4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm
requirements, share information, listen and understand

- follow and give instructions
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to able to coordinate and action tasks, work with others and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - disconnect and reconnect system interface devices and associated wiring
  - reconfirm operation of control and indicating equipment (CIE)
  - use mobile communication technology

**Required knowledge**

- components and materials of fire alarm and detection system interface devices
- correct location and setting of interface devices to meet system design standards
- difference between extra low voltage and low voltage system interface wiring connection
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing, testing and commissioning fire alarm and detection system interface devices
- properties of water, including pressure and flow rates
- relevant statutory requirements related to commissioning fire alarm and detection system interface devices, including automatic smoke and heat venting systems, air handling systems, and emergency warning and intercommunication systems
- SI system of units
- sources of information and processes for calculating suitable replacement of interface devices
- standards applicable to the service
- systems operations and procedures
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing, planning and conducting system commissioning procedures for one fire alarm and detection system and completing all associated documentation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to commissioning fire alarm and detection system interface devices
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- commissioning one fire alarm and detection system interface device, including one pressure switch and one flow switch, plus an actuator and a control and indicating panel, ensuring:
  - applying sustainability principles and concepts
  - correctly identifying location, design specification and details of the system
  - correctly selecting and using appropriate processes, tools and equipment
  - completing all work to specification
  - complying with regulations, standards and organisational quality procedures and processes.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a
period of time reflecting the scope of the role and the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective equipment, including that prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - other machines
  - surrounding structure and facilities
  - trip hazards
underground services
use of tools and equipment
work site visitors and the public
working at heights
working in confined spaces
working in proximity to others
use of firefighting equipment
use of first aid equipment
workplace environment and safety.

**Quality assurance requirements** may include:

- Environment Protection Authority
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:

- hand and power tools
- test equipment.

**Commissioning fire alarm and detection system interface devices:** may include verifying interface device operations, including:

- alarm volume
- annunciators
- audible, visible and combination alarms
- controls
- coordination of alarm signals with other services
- dispatching systems
- public reporting systems
- signal transmission
- tactile alarm appliances for people with disabilities
- zone alarms

- interface devices may include:
  - pressure switches
  - flow switches
  - actuators
  - solenoids
• valve monitoring devices.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient energy usage
  • efficient water usage, including harvesting and disposal.

**Relevant standards** may include:

• AS1670.1 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Fire
• AS2118.1 Automatic fire sprinkler systems Part 1 – General requirements
• AS1851 Maintenance of fire protection systems and equipment.

**Statutory and regulatory authority** include:

• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Unit Sector(s)**

**Functional area**

**Unit sector** Plumbing and services

**Custom Content Section**

Not applicable.
CPCPFS4026A Commission firefighting appliances

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Detailed licensing information included
Not equivalent to CPCPFS4006A

Unit Descriptor
This unit of competency specifies the outcomes required to commission firefighting appliances.
It covers preparation for the work, identification and confirmation of system specifications and requirements, physical testing and commissioning of appliances, and work finalisation processes, including records and documentation.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople with responsibility for testing and commissioning firefighting appliances.
Site location for work application may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 Work health and safety (WHS) requirements associated with workplace environment and commissioning firefighting appliances are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.
   1.5 Tools and equipment for commissioning firefighting appliances, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient commissioning process.

2 Identify system requirements.
   2.1 Equipment requirements are identified and confirmed from job specifications and according to relevant standards.
   2.2 Requirements of firefighting appliance commissioning are identified according to standards, statutory and regulatory authorities’ requirements and job specifications.

3 Test and commission
   3.1 Firefighting appliances are checked to ensure type and installation conform to standards, job specifications,
3.2 Operation of appliances is tested according to standards, job specifications, manufacturer recommendations and authorities’ requirements and is adjusted as required.

3.3 Appliances are commissioned and maintained to ensure correct operation according to standards, and manufacturer and job specifications.

3.4 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Clean up work area.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
• complete workplace documentation
• read and interpret:
  • documentation from a variety of sources
  • plans and specifications
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• Australian standards applicable to relevant appliances
• components and materials of firefighting equipment and appliances
• job safety analysis (JSA) and safe work method statements (SWMS)
• pressure requirements of hose reel systems
• process of installing, testing and commissioning firefighting equipment and appliances
• relevant statutory requirements related to commissioning firefighting equipment and appliances
• SI system of units
• sources of information and processes for the calculation of requirements
• workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing, planning and
conducting commissioning procedures for firefighting appliances for a residential building of four storeys and completing all associated documentation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the commissioning of firefighting appliances
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- commissioning firefighting appliances, including portable fire appliances, wheeled fire extinguishers, delivery lay flat hose and fire hose reel systems, ensuring:
  - application of sustainability principles and concepts
  - correctly identifying location, design specification and details of system
  - correctly selecting and using appropriate processes, tools and equipment
  - completing all work to specification
  - complying with regulations, standards and organisational quality procedures and processes.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as possible take into account the language, literacy and numeracy capacity of the candidate in relation to the
competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials, including hazardous materials and substances
- hazard control
- personal protective equipment, including that prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Quality assurance requirements** may include:

- Environment Protection Authority
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
site safety plan
workplace operations and procedures.

**Tools and equipment** may include:
- hand and power tools
- test equipment.

**Commissioning firefighting appliances** covers testing and commissioning firefighting appliances, including:
- delivery lay flat fire hose
- fire blankets
- fire hose reel systems
- portable fire appliances
- wheeled fire extinguishers.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Relevant standards** may include:
- AS/NZS1841 Portable fire extinguishers - general requirements
- AS/NZS1850 Portable fire extinguishers – classification, rating and performance testing
- AS1851 Maintenance of fire protection systems and equipment
- AS2441 Installation of fire hose reels
- AS2444 Portable fire extinguishers and blankets - selection and location
- AS/NZS3504 Fire blankets
- AS3565 Meters for water supply
- AS4077 Fire protection – fire extinguishing media: halogenated hydrocarbons
- AS4078 Fire protection – fire extinguishing media: carbon dioxide
- AS4265 Wheeled fire extinguishers
- AS/NZS4353 Portable fire extinguishers – aerosol type.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy usage
  - disposing of waste material to ensure minimal
environmental impact

- efficient use and recycling of material.

CPCPFS4027A Commission fire sprinkler systems

Modification History

New unit.

This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to commission fire sprinkler systems. It covers preparing for the work, identifying and confirming system specifications and requirements, physically testing and commissioning systems, and finalising work processes, including completing records and documentation.

Application of the Unit

This unit of competency supports the work of fire protection industry personnel responsible for commissioning fire sprinkler systems.

Work may be undertaken on commercial or industrial buildings, which may be new work sites or existing structures being renovated, extended, restored or maintained.

Licensing/Regulatory Information

Licensing, legislative, regulatory or certification requirements may apply to this unit. Candidates are advised to check for those requirements.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
with the evidence guide.

## Elements and Performance Criteria

1. **Prepare for commissioning fire sprinkler systems.**
   1.1 *Commissioning inspections and tests required to validate that fire sprinkler system performance meets design requirements are determined in consultation with approving authority.*
   1.2 *Documentation* required for commissioning is obtained and reviewed.
   1.3 Tasks are planned according to *industry, legislative and workplace requirements* and sequenced in conjunction with others involved in or affected by the work.
   1.4 *Tools, equipment* and materials for commissioning are selected and checked for serviceability.
   1.5 Work area is prepared to support efficient commissioning process.

2. **Confirm that installation of system components correspond to design requirements.**
   2.1 *Fire sprinkler system components* and locations are identified on drawings and specifications.
   2.2 Building is inspected to confirm that locations of system components correspond to design requirements, or location anomalies are reported.
   2.3 Types of sprinkler heads are confirmed as compatible, or anomalies are reported.
   2.4 Spaces between sprinkler heads are confirmed as correct, or anomalies are reported.
   2.5 Pipework is inspected and confirmed as functional, or jointing and supporting defects are reported.
   2.6 Valves are inspected for different commissioning tests to confirm correct type, adequate labelling, and orientation in required position.
   2.7 Pressure gauge schedule, block plan and interface
diagram are confirmed as corresponding to design requirements.

2.8 Water supply components, including any installed pumpsets, are checked and verified against design requirements.

2.9 Changes to the building or existing conditions that could affect component performance are identified.

3 Conduct pressure tests and restore system to normal pressure.

3.1 Static air-pressure test is conducted to confirm integrity of the system, and results are recorded according to relevant standards and workplace requirements.

3.2 High pressure hydraulic test is conducted to confirm integrity of the system, and results are recorded according to relevant standards and workplace requirements.

3.3 Leaks are identified and reported.

3.4 System is drained and re-charged at normal pressure according to relevant standards and workplace requirements.

4 Conduct functional tests.

4.1 Water supply functional proving test is conducted, and results are recorded according to relevant standards.

4.2 Functional tests of system components and interfaces are conducted, and results recorded according to relevant standards and design requirements.

4.3 Tests are conducted according to environmental and sustainability requirements.

5 Finalise commissioning process.

5.1 System functionality and compliance with design specifications are confirmed.

5.2 Componentry is set to operational function and pipework is charged with water according to specifications.

5.3 Tools, equipment and materials are checked and stored and work area is left in good order.
5.4 Documentation is completed and processed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - determine commissioning test requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identify and report faults in tools, equipment or materials to appropriate personnel
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks in consultation with other relevant personnel
  - set out work
- reading skills to interpret drawings and specifications
- teamwork skills to work with others to action tasks
- technical skills to use tools and equipment to commission sprinkler systems
- technology skills to:
  - access site-specific instructions in a variety of media
  - use mobile communication technology
- writing skills to record results of functional tests and complete other workplace documentation

**Required knowledge**

- design and installation performance requirements of relevant installation standards, such as:
  - National Fire Protection Association (NFPA)
  - Factory Mutual performance-based codes of practice
  - Australian Standard AS 2118.1 Automatic fire sprinkler systems
- industry and regulatory requirements for commissioning fire sprinkler systems
- job safety analyses (JSA), safety data sheets (SDS) and safe work method statements (SWMS)
- performance measures for fire sprinkler systems as referenced in design drawings and specifications
- properties of water, including pressure, flow rates and atmospheric pressure
- SI system of measurements
- standards applicable to installing and commissioning fire sprinkler systems
- workplace and equipment safety requirements, including personal protective equipment requirements relevant to the job

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications to testing and commissioning fire sprinkler systems
- apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- as a minimum, the ability to commission:
  - one wet system connected to fixed pumpsets
  - one wet system connected to town main supply
  - one pre-action fire sprinkler system
- commissioning must ensure:
  - correct identification of location, design specification and details of proposed system
  - correct selection and use of appropriate processes, tools and equipment
  - completion of work to specification
  - compliance with regulations, standards and workplace quality procedures and processes
  - effective communication with others
  - safe work practices.
Context of and specific resources for assessment

Assessment of this unit:
- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:
- an induction procedure
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- safety data sheets, job safety analyses and safe work method statements
- research resources, including industry-related systems information.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to identify and interpret the essential underpinning knowledge required for practical application.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Fire sprinkler systems** may include:
- deluge
- dry pipe
- pre-action
- storage sprinklers
- wall wetting
- water mist
- wet pipe.

**Approving authority** may be:
- client representative
- council representative
- fire brigade official
- fire protection consultant engineer
- insurance company representative
- system designer.

**Documentation** may include:
- as-installed drawings
- design calculations
- logbooks
- operator manuals.

**Industry, legislative and workplace requirements** may include:
- codes and standards
- environmental and sustainability
- licensing
- quality assurance
- workplace health and safety.

**Tools and equipment** may include:
- digital tachometers
- flow testing equipment
- hand tools
- laser levels
- measuring devices
- personal protective equipment
- pressure gauges.

**Fire sprinkler system components** may include:
- air compressors
- alarm valves
- ball valves
- brackets
- discharge nozzles
- flow switches.
- pipework
- pressure gauges
- pressure reducing valves
- pressure relief valves
- pressure switches
- pumpsets
- solenoids
- sprinkler heads
- water supply valves.

**Functional tests** may include checking the effective operation of:

- brigade booster connections
- control and actuator mechanisms, such as:
  - pressure switches
  - flow switches
- control valves, such as:
  - pressure reducing
  - pressure relief
  - tank inflow
- interfaces to other systems, including:
  - booster pumps
  - building services
  - control indicating equipment (CIE)
  - control of booster pumpsets
  - fire detection
  - heating, ventilation and air conditioning (HVAC)
  - occupant warning systems
  - valve monitoring controls
  - remote water proving points
  - water supply components, such as tank infill and suction lines.

CPCPFS5011A Design fire sprinkler systems

Modification History
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPFS5001A

Unit Descriptor
This unit of competency specifies the outcomes required to design and size fire sprinkler systems and to detail and specify the layout, materials, components, water storage requirements, and flow and pressure requirements for fire sprinkler systems in buildings.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople responsible for designing fire sprinkler systems.
Site location for work application may be for new projects or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a performance. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 **Scope of work** is established for design of fire sprinkler systems for wide span and high-rise building projects.

1.2 **Design requirements** are determined from plans, specifications and client brief.

1.3 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.

1.4 **Fire department, statutory, regulatory, Australian and New Zealand standards and relevant building code requirements** for the design of fire sprinkler systems are interpreted and applied.

1.5 **Manufacturer requirements** and trade and technical manuals are interpreted and applied.

1.6 Flow and pressure requirements are established, **flow and pressure tests** are conducted and council main flows and pressures are established.

1.7 Additional research, including a **desktop study**, is conducted and **performance requirements** are established.

2 Plan and detail system components.

2.1 **Layout of pipework systems** and type and location of **fittings and valves** are planned.

2.2 Type, location and requirements for **backflow prevention devices** and **alarm and valve assemblies** are detailed.

2.3 Pipe sizes, velocities, flows and pressures are **calculated** for a range of applications.

2.4 Approved **materials, jointing methods** and sprinkler heads for fire sprinkler systems are specified.
2.5 Smoke alarm systems, *booster assemblies*, booster relay and jacking pumps are designed and detailed.

2.6 *Pipe fixings* are designed for a range of applications.

2.7 *Water storage systems* and *pump, pump controls and pumproom requirements* are sized and detailed.

2.8 *Test points and associated drainage systems* are designed and sized.

2.9 *Installation requirements* are specified.

3 Design and size systems.  
3.1 Fire sprinkler systems are designed for a range of wide span and high-rise building applications.

3.2 Combined water supply, fire hydrant and hose reel and sprinkler systems are designed for a range of wide span and high-rise building applications.

3.3 Sprinkler systems for Grades 1, 2 and 3 water supplies are designed.

3.4 Range of *sprinkler system configurations* is designed.

3.5 Fire sprinkler systems are designed and sized using computer software packages.

3.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 Prepare documentation.  
4.1 *Plans* are prepared and detailed for a range of fire sprinkler systems.

4.2 *Specification* for a fire sprinkler system is prepared.

4.3 *Testing and commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to:
  - develop creative and responsive approaches
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - read and interpret plans, specifications and documentation from a variety of sources, including:
    - Australian standards
    - National Construction Code
    - WHS and environmental requirements
    - plumbing regulations
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and reports
- numeracy skills to:
  - apply measurements and calculations
  - interpret data
- planning and organising skills to:
  - plan and sequence tasks with others
  - research, collect, organise and understand information relating to the design of fire sprinkler systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, carry out tests, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - apply design principles relating to hydraulic systems
• use tools and equipment, including drawing instruments, measuring equipment and computer-aided design (CAD) software
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• requirements of state regulatory authorities, Australian standards and manufacturer specifications, including:
  • AS/NZS2118 Automatic fire sprinkler systems – general requirements
  • AS/NZS3500 National plumbing and drainage
  • AS2200 Design charts for water supply and sewerage
  • environmental requirements
  • hazards associated with devices and systems used in the hydraulic sector
  • installation methods used in hydraulic systems
  • other standards, codes or standard operating procedures
  • terminology and definitions used in hydraulic design
• quality assurance requirements, including:
  • Environment Protection Authority
  • internal company quality assurance policy and risk management strategy
  • International Standards Organisation
  • nature of materials used and effects of performance under various conditions
  • site safety plan
  • workplace operations and procedures
• variety of applications of technology principles in design of fire sprinkler, hydrant and hose reel systems for all classes of building
• workplace safety requirements, including relevant statutory regulations, codes and standards

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities,
responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving preparing designs and associated documentation for fire sprinkler systems for two different categories of wide span and high-rise buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, fire authority, regulatory, manufacturer, NCC and Australian and New Zealand standard requirements for a range of fire sprinkler systems
- planning and detailing system components, including:
  - applying sustainability principles and concepts
  - alarm and valve assemblies
  - preparing a specification for a fire sprinkler system
- preparing a testing and commissioning schedule
- preparing an operation and maintenance manual
- preparing plans for a range of fire sprinkler systems
  - sprinkler heads
- water storage systems.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe
work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as
is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** includes:
- interpretation of plans and specifications
- sizing and documenting layout of fire sprinkler systems for applications, including residential, commercial and industrial.

**Design requirements** may include:
- architectural specifications
- builder specifications
- owner requirements
- relevant statutory authorities
- specialist design applications.

**Cost-benefit analysis** may include:
- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising project integrity.

**Fire department, statutory, regulatory, Australian and New Zealand standards and relevant building code requirements** may include:
- relevant Acts, regulations and local and state government policies
- AS/NZS2118 Automatic fire sprinkler systems - general requirements
- AS2419 Fire hydrant installations – system design, installation and commission
- material and authorisation standards specified by:
- National Construction Code (NCC)
- statutory authorities.

**Manufacturer requirements** may include:
- material specifications and standards
- pump tables
- sizing tables
- sprinkler heads and components
- technical and trade manuals.

**Flow and pressure tests** may include:
- results of flow and pressure tests conducted by a contractor
- on-site measurement of flow (l/s) and pressure (kPa).

**Desktop study** may include:
- collection and interpretation of existing data for design purposes from:
  - architectural and building plans
  - council requirements
  - developer requirements
  - regulatory requirements
  - environmental, social and economic considerations
- other documents and reports as appropriate.

**Performance requirements** may include:
- flow, velocity, pressure and discharge requirements, established using Australian and New Zealand standards and local statutory authorities’ plans.

**Layout of pipework systems**:
- may include:
  - appropriate water supply
  - grid systems
  - ring main
  - tree system
- should have principles of economy, serviceability, durability and fit for use applied.

**Fittings and valves** may include:
- fittings:
  - mechanical fittings
- bends
- elbows
- tees
- unions
- valves:
  - backflow prevention
  - pressure relief
  - isolating
  - pressure limiting
  - pressure reduction
  - strainers
  - water-saving devices.

**Backflow prevention devices:**
- may be testable or non-testable devices and installed as:
  - individual protection
  - zone protection
  - containment protection.

**Alarm and valve assemblies** may include:
- wet
- dry
- deluge
- pre-action
- mechanical and electrical alarms
- ancillaries and trims.

**Calculations** may include:
- hazard classification
- hydraulic
- pressure and flow
- density of discharge
- velocity
- volume
- friction
- area of operation (including shapes).

**Materials** may include:
- chlorinated polyvinyl chloride (CPVC)
- copper
- steel
- fittings and fixtures
other approved materials.

**Jointing methods** may include:
- silver braze
- welded
- solvent welded
- flanged
- mechanical joints
- threaded
- other approved methods of jointing.

**Booster assemblies** may include:
- cabinet and block plans
- non-return and isolating valves
- fire appliance (hard stand) access
- pressure gauges
- appropriate booster assembly.

**Pipe fixings** may include fire and load rated:
- masonry fixing
- vertical support fixing
- pipe supports spacings and locations
- bedding and thrust blocks
- corrosion protection
- cover
- material requirements.

**Water storage systems** may include:
- automatic controls
- inlet valve design and sizing
- outlet valve design and sizing
- overflow requirements
- safe tray requirements
- tank sizes
- vortex plates
- tank siting.

**Pump, pump controls and pumproom requirements** may include:
- manual and/or automatic controls
- inlet and outlet design requirements
- installation and mounting requirements
- pump selection
- space requirements
- electrical supply requirements
- valve requirements
- ventilation requirements
- heating
- exhaust extraction.

**Test points and associated drainage systems** may include:
- design and sizing of collection points and tundishes to prevent spillage, overflow and damage to building finishes
- design and sizing of drainage systems to cater for maximum flow conditions
- specification of materials for systems, including copper, polyvinyl chloride (PVC) and galvanised piping
- other approved materials.

**Installation requirements** may include:
- corrosion and elements protection
- installation details
- jointing requirements
- supports
- workmanship and quality control.

**Sprinkler system configurations** may include:
- deluge
- drencher
- dry
- pre-action
- special hazard
- wet.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact
  - efficient water usage, harvesting and/or disposal
  - life cycle cost-benefit analysis
• consideration of the Green Building Council of Australia rating scheme.

**Plans** may include:

• axonometrics
• cross-sections
• details
• elevations
• isometrics
• schematics, which may be produced using:
  • computer generation
  • drawing equipment
• sections
• submission for client approval
• pipework fabrication sheets and stores lists
• service coordination.

**Specification** may include:

• support and specialised components
• jointing
• manufacturer
• materials
• valve selection
• quality control/workmanship.

**Testing** may include:

• air pressure test
• hydrostatic test
• flush system
• quality assurance (QA) audit.

**Commissioning schedule** may include:

• direct inspection
• flow test
• system operation.

**Operation and maintenance manual** may include:

• hydraulic calculations and water supply details
• as installed drawings
• relevant standards of maintenance of all maintainable equipment
• manufacturer data
• system description and operating instructions
• certificate reference.

CPCPGS3046A Install LPG systems in caravans, mobile homes and mobile workplaces

Modification History
Prerequisite unit updated
Changes throughout unit, including unit title and critical aspects
Not equivalent to CPCPGS3016A

Unit Descriptor
This unit of competency specifies the outcomes required to determine the requirements for installing and commissioning liquefied petroleum gas (LPG) systems with an operating pressure not exceeding 2.75kPa in caravans, mobile homes and mobile workplaces.

Application of the Unit
Site location for work application may be a purpose-built workshop or customer’s premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised
Elements and Performance Criteria

1 Identify LPG system requirements.

1.1 Plans, specifications and any special instructions are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with installing and commissioning LPG systems in caravans, mobile homes and mobile workplaces are adhered to throughout the work.

1.3 Quality assurance requirements for company operations are identified and adhered to.

1.4 Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.

1.5 System capacity is calculated to ensure adequacy for the required load and compliance with relevant Australian standards and installation requirements.

1.6 Appropriate regulator and piping are identified in terms of size, connection sizes and capacity, according to relevant Australian standards and installation requirements.

1.7 Location of cylinders, appliances and piping set out is identified according to job requirements and in compliance with relevant Australian standards and installation requirements.

1.8 Quantity of piping, components and fittings is estimated in compliance with relevant Australian standards and installation requirements.

2 Prepare for installation.

2.1 Materials, equipment, appliances and cylinders are ordered and checked for compliance with docket and order form, and for acceptable condition.
2.2 Appropriate **tools and equipment** for installing and commissioning **LPG systems** in caravans, mobile homes and mobile workplaces, including personal protective equipment, are identified and selected.

2.3 Work is planned in conjunction with others involved in or affected by the work.

2.4 Work area and materials are prepared to support efficient installation of the system.

2.5 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

3 Install LPG system, including flue and ventilation.

3.1 Cylinders, regulators, associated pipework, appliances and fixings are installed in compliance with manufacturer requirements, relevant Australian standards and installation requirements.

3.2 Ventilation requirements are determined and installed according to relevant Australian standards.

4 Test and commission LPG system.

4.1 Appropriate test equipment is selected.

4.2 System is tested according to relevant Australian standards and manufacturer requirements.

4.3 System is commissioned according to relevant Australian standards and manufacturer requirements.

4.4 Test data is recorded in format required by regulatory and installation requirements.

4.5 Compliance plates and signage are located and fitted according to **statutory and regulatory authorities’** requirements, relevant Australian standards and installation requirements.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations.
and workplace procedures.

5.3 Information is accessed and documentation completed according to statutory requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to determine requirements, and install and commission LPG systems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- process for determining material requirements
- procedures for installing and commissioning gas systems in caravans, mobile homes and mobile workplaces
- properties of gas, gas safety, combustion principles, gas pressures, and cylinder installation and ventilation requirements
- relevant statutory requirements related to installing LPG systems
- SI system of measurements
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission LPG systems in caravans, mobile homes and mobile workplaces
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications for a project, determining the requirements for, installing, testing and commissioning LPG systems in either a caravan, mobile home or mobile workplace by determining the gas load, storage capacity and ventilation requirements for two gas appliances, ensuring:
  - application of sustainability principles and concepts throughout the installation process
  - correct identification of location, design and details of
proposed installation
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Integrated Framework Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
- confined spaces
- electricity
- hazardous materials and substances
- service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Materials**:
- copper tubing
- fittings
- fixing materials
- flue systems
- gas cylinders
- gas-operated appliances
- gas hose assemblies
- gas regulators
- other approved materials
- are to comply with job specifications and appropriate standards for gas installations.

**Tools and equipment** may include:
- files
- flaring tools
- hacksaws
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- measuring equipment
- power cutting tools
- pressure testing equipment
- silver brazing equipment
- spanners
- wrenches.

**LPG system may include:**
- approved appliances
- cylinders
- flue systems
- piping
- regulators.

**Sustainability principles and concepts:**
- cover the social, economic and environmental use of resources to meet current and future needs
  - may include:
    - selecting appropriate materials
    - efficient use and recycling of material
    - using energy efficient appliances
    - disposing of waste material appropriately.

**Statutory and regulatory authorities may include:**
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Information may include:**
- charts and hand drawings
- plans and sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
  - relevant Australian standards
- safe work procedures relating to determining requirements, and installing and commissioning LPG systems in caravans, mobile homes and mobile workplaces
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of
performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

| 1 | Identify LPG system requirements. | 1.1 | Plans, specifications and any special instructions are obtained. |
|   |                                | 1.2 | **Work health and safety** (WHS) and **environmental requirements** associated with installing and commissioning LPG and gas detection systems in marine craft are adhered to throughout the work. |
|   |                                | 1.3 | **Quality assurance requirements** for company operations are identified and adhered to. |
|   |                                | 1.4 | Gas load and design requirements are determined from plans, specifications, and job drawings or workplace instructions. |
|   |                                | 1.5 | System capacity is calculated to ensure adequacy for the required load and compliance with relevant Australian standards and installation requirements. |
|   |                                | 1.6 | Appropriate regulator and piping are identified in terms of size, connection sizes and capacity, according to relevant Australian standards and installation requirements. |
|   |                                | 1.7 | Location of cylinders, appliances and piping set out is identified according to job requirements and in compliance with relevant Australian standards and installation requirements. |
|   |                                | 1.8 | Quantity of piping, components and fittings is estimated in compliance with relevant Australian standards and installation requirements. |

| 2 | Prepare for installation. | 2.1 | **Materials**, equipment, appliances and cylinders are ordered and checked for compliance with docket and order form, and for acceptable condition. |
|   |                            | 2.2 | Appropriate **tools and equipment** for installing and commissioning **LPG systems** and **gas detection** in marine craft are available and operational. |
marine craft, including personal protective equipment, are identified and selected.

2.3 Work is planned in conjunction with others involved in or affected by the work.

2.4 Work area and materials are prepared to support efficient installation of the system.

2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Determine and install LPG systems.

3.1 Cylinders, regulators, associated pipework, appliances and fixings are installed in compliance with manufacturer requirements, relevant Australian standards and installation requirements.

3.2 Gas detection system requirements are determined and installed according to relevant Australian standards and manufacturer requirements.

3.3 Low voltage wiring is installed according to manufacturer instructions.

3.4 Ventilation requirements are determined and installed according to relevant Australian standards.

4 Test and commission LPG and detection systems.

4.1 Appropriate test equipment is selected.

4.2 Systems are tested and commissioned according to relevant Australian standards and manufacturer requirements.

4.3 Test data is recorded in format required by regulatory and installation requirements.

4.4 Compliance plates and signage are located and fitted according to *statutory and regulatory authorities’* requirements, relevant Australian standards and installation requirements.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.
5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Information is accessed and documentation completed according to statutory requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - confirm that the gas detection system complies with Australian standards
  - determine requirements, and install and commission LPG systems
- technology skills to:
• access and understand site-specific instructions in a variety of media
• use mobile communication technology

Required knowledge
• requirements and procedures relating to electrical safety and requisite precautions
• procedures for accessing relevant information, including codes and technical standards
• job safety analysis (JSA) and safe work method statements (SWMS)
• process for determining material requirements
• procedures for installing and commissioning gas systems in marine craft
• properties of gas, gas safety, combustion principles, gas pressures, cylinder installation, ventilation and gas detection requirements
• relevant statutory requirements relating to installing LPG systems in marine craft
• SI system of measurements
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:
• locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission LPG systems in marine craft
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications for a project, determining the requirements for, installing, testing and commissioning LPG and gas-detection systems in a marine craft by determining the gas load, storage capacity and ventilation requirements for a gas appliance, ensuring:
  • application of sustainability principles and concepts when installing the LPG systems
- correct identification of location, design and details of proposed installation
- correct selection and use of appropriate processes, tools and equipment
- completion of all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Integrated Framework Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
  • confined spaces
  • electricity
  • hazardous materials and substances
  • service lines
- surrounding structures and facilities
- trip hazards
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Materials:**
- copper tubing
- fittings
- fixing materials
- flue systems
- gas cylinders
- gas detection system
- gas-operated appliances
- gas regulators
- gas hose assemblies
- other approved materials
- are to comply with job specifications and appropriate standards for gas installations.

**Tools and equipment** may include:
- files
- flaring tools
- hacksaws
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- measuring equipment
- power cutting tools
- pressure testing equipment
- silver brazing equipment
- spanners
- wrenches.

**LPG system may include:**
- approved appliances
- cylinders
- flue systems
- piping
- regulators
- ventilation.

**Gas detection system must include:**
- gas detection unit
- low voltage wiring (to a limit of 32 volts)
- sensors
- solenoid valve
- power supply.

**Sustainability principles and concepts:**
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate materials
  - efficient use and recycling of material
  - using energy efficient appliances
  - disposing of waste material appropriately.

**Statutory and regulatory authorities may include:**
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Information may include:**
- charts and hand drawings
- plans and sketches
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
  - relevant Australian standards
- safe work procedures relating to determining requirements, and installing and commissioning LPG and gas detection systems in marine craft
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3048A Install gas pressure control equipment

Modification History
Prerequisite unit updated
Minor changes throughout the unit
Not equivalent to CPCPGS3018A

Unit Descriptor
This unit of competency specifies the outcomes required to install and commission gas control and regulating equipment for consumer gas piping carrying natural gas (NG), liquefied petroleum gas (LPG), or tempered liquefied petroleum gas (TLPG) up to 200kPa.

This unit requires the determination of the requirements for gas control and regulating equipment (for pressures up to 200kPa), and its installation, testing and commissioning according to standards.

The design requirements of this unit are limited to the application of the design to layout and installation.

Application of the Unit
Site location for work application may be a customer's premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Install and commission control and regulating equipment.

2.1 Appropriate tools and equipment for the installation, including personal protective equipment, are identified and selected.

2.3 Work is planned in conjunction with others involved in or affected by the work.

2.4 Work area and materials are prepared to support efficient installation of equipment.

3.1 Gas control and regulating equipment is installed in compliance with standards and statutory and regulatory authorities’ requirements.

3.2 Appropriate test apparatus is selected for commissioning the control and regulating equipment.

3.3 Commissioning is carried out according to standards, and authorities’ and manufacturer requirements, and the commissioning data is recorded in format required by the authority or job specification.

3.4 Pressure is correctly adjusted to comply with standards and job specification.

3.5 Sustainability principles and concepts are applied throughout the installation process.

### Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine requirements for gas control and regulating equipment (for pressures up to 200kPa)
  - install, test and commission gas control and regulating equipment according to standards
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- gas pressure control equipment
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for installing and testing gas pressure control and regulating equipment
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory requirements related to installing and commissioning gas control and regulating equipment
- SI system of measurements
- workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and install and commission gas pressure control equipment
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications for the installation of gas pressure control and regulating equipment, determining the requirements, and installing, testing and commissioning a single and a two-stage gas regulator, ensuring:
  - it operates to appropriate reduced pressure
  - application of sustainability principles and concepts throughout
  - correctly identifying requirements, and installing and commissioning pressure control and regulating equipment
• correctly selecting and using appropriate processes, tools and equipment
• completing all work to specification
• compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and
correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state level:

- handling of materials
- hazard control
and territory legislation and regulations and may include:

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements**

- clean-up protection
- waste management.

**Quality assurance requirements**

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Materials** for installing gas pressure control and regulating equipment:

- may include:
  - copper tubing
  - fitting and fixing materials
  - gas cylinders
  - gas pressure regulators
  - non-metallic hose assemblies
  - stainless steel
  - other approved materials
- are to comply with job specifications and appropriate standards for gas installations.
**Tools and equipment** may include:
- chain blocks
- flaring tools
- forklifts
- grinders
- hacksaws
- hand trolleys
- hoists and jacks
- ladders
- load and lifting equipment
- measuring equipment
- rollers
- scaffolding
- silver brazing equipment
- spanners
- testing equipment
- wrenches.

**Gas control and regulating equipment** is to include:
- over-pressure regulators, including internal relief and over-pressure shut off (OPSO) valve.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Sustainability principles and concepts**:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate components to ensure minimal environmental impact
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions.
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
  - relevant Australian standards
  - safe work procedures relating to installing and testing gas pressure control and regulating equipment
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of
performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  1.1 Design drawings, specifications and data are obtained.

1.2 **Work health and safety (WHS) and environmental requirements** associated with installing Type A gas appliance flues are adhered to throughout the work.

1.3 **Quality assurance requirements** for company operations are identified and adhered to.

1.4 Appropriate work notices and required documentation are completed and dispatched according to **statutory and regulatory authorities’ requirements**.

1.5 Tasks are planned in conjunction with others involved in or affected by the work.

1.6 **Tools and equipment**, including personal protective equipment, are selected and checked for serviceability.

1.7 Work area is prepared to support efficient installation of **Type A gas flues**.

2 Identify flue requirements.  2.1 Proposed flue location, installation requirements and route are determined.

2.2 Dimensions and load are determined from design drawing or instruction and manufacturer instructions.

2.3 Size of flue, flue material and components are determined according to relevant Australian standards, regulatory authorities’ requirements and manufacturer instructions.

2.4 Ventilation requirements are calculated in compliance with relevant Australian standards and are determined as appropriate for job specifications.

2.5 Quantity and type of **materials** required are estimated from design drawing or on-site inspection and ordered.
install and test flue.

3.1 Flue is installed in compliance with relevant Australian standards and job specifications.

3.2 *Sustainability principles and concepts* are applied throughout the installation.

3.3 Flue is weather-proofed according to manufacturer specifications and site requirements.

3.4 Flue is tested for operation and adjusted as required according to manufacturer specifications.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 *Information* is accessed and documentation completed according to workplace requirements.

- waste management.

Quality assurance requirements may include:
- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
- chain blocks
- drills
- flaring tools
- forklifts
- grinders
- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- lifting and load shifting equipment
- limited height scaffolding
- measuring equipment
- rollers
- spanners
- testing equipment and instruments
- tin snips
- wrenches.

Type A gas flues:
- may include:
  - balanced
  - individual appliance
• multiple flues
• natural draught
• other approved fluing methods

• may be required by:
• decorative heaters
• ducted heating systems
• heated water storage
• instant heated water heaters
• space heaters
• wall ovens.

Materials include Type A gas appliance flue components and materials that:

• include:
  • flashing materials, including lead and sheet metal or other approved materials
  • stainless steel and fibre cement
  • twin wall flues
  • may include proprietary flashings
  • are to comply with appropriate Australian standards for installing and testing Type A gas appliance flues.

Sustainability principles and concepts:

• cover the current and future social, economic and environmental use of resources

• may include:
  • efficient energy use
  • efficient use and recycling of material
  • correct handling of hazardous materials
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

Information may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
  - relevant Australian standards
  - safe work procedures relating to installing and testing Type A gas appliance flues
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
• record data in writing
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and set out work
  • plan work with others
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to:
  • determine purging requirements of a consumer gas piping system in terms of volume, method and medium of purge
  • conduct purging and testing for its completeness
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• characteristics of materials used in the purging process
• effect of heat on the materials used during the purging and testing process
• electrical safety and requisite precautions
• how to access relevant information, including codes and technical standards
• job safety analysis (JSA) and safe work method statements (SWMS)
• procedures for purging gas piping systems, including isolation processes and procedures
• properties of gas, gas safety, combustion principles, ignition principles, pressure and flow rates
• relevant statutory requirements related to purging gas piping systems
• SI system of measurements
• workplace and equipment safety requirements

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for determining requirements, and purging and testing consumer gas piping systems
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment; and eliminating possible ignition sources
- given the plans and specifications, purging, testing and recording the purge operations (one to be a fuel to inert purge and the other to be an inert to fuel purge) for a consumer gas piping system of greater than 0.03 cubic metres, which includes a subsidiary meter, ensuring:
  - application of sustainability principles and concepts
  - correct identification of method, medium, calculations and procedures to purge the piping system
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - electricity
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

Environmental requirements may

- clean-up protection
- waste management.
Quality assurance requirements may include:
- Australian standards
- Environment Protection Authority (EPA)
- Internal company quality assurance policy and risk management strategy
- International Standards Organisation
- Site safety plan
- Workplace operations and procedures.

Tools and equipment may include:
- Barriers
- Buckets
- Gas detector
- Hand and power tools
- Ladders
- Purge stacks
- Restricted height scaffolding
- Signs
- Testing equipment.

Purging:
- May occur before commencing work and on completion of work using either air, fuel gas or an inert gas on pipe volumes up to and exceeding 0.03 cubic metres, to applicable regulatory requirements
- Installation to be purged, calculations, method, medium and conduct of purging is to conform to standards or requirements of local regulatory authority
- Methods of purging are to include:
  - Fuel to inert purge
  - Inert to fuel purge.

Materials for purging may include:
- Compressed air
- Nitrogen
- Carbon dioxide
- Fuel gas.

Statutory and regulatory authorities include:
- Commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - appropriate purging medium that has minimal environmental impact
  - efficient use of purge medium.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
- recognised formulas or tables accepted by the regulatory authority
- relevant Australian standards
- safe work procedures relating to purging and testing consumer gas piping systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3052A Maintain Type A gas appliances

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPGS3022A

Unit Descriptor
This unit of competency specifies the outcomes required to perform basic maintenance on Type A gas appliances.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised
text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  
1.1 Appliance specifications and servicing and manufacturer manuals are obtained for planned work activity.
1.2 Work health and safety (WHS) and environmental requirements associated with maintenance of Type A gas appliances are adhered to throughout the work.
1.3 Quality assurance requirements for company operations are identified and adhered to.
1.4 Tools and equipment are selected consistent with maintaining Type A gas appliances, checked for serviceability, and any faults are reported to supervisor.
1.5 Tasks are planned in conjunction with others involved in or affected by the work.
1.6 Work area is prepared and materials identified to support the efficient conduct of maintenance of Type A gas appliances.

2 Identify maintenance requirements.  
2.1 Appliance is checked to ensure installation complies with standards and manufacturer requirements.
2.2 Electrical safety check is carried out according to authorities’ procedures and data is recorded in format required by job specification.
2.3 Test equipment is used to support visual inspection and to conduct testing according to statutory and regulatory authorities’ requirements.
2.4 Sustainability principles and concepts are applied throughout the purging process.
3 Conduct maintenance.

3.1 Maintenance tasks are carried out according to specifications and manufacturer requirements.

3.2 Appliances are checked for operation according to specifications, standards and manufacturer recommendations.

3.3 Faults and malfunctions are identified and reported according to workplace requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
- documentation from a variety of sources
- plans and specifications
- record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
- undertaking routine basic maintenance on Type A gas appliances, including gas, mechanical and appliance construction components

**Required knowledge**

- documentation and reporting requirements
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- procedures for maintaining and testing Type A gas appliances
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory requirements related to maintaining Type A gas appliances
- SI system of measurements
- workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements and maintain Type A gas appliances
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
- given the plans and specifications, performing cleaning and routine basic adjustment to two Type A appliances, checking gas supply pressures, effective operation and flue condition, ensuring:
  - application of sustainability principles and concepts
  - correct identification of maintenance procedures and requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work
practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** include:

- clean-up protection
- waste management.

**Type A gas appliances:**

- are badged appliances of less than 500 megajoules (MJ) for which an Australian Gas Association
(AGA) approval scheme exists
- decorative heaters
- ducted heating systems
- gas stoves and hot plates
- heated water storage
- instant heated water heaters
- space heaters.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- chain blocks
- forklifts
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- measuring equipment
- rollers
- spanners
- test equipment and instruments, including:
  - manometers
  - multi-meters
  - neon testers
  - volt sticks
  - wrenches.

**Maintenance of Type A gas appliances**: includes cleaning or adjusting gas components, including:
- burners
- pilots
- regulators
- thermocouples.
thermostats
- temperature and pressure relief (TPR) valves
- also includes rectifying simple gas supply problems, including meters and regulators
- is to comply with appropriate Australian standards.

**Materials** for the maintenance of Type A gas appliances:
- may include:
  - piping materials
  - regulators and meters
  - Type A gas appliances
  - other approved materials
- are to comply with appropriate standards for maintaining Type A gas appliances.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include appropriate purging medium that has minimal environmental impact.

**Information** may include:
- charts and hand drawings
- diagrams, sketches or graphics
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to maintaining Type
A gas appliances

- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3053A Disconnect and reconnect Type A gas appliances

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPGS3023A

Unit Descriptor
This unit of competency specifies the outcomes required to disconnect and reconnect services from Type A gas appliances operating on natural gas (NG), or liquefied petroleum gas (LPG), or tempered liquefied petroleum gas (TLPG) up to 200kPa.
The work is confined to disconnecting and reconnecting a like appliance.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A    Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.
   1.1 Appliance and equipment specifications and appropriate manufacturer manuals are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with disconnecting and reconnecting Type A gas appliances are adhered to throughout the work.
   1.3 Quality assurance requirements for company operations are identified and adhered to.
   1.4 Tools, equipment and materials are selected consistent with disconnecting and reconnecting services, are checked for serviceability, and faults are reported.
   1.5 Appropriate test equipment is selected for the job.
   1.6 Tasks are planned in conjunction with others involved in or affected by the work.

2 Identify appliance requirements.
   2.1 Appropriate appliance for gas supply type is selected according to job specification.
   2.2 Appliance installation is checked to ensure its compliance with relevant Australian standards.
   2.3 Appliance is checked for safe operation and its performance is checked against specification.
   2.4 Sustainability principles and concepts are observed when preparing for and undertaking work process.
3 Disconnect and reconnect equipment.

3.1 Electrical safety check is carried out according to state or territory authorities' procedures and statutory and regulatory authorities' requirements.

3.2 Safety-check data is recorded in format required by job specification.

3.3 Appliance is isolated from gas service according to statutory and regulatory requirements.

3.4 Work is carried out according to job instruction without damage to surrounding equipment or structures.

4 Test operation of equipment.

4.1 Mechanical services, gas, water and other service connections are checked for leaks.

4.2 Appliance is operated to ensure it conforms to appliance specification.

4.3 Mechanical services equipment is adjusted according to specification.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
• access information
• determine requirements
• enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
• follow instructions
• inform relevant authorities and supervisors of completion of job
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
  • record data in writing
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and set out work
  • plan work with others
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to disconnect and reconnect Type A gas appliances from mechanical services, gas, water, air and other services to allow replacement, repair or maintenance
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• electrical safety and requisite precautions
• how to access relevant information, including codes and technical standards
• ignition and combustion principles relating to conveyed materials or materials used in confined work spaces
• job safety analysis (JSA) and safe work method statements (SWMS)
• procedures for disconnecting and reconnecting Type A gas appliances
• properties of gas, gas safety, combustion principles, pressure and flow rates
• relevant statutory requirements related to disconnecting and reconnecting Type A gas appliances
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications for disconnecting and reconnecting Type A gas appliances
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, effectively isolating, disconnecting and reconnecting at least two Type A gas appliances, involving at least two gas types, ensuring:
  - application of sustainability principles and concepts
  - correct identification of procedure and sequence of work
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies

CPCPGS3054A Calculate and install natural ventilation for Type A gas appliances

Modification History
Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPGS3024A

Unit Descriptor
This unit of competency specifies the outcomes required to calculate and install natural ventilation for Type A gas appliances operating on natural gas (NG), liquefied petroleum gas (LPG) or tempered liquefied petroleum gas (TLPG) not exceeding 200kPa.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1  Prepare for work.  1.1  Design drawings, specifications and any special instructions are obtained.

1.2  Work health and safety (WHS) and environmental requirements associated with calculating and installing natural ventilation for Type A gas appliances are adhered to throughout the work.

1.3  Quality assurance requirements for company operations are identified and adhered to.

1.4  Appropriate work notices and required documentation are completed and dispatched according to authorities' requirements.

1.5  Tasks are planned in conjunction with others involved in or affected by the work.

1.6  Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.7  Work area is prepared to support efficient calculation and installation of natural ventilation for Type A gas appliances.

2  Identify natural ventilation requirements.  2.1  Gas load and design requirements are determined from design drawings, plans, specifications and given information.

2.2  Source and path of air supply are determined to comply with standards, plans and specifications of the job.

2.3  Free ventilation area is calculated in required format and
confirmed as being according to standards, plans and specifications.

2.4 Ventilation openings are calculated in required format and positioned in compliance with standards.

2.5 Quantity and type of materials and other components required are estimated from design drawing or on-site dimensions and ordered according to workplace requirements.

3 Install ventilation and test appliance.

3.1 Ventilation is installed in compliance with building codes and standards without damage to the building structure, surrounding environment or other services.

3.2 Appliance and flues are tested and adjusted where necessary for operation and compliance with standards.

3.3 Sustainability principles and concepts are applied throughout the installation.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- calculating, installing and testing natural ventilation for Type A gas appliances
- communication skills to:
  - access information
  - determine requirements
• enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
• follow instructions
• inform relevant authorities and supervisors of completion of job
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
    • record data in writing
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and set out work
  • plan work with others
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• electrical safety and requisite precautions
• how to access relevant information, including codes and technical standards
• job safety analysis (JSA) and safe work method statements (SWMS)
• mechanical ventilation and associated interlocks
• procedures for calculating, installing and testing natural ventilation for Type A gas appliances
• properties of gas, gas safety, combustion principles, pressure and flow rates
• relevant statutory requirements related to natural ventilation requirements for Type A gas appliances
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for calculating, installing and testing natural ventilation for Type A gas appliances
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, calculating and installing natural ventilation for a minimum of three different Type A gas appliances, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.
Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and
practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Ventilation:**

- may be natural or mechanical
- may be required for:
  - type one decorative gas log fire
  - type two decorative gas log fire
  - ducted heating systems
  - gas stoves and hot plates
  - storage water heaters
  - continuous flow water heaters
  - space heaters.

**Quality assurance requirements** may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- National Construction Code
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:

- grinders
- hand and power tools
- ladders
- measuring equipment
- restricted height scaffolding
- test equipment and instruments.

**Materials:**

- are to comply with appropriate standards for installing ventilation for Type A gas appliances
- include Type A gas appliances and ventilation materials, including grills
- may include louvres and ducting.
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage
  - considering energy efficiency requirements.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
  - recognised formulas or tables accepted by the regulatory authority
  - relevant Australian standards
  - safe work procedures relating to calculating and installing natural ventilation for Type A gas appliances
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Unit Descriptor
This unit of competency specifies the outcomes required to install and test gas sub-meters for gas consumer piping systems.

Application of the Unit
Site location for work application may be a customer’s premises.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A  Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills
Elements and Performance Criteria

1 Identify gas piping system requirements.
   1.1 Plans, specifications and any special instructions are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with installation of gas sub-meters are adhered to throughout the work.
   1.3 Quality assurance requirements for company operations are identified and adhered to.
   1.4 Gas load requirements are determined from specifications or given information.
   1.5 Size of meter is determined according to standards, statutory and regulatory authorities’ and installation requirements.
   1.6 Meter is located according to specifications or instructions, and complies with standards, and authorities’ and installation requirements.
   1.7 Quantity and type of materials to conform to authorities’ requirements and appropriate standards are estimated from specifications or on-site dimensions.

2 Prepare for installation.
   2.1 Meter and materials are ordered and checked for compliance with docket and order form, and for acceptable condition.
   2.2 Appropriate tools and equipment for installing meter, including personal protective equipment, are identified, selected and checked for serviceability.
   2.3 Appropriate testing equipment is selected.
   2.4 Work is planned in conjunction with others involved in or affected by the work.
2.5 Work area and materials are prepared to support efficient installation of meter.

3 Install and test gas sub-meter.

3.1 Support and installation method, including any fixings, are selected to comply with manufacturer instructions, standards and installation requirements.

3.2 Pipe section is isolated.

3.3 Meter is installed according to plans and specifications, and complies with standards and authorities' requirements.

3.4 Installation is purged and meter is tested according to standards and authorities' requirements.

3.5 Leaks are located and repaired, and installation is retested.

3.6 Test data is recorded in format required by regulating authority and installation requirements.

3.7 Sustainability principles and concepts are applied throughout the installation.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to installation requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills
- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test gas sub-meters for domestic residences
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas sub-meters
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authorities’ requirements related to installing and testing gas sub-meters
- SI system of measurements
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for installing and testing gas sub-meters
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
- given the plans and specifications, installing and testing a gas sub-meter for a domestic residence, ensuring:
  - sustainability principles and concepts are applied throughout the installation
  - correct identification of location and operation of the meter
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Performance criteria describe the performance needed to
essential outcomes of a unit of competency. demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify gas piping system requirements.  
1.1 Building plans and specifications and any special instructions are obtained.
1.2 Work health and safety (WHS) and environmental requirements associated with installing gas piping systems are adhered to throughout the work.
1.3 Quality assurance requirements for company operations are identified and adhered to.
1.4 Gas load and design requirements are determined from design drawing or given information.
1.5 Size of piping is calculated according to relevant Australian standards, authorities’ and workplace requirements.
1.6 Set out of piping systems is according to design drawing or instruction and complies with relevant Australian standards, authorities’ and workplace requirements.
1.7 Quantity and type of materials to conform to appropriate relevant Australian standards are estimated from design drawings or on-site dimensions.

