomes required to install pre-treatment facilities designed to intercept and retain prohibited discharges to the sanitary plumbing and drainage system.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing pre-treatment facilities are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

1.5 *Tools and equipment* for installing pre-treatment facilities, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of *pre-treatment facility*.

2 Identify installation requirements.

2.1 Pre-treatment facility is identified to meet the prohibited discharge requirement, and located to meet installation requirements, plans, specifications, authorities’ requirements and relevant *information*.

2.2 Materials are identified, ordered and collected according to workplace procedures.

2.3 Materials are checked for compliance with docket and order form and for acceptable condition.

2.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.
3 Install and test pre-treatment facility.

3.1 Set out is checked for compliance with plans, specifications and authorities' requirements.

3.2 Existing or required pipework is verified as compliant with relevant Australian standards, and manufacturer and authorities' requirements.

3.3 Pre-treatment facility is installed according to authorities' requirements and manufacturer specifications.

3.4 Installation is tested for correct functioning and compliance with specifications and authorities' requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace written documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record written plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install pre-treatment facilities to intercept and retain prohibited discharges to the sanitary plumbing and drainage system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- classification of assembly types and identification of assembly components
- fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• materials handling processes
• process of installing pre-treatment facilities
• processes for accessing information and for calculating material requirements
• prohibited waste discharges to the sewer and their properties and effects
• relevant statutory requirements related to installing pre-treatment facilities
• SI system of measurements
• types and purpose of pre-treatment facilities
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install and test pre-treatment facilities
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, locating, installing and testing two different pre-treatment facilities from a sanitary plumbing or drainage system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of the proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dirt mounds
  - electricity
  - hazardous materials and substances
  - other machines
  - recently filled trenches
  - surrounding structure and facilities
  - traffic control
  - trip hazards
- underground services
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** are to cover water quality management and may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- excavation tools
- hand and power tools
- measuring equipment
- tools and equipment, including:
  - lifting and load shifting equipment
    - chain blocks
    - forklifts
    - hand trolleys
    - hoists and jacks
    - mechanical excavation equipment
    - rollers
  - trench shoring equipment.
**Pre-treatment facilities:**

- may include:
  - acid traps and neutralisers
  - cooling interceptors
  - grease traps
  - plaster and clay traps
  - silt interceptors
  - solid traps
  - solvent and oil interceptors
- may be installed in such locations as:
  - butchers
  - carparks
  - dental surgeries
  - food halls and outlets
  - hospitals
  - kitchens
  - laboratories
  - mining sites
  - processors of meat, chicken, milk and smallgoods
  - vehicle servicing and repair establishments
- may be permanent or temporary (portable).

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing pre-treatment facilities
- signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient energy and water use
  • efficient use and recycling of material
  • correct handling of hazardous materials
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

CPCPSN3026A Install sewerage pumpsets

Modification History
Minor change to unit title
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPSN3016A

Unit Descriptor
This unit of competency specifies the outcomes required to install sewerage pumps, and install and test small bore macerators.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A  Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing sewerage pumpsets are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

1.5 *Tools and equipment* for installing sewerage pumpsets, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of *sewerage pumpsets*.

2 Identify installation requirements.

2.1 Location of pump is determined following site inspection.

2.2 Pump base requirements are determined from plans and specifications and other relevant *information*.

2.3 *Materials* and equipment are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.
2.5 *Sustainability principles and concepts* are applied throughout the installation.

3 **Install sewerage pump equipment.**

3.1 Pump is set out to comply with plans, specifications, site requirements or job instructions, with consideration given to the location of existing services.

3.2 Pumping equipment is installed in specified locations using recommended fixings.

3.3 Pipework and *pump controls* are connected according to plans, specifications, manufacturer requirements and standards.

3.4 Pumping equipment and related pipework are tested according to standards and manufacturer recommendations, and test data is recorded in required format.

4 **Clean up.**

4.1 Work area is cleared and materials disposed of, reused or recycled according to state and territory legislation and workplace procedures.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace written documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record written plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test sewerage pumps and small bore macerators
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- atmospheric pressure
- fixing techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
• performance measures for various sewerage pumpsets
• process of installing sewerage pumpsets
• properties of sewage, including pressure and flow rates
• relevant statutory requirements related to installing sewerage pumpsets
• SI system of measurement
• standards applicable to the installation
• use of test equipment and procedures
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test pre-treatment facilities
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing a small bore macerator from a water closet to an approved point of discharge up to 4 metres away, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of the proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
- Validity and sufficiency of evidence requires that:
  - competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
  - where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken
at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - identifying and testing for electrical hazards
  - dirt mounds
  - hazardous materials and substances
  - other machines
  - recently filled trenches
  - surrounding structure and facilities
  - traffic control
  - trip hazards
  - underground services
  - use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

Environmental requirements cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- hand and power tools
- measuring and alignment tools
- tools and equipment, including:
  - chain blocks
  - concreting tools
  - forklifts
  - hand trolleys
  - hoists and jacks
  - lifting and load shifting equipment
  - rollers.

Sewerage pumpsets may include:

- compressed air injectors
- small bore macerators
- wet wells, including submersible and non-submersible pumps.
Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing sewerage pumpsets
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials may include:

- sewerage pumpsets, motors and fittings.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - correct disposal of waste
  - selecting appropriate components to ensure minimal environmental impact.

Pump controls may be:

- automatic controls, which may be float, level or flow switches
- manual.

CPCPSN4011B Design and size sanitary plumbing systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPSN4011A

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document the layout of sanitary plumbing systems for multi-floor buildings.

Application of the Unit
Site location for application of the plans will be residential or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for planning.

1.1 Nature and scope of planning task are identified and confirmed.

1.2 Work health and safety (WHS) and environmental requirements associated with planning, sizing and documenting the layout of sanitary pipework and fixtures are adhered to throughout the work.

1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.4 Tools and equipment required for planning, sizing and documenting the layout of sanitary pipework and fixtures, including personal protective equipment, are selected and checked for serviceability.

1.5 Work area in which planning process is to be conducted is prepared.

2 Identify system requirements.

2.1 Information and specifications for required system work are obtained and confirmed, if necessary by site inspection.

2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.

2.3 Quantity, location and type of fixtures are determined from design drawings, plans and elevations.

2.4 Fixture unit loading is determined according to relevant Australian standards and regulatory authorities' requirements.

2.5 System is sized according to relevant Australian standards, and regulatory authorities' and workplace requirements.
### Plan system layout

#### 3.1 Layout of sanitary pipework and fixtures is planned according to building plans, relevant Australian standards and workplace procedures.

#### 3.2 **Materials** required are specified and optimised according to relevant Australian standards from the proposed design.

#### 3.3 Plans are recorded according to regulatory authorities’ and workplace requirements.

#### 3.4 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

### Restore work area

#### 4.1 Work area is restored according to workplace procedures.

#### 4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

#### 4.3 Documentation, including work backup, is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete workplace documentation
  - record plans
  - read and interpret:
    - documentation from a variety of sources
    - regulations, relevant Australian standards, plans, specifications and drawings

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - document the layout of sanitary pipework and fixtures
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- accessing relevant information sources for the work activity
- Australian standards applicable to the system
- characteristics and the application of different pipe systems, including their fittings and
 fixture supports, and fixing and joining techniques
- computers and computer-aided design software
- handling of hazardous waste
- infectious diseases
- job safety analysis (JSA) and safe work method statements (SWMS)
- pipe materials and sanitary fixtures
- principles of drainage
- principles of sanitary plumbing
- process of planning, sizing and documenting the layout of sanitary pipework and fixtures
- relevant statutory requirements related to planning, sizing and documenting the layout of sanitary plumbing systems
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to planning, sizing and documenting the layout of sanitary pipework and fixtures for a multi-floor building
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to design, size and document the layout details for a commercial (Class 6) and residential building; using two approved sanitary plumbing systems to a minimum of six floors, inclusive of a basement, to include fixtures on each floor level (excluding the basement), ensuring:
  - application of sustainability principles and concepts
  - correct identification of details of the plan
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience
must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental**

- clean-up protection
requirements cover water quality management and may include:

- stormwater protection
- waste management.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- drawing instruments
- measuring equipment
- tools and equipment, which may include computers running appropriate computer-aided design software.

Fixtures may include:

- ablation trough
- bain marie
- basin
- bath
- bidet
- domestic and commercial clothes washing machine
- domestic and commercial dish washing machine
- glass washing machine
- laundry trough
- shower
- sink
- slop hopper
- urinal
- WC.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
relevant Australian standards, including AS/NZS3500 National plumbing and drainage: Part 2 Sanitary plumbing and drainage

safe work procedures relating to planning, sizing and documenting the layout of sanitary pipework and fixtures

signage

verbal, written and graphical instructions

work bulletins

work schedules, plans and specifications.

**System may include:**

- approved sanitary plumbing systems
- discharge pipes
- elevated pipework
- soil and waste fixtures.

**Materials may include:**

- building plans and specifications, including drainage plans.

**Sustainability principles and concepts:**

cover the current and future social, economic and environmental use of resources

may include:

- efficient design principles that have minimal environmental impact
- efficient use of material in the design, including recycling of material
- efficient energy and water use
- disposing of waste material to ensure minimal environmental impact.

Custom Content Section

Not applicable.
CPCPWT3020A Connect and install storage tanks to a domestic water supply

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3010A

Unit Descriptor
This unit of competency specifies the outcomes required to connect and install storage tanks to a domestic water supply.

Application of the Unit
This unit of competency applies to the connection and installation of storage tanks to a residential or commercial water distribution pipe system, which may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with connecting static storage tanks to a water supply system are followed.
   1.3 Quality assurance requirements are identified and followed according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient connection and installation.

2 Identify installation requirements.
   2.1 Required materials that comply with relevant Australian standards and job specifications are determined from plans and specification.
   2.2 Sustainability principles and concepts are observed when preparing for and undertaking work process.
   2.3 Quantities of required materials are calculated from plans and specifications.
   2.4 Materials and equipment are ordered and collected according to workplace procedures.
   2.5 Materials and equipment are checked for compliance with relevant Australian standards, docket and order
form, and for acceptable condition.

3 Install and test storage tank.

3.1 Storage tank and associated pipework are set out according to plans, specifications and job instructions.

3.2 Pipe supports and fixings that comply with relevant Australian standards are installed to plans and manufacturer specifications.

3.3 Tank, piping and materials are installed according to plans, specifications and relevant Australian standards.

3.4 Jointing systems are confirmed as compliant with relevant Australian standards.

3.5 Installed system is pressure tested and commissioned according to relevant Australian standards and job specifications.

3.6 Test data is recorded in format required by job specifications and quality assurance procedures.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - record test results in writing
  - use language and concepts appropriate to cultural differences
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to:
  - work with others to action tasks
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine system requirements for installation of a static storage tank
  - identify and report faults in tools, equipment and materials
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communications technology

**Required knowledge**
• characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
• function and operation of a range of taps and valves
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• pressure test systems and procedures
• procedures for accessing information and processes for calculating material requirements
• process for connecting static storage tanks
• relevant statutory requirements related to the connection of static storage tanks
• SI system of measurement
• structural systems, building materials and building services
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, Australian standards and specifications to connect static water storage tanks
- apply safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- connect residential or commercial static water storage tanks according to backflow protection principles
- as a minimum, given the plans and specifications, connecting and commissioning an approved static water storage tank to a residential or commercial water distribution pipe system to include correct air gap, operational water level, overflow requirements, minimum outlet size, tank placement, safe tray and safe waste (to meet the specified location and installation requirements) ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements, design and details of the proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards, and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific

This unit of competency is to be assessed using relevant
resources for assessment

Australian standards and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- MSDS
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPRF2023A Collect and store roof water
- CPCPWT3023A Install and commission water heating systems.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.
Tools and equipment may include:
- chain blocks
- cutting and threading equipment
- elevated work platforms
- forklifts
- hand and mechanical excavation equipment
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- lifting and load shifting equipment
- rollers
- scaffolds
- testing equipment
- trench shoring equipment
- welding equipment.