2 Prepare for installation.  
2.1 Materials and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.
2.2 Appropriate tools and equipment for piping system installation, including personal protective equipment, are identified, selected and checked for serviceability.
2.3 Appropriate testing equipment is selected.
2.4 Work is planned in conjunction with others involved in
or affected by the work.

2.5 Work area and materials are prepared to support efficient installation of the system.

3 Install and test piping system.

3.1 Support system and installation method, including fixings, are selected to comply with manufacturer instructions, relevant Australian standards and workplace requirements.

3.2 Pipe system is installed and jointed according to design drawing or instruction and complies with relevant Australian standards and workplace requirements.

3.3 System is tested according to job requirements, relevant Australian standards and workplace requirements.

3.4 Leaks are located and repaired and system is retested.

3.5 Sustainability principles and concepts are applied throughout the installation process.

3.6 System is purged of air according to relevant Australian standards.

3.7 Test data is recorded in format required by regulating authority and workplace requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specifications.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to regulatory and organisational requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.
Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

unit of competency. and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

1. **Identify job requirements.**
   - **1.1** Installation requirements are determined from plans, load and specifications or site inspection.
   - **1.2** *Work health and safety* (WHS) and *environmental requirements* associated with sizing consumer piping systems are adhered to throughout the work.
   - **1.3** *Quality assurance requirements* for company operations are identified and adhered to.
   - **1.4** Piping materials are selected in compliance with appropriate standards, workplace and *statutory and regulatory authorities’ requirements*.
   - **1.5** Gas loads and pipe lengths or instructions are calculated and determined from design drawings, instructions or site inspection.
   - **1.6** *Sustainability principles and concepts* are applied throughout the sizing process.

2. **Size gas piping systems.**
   - **2.1** Pressure drop is selected according to standards, regulating authorities’ requirements, specifications and workplace requirements after authorities have been contacted for information regarding capacity of gas main and available meter outlet pressure.
   - **2.2** Appropriate sizing table is selected for gas supply type, piping material and pressure drop.
   - **2.3** Sizing procedure is undertaken consistent with standards, regulating authorities’ requirements, specifications, manufacturer requirements and workplace requirements.

3. **Clean up.**
   - **3.1** Work area is cleared.
3.2 *Information* is accessed and documentation completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - seek information from relevant authorities
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- technical skills to size consumer gas piping supplying appliances at an operating pressure not exceeding 200 kPa
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- appliance pressure requirements and gas consumption requirements
- characteristics of piping materials, joining methods, fittings and sealants
- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
• job safety analysis (JSA) and safe work method statements (SWMS)
• procedures for sizing consumer gas piping systems
• properties of gas, gas safety, combustion principles, pressure and flow rates
• relevant statutory and authority requirements related to sizing consumer gas piping systems
• SI system of measurements
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, standards and specifications to determine requirements and sizing of gas piping systems
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications, sizing consumer gas piping systems of at least two materials for up to five appliances each, at least one of them being a two-stage LPG system, ensuring:
  • application of sustainability principles and concepts
  • correctly identifying the sizing requirements of proposed piping system
  • correctly selecting and using appropriate processes, tools and equipment
  • completing all work to specification
• compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills
with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:
- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and
workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** may include:
- clean-up protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly
those pertaining to:

- building codes
- WHS and environmental requirements
- plumbing and/or gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to determining requirements and sizing consumer piping systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3059A Install LPG storage of aggregate storage capacity up to 500 litres

Modification History
Prerequisite unit updated
Minor changes throughout the unit
Not equivalent to CPCPGS3034A

Unit Descriptor
This unit of competency specifies the outcomes required to select, locate, install and test liquefied petroleum gas (LPG) storage facilities with a storage capacity of up to 500 litres; install either single or multiple cylinders; and test associated piping systems.
The storage is connected to consumer piping systems with operating pressures not exceeding 200kPa.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify LPG storage requirements.

1.1 Design, drawings, specifications and any special instructions are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with the installation of LPG storage facilities are adhered to throughout the work.

1.3 Quality assurance requirements for company operations are identified and adhered to.

1.4 Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.

1.5 Storage capacity is checked for compliance with regulatory authority and installation requirements.

1.6 Type of storage is determined according to job and installation requirements.

1.7 Cylinder and type of system (one or two-stage) are selected according to standards, job and installation requirements.

1.8 Appropriate regulators are determined to meet capacity and load of the system according to installation requirements.

1.9 Appropriateness of selected location to provide the required service is established in compliance with standards and installation requirements.

1.10 Quantity of materials required is calculated from design, drawings and specifications in compliance with installation requirements.
2 Prepare for installation.

2.1 **Materials** and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.

2.2 Appropriate tools and equipment for storage facility installation, including personal protective equipment, are identified, selected and checked for serviceability.

2.3 Appropriate testing apparatus is selected.

2.4 Work is planned in conjunction with others involved in or affected by the work.

2.5 Work area and materials are prepared to support efficient installation of the system.

3 Install and test LPG storage system.

3.1 Cylinder supports and base, piping, fittings and components are selected in compliance with standards and installation requirements.

3.2 Size and method of connection are selected in compliance with standards and installation requirements.

3.3 Cylinder valve is purged according to standards.

3.4 System from cylinder outlet is tested, purged and regulator adjusted to be gas-tight, in compliance with regulatory authority and installation requirements.

3.5 Test data is recorded in format required by regulatory authority and installation requirements.

3.6 **Sustainability principles and concepts** are applied to work process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 **Tools and equipment** are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 **Information** is accessed and documentation completed.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas storage facilities
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory requirements related to installing and testing gas storage facilities
- SI system of measurements
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and select, locate, install and test LPG storage systems
- applying safety requirements throughout the work sequence, including applying electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, determining the LPG storage facility requirements and installing and testing two LPG storage facilities up to 500 litre capacity, with operating pressures not exceeding 200kPa, of which one is a multiple cylinder installation, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed storage installation
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and
correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state

- handling of materials
- hazard control
and territory legislation and regulations and may include:

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Materials** for installing LPG storage facilities:

- may include:
  - cylinder supports and bases
  - copper tubing
  - fitting and fixing materials
  - gas cylinders
  - gas regulators
  - non-metallic hose assemblies
  - stainless steel
  - other approved materials
- are to comply with job specifications and appropriate standards for the storage of LPG.
**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use and recycling of material
  - efficient energy usage
  - disposing of waste material to ensure minimal environmental impact.

**Tools and equipment** may include:
- chain blocks
- forklifts
- grinders
- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- manual brazing equipment
- measuring equipment
- rollers
- testing equipment.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- recognised formulas or tables accepted by the regulatory authority
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
- relevant Australian standards
- safe work procedures relating to determining requirements, and installing and testing LPG storage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3060A Install LPG storage of aggregate storage capacity exceeding 500 litres and less than 8KL

Modification History

Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPGS3035A

Unit Descriptor

This unit of competency specifies the outcomes required to select, locate, install and test liquefied petroleum gas (LPG) storage facilities with a storage capacity of more than 500 litres but less than 8KL.

The storage is connected to consumer piping systems with an operating pressure not exceeding 140kPa.

Application of the Unit

Site location for work application may be a customer's premises.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

CPCPCM2043A Carry out WHS requirements

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify installation requirements.

1.1 Building plans and specifications and any special instructions are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing LPG storage facilities are adhered to throughout the work.

1.3 *Quality assurance requirements* for company operations are identified and adhered to.

1.4 Gas load and design requirements are determined from plans, specifications, and job drawing or workplace instructions.

1.5 Storage capacity is checked for compliance with regulatory authorities’ and installation requirements.

1.6 Appropriate regulators are determined to meet capacity and load of the system according to installation requirements.

1.7 Appropriateness of selected location to provide required service is established in compliance with standards and installation requirements.

1.8 Quantity of required materials is calculated from design, drawings and specifications in compliance with installation requirements.

2 Prepare for installation.

2.1 *Materials* and equipment are ordered and checked for compliance with docket and order form, and for acceptable condition.
2.2 Appropriate **tools and equipment** for installation of storage facility, including personal protective equipment, are identified, selected and checked for serviceability.

2.3 Appropriate testing apparatus is selected.

2.4 Work is planned in conjunction with others involved in or affected by the work.

2.5 Work area and materials are prepared to support efficient installation of system.

3 Install and test LPG storage system.

3.1 LPG containers, piping, fittings and components are installed in compliance with standards and installation requirements.

3.2 Regulators and associated pipework are installed in compliance with standards and installation requirements.

3.3 Regulators are adjusted to provide working pressure in compliance with standards and installation requirements.

3.4 System is purged according to standards.

3.5 System is tested in compliance with standards and installation requirements.

3.6 Test equipment is removed and test data recorded in format required by regulatory authority and installation requirements.

3.7 **Sustainability principles and concepts** are applied throughout the installation process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 **Information** is accessed and documentation completed according to installation requirements.
4.4 Relevant authorities and supervisors are advised of job completion in compliance with regulatory and installation requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - inform relevant authorities and supervisors of completion of job
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record data in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and set out work
  - plan work with others
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to select, locate, install and test LPG storage facilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and testing gas storage facilities
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory and authority requirements related to installing and testing gas storage facilities
- SI system of measurements
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements, and select, locate, install and test LPG storage systems
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
- given the plans and specifications for a gas storage facility of capacity greater than 500 litres (but less than 8KL), determining the requirements, installing and testing first and second stage piping installation from an LPG storage container located and installed to specifications, ensuring:
• application of sustainability principles and concepts
• correct identification of location, design and details of proposed storage installation
• correct selection and use of appropriate processes, tools and equipment
• completing all work to specification
• compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in
the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Materials** for installing LPG storage facilities:

- may include:
  - container supports and bases
  - copper tubing
  - fitting and fixing materials
  - gas containers (500L–8KL)
- gas regulators
- non-metallic hose assemblies
- other approved materials
- are to comply with job specifications and appropriate standards for the storage of LPG.

**Tools and equipment** may include:
- brazing equipment
- chain blocks
- flaring tools
- forklifts
- grinders
- hacksaws
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- lifting and load shifting equipment
- measuring equipment
- rollers
- pressure testing equipment.

**Installation** is normally a two stage system and:
- may be from storage container:
  - to point of use, requiring regulators
  - from storage to a second stage regulator
- installation and materials are to be according to relevant standards.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy usage
  - selecting appropriate material to ensure minimal environmental impact.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
  - relevant Australian standards
  - safe work procedures relating to determining requirements, and installing and testing LPG storage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPGS3061A Install and commission Type A gas appliances

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Performance criterion and item in required knowledge section added
Not equivalent to CPCPGS3058A Install and commission Type A gas appliances

Unit Descriptor
This unit of competency specifies the outcomes required to install and commission Type A gas appliances approved for use with natural gas (NG) or liquefied petroleum gas (LPG) up to 200kPa.

Type A gas appliances are badged appliances of less than 500 megajoules (MJ) for which an approval scheme exists. They include but are not limited to space heaters, ducted heating systems, heated water storage, instant heated water heaters, decorative heaters, and gas stoves and hot plates.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the Performance criteria describe the required performance
essential outcomes of a unit of competency. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

1. **Prepare for work.**
   1.1 Building plans and specifications and any special instructions are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing and commissioning Type A gas appliances are adhered to throughout the work.
   1.3 *Quality assurance requirements* for company operations are identified and adhered to.
   1.4 Appropriate work notices and required documentation are completed and dispatched according to the authorities’ requirements.
   1.5 Tasks are planned in conjunction with others involved in or affected by the work.
   1.6 *Tools, equipment* and *materials*, including personal protective equipment, are selected and checked for serviceability.
   1.7 Work area is prepared to support efficient installation of Type A gas appliances.

2. **Identify appliance requirements**
   2.1 Appropriate appliance for the gas supply type is selected according to the job specification, ensuring the currency of the Australian Gas Association (AGA) or Australian Liquefied Petroleum Gas Association (ALPGA) approval number.
   2.2 Existing piping is checked to ensure its compliance with relevant Australian standards and that its capacity is adequate for the additional load.
2.3 Appliance is located in conformance to regulatory requirements and relevant Australian standards, and is appropriate for appliance use and for piping, flue and ventilation requirements.

3 Determine installation requirements.

3.1 Appropriate pipe fittings and components for the installation are selected according to relevant Australian standards.

3.2 Size of branch line is calculated according to regulating authorities' requirements.

3.3 Ventilation openings and source of air supply are determined that conform to relevant Australian standards and format required by the job specifications.

3.4 Quantity and type of materials and other components required are estimated from design drawing or on-site dimensions.

3.5 Requirements for natural gas or LPG appliance regulator installation are determined.

4 Install appliance.

4.1 Piping system is installed according to design drawing or instruction and relevant Australian standards.

4.2 Pipe system is tested according to relevant Australian standards and regulatory authorities' requirements.

4.3 Appliance is installed according to relevant Australian standards and manufacturer instructions and without damage or distortion to surrounding environment or other services.

4.4 Sustainability principles and concepts are applied throughout the installation.

5 Commission appliance.

5.1 Electrical safety check is conducted.

5.2 Consumer piping is purged and joints are reconnected according to workplace requirements.

5.3 Appropriate testing instrument is selected and operated, with data being recorded according to workplace
requirements.

5.4 Pipe system is tested according to relevant Australian standards and statutory and regulatory authorities’ requirements.

5.5 Appliance is adjusted and reassembled and operation is checked according to manufacturer specifications.

5.6 Appropriate test is carried out to ensure that there is no leakage or spillage of combustion products into the circulating air system.

5.7 Operation of appliance is explained to customer.

6 Clean up.

6.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

6.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

6.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
literacy skills to:
- complete work notices and other relevant documentation
- read and interpret:
  - documentation from a variety of sources
  - plans and specifications
- record data in writing
numeracy skills to apply measurements and calculations
planning and organising skills to:
- plan and set out work
- plan work with others
technology skills to:
- access and understand site-specific instructions in a variety of media
- use mobile communication technology

**Required knowledge**

- electrical safety and requisite precautions
- how to access relevant information, including codes and technical standards
- job safety analysis (JSA) and safe work method statements (SWMS)
- material requirements determination process
- procedures for installing and commissioning Type A gas appliances, including flashing and requirements for flues and ventilation
- procedures for using carbon monoxide testing equipment to check appliances for spillage
- properties of gas, gas safety, combustion principles, pressure and flow rates
- relevant statutory requirements related to installing and commissioning Type A gas appliances
- SI system of measurements
- workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine the requirements for installing and commissioning Type A gas appliances
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing and commissioning a water heater, space heater, and cooking appliance; at least one of which is to be a domestic installation, one a commercial installation, and one a fan assisted flued appliance, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
realistic tasks or simulated tasks covering the minimum task requirements
relevant specifications and work instructions
tools and equipment appropriate to applying safe work practices
support materials appropriate to activity
workplace instructions relating to safe work practices and addressing hazards and emergencies
research resources, including industry-related systems information
safety data sheets.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct,
indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
include:

- waste management.

**Quality assurance requirements**

may include:

- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment**

may include:

- chain blocks
- drills
- flaring tools
- forklifts
- hacksaws
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- limited height scaffolding
- measuring equipment
- rollers
- silver brazing equipment
- spanners
- test equipment and instruments
- tin snips
- wrenches.

**Materials for installing and commissioning Type A gas appliances:**

are to include Type A:

- gas appliances
- piping materials
- flues
- ventilation materials and components

are to comply with relevant Australian standards for installing and commissioning Type A gas appliances.

**Sustainability principles and concepts:**

cover the current and future social, economic and environmental use of resources

may include:
• choice of energy and water-efficient appliances
• efficient use and recycling of material
• correct handling of hazardous materials
• disposing of waste material to ensure minimal environmental impact
• selecting appropriate components to ensure minimal environmental impact.

**Information may include:**

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing and gasfitting authority regulations
• recognised formulas or tables accepted by the regulatory authority
• relevant Australian standards
• safe work procedures relating to installing and commissioning Type A gas appliances
• safety data sheets (SDS)
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

CPCPGS4011C Design and size consumer gas installations

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Reference to standard updated in required knowledge section
Equivalent to CPCPGS4011B Design and size consumer gas installations

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document a consumer's gas installation, including consumer piping operating up to a pressure of 200kPa, fluing, ventilation and appliance installation associated with natural gas (NG), simulated natural gas (SNG), liquefied petroleum gas (LPG) and tempered liquefied petroleum gas (TLPG) for a building of minimum four floors and multiple buildings supplied through one gas source (billing meter or storage tank).
It covers preparing for work, determining gas installation design requirements, detailed planning of the layout, and completing work finalisation processes, including records and documentation.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
Work associated with this unit is undertaken within the scope of AS5601 Gas installations and local licensing requirements (gas, electrical and plumbing).

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1 Prepare for planning | 1.1 Nature and scope of planning task are identified and confirmed.  
1.2 **Work health and safety** (WHS) and **environmental requirements** associated with planning, sizing and documenting layout of **gas installations** are adhered to throughout the work.  
1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work.  
1.4 **Tools and equipment** required for planning, sizing and documenting layout of gas installations, including personal protective equipment, are selected and checked for serviceability, and faults are rectified or referred for action.  
1.5 Work area in which planning process is to be conducted is prepared. |
| 2 Identify system requirements. | 2.1 **Information** and specifications for required work are obtained and confirmed, if necessary by site inspection.  
2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.  
2.3 Quantity, location and type of take-off materials and fixtures are determined from plans and specifications.  
2.4 Gas installations are sized according to relevant Australian standards, and **statutory and regulatory authority** and workplace requirements. |
3 Plan system layout.

3.1 Layout of gas installations is planned according to building plans, relevant Australian standards and workplace procedures.

3.2 *Materials* required are specified and optimised according to relevant Australian standards from proposed design.

3.3 Plans are recorded according to regulatory authorities’ and workplace requirements.

3.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 Restore work area.

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Information is accessed and documentation, including work backup, is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
• access and understand site-specific instructions in a variety of media
• read and interpret:
  • documentation from a variety of sources
  • regulations, relevant Australian standards, plans, specifications and drawings
• record plans in writing and complete workplace documentation
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • organise and sequence tasks with others
  • plan and set out work
• technical skills to plan, size and document layout of gas installations for single and multiple buildings consisting of a minimum of four floors
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge

• AS/NZS 5601 Gas installations, including the use of tables
• building and construction industry terminology
• drawing and sketching techniques, including the use of conventional symbols
• gas safety, including combustion characteristics and effects
• general electrical safety requirements
• impact of ventilation on design
• job safety analysis (JSA) and safe work method statements (SWMS)
• planning, sizing and layout of gas installations
• processes for accessing information and for calculating material requirements
• relevant statutory and authority requirements related to planning, sizing and layout of gas installations
• SI system of measurement
• types and properties of fuel gas, including pressure and flow rates
• types, characteristics, uses and limitations of gas pipe work and reticulation materials, including joining techniques and systems
• use of computers and computer-aided design (CAD) software
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to the planning, sizing and layout of gas installations
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- designing, sizing and documenting the layout of three gas installations, which are to include any combinations covering:
  - pipe sizing and pressures up to 200kPa
  - at least one NG installation
  - at least one LPG installation
  - at least one domestic installation
  - at least one commercial installation
  - a caravan installation
  - a marine installation, including the installation of an LPG leak detection system in a mono hull vessel
- installations planned and documented must include:
  - multiple buildings
  - a two stage LPG system
  - five or more gas appliances
  - domestic and commercial Type A gas appliances
  - a common flue system
  - a minimum of three piping materials
• an over-pressure protection device
• a subsidiary meter
• plans and documentation should ensure:
  • application of sustainability principles and concepts
  • identification, evaluation and incorporation of sustainability principles and concepts into the design
  • correct identification of location, design and details of proposed services
  • correct selection and use of appropriate processes, tools and equipment
  • completion of all work to specification
  • compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  • communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and
other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electrical components and safety
  - gas fires and explosions
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- air pollution
- clean-up protection
- environmental protection
- waste management.

**Gas installations** may include:

- liquefied petroleum gas
- natural gas
- simulated natural gas
- tempered liquefied petroleum gas.
Tools and equipment may include:
- computers running appropriate CAD software
- drawing instruments
- measuring equipment.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - gas regulations
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including AS5601 Gas installations
- safe work procedures relating to planning, sizing and documenting the layout of gas installations
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Materials may include:
- building plans and specifications.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - use of efficient design principles to ensure
minimal environmental impact
- incorporation of efficient use of material into the design, including recycling of material
- choice of efficient energy and water appliances
- correct handling of hazardous materials
- disposing of waste material to ensure minimal environmental impact.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
### Elements and Performance Criteria

1. **Prepare for work.**
   1.1 Appliance specifications and servicing and manufacturer manuals are obtained for planned work activity.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with servicing *Type A gas appliances* are adhered to throughout the work.
   1.3 *Quality assurance requirements* for company operations are identified and adhered to.
   1.4 *Tools, equipment* and *materials* are selected consistent with servicing needs, checked for serviceability, and faults are rectified or referred for action.
   1.5 Tasks are planned in conjunction with others involved in or affected by the work.
   1.6 Work area is prepared to support efficient conduct of servicing the Type A gas appliance.
   1.7 Electrical safety checks and isolation procedures are completed and recorded to manufacturers' and other statutory and regulatory authorities’ requirements before servicing work is commenced.
   1.8 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

2. **Disassemble and assemble Type A gas appliances.**
   2.1 Appliance specifications and servicing and manufacturer manuals are obtained and analysed to confirm assembly and disassembly techniques and sequences.
   2.2 Preliminary diagnosis is completed to focus and minimise disassembly requirement.
   2.3 Disassembly and reassembly are carried out safely and in a sequential manner.
   2.4 Appliance is assessed to ensure it complies with relevant standards and manufacturer specifications prior to commissioning and return to service.

</table>
4.7 Repair, replacement and adjustment action is taken according to manufacturer specifications or service manuals.

4.8 Appliance is assessed to ensure it complies with relevant standards and manufacturer specifications prior to commissioning and return to service.

5 Clean up work area.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

5.2 Tools and equipment are cleaned, checked, serviced and stored according to manufacturer recommendations and workplace procedures.

5.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- Initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- Literacy skills to:
  - read and interpret:
    - documentation from a variety of sources
    - regulations, standards, plans, specifications and drawings
  - record plans in writing and complete workplace documentation
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • organise and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of
cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to:
  • prepare for the work, fault diagnosis, disassembly, repair and replacement, reassembly
    and completion of work finalisation processes
  • service equipment and complete job records
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge

• AS5601 Gas installations, including the use of tables
• basic electrical theory, including:
  • characteristics of electromotive force (EMF)
  • characteristics of fuses, circuit breakers, residual current devices and earthing systems
  • combustion characteristics and effects
  • conduction
  • current flow
  • ignition systems
  • insulation
  • isolation procedures
  • Ohm's law
• burners and burner adjustment
• characteristics of conversion from one gas type to another
• classification of appliances and identification of related components
• electrical safety, including isolation procedures and requisite precautions
• gas appliance regulators
• gas appliance thermostats
• gas safety, including:
  • combustion characteristics and effects
  • isolation procedures
• job safety analysis (JSA) and safe work method statements (SWMS)
• operation of flame failure systems used in Type A gas appliances
• processes for accessing information and for calculating material requirements
• SI system of measurement
• types and properties of fuel gas, including pressure and flow rates
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to determine requirements and maintain Type A gas appliances
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment; and isolating appliances from gas and electrical services
- performing the following servicing activities and functions:
  - application of sustainability principles and concepts
  - disassembly, reassembly, testing and recommissioning of a minimum of two different Type A gas appliances
  - conduct evaluative tests on electrical and electronic components, including central processing units, printed circuit boards and associated parts, in order to diagnose and remedy faults and malfunctions
  - conduct evaluative tests on gas systems to diagnose and remedy faults and malfunctions on workplace and equipment safety requirements
the components listed in the range statement

- convert a Type A gas appliance to operate on another gas type, according to AS5601, any local utility’s requirements and manufacturer specifications
- servicing activities and function should ensure:
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present
with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electrical components and safety
  - gas fires and explosions
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- air pollution
- clean-up protection
- waste management.

**Type A gas appliances:**

- are badged appliances of less than 500 megajoules (MJ) for which an Australian Gas Association (AGA) and Australian Liquefied Petroleum Gas Association (ALPGA) approval scheme exists
- include:
  - decorative heaters
  - ducted heating systems
  - gas stoves and hot plates
  - heated water storage
  - instant heated water heaters
  - space heaters
  - mechanical components and gas appliance systems,
which may include:
- combustion chambers
- heat exchangers
- primary flues.

**Quality assurance requirements** may include:
- AGA requirements
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- maintenance of Type A gas appliances complying with appropriate Australian standards
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- lifting and load shifting equipment, including:
  - chain blocks
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
- measuring equipment
- test equipment and instruments, including:
  - dual probe voltage tester
  - manometers
  - multi-meters
  - megohmmeter
  - hand and power tools
  - spanners
  - wrenches.

**Materials** for the maintenance of Type A gas appliances:
- may include:
  - piping materials
  - regulators and meters
  - Type A gas appliances
  - other approved materials
- are to comply with appropriate standards for the maintenance of Type A gas appliances.
**Statutory and regulatory authorities**

Include:

- Commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Sustainability principles and concepts**:

- Cover the current and future social, economic and environmental use of resources.
- May include:
  - Efficient energy use.
  - Efficient use and recycling of material.
  - Correct handling of hazardous materials.
  - Disposing of waste material to ensure minimal environmental impact.
  - Selecting appropriate components to ensure minimal environmental impact.

**Testing techniques** include de-energised and energised tests, which may include:

- Capacitors.
- Electric motors.
- Heat activated switches.
- Ignition systems (basic, ignition and re-ignition, flame safeguard systems, hot surface ignition).
- Printed circuit boards.
- Relay time delay and conventional.
- Solenoid coils.
- Thermistors.
- Thermostats, direct and indirect wired.
- Time clocks, mechanical and electronic.
- Transformers.

**Adjustment** and calibration are to include:

- Dip switches.
- Fan limit controls.
- Fan speed settings.
- Heat anticipators.
- Thermostats.

**Corrective action**, such as component removal and replacement, is to include:

- Burners.
- Combination controls.
- Fans.
- Pilots.
- Rail cocks, thermostats and associated components.
- Solenoid valve regulators.
- thermocouples.

Information may include:
- charts and hand drawings
- diagrams, sketches and graphics
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and gasfitting authority regulations
- relevant Australian standards, including AS/NZS3000 Electrical installations, AS/NZS4836 Safe working on low-voltage electrical installations, AS5601 (AG601) Gas installations
- safe work procedures relating maintaining Type A gas appliances
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Unit Sector(s)

Unit sector Plumbing and services

Custom Content Section

Not applicable.
CPCPGS4023B Install, commission and service Type B gas appliances

Modification History
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.
- Reference to standards updated in required knowledge section and range statement
Equivalent to CPCPGS4023A Install, commission and service Type B gas appliances

Unit Descriptor
This unit of competency specifies the outcomes required to install, commission and service Type B gas appliances, from the gas isolation valve and electrical isolation switch to the flue spigot on the appliance, according to current and relevant standards.

Application of the Unit
This unit of competency supports the needs of appropriately qualified experienced persons with a responsibility for interpreting and applying pre-existing design specifications; gaining approvals from authorities; preparing for work; installing gas system components and associated electrical or electronic components and controls; testing, adjusting, commissioning and servicing Type B gas appliances; and completing work finalisation processes, including formal recording and reporting requirements.

Licensing/Regulatory Information
Before satisfying this unit, the candidate requires a restricted electrical licence or equivalent to connect and disconnect appliances according to the requirements of the particular State or Territory.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Obtain authority to undertake work on Type B gas appliances.**

   1.1 *Design specification for Type B gas appliance* to be installed and commissioned is accessed, analysed, interpreted and confirmed through a detailed site inspection.

   1.2 Design specification matters requiring clarification are resolved through liaison with designer and gas authorities.

   1.3 Formal authority to proceed with installation and commissioning is obtained before commencing work, according to *regulatory and code of practice requirements*.

   1.4 Regulatory and code of practice recording and reporting requirements are satisfied at appropriate times throughout the work sequence.

2. **Prepare for work.**

   2.1 *Work health and safety* (WHS) requirements associated with the workplace environment and installing, commissioning and servicing Type B gas appliances are accessed, interpreted and followed throughout the work.

   2.2 Gas system components, electrical or electronic components and controls, and other required installation materials are identified from the design specification and obtained for the work.

   2.3 Component specifications and manufacturer servicing manuals are obtained for planned work activity.
2.4 Tasks are planned in conjunction with others involved in or affected by the work.

2.5 **Tools and equipment**, including personal protective equipment, are selected consistent with installation, commissioning and servicing needs and checked for serviceability, and any faults are rectified or reported.

2.6 **Quality assurance requirements** for the work sequences are identified and followed.

2.7 Work area is prepared to support efficient installation, commissioning and servicing of Type B gas appliance.

2.8 Gas system and electrical safety checks and isolation procedures are completed and recorded to manufacturer and other authorities’ requirements before commencing work.

2.9 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

### 3 Install Type B gas appliances.

3.1 Appliance components, including **valve trains**, **burners** and associated pipework and flue systems, are installed according to approved design specifications.

3.2 Ventilation systems are installed according to approved design specifications.

3.3 Electrical components, including terminations, are installed according to design specifications and regulatory requirements.

3.4 Electrical wiring and wiring enclosures are installed according to design specifications and regulatory requirements.

3.5 Installations are visually inspected at each stage of the work to ensure compliance with specifications and absence of damaged or faulty equipment and materials.

### 4 Commission and test Type B gas appliances.

4.1 **Testing and servicing** equipment appropriate to the requirement is selected, checked and prepared for use.

4.2 Gas and electrical safety checks and isolation procedures, including purging, are completed and
recorded to manufacturer and other authorities’ requirements before testing and commissioning are commenced.

4.3 *Operational parameters of individual components* are tested and adjusted to conform to specifications.

4.4 Appliance operations are tested first without and then with fuel, adjustments are completed as necessary and results recorded according to approving authorities’ requirements.

4.5 Flue gases are analysed according to recognised industry practice and other authorities’ requirements.

5 Service Type B gas appliances.

5.1 Nature and possible cause of faults or out of specification performance are identified from defect reports or operational records.

5.2 Electrical and gas safety checks and isolation procedures are completed and recorded to manufacturer and other authorities’ requirements before servicing work is commenced.

5.3 Plans and diagrams are read and correctly interpreted to identify potential gas system and electrical fault pathways and locations.

5.4 Appropriate testing techniques, procedures and equipment are selected and applied to diagnose system faults or discrepancies.

5.5 Cause of fault or out of specification performance is identified and confirmed.

5.6 Options for correction are thoroughly analysed and most appropriate corrective action is selected.

5.7 Repair, replacement or adjustment is made according to manufacturer specifications or service manuals.

5.8 Appliance is assessed to ensure compliance with relevant standards and manufacturer specifications prior to recommissioning and returning to service.

6 Clean up work

6.1 Work area is cleared and materials disposed of, reused
area. or recycled according to commonwealth, state and territory legislation and workplace procedures.

6.2 Tools and equipment are cleaned, checked, serviced and stored according to manufacturer recommendations and workplace procedures.

6.3 Information is accessed and documentation completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - liaise with designer and authorities
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation, including recording test results
  - read and interpret:
    - defect reports
    - design specification
    - documentation from a variety of sources
    - operational records
  - submit work notices

- numeracy skills to interpret and apply mathematical information

- planning and organising skills to plan work with others

- technical skills to:
  - follow safe work procedures relating to the installation, commissioning and servicing of Type B appliances
  - interpret information, including:
- charts and hand drawings
- plans, sketches and graphics
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans, diagrams and specifications
- signage
- verbal or written and graphical instructions
- work bulletins
- work schedules
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- Australian standards, including the use of tables:
  - AS3814 (AG501) Industrial and commercial gas appliances
  - AS5601 (AG601) Gas installations/AS/NZS5601
  - relevant aspects of AS3814 Industrial fuel fired appliances, AS2593 Boilers – Unattended and limited attendance and AS/NZS3000 Electrical installations
- basic electrical theory, including:
  - Ohm's law
  - current flow
  - conduction
  - insulation
  - ignition systems
  - characteristics of fuses, circuit breakers, residual current devices and earthing systems
  - characteristics of electromotive force (EMF)
  - electrical safety, including isolation procedures and requisite precautions
  - electrical terminology and conventional symbols
- flue gas analysis techniques and processes
- gas terminology and conventional symbols
- gas safety, including:
  - isolation procedures
  - combustion characteristics and effects
• job safety analysis (JSA) and safe work method statements (SWMS)
• programmable logic controller (PLC) systems, including remedial programming techniques
• purging requirements, techniques and critical calculation processes
• SI system of units
• sources of information and processes for the calculation of material requirements
• types and properties of fuel gas, including pressure and flow rates
• types, characteristics, uses and limitations of electrical and electronic componentry and control systems
• types, characteristics, uses and limitations of Type B gas appliance components
• ventilation techniques and calculation processes
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It may be assessed on its own or as part of an integrated assessment activity involving planning and conducting the installation of at least one significant Type B gas appliance.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating interpreting and applying relevant information, standards and specifications to determine requirements of and maintain Type B appliances
• applying safety requirements throughout the work sequence, including:
  • using personal protective clothing and
equipment

- isolating appliances from gas and electrical services
- planning and conducting installation of at least one significant Type B appliance, which includes:
  - application of sustainability principles and concepts
  - obtaining required authorities
  - planning work
  - installing gas, ventilation and electrical componentry
  - installing electrical control system
  - completing all required tests and sequences
  - commissioning the appliance
  - completing all required documentation
  - communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required.
This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Design specification* may include:

- air controls
- combustion air blowers
- flame safe guards
- gas pressure regulation
- gas valve trains
- manual shut-off valves
- markings and instructions
- materials
- over-pressure protection systems
- process controls
- safety shut-off valve systems.

*Type B gas appliances*:

- include those above 10 megajoules (MJ) for which a certification scheme does not exist
- may use:
  - combination fuels
  - liquefied petroleum gas
  - natural gas
  - tempered liquefied petroleum gas
- may have special requirements for design and operation, including:
  - after burners – process
  - air gas mixing machines and mixing blowers
  - atmosphere generators and special atmospheres
  - direct gas fired air heaters
  - high input gas fired appliances
  - incinerators and generators
  - multi-fuel firing systems
  - ovens – direct fired
  - smoke ovens – direct fired
  - stationary gas engines and turbines
  - steam and heated water boilers
  - water heaters
- Type B appliance operation specifications will
include:
- flame establishment periods
- interlocks
- operation of gas appliance and burners
- operational sequences
- start gas rates
- planning installation of a Type B gas appliance will include determination of site suitability and confirmation of the appropriateness of:
  - electrical supply
  - gas supply and sizing
  - proposed appliance security and lighting measures
  - proposed component handling and positioning measures
  - proposed foundation and supports
- commissioning procedure for a Type B appliance, including:
  - preliminary inspection
  - activation run without fuel
  - activation run with fuel
  - operation and completion stages.

**Regulatory and code of practice requirements** include:
- statutory and regulatory authorities’ requirements that may include:
  - statutory plumbing authority
  - statutory gasfitting authority
- state or territory and local statutory regulatory authority and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing and/or gasfitting authority regulations
- environmental regulatory requirements may include:
  - air pollution
  - clean-up protection
  - waste management
- relevant Australian standards, including:
  - AS3814 Industrial fuel fired appliances
  - AS2593 Boilers - Unattended and limited
attendance
• AS/NZS3000 Electrical installations
• AS/NZS4836 Safe working on low-voltage electrical installations
• AS5601 (AG601) Gas installations/AS/NZS5601
• AS3814 (AG501) Industrial and commercial gas appliances.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:
• handling of materials, including hazardous materials and substances
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• safe operating procedures, including recognising and preventing hazards associated with:
  • electrical components and safety
  • gas fires and explosions
  • service lines
  • surrounding structures and facilities
  • trip hazards
  • use of tools and equipment
  • work site visitors and the public
  • working at heights
  • working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

Tools and equipment may include:
• hand tools, such as wrenches and spanners
• measuring equipment
• power tools
• testing equipment and instruments, including:
  • manometer
  • multi-meter
  • dual probe voltage tester
  • flue gas analysis equipment
  • hand pump pressure kit
  • Pitot tube
- insulation resistance tester
- megohmmeter
- power point tester
- neon tester
- volt stick
- lifting and load shifting equipment, including:
  - hand trolleys
  - rollers
  - forklifts
  - chain blocks
  - hoists and jacks.

**Quality assurance requirements**
may include:
- Australian Gas Association (AGA) requirements
- Environment Protection Authority
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

**Valve trains** include:
- flow and ratio controls
- gas pressure regulators and controllers
- manual isolation valves
- safety shut-offs.

**Burners** include:
- atmospheric
- nozzle
- oxygen enhanced
Testing and servicing of Type B gas appliances will require:

- use of a hand-held programmer to monitor circuit conditions and to edit program (to make minor changes)
- materials that comply with appropriate standards for the maintenance of Type B gas appliances.

Operational parameters of individual components include:

- air flows
- all safety and operating controls
- combustion conditions
- gas rates
- purge times.

Unit Sector(s)

Plumbing and services

CPCPIG2021A Design domestic urban irrigation systems

Modification History
Prerequisite unit added to unit
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPIG2011A

Unit Descriptor
This unit of competency specifies the outcomes required to prepare basic designs and irrigation drawings for domestic irrigation systems.

Application of the Unit
Work is normally undertaken in a drafting office environment. Location for drawing and design application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Site survey is conducted of proposed irrigation area according to client requirements.

1.2 Work health and safety (WHS) and environmental requirements associated with design of domestic irrigation systems are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for preparing basic irrigation designs and drawings are selected and checked for serviceability.

1.6 Work area is prepared to support efficient design of domestic irrigation systems.

2 Identify drawing requirements.

2.1 Areas requiring irrigation and system design components are identified.

2.2 Information is obtained on the soil type, ground slope, contours and prevailing wind.

2.3 Underground services, buildings, paths and other permanent structures are located and noted.

2.4 Water supply is located and its influence on design requirements is determined.

2.5 Appropriate emitters are selected to suit function and design requirements.

3 Design irrigation system.

3.1 Site plan is drawn to include structures, paths and property boundaries.
3.2 Garden areas are sketched to include locations of lawns, garden beds, trees, vegetable patches or ferneries.

3.3 Pipe runs and water emitters are sketched to design requirements.

3.4 Sizes of pipes are calculated using standard data and information is recorded in required format.

3.5 List of materials is compiled to include number and type of water emitters, control valves, quantities of pipes, fittings and components.

3.6 Sustainability principles and concepts are applied throughout the design process.

3.7 Drawing and design are submitted for approval.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

• communication skills to:
  • access information
  • determine requirements
  • enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  • follow instructions
  • use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • compile list of materials
  • complete workplace documentation
• read and interpret:
  • documentation from a variety of sources
  • plans and specifications
• record information
• technical skills to design and draw a domestic urban irrigation system, including:
  • identifying material requirements
  • selecting and locating components
  • site layout
  • site requirements and structures
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• job safety analysis (JSA) and safe work method statements (SWMS)
• process and workplace requirements for basic irrigation design
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory and authority requirements related to drawing and installing irrigation systems
• SI system of measurement
• specifications of the range of irrigation products available
• standards applicable to the installation
• technologies for irrigation measurement and drawings
• various types of irrigation systems, including types of materials and components used
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the design of domestic irrigation systems
- applying safety requirements throughout the work sequence, including electricity safety requirements and the use of personal protective clothing and equipment
- given the site plan and specifications for the irrigation of a 200 square metre garden (of lawn, shrubs, trees and flowers), designing and preparing a drawing of the system, incorporating automatic timers and controls, varying sprinkler heads and zones, and indicating the materials required (by number and type), ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed system
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials, including hazardous materials and substances
• hazard control
• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
• use of firefighting equipment
• use of first aid equipment
• use of tools and equipment
• workplace environment and safety.

Environmental requirements cover water quality management and may

• clean-up protection
• stormwater protection
• waste management.
include:

**Quality assurance requirements** may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- Commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- calculator
- computer design software
- drawing and drafting equipment
- laser measuring devices
- measuring equipment.

**System design components** may include:
- backflow prevention devices
- controls
- pipework
- valves
- water emitters, which may include:
  - drip emitters
  - gear drive
  - impact
  - in-line turbo drippers
  - mist sprays
  - oscillating
  - pop up
  - pulsating
- selection of water emitters, based on:
  - automatic control systems
  - manufacturer specifications
  - physical site conditions
  - site requirements
  - subsoil systems
  - types of plants requiring irrigated water.
Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- maps
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to the design of domestic irrigation systems
- signage
- sketches and plans, including job plans
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials may include:
- drafting and drawing equipment
- plans.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - minimising water wastage
  - considering use of alternative water supply
  - selecting appropriate components and material to ensure minimal environmental impact.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with setting out, installing and commissioning irrigation systems are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.
   1.5 Tools and equipment for setting out, installing and commissioning irrigation systems, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient setting out, installation and commissioning of irrigation systems.

2 Identify installation requirements.
   2.1 Irrigation system requirements are identified from plans, specifications and relevant information.
   2.2 Underground services are located and identified.
   2.3 Flow rate and water pressure are checked for compliance with plans and specifications.
   2.4 Piping and system components are selected to comply with standards, plans and specifications.
   2.5 Materials and equipment are identified, ordered and collected according to workplace procedures.
   2.6 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.
3 Install and commission irrigation system

3.1 Irrigation pipes are set out according to plans, specifications and site requirements.

3.2 Pipe trenches are excavated according to plans and specifications.

3.3 Pipe system is installed according to plans, specifications, site requirements, manufacturer recommendations and standards, and sustainability principles and concepts.

3.4 Pipelines are flushed of air and foreign matter to installation standard.

3.5 Backflow prevention device is installed according to standards.

3.6 Water emitters are installed and adjusted to produce required spray pattern.

3.7 Control valves are installed, operated and adjusted to achieve specified flow rate.

3.8 Installation is tested to comply with standards and authorities’ requirements, and is adjusted.

3.9 Trenches are backfilled according to plans and specifications and ground surface is reinstated.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.
Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - compile list of materials
  - complete workplace documentation and record information
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install pipework, controls, valves, backflow prevention devices and water emitters for an irrigation system and its commissioning
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of setting out, installing and commissioning irrigation systems
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- protection of drinking water supplies
- relevant statutory and authority requirements related to installing and commissioning irrigation systems
- SI system of measurement
- standards applicable to the installation
- various types of irrigation systems, including types of materials and components used
- workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to set out, install and commission irrigation systems
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
- given the plans or specifications, determining the system requirements, setting out, installing and commissioning an irrigation system sourced from an isolating valve to supply four water emitters of varying type and requiring a solenoid valve, ensuring:
  - application of sustainability concepts and principles
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and
safe with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dirt mounds
• hazardous materials and substances
• identifying and testing for electrical hazards
• other machines
• pits
• poles
• recently filled trenches
• surrounding structure and facilities
• traffic control
• trees
• trip hazards
• underground services
• uneven and unstable terrain
• use of tools and equipment
• work site visitors and the public
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
• chain blocks
• forklifts
• hand and power tools
• hand excavation equipment
• hand trolleys
• hoists and jacks
• ladders
- lifting and load shifting equipment
- mechanical excavation equipment
- rollers
- trench shoring equipment
- water flow and water test equipment.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to setting out, installing and commissioning irrigation systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

**Materials** may include:

- copper tube, polyethylene, stainless steel and PVC-U pipes
- joints and components
- system components, including:
  - automatic controls
  - back flow prevention devices
  - low voltage solenoid valves
  - water emitters
- water emitters, which may include:
  - drip emitters
  - hear drive
- impact
- in-line turbo drippers
- mist sprays
- oscillating
- pop up
- pulsating
- selection of water emitters, based on:
  - automatic control systems
  - manufacturer specifications
  - physical site conditions
  - site requirements
  - sub-soil systems
  - types of plants requiring irrigated water.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - minimising water wastage
  - considering usage of alternative water supply
  - protection of drinking water supply
  - selecting appropriate components and material to ensure minimal environmental impact.

CPCPIG3022A Install and commission domestic irrigation pumps

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPIG3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install and commission domestic irrigation pumps.

Application of the Unit
Site location for work application is domestic, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.  
1.1 Irrigation plans and specifications are obtained and site is inspected. 
1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing and commissioning domestic irrigation pumps are adhered to throughout the work. 
1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements. 
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*. 
1.5 *Tools and equipment* for installing and commissioning domestic irrigation pumps, including personal protective equipment, are selected and checked for serviceability. 
1.6 Work area is prepared to support efficient installation and commissioning of *domestic irrigation pumps*. 

2 Identify installation requirements.  
2.1 Irrigation system requirements are identified from plans, specifications and relevant *information*. 
2.2 Pump and installation *materials* are selected according to type, installation, range of flow rates, operating head and delivery distance. 
2.3 Pump is identified, ordered and collected according to workplace procedures. 
2.4 Pump is checked for compliance with standards, docket and order form, and for acceptable condition. 

3 Install and commission pump.  
3.1 Pumpset out position is compliant with irrigation plans and manufacturer recommendations. 
3.2 Pump base is installed according to plans and
specifications and sustainability principles and concepts.

3.3 Pump is positioned and fixed onto base.

3.4 Suction and discharge lines are connected to pump according to manufacturer specifications.

3.5 Piping is pressure tested according to job specifications.

3.6 Operation of pump is tested and adjusted to achieve effective operation according to job and manufacturer specifications.

3.7 Test data is recorded and documented in format required by quality assurance procedures.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills
• communication skills to:
  • access information
  • determine requirements
  • enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  • follow instructions
  • use language and concepts appropriate to cultural differences
  • use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
  • record and document test data
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to install and commission a centrifugal domestic irrigation pump
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• characteristics and application of different pipes and fittings, including:
  • fixing and joining techniques and methods
  • flow rates
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• mechanical, hydraulic and electrical principles
• process of installing and commissioning domestic irrigation pumps
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory and authority requirements related to installing and commissioning domestic irrigation pumps
• SI system of measurement
• various types of domestic irrigation pumps
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, standards and specifications to install and commission domestic irrigation pumps
• applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and using personal protective clothing and equipment
• given the plans and specifications for a domestic irrigation system, installing and commissioning for operation, a centrifugal pump (25mm suction and 25mm delivery), ensuring:
  • application of sustainability principles and concepts
  • correct identification of location, design and details of proposed installation
  • correct selection and use of appropriate processes, tools and equipment
  • completing all work to specification
  • compliance with regulations, standards and organisational quality procedures and processes
  • communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - identifying and testing for electrical hazards
  - dirt mounds
• hazardous materials and substances
• other machines
• pits
• poles
• recently filled trenches
• surrounding structure and facilities
• traffic control
• trees
• trip hazards
• underground services
• uneven and unstable terrain
• use of tools and equipment
• work site visitors and the public
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

Environmental requirements cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

Quality assurance requirements may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

Statutory and regulatory authorities include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
• concreting tools
• hand and power tools
• hand excavation equipment
• levelling equipment
• lifting and load shifting equipment, including:
  • chain blocks
- forklifts
- hand trolleys
- hoists and jacks
- rollers
- water flow and water pressure test equipment.

**Domestic irrigation pumps** may include:
- borehole and spear pumps
- horizontal and vertical shaft centrifugal pumps
- jet pumps
- other approved pumps.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing and commissioning domestic irrigation pumps
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** may include:
- cement and sand
- copper tube, polyethylene, stainless steel and PVC-U pipes
- joints and components
- other approved materials.
**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - minimising water wastage
  - considering use of alternative water supply
  - protection of drinking water supply
  - selecting appropriate components and material to ensure minimal environmental impact.

CPCPMS2021A Assemble mechanical services components

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS2011A

Unit Descriptor
This unit of competency specifies the outcomes required to assemble mechanical services components for heating and cooling systems prior to their installation.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1  Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with assembly of mechanical services components are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.
   1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient assembly of mechanical services components.

2  Identify fabrication requirements.
   2.1 Fabrication requirements are identified from plans, specifications and relevant *information*.
   2.2 Quantity and type of *materials* and *components* required are calculated from plans and specifications.
   2.3 Materials are identified, ordered and collected according to workplace procedures.
   2.4 Materials and equipment are checked for compliance with standards and docket and order form, and for acceptable condition with *faults reported*.

3  Assemble components.
   3.1 Dimensions for fabrication and assembly are determined and transferred.
   3.2 Relevant standards, codes and symbols are interpreted.
   3.3 Selected development method is identified as appropriate and applied according to workplace
procedures and *sustainability principles and concepts*.

3.4 Calculations are performed to determine job requirements.

3.5 Material is marked out in conformance with determined measurements.

3.6 Dimensions are checked for accuracy and compliance with plans and specifications.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
• documentation from a variety of sources
• plans and specifications
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to fabricate and assemble mechanical services components prior to installation in heating, cooling and ventilation systems
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• characteristics of materials used in the required assembly
• classification of assembly types and identification of assembly components
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• mechanical and hydraulic principles
• personal protective equipment characteristics and use
• operation requirements of equipment used for fabricating and assembling components
• SI system of measurement
• types of fasteners, fixings and sealants
• WHS regulations relevant to assembly of irrigation components
• workplace operating procedures, including required standards for assembly

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to assemble mechanical services components
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, assembling and connecting a heating coil to a boiler and a fan and duct work for a warm air heating system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of assembly
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team
leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - traffic control
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities**

include:

• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

• hand and power tools
• heating, cutting and bending equipment
• lifting and load shifting equipment, including:
  • chain blocks
  • elevated work platforms
  • forklifts
  • hand trolleys
  • hoists and jacks
  • restricted height scaffolds
  • rollers
  • welding equipment.

**Information** may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to the assembly of mechanical services components
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Materials** may include:

• components of steel, copper, brass, polymer
materials or other approved materials
- insulating materials for piping and ducting
- metal piping
- sheet metal.

**Components** may include:
- boilers
- chillers
- duct work
- fired and unfired pressure vessels
- heat exchangers and condensers
- pipework
- structural sections.

**Fault reporting:**
- may be written or verbal
- is to be according to company's workplace procedures.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - correct handling of hazardous materials
  - appropriate recycling of material
  - selecting appropriate components to ensure minimal environmental impact.

CPCPMS3031A Fabricate and install steel pressure piping

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement
Not equivalent to CPCPMS3011A

Unit Descriptor
This unit of competency specifies the outcomes required to determine installation requirements and to fabricate, install and test steel pressure piping.
It applies to pipe systems with operating pressures not exceeding 1750kPa and 200°C.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
Elements and Performance Criteria

1 Prepare for work.  

1.1 Plans, specifications and any special instructions are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with fabricating and installing steel pressure piping are adhered to throughout the work.

1.3 *Quality assurance requirements* for company operations are identified and adhered to.

1.4 Work is planned in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

1.5 *Tools and equipment* are identified, selected and checked for serviceability.

1.6 Work area and materials are prepared to support efficient fabrication and installation of steel pressure piping.

2 Identify installation requirements

2.1 Pipework configuration is identified from authorities’ requirements, plans, specifications and relevant *information*.

2.2 Allowances for fabrication and/or assembly are determined and transferred.

2.3 Quantity and type of *materials* required are calculated from plans and specifications according to regulatory authorities’ and workplace requirements.

2.4 Materials are identified, ordered and collected according to workplace procedures.

2.5 Materials are checked for compliance with docket and order form and for acceptable condition, and *faults are reported*. 

with the evidence guide.
3 Fabricate, install and test pipe system.

3.1 System is set out in compliance with design drawings or instructions.

3.2 Fixings and supports are installed to manufacturer requirements, job plans, specifications and workplace requirements.

3.3 Pipe system is fabricated and jointed according to job plans, specifications and manufacturer requirements for mechanical type joints.

3.4 Pipe system is installed in specified location without damage or distortion to pipework or surrounding environment or other services.

3.5 Sustainability principles and concepts are applied throughout the installation process.

3.6 Pipe system is tested and documented to comply with job specification, authorities’ requirements, relevant Australian standards, codes of practice and workplace requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
• determine requirements
• enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
• follow instructions
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace documentation
  • document pipes system test
• read and interpret:
  • documentation from a variety of sources
  • plans and specifications
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to:
  • cut and weld with oxy-acetylene and arc welding
  • mechanical bend, joint, fix and test mild steel pressure piping systems
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**
• fabrication, installation and testing process for pressure pipe systems
• job safety analysis (JSA) and safe work method statements (SWMS)
• processes for accessing information and for calculating material requirements
• properties of conveyed materials, including pressure, flow rates and temperature requirements
• relevant statutory authorities’ requirements and Australian standards related to fabricating, installing and testing pressure pipe systems
• SI system of measurements
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements, and fabricate, install and test pressure pipe systems
- applying safety requirements throughout the work sequence, including applying equipotential bonding procedures and the use of personal protective clothing and equipment
- given the plans and specifications, applying pipe cutting and welding skills by using oxy-acetylene and arc welding equipment for piping up to DN50 to include:
  - butt welding a pipe joint in DN40 piping in the fixed horizontal position
  - welding DN40 and 50 mild steel branch joints
  - constructing a DN80 header with DN20, 40 and 50 branch joints using the oxy-acetylene method
  - welding 50mm and 80mm flanges to mild steel pipe
  - welding blank ends into DN80 mild steel pipe
  - fabricating, installing and testing a DN40 steel pipeline from a flanged header to mechanical plant, incorporating two changes of direction with one position butt welded with oxy welding, plus an arc welded flange incorporating a branch for testing purposes
- completed task is to be tested to the required pressure, and the soundness of all joints and the system, ensuring:
  - application of sustainability principles and
concepts throughout the installation
- correct diameters are used, system is manufactured to required dimensions, and branches, bends, flanges, etc. are square
- correct identification of design and details of proposed pressure pipe system
- correct selection and use of appropriate processes, tools and equipment
- completion of all work to specification
- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools, plant and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- ozone protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.
Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
- hand and power tools
- mechanical bending equipment and threading equipment
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolding
- oxy and arc welding equipment
- testing equipment.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to fabricating, installing and testing pressure pipe systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.
Materials for fabricating, installing and testing pressure pipe systems may include:

- cutting and welding gases
- mechanical joint systems and fittings with variable diameters up to DN100
- steel pipes
- threaded pipe fittings
- weldable pipe fittings.

Fault reporting:

- may be written or verbal
- is to be according to company's workplace procedures.

Pipes may convey:

- compressed air refrigerants and low temperature applications, including chilled water and refrigerated gases
- condensate
- fuel oil
- water and other liquids.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

CPCPMS3032A Select and fit insulation and sheathing

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills, range statement and critical aspects
Not equivalent to CPCPMS3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install insulating sheathing on hot and cold piping, fittings and vessels. It includes the selection of insulation materials.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requiresites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.  
1.1 Plans and specifications are obtained.  
1.2 Work health and safety (WHS) and environmental requirements associated with selecting and installing insulating sheathing are adhered to throughout the work.  
1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.  
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.  
1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.  
1.6 Work area is prepared to support efficient selection and installation of insulating sheathing.

2 Identify insulation requirements.  
2.1 Insulation materials are selected that comply with plans, specifications and relevant information.  
2.2 Quantity and type of materials required are calculated from plans and specifications.  
2.3 Allowances for fabrication and assembly are determined.  
2.4 Materials are identified, ordered and collected according to workplace procedures.  
2.5 Materials are checked for compliance with docket and order form and for acceptable condition, and faults are reported.

3 Install insulation.  
3.1 Surfaces to be insulated are cleaned of dirt, rust, scale and grease.  
3.2 Insulating materials, including sheathing, are installed according to plans and specifications.
3.3 Vapour barriers are applied to suit job requirements.

3.4 Sustainability principles and concepts are applied throughout the installation.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge
This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
- plan and sequence tasks with others
- plan and set out work
- technical skills to select and install appropriate thermal insulation sheathing to sections of both hot and cold piping, fittings and vessels associated with refrigeration and cooling and heating systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- correct waste disposal and recycling processes
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials handling processes
- WHS regulations relevant to insulation and sheathing
- personal protective equipment requirements and use
- processes of selecting and insulating pipes, fittings and vessels
- SI system of measurement
- techniques for cutting, fabricating and assembling metal sheathing
- techniques for fixing insulating materials to piping and vessels

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to select
and install insulating sheathing to piping, fittings and vessels

- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment

- given the plans and specifications, insulating 2 metres of small bore heating line with at least one change in direction; 2 metres of refrigeration line with at least one change in direction, and metal sheath at least 2 metres of pipework with at least one change in direction, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan.
- workplace operations and procedures.

**Statutory and regulatory authorities** may include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- dust masks and respirators
- fall protection equipment
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
- measuring equipment
- swaging machines
- pittsburgh lock forming machine
- sheet metal rollers
- spot welder.

**Insulation materials** may be:
- chemically blown PVC nitrile rubber sponge in tubular or sheet form
- closed cell
- flexible
- hydrous calcium silicate with fibrous reinforcement in preformed sections
- polyisocyanurate (PIR) foam in preformed sections
- powder form and jute fibre in strip form
- resin-bonded glass fibre in flexible blanket or preformed sections
- resin-bonded mineral wool in flexible blanket form
- rigid polyurethane foam in preformed sections
- other approved materials.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or
external personnel
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to selecting and installing insulating sheathing to hot and cold piping, fittings and vessels
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Fault reporting:**
• may be written or verbal
• is to be according to company's workplace procedures.

**Sheathing** may include:
• aluminium
• aluminium and zinc coated steel
• stainless steel
• zinc coated steel
• other approved materials.

**Vapour barriers** may include:
• mastic or plastic type filling compounds and adhesives
• reinforced aluminium foil and polyethylene tubular jacket.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient use of material
  • efficient energy retention
• selecting appropriate products, components and material to ensure minimal environmental impact.

CPCPMS3033A Install small bore heating systems

Modification History
Prerequisite unit updated
Minor changes to unit
Not equivalent to CPCPMS3013A

Unit Descriptor
This unit of competency specifies the outcomes required to install small bore hydronic heated water heating systems.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Prepare for work.**
   - 1.1 Plans and specifications are obtained.
   - 1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing small bore heating systems are adhered to throughout the work.
   - 1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   - 1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.
   - 1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.
   - 1.6 Work area is prepared to support efficient installation of small bore heating systems.

2. **Identify system requirements.**
   - 2.1 Configuration of pipework is checked for compliance with plans, specifications, authorities’ requirements and other relevant *information*.
   - 2.2 Position of pipes and heating units is determined from plans, specifications or site requirements, so as not to cause damage or interference to surrounding structures.
   - 2.3 Allowances for fabrication or assembly are determined and transferred.
   - 2.4 Quantity and type of *piping materials* and other *materials* required are calculated from plans and specifications.
   - 2.5 Materials are identified, ordered and collected according to workplace procedures.
   - 2.6 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and *faults are reported*. 
3 Fabricate, install and commission heating system.

3.1 System is set out to comply with plans and specifications.

3.2 Fixings and supports are installed to manufacturer recommendations, and plans and specifications.

3.3 Pipe system is installed and jointed in compliance with plans, specifications and manufacturer requirements for mechanical type joints.

3.4 **Heating system** unit is installed according to plans, specifications and manufacturer requirements.

3.5 Heating system is installed in specified location without damage or distortion to pipework, surrounding environment or other services.

3.6 **Sustainability principles and concepts** are applied throughout the installation process.

3.7 Heating system is tested to comply with job specification, regulatory authorities’ requirements, and relevant Australian standards and codes of practice; and details are recorded in required format.

3.8 Heating system is checked and adjusted for correct operation and balance, including the setting of nominated temperature and adding appropriate inhibitor.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation
  - document heating system test
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - determine system requirements
  - install and commission a heating system

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different fixing and joining techniques and methods
- effective isolation processes and procedures
- electrical and electronic principles and safety requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- WHS regulations relevant to installation of small bore systems
• personal protective equipment requirements and use
• processes of installing and commissioning small bore heating systems
• properties of water, including pressure and flow rates
• SI system of measurement
• statutory requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, relevant Australian standards and specifications to install and commission small bore heating systems

• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment

• given the plans and specifications and using a combination of copper tube and non-metallic piping, installing a two-pipe heating system to either a panel radiator, skirting convector or a unit heater; the installation should have a minimum of DN20 flow and return with DN15 branches, connected to a boiler and heat exchanger and heating source, ensuring:
  • application of sustainability principles and concepts throughout the installation
  • correct identification of requirements and details
of proposed installation

- correct selection and use of appropriate processes, tools and equipment
- completion of all work to specification
- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or
simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Work health and safety* is to be

- handling of materials
according to commonwealth, state and territory legislation and regulations and may include:

- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** are to cover:

- clean-up protection
- ozone protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- hand and power tools
- heating and bending equipment
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolding
- measuring equipment
- silver brazing equipment
- welding equipment.

**Information** may include:
- charts and hand drawings
- diagrams and sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing small bore heaters
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

**Piping materials** may include:
- copper (Cu)
- polybutylene (PB)
- polyethylene (PP)
- steel pipes
- other approved materials.
Materials may include:
- fixings and supports
- heaters (panel, skirting and unit)
- pipe materials
- other approved materials.

Fault reporting:
- may be written or verbal
- is to be according to company's workplace procedures.

Heating system may include:
- panel radiators
- skirting convectors
- unit heaters.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

CPCPMS3034A Install medical gas pipeline systems

Modification History
Prerequisite unit updated
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3014A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test medical gas pipeline systems.

Application of the Unit
Site location for work application is commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications are obtained and work requirements are identified.

1.2 Work health and safety (WHS) and environmental requirements associated with installation of medical gas pipeline system are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of medical gas pipeline systems.

2 Identify system requirements. 2.1 Configuration of system is checked for compliance with plans, specifications, standards, authorities’ requirements and relevant information.

2.2 Position of pipes, supports, fixings and terminals are determined from plans and specifications or site requirements, so as not to cause damage or interference to surrounding structures.

2.3 Allowances for fabrication or assembly are determined and transferred.

2.4 Quantity and type of materials, including types of medical gas pipelines required, are calculated from plans and specifications.

2.5 Materials are identified, ordered and collected according to workplace procedures.

2.6 Materials and equipment are checked for compliance with standards, docket and order form, and for
acceptable condition and faults are reported.

3 Fabricate, install, purge and test pipeline system.

3.1 Medical gas pipeline system is set out to comply with plans, specifications, standards and authorities’ requirements.

3.2 Fixings and supports are installed to comply with plans, specifications, standards, authorities’ requirements and manufacturer recommendations.

3.3 Pipe system and terminal units are positioned and labelled in compliance with plans, specifications, standards and manufacturer requirements.

3.4 Pipeline system is installed in specified location without damage or distortion to pipework, surrounding environment or other services.

3.5 Pipeline system is pressure tested to comply with job specification, regulatory authorities’ requirements, standards and regulations, and details are recorded in required format.

3.6 Pipeline system is purged according to standards and authorities’ requirements.

3.7 Sustainability principles and concepts are applied throughout the installation.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- Communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- Initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- Literacy skills to:
  - complete workplace documentation
  - document pipeline system pressure test
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- Numeracy skills to apply measurements and calculations
- Planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- Technical skills to:
  - determine system requirements
  - install, test and purge a medical gas pipeline system
- Technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- Job safety analysis (JSA) and safe work method statements (SWMS)
- WHS regulations relevant to medical gas pipeline systems
- Personal protective equipment requirements and use
- Pressure testing procedures and equipment
• processes and requirements of installing, testing and purging medical gas pipeline systems
• SI system of measurement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:
• locating, interpreting and applying relevant information, standards and specifications to install medical gas pipeline systems
• applying safety requirements throughout the work sequence, including equipotential bonding procedures and the use of personal protective clothing and equipment
• given the plans and specifications, installing and testing at least three medical gas pipeline systems (each with a different medical gas) from a manifold system to terminal units and fittings, ensuring:
  • application of sustainability principles and concepts
  • cleanliness and sterility of finished system
  • correct identification of requirements and details of proposed installation
  • correct selection and use of appropriate processes, tools and equipment
  • completion of all work to specification
  • compliance with regulations, standards and organisational quality procedures and processes
  • communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
Environmental requirements may include:

- clean-up protection
- ozone protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- hand and power tools
- heating and bending equipment
- silver brazing equipment.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
- building codes
- WHS and environmental requirements
- plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing medical gas pipeline systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** for installing medical gas pipeline systems are to include:

- fittings and supports
- labels
- pipe materials
- purging gases
- terminal units.

**Types of medical gas pipelines** may include:

- carbon dioxide
- medical breathing air
- medical suction
- mixtures of medical gases
- nitrous oxide
- standard oxygen
- surgical tool gas.

**Fault reporting:**

- may be written or verbal
- is to be according to company's workplace procedures.

**Medical gas pipeline system** includes:

- fixtures and labels
- gas pipeline
- terminal units and fittings.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy retention
  - selecting appropriate products and components
to ensure minimal environmental impact.

CPCPMS3035A Install and test ducting systems

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3015A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test ducting systems used for ventilation systems, heating and/or cooling systems, and exhaust systems.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements installing and testing ducting systems are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation and testing of ducting systems.

2 Identify system requirements.  2.1 Quantity and type of ducting system materials, including in-duct equipment, are calculated from plans, specifications and relevant information.

2.2 Allowances for fabrication or assembly are determined and transferred.

2.3 Materials are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with standards, docket and order form, and acceptable condition and faults are reported.

3 Install and insulate duct system.  3.1 System is set out to comply with plans and specifications.

3.2 Duct supports and fixings are positioned to comply with plans, specifications and manufacturer
recommendations.

3.3 Duct work is installed according to plans and specifications.

3.4 Circumferential joints are assembled and sealed according to plans, specifications and manufacturer recommendations.

3.5 Duct system is installed in specified location, without damage or distortion to surrounding environment or other services and according to standards.

3.6 Insulation materials are fixed according to plans and specifications.

3.7 Insulation materials are installed in specified location without damage to surrounding environment and according to plans, specifications, standards and manufacturer recommendations.

3.8 **Diffusers and terminal devices** are installed according to plans and specifications and with no damage to ceiling or finished surfaces.

3.9 **Sustainability principles and concepts** are applied throughout the installation.

4 Test duct work system.

4.1 Test requirements are determined from plans and specifications.

4.2 Appropriate test equipment is selected for specified tests.

4.3 Duct system is tested under pressure according to instructions and workplace procedures.

4.4 Leak sources are identified and repaired using specified procedures and materials, to ensure correct flow operation.

4.5 Details of test data are recorded in format required by the specification.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes
of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - document ducting system tests
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install, insulate and test ducting for ventilation, heating, cooling and exhaust systems, including in-duct equipment
- technology skills to:
- access and understand site-specific instructions in a variety of media
- use mobile communication technology

**Required knowledge**
- applicable Australian standards
- application of flow rates, pressure and volume principles to testing procedures
- characteristics of materials used in the system being tested
- electrical and electronic principles and safety requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- WHS regulations relevant to the work activity
- personal protective equipment requirements and use
- processes of installing, insulating and testing ducting
- SI system of measurement
- statutory requirements
- system types and identification of system components
- techniques for setting out, assembling, fixing and jointing duct work systems and components, including insulation and acoustic materials
- types of repairs for detected leaks in the duct work system

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:
- locating, interpreting and applying relevant information, standards and specifications to install and test small ducting systems
- applying safety requirements throughout the work sequence, including electrical safety requirements
and the use of personal protective clothing and equipment

- given the plans and specifications, installing, insulating, testing and balancing from a plenum box or chamber a supply of heated air to three outlet grills; the installation shall incorporate hard and flexible duct work, including one transition piece and dampeners, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required.
This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities**

- commonwealth, state or territory, and local authorities administering applicable Acts,
include: regulations and codes of practice.

**Tools and equipment** may include:
- duct lifter
- hand and power tools
- in-duct equipment, including:
  - fire dampers
  - noise attenuation fittings
  - volume control dampers
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
- measuring equipment
- pittsburgh lock forming machine
- sheet metal rollers
- spot welders
- test equipment, including:
  - manometers
  - micro-manometers.

**Ducting system materials:**
- may include:
  - diffusers
  - ducting
  - fixings and supports
  - in-duct equipment
  - insulation
  - joints
  - plenum box and chamber
  - terminal devices
- may be:
  - flexible
  - sheet metal
  - a combination.
**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing and testing ducting heaters
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials:**

- may include:
  - ducting:
    - fixings and supports
    - sheet metal:
      - flexible
      - combination
    - in-duct fittings:
      - plastic
      - sheet metal
    - insulation
  - insulation and acoustic materials may be:
    - acoustic and non-acoustic materials
    - externally insulated
    - fibreglass tissue factory bonded to the insulation
    - flexible aluminium laminate fabric
    - perforated double-sided aluminium foil factory bonded to the insulation
    - perforated zincanneal or other metal sheet fixed in the duct so that continuous insulation is obtained
- resin-bonded mineral wool or glass fibre in faced or unfaced semi-rigid batt or board form, weight 20 to 100kg and m³
- sheet materials
- surface facings of PVC-coated fibreglass mesh factory bonded to the insulation
- thermal and acoustic insulation for duct work and air handling equipment, handling air between 2 and 65°C
- thermal insulation and sound absorption materials of resin-bonded mineral wool or glass fibre in unbound flexible blanket form, weight 20 to 65 kg and m³.

**Fault reporting:**
- may be written or verbal
- is to be according to company's workplace procedures.

**Diffusers and terminal devices** may include:
- combined diffusers
- control devices
- cushion heads
- grills
- light fittings
- outlets taken directly from duct and on flexible branch
- pressure-reducing devices
- registers
- variable air volume (VAV) boxes.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use and recycling of material
  - efficient energy retention
  - ensuring integrity of ductwork system
  - selecting appropriate products and components to ensure minimal environmental impact.

CPCPMS3036A Install air handling units

Modification History
Prerequisite unit updated
Changes to descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3016A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test air heating, cooling and ventilation plenums or enclosures.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* installing and testing air handling units are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation and testing of air handling units.

2 Identify installation requirements. 2.1 Requirements for components and materials are determined from plans, specifications and relevant *information*.

2.2 Assembly methods are identified from plans and specifications.

2.3 *Materials and components* are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition; and *faults are reported*.

3 Set out, assemble and test air handling units. 3.1 *Air handling unit* is set out in compliance with plans and specifications.

3.2 Components and equipment are positioned according to plans and specifications.
3.3 Equipment is installed according to job and manufacturer specifications.

3.4 Assembly is checked for compliance with plans and specifications.

3.5 Air handling unit is tested for correct operation.

3.6 Details of test data are recorded in required format.

3.7 *Sustainability principles and concepts* are applied throughout the installation process.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and report to appropriate personnel any faults in tools, equipment or materials
  - literacy skills to:
- complete workplace documentation
- document pipeline system pressure test
- read and interpret:
  - documentation from a variety of sources
  - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test an air handling plenum, which is part of an air heating, cooling and ventilation system
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- effect of machinery vibrations on structures, ducts and fittings
- electrical and safety requirements
- equipment installation techniques that limit the transfer of vibrations from plant and equipment to other components
- job safety analysis (JSA) and safe work method statements (SWMS)
- WHS regulations relevant to the work activity
- personal protective equipment requirements and use
- processes of installing and testing air handling units
- SI system of measurement
- statutory requirements
- techniques for setting out, assembly and fixing and jointing requirements for duct work systems
- testing, balancing and commissioning of air handling units

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace
environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install air handling units
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing a plenum chamber that includes a fan, coil, filter and dampers, including supports and brackets and any fixing requirements, allowing for anti-vibration and ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

Environmental requirements may include:

- clean-up protection
- waste management.
include:

**Quality assurance requirements** may include:
- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
  - duct lifter
  - measuring equipment.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
relevant Australian standards
safe work procedures relating to installing and testing air handling units
signage
verbal, written and graphical instructions
work bulletins
work schedules, plans and specifications.

**Materials and components** may include:
- coils
- fans
- filters
- motors
- sheet metal:
  - galvanised iron
  - zincalume
  - other approved metals.

**Fault reporting:**
- may be written or verbal
- is to be according to company's workplace procedures.

**Air handling units** may contain:
- coils
- fans
- filters
- other equipment items.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy retention
  - selecting appropriate products and components to ensure minimal environmental impact.

**Unit Sector(s)**

**Functional area**
Unit sector: Plumbing and services

CPCPMS3037A Install and test split system air conditioning

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3017A

Unit Descriptor
This unit of competency specifies the outcomes required to install and test split system air conditioning.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements installing split air conditioning are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of split air conditioning.

2 Identify installation requirements.

2.1 Quantity and type of material required for installation are determined from plans, specifications and relevant information.

2.2 Materials are identified, ordered and collected according to workplace procedures.

2.3 Requirements for other services are identified and connection is planned according to regulatory requirements.

2.4 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition and faults are reported.

3 Install and test system.

3.1 Installation is set out in compliance with plans and specifications.
3.2 Existing services are located and installation process is adjusted accordingly to avoid any disturbance.

3.3 Preparatory work is carried out to specifications without unnecessary damage to surrounding structures or environment.

3.4 Structural supports are installed in compliance with plans and specifications.

3.5 Ducting and control panels are installed according to authorities’ requirements, manufacturer recommendations, plans and specifications.

3.6 System is installed to manufacturer recommendations, plans and specifications.

3.7 **Sustainability principles and concepts** are applied throughout the installation.

3.8 Installation is tested according to specifications, codes or standards for the application.

3.9 Test results are documented in required format.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
- determine requirements
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- follow instructions
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
  - document pipeline system pressure test
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
  - undertake preparatory work that may be needed, including penetration through building structure, installation of structural supports and installation of plinths

**Required knowledge**

- characteristics and application of different assemblies, including fixing and jointing techniques and methods
- effective isolation processes and procedures
- electrical safety requirements
- environmental impact of gases and Environment Protection Authority (EPA) requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- materials handling techniques
- WHS regulations relevant to the work activity
- personal protective equipment requirements and use
- operating principles of air conditioning and refrigeration systems
- processes of installing and testing split air conditioning systems
- SI system of measurement
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install split air conditioning
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing and pressure testing a single-head split system air conditioner, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and
environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying electrical safety requirements
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
Environmental requirements may include:

- clean-up protection
- ozone protection
- waste management.

Quality assurance requirements may include:

- EPA
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
- measuring equipment:
  - vacuum pump
- testing equipment, including relevant pressure-testing equipment.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel

- working at heights
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans, sketches and graphics
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing split air conditioning
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Materials** may include:
• air conditioning unit
• control panels
• ducting materials
• insulation.

**Fault reporting:**
• may be written or verbal
• is to be according to company's workplace procedures.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient use of material
  • efficient energy retention
  • handling refrigerant gas according to appropriate commonwealth authorities’ requirements
  • selecting appropriate products and components to ensure minimal environmental impact.

CPCPMS3038A Install air conditioning control equipment

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3018A

Unit Descriptor
This unit of competency specifies the outcomes required to install air conditioning control equipment for the control of pressure, temperature, flow rate, humidity and density.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* installing air conditioning control equipment are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of *air conditioning control equipment*.

2 Identify installation requirements.

2.1 Appropriate controller and necessary *materials* are selected according to plans and specifications, manufacturer recommendations and relevant *information*.

2.2 Controller position is identified from plans and specifications, and with consideration of location of existing services.

3 Install control equipment.

3.1 *Air conditioning* system is shut down and isolated according to appropriate codes of practice and WHS requirements.

3.2 Control equipment is installed to specification or manufacturer instructions and *faults are reported*.

3.3 *Sustainability principles and concepts* are applied throughout the installation.

3.4 Control equipment is positioned in specified location.
3.5 Manual-handling techniques are used according to WHS requirements.

4 Calibrate and test control equipment.

4.1 Control equipment is calibrated according to manufacturer recommendations and job specifications.

4.2 Correct operation of system control equipment is checked against operational specification.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
• read and interpret:
  • documentation from a variety of sources
  • plans and specifications
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• effective isolation processes and procedures
• electrical and safety requirements
• job safety analysis (JSA) and safe work method statements (SWMS)
• WHS regulations relevant to the work activity
• personal protective equipment requirements and use
• operating principles of air conditioning and refrigeration systems
• power and maintenance access requirements for control units
• process of installing and testing air conditioning control equipment
• SI system of measurement
• statutory requirements

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install air conditioning control equipment
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing a control valve, a thermostat and flow, pressure and limit switches for an air conditioning system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation and location
  - correct operation of the system and equipment
  - correct selection and use of appropriate processes, tools and handling of equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints. Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

CPCPMS3039A Maintain mechanical services equipment

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3019A.

Unit Descriptor
This unit of competency specifies the outcomes required to perform general maintenance of heating, ventilating and air conditioning systems and associated mechanical equipment (air distribution systems, hydronic systems and control systems).

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
with the evidence guide.

**Elements and Performance Criteria**

1. **Prepare for work.**
   - 1.1 Plans and specifications are obtained.
   - 1.2 *Work health and safety* (WHS) and *environmental requirements* maintaining mechanical services equipment are adhered to throughout the work.
   - 1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   - 1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.
   - 1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.
   - 1.6 Work area is prepared to support efficient maintenance of mechanical services equipment.

2. **Perform routine maintenance.**
   - 2.1 Maintenance tasks detailed in *routine maintenance schedule* are carried out to specification and in line with relevant *information*.
   - 2.2 Mechanical equipment and system components are checked with appropriate instruments.
   - 2.3 Faulty items or components are identified, *faults reported* and maintenance procedure selected.

3. **Repair and replace faulty components and test job.**
   - 3.1 Equipment is safely isolated according to regulations and WHS requirements.
   - 3.2 Faulty items or components are removed using appropriate tools, equipment and procedures.
   - 3.3 Replaceable items are selected from manufacturers’ catalogue or serviceable items are fitted according to
manufacturer or site specifications.

3.4 *System adjustments* are made to equipment or components to comply with specifications.

3.5 Operational check is carried out on system to ensure its compliance with job specification.

3.6 Maintenance report is documented in format required by the maintenance specification.

3.7 *Sustainability principles and concepts* are applied throughout the repair, replacement and testing procedures.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
- complete workplace documentation
- document maintenance report
- read and interpret:
  - documentation from a variety of sources
  - maintenance schedule
  - manufacturer catalogues
  - plans, specifications and drawings
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - conduct routine maintenance on air distribution and hydronic heating, ventilating and air conditioning systems
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
- air-conditioning and refrigeration principles
- electrical safety principles
- effect of bacteria in water, and potential impact on health
- job safety analysis (JSA) and safe work method statements (SWMS)
- mechanical and hydraulic principles
- personal protective equipment requirements and use
- operating principles of system components used in mechanical services equipment
- processes of maintaining mechanical services equipment
- SI system of measurement
- WHS regulations relevant to the work activity
- workplace and statutory requirements for mechanical services equipment

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the
CPCPM3039A Maintain mechanical services equipment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to maintain mechanical services equipment
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- for air distribution equipment, given the plans and specifications, replacing, realigning and tensioning pulleys and belts; check vibration mountings and flexible connections; lubricate bearings; clean air filters, coils and blades; and check system for leaks
- for hydronic systems, given the plans and specifications, replacing gland valves and O rings, replacing and adjusting pump glands, cleaning drains, adjusting operating control valves and settings, replacing chemical dosing systems when required and checking water system for leaks
- for both air distribution and hydronic systems, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed maintenance
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a
period of time reflecting the scope of the role and
the practical requirements of the workplace
• where the assessment is part of a structured learning
experience the evidence collected must relate to a
number of performances assessed at different points
in time and separated by further learning and
practice, with a decision on competency only taken
at the point when the assessor has complete
confidence in the person's demonstrated ability and
applied knowledge
• all assessment that is part of a structured learning
experience must include a combination of direct,
indirect and supplementary evidence.

Assessment processes and techniques should as far as
is practical take into account the language, literacy and
numeracy capacity of the candidate in relation to the
competency being assessed.

Supplementary evidence of competency may be
obtained from relevant authenticated documentation
from third parties, such as existing supervisors, team
leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work
environments and situations that may affect performance. Bold italicised wording, if used in
the performance criteria, is detailed below. Essential operating conditions that may be present
with training and assessment (depending on the work situation, needs of the candidate,
accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be
according to commonwealth, state
and territory legislation and
regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment
  prescribed under legislation, regulations and
  workplace policies and practices
- safe operating procedures, including recognising
  and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - service lines
  - surrounding structures and facilities
• trip hazards
• use of tools and equipment
• work site visitors and the public
• working at heights
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** may include:
• clean-up protection
• potential health hazards
• waste management.

**Quality assurance requirements** may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• health warnings
• International Standards Organisation
• site safety plan
• water treatment requirements
• workplace operations and procedures.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
• elevated work platforms
• hand and power tools
• ladders
• scaffolds
• test equipment
• tachometer.

**Routine maintenance** may include:
• aligning drives
• checking vibration isolation
• cleaning filters and strainers (air and water systems)
• cleaning equipment drains
• cleaning finned coils
• lubricating bearings
Information may include:

- V belt tensioning.
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- program maintenance schedules, plans and specifications
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - confined space entry
  - plumbing regulations
  - relevant Australian standards
- safe work procedures relating to maintaining mechanical services equipment
- signage
- verbal, written and graphical instructions
- work bulletins.

Fault reporting:

- may be written or verbal
- is to be according to company's workplace procedures.

System adjustments may include:

- check of settings
- operational check of control valves
- pipe and duct system check for leaks
- volume control and fire check operation.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - correct handling of hazardous materials
  - appropriate recycling of material
- selecting appropriate products and components to ensure minimal environmental impact.

CPCPMS3040A Install and maintain evaporative air cooling systems

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS3020A

Unit Descriptor
This unit of competency specifies the outcomes required to install and maintain evaporative air cooling systems.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
with the evidence guide.

Elements and Performance Criteria

1 Prepare for work. 1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements installing evaporative air cooling systems are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation and maintenance of evaporative air cooling systems.

2 Identify installation requirements.

2.1 Quantity and type of materials required for installation are determined from plans and specifications.

2.2 Materials are identified, ordered and collected according to workplace procedures.

2.3 Requirements for other services are identified and connection is planned according to regulatory requirements.

2.4 Materials and equipment are checked for compliance with standards, and docket and order form, and for acceptable condition.

3 Install and test unit.

3.1 Installation is set out in compliance with plans, specifications and relevant information.
3.2 Existing services are located and installation process is adjusted accordingly to avoid any disturbance.

3.3 **Preparatory work**, including installation of piping and isolating valve and roof penetration and flashing, is carried out to specifications without unnecessary damage to surrounding structures or environment.

3.4 Structural supports are installed in compliance with plans and specifications and National Construction Code.

3.5 Ducting and control panels are installed according to authorities’ requirements, plans, specifications and manufacturer recommendations.

3.6 System is installed to plans, specifications and manufacturer recommendations.

3.7 Installation is tested according to specification, code or standards for the application.

3.8 **Sustainability principles and concepts** are applied throughout the installation and maintenance process.

3.9 Test results are documented in required format.

4 Maintain unit.

4.1 Service and maintenance requirements are identified from manufacturer specifications or authorities’ requirements.

4.2 Replacement components are checked and fitted periodically and as required according to specification.

4.3 **Other services to the unit** and maintenance operations are conducted, observing manufacturer and authorities’ requirements.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
5.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete workplace documentation
  - document test results
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - undertake associated penetration and flashing of the roof, provision of water, and installation of required duct work

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- characteristics and application of different assemblies, including fixing and jointing techniques and methods
- effect of bacteria in water, and health implications
- effective isolation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- materials handling techniques
- WHS regulations relevant to the work activity
- personal protective equipment requirements and use
- processes of installing and testing evaporative air cooling systems
- roof penetration and flashing
- SI system of measurement
- statutory requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install evaporative units
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing an evaporative air cooling system on a roof, including flashing the roof penetration; installing a plenum box and duct work to three diffusers; connecting cold water to an isolation valve within 1 metre of
the appliance; connecting and completing installation testing, and commissioning its operation, ensuring:

- application of sustainability principles and concepts
- correct identification of requirements and details of proposed installation
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - manual handling
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.
Tools and equipment may include:

- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
  - scaffolds
  - measuring equipment
  - roof safety equipment
  - test equipment.

Materials may include:

- control panels
- diffusers
- ducting materials
- evaporative air cooling systems
- grills
- insulation.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards and building codes
  - safe work procedures relating to installing evaporative cooling systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
- work schedules, plans and specifications.

**Preparatory work** that may need to be completed includes:

- ensuring structural integrity of roof
- installing piping and isolating valve
- installing piping and isolating valve in roof cavity
- installing plinths
- installing structural supports
- installing roof penetration and flashing for the unit.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - correct handling of hazardous materials
  - appropriate recycling of material
  - efficient water use
  - efficient energy retention
  - reuse of waste water
  - selecting appropriate products, components and material to ensure minimal environmental impact.

**Other services to units** may include:

- electrical connections
- water supply.

**Unit Sector(s)**

**Functional area**

**Unit sector** Plumbing and services

**Custom Content Section**

CPCPMS3041A Install domestic solid fuel burning appliances

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPMS3021A

Unit Descriptor
This unit of competency specifies the outcomes required to interpret compliance requirements for domestic solid fuel burning appliance installation, plan and negotiate installation details with clients, and install appliances and flues to meet compliance and quality requirements.

Work in this area must be completed according to relevant legislative, industry, customer and organisational requirements, including work health and safety (WHS) policies and procedures.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
Regulatory mechanisms may apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - report faults
  - use language and concepts appropriate to cultural differences
- literacy skills to:
  - complete written documentation, such as:
    - appliance conformance certificates
    - installation compliance certificates
    - local authority permit applications
  - read and interpret instructions, specifications and standards, such as:
    - AS/NZS 2918 Domestic solid fuel burning appliances – installation
    - compliance certification plates on appliances
    - guidelines and updates for legislation and regulations regarding domestic solid fuel burning appliances
    - manufacturer installation instructions and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- teamwork skills to:
  - work with others to action tasks
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

Required knowledge

- factors affecting selection of installation locations for appliances
- factors affecting compliance and non-compliance of domestic solid fuel burning appliances
- heat damage protection requirements for appliances
- legislation, regulations and standards that apply to the installation and emissions of domestic solid fuel burning appliances
- heat-response categories of construction materials:
  - heat sensitive
  - heat tolerant
  - heat resistant
- installation requirements for different types of domestic solid fuel burning appliances
• job safety analysis (JSA) and safe work method statements covering:
  • asbestos recognition and reporting requirements
  • manual handling of appliances
  • personal protective equipment (PPE) for different tasks and situations
  • working safely at heights
  • worksite housekeeping
• quality requirements
• principles and products of combustion
• requirements and methods for maintaining structural integrity of buildings, roof structures and existing roof coverings
• SI system of measurement
• structure and function of flue elements and principles of flue draw, and effects of:
  • bends and horizontal sections
  • climatic conditions
  • surrounding buildings and trees
• types of domestic solid fuel burning appliances and methods for safe operation
• types and condition of wood used as fuel and impacts on:
  • efficiency of appliances
  • emissions

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, providing that simulated or project-based assessment techniques fully replicate workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
• apply safety requirements throughout the work sequence, including:
  • work with or near electricity
  • select and use processes, tools and equipment
  • use PPE
  • work at heights
• communicate and work effectively and safely with others
• apply sustainability principles and concepts while installing solid fuel burning appliances
• locate, interpret and apply information, standards and specifications relevant to the installation of domestic solid fuel burning appliances
• install at least two different domestic solid fuel burning appliances according to client, compliance and workplace requirements; appliances may be for:
  • central-heating
  • cooking
  • space-heating
  • water-heating
  • combinations of applications
  • fireplace inserts
  • free-standing
  • in-built
  • non-tested.

Context of and specific resources for assessment

This unit of competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access
to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present
with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Installation information** may include:
- AS/NZS 2918 Domestic solid fuel burning appliances – installation (Australian standards are frequently revised and users must always check for currency)
- client requirements
- compliance certification plates on appliances
- JSA
- manufacturer instructions and specifications
- National Construction Code (NCC)
- safe work method statements
- work order.

**Domestic solid fuel burning appliances** may include:
- appliances for:
  - central-heating
  - cooking
  - space-heating
  - water-heating
  - combinations of applications
- fireplace inserts
- free-standing
- in-built
- non-tested
- tested.

**Compliance requirements** may include:
- Australian standards, such as:
  - AS/NZS 2918 Domestic solid fuel burning appliances – installation
  - AS/NZS3500 Plumbing and drainage (set)
- clearance distances to heat sensitive materials, including:
  - ceilings
  - curtains
  - furniture
  - timbers
  - walls
- codes of practice, such as HB39 Installation code for metal roof and wall cladding
- emissions compliance certification plate
- manufacturer specifications
- NCC
• types and dimensions of floor protection.

**Legislative requirements**

may include:

• commonwealth, state and territory, and local legislation and regulations relating to:
  • emissions
  • installation permits
  • work health and safety.

**Inspection of installation sites**

may include:

• assessing height and proximity of neighbouring buildings and trees
• determining structural elements and building materials, especially in regard to presence of asbestos; areas to be assessed include:
  • ceilings
  • floors
  • roofs
  • walls
• measuring dimensions of furniture and fittings close to appliance locations
• finding and noting locations of:
  • electricity
  • power points
  • rooftop outlets for heating, ventilation and air-conditioning (HVAC) systems
  • structural elements of buildings.

**Appliance installation locations**

should:

• allow clearance distances and accessibility clearance according to manufacturer specifications or AS/NZS 2918 Domestic solid fuel burning appliances – installation
• be suitable for installation of flue according to manufacturer specifications or AS/NZS 2918 Domestic solid fuel burning appliances – installation
• be suitable for operation of fans, if required
• comply with emissions compliance requirements
• comply with health and safety requirements
• minimise discomfort caused by cool air draught
• provide optimum heat circulation.

**Heat protection strategies:**

should include:

• compliant floor protection
• compliant clearance distances
  • may include:
  • additional shielding
  • reduced compliant clearance distances.

Equipment and materials may include:

  • appliances and associated components
  • drills
  • flashing roof materials, including:
    • fibreglass
    • laminate
    • metal roof covers of concealed or pierce fixed types
    • plastic building sheets for walls and roofs
    • polyethylene
    • rainwater goods
    • straw or wool
    • thermal insulation of reflective foil
    • fixings, which may include:
      • metal self drilling and tapping screws
      • rivets
      • sealants such as silicon and solder
  • grinders
  • hammers
  • ladders
  • PPE
  • rivet gun
  • saws
  • sealant applicators
  • sealants
  • steel tape
  • tile cutters
  • tin snips.

Sustainability principles and concepts:

  • cover the current and future social, economic and environmental use of resources
  • may include:
    • selecting appropriate material to ensure minimal environmental impact
    • efficient use and recycling of material
    • efficient energy and water use
    • disposing of waste material to ensure minimal
Factors affecting optimum performance may include:

- general cleaning and maintenance requirements
- type and condition of fuel used in appliances.

Unit Sector(s)

Competency field

Unit sector: Plumbing and services

Custom Content Section

Not applicable.
CPCPMS4011B Design, size and lay out heating and cooling systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPMS4011A

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document the layout of heating and cooling systems for multi-floor structures.

It covers preparing for the work, identifying and confirming system specifications and requirements, designing system layout, and work finalisation processes, including records and documentation.

Application of the Unit
This unit applies:

to ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75kPa and a maximum velocity of 12.5 metres per second piping systems conveying heating and chilled water operating at a maximum pressure of 700kPa or a maximum temperature of 100°C, and systems having a maximum output of 50kW and total air quantities not exceeding 950 litres per second.

Site location for the application of the plan will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for design. 1.1 Nature and scope of design task are identified and confirmed.

1.2 Work health and safety (WHS) and environmental requirements planning, sizing and documenting the layout of heating and cooling systems are adhered to throughout the work.

1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work.

1.4 Tools and equipment required for designing, sizing and documenting the layout of heating and cooling systems, including personal protective equipment, are selected and checked for serviceability.

1.5 Work area in which design process is to be conducted is prepared.

2 Identify system requirements. 2.1 Information and specifications for required work are obtained and confirmed, if necessary by site inspection.

2.2 Statutory and regulatory authorities' requirements relevant to work are consulted and applied to all aspects of the work, using relevant information.

2.3 Heating and cooling requirements are determined from building drawings, plans and specifications.

2.4 Air conditioning or small bore heating system is sized to provide for required heating and cooling load and to provide required piping and ducting according to
standards, and regulatory authorities' and workplace requirements.

2.5 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

3 Design system layout. 3.1 Layout of heating and cooling system is designed according to building plans, relevant standards and workplace procedures.

3.2 **Materials** required are specified and optimised according to standards from the proposed design.

3.3 Plans are recorded according to regulatory authorities' and workplace requirements.

4 Restore work area. 4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Documentation, including work backup, is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
Required knowledge

- characteristics and application of different fixing and joining techniques and methods
- characteristics and application of pipe and ducting systems, including their fittings and fixture supports and fixing and joining techniques
- design concepts and performance measures for heating and cooling systems
- effective isolation processes and procedures
- electrical and electronic principles and safety requirements
- environmental impact of gases and Environment Protection Authority (EPA) requirements
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles, operation and characteristics of heating and cooling systems
- process of designing, sizing and documenting the layout of heating and cooling systems
- properties of water and air, including pressure and flow rates
- relevant information sources for the work activity
- relevant statutory requirements related to designing, sizing and documenting the layout of heating and cooling systems
- SI system of measurements
- standards applicable to heating and cooling systems
- use of computers and relevant computer-aided design (CAD) software
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to planning, sizing and documenting the layout of a heating and cooling system
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, designing, sizing and documenting the layout details of a domestic heating and cooling system requiring a minimum heat load of 150 megajoules (MJ) per hour plus a commercial heating and cooling system for a structure with at least four floors, ensuring:
  - application of sustainability principles and concepts
  - correct identification of details of the plan
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and
the practical requirements of the workplace

- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
• underground services
• use of tools and equipment
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

**Tools and equipment** may include:
• computers running appropriate CAD software
• drawing instruments
• measuring equipment.

**Statutory and regulatory authorities** include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Information** may include:
• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to designing, sizing and documenting heating and cooling systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Air conditioning** may include:
- evaporative cooling system
- hydronic heating system
- hydronic cooling system
- warm air system
- refrigerated air conditioning system.

**Small bore heating systems** include:
- boilers
- piping
- radiators.

**Sustainability principles and concepts**:  
- cover the current and future social, economic and environmental use of resources  
- may include:  
  - use of efficient design principles throughout  
  - incorporating efficient use of material in the design  
  - design that ensures minimal environmental impact  
  - choice of appropriate components and equipment to ensure minimal environmental impact.

**Materials** may include:  
- drafting materials and equipment  
- relevant structure plans and specifications.

CPCPMS4022A Commission air and water systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS4002A

Unit Descriptor
This unit of competency specifies the outcomes required to test and commission air and water heating and cooling systems.

It covers preparing for the work, determining testing requirements, preparing systems for balancing, and the physical balancing, testing and commissioning of the systems and completion of work finalisation processes, including recording.

Application of the Unit
This unit applies to:
- ducting systems for air conditioning, heating or ventilation purposes in buildings Class 1 or 2 with a maximum static pressure of 0.75kPa and a maximum velocity of 12.5 metres per second
- piping systems conveying heating and chilled water operating at a maximum pressure of 700kPa or a maximum temperature of 100°C, with a maximum output of 50kW and total air quantities not exceeding 950 litres per second.

Site location for work application will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.  
1.1 Information, plans and specifications are obtained.  
1.2 Work health and safety (WHS) and environmental requirements testing and commissioning air and water systems are adhered to throughout the work.  
1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.  
1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.  
1.5 Tools and equipment for testing and commissioning air and water systems, including personal protective equipment, are selected and checked for serviceability.  
1.6 Work area is prepared to support efficient testing and commissioning process.

2 Determine testing requirements.  
2.1 Equipment is checked for safe operation and correct functioning.  
2.2 Equipment performance data is checked against plans, specification requirements and other relevant information.  
2.3 Instruments and associated equipment suitable for measuring quantities are selected according to job specification.
3  Prepare system for balancing.
   3.1 Dampers are set in the open or specified position and operational check of system-related fans and ducting is carried out according to workplace procedures.
   3.2 Automatic control devices are energised to provide maximum demand for airflow.
   3.3 Piping system is checked for flow direction and leaks, and operational check of system and related pumps is carried out.
   3.4 All manual and automatic valves are set in the specified position.

4  Balance, test and commission system.
   4.1 Valves or throttling devices are adjusted to achieve specified water flow ratings.
   4.2 Air volumes moved by system fans are measured.
   4.3 Dampers and terminal devices are correctly adjusted to achieve specified airflow ratings.
   4.4 Automatic controls and devices are set to specified settings.
   4.5 Testing and balancing of system is carried out according to job specification, manufacturer recommendations and sustainability principles and concepts.
   4.6 Test and monitored results are documented in format required by job specification and/or manufacturer.

5  Restore work area.
   5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.
   5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.
   5.3 Documentation is completed according to workplace requirements.
**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test and monitored results

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to:
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - test, balance and commission air conditioning, heating and ventilation ducting and piping systems

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- application of mechanical, hydraulic, electric and electronic principles and safety requirements
- design concepts, tests and performance standards for measuring various water and air systems
- effect of bacteria in water, and potential impact on health
• environmental impact of gases and Environment Protection Authority (EPA) requirements
• job safety analysis (JSA) and safe work method statements (SWMS)
• operating principles and characteristics of system components used in water and air systems
• performance standards for balancing systems
• processes of commissioning air and water systems
• relevant information sources for the work activity
• relevant statutory requirements related to installing, testing, balancing, commissioning and operation of air and water systems
• SI system of measurements
• standards applicable to testing, balancing and commissioning air and water systems
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:
• locating, interpreting and applying relevant information, standards and specifications to testing, balancing and commissioning air and water systems
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• as a minimum, the ability to balance and commission an air conditioning system (up to 150 megajoules) for a domestic situation and a commercial air conditioning system for a structure of at least four floors, plus balance and commission a hydronic water heating system for a structure of at least four floors, ensuring:
- application of sustainability principles and concepts
- correct identification of details of the plan
- correct selection and use of appropriate processes, tools and equipment
- completion of all work to specification
- compliance with regulations, standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
Work health and safety is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - identifying and testing for electrical hazards
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

Environmental requirements are to cover water quality management and may include:

- clean-up protection
- ozone management
- stormwater protection
- waste management.

Quality assurance requirements may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- elevated work platforms
- hand and power tools
- ladders
- scaffolds
- test equipment:
  - tachometer
  - anemometer
  - differential pressure gauges.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:

CPCPMS4023A Design compressed air systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS4003A

Unit Descriptor
This unit of competency specifies the outcomes required to design and size compressed air distribution systems and prepare system plans and specifications.