Materials may include:
- copper, brass, polymer or cement-lined cast iron pipes
- fibre glass, steel or polymer storage tanks
- other approved pipes and materials.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient energy and water use
  - efficient use and recycling of material, including minimising evaporation
  - siting of tank
  - overflow disposal and reuse
  - disposing of waste material to ensure minimal environmental impact.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to connecting static storage tanks
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPWT3021A Set out and install water services

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3011A

Unit Descriptor
This unit of competency specifies the outcomes required to install heated, cold and tempered water services from the water supply to the fixture or points of discharge and storage.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Drawings, plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with setting out and installing water services are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for setting out and installing water piping systems, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient setting out and installation of water services.

2 Identify installation requirements.

2.1 Quantity and type of materials required are calculated from drawings and specifications or site inspection and comply with relevant Australian standards and other information.

2.2 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.3 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.4 Sustainability principles and concepts are observed
when preparing for and undertaking work process.

3 Install and test pipe system.

3.1 Pipelines and fixture connection points are set out according to drawings and specifications or job instructions, with consideration given to the location of existing services.

3.2 Trenches are excavated according to relevant Australian standards and authorities' requirements.

3.3 Installation of supports and clips are checked for compliance with job specification, authorities' requirements and manufacturer recommendations.

3.4 Pipes are installed and jointed according to job specifications, design layout and relevant Australian standards without damage or distortion to pipework, or surrounding environment and other services.

3.5 Installation to point of discharge is tested to comply with relevant Australian standards and authorities' requirements, and adjusted.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install pipework to carry drinking and non-drinking water from a water meter, rainwater tank, storage tank or heated water service to points of discharge and storage
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of installing water piping systems
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- regulations and requirements for non-drinkable water installations
- relevant statutory requirements related to installing water piping systems
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to set out and install water services
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning layout, sizing, setting out, installing and testing water services from a meter or storage tank, to at least five heated/tempered and five cold outlets, including a water heater and a non-drinkable water source to at least two outlets, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trees
  - trip hazards
- underground services
- uneven and unstable terrain
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces

CPCPWT3022A Install and adjust water service controls and devices

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install water service controls and mixing devices used to manually control water mix and flow. It includes the basic adjustment and maintenance of correct flow operation for flushing devices, control valves, temperature control devices pumps and appliances, and excludes the commissioning and adjustment of backflow prevention devices and thermostatic mixing valves.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria  Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Prepare for work.

1.1  Drawings, plans and specifications are obtained.

1.2  *Work health and safety* (WHS) and *environmental requirements* associated with installing and adjusting water service controls and devices are adhered to throughout the work.

1.3  *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4  Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

1.5  *Tools and equipment* for installing and adjusting *water service controls and mixing devices*, including personal protective equipment, are selected and checked for serviceability.

1.6  Work area is prepared to support efficient installing and adjusting of water service controls and devices.

2  Identify installation requirements.

2.1  Service design requirements are identified from job specifications and according to relevant Australian standards using relevant *information*.

2.2  Service controls and mixing devices are selected according to relevant Australian standards, authorities' requirements and job specifications.

2.3  Available pressure and number of fixtures are determined from job specifications.
2.4 Valve size is selected according to regulations, job specifications, manufacturer recommendations and design data.

2.5 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.6 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.7 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Install and adjust devices.

3.1 Devices and mixing valves are positioned and installed according to relevant Australian standards, job specifications, manufacturer recommendations and authorities’ requirements.

3.2 Pipework is flushed.

3.3 Devices are commissioned and maintained to ensure correct flow operation according to relevant Australian standards, and manufacturer and job specifications.

3.4 Customer is advised of correct operation of flushing devices, control valves, appliances and pumps.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to install and make basic adjustments to water flushing devices, control valves, pumps and appliances for heated and cold water services

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics of the materials and devices being installed
- effective isolation procedures
- hydraulics and mechanics
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing service controls and devices
• processes for accessing information and for calculating material requirements
• properties of water including pressure and flow rates
• relevant statutory requirements related to installing service controls and devices and requirements for backflow prevention devices
• SI system of measurements
• Australian standards applicable to the installation
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install and adjust water service controls and devices
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing and providing basic adjustment for a cold water service incorporating both manual and programmed flushing devices and a heated/tempered water service consisting of a mixing tap and a tempering valve, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and authorised work practices, safety requirements and
for assessment

Environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
Environmental requirements cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
- elevated work platforms
- hand and power tools
- ladders.

Water service controls and mixing devices:
- include:
  - back flow prevention devices (install only)
  - isolating valves
  - line strainers
  - metal bodied taps
  - pressure limiting valves
  - temperature control devices
  - thermostatic mixing valves (install only)
- types of appliances include:
- automatic
- domestic
- industrial
- manual
- programmed.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to the installation and basic adjustment of water service controls and devices
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** may include:
- water flushing devices
- control valves
- pumps
- domestic and industrial appliances.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - heat retention
  - efficient energy and water use
  - efficient use and recycling of material
disposing of waste material to ensure minimal environmental impact

- selecting appropriate components to ensure minimal environmental impact.

**Flushing devices** may include:

- cisterns (manual, automatic and programmed on demand)
- flushometers (flush valves).

**Control valves** may include:

- automatic
- flow control
- isolation
- manual
- programmed
- safety.

**Pumps** may include:

- centrifugal and positive displacement.

CPCPWT3023A Install and commission water heating systems

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3013A

Unit Descriptor
This unit of competency specifies the outcomes required to install and commission water heaters for domestic and commercial applications.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| **1. Prepare for work.** | 1.1 Drawings, plans and specifications are obtained.  
 | 1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing water heaters, and workplace are adhered to throughout the work.  
 | 1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.  
 | 1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.  
 | 1.5 *Tools and equipment* for installing *water heaters*, including personal protective equipment, are selected and checked for serviceability.  
 | 1.6 Work area is prepared to support efficient installation of water heaters. |
| **2. Identify installation requirements.** | 2.1 Installation position is assessed for compliance with authorities’ requirements, manufacturer recommendations, relevant Australian standards, job specifications and location of other services using relevant *information*.  
 | 2.2 Quantity and type of materials required are calculated from job specifications and site inspection, and comply with relevant Australian standards.  
 | 2.3 *Materials* and equipment are identified, ordered and collected according to workplace procedures. |
2.4 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.5 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

### 3 Install, commission and maintain system.

3.1 Water heating system is installed according to relevant Australian standards, job specifications and manufacturer recommendations, and complies with authorities' requirements.