Application of the Unit
This unit of competency supports the needs of experienced plumbers with responsibility for providing consultancy or supervision in the evaluation and design of compressed air systems.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 Scope of work for the design of compressed air systems is established.

1.2 Client requirements are determined from plans, specifications and client brief.

1.3 Cost-benefit analysis is conducted comparing a range of materials and system designs.

1.4 Statutory, regulatory and Australian and New Zealand Standard requirements for the design of compressed air systems are interpreted, analysed and applied.

1.5 Manufacturer requirements and trade and technical manuals are interpreted.

1.6 Additional research, including a desktop study, is conducted to outline design parameters.

1.7 Performance requirements are established.

2 Plan and detail system components.

2.1 Layout of pipework systems and type and location of fittings and valves are planned.

2.2 System calculations are conducted for a range of applications.

2.3 Compressed air system equipment and components are sized and specified.

2.4 Noise reduction methods are analysed and suitable methods specified.

2.5 Approved materials and jointing methods and installation requirements are specified.

3 Design and size systems.

3.1 Compressed air systems are designed for a range of applications.

3.2 Compressed air systems are designed and sized using computer software packages.
3.3 **Sustainability principles and concepts** are applied throughout the design process.

4 Prepare documentation

4.1 **Plans** are prepared for a range of compressed air systems.

4.2 **Specification** for a compressed air system is prepared.

4.3 **Testing and commissioning schedule** is prepared.

4.4 **Operation and maintenance manual** is produced.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - report faults with application
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
- literacy skills to:
  - read and interpret:
    - codes, legislation and standards
    - documentation from a variety of sources
    - plans and specifications
    - regulatory authorities’ requirements
  - numeracy skills to apply measurements and calculations
  - planning and organising skills to plan for and set out work

**Required knowledge**

- nature of materials and effect of their performance in a variety of conditions
- WHS and organisational quality procedures and processes
- principles of technology in the design of compressed air systems
• terminology, definitions, installation methods, applications and hazards identified in relation to compressed air devices and systems used according to Australian and New Zealand standards and other standards, codes or standard operating procedures
• work drawings and specifications
• workplace safety requirements, including relevant statutory regulations, codes and standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

• apply sustainability principles and concepts associated with the design
• identify electrical hazards associated with the design
• evaluate and document design parameters including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of compressed air systems
• produce appropriate layouts for compressed air systems according to manufacturers’ and regulatory requirements
• calculate pipe sizes according to regulations and manufacturers’ requirements
• design and size a compressed air system using appropriate software
• prepare plans for a range of compressed air systems to industry standards
• prepare a specification for a compressed air system
• prepare a testing and commissioning schedule
• prepare an operation and maintenance manual.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Client requirements** may include:
- architectural specifications
- builders’ specifications
- owner requirements
- specialist use applications.

**Cost-benefit analysis**:
- compares the range of suitable treatment and disposal options, materials, system choices, disinfection options, water savings and
environmental benefits compared to initial and ongoing maintenance costs.

Statutory, regulatory and Australian and New Zealand standard requirements include:

- Acts
- Australian and New Zealand standard requirements
- industry standards
- local and state government policies, including group and strata titling
- National Construction Code
- regulations.

Manufacturer requirements may include:

- material specifications
- sizing tables
- technical and trade manuals.

Desktop study may include collection and interpretation of existing data for design purposes in:

- architectural and building plans and other documents, including:
  - applications
  - brochures
  - forms
  - policies
  - reports
  - council plans
  - developer plans
  - manufacturer data.

Performance requirements may include:

- Australian and New Zealand standards
- local authority plans
- operational pressures and compressed air consumption
- pressure and air quality.

Layout of pipework systems may include:

- building integrity and aesthetic appeal should not be unduly effected by pipework
- principles of economy, serviceability, durability and fit for use should be applied.

Fittings and valves may include:

- bends
- couplings
- isolating valves
- pressure relief valves
- tees
- unions.

**System calculations** may include:
- air consumption
- compressed air volume and storage
- distribution pressures
- energy
- interpretation of design charts and tables
- pipe sizing.

**Equipment and components** may include:
- air filtering equipment, including proprietary filtering systems and air scrubbing systems
- capacity and size
- compressed air appliances, including air-operated tools, machinery and equipment
- moisture removal methods
- mounting and installation requirements
- oiling equipment
- reciprocating compressors
- single and multi-stage compressors
- valves, pressure controls and components.

**Materials** may include:
- approved pressure-rated materials
- copper
- steel.

**Jointing methods** may include:
- brazing
- mechanical joints
- threading.

**Installation requirements** may include:
- clipping
- installation details
- jointing requirements
- level of workmanship.

**Sustainability principles and**
- cover the current and future social, economic and environmental use of resources
concepts: • may include:
  • using efficient design principles throughout
  • incorporating efficient use of material in the design
  • design that ensures minimal environmental impact
  • choice of appropriate components and equipment.

Plans: • may include:
  • axonometrics
  • cross-sections
  • details
  • elevations
  • isometrics
  • schematics
  • sections
  • may be produced using:
    • computer generation
    • Indian ink
    • pencil
    • pigment liner.

Specification may include:
  • appliances
  • clipping
  • detailing of specialised components
  • jointing
  • manufacturer requirements
  • materials
  • valves
  • workmanship.

Testing may include:
  • flow testing
  • inspection checklist
  • leak testing
  • pressure testing
  • quality assurance (QA) audit.

Commissioning schedule may
  • check fit for purpose
include:

- check for burrs and obstructions
- commission appliances
- purge system
- remove contaminants.

*Operation and maintenance manual* may include:

- check for blockages
- leak detection
- regular inspections
- regular maintenance requirements.

CPCPMS5010A Design steam generation and distribution systems

Modification History
Changes to unit title, descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS5000A

Unit Descriptor
This unit of competency specifies the outcomes required to design steam generation and distribution systems, including pipe and valve sizing, material selection, and the preparation and specification of documentation for steam distribution systems.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1  Evaluate design parameters.  1.1  **Scope of work** for steam generation and distribution systems is established.

1.2  **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3  **Cost-benefit analysis** is conducted comparing a range of materials and system designs.

1.4  **Statutory and regulatory requirements and relevant Australian standards and codes** for the design of steam generation and distribution systems are analysed and applied.

1.5  **Manufacturer requirements** and trade and technical manuals are interpreted.

1.6  Additional research, including a **desktop study**, is conducted to outline design parameters.

1.7  Factors that contribute to quality, safety and time efficiency are determined.

1.8  **Performance requirements** are established, considering safety of system users or building occupants.

2  Plan and detail system components.  2.1  **Layout of pipework systems** and types of fittings, valves and controls are planned.

2.2  **Pipe size calculations** are performed for a range of applications.

2.3  **Steam appliances** are specified, steam consumption is calculated and **boilers** required are sized and specified.

2.4  **Steam circuits** are detailed and distribution pressures for a range of applications are specified.

2.5  **Steam trap types and their operation** are specified and detailed.

2.6  **Steam injection** systems are specified.
2.7 *Insulation* is specified.

2.8 *Pipe supports* are designed for a range of applications.

2.9 Approved *materials, jointing methods and installation requirements* for steam generation and distribution systems are specified.

3 Design and size systems.

3.1 Steam distribution systems are *designed* for a range of applications.

3.2 Steam distribution systems are designed and sized using calculations and computer software packages.

3.3 *Sustainability principles and concepts* are applied throughout the design.

4 Prepare documentation.

4.1 *Plans* and *specifications* are prepared for a range of steam generation and distribution systems.

4.2 *Testing* and *commissioning schedule* is prepared.

4.3 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to develop creative and responsive approaches
• literacy skills to:
  • prepare written documentation, including:
    • operation and maintenance manual
    • plans, specifications and schedules
  • read and interpret:
    • manufacturer requirements and manuals
    • plans, specifications, drawings and design briefs
    • statutory and regulatory requirements and standards
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and set out work
  • research, collect, organise and understand information relating to the design of steam generation and distribution systems
  • take initiative and make decisions
• problem-solving skills to analyse requirements, consider options and design an appropriate system
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.
• technical skills to prepare and specify steam distribution system plans
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge

• common terminology and definitions used in design of steam generation and distribution systems for all classes of building, including industry terminology such as:
  • absolute pressure
  • enthalpy
  • enthalpy of evaporation and of saturated steam
  • enthalpy of saturated water
  • gauge pressure
  • heat and heat transfer
  • latent heat
  • specific enthalpy
  • specific heat capacity
• principles of technology in the design of steam generation and distribution systems
• requirements of commonwealth, state or territory regulatory authorities, relevant Australian standards, codes and manufacturer specifications, including hazards identified in relation to devices and systems used
• SI system of units related to steam
• terms, including relevant Australian standard and code definitions, manufacturer terms and naming conventions
• workplace safety requirements, including relevant statutory regulations, codes and standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

• apply sustainability principles and concepts throughout the design of the system
• design, size and document layout details, including a specification for a 100-bed three-storey hospital incorporating a laundry
• evaluate and document design parameters to relevant Australian standards, codes, regulations, and client and manufacturer requirements for a steam generation and distribution system
• design and size a steam generation and distribution system using appropriate software
• prepare testing and commissioning schedules
• produce operation and maintenance manuals
• communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must
relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** must include:

- barriers to heat transfer
- effects of air in a steam system
- heat transfer
- interpreting plans and specifications, and sizing and documenting layout of steam generation and distribution systems for residential, commercial and industrial applications for either new projects or an existing structure being renovated, extended, restored or maintained
- principles and properties of steam systems, including:
  - characteristics of condensation
  - methods of condensate removal
  - steam applications, including commercial, manufacturing, institution and machinery and equipment operation
- working with types of steam and steam quality,
including:
- dry steam
- flash steam
- properties of steam at varying pressures
- superheated steam
- wet steam.

**Design requirements** may include:
- architectural plans
- builder specifications
- boiler selection
- fire safety requirements
- flow requirements and sizing of pipework
- owner requirements
- pipework identification
- ventilation requirements.

**Cost-benefit analysis:**
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of the project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials.

**Statutory and regulatory requirements and relevant Australian standards and codes** may include:
- Acts, regulations and commonwealth, state or territory, and local government requirements
- National Construction Code
- relevant Australian standards and codes.

**Manufacturer requirements** may include:
- material specifications
- recommended specific fixings for pipework
- sizing tables
- technical and trade manuals.
Desktop study must include:
- architectural and building plans
- developer plans
- documents, including:
  - applications
  - brochures
  - forms
  - other reports as available
- manufacturer data
- policies.

Performance requirements may include:
- steam generation and consumption, and steam and pressure quality, established using relevant Australian standards, codes and manufacturer information.

Layout of pipework systems:
- must include:
  - principles of economy, serviceability, durability and fit for use
  - location of pipework (fire rating of enclosure)
- should not unduly affect building integrity and aesthetic appeal.

Fittings and valves may include:
- fittings:
  - bends
  - couplings
  - condensate traps
  - steam traps
  - steam headers
  - steam strainers
  - tees
  - unions
- valves:
  - isolating valves
  - pressure relief valves.

Pipe size calculations must include:
- energy
- pressure
• sizing  
• storage  
• volume.

Steam appliances:
• may include:
  • calorifiers  
  • industrial applications  
  • kitchen and laundry appliances  
  • sterilisers  
  • water heaters  
• details must include:
  • components  
  • construction  
  • electronic controls  
  • methods of temperature and pressure control.

Boilers:
• may include:
  • coal  
  • electric  
  • fire tube  
  • gas  
  • oil  
  • packaged  
  • solid fuel  
  • water tube  
• factors to be considered when selecting a boiler must include:
  • advantages and disadvantages of boiler types  
  • capacity and size  
  • designs based on anticipated use  
  • energy sources  
  • methods of reducing heat losses  
  • pressure controls and components  
  • storage requirement calculations  
  • suitable time period between refilling  
  • valves.

Steam circuits must include:
• condensate return
- feed pumps
- feed tanks
- headers
- steam distribution
- water treatment.

**Steam trap types and their operation:**
- types, which may include:
  - mechanical
  - thermodynamic
  - thermostatic
  - other applicable types
- operation, which must include:
  - installation
  - location.

**Steam injection** must include:
- noise control
- open ended pipe
- proprietary
- sparge pipe.

**Insulation:**
- may include:
  - fibreglass
  - rock wool
- insulation protection, including:
  - plastic
  - sheet metal.

**Pipe supports** may include:
- anchors
- bracket spacing
- corrosion protection
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion.

**Materials** may include:
- copper
- steel
- other approved materials.
Jointing methods may include:
- brazing
- mechanical joints
- threading
- welding.

Installation requirements may include:
- pipe protection:
  - cover
  - corrosion
  - impact
  - fire rating
  - level of workmanship
  - manufacturer-recommended specific fixings
- pipe support
- provision for expansion
- provision for drainage of condensation
- serviceability and access.

Designed may include:
- cost relating to performance, including:
  - milestones
  - standard procedures
  - standards of work
  - work schedules
- prescriptive designs, including detail relating to:
  - materials and quality of work
  - nominated subcontractors
  - provision of on-site facilities and site access
  - quality assurance.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient energy usage
  - water usage
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact.
Plans:

- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.

Specification may include:

- boiler selection
- fire safety
- flow requirements
- jointing
- manufacturer requirements
- materials
- residual pressures
- specialised components
- support
- testing
- valve selection
- workmanship
- work health and safety (WHS).

Testing may include:

- defect inspection
- flow
- inspection checklist
- leak
- pressure
- performance
- quality assurance (QA) audit.

Commissioning schedule may include:

- boiler
- check for foreign material
- containment
- leak check
• operation
• pump
• system certification
• system defects
• system functions as per design
• treatment system.

**Operation and maintenance manual** may include:

• as installed drawings
• certification documentation
• maintenance schedules
• manufacturer brochures and technical information
• system operational procedures
• regular water quality testing
• results of commissioning test.

CPCPMS5011A Design air conditioning and ventilation systems

Modification History
Changes to unit descriptor, application, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS5001A

Unit Descriptor
This unit of competency specifies the outcomes required to evaluate and design air conditioning and ventilation systems for residential and commercial applications.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 **Scope of work** for the design of air conditioning and ventilation systems is established.

1.2 **Design requirements** are determined from relevant Australian standards, codes, plans, specifications, manufacturer instructions and client briefs, including factors that contribute to quality, safety and time efficiency are determined.

1.3 User comfort conditions and **specific use conditions** are evaluated and **psychometric evaluation and heat loads are calculated**.

1.4 **Building heat losses** are evaluated.

1.5 Distribution requirements for air conditioning and ventilation system applications are specified.

1.6 Range of air conditioning and ventilation systems are evaluated according to given applications.

1.7 Mechanical services drawings are evaluated and interpreted.

1.8 Health risks that may arise due to poor maintenance of air conditioning and ventilation systems are evaluated.

1.9 Minimum performance requirements are specified for several different air conditioning and ventilation systems.

1.10 Manufacturer specifications and technical manuals are evaluated for suitability for a range of design applications.

1.11 Additional research, including a **desktop study**, is conducted to outline design parameters.

1.12 Safety of system users or building occupants is considered.

2 Plan system components.

2.1 Appropriate zoning of air conditioning and ventilation systems is planned to comply with given specific performance objectives.
2.2 Air conditioning units are specified for optimum performance with reference to *legislation, standards and other relevant documentation*.

2.3 Fan types are specified for a range of applications with reference to legislation, standards and other relevant documentation.

2.4 Air diversion systems, including registers, are planned to ensure a balanced system with reference to legislation, standards and other relevant documentation.

2.5 Required ventilation and duct work components are planned and locations are specified with reference to legislation, standards and other relevant documentation.

2.6 Approved materials for air conditioning and ventilation systems are specified.

2.7 *Plans* and drawings are completed using relevant Australian standards, codes, manufacturer installation requirements, drawing symbols related to air conditioning and ventilation according to legislation, and other relevant documentation.

3 Design and size systems.

3.1 Volume air changes per hour are calculated from given floor plans and details.

3.2 Methods for eliminating health risks from existing or proposed systems are specified with reference to legislation, standards and other relevant documentation.

3.3 *Design and sizing* for a range of air conditioning and ventilation systems are determined for given applications.

3.4 *Sustainability principles and concepts* are applied throughout the design.

4 Test systems.

4.1 Test procedures for air conditioning and ventilation systems are evaluated.

4.2 *Tests* are conducted using appropriate *testing equipment*, results are recorded and report is prepared.
4.3 Adjustments required as a result of testing are planned, designed and specified.

5 Prepare documentation.

5.1 Client brief of the desired design is prepared.

5.2 Appropriate checklist, including formulas required to carry out an air balance to a given specification, is developed.

5.3 Plans and specifications are prepared for a range of air conditioning and ventilation systems.

5.4 Testing and commissioning schedule is prepared.

5.5 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication

- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - manufacturer requirements and manuals
    - statutory and regulatory requirements and standards
  - initiative and enterprise skills to develop creative and responsive approaches
• numeracy skills to:
  • apply formulas and calculate air displacements and returns
  • calculate heat loads
• planning and organising skills to:
  • research, collect, organise and understand information relating to the design of air conditioning and ventilation systems
  • take initiative and make decisions
• problem-solving skills to analyse requirements, carry out tests, consider options and design an appropriate system
• teamwork skills to be able to work with others and action tasks and relate to people from a range of cultural ethnic backgrounds and varying physical and mental abilities.
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• air psychometrics and the use of psychometric charts
• requirements of the National Construction Code, relevant Australian standards and other applicable codes or standard operating procedures relevant to the sector
• compliance with WHS and organisational quality procedures and processes
• hazards associated with devices used in air conditioning and ventilation systems
• heat load calculations
• installation methods used in air conditioning and ventilation systems
• nature of materials and effect of performance
• plans and specifications
• terminology and definitions used in air conditioning and ventilation systems

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

This unit of competency could be assessed by:
• developing an air conditioning and ventilation system for a given project, including the schedule of works and job specification
• preparing a graphical presentation of an air conditioning or ventilation system solution with specifications.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum, provide evidence of the ability to:

• design, size and document the layout details for an air conditioning and ventilation system for a 10 storey residential building with ground floor shops and basement car park
• evaluate and document design parameters to relevant Australian standards, codes, regulatory, client and manufacturer requirements for system components, including:
  • air conditioning units
  • ducting systems
  • controls
  • fans
  • zones
• develop an appropriate checklist for tests to be carried out on the system, including formulas required to carry out an air balance
• conduct tests, record and evaluate test results, and prepare a report
• prepare testing and commissioning schedules for air conditioning and ventilation systems
• prepare operation and maintenance manuals for air conditioning and ventilation systems
• apply sustainability principles and concepts throughout the air conditioning and ventilation system design
• communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the
  minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe
  work practices
- support materials appropriate to activity
- workplace instructions relating to safe work
  practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related
  systems information.

Reasonable adjustments for people with disabilities
must be made to assessment processes where required.
This could include access to modified equipment and
other physical resources, and the provision of
appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the
  Construction, Plumbing and Services Training
  Package
- include direct observation of tasks in real or
  simulated work conditions, with questioning to
  confirm the ability to consistently identify and
  correctly interpret the essential underpinning
  knowledge required for practical application
- reinforce the integration of employability skills
  with workplace tasks and job roles
- confirm that competency is verified and able to be
  transferred to other circumstances and
  environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a
  period of time reflecting the scope of the role and
  the practical requirements of the workplace
- where the assessment is part of a structured
  learning experience the evidence collected must
relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** may include:

- interpreting plans and specifications
- sizing and documenting layout for air conditioning and ventilation systems, including residential and commercial systems
- new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:

- architectural plans
- building specifications
- fire safety
- National Construction Code
- owners
- tenants
- air-flow requirements and sizing of duct work.
Specific use conditions may include:

- age and activity of occupants
- computer requirements
- food preparation
- smoke exhaust
- wet-bulb and dry-bulb temperature and humidity.

Psychometric evaluation may include:

- absolute, specific and relative humidity
- air composition
- air properties, including:
  - density
  - expansion coefficient
  - kinematic viscosity
  - Prandtl number
  - specific heat
  - temperature
  - thermal conductivity
- altitude, density and volume
- determination of the air condition using a psychometric or Mollier chart, showing:
  - dewpoint temperature
  - dry-bulb temperature
  - enthalpy
  - humidity ratio
  - relative humidity
  - specific volume
  - wet-bulb temperature.

Calculation of heat loads must include:

- assessment of factors affecting heat load, including:
  - building materials
  - insulation
  - number of personnel
  - number of windows
  - room dimensions
  - usage
  - weather effects
- using:
  - calculations and computer software systems
  - heat load calculation methods and formulas.
Building heat losses may include:

- construction materials
- insulation materials
- maintaining plenum
- occupancy
- room sizes.

Desktop study may include collection and interpretation of data for design purposes in:

- architectural and building plans
- developer plans
- manufacturer data
- documents:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Legislation, standards and other relevant documentation is to be according to commonwealth, state and territory legislation and regulations and may include:

- WHS requirements, such as:
  - growth and distribution of *Legionella pneumophila* bacteria and other water and airborne infectious bacterial agents
  - handling of materials, including hazardous materials and substances
  - hazard control
  - organic and inorganic contaminants
  - personal protective clothing (PPE) and equipment
  - use of first aid equipment
  - use of tools and equipment
  - workplace environment and safety
  - environmental requirements, including water quality management, which may include the breeding of mosquitoes
  - quality assurance requirements, including:
    - AS1100 Technical drawing materials
    - AS/NZS1668 Ventilation systems: Parts 1 and 2
    - AS/NZS1677 Refrigerating systems
    - AS/NZS 3666 Handling microbial systems
    - Environment Protection Authority (EPA)
    - internal company quality assurance policy and
risk management strategy  
- International Standards Organisation  
- site safety plan  
- workplace operations and procedures  
- specifications and operational manuals for:  
  - commissioning and testing  
  - components installation  
  - fittings  
  - manufacturer specifications, literature and data  
  - materials  
  - pumps  
  - systems  
  - valves.

**Specifications** may include:

- air-flow requirements  
- equipment selection  
- fire safety  
- jointing  
- manufacturer requirements  
- materials  
- safety (WHS)  
- specialised components  
- support  
- testing  
- workmanship.

**Plans:**

- may include:  
  - axonometrics  
  - cross-sections  
  - details  
  - elevations  
  - isometrics  
  - schematics  
  - sections  
- may be produced using:  
  - computer generation  
  - drawing equipment.
Design and sizing:

- may include designs that are prescriptive and include detail relating to:
  - cost
  - materials and quality of work
  - milestones
  - nominated subcontractors
  - provision of on-site facilities and site access
  - quality assurance
  - space allowances
  - standard procedures
  - work schedules
- design parameters must include:
  - client requirements
  - legislative requirements
  - WHS requirements
  - user requirements in relation to zoning
- design and sizing may be produced using:
  - computer generation
  - drawing equipment
  - with reference to calculations, tables, regulations and manufacturer specifications.

Applications may include:

- amenities
- basement carpark
- food preparation
- residential and commercial premises.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage/capital outlay comparison.

Tests and testing equipment must include:

- air pressure
- air velocity
- air volume
- humidity
- Pitot tubes
- sound power levels
- temperature.

**Testing** may include:
- air flow
- climate control
- defect inspection
- inspection checklist
- performance quality assurance (QA) audit.

**Commissioning schedule** may include:
- acoustic performance
- balancing
- system certification
- check for foreign material
- leak check
- system defects
- system functions as per design.

**Operation and maintenance manual** may include:
- as installed drawings
- certification documentation
- results of commissioning test
- maintenance schedules
- manufacturer brochures and technical information
- regular water quality testing
- system operation.

**Unit Sector(s)**

**Custom Content Section**

Not applicable.
**CPCPMS5012A Design sound attenuated hydraulic services**

**Modification History**
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPMS5002A

**Unit Descriptor**
This unit of competency specifies the outcomes required to design sound attenuated hydraulic services, determine relevant installation details and prepare specifications for a range of residential, commercial and industrial buildings.

**Application of the Unit**
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and construction hydraulics.

**Licensing/Regulatory Information**
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

**Pre-Requisites**
Nil

**Employability Skills Information**
This unit contains employability skills.

**Elements and Performance Criteria Pre-Content**
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 **Scope of work** is established for sound attenuated hydraulic services for wide span and high-rise building projects.

1.2 **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Sound transmission categories and levels are identified from relevant Acts, codes and standards, and are evaluated for residential, commercial and industrial premises.

1.4 Sound transmission values of building and structural elements and materials are evaluated.

1.5 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.

1.6 National Construction Code, statutory and regulatory requirements and Australian standards for the design of sound attenuated hydraulic services are analysed and applied.

1.7 **Manufacturer requirements** and trade and technical manuals are interpreted.

1.8 Factors that contribute to quality, safety and time efficiency are determined.

1.9 Additional research, including a desktop study, is conducted to outline design parameters.

1.10 **Performance requirements** are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 Causes of **noise generation** in hydraulic services are identified and analysed.

2.2 **Layout of** sound-attenuated pipework systems is planned.
2.3 **System calculations** are performed for a range of sound attenuated hydraulic services.

2.4 **Pumped hydraulic systems** are sound attenuated.

2.5 **Pipe supports** are designed for a range of applications.

2.6 Approved **materials** and **installation requirements** for sound attenuated hydraulic services are specified.

3 Design and size systems.

3.1 Sound attenuated hydraulic services are designed and sized for a range of applications.

3.2 **Material combinations** are identified and documented to achieve sound attenuation requirements.

3.3 Pump installations are sound attenuated.

3.4 Sound attenuated hydraulic services are designed and evaluated using calculations and computer software packages.

3.5 **Sustainability principles and concepts** are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 **Plans** and **specifications** are prepared for a range of sound attenuated hydraulic services.

4.3 Report on sound attenuated hydraulic services for a range of applications is prepared.

4.4 **Testing** and **commissioning schedule** is prepared.

4.5 **Operation and maintenance manual** is produced, including information on how to properly and safely maintain the system.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.
Required skills

- Communication skills to:
  - Communicate with others to ensure safe and effective work practices
  - Confirm job specifications and client requirements
  - Enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - Use language and concepts appropriate to cultural differences
  - Use and interpret non-verbal communication, such as hand signals

- Literacy skills to:
  - Prepare written documentation, including:
    - Operation and maintenance manual
    - Plans, specifications and schedules
  - Read and interpret:
    - Plans, specifications, drawings and design briefs
    - Standards and manufacturer requirements and manuals
    - Statutory and regulatory requirements

- Initiative and enterprise skills to develop creative and responsive approaches

- Numeracy skills to apply measurements and calculations

- Planning and organising skills to:
  - Plan and set out work
  - Research, collect, organise and understand information relating to the design of sound attenuated hydraulic services
  - Take initiative and make decisions

- Problem-solving skills to analyse requirements, consider options and design an appropriate system

- Teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- Technical skills to:
  - Determine relevant installation details for sound-attenuated hydraulic services
  - Prepare specifications for sound attenuated hydraulic services

- Technology skills to:
  - Access and understand site-specific instructions in a variety of media
  - Use mobile communication technology

Required knowledge

- Application of relevant Australian standards and codes, National Construction Code, manufacturer specifications, and other relevant standard operating procedures relevant to the sector

- Common terminology and definitions used in the design of sound attenuated hydraulic services
sides for all classes of building
- drafting principles
- nature of materials used and effects of performance under various conditions
- principles of technology in the design of sound attenuated hydraulic services
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum, provide evidence of the ability to:
- design and document the details for sound-attenuated hydraulic services installation, including a specification for a high-rise mixed development building; using an approved sanitary plumbing and domestic drinking water system to a minimum of 29 floors.
- evaluate and document design parameters, to relevant Australian standard and codes, and regulatory, client and manufacturer requirements for a range of sound-attenuated hydraulic services components must include:
  - clipping
  - pipe enclosures
  - insulation
  - sound-attenuated pipework
- prepare reports on sound-attenuated hydraulic services for a range of applications
- prepare specifications for a range of sound-attenuated hydraulic services
- prepare testing and commissioning schedules
- apply sustainability principles and concepts throughout the design process
- communicate with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:
• must include:
  • documenting layout of sound attenuated hydraulic services, including reduction of noise transfer for residential, commercial and
Design requirements must include:
- architectural plans
- building specifications
- acoustic performance of fixtures, fittings and equipment
- building construction materials
- fire rating of penetrations
- owner requirements
- pipe enclosures
- pipework identification
- specialist applications.

Cost-benefit analysis:
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials
  - system choices.

Statutory and regulatory requirements and Australian standards may include:
- Acts, regulations and commonwealth, state or territory, and local government requirements
- National Construction Code
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- other relevant Australian standards.

Manufacturer requirements may
- analysis of sound transmission values
- acoustic performance of fixtures, fittings and...
include:

- equipment
- specifications
- technical and trade manuals.

**Desktop study** may include:

collection and interpretation of data for design purposes in:

- architectural and building plans
- developer plans
- manufacturer data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

**Performance requirements** may include:

- flow, velocity, pressure and discharge requirements established using relevant Australian standards, codes and local government authority plans
- noise rating of habitable areas.

**Noise generation** must include:

- acoustic performance of fixtures, fittings and equipment
- high velocity
- high pressure
- linking of building compartments by pipework
- loose pipework
- pumped hydraulic systems
- system design
- quick action valves
- water hammer.

**Layout of pipework systems**:

- must include:
  - concealed pipework
  - pipe enclosures
  - exposed pipework
  - fire-rated pipework
- should have principles of economy, serviceability, durability and fit for use applied
- should not unduly affect building integrity and aesthetic appeal.
System calculations must include:
- sound criteria for habitable rooms
- noise insulation characteristics of materials
- sound transmission values of plumbing pipework and building materials.

Pumped hydraulic systems may include:
- circulating systems
- compressed air systems
- pressurised water mains
- pump and pump rising mains
- pumproom
- sanitary rising mains
- steam systems.

Pipe supports cover fixings that do not impinge on sound attenuation of the hydraulic service, and may include:
- anchors
- bracket spacing
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- separation and insulation between pipework, supports and building structure.

Materials may include:
- expanded foam rubber
- glasswool
- rockwool
- lead vinyl
- other approved materials.

Installation requirements:
- may be for:
  - sanitary plumbing
  - drinking and non-drinking water supply
  - alternative water supply
  - stormwater drainage
  - siphonic stormwater systems
  - pumping systems
- must include:
  - fire rating
- level of workmanship
- manufacturer installation requirements
- pipe support
- serviceability and access.

**Material combinations** may include:
- pipe enclosures
- floor, wall and ceiling systems
- separation and insulation distances.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - consideration of the Green Building Council of Australia rating scheme
  - selecting appropriate components to ensure minimal environmental impact.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - sections
  - schematics, which may be produced using:
    - computer generation
    - drawing equipment.

**Specification** may include:
- jointing
- manufacturer requirements
- materials
- performance criteria
- safety (WHS)
- selection of suitable acoustic rated fixtures, fittings and equipment
- separation and insulation between pipework, supports and building structure
• support
• workmanship.

**Testing** may include:
• compliance testing
• quality assurance (QA) audit
• performance
• sound measurement (dB).

**Commissioning schedule** must include:
• system certification
• insulation gap filling
• system defects
• system functions as per design.

**Operation and maintenance manual** may include:
• as installed drawings
• results of commissioning test
• certification documentation
• maintenance schedules
• manufacturer brochures and technical information.

**Unit Sector(s)**

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 **Scope of work** for hydronic heating and cooling systems is established.

1.2 **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.

1.4 **Statutory and regulatory requirements and relevant Australian standards and codes** for the design of hydronic heating and cooling systems are analysed and applied.

1.5 **Manufacturer requirements** and trade and technical manuals are interpreted.

1.6 Additional research, including a **desktop study**, is conducted to outline design parameters.

1.7 Factors that contribute to quality, safety and time efficiency are determined.

1.8 **Performance requirements** are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 **Layout of pipework systems**, and type and location of **fittings, valves** and controls are planned.

2.2 **Pipe size requirement calculations** are performed for a range of applications according to regulations and manufacturer requirements.

2.3 **System components and circuits** are specified.

2.4 **Pump and compressor systems** are detailed.

2.5 Distribution flows, velocities and pressures are specified for a range of applications.

2.6 **Insulation** is specified.
2.7 Pipe supports are designed for a range of applications.

2.8 Approved materials, jointing methods and installation requirements for hydronic heating and cooling systems are specified.

2.9 Allowance for expansion and contraction is provided.

3 Design and size systems.

3.1 Hydronic systems and circuits are designed for a range of applications.

3.2 Hydronic systems are designed and sized using calculations and computer software packages.

3.3 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specifications are prepared for a range of hydronic heating and cooling systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements

initiative and enterprise skills to develop creative and responsive approaches

numeracy skills to apply measurements and calculations

planning and organising skills to:
  - plan and set out work
  - research, collect, organise and understand information relating to the design of hydronic heating and cooling systems
  - take initiative and make decisions

problem-solving skills to analyse requirements, consider options and design an appropriate system

teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

technical skills to:
  - determine relevant installation details for hydronic heating and cooling systems
  - prepare system specifications for hydronic heating and cooling systems

technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- application of National Construction Code or relevant Australian standards and codes, manufacturer specifications and operating procedures relevant to the sector
- common terminology and definitions used in design of hydronic heating and cooling systems for all classes of building
- drafting principles
- nature of materials used in hydronic heating and cooling systems and effects of performance under various conditions
- principles of technology in the design of hydronic heating and cooling systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum, provide evidence of the ability to:

- design, size and document the layout details for a hydronic heating and cooling system, including a specification for a high-rise mixed development building to a minimum of 29 floors, inclusive of a basement to include fixtures on each floor level (fixtures are included in the basement), including:
  - applying sustainability principles and concepts throughout the design to achieve a star rating under the Green Council of Australia rating scheme
  - evaluating and documenting design parameters, including client, regulatory, manufacturer and relevant Australian standard and code requirements for a range of hydronic heating and cooling systems
  - producing an appropriate layout for hydronic heating and cooling systems, planned according to manufacturer and regulatory requirements
  - calculating pipe sizes according to regulations and manufacturer requirements
  - designing hydronic circuits
  - designing and sizing hydronic systems using calculations and appropriate computer software
  - preparing plans and specifications for a range of hydronic heating and cooling systems
  - preparing testing and commissioning schedules
  - producing operation and maintenance manuals
  - communicating with others to ensure safe and
effective workplace operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**

- must include:
  - interpretation of plans and specifications
  - principles and properties of hydronic systems, including:
    - barriers to heat transfer
    - conduction
    - convection
• heat transfer
• principles of hydronic circuits
• principles of pressure and energy related to hydronic systems
• properties of water steam and gases used for hydronic systems
• radiation
• hydronic applications, which may include:
  • chiller circuits for air conditioning and refrigeration applications
  • concrete floor heating circuits
  • heat removal applications
  • manufacturing and industrial applications
  • room heating circuits for residential, commercial and industrial heating applications
  • timber floor heating circuits
• sizing and documenting layout of hydronic heating and cooling systems for residential, commercial or industrial applications for either new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** may include:
• architectural plans
• building specifications
• interpretation and application of mechanical services drawings and symbols
• fire rating of penetrations
• owner requirements
• pipework identification
• specialist hydronic applications.

**Cost-benefit analysis**:
• compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
• may include:
  • design styles
  • energy costs
  • expected design life
  • labour costs
  • material costs
  • safety factors
- speed of installation
- suitable materials
- system choices.

**Statutory and regulatory requirements and relevant Australian standards** may include:
- Acts, regulations and commonwealth, state or territory, and local government requirements
- industry standards
- National Construction Code
- other relevant Australian standards.

**Manufacturer requirements** include:
- sizing tables
- specifications
- recommended specific fixings for pipework
- technical and trade manuals.

**Desktop study** may include:
- architectural and building plans
- developer plans
- manufacturer data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

**Performance requirements** must include:
- hydronic heating and cooling system requirements, including temperature and safety requirements, established using relevant Australian standards, codes and manufacturer information.

**Layout of pipework systems:** must include:
- flow, velocity, pressure and discharge requirements established using relevant Australian standards, codes and local government authority requirements
- location of pipework (fire rating of enclosure)
- compliance with hydronic principles
- should not unduly affect building integrity and aesthetic appeal
• should have principles of economy, serviceability, durability and fit for use applied.

**Fittings and valves** may include:

- fittings:
  - bends
  - elbows
  - tees
  - unions
  - couplings
  - strainers

- valves:
  - excess pressure
  - flow and isolating
  - pressure limiting
  - pressure reduction.

**Pipe size requirement calculations** must include:

- energy
- flow and velocity
- pressure
- sizing
- temperature
- volume and storage.

**System components and circuits:**

- boilers may include:
  - advantages and disadvantages of boiler types
  - capacity and size
  - coal
  - electric
  - energy sources
  - fire tube
  - gas
  - heat exchanger
  - methods of reducing heat losses
  - oil
  - packaged
  - pressure controls and components
  - solid fuel
  - valves
  - water tube
• factors to be considered when selecting a boiler hydronic circuit must include:
  • circulating pump appliances
  • flow and return pipework
  • pipework grades
  • valves and fittings
• cooling towers must include:
  • bacteriological safety
  • collection
  • construction
  • disinfection
  • fans
  • maintenance
  • size
  • sprays
• chillers and refrigerant plant must include:
  • engineered systems
  • packaged plants
  • proprietary commercial and industrial equipment and assemblies
• hydronic appliances must include:
  • calorifiers
  • components
  • concrete construction
  • electronic controls
  • heat exchangers
  • methods of temperature and pressure control
  • radiators
  • timber floor heating systems
  • types
  • water heaters.

**Pump and compressor systems** must include:
• chilled water pumps
• circulating pumps
• refrigeration compressors
• other applications as required.

**Insulation** may include:
• felt
• fibreglass
- insulation protection, including:
  - plastic
  - sheet metal
  - rock wool.

**Pipe supports** may include:
- anchors
- bracket spacing
- corrosion protection
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- saddles.

**Materials** may include:
- copper (Cu)
- steel
- other approved materials.

**Jointing methods** may include:
- brazing
- mechanical joints
- threading
- other approved jointing methods.

**Installation requirements** may include:
- pipe protection, which may include:
  - cover
  - corrosion
  - impact
  - fire rating
  - level of workmanship
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for expansion
  - serviceability and access.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
- efficient energy use/capital outlay comparison
- water efficiency
- reuse of water, such as rainwater, greywater and recycled non-drinking water
- consideration of the Green Building Council of Australia rating scheme
- selecting appropriate components to ensure minimal environmental impact.

**Plans:**

- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - sections
  - schematics, which may be produced using:
    - computer generation
    - drawing equipment.

**Specification** may include:

- bedding
- support
- flow requirements
- jointing
- manufacturer requirements
- materials
- residual pressures
- safety (WHS)
- specialised components
- testing
- valve selection
- water treatment
- workmanship.

**Testing** may include:

- defect inspection
- flow testing
- inspection checklist
- leak testing
- pressure testing
- quality assurance (QA) audit.
**Commissioning schedule** must include:

- system certification
- flue balancing
- flow test
- leak check
- pressure test
- system purge
- system defects
- system functions as per design
- valve operation
- checking fit for purpose
- removing contaminants.

**Operation and maintenance manual** may include:

- as installed drawings
- certification documentation
- check for blockages
- leak detection
- maintenance schedules
- manufacturer brochures and technical information
- regular inspection
- regular maintenance requirements.
- results of commissioning test
- valve function.

CPCPPS5002B Design gas reticulation systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPPS5002A

Unit Descriptor
This unit of competency specifies the outcomes required to design and size gas reticulation systems, including determining material, placement and ventilation requirements.
The unit also covers the analysis and interpretation of relevant gas codes and standards, the preparation of documentation for testing and commissioning, and testing for safe operation.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1 Evaluate design parameters.

   1.1 **Scope of work** for gas reticulation systems is established.

   1.2 **Design requirements** are determined from plans, specifications and client brief.

   1.3 **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.

   1.4 **Statutory and regulatory requirements and Australian and New Zealand standards** for the design of gas reticulation systems are analysed and applied.

   1.5 **Manufacturer requirements** and trade and technical manuals are interpreted.

   1.6 Additional research, including a *desktop study*, is conducted to outline design parameters.

   1.7 Performance requirements are established.

2 Plan and detail system components.

   2.1 **Layout of pipework systems** and type and location of **fittings and valves** are planned.

   2.2 Pipe sizes are **calculated** for a range of applications.

   2.3 **Ventilation and flue requirements** are specified for a range of applications.

   2.4 Gas metering and measurement of gas consumption are conducted.

   2.5 Distribution pressures and **specifications of regulators and appliances** are detailed for a range of applications.

   2.6 **Cylinder and tank systems are designed** and detailed.

   2.7 Safety, ignition, thermostat and gas control devices are specified in compliance with relevant standards and codes.
2.8 *Pipe fixings* are designed for a range of applications.

2.9 Approved *materials, jointing methods* and *installation requirements* for gas reticulation systems are specified.

3 Design and size systems.

3.1 Gas reticulation systems are designed for a range of applications.

3.2 Gas reticulation systems are designed and sized using computer software packages.

4 Prepare documentation.

4.1 *Plans* are prepared for a range of gas reticulation systems.

4.2 *Specification* for a gas reticulation system is prepared.

4.3 *Testing* and *commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- analysing and interpreting relevant gas codes and standards
- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to develop creative and responsive approaches
- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
- read and interpret:
  - documentation from a variety of sources
  - plans, specifications, drawings and design briefs
  - standards and manufacturer requirements and manuals
  - statutory and regulatory requirements
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of gas reticulation systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine material, placement and ventilation requirements for a gas reticulation system
  - prepare documentation for testing and commissioning a gas reticulation system
  - test a gas reticulation system for safe operation

**Required knowledge**

- common terminology and definitions used in design of gas reticulation systems for all classes of building
- principles of technology used in design of gas reticulation systems
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities,
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- evaluating and documenting design parameters, including client, regulatory, manufacturer and Australian and New Zealand standard requirements for a range of gas reticulation systems
- producing an appropriate layout for gas reticulation systems planned according to manufacturer and regulatory requirements
- calculating pipe sizes according to regulations and manufacturer requirements
- designing and sizing gas reticulation systems using appropriate software
- preparing plans for a range of gas reticulation systems
- preparing specifications for gas reticulation systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related
systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team
leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of work:

- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout of gas reticulation systems for applications, including residential, commercial and industrial
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.

Design requirements must include:

- architectural specifications
- builder specifications
- owner requirements
- specialist use applications.

Cost-benefit analysis:

- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.

Statutory and regulatory requirements and Australian and New Zealand standards include:

- Acts, regulations and local and state government policies, including group and strata titling
- AS/NZS1596 The storage and handling of LP gas
- AS5601 (AG601) Gas installations
- Gas Act 1965 and amendments
- gas regulations
- gas utility and supplier information and requirements
- industry standards
- manufacturer requirements
- National Construction Code.

**Manufacturer requirements**

- material specifications
- pump tables
- sizing tables
- technical and trade manuals.

**Desktop study**

- architectural and building plans
- council plans
- developer plans
- other documents, including:
  - applications
  - forms
  - other reports as available.

**Layout of pipework systems**

- have principles of economy, serviceability, durability and fit for use applied
- not unduly affect building integrity and aesthetic appeal.

**Fittings and valves**

- bends
- couplings
- regulators
- tees
- unions.

**Calculations**

- energy
- gas volume
- pressure
- sizing
- storage.

**Ventilation and flue requirements**

- appliance flue design and ventilation requirements according to standards, regulations and gas authorities’ requirements.

**Specifications of regulators**

- adjustment procedures of regulators
- excessive pressure protection types of regulators.
• gas regulation method
• identification, analysis and documentation of regulator faults
• principles of operation
• selection and installation requirements
• sizing of regulators
• types of gas regulators.

**Specifications of appliances**

- commercial appliances
- components
- construction of the appliance
- domestic appliance design
- electronic controls
- industrial appliances.

**Design of cylinder and tank systems**

- anticipated use
- appropriate time period between refilling
- gas storage requirements calculations.

**Pipe fixings**

- anchors
- bracket spacing
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

**Materials**

- copper (Cu)
- fittings and fixtures
- galvanised steel
- polyethylene (PE)
- unplasticised polyvinyl chloride (PVC-U).

**Jointing methods**

- brazing and threading
- gluing
- mechanical joints
- rubber ring
- solvent cement welding.
Installation requirements include:
• clipping, bedding and installation detail
• installation requirements for mobile, marine
  installation and portable appliances (high and
  low-pressure)
• jointing requirements
• level of workmanship.

Plans include:
• axonometrics
• cross-sections
• details
• elevations
• isometrics
• schematics, which may be produced using:
  • computer generation
  • drawing equipment
  • sections.

Specification includes:
• appliances
• bedding
• clipping
• details of specialised components
• jointing
• manufacturer requirements
• materials
• valves
• workmanship.

Testing includes:
• bubble leak testing
• electronic gas leak detection
• flow testing
• inspection checklist
• pressure testing
• quality assurance (QA) audit.

Commissioning schedule must include:
• checking for burrs and obstructions
• commissioning appliances
• confirming fit for purpose
• purging system
- removing contaminants.

*Operation and maintenance manual* includes:

- check for blockages
- leak detection
- regular inspection
- regular maintenance requirements.

Unit Descriptor

Unit descriptor
This unit of competency specifies the outcomes required to specify procedures to locate and maintain piping systems. The unit requires a range of applications, including pipefreezing equipment and procedures, sewer and drain camera equipment and procedures, under-road boring equipment and procedures, robotic sewer repair, chemical grout systems and procedures, and high-pressure drain cleaning equipment and procedures.

Application of the Unit

Application of the unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
Not Applicable

Pre-Requisites

Prerequisite units
Nil
Employability Skills Information

Employability skills  This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- communication skills to:
REQUIRED SKILLS AND KNOWLEDGE

- confirm job specifications and client requirements
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret drawings, specifications and documentation from a variety of sources
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- maintaining piping systems
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- specifying procedures to locate piping systems
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities.

Required knowledge

Required knowledge for this unit is:

- common terminology and definitions used in the specification of piping system maintenance procedures
- nature of materials used and effects of performance under various conditions
- principles of technology in the specification of piping system maintenance procedures
- requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
- workplace safety requirements, including relevant statutory regulations, codes and standards.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully
EVIDENCE GUIDE

replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- specifying equipment and procedures to be used for the location of pipes and services
- specifying pipe-freezing equipment and procedures
- specifying sewer and drain camera equipment and procedures
- specifying under-road boring equipment and procedures
- specifying robotic sewer repair and chemical grout systems and procedures
- specifying high-pressure drain cleaning equipment and procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.
EVIDENCE GUIDE

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
EVIDENCE GUIDE

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Applications for pipe and service locating equipment include:
- burst water pipes
- excavations where existing services may be located
- locating existing services for new connections.

Locating equipment includes:
- electronic detection equipment
- metal detectors
- sound detection equipment.

Operating procedures include:
- defining the application, equipment operation and equipment limitations.

Safety procedures include:
- access restrictions
- electrical safety
- equipment safety requirements
- excavation safety
- personal protective equipment.

Pipe-freezing equipment include:
- applications where interruption to water supply is not an option
- burst water mains
- maintenance
- repairs.

Sewer and drain camera uses include:
- inspection of pipework
- location of damaged pipework
- root intrusion identification.
RANGE STATEMENT

Under-road boring equipment uses include:
- installation of new services where damage to roads and structures is undesirable or cost prohibitive
- replacement of services.

Robotic sewer repair and chemical grout systems include re-lining of:
- damaged sewers
- stormwater drains
- water mains.

Trenchless pipe repair systems include:
- polyethylene sleeves
- stainless steel sleeves
- other pipelining materials.

High-pressure drain cleaning equipment includes blocked:
- manholes
- sewers
- stormwater drains.

Unit Descriptor
This unit of competency specifies the outcomes required to conduct inspections of hydraulic systems for a range of residential, commercial and industrial buildings to ensure compliance with Australian and New Zealand standards and local authority and operational performance requirements.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
Inspections of hydraulic systems must comply with Australian and New Zealand standards and local authority and operational performance requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
Elements and Performance Criteria

1 Specify local authority inspection requirements.
   1.1 Local authority inspection requirements for hydraulic systems are specified according to legislation and standards.
   1.2 Approved materials are specified for different applications.
   1.3 Installation requirements are specified in compliance with manufacturer manuals and regulatory requirements.

2 Develop inspection procedures.
   2.1 Administrative procedures for inspection projects are developed.
   2.2 Inspection checklists are developed.

3 Conduct inspections
   3.1 Communication channels are established with relevant site personnel and stakeholders.
   3.2 Inspection routes and schedules are planned and detailed.
   3.3 Work health and safety (WHS) guidelines and sustainability principles and concepts are applied to inspections, and personal protective equipment is worn.
   3.4 Inspections are conducted to assess compliance with regulatory requirements and professional workmanship standards.
   3.5 On-site as-constructed plans are hand sketched and measurements are taken.
   3.6 Dispute-resolution techniques are implemented as necessary when non-compliance is identified.
   3.7 Testing procedures are implemented.
3.8 Inspection and testing results are accurately recorded.

4 Prepare reports. 4.1 Inspection reports are prepared using on-site records, including as-constructed plans.

4.2 Recommendations are detailed and reported.

4.3 Rectification schedules are produced.

5 Enforce compliance. 5.1 Breaches of relevant regulation or standard are detailed.

5.2 Infringement notices are issued and relevant follow-up procedures are implemented.

5.3 In cases of non-compliance, enforcement action is implemented with infringement notices.

6 Maintain records. 6.1 Inspection diary is maintained.

6.2 Inspection records are processed according to established administrative procedures.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - establish communication channels
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - develop administrative procedures and checklists
  - issue infringement notices
  - maintain records
• prepare inspection reports
• read and interpret:
  • documentation from a variety of sources
  • manufacturer manuals and regulations
  • plans, specifications and drawings
• record inspection and testing results
• numeracy skills to apply measurements and calculations
• planning and organising skills to plan and set out work
• technical skills to inspect hydraulic systems for a range of residential, commercial and industrial buildings to ensure compliance with Australian and New Zealand standards and local authority and operational performance requirements

Required knowledge
• common terminology and definitions used in the design of plumbing and drainage systems
• nature of materials used and effects of performance under various conditions
• principles of technology used in the design of plumbing and drainage systems
• requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
• workplace safety requirements, including relevant statutory regulations, codes and standards

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:
• specifying local authority inspection requirements for hydraulic systems according to legislation and standards
- developing administrative procedures for inspection projects
- implementing dispute-resolution techniques
- conducting compliance inspections
- taking relevant measurements and sketching on-site as-constructed plans
- implementing testing procedures
- preparing inspection reports
- detailing breaches to regulations or standards
- maintaining an inspection diary.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the
Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present...
with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Hydraulic systems** include:
- fire services
- gas services
- mechanical services
- sanitary plumbing and drainage
- stormwater drainage
- trade waste
- water supply.

**Approved materials** are identified from Australian and New Zealand standards and include:
- fittings
- fixtures
- pipes.

**Administrative procedures** must include:
- file management
- inspection allocation
- inspection records
- logging inspections.

**Inspection projects** include:
- hydraulic consultant
- local authority
- plumbing supervisor.

**Inspection checklists**:
- include:
  - approved installation methods
  - authorised materials
  - project section
- comply with:
  - Australian and New Zealand standards
  - distances
  - limitations
  - National Construction Code
  - other regulatory requirements.

**Sustainability principles and concepts**:
- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - selecting appropriate components and material
• choosing efficient products
• using material efficiently
• storing and disposing of hazardous material to ensure minimal environmental impact.

As-constructed plans include layout of:
• fire services pipework
• gas pipework
• mechanical services pipework
• sanitary plumbing and drainage pipework
• stormwater pipework
• trade waste drainage systems
• water supply pipework.

Dispute-resolution techniques include:
• active listening techniques
• non-threatening body language
• power neutral relationships
• other recognised dispute avoidance and resolution techniques.

Testing procedures include:
• air pressure tests
• compliance checklist
• gas leak detection
• hydrostatic tests
• mirror tests
• quality assurance (QA) audit
• sound testing.

Inspection reports include:
• defect
• inspection
• performance
• quality assurance.

Enforcement action includes:
• fines
• legal action
• notification to plumbing licensing body
• penalties.

CPCPPS5023A Design solar water heating systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5003A

Unit Descriptor
This unit of competency specifies the outcomes required to design efficient, cost effective solar water heating systems for residential, commercial and industrial applications using proprietary components and manufacturer design information.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople with a responsibility for designing solar water heating systems for residential, commercial and industrial buildings.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 Scope of work for solar water heating system design is established.

1.2 Design requirements are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Locations of solar collectors are assessed and effect of each location on efficiency is evaluated.

1.4 Cost-benefit analysis is conducted comparing a range of materials and system designs.

1.5 Environmental and community benefits of solar water heating systems are evaluated.

1.6 Statutory and regulatory requirements and relevant Australian standards and codes for the design of solar water heating systems are analysed and applied.

1.7 Manufacturer requirements and trade and technical manuals are interpreted.

1.8 Additional research, including a desktop study, is conducted to outline design parameters.

1.9 Performance requirements are established, considering safety of system users or building occupants.

1.10 Factors that contribute to quality, safety and time efficiency are determined.

2 Plan and detail system components.

2.1 Layout of pipework systems, and type and location of fittings and valves, are planned.

2.2 Range configuration and application of proprietary solar heated water systems, and materials and valves to be selected, are evaluated.

2.3 Solar water heating system calculations are performed.

2.4 Typical configuration of a hydraulic circuit (flow and return) and its components for a pumped-storage solar water heating system is designed.
2.5 Water quality and water pre-treatment methods are specified.

2.6 Suitable types and levels of insulation for system components are specified and a range of methods to prevent freezing and protect from over performance is detailed.

2.7 *Pipe size, velocity, flow and pressure calculations* are performed for a range of applications.

2.8 *Pipe supports* are designed for a range of applications.

2.9 Approved *materials, jointing methods and installation requirements* for solar water heating systems are specified.

2.10 Allowance for expansion and contraction is provided.

3 Design and size systems.

3.1 *Solar collectors* are selected to meet the installation requirements.

3.2 Residential, commercial and industrial solar water heating systems are designed.

3.3 Solar pre-heat systems are designed.

3.4 Solar pool and spa heating systems are designed.

3.5 Solar water heating systems are designed and sized using calculations and computer software packages.

3.6 *Sustainability principles and concepts* are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 *Plans and specifications* are prepared for a range of solar water heating systems.

4.3 *Testing and commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to develop creative and responsive approaches
- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - documentation from a variety of sources
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- numeracy skills to interpret data and to apply measurements and calculations
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of solar water heating systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- technical skills to design solar water heating systems
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- application of:
  - relevant Australian standards, including AS/NZS3500 National plumbing and
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- design, size and document the layout details using two methods of providing solar-heated water systems;
  - one to be a gas-boosted commercial solar system, one to be a heat pump-boosted system
  - develop a specification for each of the following projects:
  - a high-rise mixed development building to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level (fixtures are included in the basement)
  - a wide span project, such as a school
- specifications for each of the projects, to include:
- evaluating and documenting design parameters, including client, regulatory, manufacturer and relevant Australian standard and code
requirements for a range of solar water heating systems
- evaluating health risks associated with heated water supplies
- conducting a cost-benefit analysis
- planning and detailing system components, including:
  - circulating systems
  - solar collectors
  - valve and piping systems
- designing a range of residential, commercial and industrial solar water heating systems
- designing solar pre-heat systems
- designing solar pool and spa heating systems
- preparing plans and specifications for a range of solar water heating systems
- preparing testing and commissioning schedules
- producing operation and maintenance manuals
- applying sustainability principles and concepts throughout the design
- communicating with others to ensure safe and effective work site operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working
practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** must include:

- interpreting plans and specifications, and sizing and documenting layout of solar water heating systems for applications including residential, commercial and industrial buildings for new projects or an existing structure being renovated, extended, restored or maintained
- heat transfer mechanism analysis, including conduction, convection and radiation (long wave and short wave), and the evaluation of transmittance, absorption and emittance properties of materials used in solar collectors
- solar radiation calculations, including:
  - calculations of efficiency
  - calculations of radiation falling on collectors
  - daily, monthly and yearly calculations.

**Design requirements** may include:

- architectural plans
- building specifications
- fire rating of penetrations
- frost protection
- integration with other heat sources
- limitations of various systems
- overheating protection
- owner requirements
- pipework identification
- specialist heated water use applications.
Efficiency must include:

- angle of collector in relation to latitude
- comparison of demand and efficiency curves for various types of solar collectors
- current and potential shading
- direction in relation to north
- efficiency in relation to:
  - ambient temperature
  - flow
  - location
  - pollution
  - prevailing wind conditions
- magnetic north as opposed to true north.

Cost-benefit analysis:

- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising the integrity of the project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials
  - comparison and evaluation of capital cost, simple pay back and lifecycle cost of solar and other heat sources
  - comparison of initial set-up costs to the energy savings available and establishment of cost-recovery period.

Statutory and regulatory requirements and relevant Australian standards and codes may include:

- Acts, regulations, and commonwealth, state or territory, and local government requirements
- Australian standards:
  - AS/NZS3500 National plumbing and drainage
  - AS2200 Design charts for water supply and sewerage
- AS2369.1 Materials for solar collectors for swimming pool heating – rubber materials
- AS2369.2 Materials for solar collectors for swimming pool heating – flexible or plasticised polyvinyl chloride
- AS/NZS2535.1 Test methods for solar collectors – thermal performance of glazed liquid heating collectors including pressure drop
- AS/NZS2712 Solar and heat pump water heaters design and construction
- AS3634 Solar heating systems for swimming pools
- AS/NZS4234 Solar water heaters domestic and heat pump – calculation of energy consumption
- AS/NZS4445.1 Solar heating domestic water heating systems performance rating procedure using indoor test methods
- DR04527 Amendment 1 to AS/NZS2712 Solar water heaters design and construction
- National Construction Code.

**Manufacturer requirements** may include:

- heater maintenance and servicing
- material specifications
- provision for heater pressure and temperature discharge
- protection for freezing and overheating
- recommended specific fixings for pipework
- sizing tables
- technical and trade manuals
- limitations of use.

**Desktop study** may include:

- collection and interpretation of data for design purposes, such as:
  - architectural and building plans
  - developer plans
  - manufacturer’s data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
• other reports as available
• local authorities’ requirements
• area suitability for solar
• shadow studies
• comparison of performance of various types of solar water heaters in terms of design, location and predicted solar fraction.

**Performance requirements** are established using relevant Australian standards, codes, commonwealth, state or territory and local authority plans and may include:

- flow rate requirements
- pressure
- system design
- velocity
- water quality and its effect on the system.

**Layout of pipework systems:**

- must include:
  - dual feed
  - ring main
  - single pipe
- should not unduly affect building integrity and aesthetic appeal
- should have principles of economy, serviceability, durability and fit for use applied.

**Fittings and valves** may include:

- fittings:
  - bends
  - elbows
  - tees
  - unions
- valves:
  - backflow prevention
  - excess pressure
  - frost protection devices
  - isolating
  - location of valves
  - over temperature
  - pressure limiting
  - pressure reduction
  - strainers.
*Proprietary solar heated water systems* may include:

- alternative supplementary fuel sources, including:
  - coal
  - electricity
  - fuel oil
  - gas
  - heat pump
  - waste heat recovery (mechanical plant)
  - wood
- circulating systems
- clarifiers
- close coupled, split systems
- direct and indirect heating systems
- heat exchange systems
- heated water heaters
- pool heaters
- solar pre-heaters
- spa heaters
- storage systems
- sun track systems.

*Solar water heating system calculations* may include:

- area locality
- circulation calculations
- energy balance equation
- flow calculations
- heat loss calculations, covering:
  - collector losses
  - overnight losses
  - standing losses
- incoming water temperature
- temperature and energy equations
- varying inlet temperature and flow rate effect on the performance of a solar collector
- volume calculations.

*Components* may include:

- collectors
- differential controllers
- electronics
- expansion tanks
- filters
- fittings
- flow and return pipework
- heat exchangers
- insulation
- overflows
- pumps
- safe trays
- storage vessels
- suitable type and size of circulating pumps
- supplementary heat sources
- support frames
- timers and mechanical components
- valves
- water treatment.

**Methods to prevent freezing and protect from over performance** may include:

- circulating systems
- drain back systems
- dump valves
- heat trace systems
- indirect systems
- insulation.

**Pipe size, velocity, flow and pressure calculations** must include:

- rate of discharge
- temperature
- velocities
- volume.

**Pipe supports** may include:

- anchors
- bracket spacing
- corrosion protection
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- saddles.

**Materials** may include:

- copper (Cu)
- other approved materials.
J**ointing methods** may include:
- brazing
- compression
- flaring
- mechanical joints
- other approved jointing methods.

**Installation requirements** include:
- pipe protection, which may include:
  - corrosion
  - impact
  - fire rating
  - level of workmanship
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for expansion
  - serviceability and access
  - system structure support.

**Solar collector** design may include:
- collector housing
- fin and tube collectors
- glass
- insulation
- pipe collectors
- pre-heat systems
- sun tracking systems
- vacuum tube.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy use/capital outlay comparison
  - selecting energy efficient water heater
  - reusing water, such as rainwater, greywater and recycled non-drinking water
  - consideration of the Green Building Council of Australia rating scheme
  - selecting appropriate components to ensure minimal environmental impact.
**Plans:**

- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.

**Specification** may include:

- support
- jointing
- flow requirements
- manufacturer requirements
- materials
- safety (WHS)
- specialised components
- testing
- valve selection
- workmanship.

**Testing** may include:

- air pressure
- defect inspection
- hydrostatic
- mains pressure
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:

- balancing the system
- checking and flushing the system
- checking and maintaining heat transfer fluid levels
- temperature setting
- disinfection
- flow test
- leak check
- pressure test
- system certification
- system defects
- system functions as per design
- valve operation.

*Operation and maintenance manual* may include:
- as installed drawings
- certification documentation
- results of commissioning test
- heater detail, setting and operations
- maintenance schedules
- manufacturer brochures and technical information
- valve function
- safety management system
- system detail, setting and operations.

CPCPPS5024A Conduct a water audit and identify water-saving initiatives

Modification History
Changes to unit descriptor, application, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5004A

Unit Descriptor
This unit of competency specifies the outcomes required to identify wasted water and leaks in pipework and fixtures, and, where water use reduction is possible, types of water-saving devices that are appropriate. The unit also requires the preparation of a report that reflects this assessment.

Application of the Unit
This unit of competency supports the development of skills and knowledge required to conduct water and energy audits and recommend water-saving initiatives in relation to plumbing services and construction hydraulics.
Application of the unit is relevant to multi-storey residential, commercial and industrial buildings with or without connection to reticulated water supply.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requirements
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed.
Elements and Performance Criteria

1 Calculate water use.

1.1 Scope of work for conducting water audits is established.

1.2 Client requirements are identified from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Types of flow and pressure-measuring devices, and their use and location are specified.

1.4 Flow and pressure tests are conducted and flows at outlets are measured.

1.5 Actual water use is compared to ideal use, and the difference is calculated.

1.6 Statutory and regulatory requirements for the use of water are interpreted and applied.

1.7 Manufacturer requirements and trade and technical manuals are interpreted.

1.8 Desktop study is conducted and performance requirements are established.

2 Identify excessive water and energy use.

2.1 Leak identification processes are implemented, considering safety of system users or building occupants.

2.2 Flows are measured and evaluated against relevant standards and user requirements.

2.3 Suitability of existing fixtures and fittings is evaluated against new technology.

2.4 Water use times are identified and compared to optimal timing.
2.5 Existing inefficient system conditions, such as dead legs, are identified and analysed.

2.6 Pressure test is conducted and consequences of high and low pressures are identified and compared to industry standards.

2.7 Energy saving associated with reduction in water use is evaluated.

3 Evaluate methods to conserve water and energy.

3.1 Flow restrictors, sensors and pressure-limiting devices are identified for a range of applications.

3.2 Automatic systems are identified for a range of applications.

3.3 Alternative processes and practices are evaluated for optimum water and energy savings.

3.4 Alternative fixtures and fittings are evaluated for optimum water and energy savings.

3.5 Rainwater harvesting techniques and processes are applied.

3.6 Recycling and re-use processes are designed.

3.7 Sustainability principles and concepts are applied throughout water audit process.

4 Report findings.

4.1 Cost-benefit analysis is conducted, including the investment return period.

4.2 Water and energy audit report is prepared.

4.3 Resultant environmental benefits and water and energy savings are identified and reported.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.
Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - prepare a water and energy audit report
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- initiative and enterprise skills to:
  - comply with WHS and organisational quality procedures and processes
  - develop creative and responsive approaches to conserving water and energy
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - research, collect, organise and understand information relating to water use
  - take initiative and make decisions
- problem-solving skills to:
  - analyse requirements
  - carry out tests
  - consider options
  - recommend appropriate water and energy saving measures
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - accurately apply design principles relating to hydraulic systems, design concepts, measurements and calculations
  - apply and interpret documentation from a wide range of sources, including legislation, standards, drawings and specifications
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- hazards associated with devices and systems used in the hydraulic sector
- installation methods used in hydraulic systems
- nature of materials and effect of their performance in a variety of conditions
- preparation and interpretation of plans and specifications
- requirements of commonwealth, state or territory regulatory authorities, relevant Australian standards and codes, manufacturer specifications, National Construction Code (NCC) and other relevant codes, standards and operating procedures
- terminology and definitions used in hydraulic design
- variety of applications of technology principles in design of water and energy-efficient usage systems for all classes of building
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

It could be assessed on its own or as part of an integrated assessment activity involving audit of water and energy use in at least two different types of building and the preparation of comprehensive reports.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- conduct a water audit and identify water saving initiatives for a:
  - 50 unit residential building
  - 20 floor commercial office building
  - a commercial laundry
- including:
  - applying sustainability principles and concepts throughout the audit and identifying water-saving initiatives
conducting pressure and flow measurements
- interpreting and applying statutory and local government requirements for the use of water
- reporting water wasting practices and processes, including leaks
- specifying sensors and automatic systems for a range of applications
- recommending recycling and re-use processes
- preparing a water and energy audit report
- conducting a cost-benefit analysis, including investment return period
- identifying and reporting on environmental benefits and water savings
- applying sustainability principles and concepts throughout the water audit and identify water-saving initiatives
- communicating with others to ensure safe and effective work site operations.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** must include:
- compiling reports
- identifying:
  - procedures, practices and products to reduce water and energy consumption
  - wasted water
  - water-saving initiatives
- producing a cost-benefit analysis.

**Client requirements** must include:
- compliance with regulatory requirements
- more efficient use of water resources
- reduction in water and energy costs
- maintaining satisfactory system performance.

**Types of flow and pressure-measuring devices** include:
- applications, which may include:
  - domestic cold and heated water supply
  - cooling towers
  - industrial processes
  - irrigation
  - mechanical
  - sanitation
  - trade waste
- measuring methods, which may include:
  - direct
  - electronic
  - hand-held
  - indirect
  - in-line
  - mechanical.
### Flow and pressure tests may include:
- interpretation of flow and pressure tests conducted by a contractor
- on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa).

### Statutory and regulatory requirements may include:
- Acts, regulations and commonwealth, state or territory, and local government regulations
- National Construction Code
- other relevant Australian standards and codes.

### Manufacturer requirements must include:
- flow and pressure requirements.

### Desktop study includes:
- comparison of range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- research and evaluation of water-saving products, processes and procedures currently available.

### Performance requirements must include:
- maintenance of flow, velocity, pressure and discharge requirements of the client, using relevant Australian standards, National Construction Code, or other relevant codes and standards.

### Leak identification processes may include:
- electronic leak detection
- listening devices
- measuring equipment
- cameras.

### Sensors may include:
- pressure switches
- flow switches
- high and low level
- moisture.

### Automatic systems may include:
- electronic and mechanical timer
- pressure-activated
- user-activated.
**Alternative processes and practices**

- change in personal water habits
- change in timing
- discontinuation of a process
- irrigation before sunrise and after sunset
- lower water pressures
- modifying a process
- modifying wash-down cleaning procedures and order of operation
- rainwater harvesting and usage
- running dishwashers and washing machines with full loads
- testing pipe systems with air instead of water
- using water-efficient appliances and fixtures
- waste water collection and reuse.

**Alternative fixtures and fittings**

- drip systems
- irrigation systems
- low-energy and water-use appliances, such as:
  - air cooling towers
  - dishwashers
  - dual flush low volume toilet flushing systems
  - tapware
  - waterless and sensor control urinals
  - washing machines
- low-flow shower roses
- outlet-flow control devices
- pressure control devices.

**Rainwater harvesting**

- collection, storage and distribution of rainwater, including the use of tanks and dams.

**Recycling and re-use processes**

- black water treatment and reuse options
- industrial processes
- grey water treatment and reuse options
- recovery of test water, such as fire.

**Sustainability principles and**

- cover the current and future social, economic and environmental use of resources
concepts:

- may include:
  - efficient energy usage/capital outlay comparison
  - selecting water efficient appliances and fixtures
  - using alternative water supplies
  - consideration of the Green Building Council of Australia rating scheme.

Cost-benefit analysis compares:

- installation, set-up and running costs against the capital investment to determine the cost recovery period
- the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project.

Water and energy audit report is a comprehensive report written to industry standards that includes:

- client brief
- analysis
- results
- methodology
- conclusions
- recommendations.

CPCPPS5025A Design grey water re-use systems

Modification History
Changes to unit title, descriptor, application, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5005A

Unit Descriptor
This unit of competency specifies the outcomes required to design grey water re-use systems. The unit requires the ability to consider legislation, risk implications, and collection, treatment, diversion and storage options when designing these systems.

Application of the Unit
This unit of competency supports the needs of experienced tradespeople with a responsibility for designing grey water re-use systems.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

2.8 Approved materials and jointing methods for grey water re-use systems are evaluated, pipe supports are designed and installation requirements are specified.

3 Design and size systems.

3.1 Grey water reuse systems are designed for a range of residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems.

3.2 Grey water reuse systems are designed to ensure that the system can be properly and safely maintained.

3.3 Grey water reuse systems are designed and sized using calculations and computer software packages.

3.4 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specifications are prepared for a range of grey water re-use systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills
• communication skills to:
  • communicate with others to ensure safe and effective work practices
  • confirm job specifications and client requirements
  • enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  • use language and concepts appropriate to cultural differences
  • use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to develop creative and responsive approaches
• literacy skills to:
  • prepare documentation, including:
    • operation and maintenance manual
    • plans, specifications and schedules
  • read and interpret:
    • plans, specifications, drawings and design briefs
    • standards and manufacturer requirements and manuals
    • statutory and regulatory requirements
• numeracy skills to:
  • apply measurements and calculations
  • interpret data
• planning and organising skills to:
  • research, collect, organise and understand information relating to the design of grey water re-use systems
  • take initiative and make decisions
  • problem-solving skills to analyse requirements, consider options and design an appropriate system
• technical skills to apply design concepts and principles relating to hydraulic systems
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• approved installation methods are identified
• hazards associated with devices and systems used in the hydraulic sector
• nature of materials and effect of their performance in a variety of conditions
• organisational quality procedures and processes
• principles of technology in the design of grey water re-use systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
• required Australian standards, codes, manufacturer specifications, National Construction Code (NCC) and operating procedures relevant to the sector
- terminology and definitions used in hydraulic design
- work drawings and specifications
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:

- design, size and document the layout details, including a specification for a high-rise mixed development building and a wide span project, such as a school or industrial complex, including:
  - evaluating and documenting design parameters, including client, regulatory, manufacturer and relevant Australian standard code requirements for a range of grey water re-use systems
  - planning and detailing system components, including:
    - storage tanks
    - system overflow
    - treatment systems
    - piping systems
    - plumbing systems
    - usage systems
  - designing and sizing a grey water reuse system
- preparing plans and specifications for a range of grey water reuse systems to industry standards
- preparing testing and commissioning schedules
• preparing operation and maintenance manuals
• applying sustainability principles and concepts throughout the system design
• communicating with others to ensure safe and effective work site operations.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
• tools and equipment appropriate to applying safe work practices, including computers, software and calculators
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning
knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**
- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout of grey water
re-use systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems

- may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:

- architectural plans
- building specifications
- owner requirements
- pipework identification
- sizing of pipework
- backflow protection of drinking and non-drinking water supply systems
- water treatment
- specialist water use applications.

**Health and environmental risks** include:

- health risks, which may include:
  - abdominal pain
  - acute enteritis
  - bacillary dysentery
  - chest pain
  - cholera
  - common colds
  - coughing
  - diarrhoea
  - digestive and nutritional disturbances
  - dysentery
  - fever
  - gastroenteritis
  - giardiasis
  - helminthes, including flukes and worms
  - hepatitis
  - hookworm disease
  - infectious hepatitis
  - meningitis
  - muscle aches
  - neurological symptoms, including nervousness and insomnia
  - poliomyelitis
- respiratory infections, such as pneumonia
- restlessness
- salmonellosis (food poisoning)
- taeniasis
- toxoplasmosis
- typhoid fever
- vomiting
- weight loss
- environmental risks, which may include:
  - algal blooms
  - excess nutrient loads
  - fish kills
  - oxygen depletion.

**Measures to protect public health** must include:

- auditing
- contact avoidance
- contact minimisation
- disinfection and sterilisation
- education
- legislation
- licensing
- maintenance
- separation barriers
- set back distances
- timing discharges
- wet weather storage.

**Cost-benefit analysis** compares:

- the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project, such as suitable treatment, disposal options and disinfection options
- water savings and environmental benefits compared to initial and ongoing maintenance costs.

**National water programs, statutory and regulatory requirements, relevant Australian standards, and codes** may include:

- Acts and regulations
- Australian standard requirements, including:
  - AS/NZS1546 On-site domestic wastewater treatment units
  - AS/NZS1547 On-site domestic wastewater
management

- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- National Construction Code
- commonwealth, state or territory government policies, including health departments.

Manufacturer requirements must include:

- material specifications
- grey water treatment systems
- pump installation
- pipe sizing
- storage systems
- technical and trade manuals.

Desktop study may include collection and interpretation of data for design purposes in:

- architectural and building plans
- developer plans
- manufacturer data
- other documents, including:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Performance requirements may include:

- compliance limits for:
  - bacteria levels
  - chlorine levels
  - nutrients
  - pH
  - phosphates
- requirements established using relevant Australian standards, codes and local authority plans, including:
  - cover
  - discharge
  - flow conditions
  - pipe grades.
Layout of pipework systems:

- may include:
  - drainage systems
  - elevated pipework systems
  - gravity systems
  - pumped and rising mains
  - stack systems, may include:
    - fully vented
    - fully vented modified
    - single stack
    - single stack modified
    - waste stack
    - two-pipe system
    - reduced velocity aerator system
- should not unduly affect building integrity and aesthetic appeal
- includes location of pipework (fire rating of enclosure)
- should demonstrate principles of economy, serviceability, durability and fit for use.

Fittings, valves and controls must include:

- backflow prevention devices
- irrigation control systems
- isolating valves
- level indicators
- pump controls.

Land application options may include:

- surface irrigation
- subsurface irrigation
- spray irrigation.

Storage tanks may include:

- connections
- containment
- location
- material
- overflow provision
- pumps
- sizing
- support
- switches
- valves
• vermin control.

*Pipe size and pump duty calculations* may include:

• calculating pipe sizing
• calculating pressure and flow requirements
• determining flow and fixture loadings
• interpreting design charts and tables.

*Pumpwell, pump and pump control requirements* may include:

• automatic controls
• capacity
• corrosion-resistant materials
• detailing
• high and low-level water controls and alarms
• inlet and outlet design requirements
• installation and mounting requirements
• macerator requirements
• pump sizing
• pumpwell sizing
• selection of pump type
• valve requirements
• warning system.

*Materials* may include:

• copper (Cu)
• polypropylene (PP)
• polybutylene (PB)
• polyethylene (PE)
• unplasticised polyvinyl chloride (PVC-U)
• other approved material.

*Jointing methods* may include:

• brazing
• compression joints
• electrofusion welding
• mechanical joints
• solvent cement
• threading
• other approved jointing methods.

*Pipe supports* include:

• anchors
• bedding
• bracket spacing
• concrete support
• corrosion protection
• manufacturer-recommended specific fixings
• material requirements
• provision for expansion
• saddles.

**Installation requirements** may include:

• pipe protection, which may include:
  • cover
  • corrosion
  • impact
  • fire rating
  • level of workmanship
  • manufacturer-recommended specific fixings
  • pipe support
  • provision for expansion
  • serviceability and access.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
• selecting appropriate material to ensure minimal environmental impact
• efficient use of material
• efficient energy usage/capital outlay comparison
• local environment consideration
• water efficiency
• reuse of greywater
• consideration of the Green Building Council of Australia rating scheme.

**Plans:**

• may include:
  • axonometrics
  • elevations
  • details
  • cross-sections
  • isometrics
  • sections
  • schematics, which may be produced using:
    • computer generation
- drawing equipment.

**Specification** may include:
- backflow prevention
- flow requirements
- jointing
- manufacturer requirements
- materials
- residual pressures
- safety (WHS)
- specialised components
- storage
- support
- testing
- valve selection
- water treatment
- workmanship.

**Testing** may include:
- air pressure
- backflow protection
- defect inspection
- drainage inspection
- hydrostatic
- performance:
  - flow
  - pressure
- water quality
- quality assurance (QA) audit.

**Commissioning schedule** may include:
- balancing disposal system
- flow and pressure adjustments
- leak check
- pump settings
- pressure test
- safety requirements
- system certification
- system flushing
- system defects
- system functions as per design
- system purge
- valve operation
- ventilation
- vermin control.

**Operation and maintenance manual** may include:

- as installed drawings
- certification documentation
- land application compliance checks
- maintenance schedules
- manufacturer brochures
- ongoing maintenance requirements
- pump maintenance
- regular inspections
- results of commissioning test
- safety management system
- surface ponding checks
- system detail, setting and operations
- valve function
- system operational parameter adjustments and checks, including:
  - chlorine levels
  - dissolved oxygen
  - nitrates
  - pH
  - phosphates
  - suspended solids
  - water quality.

CPCPPS5026A Design rainwater collection, storage, distribution and re-use systems

Modification History
Changes to unit descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5006A

Unit Descriptor
This unit of competency specifies the outcomes required to design systems for the collection, storage, distribution and re-use of rainwater for drinking and non-drinking uses, including irrigation, toilet flushing and other uses approved by relevant authorities.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to the design of systems for the collection, storage, distribution and re-use of rainwater.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

|   | Evaluate design parameters. | 1.1 Scope of work is established for rainwater harvesting systems for wide span and high-rise building projects. |
|   |                             | 1.2 Design requirements are determined from relevant Australian standards, codes, plans, specifications and client brief. |
|   |                             | 1.3 Potential contamination sources are analysed and solutions are applied. |
|   |                             | 1.4 Rainfall patterns and required rainwater storage volumes are established. |
|   |                             | 1.5 Cost-benefit analysis is conducted comparing a range of pipe materials and system designs. |
|   |                             | 1.6 Statutory, regulatory requirements and relevant Australian standards and codes for the design of rainwater harvesting systems are interpreted, analysed and applied. |
|   |                             | 1.7 Manufacturer requirements and trade and technical manuals are interpreted. |
|   |                             | 1.8 Additional research, including a desktop study, is conducted to outline design parameters. |
|   |                             | 1.9 Performance requirements are established, considering safety of system users or building occupants. |

|   | Plan and detail system components. | 2.1 Tank type and location are specified. |
|   |                                   | 2.2 Layout of pipework systems and type and location of fittings, valves and controls are planned. |
|   |                                   | 2.3 First-flush systems are designed and detailed. |
|   |                                   | 2.4 Filtration systems and water contamination solutions are specified. |
|   |                                   | 2.5 Pipe size calculations are completed for a range of |
applications.

2.6 Separation of services and backflow prevention devices are designed and detailed.

2.7 Approved non-contaminating materials and jointing methods for rainwater harvesting are specified and pipe supports are designed.

2.8 Pump and ancillary requirements are sized and detailed.

2.9 Installation requirements are specified.

2.10 Water treatment is specified according to state and territory health requirements.

2.11 Vermin protection is specified according to manufacturer and state and territory requirements.

2.12 Allowance for expansion and contraction is provided.

3 Design and size systems.

3.1 Rainwater harvesting systems are designed and detailed for a range of residential, commercial and industrial applications.

3.2 Rainwater reuse systems are designed and detailed.

3.3 Rainwater harvesting systems are designed and sized using calculation and computer software packages.

3.4 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specifications are prepared for a range of rainwater harvesting systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals

- literacy skills to:
  - prepare documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements

- initiative and enterprise skills to develop creative and responsive approaches

- numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of rainwater collection, storage, distribution and re-use systems
  - take initiative and make decisions

- problem-solving skills to analyse requirements, consider options and design an appropriate system

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to design systems for the collection, storage, distribution and reuse of rainwater for drinking and non-drinking uses

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- common terminology and definitions used in the design of rainwater collection, storage, distribution and re-use
• key features of work plans and specifications
• nature of materials used and effects of performance under various conditions
• organisational quality procedures and processes
• principles of technology in the design of rainwater collection, storage, distribution and reuse for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
• relevant Australian standards, codes, manufacturer specifications, National Construction Code and operating procedures relevant to the sector
• terminology and definitions used in hydraulic design
• work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:
• design, size and document the layout details, including a specification for a high-rise mixed development building and a wide span project, such as a school or industrial complex.
• evaluate and document design parameters, including rainfall, client, regulatory, manufacturer and relevant Australian standard requirements and storage capacity for a range of rainwater harvesting systems.
• plan and detail system components, including:
  • authority connection
  • backflow prevention requirements
  • filters
  • fixtures and fitments
- piping systems
- pumps
- storage
- water treatment
- design and size rainwater harvesting and reuse systems
- prepare plans and specifications for a range of rainwater harvesting and reuse systems to industry standards
- prepare testing and commissioning schedules
- prepare operation and maintenance manuals
- apply sustainability principles and concepts throughout the design to achieve a green star rating
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of
appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**
- must include:
  - interpreting plans and specifications
  - rainfall analysis
  - sizing and documenting layout of rainwater harvesting systems for residential, commercial and industrial applications to include water treatment and backflow protection of drinking and non-drinking water supply systems
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:
- architectural plans
- building specifications
- owner requirements
- pipework identification
- sizing of pipework
- backflow protection of drinking and non-drinking water supply systems
- water treatment
- specialist water use applications.

**Contamination** may include:
- bacterial
- heavy metal
- inorganic
- odour
- organic
- taste
- silt
- viral
- vermin.

**Cost-benefit analysis:**
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials.

**Statutory, regulatory requirements and relevant Australian standards and codes** include:
- Acts and regulations, commonwealth, state or territory and local government requirements
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- National Construction Code.

**Manufacturer requirements** may include:
- material specifications
- pipe sizing
- pump installation
- storage system
- technical and trade manuals
- other relevant documents.

**Desktop study** may include
- collection and interpretation of data for design purposes in:
  - architectural and building plans
  - developer plans
  - manufacturer data
  - other documents, which may include:
    - applications
    - brochures
    - forms
    - policies
    - other reports as available.

**Performance requirements** must include:
- compliance limits for:
  - bacteria levels
  - nutrients
  - pH
  - silt control
• vermin protection
• overflow discharge requirements
• requirements established using relevant Australian
  standards, codes and local authority plans,
  including:
  • cover
  • discharge
  • flow conditions
  • pipe grades.

**Tank type and location** may include:

• tank type:
  • concrete
  • fibreglass
  • metal
  • polymer
  • other approved materials
• tank location may include:
  • above-ground
  • in-ground.

**Layout of pipework systems:** may include:

• gravity systems
• pumped systems
• should not unduly affect building integrity and
  aesthetic appeal
• should have principles of economy, serviceability,
  durability and fit for use.

**Fittings, valves and controls** include:

• backflow prevention devices
• inspection openings
• irrigation control systems
• isolating valves
• level indicators
• pump controls.

**First-flush systems** may include:

• electronic
• float-activated
• mechanical
• volume-activated.
Filtration systems may include:
- overflow devices
- sand
- screens
- settlement tanks
- strainers.

Water contamination solutions may include:
- disinfection
- ultraviolet.

Pipe size calculations must include:
- determination of flow
- interpretation of design charts and tables
- pipe sizing calculations
- reduced level calculations.

Materials may include:
- copper (Cu)
- polyethylene (PE)
- polypropylene (PP)
- polybutylene (PB)
- unplasticised polyvinyl chloride (PVC-U)
- other approved material.

Jointing methods may include:
- brazing
- compression joints
- electrofusion welding
- mechanical joints
- solvent cement
- threading
- other approved jointing methods.

Pipe supports may include:
- anchors
- bedding
- bracket spacing
- concrete support
- corrosion protection
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- saddles.

**Pump and ancillary requirements** may include:
- automatic controls
- pump duties
- corrosion-resistant materials
- level controls and alarms
- pump selection and pump sizing, based on:
  - flow
  - velocity
  - lift
  - probable simultaneous demands.

**Installation requirements** may include:
- pipe protection, which may include:
  - cover
  - corrosion
  - impact
  - fire rating
  - level of workmanship
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for expansion
  - serviceability and access.

**Rainwater reuse systems** must include:
- roof water collection
- storage may include:
  - tanks
  - open in-ground (dam)
- water treatment
- pumps
- approved drinking and non-drinking use.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient energy use/capital outlay comparison
  - water use
  - evaporation
  - local environment consideration
• overflow disposal/reuse
• consideration of the Green Building Council of Australia rating scheme
• selecting appropriate components to ensure minimal environmental impact.

**Plans:**

• may include:
  • axonometrics
  • cross-sections
  • details
  • elevations
  • isometrics
  • schematics
• may be produced using:
  • computer generation
  • drawing equipment.

**Specification** may include:

• backflow prevention
• flow requirements
• jointing
• manufacturer requirements
• materials
• residual pressures
• safety (WHS)
• specialised components
• storage
• support
• testing
• valve selection
• water treatment
• workmanship.

**Testing** must include:

• air pressure
• backflow protection
• defect inspection
• drainage inspection
• hydrostatic
• performance:
  • flow
- pressure
- water quality
- quality assurance (QA) audit.

**Commissioning schedule** must include:

- balancing disposal system
- flow and pressure adjustments
- leak check
- pressure test
- pump settings
- safety requirements
- system certification
- system defects
- system flushing
- system functions as per design
- system purge
- valve operation
- ventilation
- vermin control.

**Operation and maintenance manual** may include:

- as installed drawings
- certification documentation
- maintenance schedules
- manufacturer brochures
- ongoing maintenance requirements
- pump maintenance
- regular inspections
- results of commissioning test
- safety management system
- system detail, setting and operations
- valve function
- system operational parameter adjustments and checks, including:
  - disinfection
  - first flush devices
  - pH
  - silt control
  - suspended solids
  - water quality.
Unit Sector(s)

Custom Content Section

Not applicable.
CPCPPS5027A Design irrigation systems

Modification History
Changes to unit descriptor, application, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5007A

Unit Descriptor
This unit of competency specifies the outcomes required to design irrigation systems to relevant Australian standards, codes, the National Construction Code (NCC) and other relevant legislative requirements to meet occupier needs and industry standards.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to the design of irrigation systems for residential, commercial, industrial, sporting and agricultural properties with or without connection to reticulated supply.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1  Evaluate design parameters.

1.1  **Scope of work** for irrigation systems is established.

1.2  **Design requirements** are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3  **Cost-benefit analysis** is conducted comparing a range of pipe materials and system designs.

1.4  **Statutory and regulatory requirements and relevant Australian standards and codes** for the design of irrigation systems are interpreted, analysed and applied.

1.5  **Manufacturer requirements** and trade and technical manuals are interpreted.

1.6  Additional research, including a **desktop study**, is conducted to outline design parameters.

1.7  **Flow and pressure tests** are conducted.

1.8  **Water sources, volumes and areas to be irrigated** are established.

1.9  **Soil types** are analysed and categorised, and impacts on irrigation systems are documented.

1.10  Factors that contribute to quality, safety and time efficiency are determined.

1.11  **Performance requirements** are established, considering safety of system users or building occupants.

2  Plan and detail system components.

2.1  **Layout of pipework systems** and type and location of fittings, valves and controls are planned.

2.2  Type, location and requirements for **backflow prevention devices** are detailed.

2.3  Pipe sizes, velocities, flows and pressures are calculated for a range of applications.
2.4 Approved materials and jointing methods for irrigation systems are specified.

2.5 Sections and components of the irrigation system are detailed.

2.6 Pipe supports are designed for a range of applications.

2.7 Pump enclosure and control requirements are sized and detailed.

2.8 Installation requirements are specified for irrigation management system.

2.9 Water storage requirements are determined.

2.10 Allowance for pipe movement is made.

3 Design and size systems.

3.1 Irrigation systems are designed for a range of residential, commercial, industrial, sporting and agricultural applications.

3.2 Range of delivery systems and layout are designed.

3.3 Irrigation systems are designed and sized using calculations and computer software packages.

3.4 Required water application is determined to establish and maintain plant life.

3.5 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specifications are prepared for a range of irrigation systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- initiative and enterprise skills to develop creative and responsive approaches
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of irrigation systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to design irrigation systems to National Construction Code, relevant Australian standards, and other relevant legislative requirements
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- application of National Construction Code or relevant Australian standards and codes, manufacturer specifications, and operating procedures relevant to the sector
- common terminology and definitions used in the design of irrigation systems
- nature of materials used and effects of performance under various conditions
• principles of technology used in design of irrigation systems for a range of applications
• work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to, as a minimum, provide evidence of the ability to:
• design, size and document layout details of an irrigation system, including a specification for a:
  • sports oval incorporating stormwater collection and use, with a mains pressure drinking water top-up and with chemical additives
  • a landscaped area for a mixed development site connected to a main pressure recycled (non-drinking) water main
• evaluate and document design parameters to relevant Australian standards and codes, and regulatory, client and manufacturer requirements.
• plan and detail system components that include:
  • backflow prevention devices
  • irrigation management-control system
  • pumping requirements
  • water delivery outlets
  • piping requirements
• design and size two irrigation systems, using appropriate calculations and computer software for specific applications
• prepare testing and commissioning schedules
• prepare operation and maintenance manuals
• apply sustainability principles and concepts throughout the design
• communicate with others to ensure safe and effective work site operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
• tools and equipment appropriate to applying safe work practices, including computers, software and calculators
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and
correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**
- must include:
  - interpretation of plans and specifications
sizing and documenting layout irrigation systems and documenting layout irrigation systems for applications, including residential, sporting and agricultural properties

may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:

- architectural plans
- backflow requirements
- interpretation and application of irrigation services, drawings and symbols
- irrigation management system
- owner requirements
- precipitation and evaporation rates
- pumping requirements
- required water application to establish and maintain plant life
- source of irrigation water
- sprinkler head spacings
- system requirements
- water storage requirements.

**Cost-benefit analysis:**

- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design styles
  - expected design life
  - labour costs
  - material costs
  - required water application to establish and maintain plant life
  - safety factors
  - speed of installation
  - suitability of materials
  - system choices
  - use of recycled or alternative water.

**Statutory and regulatory requirements and relevant Australian standards and codes**

- Acts, regulations and commonwealth, state or territory, and local government requirements
- AS/NZS3500 National plumbing and drainage
may include:

- AS2200 Design charts for water supply and sewerage
- National Construction Code
- state or territory health department requirements
- other relevant Australian standards or codes.

**Manufacturer requirements** may include:

- irrigation management system
- material specifications
- pump tables
- sprinkler head performance
- sub-surface irrigation
- technical and trade manuals.

**Desktop study** may include:

- collection and interpretation of data for design purposes in:
  - architectural and building plans
  - site layout plans, which may include:
    - sports ovals
    - golf courses
    - residential, commercial, industrial and agricultural properties
    - local government parks
  - manufacturer data
  - documents, which may include:
    - applications
    - brochures
    - forms
    - policies
    - other reports as available.

**Flow and pressure tests** may include:

- interpretation of flow and pressure tests
- on-site measurement of flows (l/s), velocity (m/s) and pressure (kPa).

**Water sources, volumes and areas to be irrigated** may include:

- sources:
  - drinking water
  - non-drinking (recycled) water
  - rain water
  - grey water
  - creeks
  - dams
- lakes
- rivers
- streams
- tanks
- other approved water sources
- volumes and areas:
  - amount and duration of water supply
  - areas to be irrigated
  - number of control stations required
  - total amount and flow rate required for each control station.

**Soil types** may include:
- gravels
- light, medium and heavy clays
- loams
- rock
- sands.

**Performance requirements** may include:
- flow, velocity, pressure and discharge requirements, established using relevant Australian standards, codes and manufacturer information
- required water application to establish and maintain plant life.

**Layout of pipework systems:**
- may include:
  - distribution
  - dual feed systems
  - range pipes
  - ring main
  - single pipe
  - control stations
- should not unduly affect aesthetic appeal and building integrity
- should have principles of economy, serviceability, durability and fit for use applied.

**Fittings, valves and controls** may include:
- fittings:
  - bends
  - elbows
- sprinkler heads
- tees
- unions
- valves:
  - backflow prevention
  - excess pressure
  - isolating
  - pressure limiting
  - pressure reduction
  - strainers
- controls:
  - irrigation management system
  - control stations
  - control wiring
  - nodes.

**Backflow prevention devices** may include:
- double-check valve assembly (DCV)
- dual-check valve with intermediate vent (DuCV)
- pressure type vacuum breaker (PVB)
- reduced pressure zone device (RPZD)
- registered air gap (RAG)
- registered break tank (RBT)
- reduced pressure detector assembly (RPDA)
- reduced pressure zone device (RPZD)
- other approved backflow prevention devices
- may be located as:
  - individual protection
  - zone protection
  - containment protection.

**Materials** may include:
- composite pipework
- copper (Cu)
- cross-linked polyethylene (PE-X)
- polypropylene (PP)
- polybutylene (PB)
- polyvinyl chloride (PVC)
- other relevant materials.

**Jointing methods** include:
- brazing
- compression
- electrofusion welding
- flaring
- mechanical joints
- rubber ring joints
- screwing
- soldering
- other approved jointing methods.

Sections and components of the irrigation system must include:

- irrigation stations:
  - number, size, area, volume of water required, delivery requirements, operation and activation of stations, sprinkler patterns, location and distribution of sprinkler heads, obstacle avoidance, water minimisation, waste minimisation and timing
- manifold systems:
  - manifolds to stations, headers, branches, timers, isolators, servo valves, electronics, power supplies and manual activation
- sensors:
  - moisture sensors, soil sensors, temperature sensors, humidity sensors, weather stations and computer automation
- automatic controls:
  - station controllers, servo valves, isolating valves, water tractors and timers
- sprinklers, drippers and irrigators:
  - sprinkler heads, sprinkler flows, impact sprinklers, gear-driven sprinklers, water tractors, water cannons, tape drippers, individual drippers, flow controlled drippers, in-ground irrigation tapes and root inhibitor systems
- sprinkler patterns:
  - head to head, square, triangular, circular, quarter overlap, half overlap, full overlap, double overlap and other overlap patterns.

Pipe supports may include:

- thrust blocks
- bedding
- bracket spacing
- corrosion protection
- cover
- manufacturer-recommended specific fixings
- material requirements
- provision for pipe movement.

**Pump enclosure and control requirements** may include:

- acoustic performance
- automatic change-over
- automatic controls
- dual-pump provision
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- irrigation management control system
- pressure gauges
- pump controls
- pump selection
- pump sizing
- pump housing
- space requirements
- valve requirements
- variable speed control.

**Installation requirements** may include:

- pipe connection:
  - bedding and backfilling
  - corrosion
  - cover
  - ground stability
  - impact
- level of workmanship
- manufacturer recommendations
- pipe support
- provision for pipe movement
- serviceability and access.

**Applications**:

- may include:
  - agricultural crops
  - garden irrigation
  - golf courses
  - greenhouses
• lawn watering
• local government parks
• nurseries
• sports ovals
• should also cover:
  • individual crop water requirements
  • types of plants and their respective crop factors.

**Delivery systems and layout** may include:

• main delivery
• number and design of control stations
• design includes:
  • avoiding obstacles
  • irregular shapes
  • minimising water wastage
  • range of irrigation applications
• range pipes
• ring mains
• size and water delivery of sprinklers
• sprinkler head patterns and placement.

**Sustainability principles and concepts:**

• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
  • efficient use of material
  • efficient energy usage/capital outlay comparison
  • water efficiency
  • reuse of water, such as rainwater, grey water and recycled non-drinking water
  • consideration of the Green Building Council of Australia rating scheme.

**Plans:**

• may include:
  • axonometrics
  • cross-sections
  • details
  • elevations
  • isometrics
• schematics
• sections
• may be produced using:
  • computer generation
  • drawing equipment.

**Specification** may include:
• bedding
• flow requirements
• irrigation management control system
• jointing
• manufacturer requirements
• materials
• pumps
• residual pressures
• safety (WHS)
• specialised components
• sprinkler head selection
• storage tanks
• support
• testing
• valve selection
• water treatment
• workmanship.

**Testing** may include:
• defect inspection
• hydrostatic
• mains pressure
• performance
• quality assurance (QA) audit.

**Commissioning schedule** may include:
• system certification
• flow test
• leak check
• pressure test
• system purge
• system defect
• system functions as per design
• valve and system operation.
Operation and maintenance manual includes:

- as installed drawings
- results of commissioning test
- certification documentation
- maintenance schedules
- manufacturer brochures and technical information
- operational procedures
- valve function.

Unit Sector(s)

Custom Content Section

Not applicable.
CPCPPS5028A Design trade waste pre-treatment systems

Modification History
Changes to unit descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5008A

Unit Descriptor
This unit of competency specifies the outcomes required to design trade waste pre-treatment systems for commercial and industrial premises prior to discharge to authority’s point of sewer connection. The unit requires identification of appropriate installation details and preparation of specifications.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 Scope of work is established for trade waste pre-treatment systems prior to discharge to authority’s point of sewer connection.

1.2 Design requirements are determined from relevant Australian standards, codes, plans, specifications, authorities’ requirements and client brief.

1.3 Statutory and regulatory requirements and relevant Australian standards and codes for the design of trade waste pre-treatment systems are analysed and applied.

1.4 Trade waste applications are analysed and a cost-benefit analysis is conducted, comparing a range of pipe materials and system designs.

1.5 Manufacturer requirements and trade and technical manuals are interpreted.

1.6 Additional research, including a desktop study, is conducted to outline design parameters.

1.7 Performance requirements are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 Layout of pipework systems and type, and location of fittings and controls are planned.

2.2 Solid removal systems are planned and detailed.

2.3 Grease and oil interceptors, neutralising chambers and wash-down areas incorporating stormwater exclusion are planned and detailed.

2.4 Diffused air flotation systems are planned and detailed.

2.5 Bacterial treatment processes and combined and specialised treatment processes are detailed for a range of commercial and industrial applications.

2.6 General housekeeping procedures are incorporated to
minimise discharge of trade waste.

2.7 *System calculations* are performed for a range of applications.

2.8 *Pumpwell, pumps, controls and equipment requirements* are sized and detailed.

2.9 *Pipe supports* are designed for a range of applications.

2.10 Approved *materials, jointing methods* and *installation requirements* for trade waste pre-treatment systems are specified.