3.2 Pipe joints are fitted correctly and according to relevant Australian standards.

3.3 Installation is tested according to relevant Australian standards, manufacturer specifications and authorities' requirements.

3.4 Water heating system is commissioned according to relevant Australian standards, manufacturer specifications and authorities' requirements.

3.5 Water heating system is maintained according to manufacturer instructions.

### 4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- Literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technical skills to install and commission low pressure, mains pressure, continuous flow and solar water heating systems

- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Characteristics and application of different mounting fittings, including fixing and joining techniques and methods
- Job safety analysis (JSA) and safe work method statements (SWMS)
- Levelling and alignment processes
- Performance measures for various water heaters
- process of installing water heaters
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relevant statutory requirements related to installing water heaters
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install water heaters
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout, and then installing and commissioning at least two different water heaters from the following:
  - a vented storage water heater, an unvented storage water heater, a continuous flow water heater, and a solar water heater
  - with one of these heaters being a manifold system, ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed installations
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a
period of time reflecting the scope of the role and the practical requirements of the workplace

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
- trip hazards
- underground services
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- flaring tools
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolding
  - rollers
- mechanical bending equipment
- silver brazing equipment.

**Water heaters** may include:
- electric storage heaters up to 630 litres
- heat exchange water heaters
- heat pump water heaters
- continuous flow water heaters
- other storage heaters up to 700 litres
- solar water heaters
- warm water systems
- other approved water heaters.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing water heaters
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

**Materials** may include:
- water heaters and fittings, including solar panels for solar water heaters.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal
environmental impact
• heat retention
• efficient use and recycling of material
• efficient energy and water use
• disposing of waste material to ensure minimal environmental impact.

CPCPWT3024A Install and maintain domestic water treatment equipment

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3014A

Unit Descriptor
This unit of competency specifies the outcomes required to install, test and maintain domestic water softeners, water coolers and water filtering equipment.

Application of the Unit
Site location for work application is domestic, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Prepare for work.**
   1.1 Plans and specifications are obtained.
   1.2 **Work health and safety** (WHS) and **environmental requirements** associated with installing water treatment equipment are adhered to throughout the work.
   1.3 **Quality assurance requirements** are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and **statutory and regulatory authorities’ requirements**.
   1.5 **Tools and equipment** for installing water treatment equipment, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient installation of **water treatment equipment**.

2. **Identify installation requirements.**
   2.1 Water treatment equipment requirements and location are determined according to job specifications or site inspection and relevant **information**.
   2.2 Water system adjacent to the equipment is tested for appropriate pressure.
   2.3 **Materials** and equipment are estimated from design drawings or job specification.
   2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.
2.5 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.6 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

### 3 Install and test water treatment equipment.

3.1 Water treatment equipment is installed according to relevant Australian standards and manufacturer specifications, and complies with authorities' requirements.

3.2 Base is provided for water treatment equipment that complies with job specification or manufacturer instructions.

3.3 Connections to water treatment equipment are checked for compliance with authorities' requirements and relevant Australian standards.

3.4 Installation is pressure tested for leaks.

3.5 Service lines are flushed according to relevant Australian standards.

3.6 Appliance is commissioned according to manufacturer specifications.

### 4 Maintain water treatment equipment.

4.1 Service and maintenance requirements, including **water filters**, are identified from manufacturer specifications or authorities' requirements.

4.2 Replacement components are checked and fitted according to specification.

4.3 Maintenance operations are conducted observing manufacturer and authorities' requirements.

### 5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- characteristics and application of different assemblies, including fixing and joining techniques and materials
- chemistry of water, including:
  - osmosis, filtration and purification
  - properties of hard and soft water, including sources of contamination, impurities, pressure and flow rates
• job safety analysis (JSA) and safe work method statements (SWMS)
• process of installing water treatment equipment
• relevant statutory requirements related to installing water treatment equipment
• SI system of measurements
• Australian standards applicable to the installation
• use of test equipment and procedures
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to install water treatment equipment
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout, and then installing and commissioning either a domestic water filter or cooler or a domestic water softener or conditioner, indicating the continuing maintenance requirement for each installation and ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances

Prerequisite unit changed
Minor changes throughout the unit and to unit title
Not equivalent to CPCPWT3015A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test water pumps.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with installing water pumpsets are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for installing water pumpsets, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of water pumpsets.

2 Identify installation requirements.

2.1 Location of pump is determined following site inspection.

2.2 Pump base requirements are identified from drawings and specifications using relevant information.

2.3 Required materials and equipment are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.5 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Install water pumpsets.

3.1 Pump base is set out to comply with drawings and specifications.

3.2 Pump base is constructed according to drawings and specifications.
3.3 Pump and *pump controls* are installed according to relevant Australian standards, drawings, specifications and manufacturer instructions.

3.4 Fuel tank fitting, alignment of shafts and couplings, and the use of mechanical joints comply with relevant specifications and manufacturer instructions.

3.5 Pressure testing of piping system is conducted according to specifications.

3.6 Pumpset is tested according to specifications and test data is recorded in required format.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to install and test water pumps and a centrifugal pumpset

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- atmospheric pressure
- fixing techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- performance measures for various water pumpsets
- process of installing water pumpsets
- properties of water, including pressure and flow rates
- relevant statutory requirements related to installing water pumpsets
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install water pumpsets
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout, and then installing and testing a centrifugal pump, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and
practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:
• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
• chain blocks
• concreting tools
• forklifts
• hand and power tools
• hand trolleys
• hoists and jacks
• lifting and load shifting equipment
• measuring and alignment tools
• rollers.

**Water pumpsets:**
• may include:
  • multi-stage turbine
  • positive displacement
  • submersible and electric and compression ignition driven pumps
• may be:
  • belt-driven by an electric or petrol and diesel motor
• close coupled
• long coupled with mechanical joints.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
• plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing water pumpsets
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Materials** may include:
• circulating
• hydropneumatic pumping systems and fittings
• spa baths
• water pumpsets.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
  • efficient use and recycling of material
  • efficient energy and water use
  • disposing of waste material to ensure minimal environmental impact.
Pump controls may be:

- automatic controls, which may be float, level or flow switches
- manual.

CPCPWT3026A Fit off and commission heated and cold water services

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPWT3016A

Unit Descriptor
This unit of competency specifies the outcomes required to fit off and commission heated and cold water services to appropriate fixtures. It includes the provision for non-drinkable water applications.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 **Prepare for work.**

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with fitting off, connecting and commissioning heated and cold water services are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

1.5 *Tools and equipment* for fitting off, connecting and commissioning heated and cold *water services*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient fitting off, connecting and commissioning of heated and cold water services.

2 **Identify installation requirements.**

2.1 Fit off, connections, fixtures and fittings and their location are identified according to job specifications or site inspection, using relevant *information*.

2.2 *Materials* and equipment are estimated from drawings or job specification.

2.3 Materials and equipment are identified, ordered and collected according to workplace procedures.
2.4 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Make connections and test service.

3.1 Final connections are made to heated and cold water services ensuring fixtures, jointing methods and appliances comply with relevant Australian standards and are made without damage to surrounding structures.

3.2 Labels and signage are positioned for non-drinkable water services according to regulatory authorities’ requirements.

3.3 Water services are hydraulically tested to ensure connections are leak free.

3.4 Valves, cisterns, taps and other components are checked for correct operation.

4 Commission water services.

4.1 Service lines are flushed according to relevant Australian standards and regulatory authorities’ requirements.

4.2 Water services are commissioned according to regulatory authorities’ requirements and manufacturer specifications.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to fit off, connect, test and commission heated and cold water services to household fixtures and appliances
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different fittings and fixtures, including fixing and joining techniques and materials
- implications of cross connections and air gaps
- isolation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
• non-drinkable water processing, requirements and applications
• process of fitting off, connecting and commissioning heated and cold water services
• properties of water, including sources of contamination, impurities, pressure and flow rates
• relevant statutory requirements related to fitting off, connecting and commissioning heated and cold water services
• SI system of measurement
• Australian standards applicable to the work
• use of test equipment and procedures
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

CPCPWT3027A Connect irrigation systems from drinking water supply

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3017A

Unit Descriptor
This unit of competency specifies the outcomes required to connect irrigation and watering systems from a drinking water supply. It does not include the commissioning of backflow prevention devices or arrangements.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Prepare for work.**
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with connecting irrigation systems from a drinking water supply are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements.*
   1.5 *Tools and equipment* for connecting irrigation systems, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient connection of irrigation systems from a drinking water supply.

2. **Identify installation requirements.**
   2.1 Connection size and hazard rating are determined from plans, specification, relevant Australian standards and/or site inspection using relevant *information.*
   2.2 Valve is sized according to plans and specification.
   2.3 Back flow prevention devices are confirmed as being according to hazard rating.
   2.4 *Materials* and equipment are identified, ordered and collected according to workplace procedures.
2.5 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 **Connect and test system.**

3.1 Excavation is set out and made according to plans and specifications and undertaken with consideration given to existing structures and services.

3.2 Service pipe is isolated and cut to accommodate take off branch according to authorities’ requirements.

3.3 Back flow prevention device is fitted according to relevant Australian standards and manufacturer specifications.

3.4 System is connected and flushed to required standard.

3.5 Water supply is restored and system tested according to relevant Australian standards.

3.6 Ground surface is restored.

4 **Clean up.**

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to cut into a water supply and install a take-off branch and fitting valves and backflow prevention devices for an irrigation or watering system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- drinking water supplies and protection measures
- implications of cross connections and air gaps
- job safety analysis (JSA) and safe work method statements (SWMS)
• process of connecting irrigation systems from a drinking water supply
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory requirements related to connecting irrigation systems from a drinking water supply
• SI system of measurement
• Australian standards applicable to the connection
• use of test equipment and procedures
• various types of irrigation systems and types of materials used
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to connect an irrigation system from a drinking water supply
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, connecting an irrigation system to a drinking water supply, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trees
  - trip hazards
  - underground services
  - uneven and unstable terrain
  - use of tools and equipment
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

Environmental requirements cover water quality management and may include:
• clean-up protection
• waste management.

Quality assurance requirements may include:
• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

Statutory and regulatory authorities include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
• chain blocks
• electrical bonding and bridging strap
• elevated work platforms
• forklifts
• hand and power tools
• hand excavation equipment
• hand trolleys
• hoists and jacks
• lifting and load shifting equipment
• measuring equipment
• mechanical excavation equipment
• rollers
• scaffolding
• silver solder and brazing equipment
• trench shoring equipment.
Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to connecting irrigation systems from a drinking water supply
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Materials may include:
- backflow prevention devices
- copper tube
- fittings and connections
- joints
- polymer pipes
- valves.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient energy and water use
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact.

PCPWT3028A Install water service

Modification History
Prerequisite unit changed
Minor changes throughout the unit, including to unit title
Not equivalent to CPCPWT3018A

Unit Descriptor
This unit of competency specifies the outcomes required to install a water supply system from the authorities’ main to the metering device, according to water authorities’ requirements.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Prepare for work.**

   1.1 Site plans and specifications are obtained to establish location of the main.

   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing a water service are adhered to throughout the work.

   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

   1.5 *Tools and equipment* for installing water services, including personal protective equipment, are selected and checked for serviceability.

   1.6 Work area is prepared to support efficient installation of water services.

2. **Identify installation requirements.**

   2.1 Location of service is determined following site inspection.

   2.2 Cables, conduits, pipes or other services are located and noted using relevant *information*.

   2.3 Quantity and type of materials required are calculated or determined from plans and specifications.

   2.4 *Materials* and equipment are identified, ordered and collected according to workplace procedures.

   2.5 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

   2.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.
3 Install and test water services.