---

3 Design and size systems.

3.1 Trade waste pre-treatment systems are designed and sized for a range of applications using calculations and *computer software packages*.

3.2 *Sustainability principles and concepts* are applied throughout the design process.

---

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 *Plans and specifications* are prepared for a range of trade waste pre-treatment systems.

4.3 *Testing and commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.

---

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm
requirements, share information, listen and understand

- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to develop creative and responsive approaches
- literacy skills to:
  - prepare written documentation, including:
    - operation and maintenance manual
    - plans, specifications and schedules
  - read and interpret:
    - plans, specifications, drawings and design briefs
    - standards and manufacturer requirements and manuals
    - statutory and regulatory requirements
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - research, collect, organise and understand information relating to the design of trade waste pre-treatment systems
  - take initiative and make decisions
- problem-solving skills to analyse requirements, consider options and design an appropriate system
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to recommend general housekeeping procedures to minimise trade waste
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- relevant Australian standards, codes, manufacturer specifications, National Construction Code (NCC), relevant authorities’ requirements and operating procedures relevant to the sector
- hazards associated with devices and systems used in the hydraulic sector
- design of the options for the pre-treatment of trade waste
- approved installation methods for trade waste pre-treatment systems
- key features of work plans and specifications
- nature of materials and effect of their performance in a variety of conditions
- organisational quality procedures and processes
- terminology and definitions used in hydraulic design
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide, as a minimum, evidence of the ability to:

- design, size and document the installation and layout details for a trade waste pre-treatment system, including a specification for two of the following:
  - commercial kitchen
  - vehicle mechanical workshop
  - commercial laundry
  - metal plating process
- evaluate and document design parameters to relevant Australian standards, codes, client information, local authorities’ trade waste policy, and manufacturer installation requirements
- evaluate health risks associated with the trade waste system
- plan and detail system components, including pre-treatment systems and piping systems
- design and size trade waste systems
- design and size wash-down and stormwater exclusion systems
- prepare plans and specifications for the trade waste pre-treatment installations to industry standards
- prepare schedules for testing and commissioning
- produce operation and maintenance manuals
- apply sustainability principles and concepts throughout installations
- communicate with others to ensure safe and effective workplace operations.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**

- must include:
  - interpreting plans and specifications
  - sizing and documenting layout of trade waste pre-treatment systems for commercial and industrial applications
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.
**Design requirements** must include:

- architectural plans
- building specifications
- cleaning and maintenance procedures
- installation requirements
- odour control
- owner requirements
- pipework identification
- sizing
- trade waste treatment
- ventilation.

**Statutory and regulatory requirements and relevant Australian standards and codes** may include:

- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- commonwealth, state or territory and local governments requirements
- National Construction Code
- other relevant Australian standards and codes.

**Trade waste applications** may include:

- chemical facilities
- commercial and industrial facilities that produce a liquid waste stream
- commercial and industrial laundry
- food preparation facilities
- laboratories
- motor vehicle workshops
- photography development facilities
- wash-down facilities.

**Cost-benefit analysis:**

- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design styles
  - energy costs
  - expected design life
  - labour costs
  - material costs
• safety factors
• speed of installation
• suitable materials
• authorities’ requirements.

Manufacturer requirements may include:
• containment
• design and installation
• installation space
• material specifications
• pipe sizing
• pump installation
• storage systems
• technical and trade manuals
• ventilation.

Desktop study may include collection and interpretation of existing data for design purposes in:
• architectural and building plans
• developer plans
• manufacturer data
• documents, which may include:
  • applications
  • brochures
  • forms
  • policies
  • other reports as available
• trade waste publications.

Performance requirements must:
• establish acceptable discharge standards for the relevant authority
• comply with relevant Australian standards, codes and local authorities’ requirements.

Layout of pipework systems:
• may include:
  • location of pipework (fire rating of enclosure)
  • trade waste plumbing and drainage
  • pumped systems
  • accessibility
• should not unduly affect building integrity and aesthetic appeal
• should have principles of economy, serviceability,
durability and fit for use applied.

**Fittings** may include:
- bends
- junctions
- reflux valves
- inspection openings
- expansion joints.

**Solid removal systems** may remove:
- bone
- dirt
- grit
- metal
- paper
- plastic
- rubbish
- sand
- silt
- wood
- other solid contaminants.

**Grease and oil interceptors** may include:
- coalescing plate separators
- dissolved air flotation (DAF)
- grease traps
- skimmers
- vertical separators.

**Neutralising chambers** may neutralise:
- acid
- alkaline
- chemicals.

**Wash-down areas** may include:
- bin
- commercial and industrial wash-down processes that may or may not require stormwater diversion
- floor
- vehicle
- machinery.

**Bacterial treatment processes** may include:
- aerobic
include:

- anaerobic
- facultative and specialised bacteria for the removal of grease and other contaminants.

**Combined and specialised treatment processes** may include:

- bacterial treatment
- cooling pits
- diffused air flotation systems
- neutralising chambers
- solid removal systems
- specialised treatment.

**System calculations** must include:

- calculating gradient
- interpreting design charts and tables
- calculating pipe sizing
- calculating reduced level
- determining flow and fixture loadings
- sizing treatment system
- storage tank capacity.

**Pumpwell, pumps, controls and equipment requirements** may include:

- access covers
- automatic controls
- capacity
- chains
- corrosion-resistant materials
- detailing
- emergency storage
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- ladder access
- odour control
- macerator requirements
- pump selection
- pump sizing
- pumpwell sizing
- space requirements
- step irons
- valve requirements
- ventilation
Pipe supports include:

- anchors
- bedding
- bracket spacing
- concrete support
- corrosion protection
- cover
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- saddles
- provision for expansion
- wall and ceiling brackets.

Materials may include:

- pipes may include:
  - cast iron or epoxy lined
  - earthenware or vitrified clay pipe (VCP)
  - polyethylene (PE)
  - polypropylene (PP)
  - other approved material
- fittings and fixtures, including sound attenuation requirements.

Jointing methods may include:

- electrofusion welding
- mechanical joints
- rubber ring
- threading.

Installation requirements may include:

- bedding
- pipe protection, which may include:
  - cover
  - corrosion
  - impact
- fire rating
- level of workmanship
- manufacturer-recommended specific fixings
- pipe support
- provision for expansion
• serviceability and access.

**Computer software packages**
include:
• proprietary design software
• manufacturer software.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • selecting appropriate material to ensure minimal environmental impact
  • efficient use of material
  • efficient energy usage/capital outlay comparison
  • effect on the environment due to overflow or leakage
  • material selected to convey the type of discharge
  • water efficiency.

**Plans:**
• may include:
  • axonometrics
  • cross-sections
  • details
  • elevations
  • isometrics
  • schematics
  • sections
• may be produced using:
  • computer generation
  • drawing equipment.

**Specification** may include:
• access chambers (manholes)
• bedding
• commissioning
• concrete support and detailing specialised components
• jointing
• manufacturer requirements
• materials
- pumps
- safety (WHS)
- support
- testing
- workmanship.

**Testing** may include:
- air pressure
- compliance with authorities’ discharge requirements
- drainage inspection
- hydrostatic
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:
- checking for foreign material
- checking system defects
- checking that system functions as per design
- containment
- leak check
- operational commissioning
- pump commissioning
- system certification
- treatment system commissioning.

**Operation and maintenance manual** may include:
- as installed drawings
- certification documentation
- results of commissioning test
- maintenance schedules
- manufacturer brochures and technical information
- odour control
- regular treatment system maintenance
- regular water quality testing
- ventilation
- water auditing.

CPCPPS5030A Design pump systems

Modification History
Changes to unit descriptor, performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5010A

Unit Descriptor
This unit of competency specifies the outcomes required to undertake the specification, selection and sizing of pumps and the design of associated piping and components for inclusion in hydraulic systems.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 Scope of work is established for pump system requirements for wide span and high-rise building projects.

1.2 Pump duties are established.

1.3 Design requirements are determined from plans, specifications, system demands and client brief.

1.4 Cost-benefit and life cycle analysis is conducted comparing a range of pump alternatives, materials and system designs.

1.5 Statutory and regulatory requirements and Australian standards and codes for the design of pump systems are analysed, interpreted and applied.

1.6 Manufacturer requirements and trade, technical and sizing manuals are interpreted.

1.7 Additional research, including a desktop study, is conducted to outline design parameters.

1.8 Flow and pressure tests of hydraulic system are conducted.

1.9 Performance requirements are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 Pump, controls and pumproom requirements are sized and detailed.

2.2 Layout of pipework systems and type and location of fittings, valves and controls are planned.

2.3 Pipe sizes, velocities, flows and pressures are calculated for a range of applications.

2.4 Energy sources are specified for a range of hydraulic pumping applications.

2.5 Pump plinths and pump mountings are designed for a range of applications.
2.6 Pump impellers are sized and selected.

2.7 Approved *materials, jointing methods* and *installation requirements* are specified.

2.8 Allowance for vibration is provided.

3 Design and size systems.

3.1 Pump systems are designed for a range of wide span and high-rise building applications.

3.2 Pump acoustic performance is evaluated.

3.3 Net positive suction head calculations are performed.

3.4 Design principles are applied for optimal performance of pump systems.

3.5 Range of *delivery systems* is designed.

3.6 Pump systems are designed and sized using calculations and computer software packages.

3.7 *Sustainability principles and concepts* are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 *Plans* and *specification* details are prepared for a range of pump systems.

4.3 *Testing* and *commissioning schedule* is prepared.

4.4 *Operation and maintenance manual* is produced, including information on how to properly and safely maintain the system.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand

liaise with others to publish reports

use language and concepts appropriate to cultural differences

use and interpret non-verbal communication, such as hand signals

literacy skills to:

apply design concepts and principles relating to hydraulic systems and undertake a literature review

produce report to a professional standard

read and interpret:

- documents and resources identified through the literature review
- plans, specifications and drawings
- standards, manufacturer requirements and manuals
- statutory and regulatory requirements
- other relevant documentation

undertake document analysis, including impacts and evaluation results

initiative and enterprise skills to develop creative and responsive approaches

numeracy skills to apply measurements and calculations

planning and organising skills to:

- research, collect, organise and understand information relating to the design of pump systems
- take initiative and make decisions

problem-solving skills, including the ability to:

- identify typical faults and action required to rectify problems
- analyse requirements, consider options and design an appropriate system

technical skills to:

- design associated piping and components for hydraulic systems
- specify, select and size pumps

technology skills to:

- access and understand site-specific instructions in a variety of media
- use mobile communication technology

Required knowledge

- hazards associated with pumping equipment used in hydraulic systems
- key features of work plans and specifications
- approved installation methods for pump systems
- principles of technology in the design of pump installations for hydraulic systems
- relevant Australian standards, codes, manufacturer specifications, National Construction Code (NCC) and operating procedures relevant to the sector
- research methods, report writing and publishing, including who to contact and how to
publish reports

- terminology and definitions used in pump installation
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to, as a minimum provide evidence of the ability to:

- design, size and document required pumping systems for the hydraulic services installation required for a high-rise mixed development building to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level (fixtures are included in the basement) and a wide span project (such as a school or industrial complex) to include:
  - applying sustainability principles and concepts throughout the design of pump system
  - evaluating and documenting design parameters to relevant Australian standards, codes, and hydraulic system client, regulatory and manufacturer requirements
  - planning and detailing system components, including:
    - ancillaries
    - control panel
    - fittings
    - flow switches
    - mounting
- piping
- plinths
- pressure switches
- pump duty
- complying with WHS regulations applicable to workplace operations
- applying organisational quality procedures and processes
- using appropriate calculations and computer software
- developing a cost-benefit lifecycle analysis for a range of systems
- preparing plans and specification
- preparing a testing and commissioning schedule
- preparing an operation and maintenance manual
- communicating with others to ensure safe and effective work site operations
- producing safety and emergency procedures.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.
Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**
- must include:
  - interpretation of plans and specifications
  - sizing and documenting layout of pump systems for wide span and high-rise building projects
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Pump** types may include:
- centrifugal
- circulating
- constant flow variable speed
- macerator
- multiple stage
- piston
- positive displacement
- submersible
- vacuum
- variable speed control.

**Pump duties** must include:
- constant pressure
- flow rate
- head
- velocity.

**Design requirements** may include:
- acoustic performance
- architectural plans
- available flow and pressure from authority’s main
- building specifications
- fire safety
- owner’s requirements
- pipework identification
- pump duty
- sizing of pipework
- ventilation
- vibration
- viscosity of fluids.

*Cost-benefit and life cycle analysis:*
- includes balancing initial cost with durability, longevity, maintenance and ongoing fuel and energy cost requirements
- compares the range of suitable materials, pumps and system designs available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - design
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitable materials.

*Statutory and regulatory requirements* may include:
- Acts and regulations, and commonwealth, state or territory, and local government requirements.

*Australian standards and codes* may include:
- AS/NZS3500 National plumbing and drainage
- AS2419 Fire hydrant installations – system design, installation and commission
- AS/NZS1547 On-site domestic wastewater management
- AS2200 Design charts for water supply and sewerage
- National Construction Code
- other relevant Australian standards.

*Manufacturer requirements* may include:
- material installation specifications
- pump tables
- pipe sizing
- recommended installation and fixings for
Desktop study may include collection and interpretation of data for design purposes in:

- architectural and building plans
- developer plans
- manufacturer data
- documents, which may include:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Flow and pressure tests may include:

- on-site measurement of flow (l/s), velocity (m/s) and pressure (kPa).

Performance requirements include:

- flow, velocity, pressure and discharge requirements, to satisfy the requirements of the hydraulic system.

Pump, controls and pumproom requirements may include:

- acoustics
- ancillaries
- automatic controls
- inlet and outlet design
- installation and mounting
- plinths
- pump sizing and selection
- space
- ventilation
- vibration.

Layout of pipework systems may include:

- access
- identification
- insulation
- isolation
- maintenance
- principles of economy, serviceability, durability and fit for use.
• replacement.

**Fittings and valves** may include:

- fittings:
  - bends
  - flanges
  - inlet and outlet pressure gauges
  - tees
  - unions
- valves:
  - air relief
  - excess pressure
  - isolating
  - non-return
  - pressure limiting
  - pressure reduction
  - strainers
  - vibration couplings.

**Energy sources** may include:

- diesel and diesel-electric generator sets
- electrical, single phase and three-phase
- petrol.

**Pump plinth** bases designed to resist forces exerted by pump may include:

- concrete
- masonry
- timber
- steel.

**Pump mountings** may include:

- anchoring bolts
- inertia pads
- rubber and synthetic
- spring loaded
- vibration mounts.

**Materials:**

- piping may include:
  - copper (Cu)
  - galvanised steel
  - stainless steel
  - polyethylene (PE)
- polypropylene (PP)
- polybutylene (PB)
- other approved material
- pumps may include:
  - cast iron
  - bronze
  - stainless steel
  - other appropriate materials.

**Jointing methods** may include:
- brazing
- electrofusion welding
- mechanical joints
- other approved jointing method.

**Installation requirements** may include:
- pipe protection, which may include:
  - corrosion
  - impact
  - fire rating
  - level of workmanship.
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for vibration
  - serviceability and access
  - thrust brackets.

**Delivery systems** may include:
- circulation
- constant flow variable speed pump
- hydropneumatic
- lift
- pressure
- rising main
- vacuum.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
- efficient energy usage/capital outlay comparison
- effect on the environment due to pump or pipe failure
- pump efficiency.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.

**Specification** may include:
- acoustic performance
- fire safety
- jointing
- manufacturer requirements
- materials
- pump duty
- residual pressures
- safety (WHS)
- specialised components
- support
- testing
- valve selection
- vibration control
- workmanship.

**Testing** may include:
- defect inspection
- hydrostatic
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:
- system certification
include:

- exhaust pipe check
- flow check
- leak check
- pressure check
- system purge
- system defects
- system functions as per design
- valve operation
- acoustic performance.

**Operation and maintenance manual** may include:

- as installed drawings
- results of commissioning test
- certification documentation
- emergency shut-down procedures
- maintenance schedules
- manufacturer brochures and technical information
- valve function.

CPCPPS5032A Design siphonic stormwater drainage systems

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPPS5012A

Unit Descriptor
This unit of competency specifies the outcomes required to design siphonic stormwater drainage systems, determine installation details, and prepare specifications for a range of residential, commercial and industrial buildings.

Application of the Unit
This unit of competency supports development of skills and knowledge required for competent workplace performance in a consultancy or supervisory capacity in relation to plumbing services and hydraulics.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

1. **Evaluate design parameters.**

   1.1 *Scope of work* is established for siphonic stormwater drainage systems.

   1.2 *Design requirements* are determined from relevant Australian standards, codes, plans, specifications and client brief.

   1.3 *Siphonic system attributes* are evaluated and *cost-benefit analysis* is conducted, comparing a range of pipe materials and system designs.

   1.4 *Statutory and regulatory requirements and relevant Australian standards and codes* for the design of siphonic stormwater drainage systems are analysed and applied.

   1.5 Stormwater design manuals, *manufacturer requirements* and trade and technical manuals are interpreted.

   1.6 Additional research, including a *desktop study*, is conducted to outline design parameters.

   1.7 Factors that contribute to quality, safety and time efficiency are determined.

   1.8 *Performance requirements* are established, considering safety of system users or building occupants.

2. **Plan and detail system components.**

   2.1 Siphonic stormwater drainage systems are integrated with the building structure.

   2.2 Volume of roof water and stormwater is calculated using a range of approved methods.

   2.3 *Layout of pipework systems*, and type and location of fittings are planned.

   2.4 *Pipe size and flow requirements are calculated* for a range of applications according to stormwater collection requirements.
2.5 **Pipe supports** are designed for a range of applications.

2.6 Approved **materials and components**, **jointing methods** and **installation requirements** for siphonic stormwater drainage systems are specified.

3 **Design and size systems.**

3.1 Siphonic stormwater drainage systems are designed for a range of applications.

3.2 Catchment areas are calculated, collection points determined, and siphonic systems sized.

3.3 Siphonic stormwater drainage systems are designed and sized using calculations and **computer software packages**.

3.4 **Sustainability principles and concepts** are applied throughout the design process.

4 **Prepare documentation.**

4.1 Client brief of the desired design is prepared.

4.2 **Plans** and **specification** are prepared for a range of siphonic stormwater drainage systems.

4.3 **Testing** and **commissioning schedule** is prepared.

4.4 **Operation and maintenance manual** is produced, including information on how to properly and safely maintain the system.

---

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to develop creative and responsive approaches
• literacy skills to:
  • prepare documentation, including:
    • operation and maintenance manual
    • plans, specifications and schedules
  • read and interpret:
    • plans, specifications, drawings and design briefs
    • standards and manufacturer requirements and manuals
    • statutory and regulatory requirements
• numeracy skills to:
  • apply measurements and calculations
  • interpret data
• planning and organising skills to:
  • research, collect, organise and understand information relating to the design of siphonic stormwater systems
  • take initiative and make decisions
• problem-solving skills to analyse requirements, consider options and design an appropriate system
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to:
  • determine installation details for siphonic stormwater drainage systems
  • prepare specifications for siphonic stormwater drainage systems
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• common terminology and definitions used in design of siphonic stormwater drainage systems for residential, commercial and industrial buildings
• drafting principles
• nature of materials used and effects of performance under various conditions
• procedures for estimating volume of stormwater run-off from rainwater collection areas
• principles of technology in the design of siphonic stormwater drainage systems
• requirements of state regulatory authorities, Australian standards and manufacturer specifications, including hazards identified in relation to devices and systems used
• work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum provide evidence of the ability to:

- design, size and document the layout details, including a specification of a siphonic system for a site incorporating a high-rise mixed development building and a wide span project (such as a school) to include:
  - applying sustainability principles and concepts throughout
  - evaluating and documenting design parameters to relevant Australian standards, codes and manufacturer requirements for a range of siphonic stormwater drainage systems
  - evaluating health risks associated with the siphonic system
  - designing and sizing siphonic stormwater drainage systems using appropriate calculations and computer software
  - selecting materials and components for compliance, fit for purpose, durability, compatibility and cost-effectiveness
  - preparing testing and commissioning schedules
  - producing operation and maintenance manuals
  - communicating with others to ensure safe and effective workplace operations.

Context of and specific resources

This competency is to be assessed using standard and
for assessment

authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work** must include:

- calculation of rainfall intensities in given catchment areas, including:
  - average rainfall intervals
  - meteorological information
  - rainfall intensities
  - stormwater collection area calculations
  - time and concentration
  - interpretation of plans and specifications
  - sizing and documenting layout of siphonic
stormwater drainage systems for residential, commercial and industrial applications and for either new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:
- owner requirements
- architectural plans
- building specifications
- pipework identification
- catchment area
- approved point of discharge
- acoustic performance.

**Siphonic system attributes** must include:
- availability
- cost
- installation requirements
- risks
- site conditions.

**Cost-benefit analysis:**
- compares range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- must include:
  - design styles
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation.

**Statutory and regulatory requirements and relevant Australian standards and codes** may include:
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- commonwealth, state or territory requirements and local governments requirements
- National Construction Code
- other relevant Australian standards and codes.
Manufacturer requirements may include:
- material specifications
- sizing tables
- technical and trade manuals
- special siphonic drainage collection inlets.

Desktop study may include collection and interpretation of existing data for design purposes in:
- architectural and building plans
- manufacturer data
- developer plans
- other documents, including:
  - applications
  - brochures
  - forms
  - policies
  - other reports as available.

Performance requirements may include:
- pipe flow velocities, flow conditions and discharge requirements, established using relevant Australian standards, codes and local authorities’ requirements.

Layout of pipework systems:
- must include:
  - acoustic performance
  - amenity of the building
  - clipping and pipe support
  - fireproofing
  - function of the building
  - impingement on floor heights
  - location of pipework (fire rating of enclosure)
  - materials to be used
  - size of penetrations
  - type of building structure
  - should not unduly affect building integrity and aesthetic appeal
  - should have principles of economy, serviceability, durability and fit for use applied.

Fittings may include:
- bends
- junctions.
Pipe size and flow requirement calculations may include:
- discharge
- flow
- manufacturers’ tables
- sizing, according to relevant Australian standards and codes
- velocity
- volumes.

Pipe supports may include:
- anchors
- bracket spacing
- corrosion protection
- cover
- hanging brackets
- material requirements
- saddles
- wall and ceiling brackets.

Materials and components may include:
- appropriate materials specified, based on fit for purpose, durability, compatibility and cost-effectiveness, including:
  - copper (Cu)
  - polyethylene (PE)
  - polypropylene (PP)
  - stainless steel
  - other approved material
- components, may include:
  - clips
  - fasteners
  - fittings
  - pipework
  - siphonic collection inlets.

Jointing methods may include:
- brazing
- electrofusion welding
- mechanical joints
- rubber ring
- other approved jointing methods.
Installation requirements must include:

- pipe protection, which may include:
  - corrosion
  - impact
  - fire rating
  - level of workmanship
  - manufacturer-recommended specific fixings
  - pipe support
  - provision for expansion
  - serviceability and access.

Computer software packages may include:

- manufacturer software
- proprietary design software.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - efficient energy usage/capital outlay comparison
  - effect on the environment due to overflow or leakage
  - consideration of the Green Building Council of Australia rating scheme.

Plans:

- may include:
  - axonometrics
  - elevations
  - details
  - cross-sections
  - isometrics
  - schematics
  - sections
- may be produced using:
  - computer generation
  - drawing equipment.
**Specification** may include:
- commissioning
- bedding
- support
- jointing
- manufacturer requirements
- materials
- testing
- workmanship
- work health and safety (WHS).

**Testing** may include:
- hydrostatic test
- inspection
- performance
- quality assurance (QA) audit.

**Commissioning schedule** may include:
- system certification
- checking for foreign material
- checking leaks
- cleaning grates
- system defects
- system functions as per design.

**Operation and maintenance manual** may include:
- as installed drawings
- certification documentation
- results of commissioning test
- maintenance schedules
- manufacturer brochures and technical information
- check for blockages
- leak detection
- regular inspection
- regular maintenance requirements.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Evaluate design parameters.

1.1 Scope of work is established for vacuum sewerage systems designed for sewer infrastructure systems and high-rise building projects.

1.2 Design requirements are determined from relevant Australian standards, codes, plans, specifications and client brief.

1.3 Vacuum sewerage system attributes are evaluated and a cost-benefit analysis is conducted, comparing a range of pipe materials and system designs.

1.4 Statutory and regulatory requirements and relevant Australian standards and codes for the design of vacuum sewerage systems are analysed and applied.

1.5 Manufacturer requirements and trade and technical manuals are interpreted.

1.6 Additional research, including a desktop study, is conducted to outline design parameters.

1.7 Factors that contribute to quality, safety and time efficiency are determined.

1.8 Performance requirements are established, considering safety of system users or building occupants.

2 Plan and detail system components.

2.1 Layout of pipework systems and type and location of fittings, valves and controls are planned.

2.2 Sewerage loading is calculated using equivalent population (EP) density for a residential development in excess of 25 dwellings and National Construction Code for a high-rise project.

2.3 Pipe size calculations are performed for a range of applications according to regulations and manufacturer requirements.

2.4 Pipe supports are designed for a range of applications.
2.5 Vacuum pumping station and pump control requirements are sized and detailed.

2.6 Approved materials, jointing methods and installation requirements for vacuum sewerage systems are specified.

2.7 Approved point of discharge to authority’s main is determined.

2.8 Acoustic performance of the system is included in the plan.

3 Design and size systems.

3.1 Vacuum sewerage systems are designed for a range of applications.

3.2 Vacuum sewerage systems are designed and sized using calculations and computer software packages.

3.3 Sustainability principles and concepts are applied throughout the design process.

4 Prepare documentation.

4.1 Client brief of the desired design is prepared.

4.2 Plans and specifications are prepared for a range of vacuum sewerage systems.

4.3 Testing and commissioning schedule is prepared.

4.4 Operation and maintenance manual is produced, including information on how to properly and safely maintain the system.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with others to ensure safe and effective work practices
  - confirm job specifications and client requirements
• enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to develop creative and responsive approaches
• literacy skills to:
  • prepare documentation, including:
    • operation and maintenance manual
    • plans, specifications and schedules
  • read and interpret:
    • plans, specifications, drawings and design briefs
    • standards and manufacturer requirements and manuals
    • statutory and regulatory requirements
• numeracy skills to:
  • apply measurements and calculations
  • interpret data
• planning and organising skills to:
  • research, collect, organise and understand information relating to the design of vacuum sewerage systems
  • take initiative and make decisions
• problem-solving skills to analyse requirements, consider options and design an appropriate system
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to:
  • determine installation details for vacuum sewerage systems
  • prepare specifications for vacuum sewerage systems
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• relevant Australian standards, including Sewerage Code of Australia
• manufacturer specifications, including hazards identified in relation to devices and systems used
• fire safety requirements
• other codes or standard operating procedures
• pipe-sizing procedures
• pump selection and rising main requirements
• ventilation requirements
- odour control
- regulatory authorities’ requirements
- nature of materials used and effects of performance under various conditions
- common terminology and definitions used in the design of vacuum sewer systems
- principles of technology in the design of sewer infrastructure systems
- work health and safety (WHS) requirements, including relevant statutory regulations, codes and standards

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to as a minimum, provide evidence of the ability to:

- design, size and document the installation and layout details for a vacuum infrastructure sewer system for a:
  - residential development of 50 properties, incorporating:
    - vacuum sewage collection chambers
    - vacuum sewer mains
    - vacuum pump station
    - pump rising main
    - ventilation
    - odour control
  - high-rise mixed development building, to a minimum of 29 floors, inclusive of a basement, to include fixtures on each floor level (fixtures are included in the basement), incorporating:
    - vacuum pump station
    - vacuum sanitary drainage system
    - pump rising main
- ventilation
- odour control
- apply sustainability principles and concepts throughout to achieve a star rating under the Green Building Council of Australia rating scheme
- evaluate and document design parameters, including client, regulatory and manufacturer requirements and relevant Australian standards and codes for a range of complex sanitary plumbing and drainage systems
- evaluate health risks associated with the sanitary plumbing and drainage system
- calculate pipe sizes according to regulations and manufacturer requirements
- design and size vacuum sewerage systems using appropriate calculations and computer software
- select materials and components for compliance, fit for purpose, durability, compatibility and cost-effectiveness
- prepare a testing and commissioning schedule
- produce an operation and maintenance manual
- communicate with others to ensure safe and effective workplace operations.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions, including design brief drawings, specifications, codes, design concepts and construction schedules
- tools and equipment appropriate to applying safe work practices, including computers, software and calculators
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be
obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Scope of work:**
- must include:
  - interpreting plans and specifications
  - sizing and documenting layout of vacuum sewage systems, including residential, commercial and industrial
  - may be for new projects or an existing structure being renovated, extended, restored or maintained.

**Design requirements** must include:
- acoustic performance
- architectural plans
- building specifications
- fire safety requirements
- flow requirements and sizing of pipework
- odour control
- owner requirements
- pipework identification
- Sewerage Code of Australia
- vacuum pumping station
- ventilation requirements.

**Vacuum sewerage system attributes** must include:
- availability
- cost
- flexibility
- installation requirements
- low water usage
- risks
- sewerage loading
- site conditions.

**Cost-benefit analysis:**
- compares the range of suitable materials and system choices available to enable cost-effective choices to be made without compromising integrity of project
- may include:
  - energy costs
  - expected design life
  - labour costs
  - material costs
  - safety factors
  - speed of installation
  - suitability of design.

**Statutory and regulatory requirements and relevant Australian standards and codes may include:**
- Acts, regulations and commonwealth, state or territory, and local government requirements
- Sewerage Code of Australia
- AS/NZS3500 National plumbing and drainage
- AS2200 Design charts for water supply and sewerage
- Environmental Protection Authority (EPA)
- National Construction Code
- other relevant Australian standards or codes.

**Manufacturer requirements may include:**
- material specifications
- collection and storage systems
- design and installation
- equipment installation
- pump installation
- selection of compatible sanitary fixtures
- technical manuals.

**Desktop study may include collection and interpretation of data for design purposes in:**
- architectural and building plans
- developer plans
- manufacturer data
- documents, which may include:
  - applications
- brochures
- forms
- policies
- sewer detail maps
- other reports as available.

**Performance requirements** may include:
- discharge requirements
- durability
- emergency storage and/or power backup
- longevity
- noise level
- self-cleaning ability
- sufficient capacity.

**Layout of pipework systems:**
- sewer infrastructure systems must include consideration of:
  - cover
  - grade
  - location of vacuum pump station
  - location vacuum sewage collection chambers
  - odour control
  - pipe access
  - ventilation
- high-rise building projects must include consideration of:
  - acoustic performance
  - amenity of the building
  - clipping and pipe support
  - location of pipework (fire rating of enclosure)
  - function of the building
  - impingement on floor heights
  - materials to be used
  - size of penetrations
  - type of building structure
- should not unduly affect building integrity and aesthetic appeal
- should include principles of economy, serviceability, durability and fit for use should be applied.
Fittings, valves and controls

include:

- fittings:
  - bends
  - elbows
  - inspection and maintenance access
  - tees
  - unions
- valves:
  - backflow prevention
  - isolating
  - non-return
  - strainers
  - vacuum diaphragm valve
- controls:
  - pneumatic control switch assembly
  - vacuum management system.

Pipe size calculations

must include:

- determining flow and fixture loadings
- EP density
- calculating gradient
- interpreting design charts and tables
- determining self-cleaning velocities
- manufacturer requirements
- probable simultaneous demand.

Pipe supports

may include:

- bedding
- bracket spacing
- concrete support
- corrosion protection
- cover
- hanging brackets
- manufacturer-recommended specific fixings
- material requirements
- provision for expansion
- thrust blocks
- wall and ceiling brackets.

Vacuum pumping station and pump control requirements

may include:

- access covers
- automatic controls
include:

- capacity
- corrosion-resistant materials
- detailing
- emergency storage
- emergency power supply
- high and low-level water controls and alarms
- impeller sizing
- inlet and outlet design requirements
- installation and mounting requirements
- macerator requirements
- odour control
- pneumatic control switch assembly
- pump selection
- pump sizing
- pumpwell sizing
- space requirements
- vacuum pump systems
- valve requirements
- ventilation
- warning system.

Materials:

- appropriate materials specified based on:
  - compatibility
  - cost effectiveness
  - durability
  - fit for purpose
- may include:
  - copper (Cu)
  - polyethylene (PE)
  - polypropylene (PP)
  - polyvinyl chloride (PVC)
  - stainless steel
  - other approved material.

Jointing methods may include:

- brazing
- electrofusion welding
- flanged
- mechanical joints
- rubber ring
- solvent cement welding
- threading.

**Installation requirements** may include:
- acoustic performance
- bedding
- pipe protection, which may include:
  - cover
  - corrosion
  - impact
- grade
- level of workmanship.
- fire rating
- manufacturer-recommended specific fixings
- pipe support
- provision for pipe movement
- serviceability and access.

**Computer software packages** may include:
- manufacturer software
- proprietary design software.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use of material
  - capital outlay/energy usage comparison
  - positive effect on the environment in regard to no potential overflow or leakage
  - water efficient
  - consideration of the Green Building Council of Australia rating scheme
  - local environment consideration overflow disposal/reuse.

**Plans:**
- may include:
  - axonometrics
  - cross-sections
  - details
  - elevations
• isometrics
• schematics
• site
• sections
• may be produced using:
  • computer generation
  • drawing equipment.

**Specification** includes:
• access chambers (manholes)
• bedding
• commissioning
• concrete support and detailing specialised components
• jointing
• manufacturer requirements
• materials
• odour control
• pump rising main
• safety (WHS)
• selection of compatible sanitary fixtures
• support
• testing
• vacuum pump station
• vacuum sewage collection chambers
• vacuum sewer mains
• ventilation
• workmanship.

**Testing** may include:
• compressed air test
• flow testing
• hydrostatic test
• inspection checklist
• performance
• vacuum
• quality assurance (QA) audit.

**Commissioning schedule** must include:
• system certification
• check for foreign material
• checking leaks
• emergency procedures
• system defects
• system functions as per design.

*Operation and maintenance manual* includes:

• as installed drawings
• results of commissioning test
• certification documentation
• maintenance schedules
• manufacturer brochures and technical information
• operating procedures.

**Unit Sector(s)**

Not applicable.
CPCPRF2022A Select and install roof sheeting and wall cladding

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPRF2012A

Unit Descriptor
This unit of competency specifies the outcomes required to select and install roof sheeting, steel battens and wall cladding for roofs. It includes the selection and installation of non-metallic roof materials associated with metal roofing (excluding roof tiles and slate) and of insulation materials.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
with the evidence guide.

Elements and Performance Criteria

| 1  | Prepare for work. | 1.1 | Plans and specifications are obtained from site inspection. |
|    |                  | 1.2 | **Work health and safety** (WHS) and **environmental requirements** selecting and installing roof sheeting and wall cladding are adhered to throughout the work. |
|    |                  | 1.3 | **Quality assurance requirements** are identified and adhered to according to workplace requirements. |
|    |                  | 1.4 | Tasks are planned and sequenced in conjunction with others involved in or affected by the work and **statutory and regulatory authorities’ requirements**. |
|    |                  | 1.5 | **Tools and equipment**, including personal protective equipment, are selected and checked for serviceability. |
|    |                  | 1.6 | Work area is prepared to support efficient selection and installation of **roof sheeting** and wall cladding. |

| 2  | Identify insulation requirements. | 2.1 | Level of insulation from rain and other noise, condensation control and heat transfer reduction is determined. |
|    |                                  | 2.2 | **Installation** method, insulation supports and insulation materials are identified to meet performance requirements, plans, specifications, regulatory authorities’ requirements and relevant **information**. |
|    |                                  | 2.3 | Quantity and type of **insulation materials** required are calculated from design drawings and specifications in compliance with local authorities’ requirements. |

| 3  | Select sheeting, cladding and non-metallic | 3.1 | Appropriate roof sheeting and wall cladding are identified to comply with design specifications. |
|    |                                             | 3.2 | Quantity and type of manufactured roof coverings and/or |
3.3 Manufactured non-metallic roof materials are identified from plans and specifications and verified as compliant with design requirements and regulatory authorities' requirements.

3.4 Proposed roof and wall coverings, sealant, non-metallic materials, fixing materials, roofing and catchments are selected and checked for compatibility.

3.5 *Materials*, including insulation, are identified, ordered and collected according to workplace procedures.

3.6 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and *faults are reported*.

4  Install roof sheeting or wall cladding.

4.1 Safety mesh and thermal insulation are fixed according to relevant Australian standards, job specification and manufacturer requirements.

4.2 Sheets are marked and trimmed prior to fixing and cut edges are treated according to manufacturer specifications.

4.3 Sheets, cladding and non-metallic materials are fixed in compliance with relevant Australian standards and manufacturer specifications.

4.4 *Sustainability principles and concepts* are applied throughout the installation.

5  Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete written workplace documentation
  - document scope of work and work practices
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - select and install non-metallic roof materials associated with metal roofing (excluding roof tiles and slate) and insulation materials
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of selecting and installing roof sheeting and wall cladding
- relevant WHS regulations and fall protection codes and requirements
- relevant statutory requirements related to installing roof sheeting and wall cladding, including non-metallic materials
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the installation of roof coverings

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to selecting and installing roof coverings and wall cladding
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, calculating the requirements and selecting and installing roof sheeting, wall cladding and insulation for two roof structures, each roof structure being a minimum of 4 square metres area, one of which incorporates 2 square metres of non-metallic roof sheeting
- both installations may include insulation, flashings and cappings, using the pierced and concealed fastening methods, ensuring:
  - application of sustainability principles and
Concepts throughout the installation
- correct identification of requirements and details of proposed installation
- correct fit of the completed installation
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the
Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate,
accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- elevated work platforms
- fall protection equipment
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
- measuring equipment.

**Roof sheeting** may include:
- metal and non-metallic (clear and coloured) sheets
- other approved materials.

**Installation** may include:
- fitting safety mesh and rainwater fittings.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to selecting and installing roof sheeting and wall cladding
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Insulation materials** may include:
- batts
- interlocking sections
- loose fill
- rolls.

**Materials** for selecting and installing roof sheeting and wall cladding may include:

- approved roof battens
- cappings
- fixings and fasteners
- flashings
- insulation, including:
  - fibreglass
  - laminate
  - polyethylene
  - reflective foil
  - straw
  - wool
- insulation supports, including:
  - plaster board
  - timber board
  - wire mesh
- metal roof covers of concealed or pierce fixed types
- moulds
- plastic building sheets for walls and roofs
- rain water goods, including:
  - aluminium
  - copper
  - fibreglass
  - polycarbonate
  - stainless steel
  - steel
  - zinカルme
  - rivets and sealants
  - self drilling and tapping screws
  - trims
  - other approved materials.

**Fault reporting:**

- may be written or verbal
- is to be according to company's workplace procedures.
Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

CPCPRF2023A Collect and store roof water

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPRF2013A

Unit Descriptor
This unit of competency specifies the outcomes required to determine storage requirements and to plan, prepare and install storage tanks and related piping for the collection and storage of roof water.

The unit requires the installation of water storage tanks of at least 1000 litres capacity.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
Elements and Performance Criteria

1 Identify water storage system requirements.

1.1 Plans, specifications and any special instructions are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with *collecting and storing roof water* are adhered to throughout the work.

1.3 *Quality assurance requirements* for company operations are identified and adhered to.

1.4 Site's annual rainfall is determined from meteorological or other relevant data.

1.5 Roof catchment area is determined from plans or site inspection.

1.6 Water consumption requirements for the installation are determined.

1.7 Total water storage requirements for the installation are determined.

1.8 Criteria for *storage tanks*, gutters, downpipes and other system components are determined according to relevant Australian standard and other *information*.

2 Plan and prepare for installation.

2.1 Required materials are identified, ordered and collected according to workplace procedures.

2.2 Work is planned in conjunction with others involved in or affected by the work.

2.3 *Materials* are checked for compliance with docket and order form and for acceptable condition, and *faults are reported*.

2.4 Work area and materials are prepared to support efficient installation.
2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 **Install storage system.**

3.1 Set out complies with design drawings or instructions.

3.2 Preparatory work, including *installation* of tank stand or standing, is carried out to specification without damage to surrounding structures or existing services.

3.3 System is installed according to job specification and *statutory and regulatory authorities’* requirements.

4 **Clean up.**

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 *Tools and equipment* are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

## Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
• numeracy skills to:
  • apply calculations and measurements
  • interpret data
• planning and organising skills to:
  • plan and set out work
  • plan work with others
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• job safety analysis (JSA) and safe work method statements (SWMS)
• procedures for commissioning water storage tanks for use
• processes for accessing information and for calculating material requirements
• properties of water, including:
  • effect of gravity and atmospheric pressure
  • procedures for maintaining water quality
  • sources of contamination and impurities
• regulations and requirements pertaining to collecting and storing drinking water and non-drinking water
• relevant statutory requirements related to collecting and storing roof water
• SI system of measurements
• water storage installation processes
• workplace and equipment safety requirements

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment This unit of competency could be assessed in the
workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications for determining requirements, planning and installing storage tanks for drinking water
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, completing the following in respect of roof water collection and storage systems:
  - calculate the water catchment area of a roof, the gutter and downpipe materials required and the amount of water storage required for a given job
  - determine system requirements from plans and specifications according to local authorities’ requirements
  - planning the layout and installation of a storage tank of not less than 1000 litres capacity, incorporating an inlet connection and a first flush device from a roof catchment area, and an overflow to be connected to an approved stormwater point of discharge, ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed storage
    - correct selection and use of appropriate processes, tools and equipment
    - completing all work to specification
    - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
Service lines
surrounding structures and facilities
trip hazards
use of tools and equipment
work site visitors and the public
working at heights
working in proximity to others
use of firefighting equipment
use of first aid equipment
workplace environment and safety.

Environmental requirements cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

Roof water collected and stored may be for:

- drinking or non-drinking purposes.

Quality assurance requirements may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Storage tanks may be of:

- any authorised material.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
• plumbing regulations
• relevant Australian standards
• safe work procedures relating to determining, preparing and installing collection and storage systems for roof water
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Materials** for installing storage tanks are to include:

- water storage tanks, and components of authorised materials that comply with local authorities’ requirements, such as:
  - coated steel materials
  - metal guttering
  - PVC
  - sealants
  - tank stand.

**Fault reporting:**

- may be written or verbal
- is to be according to company’s workplace procedures.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - rainwater harvesting
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

**Installation** covers:

- both gravity and pump retrieval systems.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.
Tools and equipment may include:

- hand and power tools
- ladders
- levelling equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - excavation equipment
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
- measuring equipment.

covering. calculations.

3.2 Method of fabrication, tools and machinery for fabrication are determined to suit job requirements.

3.3 Roof covering is marked out according to drawings, patterns, or calculations and prefabricated.

3.4 Components are marked and packaged for delivery to point of installation.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice, and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete written workplace documentation
  - develop materials list
  - read and interpret:
• documentation from a variety of sources
• plans and specifications
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• capillary action, thermal expansion and fabrication techniques to prevent leaking installations
• characteristics of various metals and finishes
• design concepts and performance measures for curved roof coverings
• electrolysis and problems associated with the use of dissimilar metals
• job safety analysis (JSA) and safe work method statements (SWMS)
• processes of designing and fabricating curved roof coverings
• relevant statutory and regulatory authority requirements related to metal roofs
• SI system of measurement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to
A person who demonstrates competency in this unit
demonstrate competency in this unit

must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications for the design and fabrication of curved roof coverings
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of a bull nosed verandah roof incorporating one internal and one external angle, designing and fabricating the curved roof coverings, ensuring:
  - application of sustainability principles and concepts
  - correct identification of design criteria and fabrication requirements
  - fabrication conforms with the design requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement

  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk
management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
- drafting equipment
- hand and power tools
- lifting and load shifting equipment, including:
  - chain blocks
  - forklifts
  - hand trolleys
  - hoists and jacks
  - rollers
- machinery for shaping the roof material
- measuring equipment.

Fault reporting:
- may be written or verbal
- is to be according to company workplace procedures.

Curved roof covering may be:
- barrel shaped
- concave
- convex
- hyperbolic
- paraboloid.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly
those pertaining to:
• building codes
• WHS and environmental requirements
• plumbing regulations
• relevant Australian standards
• safe work procedures relating to the design, and fabrication of coverings for curved roofs
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

Fabrication patterns may be:
• actual size or scaled.

Sustainability principles and concepts:
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient energy use
  • efficient use and recycling of material
  • disposing of waste material to ensure minimal environmental impact
  • selecting appropriate components to ensure minimal environmental impact.

Materials may include:
• drawing materials
• manufacturer catalogues and specifications
• metal roof sheeting of concealed or fixed type and accessories.

Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1 **Prepare for work.**

1.1 Plans and specifications are obtained and confirmed by site visit.

1.2 *Work health and safety* (WHS) and *environmental requirements* materials handling are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 **Tools and equipment**, including personal protective equipment and barricades and signs, are selected and checked for serviceability.

1.5 Work area is prepared to support efficient receipt of roofing materials.

2 **Plan delivery.**

2.1 Plans, specifications, *material* quantity details and other relevant *information* are interpreted to determine amount and type of material to be delivered to site.

2.2 Site is visited to determine capacity, identify risks and hazards, and identify load-handling methods and techniques.

2.3 Spot load limits on roof frame structure are obtained from structural engineer.

2.4 Loads are sequenced according to job requirements and work site capacity.

2.5 Orders are placed specifying items, quantities and sequence of delivery of each load.

2.6 Deliveries are planned and sequenced in conjunction with others involved in or affected by their arrival.

3 **Receive delivery**

3.1 Employees are informed of delivery process.
of materials.

3.2 Access to site for crane and other support vehicles and equipment is cleared and provided.

3.3 Delivery sites and spot load sites and material securing equipment are prepared.

3.4 Safety barricades and signs are positioned.

3.5 Loads are moved from delivery vehicle to spot load positions or other determined site location.

3.6 Loads are covered and secured to prevent damage according to standards and manufacturer requirements, and faults are reported.

3.7 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 Clean up.

4.1 Safety barricades and signs are removed.

4.2 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulation, codes of practice and job specification.

4.3 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.4 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
• inform employees of delivery process
• plan and sequence deliveries with others
• report faults
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
• numeracy skills to apply calculations
• planning and organising skills to:
  • coordinate receipt of deliveries of roofing materials to a work site
  • plan and set out work
  • sequence the delivery of materials
• relocating materials and securing them within the site
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• application of relevant regulations and workplace procedures
• deployment of relevant human and physical resources and facilities
• identification and correct use of equipment, processes and procedures
• job safety analysis (JSA) and safe work method statements (SWMS)
• methods of working and correct selection and use of equipment relevant to work activity
• relevant WHS regulations and fall protection codes and requirements
• relevant statutory requirements related to transportation and storage of roofing materials
• SI system of measurement
• techniques and procedures for delivery of roof plumbing materials
• workplace planning and estimation processes for delivery of roof plumbing materials

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to receiving roofing materials
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of a roofing project, assessing roofing material requirements, sequencing their delivery to correspond with a planned construction project, receiving the materials (including the location of spot points) and securing arrangements, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of their delivery
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or
Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

| 1 | Prepare for work. | 1.1 Plans and specifications are obtained and confirmed by site inspection. |
|   |                  | 1.2 *Work health and safety* (WHS) and *environmental requirements* associated with fabricating and installing roof drainage components are adhered to throughout the work. |
|   |                  | 1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements. |
|   |                  | 1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*. |
|   |                  | 1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability. |
|   |                  | 1.6 Work area is prepared to support the fabrication and installation of roof drainage components. |
| 2 | Identify installation requirements. | 2.1 Rainwater management system is identified as suitable for preventing rainwater penetration into building structure. |
|    |                       | 2.2 *Roof drainage components* required for installation are identified from drawings and specifications. |
|    |                       | 2.3 *Fabrication patterns* are drawn based on design and freehand sketch of roof drainage. |
|    |                       | 2.4 Quantity, type and sizing of drainage components, rainwater materials and accessories required are calculated from drawings and specifications in compliance with relevant Australian standards, local authorities’ requirements and relevant *information*. |
|    |                       | 2.5 Box gutter support system is fabricated according to relevant Australian standard. |
|    |                       | 2.6 *Materials* are identified from drawings, specifications, |
2.7 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and *faults are reported*.

3 Fabricate roof drainage components.

3.1 Method of fabrication, tools and machinery requirements are determined to suit job requirements.

3.2 Materials are marked out from drawings to fabricate roof drainage components.

3.3 Roof drainage components are fabricated in compliance with relevant Australian standards, drawings, specifications and site measurements.

3.4 Components are marked, packaged and prepared for delivery and installation according to workplace procedures.

4 Set out and install roof drainage components.

4.1 Components are checked for compliance with docket and order form and for acceptable condition, and arranged in order of installation.

4.2 Roof drainage components are set out to comply with job specifications and site measurements.

4.3 Structural supports are installed in compliance with job specifications.

4.4 Roof drainage components are jointed in compliance with job specifications and relevant Australian standards.

4.5 Roof drainage system is installed according to relevant Australian standards and job specifications.

4.6 *Sustainability principles and concepts* are applied throughout the installation.

4.7 System is performance tested for satisfactory installation and remedied.
5 Clean up.  

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to select, fabricate, joint and install gutter and downpipe systems to effectively drain a roof to an authorised discharge point
- technology skills to:
• access and understand site-specific instructions in a variety of media
• use mobile communication technology

Required knowledge
• capacity of fabrication machinery involved in the production of roof drainage components
• capillary action, thermal expansion and fabrication techniques to prevent leaking installations
• characteristics of various metals and finishes
• corrosion prevention treatment requirements of cut sheets
• design concepts and performance measures for roof drainage components
• electrolysis and problems associated with the use of dissimilar metals
• job safety analysis (JSA) and safe work method statements (SWMS)
• joining of materials
• processes of fabricating, jointing and fixing roof drainage components
• relevant WHS regulations and fall protection codes and requirements
• relevant statutory requirements related to fabricating and installing roof drainage components
• SI system of measurement
• types of fasteners, fixings and sealants and their application to the fabrication and installation of roof coverings

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person who demonstrates competency in this unit must be able to provide evidence of:
• locating, interpreting and applying relevant information, relevant Australian standards and specifications to the fabrication and installation of roof drainage components
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications of a roof-management system for a roofed area of at least 4 square metres, determining the requirements, selecting, fabricating and installing:
  • valley gutter
  • box gutter, to include a sump or rainhead and overflow
  • eaves gutter and downpipe system, complete with gutter supports, expansion joints and caps
• ensuring:
  • application of sustainability principles and concepts throughout the installation
  • correct identification of requirements and details of proposed installation
  • correct fit of the completed installation
  • correct selection and use of appropriate processes, tools and equipment
  • completing all work to specification
  • compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  • communicating and working effectively and safely with others.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the
Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements**

- environment policy
may include:

- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- drawing equipment
- fall protection equipment
- hand and power tools
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
  - measuring equipment.

Roof drainage components may include:

- box gutters
- downpipes
- eaves gutters
- gutter support system
- parapet gutters
- rainwater heads
- siphonic drainage downpipe systems and materials
- standing overflows
- sumps
- valley gutters.

Fabrication patterns may be:

- actual size or scaled.
Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to fabricating and installing roof drainage components
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Materials for fabricating and installing roof drainage components may include:
- fibreglass
- laminate
- metal gutter and structural supports
- metal rainwater goods
- metal roof covers of concealed or pierce fixed types
- metal self drilling and tapping screws
- plastic building sheets for walls and roofs
- polyethylene
- PVC sheet goods
- rivets and sealants
- thermal insulation of reflective foil
- roof tiles.

Fault reporting:
- may be written or verbal
- is to be according to company's workplace procedures.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
may include:
- rainwater harvesting
- efficient energy use
- efficient use and recycling of material
- correct handling of hazardous materials
- disposing of waste material to ensure minimal environmental impact
- selecting appropriate components to ensure minimal environmental impact.

CPCPRF3023A Fabricate and install external flashings

Modification History
Prerequisite unit changed
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPRF3013A

Unit Descriptor
This unit of competency specifies the outcomes required to fabricate and install external flashings for roof and ceiling installations.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Prepare for work.

1.1 Plans and specifications are obtained and confirmed by site inspection.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with fabricating and installing external flashings are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient fabrication and installation of *external flashings*.

### 2 Identify installation requirements.

2.1 External flashings to be installed are identified and working drawings and patterns are developed from job drawings, plans, specifications, site measurements and relevant *information*.

2.2 *Materials*, coatings, fixings, sealants and fasteners are checked for compliance with plans, specifications and standards and are compatible with adjacent materials and catchment.

2.3 Materials are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and *faults are reported*.

### 3 Fabricate and install external

3.1 External flashings are fabricated in compliance with standards, plans, specifications and site measurements.
flashings.  

3.2 Support framework is set out where required and fixed to comply with plans, specifications and manufacturer recommendations.

3.3 Thermal insulation, where required, is set and fixed according to plans, specifications and cladding manufacturer's recommendations.

3.4 *Sustainability principles and concepts* are applied throughout the installation.

4 Clean up.  

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
read and interpret:
  - documentation from a variety of sources
  - plans and specifications
numeracy skills to apply measurements and calculations
planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- design concepts and performance measures for various external flashings
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of fabricating and installing external flashings
- relevant WHS regulations and fall protection codes and requirements
- relevant statutory requirements related to installing external flashings
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the fabrication and installation of external flashings

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the fabrication and installation of external flashings
- applying safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- given the plans and specifications:
  - fabricate and install a minimum of 2 square metres of metal ceiling and associated soffits
  - fabricate and install metal flashings to include an apron, parapet, apron wall, hanging and step, each up to a length of 1.5 metres
  - install a metal fascia up to 2 metres in length, including one external angle and one internal angle
- all fabrication and installation, ensuring:
  - application of sustainability principles and concepts throughout the installation
  - correct identification of requirements and details of the proposed installations
  - correct fit of the completed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
realistic tasks or simulated tasks covering the minimum task requirements
relevant specifications and work instructions
tools and equipment appropriate to applying safe work practices
support materials appropriate to activity
workplace instructions relating to safe working practices and addressing hazards and emergencies
material safety data sheets
research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning
experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Work health and safety* is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

*Environmental requirements* cover:

- clean-up protection
water quality management and may include:

- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- Australian standards
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- National Construction Code
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- hand and power tools
- ladders
- levelling equipment,
- lifting and load shifting equipment, including:
  - chain blocks
  - cranes
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
  - measuring equipment
  - perimeter guard rails.

**External flashings** may include:

- metal ceilings
- associated soffits and fascias.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
memos
organisation work specifications and requirements
plans and sketches
regulatory and legislative requirements, particularly those pertaining to:
building codes
WHS and environmental requirements
plumbing regulations
relevant Australian standards
safe work procedures relating to fabricating and installing external flashings
signage
verbal, written and graphical instructions
work bulletins
work schedules, plans and specifications.

**Materials** for fabricating and installing external flashings may include:
cappings
flashings
insulation materials, such as foil laminate
lead
metal rainwater goods
metal self drilling and tapping screws
moulds
rivets and sealants
trims
other approved materials.

**Fault reporting:**
may be written or verbal
is to be according to company workplace procedures.

**Sustainability principles and concepts:**
cover the current and future social, economic and environmental use of resources
may include:
efficient use of material
efficient energy use
selecting appropriate components to ensure minimal environmental impact.

CPCPRF3024A Install roof components

Modification History
Prerequisite unit updated
Minor changes throughout unit, including addition of photovoltaic (solar) panels to range statement
Not equivalent to CPCPRF3014A

Unit Descriptor
This unit of competency specifies the outcomes required to select and install industrial type roofing components in roofs.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with selecting and installing industrial roof components are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

1.5 *Tools and equipment*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient selection and installation of *industrial roof components*.

2 Identify installation requirements.

2.1 Industrial roof components are identified from plans and specifications and are compatible with adjacent materials and other relevant *information*.

2.2 Proposed sealant, fixing materials, and roofing and flashing materials are selected and checked for compliance with plans, specifications and relevant Australian standards.

2.3 *Materials* are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with docket and order form and for acceptable condition, and *faults are reported*.

2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

2.6 Location of installation and opening size are identified from plans and manufacturer specifications.
2.7 Location is checked for obstructions that may affect the installation.

3 Install roof components.

3.1 Where required, the industrial component is erected to comply with manufacturer recommendations.

3.2 Industrial roof component is set out to comply with plans, specifications and site measurements.

3.3 Structural supports are installed to comply with plans and specifications.

3.4 Openings are prepared to comply with plans, specifications and relevant Australian standards.

3.5 Mullions, frames, baffles, sheeting and louvre blades are located and fixed to comply with manufacturer recommendations.

3.6 Component is installed to comply with plans, specifications and manufacturer requirements.

3.7 Flashing and waterproofing, including proprietary or purpose-made flashing, are installed to comply with relevant Australian standards, plans, specifications, manufacturer recommendations and regulatory authorities’ requirements.

3.8 Installation is performance tested and remedied as required.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete written workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of erecting and installing industrial roof components
- relevant WHS regulations and fall protection codes and requirements
- relevant statutory requirements related to installing roof components
• SI system of measurement
• types of fasteners, fixings and sealants and their application to the installation of roof components

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements, plan and install industrial components in roofs
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications of an industrial roof, determine the material requirements, selecting and installing two of the following components in a roof (one on a ridge line and another in roof sheeting, which may include insulation):
  • thermal vent or a skylight
  • non-mechanised ventilator unit
  • manual box-type louvre unit
  • continuous roof ventilator (ridge or slope mounted), ensuring:
    • application of sustainability principles and concepts
    • correct identification of requirements and details of proposed installations
  • completed installation must fit
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to
confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state

- handling of materials
- hazard control
and territory legislation and regulations and may include:

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - photovoltaic (solar) panels
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- cranes
- fall protection equipment
- hand and power tools
- ladders
- levelling equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolds
  - rollers
  - measuring equipment
  - perimeter guard rails.

**Industrial roof components** may be:
- continuous frame sheet type ridge or slope mounted ventilators
- continuous louvre blades, including single, double or triple pass blades
- dome lights and thermal vents
- manual and automated box type louvre units
- non-mechanical roof ventilator units
- ridge vents.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to selecting and installing industrial components in roofs
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.
Materials for installing industrial components in roofs are to include:

- cappings
- fixings and fasteners
- flashings
- insulation, including:
  - batt types
  - blanket
  - foil laminate
- metal rainwater goods
- moulds
- pop rivets and sealants
- roofing materials, including:
  - aluminium
  - colour coated steel
  - copper
  - fibreglass
  - polycarbonate
  - stainless steel
  - steel
  - zincalume
- self drilling and tapping screws
- trims.

Fault reporting:

- may be written or verbal
- is to be according to company's workplace procedures.

Sustainability principles and concepts:

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

CPCPRF3025A Install roof coverings to curved roof structures

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPRF3015A

Unit Descriptor
This unit of competency specifies the outcomes required to set out and install roofing to hyperbolic, paraboloid, barrel vault roof, curved roof and bull-nosed roof structures.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

3 Install roof coverings.

3.1 Safety mesh and thermal insulation are fixed according to relevant Australian standards, job specification and manufacturer requirements.

3.2 Sheets are marked and trimmed prior to fixing and cut edges are treated according to manufacturer specifications.

3.3 Roof covering is installed according to manufacturer specifications.

3.4 Roof covering is performance tested and remedied.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
- complete workplace documentation
- read and interpret:
  - documentation from a variety of sources
  - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- capillary action, thermal expansion and fabrication techniques to prevent leaking installations
- corrosion prevention treatment requirements of cut sheets
- electrolysis and problems associated with the use of dissimilar metals
- job safety analysis (JSA) and safe work method statements (SWMS)
- processes of fixing covering to curved roof structures
- relevant WHS regulations and fall protection codes and requirements
- relevant statutory requirements related to installing roof coverings to curved roof structures
- SI system of measurement
- types of fasteners, fixings and sealants and their application to the installation of roof coverings

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to determine requirements, and plan the layout and installation of roof coverings to curved roof structures
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, calculating the requirements and installing the roof covering to a bull-nose or curved roof structure, incorporating one internal and one external corner, ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements and details of proposed installation
  - covering fits the structure
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.
Quality assurance requirements may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- cranes
- fall protection equipment
- hand and power tools
- ladders
- levelling equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists
  - restricted height scaffolds
  - rollers
  - measuring equipment.

Curved roof structure may be:

- barrel shaped
- concave
- convex
- hyperbolic
- paraboloid.

Information may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
memos
organisation work specifications and requirements
plans and sketches
regulatory and legislative requirements, particularly those pertaining to:
- building codes
- WHS and environmental requirements
- plumbing regulations
relevant Australian standards
safe work procedures relating to installing roof coverings to curved roof structures
signage
verbal, written and graphical instructions
work bulletins
work schedules, plans and specifications.

**Materials** for installing roof coverings to curved roofs may include:
- blanket and batt types
- curved metal roof covers of concealed or pierce fixed types
- metal rain water goods
- metal self drilling and tapping screws
- plastic building sheets for walls and roofs
- rivets and sealants
- thermal insulation of reflective foil laminate
- other approved materials.

**Fault reporting:**
- may be written or verbal
- is to be according to organisational workplace procedures.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - thermal heat reflection and retention
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure
minimal environmental impact.

CPCPRF4011B Design and size roof drainage systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPRF4011A

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document the layout of components of roof drainage systems.

Application of the Unit
Site location for work application will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for planning.
   1.1 Nature and scope of planning task are identified and confirmed.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with planning, sizing and documenting the layout of roof drainage systems are adhered to throughout the work.
   1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work.
   1.4 *Tools and equipment* required for planning, sizing and documenting the layout of roof drainage systems, including personal protective equipment, are selected and checked for serviceability.
   1.5 Work area in which planning process is to be conducted is prepared.

2 Identify system requirements.
   2.1 *Information* and specifications for the required work are obtained and confirmed, if necessary by site inspection.
   2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work, including *statutory and regulatory authorities’ requirements*.
   2.3 Roof catchment areas and design flows are determined from rainfall data and relevant Australian standards.
   2.4 Quantity and size of gutters, sumps, rain heads and downpipes are determined according to relevant Australian standards, plans and specifications.

3 Plan system layout.
   3.1 Layout of roof drainage system is planned according to development plans, specifications, relevant Australian standards and workplace procedures.
   3.2 Required *materials* and *components of roof drainage system* are specified and optimised according to relevant Australian standards from the proposed design.
3.3 Plans are recorded according to regulatory authorities' and workplace requirements.

3.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 **Restore work area.**

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - regulations, relevant Australian standards, plans, specifications and drawings
  - record plans
  - identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
- plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- accessing relevant information sources for the work activity and the processes for the calculation of catchment areas and design flows
- capacity of fabrication machinery involved in the production of roof draining components
- Australian standards applicable to roof drainage
- capillary action, thermal expansion and fabrication techniques to prevent leaking
- characteristics of various metals and finishes
- computers and computer-aided design (CAD) software
- corrosion prevention treatment requirements of cut sheets
- design concepts and performance measures for various roof draining components for all types of roofs
- electrolysis and problems associated with the use of dissimilar metals
- implications of climate variations for the design of roof draining components
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of planning, sizing and documenting the layout of roof drainage systems
- relevant statutory requirements related to planning, sizing and documenting the layout of roof drainage systems
- SI system of measurements
- workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the planning, sizing and layout of roof drainage systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to design, size and document the layout of a roof drainage system for three varied roof types, including at least one type incorporating eaves gutter and one type for a commercial building incorporating box gutters, sumps or rain heads, ensuring:
  - application of sustainability principles and concepts
  - correct identification of details of the plan
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the
competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may

- clean-up protection
- stormwater protection
include:

- waste management.

**Tools and equipment** may include:

- computers running appropriate CAD software
- drawing instruments
- ladders
- laser measuring devices
- measuring equipment.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - National Construction Code
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including:
  - AS/NZS3500 National plumbing and drainage: Part 3.2 Stormwater drainage
  - SAA and SNZ HB 114:1998 Guidelines for design of eaves and box gutters
- safe work procedures relating to planning, sizing and documenting the layout of roof drainage systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Materials for design of roof** include:

- drafting and drawing materials
drainage systems may include:
- plans and specifications
- manufacturer catalogues and specifications.

**Components of roof drainage system** may include:
- downpipes
- gutters
- rain heads
- sumps.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient design principles are used throughout to minimal environmental impact
  - efficient use of material are incorporated in the design including recycling of material
  - rainwater harvesting concepts are applied
  - efficient energy usage
  - disposing of waste material to ensure minimal environmental impact.

CPCPSN3011B Plan layout of a residential sanitary plumbing system

Modification History
Minor changes throughout the unit
Equivalent to CPCPSN3011A

Unit Descriptor
This unit of competency specifies the outcomes required to plan the layout, size and install a sanitary plumbing system for residential buildings.

Application of the Unit
Site location for application of the design will be domestic, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Not applicable

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
# Elements and Performance Criteria

## 1 Prepare for work.

of practice and job specification.

3.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

3.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials:
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology
Required knowledge

- application of various sanitary and drainage fixtures and appliances
- characteristics and the application of different pipe systems, including their fittings and fixture supports, and fixing and joining techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- principles of drainage
- principles of sanitary plumbing
- process of planning the layout of sanitary plumbing systems
- relevant statutory requirements related to sanitary plumbing systems
- SI system of measurements
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the layout of a sanitary plumbing system for a residential type building
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout for a sanitary plumbing system of a three-storey residence, which includes a range of residential fixtures, connecting all fixtures
to a legal point of discharge, ensuring:
- sustainability principles and concepts are applied
- correct identification of details of the plan
- appropriate sequencing of work and identification of materials and resources required
- correct selection and use of appropriate processes, tools and equipment
- completing all work to specification
- compliance with regulations, relevant Australian standards and organisational quality procedures and processes
- application of sustainability principles and concepts
- communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to
modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training
Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- electrical risks and hazards
- handling of materials
- hazard control
- hazardous materials and substances
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- use of firefighting equipment
- use of first aid equipment
- use of tools and equipment
- workplace environment and safety.

**Environmental requirements** may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.
Fixtures are to include:  
- all authorised residential fixtures.

Information may include:  
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- maps
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to the design of sanitary plumbing systems
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Sanitary plumbing system may include:  
- elevated pipework
- fully vented
- fully vented modified
- revass
- single stack
- single stack modified
- other approved methods.

Materials may include:  
- drawing instruments
- measuring equipment
- plans, including building plan, sanitary plan and drainage plan.

Sustainability principles and  
- cover the current and future social, economic and environmental use of resources
**concepts:**

- may include:
  - efficient energy use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

CPCPSN3022A Install discharge pipes

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPSN3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install pipework from soil and wastewater fixtures to a stack or drain.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained and fixture position is determined.

1.2 Work health and safety (WHS) and environmental requirements associated with installing sewage discharge pipes are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for installing sewage discharge pipes, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of sewage discharge pipes.

2 Identify installation requirements.

2.1 Position of discharge pipes is determined according to plans and specifications, relevant Australian standards, site requirements and other relevant information and does not cause damage or interference to surrounding structures.

2.2 Quantity and type of materials required are calculated from design drawings and specifications and comply with relevant Australian standards and authorities’ requirements.

2.3 Allowances for fabrication and assembly are determined and transferred.

2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.5 Materials and equipment are checked for compliance with relevant Australian standards, docket and order forms, and for acceptable condition.
2.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Install and test pipe system.  

3.1 *Pipe system* is set out to comply with plans, specifications and relevant Australian standards.

3.2 Fixings and supports are installed to manufacturer recommendations, job plans and specifications, and relevant Australian standards.

3.3 Pipes are installed and jointed according to relevant Australian standards, without damage or distortion to pipework, surrounding environment and other services.

3.4 Pipe system is tested to comply with relevant Australian standards and adjusted.

4 Clean up.  

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - report faults
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• literacy skills to:
  • complete workplace documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
  • record plans
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• characteristics and application of different materials, pipe fittings and supports, including fixing and joining techniques
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• process of installing sewage discharge pipes
• processes for accessing information and for calculating material requirements
• properties and characteristics of sewage, including temperature implications and discharges
• relevant statutory requirements related to installing discharge pipes
• SI system of measurements
• standards applicable to the installation
• workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.
Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install sewage discharge pipes
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications and using any two approved materials, installing two fixture discharge pipes:
  - direct to a below-ground drain
  - direct to drain via elevated pipework, which includes at least one expansion fitting
  - waste fixture to a drain via a gully (a combination of soil and waste fixtures must be included), ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed installations
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

3 Fabricate, install and test pipe system.

3.1 *Plumbing system* is set out to comply with job plans, specifications and relevant Australian standards.

3.2 Fixings and supports are installed to manufacturer recommendations, relevant Australian standards, plans and specifications.

3.3 Pipes are fabricated, installed and jointed in specified location according to job plans, specifications and relevant Australian standards, without causing damage or distortion to pipework or surrounding environment and other services.

3.4 Pipe system is tested to comply with relevant Australian standards and adjusted.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and the application of different pipe fittings and fixture supports, including fixing and joining techniques
- classification of assembly types and identification of assembly components
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- materials handling processes
- performance measures and characteristics of the materials used in the required soil and waste stack assembly
- process of fabricating and installing sanitary stacks
- processes for accessing information and for calculating material requirements
- product and service standards applicable to the installation
- properties of soil and waste discharges, including temperature and corrosive discharges
- relevant statutory requirements related to installing stacks, discharge pipes and vents
- SI system of measurements
- systems of sanitary plumbing

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:
- given instructions, locating, interpreting and applying relevant information, Australian standards and specifications to fabricate and install a sanitary stack for a residential building.
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, fabricating and installing a sanitary stack system of plumbing, to connect future fixtures from two floor levels; with fixtures to include a WC, bath, basin, shower and floor waste gully at each floor with fabrication of at least two branches in copper tube (minimum of DN50), ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installation
• correct selection and use of appropriate processes, tools and equipment
• completing all work to specification
• compliance with regulations, relevant Australian standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to
confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state

- handling of materials
- hazard control
and territory legislation and regulations and may include:

- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - dirt mounds
  - electricity
  - hazardous materials and substances
  - other machines
  - recently filled trenches
  - surrounding structure and facilities
  - traffic control
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.
Tools and equipment may include:
- dropsaw
- hacksaw
- hand and power tools
- heating equipment
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolding
  - rollers
  - measuring equipment
  - threading and bending equipment.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to fabricating and installing sanitary stacks
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

Materials may include:
- copper (Cu)
- polymer
- cast iron
- other approved materials.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

**Plumbing systems** may include:
- elevated pipework
- fully vented
- fully vented modified
- revass
- single stack
- single stack modified
- other approved methods.

CPCPSN3024A Install and fit off sanitary fixtures

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPSN3014A

Unit Descriptor
This unit of competency specifies the outcomes required to install and fit off sanitary fixtures. It applies to the installation of sanitary plumbing, including the connection of discharge pipes to sanitary plumbing and drainage, including soil and waste fixtures.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
Elements and Performance Criteria

1  Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with installing and fitting off sanitary fixtures are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.
   1.5 Tools and equipment, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient installation and fitting off of sanitary fixtures.

2  Identify installation requirements.
   2.1 Position of sanitary fixtures is determined according to plans, specifications and site requirements.
   2.2 Quantity and type of materials, including pipe materials required, are calculated from design drawings and specifications.
   2.3 Materials and equipment are identified, ordered and collected according to workplace procedures.
   2.4 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.
   2.5 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3  Install and fit off
   3.1 Set out is checked for compliance with design drawings, manufacturers’ instructions, relevant authorities’
sanitary fixtures. Requirements and information.

3.2 Fixtures are positioned and installed to comply with plans, specifications and manufacturer requirements.

3.3 Fixtures, components and pipework are assembled, installed and tested to manufacturer requirements, job specification and relevant Australian standards.

3.4 Fixtures are installed and connected without damage or distortion to fixture, pipework, surrounding environment or other services.

3.5 Completed installation is checked for correct functioning and compliance with specifications.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace written documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
  • record written plans
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to install sanitary plumbing, including connecting discharge pipes to sanitary plumbing and drainage and installing sanitary fixtures
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• characteristics and the application of different pipe fittings and fixture supports, including fixing and joining techniques
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• performance measures and characteristics of sanitary fixtures
• process of installing and fitting off sanitary fixtures
• processes for accessing information and for calculating material requirements
• relevant statutory, authority and manufacturer requirements related to installing and fitting off sanitary fixtures
• SI system of measurements
• workplace and equipment safety requirements

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based
assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install and fit off sanitary fixtures
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, setting out, installing and fitting off the following sanitary fixtures: a water closet, shower base, sink, bath, basin, dishwashing machine, and a wall hung urinal, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of the proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - services
  - surrounding structure and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.
Environmental requirements may include:

- clean-up protection
- waste management.

Quality assurance requirements may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:

- hand and power tools
- heating, cutting and bending equipment
- ladders
- lifting and load shifting equipment, including:
  - chain blocks
  - elevated work platforms
  - forklifts
  - hand trolleys
  - hoists and jacks
  - restricted height scaffolding
  - rollers
- measuring equipment.

Sanitary fixtures are as authorised and may include:

- basins
- baths
- clothes washing machines
- dishwashing machines
- shower bases
- sinks
- spa baths
- troughs
- wall hung urinals
- water closets.
**Materials to connect sanitary fixtures** may include:

- copper (Cu)
- copper alloy
- high density polyethylene (HDPE)
- polyvinyl chloride (PVC)
- sanitary fixtures
- stainless steel pipes
- other approved materials.

**Pipe materials** may include:

- copper
- copper alloy
- polymer
- stainless steel pipes
- other approved materials.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
  - use of sustainable water efficient products
  - correct handling of hazardous materials
  - disposing of waste material to ensure minimal environmental impact
  - selecting appropriate components to ensure minimal environmental impact.

CPCPSN3025A Install pre-treatment facilities

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPSN3015A

Unit Descriptor
This unit of competency specifies the outcomes required to install pre-treatment facilities designed to intercept and retain prohibited discharges to the sanitary plumbing and drainage system.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italics text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
Elements and Performance Criteria

1 Prepare for work

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing pre-treatment facilities are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

1.5 *Tools and equipment* for installing pre-treatment facilities, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of *pre-treatment facility*.

2 Identify installation requirements

2.1 Pre-treatment facility is identified to meet the prohibited discharge requirement, and located to meet installation requirements, plans, specifications, authorities' requirements and relevant *information*.

2.2 Materials are identified, ordered and collected according to workplace procedures.

2.3 Materials are checked for compliance with docket and order form and for acceptable condition.

2.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

3 Install and test pre-treatment

3.1 Set out is checked for compliance with plans, specifications and authorities' requirements.
3.2 Existing or required pipework is verified as compliant with relevant Australian standards, and manufacturer and authorities’ requirements.

3.3 Pre-treatment facility is installed according to authorities’ requirements and manufacturer specifications.

3.4 Installation is tested for correct functioning and compliance with specifications and authorities’ requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace written documentation
• read and interpret:
  • documentation from a variety of sources
  • plans and specifications
  • record written plans
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to install pre-treatment facilities to intercept and retain prohibited discharges to the sanitary plumbing and drainage system
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• classification of assembly types and identification of assembly components
• fixing and joining techniques and methods
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• materials handling processes
• process of installing pre-treatment facilities
• processes for accessing information and for calculating material requirements
• prohibited waste discharges to the sewer and their properties and effects
• relevant statutory requirements related to installing pre-treatment facilities
• SI system of measurements
• types and purpose of pre-treatment facilities
• workplace and equipment safety requirements

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install and test pre-treatment facilities
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, locating, installing and testing two different pre-treatment facilities from a sanitary plumbing or drainage system, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of the proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
tools and equipment appropriate to applying safe work practices
support materials appropriate to activity
workplace instructions relating to safe working practices and addressing hazards and emergencies
material safety data sheets
research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- excavation tools
- hand and power tools
- measuring equipment
- tools and equipment, including:
  - lifting and load shifting equipment
    - chain blocks
    - forklifts
    - hand trolleys
    - hoists and jacks
    - mechanical excavation equipment
    - rollers
    - trench shoring equipment.

**Pre-treatment facilities**:

- may include:
  - acid traps and neutralisers
  - cooling interceptors
  - grease traps
  - plaster and clay traps
  - silt interceptors
  - solid traps
• solvent and oil interceptors
• may be installed in such locations as:
  • butchers
  • carparks
  • dental surgeries
  • food halls and outlets
  • hospitals
  • kitchens
  • laboratories
  • mining sites
  • processors of meat, chicken, milk and smallgoods
  • vehicle servicing and repair establishments
• may be permanent or temporary (portable).

**Information** may include:

• charts and hand drawings
• instructions issued by authorised organisational or external personnel
• job drawings
• manufacturer specifications and instructions
• material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing pre-treatment facilities

CPCPSN3026A Install sewerage pumpsets

Modification History
Minor change to unit title 
Prerequisite unit updated 
Changes to performance criteria, required skills and knowledge, range statement and critical aspects 
Not equivalent to CPCPSN3016A 

Unit Descriptor
This unit of competency specifies the outcomes required to install sewerage pumps, and install and test small bore macerators.

Application of the Unit
Site location for work application may be either domestic or commercial and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
with the evidence guide.

Elements and Performance Criteria

1  Prepare for work.
   1.1 Plans and specifications are obtained.
   1.2 Work health and safety (WHS) and environmental requirements associated with installing sewerage pumpsets are adhered to throughout the work.
   1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.
   1.5 Tools and equipment for installing sewerage pumpsets, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient installation of sewerage pumpsets.

2  Identify installation requirements.
   2.1 Location of pump is determined following site inspection.
   2.2 Pump base requirements are determined from plans and specifications and other relevant information.
   2.3 Materials and equipment are identified, ordered and collected according to workplace procedures.
   2.4 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.
   2.5 Sustainability principles and concepts are applied throughout the installation.

3  Install sewerage
   3.1 Pump is set out to comply with plans, specifications, site requirements or job instructions, with consideration
pump equipment.

3.2 Pumping equipment is installed in specified locations using recommended fixings.

3.3 Pipework and pump controls are connected according to plans, specifications, manufacturer requirements and standards.

3.4 Pumping equipment and related pipework are tested according to standards and manufacturer recommendations, and test data is recorded in required format.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to state and territory legislation and workplace procedures.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
  - literacy skills to:
• complete workplace written documentation
• read and interpret:
  • documentation from a variety of sources
  • plans and specifications
• record written plans
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to install and test sewerage pumps and small bore macerators
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• atmospheric pressure
• fixing techniques
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• performance measures for various sewerage pumpsets
• process of installing sewerage pumpsets
• properties of sewage, including pressure and flow rates
• relevant statutory requirements related to installing sewerage pumpsets
• SI system of measurement
• standards applicable to the installation
• use of test equipment and procedures
• workplace and equipment safety requirements

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and
services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test pre-treatment facilities
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, installing a small bore macerator from a water closet to an approved point of discharge up to 4 metres away, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of the proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.
• Validity and sufficiency of evidence requires that:
  • competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
  • where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
  • all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the
Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - identifying and testing for electrical hazards
  - dirt mounds
  - hazardous materials and substances
  - other machines
  - recently filled trenches
  - surrounding structure and facilities
  - traffic control
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
Environmental requirements cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

Quality assurance requirements may include:
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

Statutory and regulatory authorities include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
- hand and power tools
- measuring and alignment tools
- tools and equipment, including:
  - chain blocks
  - concrete tools
  - forklifts
  - hand trolleys
  - hoists and jacks
  - lifting and load shifting equipment
  - rollers.

Sewerage pumpsets may include:
- compressed air injectors
- small bore macerators
- wet wells, including submersible and non-submersible pumps.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
• memos
• organisation work specifications and requirements
• plans and sketches
• regulatory and legislative requirements, particularly those pertaining to:
  • building codes
  • WHS and environmental requirements
  • plumbing regulations
• relevant Australian standards
• safe work procedures relating to installing sewerage pumpsets
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Materials may include:**
• sewerage pumpsets, motors and fittings.

**Sustainability principles and concepts:**
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient use of material
  • correct disposal of waste
  • selecting appropriate components to ensure minimal environmental impact.

**Pump controls may be:**
• automatic controls, which may be float, level or flow switches
• manual.

CPCPSN4011B Design and size sanitary plumbing systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPSN4011A

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document the layout of sanitary plumbing systems for multi-floor buildings.

Application of the Unit
Site location for application of the plans will be residential or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for planning.

1.1 Nature and scope of planning task are identified and confirmed.

1.2 Work health and safety (WHS) and environmental requirements associated with planning, sizing and documenting the layout of sanitary pipework and fixtures are adhered to throughout the work.

1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.4 Tools and equipment required for planning, sizing and documenting the layout of sanitary pipework and fixtures, including personal protective equipment, are selected and checked for serviceability.

1.5 Work area in which planning process is to be conducted is prepared.

2 Identify system requirements.

2.1 Information and specifications for required system work are obtained and confirmed, if necessary by site inspection.

2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.

2.3 Quantity, location and type of fixtures are determined from design drawings, plans and elevations.

2.4 Fixture unit loading is determined according to relevant Australian standards and regulatory authorities’ requirements.

2.5 System is sized according to relevant Australian standards, and regulatory authorities’ and workplace requirements.

3 Plan system layout.

3.1 Layout of sanitary pipework and fixtures is planned according to building plans, relevant Australian standards and workplace procedures.
3.2 *Materials* required are specified and optimised according to relevant Australian standards from the proposed design.

3.3 Plans are recorded according to regulatory authorities’ and workplace requirements.

3.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 **Restore work area.**

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Documentation, including work backup, is completed according to workplace requirements.

---

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements, including system requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
  - record plans
  - read and interpret:
    - documentation from a variety of sources
    - regulations, relevant Australian standards, plans, specifications and drawings
- numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to:
  • document the layout of sanitary pipework and fixtures
  • identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• accessing relevant information sources for the work activity
• Australian standards applicable to the system
• characteristics and the application of different pipe systems, including their fittings and fixture supports, and fixing and joining techniques
• computers and computer-aided design software
• handling of hazardous waste
• infectious diseases
• job safety analysis (JSA) and safe work method statements (SWMS)
• pipe materials and sanitary fixtures
• principles of drainage
• principles of sanitary plumbing
• process of planning, sizing and documenting the layout of sanitary pipework and fixtures
• relevant statutory requirements related to planning, sizing and documenting the layout of sanitary plumbing systems
• SI system of measurements
• workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate
plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to planning, sizing and documenting the layout of sanitary pipework and fixtures for a multi-floor building
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to design, size and document the layout details for a commercial (Class 6) and residential building; using two approved sanitary plumbing systems to a minimum of six floors, inclusive of a basement, to include fixtures on each floor level (excluding the basement), ensuring:
  - application of sustainability principles and concepts
  - correct identification of details of the plan
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from
relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.
**Tools and equipment** may include:
- drawing instruments
- measuring equipment
- tools and equipment, which may include computers running appropriate computer-aided design software.

**Fixtures** may include:
- ablation trough
- bain marie
- basin
- bath
- bidet
- domestic and commercial clothes washing machine
- domestic and commercial dish washing machine
- glass washing machine
- laundry trough
- shower
- sink
- slop hopper
- urinal
- WC.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including AS/NZS3500 National plumbing and drainage: Part 2 Sanitary plumbing and drainage
- safe work procedures relating to planning, sizing and documenting the layout of sanitary pipework and fixtures
- signage
- verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

System may include:
• approved sanitary plumbing systems
• discharge pipes
• elevated pipework
• soil and waste fixtures.

Materials may include:
• building plans and specifications, including drainage plans.

Sustainability principles and concepts:
• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient design principles that have minimal environmental impact
  • efficient use of material in the design, including recycling of material
  • efficient energy and water use
  • disposing of waste material to ensure minimal environmental impact.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
- record test results in writing
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - record test results in writing
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to:
  - work with others to action tasks
  - relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - determine system requirements for installation of a static storage tank
  - identify and report faults in tools, equipment and materials
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communications technology

Required knowledge

- characteristics and application of different pipe fittings and fixture supports, including fixing and joining techniques
- function and operation of a range of taps and valves
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- pressure test systems and procedures
- procedures for accessing information and processes for calculating material requirements
- process for connecting static storage tanks
- relevant statutory requirements related to the connection of static storage tanks
- SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- locate, interpret and apply relevant information, Australian standards and specifications to connect static water storage tanks
- apply safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- connect residential or commercial static water storage tanks according to backflow protection principles
- as a minimum, given the plans and specifications, connecting and commissioning an approved static water storage tank to a residential or commercial water distribution pipe system to include correct air gap, operational water level, overflow requirements, minimum outlet size, tank placement, safe tray and safe waste (to meet the specified location and installation requirements) ensuring:
  - application of sustainability principles and concepts
  - correct identification of requirements, design and details of the proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, relevant Australian standards, and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific

This unit of competency is to be assessed using relevant
resources for assessment

Australian standards and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• MSDS
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Guidance information for assessment**

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:

- CPCPRF2023A Collect and store roof water
- CPCPWT3023A Install and commission water heating systems.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
surrounding structures and facilities
trip hazards
use of tools and equipment
work site visitors and the public
working at heights
working in proximity to others
use of firefighting equipment
use of first aid equipment
workplace environment and safety.

**Environmental requirements**
cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Tools and equipment** may include:
- chain blocks
- cutting and threading equipment
- elevated work platforms
- forklifts
- hand and mechanical excavation equipment
- hand and power tools
- hand trolleys
- hoists and jacks
- ladders
- lifting and load shifting equipment
- rollers
- scaffolds
- testing equipment
- trench shoring equipment
- welding equipment.
Materials may include:
- copper, brass, polymer or cement-lined cast iron pipes
- fibre glass, steel or polymer storage tanks
- other approved pipes and materials.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient energy and water use
  - efficient use and recycling of material, including minimising evaporation
  - siting of tank
  - overflow disposal and reuse
  - disposing of waste material to ensure minimal environmental impact.

Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
- safe work procedures relating to connecting static storage tanks
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

CPCPWT3021A Set out and install water services

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3011A

Unit Descriptor
This unit of competency specifies the outcomes required to install heated, cold and tempered water services from the water supply to the fixture or points of discharge and storage.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

### 1 Prepare for work.

1.1 Drawings, plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with setting out and installing water services are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

1.5 *Tools and equipment* for setting out and installing water piping systems, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient setting out and installation of water services.

### 2 Identify installation requirements.

2.1 Quantity and type of materials required are calculated from drawings and specifications or site inspection and comply with relevant Australian standards and other information.

2.2 *Materials* and equipment are identified, ordered and collected according to workplace procedures.

2.3 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

### 3 Install and test pipe system.

3.1 Pipelines and fixture connection points are set out according to drawings and specifications or job instructions, with consideration given to the location of existing services.
3.2 Trenches are excavated according to relevant Australian standards and authorities' requirements.

3.3 Installation of supports and clips are checked for compliance with job specification, authorities' requirements and manufacturer recommendations.

3.4 Pipes are installed and jointed according to job specifications, design layout and relevant Australian standards without damage or distortion to pipework, or surrounding environment and other services.

3.5 Installation to point of discharge is tested to comply with relevant Australian standards and authorities' requirements, and adjusted.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and accurately report to appropriate personnel
any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install pipework to carry drinking and non-drinking water from a water meter, rainwater tank, storage tank or heated water service to points of discharge and storage
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**
- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of installing water piping systems
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- regulations and requirements for non-drinkable water installations
- relevant statutory requirements related to installing water piping systems
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.
Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to set out and install water services
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning layout, sizing, setting out, installing and testing water services from a meter or storage tank, to at least five heated/tempered and five cold outlets, including a water heater and a non-drinkable water source to at least two outlets, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.
Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete
confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trees
  - trip hazards
  - underground services
  - uneven and unstable terrain
  - use of tools and equipment
  - work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

• clean-up protection
• stormwater protection
• waste management.

**Quality assurance requirements** may include:

• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

**Statutory and regulatory authorities** include:

• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

• bending equipment
• crimping tools
• flaring tools
• hand and power tools
• hand excavation equipment
• measuring equipment
• pressure testing equipment
• silver brazing equipment
• tools and equipment, including:
  • chain blocks
  • elevated work platforms
  • forklifts
  • hand trolleys
  • hoists and jacks
  • lifting and load shifting equipment
  • mechanical excavation equipment
- rollers
- scaffolding
- trench shoring equipment.

**Information may include:**
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- maps
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to setting out and installing water piping systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials may include:**
- those authorised for use
- factors influencing choice of materials, including:
  - characteristics of materials and products
  - condition of ground
  - environmental factors
  - nature of water conveyed
  - type of usage.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient energy and water use
  - efficient use and recycling of material
- heat retention
- correct handling of hazardous materials
- disposing of waste material to ensure minimal environmental impact
- selecting appropriate components to ensure minimal environmental impact.

**Point of discharge** may be:

- an isolating valve, tap or fixture.

**Unit Sector(s)**

**Functional area**

**Unit sector** Plumbing and services

**Custom Content Section**

CPCPWT3022A Install and adjust water service controls and devices

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3012A

Unit Descriptor
This unit of competency specifies the outcomes required to install water service controls and mixing devices used to manually control water mix and flow. It includes the basic adjustment and maintenance of correct flow operation for flushing devices, control valves, temperature control devices pumps and appliances, and excludes the commissioning and adjustment of backflow prevention devices and thermostatic mixing valves.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed.
of competency. in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

**Elements and Performance Criteria**

1. **Prepare for work.**
   1.1 Drawings, plans and specifications are obtained.
   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing and adjusting water service controls and devices are adhered to throughout the work.
   1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.
   1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.
   1.5 *Tools and equipment* for installing and adjusting *water service controls and mixing devices*, including personal protective equipment, are selected and checked for serviceability.
   1.6 Work area is prepared to support efficient installing and adjusting of water service controls and devices.

2. **Identify installation requirements.**
   2.1 Service design requirements are identified from job specifications and according to relevant Australian standards using relevant *information*.
   2.2 Service controls and mixing devices are selected according to relevant Australian standards, authorities' requirements and job specifications.
   2.3 Available pressure and number of fixtures are determined from job specifications.
   2.4 Valve size is selected according to regulations, job specifications, manufacturer recommendations and design data.
2.5 **Materials** and equipment are identified, ordered and collected according to workplace procedures.

2.6 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.7 **Sustainability principles and concepts** are observed when preparing for and undertaking work process.

---

### 3 Install and adjust devices.

3.1 Devices and mixing valves are positioned and installed according to relevant Australian standards, job specifications, manufacturer recommendations and authorities’ requirements.

3.2 Pipework is flushed.

3.3 Devices are commissioned and maintained to ensure correct flow operation according to relevant Australian standards, and manufacturer and job specifications.

3.4 Customer is advised of correct operation of **flushing devices**, control valves, appliances and **pumps**.

---

### 4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

CPCPWT3023A Install and commission water heating systems

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3013A

Unit Descriptor
This unit of competency specifies the outcomes required to install and commission water heaters for domestic and commercial applications.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1  Prepare for work.

1.1 Drawings, plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing water heaters, and workplace are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’* requirements.

1.5 *Tools and equipment* for installing *water heaters*, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of water heaters.

2  Identify installation requirements.

2.1 Installation position is assessed for compliance with authorities’ requirements, manufacturer recommendations, relevant Australian standards, job specifications and location of other services using relevant *information*.

2.2 Quantity and type of materials required are calculated from job specifications and site inspection, and comply with relevant Australian standards.

2.3 *Materials* and equipment are identified, ordered and collected according to workplace procedures.

2.4 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.
3 Install, commission and maintain system.

3.1 Water heating system is installed according to relevant Australian standards, job specifications and manufacturer recommendations, and complies with authorities' requirements.

3.2 Pipe joints are fitted correctly and according to relevant Australian standards.

3.3 Installation is tested according to relevant Australian standards, manufacturer specifications and authorities' requirements.

3.4 Water heating system is commissioned according to relevant Australian standards, manufacturer specifications and authorities' requirements.

3.5 Water heating system is maintained according to manufacturer instructions.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to install and commission low pressure, mains pressure, continuous flow and solar water heating systems
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• characteristics and application of different mounting fittings, including fixing and joining techniques and methods
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• performance measures for various water heaters
• process of installing water heaters
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory requirements related to installing water heaters
• SI system of measurements
• Australian standards applicable to the installation
• use of test equipment and procedures
• workplace and equipment safety requirements

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the
performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install water heaters
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout, and then installing and commissioning at least two different water heaters from the following:
  - a vented storage water heater, an unvented storage water heater, a continuous flow water heater, and a solar water heater
  - with one of these heaters being a manifold system, ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed installations
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
    - communicating and working effectively and safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning
experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
• use of tools and equipment
• work site visitors and the public
• working at heights
• working in confined spaces
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

Environmental requirements cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

Quality assurance requirements may include:
• environment policy
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

Statutory and regulatory authorities include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
• flaring tools
• hand and power tools
• ladders
• lifting and load shifting equipment, including:
  • chain blocks
  • elevated work platforms
  • forklifts
  • hand trolleys
  • hoists and jacks
  • restricted height scaffolding
  • rollers
• mechanical bending equipment
• silver brazing equipment.
**Water heaters** may include:
- electric storage heaters up to 630 litres
- heat exchange water heaters
- heat pump water heaters
- continuous flow water heaters
- other storage heaters up to 700 litres
- solar water heaters
- warm water systems
- other approved water heaters.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing water heaters
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

**Materials** may include:
- water heaters and fittings, including solar panels for solar water heaters.

**Sustainability principles and concepts**:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - heat retention
- efficient use and recycling of material
- efficient energy and water use
- disposing of waste material to ensure minimal environmental impact.

Not applicable.
CPCPWT3024A Install and maintain domestic water treatment equipment

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3014A

Unit Descriptor
This unit of competency specifies the outcomes required to install, test and maintain domestic water softeners, water coolers and water filtering equipment.

Application of the Unit
Site location for work application is domestic, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing water treatment equipment are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities*’ requirements.

1.5 *Tools and equipment* for installing water treatment equipment, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of *water treatment equipment*.

2 Identify installation requirements.

2.1 Water treatment equipment requirements and location are determined according to job specifications or site inspection and relevant *information*.

2.2 Water system adjacent to the equipment is tested for appropriate pressure.

2.3 *Materials* and equipment are estimated from design drawings or job specification.

2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.5 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.
3 Install and test water treatment equipment.

3.1 Water treatment equipment is installed according to relevant Australian standards and manufacturer specifications, and complies with authorities' requirements.

3.2 Base is provided for water treatment equipment that complies with job specification or manufacturer instructions.

3.3 Connections to water treatment equipment are checked for compliance with authorities' requirements and relevant Australian standards.

3.4 Installation is pressure tested for leaks.

3.5 Service lines are flushed according to relevant Australian standards.

3.6 Appliance is commissioned according to manufacturer specifications.

4 Maintain water treatment equipment.

4.1 Service and maintenance requirements, including water filters, are identified from manufacturer specifications or authorities' requirements.

4.2 Replacement components are checked and fitted according to specification.

4.3 Maintenance operations are conducted observing manufacturer and authorities' requirements.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different assemblies, including fixing and joining techniques and materials
- chemistry of water, including:
  - osmosis, filtration and purification
  - properties of hard and soft water, including sources of contamination, impurities, pressure and flow rates
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of installing water treatment equipment
- relevant statutory requirements related to installing water treatment equipment
• SI system of measurements
• Australian standards applicable to the installation
• use of test equipment and procedures
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

• locating, interpreting and applying relevant information, relevant Australian standards and specifications to install water treatment equipment
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications, planning the layout, and then installing and commissioning either a domestic water filter or cooler or a domestic water softener or conditioner, indicating the continuing maintenance requirement for each installation and ensuring:
  • application of sustainability principles and concepts
  • correct identification of location, design and details of proposed installations
  • correct selection and use of appropriate processes, tools and equipment
  • completion of all work to specification
  • compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and
Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
- hazardous materials and substances
- other machines
- surrounding structure and facilities
- trip hazards
- underground services
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- stormwater protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- crimping tools
- flaring tools
- hand and power tools
- measuring and levelling equipment
- silver brazing equipment
- testing equipment.

**Water treatment equipment** may include:

- water coolers
- water softeners.
include:

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to installing water treatment equipment
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** may include:
- water treatment appliances and fittings.

**Sustainability principles and concepts:**
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient insulation
  - efficient use and recycling of material
  - efficient energy and water use
  - disposing of waste material to ensure minimal environmental impact.

**Water filters** may include:
- cartridge filters
- disk filters
- reverse osmosis filters
- sand filters.

|   |                   | 1.6 Work area is prepared to support efficient installation of *water pumpsets*. |
| 2 | Identify installation requirements. | 2.1 Location of pump is determined following site inspection. |
|   |                             | 2.2 Pump base requirements are identified from drawings and specifications using relevant *information*. |
|   |                             | 2.3 Required *materials* and equipment are identified, ordered and collected according to workplace procedures. |
|   |                             | 2.4 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition. |
|   |                             | 2.5 *Sustainability principles and concepts* are observed when preparing for and undertaking work process. |
| 3 | Install water pumpsets. | 3.1 Pump base is set out to comply with drawings and specifications. |
3.2 Pump base is constructed according to drawings and specifications.

3.3 Pump and *pump controls* are installed according to relevant Australian standards, drawings, specifications and manufacturer instructions.

3.4 Fuel tank fitting, alignment of shafts and couplings, and the use of mechanical joints comply with relevant specifications and manufacturer instructions.

3.5 Pressure testing of piping system is conducted according to specifications.

3.6 Pumpset is tested according to specifications and test data is recorded in required format.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

### Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to install and test water pumps and a centrifugal pumpset
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- atmospheric pressure
- fixing techniques
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- performance measures for various water pumpsets
- process of installing water pumpsets
- properties of water, including pressure and flow rates
- relevant statutory requirements related to installing water pumpsets
- SI system of measurements
- Australian standards applicable to the installation
- use of test equipment and procedures
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace.
environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to install water pumpsets
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout, and then installing and testing a centrifugal pump, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package

- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.
Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover

- clean-up protection
water quality management and may include:
- stormwater protection
- waste management.

**Quality assurance requirements** may include:
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- chain blocks
- concreting tools
- forklifts
- hand and power tools
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- measuring and alignment tools
- rollers.

**Water pumpsets:**
- may include:
  - multi-stage turbine
  - positive displacement
  - submersible and electric and compression ignition driven pumps
- may be:
  - belt-driven by an electric or petrol and diesel motor
  - close coupled
  - long coupled with mechanical joints.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
job drawings
manufacturer specifications and instructions
material safety data sheets (MSDS)
memos
organisation work specifications and requirements
plans and sketches
regulatory and legislative requirements, particularly those pertaining to:
building codes
WHS and environmental requirements
plumbing regulations
relevant Australian standards
safe work procedures relating to installing water pumpsets
signage
verbal, written and graphical instructions
work bulletins
work schedules, plans and specifications.

**Materials** may include:
circulating
hydropneumatic pumping systems and fittings
spa baths
water pumpsets.

**Sustainability principles and concepts:**
cover the current and future social, economic and environmental use of resources
may include:
selecting appropriate material to ensure minimal environmental impact
efficient use and recycling of material
efficient energy and water use
disposing of waste material to ensure minimal environmental impact.