3.1 Pipelines and excavation areas are set out according to plans and specifications.

3.2 Trenches are excavated according to relevant Australian standards and regulatory authorities’ requirements, and to required size.

3.3 Service control valve position is located.

3.4 Main is drilled and tapped according to regulatory authorities’ requirements and workplace procedures.

3.5 Service line is marked out at 90° to the main in a straight line to the meter.

3.6 Selected process for installation of service pipe under roadway is undertaken according to authorities’ requirements.

3.7 Pipework is installed according to job specification, authorities’ requirements and design layout, including fitting designated service control valves.

3.8 Water meter is selected and installed according to authorities’ requirements, surrounding environment and climatic conditions, and in consideration of servicing or cleaning requirements.

3.9 Meter control valve is fitted at inlet according to authorities’ requirements.

3.10 Installation is tested for compliance with job specifications, relevant Australian standards and regulatory authorities’ requirements.

3.11 Excavation is backfilled according to specifications and authorities’ requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace
requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - tap into a water main and connect and install valves, flanges and pipework to a water meter
  - test the installation of valves, flanges and pipework to a water meter
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of installing water services
- properties of water, including pressure and flow rates
- relevant statutory requirements related to installing water services
- SI system of measurement
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install water services
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, determining the requirements, tapping into a water main, connecting a property service up to the outlet of a water meter, and testing the installation, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and
practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
working in confined spaces
working in proximity to others
use of firefighting equipment
use of first aid equipment
workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- chain blocks
- forklifts
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- manual excavation equipment
- mechanical excavation equipment
- rollers
- silver brazing equipment
- tapping tool
- test equipment
- trench shoring equipment.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing water services
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** may include:
- those approved for use.

**Sustainability principles and concepts**:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use and recycling of material
  - efficient energy and water use
  - disposing of waste material to ensure minimal environmental impact.

**Tapping** may be performed:
- under pressure
- with the water turned off.

CPCPWT3029A Install water pipe systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPWT3019A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test water pipes larger than DN65, or large water services.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Plan and prepare.

1.1 Work instructions and relevant information, including plans, specifications, quality requirements and operational details relevant to the tasks, are obtained, confirmed and applied to the allotted task.

1.2 Work health and safety (WHS) requirements are obtained from the site safety plan and organisational policies and procedures, confirmed and applied to the allotted task.

1.3 Signage requirements are identified and obtained from project traffic management plan and traffic conditions and are implemented.

1.4 Plant, tools and equipment selected to carry out tasks are consistent with requirements of the job, are checked for serviceability and any faults are rectified or reported.

1.5 Environmental requirements are identified from project environmental management plan, confirmed and applied to the allotted task.

2 Set out and excavate.

2.1 Work area and materials are prepared to support efficient installation of the pipe work.

2.2 Dewatering requirements are determined and applied.

2.3 Location, alignment direction, level and grade of mains pipe system are determined from job drawings and specifications.

2.4 Works are set out to specification.

2.5 Plant operator is advised of excavation requirements and levels are monitored.

2.6 Mains pipe system support mechanism is installed according to plans, specifications and standards in compliance with statutory and regulatory authorities’ requirements.
3 Install mains pipeline.

3.1 Pipes are lowered and placed in position according to design specifications of mains pipe system.

3.2 Pipes are joined according to manufacturer specifications using pipe joining methods.

3.3 Pipes are placed and fittings, valves and flow control devices are fitted according to drawings, specifications and installation procedures.

3.4 Alignment level and grade are checked continuously for conformance with design plans and specifications.

3.5 Side support or overlay is positioned beside the pipes.

3.6 Mains pipe system support structure is checked.

3.7 Backfill procedure is monitored to ensure work is completed to specification, where specified.

3.8 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Test mains pipe system.

4.1 Testing is performed to relevant authorities’ requirements as determined by specifications.

4.2 Mains pipe system test procedures are performed, establishing pressurisation, functionality and serviceability.

4.3 Test results are recorded and reported.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- Initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- Literacy skills to:
  - complete written records and reports of test results
  - complete other relevant workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Concrete and concrete fabrication
- Confined space entry requirements
- Dewatering
- Equipment types, characteristics, technical capabilities and limitations
- Excavation and trench safety
- Installation of booster systems
- installation of thrust blocks
- job safety analysis (JSA) and safe work method statement
- mains pipe systems and installation procedures
- mains water pressure
- materials safety data sheets (MSDS) and materials handling methods
- operational, maintenance and basic diagnostic procedures, including testing procedures
- plumbing industry terminology
- processes for interpreting engineering drawings
- processes for calculating pipeline grades and percentages
- project quality requirements
- sedimentation and erosion controls
- site and equipment safety requirements
- site isolation and traffic control responsibilities and authorities
- valves and flow control devices
- water reticulation
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- applying sustainability principles and concepts
- locating, interpreting and applying relevant information, standards and specifications
- complying with site safety plan, WHS regulations and state and territory legislation applicable to workplace operations
- complying with organisational policies and procedures, including quality requirements
- given the plans and specifications, installing six metres of DN100 mains pressure pipe system which is to include a change of direction or tee junction
- installing a mains pipe system which, as a minimum, includes two materials and one isolation valve
- safe and effective operational use of tools, plant and equipment
- communicating and working effectively and safely with others.

## Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's
demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

**Guidance information for assessment**

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- MSDS
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements pertaining to the installation of mains pipe systems
- relevant Australian standards
- safe work procedures or equivalent relating to the installation of mains pipe systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.
Work health and safety is to be according to commonwealth, state and territory legislation and regulations, organisational safety policies and procedures, and project safety plan, and may include:

- emergency procedures, which are to include:
  - emergency shutdown and stopping
  - extinguishing equipment for fires
  - organisational first aid requirements, including use of first aid equipment
  - evacuation
  - handling of materials
  - hazard control
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
  - safe operating procedures, including recognising and preventing hazards and risks associated with:
    - buildings
    - cuttings
    - electricity
    - embankments
    - excavations
    - hazardous materials and substances
    - other machines
    - personnel
    - restricted access barriers
    - structures
    - traffic control
    - trees
    - underground services
    - uneven and unstable terrain
    - work site visitors and the public
    - working in proximity to others
  - safe parking practices, including ensuring:
    - access ways are clear
    - equipment and machinery are:
      - away from overhangs and refuelling sites
      - safe distance from excavations
      - secured from unauthorised access or movement
    - use of tools and equipment
    - workplace environment and safety.

Signage may include:

- barricades
- highway traffic signs
- signage for traffic control escort vehicles
- site safety signage
- temporary signage for benefit of motorists and pedestrians
- traffic conditions signage.

**Traffic conditions** may include:
- buildings
- congested urban environments
- low traffic rural areas
- off-road un-trafficked areas
- parking sites
- pedestrian areas.

**Tools and equipment** may include:
- crow bars
- grinders
- hammers
- jointing equipment
- levelling equipment
- lifting equipment
- oxy-acetylene equipment
- saws
- scaffolding
- shovels.

**Environmental requirements** are to include:
- clean-up management
- dust and noise
- organisational and project environmental management plan
- vibration
- waste management
- water quality protection.

**Materials** may include:
- backfill and bedding materials
- concrete
- pipes
- other approved materials.

**Statutory and regulatory**
- commonwealth, state or territory, and local
**authorities include:** authorities administering applicable Acts, regulations and codes of practice.

**Mains pipe systems:**
- may include:
  - in-ground or above ground
  - pressurised mains water pipelines (booster system)
- may be constructed from:
  - ductile iron cement lined (DICL)
  - polymer
  - steel and copper
  - other approved materials.

**Pipe joining methods** may include:
- arc welded and mechanical jointed
- rubber ring
- solvent welded
- other approved jointing methods.

**Valves and flow control devices** include:
- air release valves
- energy dissipaters
- flow control valves
- non-return valves
- pressure control valves
- stop valves.

**Installation procedures:**
- are to include:
  - bedding down pipes
  - checking alignment, level and grade
  - positioning pipes
  - selecting size, type and material of pipe
- may include:
  - repair work
  - bedding materials, including aggregate and sand
  - support systems, which may include:
    - bedding for in-ground trenches
    - concrete shoulders for above ground pipes.

**Sustainability principles and**
- cover the current and future social, economic and
concepts: environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use and recycling of material
  - efficient energy and water use
  - disposing of waste material to ensure minimal environmental impact.

Testing procedures may include:
- air
- ovality
- pressure
- tolerance
- visual straightness
- water.

Unit Descriptor

This unit of competency specifies the outcomes required to install a home fire sprinkler system in a class 1a building.

Application of the Unit

Site location for work application is a class 1a building and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

CPCPCM2043A Carry out WHS requirements

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Prepare for work.
   1.1  Plans and specifications are obtained.
   1.2  *Work health and safety* (WHS) and *environmental requirements* associated with a home fire sprinkler system in a class 1a building are adhered to throughout the work.
   1.3  *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4  Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5  *Tools and equipment* for installing a home fire sprinkler in a class 1a building, including personal protective equipment, are selected and checked for serviceability.
   1.6  Work area is prepared to support efficient installation of a home fire sprinkler system for a class 1a building.

2  Identify installation requirements.
   2.1  System requirements are identified from plans, specifications and standards.
   2.2  *Materials* are selected that comply with *relevant Australian standards*.
   2.3  Quantities of materials required are calculated from plans and specifications.
   2.4  Materials and equipment are identified, ordered and collected according to workplace procedures.
   2.5  Materials and equipment are checked for compliance
with standards, docket and order form, and for acceptable condition.

2.6 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

### 3 Install and test system components.

3.1 System is set out according to plans, specifications and job instructions relevant Australian standards.

3.2 Pipe supports are installed that comply with standards, plans and specifications.

3.3 Fixings are installed to plans, specifications and manufacturer specifications.

3.4 Assemblies, devices, alarms, piping and materials are installed according to Australian standards, plans and specifications.

3.5 Jointing systems are installed in compliance with Australian standards and manufacturer specifications.

3.6 Installed system is subjected to pressure testing according to Australian standards, plans and specifications.

3.7 Test data is recorded in format required by plans, specifications and quality assurance procedures.

### 4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 **Information** is accessed and documentation completed according to regulatory authorities and workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- **Communication skills to:**
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication

- **Literacy skills to:**
  - complete workplace documentation
  - identify and accurately report faults in tools, equipment or materials
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing

- **Numeracy skills to apply measurements and calculations**

- **Planning and organising skills to:**
  - plan and sequence tasks with others
  - plan and set out work

- **Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities**

- **Technical skills to install and test a home fire sprinkler system for a class 1a building, including piping, control valve assemblies, actuating devices, alarms and sprinkler heads**

- **Technology skills to:**
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- **Components and materials relevant to installing a home fire sprinkler system for a class 1a building**

- **Fire rating systems and procedures**

- **Function and operation of a range of alarms, actuating devices, sprinkler heads and valves**
- job safety analyses (JSA) and safe work method statements (SWMS)
- National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
- pressure test systems and procedures
- processes for accessing information and calculating material requirements
- process of installing a home fire sprinkler system for a class 1a building
- relevant statutory requirements related to installing a home fire sprinkler system for a class 1a building
- SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test a home fire sprinkler system for a class 1a building
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of a home fire sprinkler system for a single storey class 1a building, installing and testing a home fire sprinkler system, consisting of a water supply, piping, control valves, actuating devices, alarms and sprinkler heads to design criteria and standards, ensuring:
  - application of sustainability principles and concepts throughout the installation process
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints. Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Integrated Framework Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and
supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements:**

- cover water quality management
- may include:
  - clean-up protection
  - waste management.
Quality assurance requirements may include:
- Australian standards
- Environment policy
- Environment Protection Authority (EPA)
- Internal company quality assurance policy and risk-management strategies
- International Standards Organisation
- Project specifications
- Site safety plan
- Workplace operations and procedures.

Tools and equipment may include:
- Cutting and threading equipment
- Elevated work platforms
- Hand and power tools
- Ladders
- Silver brazing equipment
- Testing equipment
- Welding equipment.

Materials may include:
- Actuating devices
- Control valve assemblies
- Local alarms
- Approved piping and fittings
- Sprinkler heads.

Relevant Australian standards include:
- AS2118.5 Automatic fire sprinkler systems (Part 5: Domestic)
- AS/NZS3500 National plumbing and drainage.

Sustainability principles and concepts:
- Cover the social, economic and environmental use of resources to meet current and future needs
- May include:
  - Disposing of waste material
  - Efficient energy usage
  - Efficient use and recycling of material
  - Selecting appropriate materials
  - Water use, harvesting and/or disposal.

Information may include:
- Charts and hand drawings
include:

- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- NFPA and Factory Mutual performance-based codes of practice
- organisational work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those relating to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing home fire sprinkler systems for a Class 1a building
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPWT4011B Design and size heated and cold water services and systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPWT4011A

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document the layout of heated, tempered and cold water services, flushing systems, and hydrant and hose reel systems for multi-floor buildings. It covers preparation for work, identification of water service and system requirements, planning the service and system layout and completion of work finalisation processes.

Application of the Unit
Site location for work application will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for planning.

1.1 Nature and scope of planning task are identified and confirmed.

1.2 Work health and safety (WHS) and environmental requirements associated with planning, sizing and documenting the layout of heated, tempered and cold water services and systems are adhered to throughout the work.

1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.4 Tools and equipment required for planning, sizing and documenting the layout of heated, tempered and cold water services and systems, including personal protective equipment, are selected and checked for serviceability.

1.5 Work area in which planning process is to be conducted is prepared.

2 Identify system requirements.

2.1 Information and specifications for required work are obtained and confirmed, if necessary by site inspection using relevant information.

2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.

2.3 Quantity, location and type of take-off points and fixtures are determined from plans and specifications.
2.4 Heated, tempered and cold *water services and systems* are sized according to relevant Australian standards and regulatory authorities' and workplace requirements.

3 Plan service and system layout.

3.1 Layout of heated, tempered and cold water services and systems to *point of discharge* are planned according to building plans, relevant Australian standards and workplace procedures.

3.2 *Materials* required are specified and optimised according to relevant Australian standards from the proposed design.

3.3 Plans are recorded according to regulatory authorities' and workplace requirements.

3.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 Restore work area.

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Documentation, including work backup, is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation, including work backup
  - read and interpret:
    - documentation from a variety of sources
    - regulations, relevant Australian standards, plans, specifications and drawings
  - record written plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to identify requirements, including system requirements
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- characteristics and application of water heating systems
- characteristics and application of water pumps and water storage tanks for multiple floor buildings
- drafting techniques, which may include the use of computers and computer-aided design
(CAD) software
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of designing, sizing and documenting the layout of heated, tempered and cold water services and systems
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relevant statutory requirements related to designing, sizing and laying out:
  - heated, tempered and cold water services and flushing systems, and fire hydrant and hose reel systems, including non-drinking water requirements
  - both mains pressure and low pressure flushing devices
- selection for installation of:
  - thermostatic mixing valves
  - backflow prevention devices
- SI system of measurements
- Australian standards applicable to the service and system
- water treatment processes
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the design, sizing and layout of heated, tempered and cold water services and systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to design, size and document the layout of:
  - a water supply system for a building with a minimum of six floors (including a non-drinking supply)
  - a flush valve system for a multi-floor complex, for a building that is a minimum of 35 metres high
  - a heated/tempered water supply system for a building
  - a hydrant and hose reel system for a building with a minimum of six floors; ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed services and systems
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, relevant Australian standards and organisational
quality procedures and processes
  • communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
  • an induction procedure and requirement
  • realistic tasks or simulated tasks covering the minimum task requirements
  • relevant specifications and work instructions
  • tools and equipment appropriate to applying safe work practices
  • support materials appropriate to activity
  • workplace instructions relating to safe working practices and addressing hazards and emergencies
  • material safety data sheets
  • research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

  • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
  • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
  • reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:
- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising
and preventing hazards associated with:
- electricity
- hazardous materials and substances
- other machines
- surrounding structure and facilities
- trip hazards
- underground services
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- computers running appropriate CAD software
- drawing instruments
- measuring equipment.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
- building codes
- WHS and environmental requirements
- plumbing regulations
- relevant Australian standards, including AS/NZS3500 National plumbing and drainage
- safe work procedures relating to designing, sizing and documenting the layout of heated and cold water services and systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Water services and systems** include:
- drinking water from a water meter or storage tank to a point of discharge or storage
- fire hydrant and hose reel systems
- heated and tempered water service to a point of discharge
- flushing systems
- non-drinking water from a source to a point of discharge or storage.

**Point of discharge** may be:
- fixture
- isolating valve.

**Materials** may include:
- building plans
- job specifications
- manufacturer specifications.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient design principles to minimise environmental impact
  - efficient use of material in the design, including recycling of material
  - efficient energy and water use
  - disposing of waste material to ensure minimal environmental impact.

CPCPWT4022A Commission and maintain backflow prevention devices

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPWT4012A

Unit Descriptor
This unit of competency specifies the outcomes required to test, commission and maintain backflow prevention devices in water services. It covers preparation for work, identification of testing and commissioning requirements, physical testing and commissioning of devices, maintenance of devices and completion of work finalisation processes.

Application of the Unit
Site location for work application will be either residential or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with testing, commissioning and maintaining backflow prevention devices are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for testing, commissioning and maintaining backflow prevention devices, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient testing, commissioning and maintenance of backflow prevention devices.

2 Identify testing and commissioning requirements.

2.1 Service and system design, and testing and commissioning requirements, are identified and confirmed from job specifications and according to standards and relevant information.

2.2 Backflow prevention device specifications and necessary installation materials are identified according to standards, authorities’ requirements and job specifications.
2.3 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 **Test and commission device.**

3.1 Installation is checked to ensure device is appropriate and installed according to standards, job specifications, manufacturer recommendations and authorities' requirements.

3.2 Operation of device is tested according to job specifications, manufacturer recommendations and authorities' requirements, and adjusted as required.

3.3 Documentation is completed according to regulating authorities' requirements.

4 ** Maintain device.**

4.1 Service and maintenance requirements are identified from manufacturer specifications or authorities' requirements.