**Pump controls** may be:
automatic controls, which may be float, level or flow switches
manual.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.
Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials

- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
  - numeracy skills to apply measurements and calculations

- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work

- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities

- technical skills to fit off, connect, test and commission heated and cold water services to household fixtures and appliances

- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- characteristics and application of different fittings and fixtures, including fixing and joining techniques and materials
- implications of cross connections and air gaps
- isolation processes and procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- non-drinkable water processing, requirements and applications
- process of fitting off, connecting and commissioning heated and cold water services
- properties of water, including sources of contamination, impurities, pressure and flow rates
- relevant statutory requirements related to fitting off, connecting and commissioning heated and cold water services
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to fitting off, connecting and commissioning heated and cold water services
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, planning the layout, and then fitting off, connecting, testing and commissioning heated, tempered and cold (drinking and non-drinking) water services of a house, including bathroom, kitchen, laundry and outdoor connections, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, fit off, connections, testing and commissioning requirements
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
• compliance with regulations, relevant Australian standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application.
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
• where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:
• handling of materials
• hazard control
• identifying and testing for electrical hazards
• personal protective clothing and equipment
prescribed under legislation, regulations and workplace policies and practices

- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trip hazards
  - underground services
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in confined spaces
  - working in proximity to others
  - use of firefighting equipment
  - use of first aid equipment
  - workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- crimping tools
- hand and power tools
- flaring tools
- mechanical and bending tools
- silver brazing equipment
- testing equipment.
**Water services** include:

- non-drinkable water services.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to fitting off, connecting and commissioning heated and cold water services
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** are as approved for heated, tempered and cold water services and may include:

- fixtures and fittings
- heaters
- water services.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - heat retention
  - efficient use and recycling of material
  - efficient energy and water use
  - disposing of waste material to ensure minimal environmental impact.

CPCPWT3027A Connect irrigation systems from drinking water supply

Modification History
Prerequisite unit changed
Minor changes throughout the unit
Not equivalent to CPCPWT3017A

Unit Descriptor
This unit of competency specifies the outcomes required to connect irrigation and watering systems from a drinking water supply. It does not include the commissioning of backflow prevention devices or arrangements.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency.
Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent.
with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with connecting irrigation systems from a drinking water supply are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for connecting irrigation systems, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient connection of irrigation systems from a drinking water supply.

2 Identify installation requirements.

2.1 Connection size and hazard rating are determined from plans, specification, relevant Australian standards and/or site inspection using relevant information.

2.2 Valve is sized according to plans and specification.

2.3 Back flow prevention devices are confirmed as being according to hazard rating.

2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.5 Materials and equipment are checked for compliance with relevant Australian standards, docket and order form, and for acceptable condition.

2.6 Sustainability principles and concepts are observed when preparing for and undertaking work process.
3 Connect and test system.

3.1 Excavation is set out and made according to plans and specifications and undertaken with consideration given to existing structures and services.

3.2 Service pipe is isolated and cut to accommodate take off branch according to authorities' requirements.

3.3 Back flow prevention device is fitted according to relevant Australian standards and manufacturer specifications.

3.4 System is connected and flushed to required standard.

3.5 Water supply is restored and system tested according to relevant Australian standards.

3.6 Ground surface is restored.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication, such as hand signals
• initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
• literacy skills to:
  • complete workplace documentation
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to cut into a water supply and install a take-off branch and fitting valves and backflow prevention devices for an irrigation or watering system
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

**Required knowledge**

• characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
• drinking water supplies and protection measures
• implications of cross connections and air gaps
• job safety analysis (JSA) and safe work method statements (SWMS)
• process of connecting irrigation systems from a drinking water supply
• processes for accessing information and for calculating material requirements
• properties of water, including pressure and flow rates
• relevant statutory requirements related to connecting irrigation systems from a drinking water supply
• SI system of measurement
• Australian standards applicable to the connection
• use of test equipment and procedures
• various types of irrigation systems and types of materials used
• workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, relevant Australian standards and specifications to connect an irrigation system from a drinking water supply
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications, connecting an irrigation system to a drinking water supply, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed installations
  - correct selection and use of appropriate processes, tools and equipment
  - completing all work to specification
  - compliance with regulations, relevant Australian standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will
usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a
number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge.

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - hazardous materials and substances
  - other machines
  - surrounding structure and facilities
  - trees
  - trip hazards
  - underground services
  - uneven and unstable terrain
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:

- clean-up protection
- waste management.

**Quality assurance requirements** may include:

- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk management strategy
- International Standards Organisation
- site safety plan
- workplace operations and procedures.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:

- chain blocks
- electrical bonding and bridging strap
- elevated work platforms
- forklifts
- hand and power tools
- hand excavation equipment
- hand trolleys
- hoists and jacks
- lifting and load shifting equipment
- measuring equipment
- mechanical excavation equipment
- rollers
- scaffolding
- silver solder and brazing equipment
- trench shoring equipment.
Information may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- job drawings
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards
- safe work procedures relating to connecting irrigation systems from a drinking water supply
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Materials may include:
- backflow prevention devices
- copper tube
- fittings and connections
- joints
- polymer pipes
- valves.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient energy and water use
  - efficient use and recycling of material
  - disposing of waste material to ensure minimal environmental impact.

CPCPWT3028A Install water service

Modification History
Prerequisite unit changed
Minor changes throughout the unit, including to unit title
Not equivalent to CPCPWT3018A

Unit Descriptor
This unit of competency specifies the outcomes required to install a water supply system from the authorities' main to the metering device, according to water authorities’ requirements.

Application of the Unit
Site location for work application may be either domestic or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
CPCPCM2043A Carry out WHS requirements

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Prepare for work.

1.1 Site plans and specifications are obtained to establish location of the main.

1.2 *Work health and safety* (WHS) and *environmental requirements* associated with installing of a water service are adhered to throughout the work.

1.3 *Quality assurance requirements* are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities*’ requirements.

1.5 *Tools and equipment* for installing water services, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of water services.

2 Identify installation requirements.

2.1 Location of service is determined following site inspection.

2.2 Cables, conduits, pipes or other services are located and noted using relevant *information*.

2.3 Quantity and type of materials required are calculated or determined from plans and specifications.

2.4 *Materials* and equipment are identified, ordered and collected according to workplace procedures.

2.5 Materials and equipment are checked for compliance with relevant *Australian standards*, docket and order form, and for acceptable condition.

2.6 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.
3 Install and test water services.

3.1 Pipelines and excavation areas are set out according to plans and specifications.

3.2 Trenches are excavated according to relevant Australian standards and regulatory authorities' requirements, and to required size.

3.3 Service control valve position is located.

3.4 Main is drilled and tapped according to regulatory authorities' requirements and workplace procedures.

3.5 Service line is marked out at 90° to the main in a straight line to the meter.

3.6 Selected process for installation of service pipe under roadway is undertaken according to authorities' requirements.

3.7 Pipework is installed according to job specification, authorities' requirements and design layout, including fitting designated service control valves.

3.8 Water meter is selected and installed according to authorities' requirements, surrounding environment and climatic conditions, and in consideration of servicing or cleaning requirements.

3.9 Meter control valve is fitted at inlet according to authorities' requirements.

3.10 Installation is tested for compliance with job specifications, relevant Australian standards and regulatory authorities' requirements.

3.11 Excavation is backfilled according to specifications and authorities' requirements.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Documentation is completed according to workplace
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - identify requirements
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to:
  - tap into a water main and connect and install valves, flanges and pipework to a water meter
  - test the installation of valves, flanges and pipework to a water meter
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
• characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
• job safety analysis (JSA) and safe work method statements (SWMS)
• levelling and alignment processes
• process of installing water services
• properties of water, including pressure and flow rates
• relevant statutory requirements related to installing water services
• SI system of measurement
• Australian standards applicable to the installation
• use of test equipment and procedures
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:
• locating, interpreting and applying relevant information, Australian standards and specifications to install water services
• applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
• given the plans and specifications, determining the requirements, tapping into a water main, connecting a property service up to the outlet of a water meter, and testing the installation, ensuring:
  • application of sustainability principles and concepts
  • correct identification of location, design and details of proposed installation
• correct selection and use of appropriate processes, tools and equipment
• completion of all work to specification
• compliance with regulations, standards and organisational quality procedures and processes
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and
correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state
- handling of materials

</table>
3 Install mains pipeline.

3.1 Pipes are lowered and placed in position according to design specifications of mains pipe system.

3.2 Pipes are joined according to manufacturer specifications using pipe joining methods.

3.3 Pipes are placed and fittings, valves and flow control devices are fitted according to drawings, specifications and installation procedures.

3.4 Alignment level and grade are checked continuously for conformance with design plans and specifications.

3.5 Side support or overlay is positioned beside the pipes.

3.6 Mains pipe system support structure is checked.

3.7 Backfill procedure is monitored to ensure work is completed to specification, where specified.

3.8 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Test mains pipe system.

4.1 Testing is performed to relevant authorities’ requirements as determined by specifications.

4.2 Mains pipe system test procedures are performed, establishing pressurisation, functionality and serviceability.

4.3 Test results are recorded and reported.

5 Clean up.

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Plant, tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and standard work practices.
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow and give instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete written records and reports of test results
  - complete other relevant workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge

- concrete and concrete fabrication
- confined space entry requirements
- dewatering
- equipment types, characteristics, technical capabilities and limitations
- excavation and trench safety
- installation of booster systems
- installation of thrust blocks
- job safety analysis (JSA) and safe work method statement
- mains pipe systems and installation procedures
• mains water pressure
• materials safety data sheets (MSDS) and materials handling methods
• operational, maintenance and basic diagnostic procedures, including testing procedures
• plumbing industry terminology
• processes for interpreting engineering drawings
• processes for calculating pipeline grades and percentages
• project quality requirements
• sedimentation and erosion controls
• site and equipment safety requirements
• site isolation and traffic control responsibilities and authorities
• valves and flow control devices
• water reticulation

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

A person who demonstrates competency in this unit must be able to provide evidence of:

• applying sustainability principles and concepts
• locating, interpreting and applying relevant information, standards and specifications
• complying with site safety plan, WHS regulations and state and territory legislation applicable to workplace operations
• complying with organisational policies and procedures, including quality requirements
• given the plans and specifications, installing six metres of DN100 mains pressure pipe system which is to include a change of direction or tee junction
• installing a mains pipe system which, as a minimum, includes two materials and one isolation valve
• safe and effective operational use of tools, plant and equipment
• communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the minimum task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe working practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills
with workplace tasks and job roles

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

**Guidance information for assessment**

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. *Bold italicised* wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Information** may include:

- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- MSDS
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements pertaining to the installation of mains pipe systems
- relevant Australian standards
- safe work procedures or equivalent relating to the installation of mains pipe systems
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations, organisational safety policies and procedures, and project safety plan, and may include:

- emergency procedures, which are to include:
  - emergency shutdown and stopping
  - extinguishing equipment for fires
  - organisational first aid requirements, including use of first aid equipment
  - evacuation
  - handling of materials
  - hazard control
  - personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards and risks associated with:
  - buildings
  - cuttings
  - electricity
  - embankments
  - excavations
  - hazardous materials and substances
  - other machines
  - personnel
  - restricted access barriers
  - structures
  - traffic control
  - trees
  - underground services
  - uneven and unstable terrain
- work site visitors and the public
- working in proximity to others
- safe parking practices, including ensuring:
  - access ways are clear
  - equipment and machinery are:
    - away from overhangs and refuelling sites
    - safe distance from excavations
    - secured from unauthorised access or movement
- use of tools and equipment
- workplace environment and safety.

**Signage** may include:
- barricades
- highway traffic signs
- signage for traffic control escort vehicles
- site safety signage
- temporary signage for benefit of motorists and pedestrians
- traffic conditions signage.

**Traffic conditions** may include:
- buildings
- congested urban environments
- low traffic rural areas
- off-road un-trafficked areas
- parking sites
- pedestrian areas.

**Tools and equipment** may include:
- crow bars
- grinders
- hammers
- jointing equipment
- levelling equipment
- lifting equipment
- oxy-acetylene equipment
- saws
- scaffolding
- shovels.

**Environmental requirements** are to
- clean-up management
include:

- dust and noise
- organisational and project environmental management plan
- vibration
- waste management
- water quality protection.

**Materials** may include:

- backfill and bedding materials
- concrete
- pipes
- other approved materials.

**Statutory and regulatory authorities** include:

- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Mains pipe systems**:

- may include:
  - in-ground or above ground
  - pressurised mains water pipelines (booster system)

- may be constructed from:
  - ductile iron cement lined (DICL)
  - polymer
  - steel and copper
  - other approved materials.

**Pipe joining methods** may include:

- arc welded and mechanical jointed
- rubber ring
- solvent welded
- other approved jointing methods.

**Valves and flow control devices** include:

- air release valves
- energy dissipaters
- flow control valves
- non-return valves
- pressure control valves
- stop valves.
Installation procedures:
- are to include:
  - bedding down pipes
  - checking alignment, level and grade
  - positioning pipes
  - selecting size, type and material of pipe
- may include:
  - repair work
  - bedding materials, including aggregate and sand
  - support systems, which may include:
    - bedding for in-ground trenches
    - concrete shoulders for above ground pipes.

Sustainability principles and concepts:
- cover the current and future social, economic and environmental use of resources
- may include:
  - selecting appropriate material to ensure minimal environmental impact
  - efficient use and recycling of material
  - efficient energy and water use
  - disposing of waste material to ensure minimal environmental impact.

Testing procedures may include:
- air
- ovality
- pressure
- tolerance
- visual straightness
- water.

Unit Descriptor

This unit of competency specifies the outcomes required to install a home fire sprinkler system in a class 1a building.

Application of the Unit

Site location for work application is a class 1a building and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information

In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites

CPCPCM2043A Carry out WHS requirements

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range
statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with a home fire sprinkler system in a class 1a building are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work.

1.5 Tools and equipment for installing a home fire sprinkler in a class 1a building, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient installation of a home fire sprinkler system for a class 1a building.

2 Identify installation requirements.

2.1 System requirements are identified from plans, specifications and standards.

2.2 Materials are selected that comply with relevant Australian standards.

2.3 Quantities of materials required are calculated from plans and specifications.

2.4 Materials and equipment are identified, ordered and collected according to workplace procedures.

2.5 Materials and equipment are checked for compliance with standards, docket and order form, and for acceptable condition.

2.6 Sustainability principles and concepts are observed when preparing for and undertaking work process.
3 Install and test system components.

3.1 System is set out according to plans, specifications and job instructions relevant Australian standards.

3.2 Pipe supports are installed that comply with standards, plans and specifications.

3.3 Fixings are installed to plans, specifications and manufacturer specifications.

3.4 Assemblies, devices, alarms, piping and materials are installed according to Australian standards, plans and specifications.

3.5 Jointing systems are installed in compliance with Australian standards and manufacturer specifications.

3.6 Installed system is subjected to pressure testing according to Australian standards, plans and specifications.

3.7 Test data is recorded in format required by plans, specifications and quality assurance procedures.

4 Clean up.

4.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

4.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

4.3 Information is accessed and documentation completed according to regulatory authorities and workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
• access information
• determine requirements
• enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
• follow and give instructions
• use language and concepts appropriate to cultural differences
• use and interpret non-verbal communication
• literacy skills to:
  • complete workplace documentation
  • identify and accurately report faults in tools, equipment or materials
  • read and interpret:
    • documentation from a variety of sources
    • plans and specifications
  • record test results in writing
• numeracy skills to apply measurements and calculations
• planning and organising skills to:
  • plan and sequence tasks with others
  • plan and set out work
• teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
• technical skills to install and test a home fire sprinkler system for a class 1a building, including piping, control valve assemblies, actuating devices, alarms and sprinkler heads
• technology skills to:
  • access and understand site-specific instructions in a variety of media
  • use mobile communication technology

Required knowledge
• components and materials relevant to installing a home fire sprinkler system for a class 1a building
• fire rating systems and procedures
• function and operation of a range of alarms, actuating devices, sprinkler heads and valves
• job safety analyses (JSA) and safe work method statements (SWMS)
• National Fire Protection Association (NFPA) and Factory Mutual performance-based codes of practice
• pressure test systems and procedures
• processes for accessing information and calculating material requirements
• process of installing a home fire sprinkler system for a class 1a building
• relevant statutory requirements related to installing a home fire sprinkler system for a class 1a building
• SI system of measurement
- structural systems, building materials and building services
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to install and test a home fire sprinkler system for a class 1a building
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- given the plans and specifications of a home fire sprinkler system for a single storey class 1a building, installing and testing a home fire sprinkler system, consisting of a water supply, piping, control valves, actuating devices, alarms and sprinkler heads to design criteria and standards, ensuring:
  - application of sustainability principles and concepts throughout the installation process
  - correct identification of location, design and details of proposed installation
  - correct selection and use of appropriate processes, tools and equipment
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - communicating and working effectively and safely with others.

Context of and specific resources for

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.
assessment

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Integrated Framework Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on
competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
  - hazardous materials and substances
  - service lines
  - surrounding structures and facilities
  - trip hazards
  - use of tools and equipment
  - work site visitors and the public
  - working at heights
  - working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.
Environmental requirements:

- cover water quality management
- may include:
  - clean-up protection
  - waste management.

Quality assurance requirements may include:

- Australian standards
- environment policy
- Environment Protection Authority (EPA)
- internal company quality assurance policy and risk-management strategies
- International Standards Organisation
- project specifications
- site safety plan
- workplace operations and procedures.

Tools and equipment may include:

- cutting and threading equipment
- elevated work platforms
- hand and power tools
- ladders
- silver brazing equipment
- testing equipment
- welding equipment.

Materials may include:

- actuating devices
- control valve assemblies
- local alarms
- approved piping and fittings
- sprinkler heads.

Relevant Australian standards include:

- AS2118.5 Automatic fire sprinkler systems (Part 5: Domestic)
- AS/NZS3500 National plumbing and drainage.

Sustainability principles and concepts:

- cover the social, economic and environmental use of resources to meet current and future needs
- may include:
  - disposing of waste material
  - efficient energy usage
  - efficient use and recycling of material
  - selecting appropriate materials
- water use, harvesting and/or disposal.

**Information may include:**
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- NFPA and Factory Mutual performance-based codes of practice
- organisational work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those relating to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
  - relevant Australian standards
  - safe work procedures relating to installing home fire sprinkler systems for a class 1a building
  - signage
  - verbal, written and graphical instructions
  - work bulletins
  - work schedules, plans and specifications.

CPCPWT4011B Design and size heated and cold water services and systems

Modification History
Minor changes throughout the unit
Equivalent to CPCPWT4011A

Unit Descriptor
This unit of competency specifies the outcomes required to design, size and document the layout of heated, tempered and cold water services, flushing systems, and hydrant and hose reel systems for multi-floor buildings.

It covers preparation for work, identification of water service and system requirements, planning the service and system layout and completion of work finalisation processes.

Application of the Unit
Site location for work application will be residential and commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
with the evidence guide.

Elements and Performance Criteria

1. **Prepare for planning.**

   1.1 Nature and scope of planning task are identified and confirmed.

   1.2 *Work health and safety* (WHS) and *environmental requirements* associated with planning, sizing and documenting the layout of heated, tempered and cold water services and systems are adhered to throughout the work.

   1.3 Work is organised and sequenced in conjunction with others involved in or affected by the work and *statutory and regulatory authorities’ requirements*.

   1.4 *Tools and equipment* required for planning, sizing and documenting the layout of heated, tempered and cold water services and systems, including personal protective equipment, are selected and checked for serviceability.

   1.5 Work area in which planning process is to be conducted is prepared.

2. **Identify system requirements.**

   2.1 Information and specifications for required work are obtained and confirmed, if necessary by site inspection using relevant *information*.

   2.2 Regulations and Australian standards relevant to the work are consulted and applied to all aspects of the work.

   2.3 Quantity, location and type of take-off points and fixtures are determined from plans and specifications.

   2.4 Heated, tempered and cold *water services and systems* are sized according to relevant Australian standards and regulatory authorities’ and workplace requirements.
3 Plan service and system layout.

3.1 Layout of heated, tempered and cold water services and systems to point of discharge are planned according to building plans, relevant Australian standards and workplace procedures.

3.2 Materials required are specified and optimised according to relevant Australian standards from the proposed design.

3.3 Plans are recorded according to regulatory authorities’ and workplace requirements.

3.4 Sustainability principles and concepts are observed when preparing for and undertaking work process.

4 Restore work area.

4.1 Work area is restored according to workplace procedures.

4.2 Tools and equipment used in the process are refurbished and left according to workplace procedures.

4.3 Documentation, including work backup, is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation, including work backup
  - read and interpret:
- documentation from a variety of sources
- regulations, relevant Australian standards, plans, specifications and drawings
- record written plans
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to identify requirements, including system requirements
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- characteristics and application of different pipes and fittings, including fixing and joining techniques and methods
- characteristics and application of water heating systems
- characteristics and application of water pumps and water storage tanks for multiple floor buildings
- drafting techniques, which may include the use of computers and computer-aided design (CAD) software
- job safety analysis (JSA) and safe work method statements (SWMS)
- levelling and alignment processes
- process of designing, sizing and documenting the layout of heated, tempered and cold water services and systems
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relevant statutory requirements related to designing, sizing and laying out:
  - heated, tempered and cold water services and flushing systems, and fire hydrant and hose reel systems, including non-drinking water requirements
  - both mains pressure and low pressure flushing devices
- selection for installation of:
  - thermostatic mixing valves
  - backflow prevention devices
- SI system of measurements
- Australian standards applicable to the service and system
- water treatment processes
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, Australian standards and specifications to the design, sizing and layout of heated, tempered and cold water services and systems
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to design, size and document the layout of:
  - a water supply system for a building with a minimum of six floors (including a non-drinking supply)
  - a flush valve system for a multi-floor complex, for a building that is a minimum of 35 metres high
  - a heated/tempered water supply system for a building
  - a hydrant and hose reel system for a building with a minimum of six floors; ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed services and systems
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, relevant Australian standards and organisational
quality procedures and processes
  • communicating and working effectively and safely with others.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
  • an induction procedure and requirement
  • realistic tasks or simulated tasks covering the minimum task requirements
  • relevant specifications and work instructions
  • tools and equipment appropriate to applying safe work practices
  • support materials appropriate to activity
  • workplace instructions relating to safe working practices and addressing hazards and emergencies
  • material safety data sheets
  • research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:
  • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
  • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
  • reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

• competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace

• where the assessment is part of a structured learning experience, the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge

• all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

• handling of materials

• hazard control

• personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices

• safe operating procedures, including recognising
and preventing hazards associated with:
- electricity
- hazardous materials and substances
- other machines
- surrounding structure and facilities
- trip hazards
- underground services
- use of tools and equipment
- work site visitors and the public
- working at heights
- working in confined spaces
- working in proximity to others
- use of firefighting equipment
- use of first aid equipment
- workplace environment and safety.

**Environmental requirements** cover water quality management and may include:
- clean-up protection
- stormwater protection
- waste management.

**Statutory and regulatory authorities** include:
- commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

**Tools and equipment** may include:
- computers running appropriate CAD software
- drawing instruments
- measuring equipment.

**Information** may include:
- charts and hand drawings
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
• WHS and environmental requirements
• plumbing regulations
• relevant Australian standards, including AS/NZS3500 National plumbing and drainage
• safe work procedures relating to designing, sizing and documenting the layout of heated and cold water services and systems
• signage
• verbal, written and graphical instructions
• work bulletins
• work schedules, plans and specifications.

**Water services and systems** include:

• drinking water from a water meter or storage tank to a point of discharge or storage
• fire hydrant and hose reel systems
• heated and tempered water service to a point of discharge
• flushing systems
• non-drinking water from a source to a point of discharge or storage.

**Point of discharge** may be:

• fixture
• isolating valve.

**Materials** may include:

• building plans
• job specifications
• manufacturer specifications.

**Sustainability principles and concepts**:

• cover the current and future social, economic and environmental use of resources
• may include:
  • efficient design principles to minimise environmental impact
  • efficient use of material in the design, including recycling of material
  • efficient energy and water use
  • disposing of waste material to ensure minimal environmental impact.

CPCPWT4022A Commission and maintain backflow prevention devices

Modification History
Changes to performance criteria, required skills and knowledge, range statement and critical aspects
Not equivalent to CPCPWT4012A

Unit Descriptor
This unit of competency specifies the outcomes required to test, commission and maintain backflow prevention devices in water services.

It covers preparation for work, identification of testing and commissioning requirements, physical testing and commissioning of devices, maintenance of devices and completion of work finalisation processes.

Application of the Unit
Site location for work application will be either residential or commercial, and may be a new work site or an existing structure being renovated, extended, restored or maintained.

Licensing/Regulatory Information
In some jurisdictions, this unit of competency may form part of accreditation, licensing, legislative, regulatory or certification requirements.

Pre-Requisites
Nil

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent
Elements and Performance Criteria

1 Prepare for work.

1.1 Plans and specifications are obtained.

1.2 Work health and safety (WHS) and environmental requirements associated with testing, commissioning and maintaining backflow prevention devices are adhered to throughout the work.

1.3 Quality assurance requirements are identified and adhered to according to workplace requirements.

1.4 Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements.

1.5 Tools and equipment for testing, commissioning and maintaining backflow prevention devices, including personal protective equipment, are selected and checked for serviceability.

1.6 Work area is prepared to support efficient testing, commissioning and maintenance of backflow prevention devices.

2 Identify testing and commissioning requirements.

2.1 Service and system design, and testing and commissioning requirements, are identified and confirmed from job specifications and according to standards and relevant information.

2.2 Backflow prevention device specifications and necessary installation materials are identified according to standards, authorities’ requirements and job specifications.

2.3 Sustainability principles and concepts are observed when preparing for and undertaking work process.

3 Test and

3.1 Installation is checked to ensure device is appropriate
commission device. and installed according to standards, job specifications, manufacturer recommendations and authorities' requirements.

3.2 Operation of device is tested according to job specifications, manufacturer recommendations and authorities' requirements, and adjusted as required.

3.3 Documentation is completed according to regulating authorities' requirements.

4 Maintain device. 4.1 Service and maintenance requirements are identified from manufacturer specifications or authorities' requirements.

4.2 Replacement components are checked and fitted periodically and as required according to specification.

4.3 Maintenance and repair of devices are conducted observing manufacturer and authorities' requirements.

5 Restore work area. 5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm
requirements, share information, listen and understand
- follow instructions
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- initiative and enterprise skills to identify and accurately report to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to test, commission and maintain high, medium and low hazard backflow prevention devices in water services
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

Required knowledge
- basic hydraulics and mechanics relevant to backflow prevention devices in water services
- characteristics and applications of the materials and backflow prevention devices
- effective isolation procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of testing, commissioning and maintaining backflow prevention devices
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relationship with other service controls and devices
- relevant statutory requirements related to testing and commissioning backflow prevention devices
- SI system of measurements
- standards applicable to the service
- testing equipment and techniques
- workplace and equipment safety requirements
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to the commissioning of backflow prevention devices
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to test and commission at least:
  - two different double check valves
  - a single (testable) check valve
  - two different registered air gaps (including two different orifice sizes and inlet pressures)
  - two different types of pressure type vacuum breakers
  - two different reduced pressure zone devices, indicating the ongoing maintenance requirements for each of them, ensuring:
    - application of sustainability principles and concepts
    - correct identification of location, design and details of proposed service
    - correct selection and use of appropriate processes, tools and equipment
    - completion of all work to specification
    - compliance with regulations, standards and organisational quality procedures and processes
    - communicating and working effectively and
safely with others.

**Context of and specific resources for assessment**

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the minimum task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe working practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

**Method of assessment**

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and
environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Work health and safety** is to be according to commonwealth, state and territory legislation and regulations and may include:

- handling of materials
- hazard control
- identifying and testing for electrical hazards
- personal protective clothing and equipment prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including recognising and preventing hazards associated with:
  - electricity
• hazardous materials and substances
• service lines
• surrounding structures and facilities
• trip hazards
• use of tools and equipment
• work site visitors and the public
• working in proximity to others
• use of firefighting equipment
• use of first aid equipment
• workplace environment and safety.

Environmental requirements cover water quality management and may include:
• clean-up protection
• stormwater protection
• waste management.

Quality assurance requirements may include:
• Environment Protection Authority (EPA)
• internal company quality assurance policy and risk management strategy
• International Standards Organisation
• site safety plan
• workplace operations and procedures.

Statutory and regulatory authorities include:
• commonwealth, state or territory, and local authorities administering applicable Acts, regulations and codes of practice.

Tools and equipment may include:
• hand and power tools
• approved and calibrated test equipment.

Backflow prevention devices may include:
• single check valves
• double check valves
• pressure type vacuum breakers
• reduced pressure zone devices
• registered air gaps (RAG)
• registered break tanks (RBT).

Information may include:
• charts and hand drawings
• instructions issued by authorised organisational or
external personnel
- manufacturer specifications and instructions
- material safety data sheets (MSDS)
- memos
- organisation work specifications and requirements
- plans and sketches
- regulatory and legislative requirements, particularly those pertaining to:
  - building codes
  - WHS and environmental requirements
  - plumbing regulations
- relevant Australian standards, including:
  - AS/NZS3500 National plumbing and drainage
- safe work procedures relating to commissioning backflow prevention devices
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

**Materials** may include:

- approved backflow prevention devices.

**Sustainability principles and concepts:**

- cover the current and future social, economic and environmental use of resources
- may include:
  - efficient use of material
  - efficient water use
  - efficient energy retention
  - selecting appropriate components and material to ensure minimal environmental impact.

**Unit Sector(s)**

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range
statement. Assessment of performance is to be consistent with the evidence guide.

**Elements and Performance Criteria**

| 1 | Prepare for work. | 1.1 | Plans and specifications are obtained. |
|   |                     | 1.2 | Work health and safety (WHS) and environmental requirements associated with testing, commissioning and maintaining hot and/or heated water temperature control devices are adhered to throughout the work. |
|   |                     | 1.3 | Quality assurance requirements are identified and adhered to according to workplace requirements. |
|   |                     | 1.4 | Tasks are planned and sequenced in conjunction with others involved in or affected by the work and statutory and regulatory authorities’ requirements. |
|   |                     | 1.5 | Tools and equipment for testing, commissioning and maintaining hot and/or heated water temperature control device, including personal protective equipment, are selected and checked for serviceability. |
|   |                     | 1.6 | Work area is prepared to support efficient commissioning of hot and/or heated water temperature control devices. |

| 2 | Identify testing and commissioning requirements. | 2.1 | Service and system testing and commissioning requirements are identified from job specifications and according to standards, using relevant information. |
|   |                                                   | 2.2 | Hot and/or heated water temperature control device specifications and necessary materials are identified according to standards, authorities' requirements and job specifications. |

| 3 | Test and commission device. | 3.1 | Service and system are checked to ensure device is appropriate and installed according to standards, job specifications, manufacturer recommendations and authorities' requirements. |
3.2 Operation of device is tested for correct flow rate, operation and compliance with specifications, manufacturer recommendations and authorities' requirements, and adjusted as required.

3.3 Documentation is completed according to regulating authorities' requirements.

3.4 *Sustainability principles and concepts* are observed when preparing for and undertaking work process.

4 **Maintain device.**

4.1 Maintenance requirements are identified from manufacturer specifications or authorities' requirements.

4.2 Replacement components are checked and fitted periodically and as required according to specification.

4.3 Maintenance of valves is conducted observing manufacturer and authorities' requirements.

5 **Restore work area.**

5.1 Work area is cleared and materials disposed of, reused or recycled according to legislation, regulations, codes of practice and job specification.

5.2 Tools and equipment are cleaned, checked, maintained and stored according to manufacturer recommendations and workplace procedures.

5.3 Documentation is completed according to workplace requirements.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - access information
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm
requirements, share information, listen and understand

- follow instructions
- report faults
- use language and concepts appropriate to cultural differences
- use and interpret non-verbal communication, such as hand signals
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- literacy skills to:
  - complete workplace documentation
  - read and interpret:
    - documentation from a variety of sources
    - plans and specifications
- numeracy skills to apply measurements and calculations
- planning and organising skills to:
  - plan and sequence tasks with others
  - plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technical skills to test, commission and maintain hot and/or heated water temperature control devices, including thermostatic mixing valves, in hot and/or heated water systems and appliances requiring temperature control
- technology skills to:
  - access and understand site-specific instructions in a variety of media
  - use mobile communication technology

**Required knowledge**

- bacteria in water and its effect on health
- basic hydraulics and mechanics relevant to water temperature control devices and their installation
- characteristics and applications of different types of hot and/or heated water temperature control valves and devices
- characteristics of materials
- effective isolation procedures
- job safety analysis (JSA) and safe work method statements (SWMS)
- process of commissioning hot and/or heated water temperature control devices
- processes for accessing information and for calculating material requirements
- properties of water, including pressure and flow rates
- relevant statutory requirements related to commissioning hot and/or heated water temperature control devices
- SI system of measurements
- standards applicable to the service
- testing techniques
- workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment providing that simulated or project-based assessment techniques fully replicate plumbing and services workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- locating, interpreting and applying relevant information, standards and specifications to commission hot and/or heated water temperature devices
- applying safety requirements throughout the work sequence, including electrical safety requirements and the use of personal protective clothing and equipment
- as a minimum, the ability to test, commission and maintain three different types of thermostatic mixing valve, ensuring:
  - application of sustainability principles and concepts
  - correct identification of location, design and details of proposed service
  - correct selection of valve for given application
  - completion of all work to specification
  - compliance with regulations, standards and organisational quality procedures and processes
  - application of sustainability principles and concepts
  - communicating and working effectively and safely with others.
Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

CPCSFS5001A Define scope and hazard level of fire systems design projects

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to interpret briefs and specifications for fire systems design projects, and define the scope and hazard level of the project with reference to relevant legislation, codes and standards. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems’ designers who need to determine the nature and purpose of the client's or fire engineer's fire systems design concept. The work involves establishing the building classification and hazard level and the legislation, codes and standards that must be applied to the detailed design for fire systems. Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- language and literacy skills for:
  - listening to and communicating clearly with clients and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect or builder
  - researching current relevant legislation, codes and standards
  - reading and interpreting drawings, including architectural and structural
- developing constructive and cooperative working relationships with project team members, workplace colleagues and clients
- initiating and running meetings with lead contractor and other service contractors
- project management
REQUIRED SKILLS AND KNOWLEDGE

- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- human psychology, especially fire avoidance behaviour
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire systems standards commonly required by building insurers
- fire systems' technology and components, including:
  - water-based systems, including:
### REQUIRED SKILLS AND KNOWLEDGE

- wet pipe sprinkler systems
- deluge and drencher systems
- dry pipe sprinkler systems
- pre-action sprinkler systems
- early suppression fast response (ESFR)
- hydrants, hose reels and monitors
- water supply tanks
- fire pump sets
- detection and warning systems, including:
  - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems
- purpose and operation of fire systems, including:
  - layout
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology

**Evidence Guide**

**EVIDENCE GUIDE**
# EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the determination and establishment of the scope of a range of fire systems design projects. This would involve correctly interpreting design concepts, briefs and specifications, establishing building classifications, and identifying the relevant applicable legislation, codes and standards.

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications
- an understanding of hazard levels and building classifications
- an understanding of the extent of legislation, codes, standards, as well as regulatory and insurance requirements, that may apply to fire systems design projects of different types and in different locations, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height
- the ability to conduct research to determine which particular legislation, codes, standards, regulatory and insurance requirements apply to specific fire systems designs in different types

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software.

### Method of assessment

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.
### Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Fire systems design projects** may include:

- different types of buildings, including:
  - residential
  - commercial
  - industrial
  - mixed classification
- projects in different locations, including:
  - local
  - involving more than one state or territory
  - international
- several types of fire systems, including:
  - water-based systems:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems.

**Building classifications** may include:

- classifications in the Building Code of Australia:
RANGE STATEMENT

| Codes and standards may include: | the Building Code of Australia  
Australian standards for fire systems  
international standards for fire systems. |
|---|---|
| Regulatory requirements may include: | relevant current legislation, including:  
building Acts  
building regulations  
infrastructure supply regulations  
relevant state, territory and local legislation. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring
REQUIRED SKILLS AND KNOWLEDGE

- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for calculating dimensions
- language and literacy skills for:
  - listening to and communicating clearly with colleagues and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
    - recognition of conflicts and errors on drawings supplied by other service contractors
    - agreements with other services, for example whichever service is fitted last must fit around existing services
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
  - researching and evaluating competing technologies in new products and
## REQUIRED SKILLS AND KNOWLEDGE

### Systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods

### Required knowledge
- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
- parametric modelling software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
REQUIRED SKILLS AND KNOWLEDGE

- the Building Code of Australia
- Australian standards for fire systems
- international standards for fire systems
- other fire system standards commonly required by building insurers
- regulatory requirements, systems and processes
- protection requirements for different buildings
- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems
- purpose and operation of fire systems, including:
  - layout
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
REQUIRED SKILLS AND KNOWLEDGE

- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- fluid mechanics and hydraulics relating to:
  - water supply
  - pressure
  - pump selection
  - tank selection
  - pressure vessels
  - pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.
### EVIDENCE GUIDE

This unit could be assessed as an activity involving the establishment of the detailed design requirements of a range of fire systems design projects, including discretionary client requirements. The activity should also include researching and interpreting the specifics of applicable legislation, regulatory processes and relevant codes and standards for a range of types of buildings in different project locations.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- an ability to interpret the detailed requirements of fire systems design specifications
- an understanding of the extent of compliance requirements and procedures to which fire systems design projects are subject, for a range of projects, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height
- the ability to discern mandatory and discretionary requirements and to research the detailed compliance requirements for a range of fire systems design projects in different locations
- the ability to gather, research and interpret information that may differ in only the slightest of details from one design or location to another
- the ability to present research findings to relevant stakeholders and conduct negotiations regarding detailed design changes imposed by:
  - compliance requirements
  - detailed designs of other services
  - aesthetic requirements.

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to
EVIDENCE GUIDE

comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology hardware and software.

Method of assessment

Assessment must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- project documentation, including plans, schedules, design briefs and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software.

### Method of assessment

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
EVIDENCE GUIDE

• confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Project management roles may include:

• client
• lead contractor or builder
• fire engineering consultant
• architect
• mechanical engineer or contractor
• structural engineer or contractor
• electrical engineer or contractor
• hydraulic engineer or contractor.

Fire systems may include:

• water-based systems, including:
  • wet pipe sprinkler systems
  • deluge and drencher systems
  • dry pipe sprinkler systems
  • pre-action sprinkler systems
  • early suppression fast response (ESFR)
### RANGE STATEMENT

| Project documentation may include: | • hydrants, hose reels and monitors  
| | • detection and warning systems, including:  
| | • emergency warning and intercommunications systems (EWIS)  
| | • fire detection and alarm systems  
| | • smoke control systems  
| | • emergency lighting systems. |

| Regulatory or other approval may include sign-off by: | • drawings, including:  
| | • architectural  
| | • structural  
| | • mechanical  
| | • hydraulic  
| | • electrical  
| | • layout  
| | • section  
| | • detail  
| | • external references  
| | • project plan  
| | • project schedule  
| | • design brief  
| | • design specifications. |

| Final drawing and documentation requirements may include: | • building surveyor  
| | • fire brigade  
| | • fire engineer.  
| | • 'as installed' drawings  
| | • block plans  
| | • tactical fire plans  
| | • commissioning benchmarks  
| | • operations and maintenance manuals. |

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to research, evaluate and select existing, new and incoming technologies and components for fire system detection and suppression systems. The unit also involves developing a broad understanding of the range of products available and their application, operation, performance and interaction. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the work of fire systems' designers and certifiers who need to:  
- understand the characteristics, operation and interaction of fire system technologies and components  
- select and assess fire system technologies and components.  
Fire systems are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

occupant warning systems. | 2.2. The suitability of fire detection and occupant warning systems to different types of buildings and situations is assessed with reference to relevant legislation, codes and standards.
2.3. The *performance characteristics and limitations of fire detection and occupant warning systems* are determined.
2.4. Fire detection and occupant warning system failures are analysed and appropriate design solutions are proposed.
2.5. Suitable and cost-effective fire detection and occupant warning system technologies and components are selected for a range of buildings and situations.

3. Analyse and specify the interaction of fire systems. | 3.1. The required interactions for effective operation of fire systems in different types of buildings and situations are analysed and specified.
3.2. The interfaces that affect interactions between fire systems in different types of buildings and situations are identified and examined.
3.3. Suitable fire detection and suppression systems are selected for a range of buildings and situations and the interactions and interfaces required for effective performance are specified.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytical skills to assess performance features and suitability of system technologies and components
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
### REQUIRED SKILLS AND KNOWLEDGE

- proprietary hydraulic calculation software
- proprietary estimating software
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
  - researching and evaluating competing technologies in new products and systems
- numeracy skills to evaluate cost-effectiveness of various systems and components
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers, manufacturers and industry professionals who may supply information relevant to research and evaluation activities
- organising own work, including creating personal systems and checklists for planning, managing and checking work

### Required knowledge

- workplace design tools and processes
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- computer software functions and operation, including:
  - word processing
  - spreadsheet
## REQUIRED SKILLS AND KNOWLEDGE

- email
- internet
- proprietary hydraulic calculation software
- proprietary estimating software
- parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems
- purpose and operation of fire systems, including:
  - layout
  - high hazard products
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
REQUIRED SKILLS AND KNOWLEDGE

- cause and effect matrix
- interface with other services
- water supplies, including:
  - common water sources
  - conservation requirements
  - in-ground reticulation
  - booster configurations
- fluid mechanics and hydraulics relating to:
  - water supply
  - pressure
  - pump selection
  - tank selection
  - pressure vessels
  - pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- principles of organic and inorganic chemistry
- principles of physical sciences, including:
  - Boyle's Law
  - Charles' Law
  - Dalton's Law
  - Henry's Law
- principles of thermodynamics, including:
  - effects of heat
  - stratification of gases
  - smoke and heat dynamics
- electrical and electronics theory, including:
  - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
  - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
  - relationship between voltage drops around a circuit and applied voltage
  - definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
  - layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
  - basic operation of common electronic and electrical components used in fire

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving research, evaluation and selection of fire detection and suppression systems for a range of types of fire systems design projects. The activity should also include the preparation of specifications for the interactions and interfaces required for the effective operation of the systems in the event of a fire.

Critical aspects for assessment and evidence required to

A person who demonstrates competency in this unit must be able to provide evidence of the
EVIDENCE GUIDE

demonstrate competency in this unit | required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to read and interpret a range of documents, including design briefs and specifications for fire systems design projects, and manufacturer specifications and technical performance data for a range of fire detection and suppression technologies and components
- the ability to evaluate and compare the performance and cost-effectiveness of different technologies and components with similar applications:
  - for fire detection and suppression systems
  - for a range of different fire systems design projects
- the ability to assess the suitability of fire detection and suppression systems technology and components for a range of applications in different fire systems design projects, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height
- the ability to specify the required interactions and interfaces between fire detection and suppression systems in a range of different fire systems design projects.

Context of and specific resources for assessment | Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- design briefs, drawings, plans and specifications
- manufacturer specifications and performance data for a range of fire detection and suppression systems technologies and components
- copies of codes, standards, legislation and
EVIDENCE GUIDE

regulated requirements

- access to information and communications technology - hardware and software.

Method of assessment

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

1.1. Technologies and

- wet pipe sprinkler systems and components
## RANGE STATEMENT

**components for fire suppression systems** may include:
- dry pipe sprinkler systems and components
- pre-action sprinkler systems and components
- early suppression fast response (ESFR) sprinkler systems and components
- fire control panels
- hydrants
- hose reels
- monitors
- water supply tanks
- fire pump sets
- valves.

**Relevant legislation, codes and standards** may include:
- building Acts and regulations
- the Building Code of Australia (BCA)
- Australian standards for fire systems
- international standards for fire systems
- codes and standards required by building insurers.

**Performance characteristics and limitations of fire suppression systems** may include:
- system activation and operation
- effect of fire, heat and smoke of component materials
- interaction with other systems and services.

**Technologies and components available for fire detection and occupant warning systems** may include:
- emergency warning and intercommunications systems (EWIS)
- fire detection and alarm systems
- smoke control systems
- emergency lighting systems
- fire control panels.

### 1.2 Performance characteristics and limitations of fire detection and occupant warning systems may include:
- system activation and operation
- effect of fire, heat and smoke on component materials
- interaction with other systems and services.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
**REQUIRED SKILLS AND KNOWLEDGE**

- email
- internet
- proprietary project management software
- proprietary hydraulic calculation software
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for:
  - calculating dimensions and pipe lengths
  - performing fluid mechanic calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
  - researching and evaluating competing technologies in new products and systems
  - developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
  - negotiation and conflict management
  - initiating and running meetings with lead contractor and other service contractors
  - organising own work, including creating personal systems and checklists for planning, managing and checking work
  - lateral thinking and problem solving
  - maintaining concentration, focus and attention to detail for long periods
  - managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements
### REQUIRED SKILLS AND KNOWLEDGE

**Required knowledge**

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - parametric modelling software, such as Navis-Works or MEP-REVIT
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components for water-based systems, including:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
- purpose and operation of fire systems, including:
REQUd SKILLS AND KNOWLEDGE

- layout
- system operation
- performance requirements
- maintenance standards
- system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- fluid mechanics and hydraulics relating to pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - trigonometry, for example to amend dimensions of pipe allowing for fittings
  - flow calculations, including:
REQUIRED SKILLS AND KNOWLEDGE

- area of operations
- discharge rates and quantities
- discharge times
- pressure gain and loss
- K-factors
- pressure, temperature and volume relationship
- Hazen-Williams equation
- Darcy-Weisbach equation
- computational fluid dynamics
- principles of organic and inorganic chemistry
- principles of physical sciences, including:
  - Boyle’s Law
  - Charles’ Law
  - Dalton’s Law
  - Henry’s Law
- principles of thermodynamics, including:
  - effects of heat
  - stratification of gases
  - smoke and heat dynamics
- human psychology, especially fire avoidance behaviour
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the effective performance and application of
EVIDENCE GUIDE

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit. In particular the person should demonstrate:

- the ability to:
  - read and interpret a range of design drawings
  - create, manipulate, save, file and share design drawings
  - identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on fire sprinkler system designs
  - interpret and apply fire engineer's designs for alternative solutions
  - an understanding of technical issues impacting on fire sprinkler system designs
  - an understanding of the relevant regulatory approval and fire systems design certification processes
  - the ability to produce fully compliant designs for fire sprinkler systems which also meet client requirements, including:
    - wet pipe
    - dry pipe
    - pre-action
    - early suppression fast response (ESFR)
    - combination systems
  - the ability to produce fully compliant designs for fire sprinkler systems for a range of types of sites, including:
    - low-rise buildings
    - medium-rise buildings
    - high-rise buildings (over 25 metres)
    - buildings over 45 metres in height. |
| Context of and specific resources for assessment | Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to |
| **EVIDENCE GUIDE**                | comply with relevant regulatory or Australian standards' requirements. Resource implications for assessment include:  
|                                  | • design briefs, drawings, plans and specifications  
|                                  | • copies of codes, standards, legislation and regulatory requirements  
|                                  | • access to information and communications technology - hardware and software  
|                                  | • access to relevant manufacturer's information regarding fittings and components.  
| **Method of assessment**         | Assessment must:  
|                                  | • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package  
|                                  | • include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application  
|                                  | • reinforce the integration of employability skills with workplace tasks and job roles  
|                                  | • confirm that competency is verified and able to be transferred to other circumstances and environments.  
| **Guidance information for assessment** | Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.  
|                                  | Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.  |
# Range Statement

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Project drawings and documentation may include: | architectural  
| structural  
| mechanical  
| electrical  
| hydraulic  
| fire engineer's or estimator's specifications. |
| Codes and standards may include: | the Building Code of Australia  
| current relevant Australian standards for fire systems  
| current relevant international standards for fire systems  
| codes and standards stipulated by the building insurer. |
| Efficient and workable layout and location relate to: | selection of cost-effective components and materials  
| consideration of:  
| penetrations  
| conflict with other services  
| occupational health and safety risks  
| access constraints  
| installation problems  
| aesthetic requirements  
| efficiencies to facilitate work on site and reduce labour costing. |
| Sprinkler system components may include: | discharge nozzles  
| pipework  
| brackets  
| system valves  
| zone valves  
| fire panels  
| specific components for:  
| wet pipe sprinkler systems |

  - proprietary project management software
  - proprietary hydraulic calculation software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT

- numeracy skills for:
  - calculating dimensions, pipe lengths and piping friction loss
  - performing fluid mechanic calculations

- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
  - researching and evaluating competing technologies in new products and systems
  - report writing

- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
REQUIRED SKILLS AND KNOWLEDGE

- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components for hydrant and hose reel systems
- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
REQUIRED SKILLS AND KNOWLEDGE

- performance requirements
- maintenance standards
- system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - trigonometry, for example to amend dimensions of pipe allowing for fittings
  - flow calculations, including:
    - area of operations
    - discharge rates and quantities
    - discharge times
### REQUIRED SKILLS AND KNOWLEDGE

- pressure gain and loss
- K-factors
- pressure, temperature and volume relationship
- Hazen-Williams equation
- Darcy-Weisbach equation
- computational fluid dynamics
- basic principles of organic and inorganic chemistry
- principles of physical sciences, including:
  - Boyle's Law
  - Charles' Law
  - Dalton's Law
  - Henry's Law
- basic principles of thermodynamics, including:
  - effects of heat
  - stratification of gases
  - smoke and heat dynamics
- human psychology, especially fire avoidance behaviour
- contractual processes

### Evidence Guide

#### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the effective performance and application of principles relating to the design of hydrant and hose reel systems for a range of different types of buildings. |
## EVIDENCE GUIDE

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to:
  - read and interpret a range of design drawings
  - use workplace design tools to create, manipulate, save or file, and share design drawings
  - identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on hydrant and hose reel system designs
  - interpret and apply fire engineer's designs for alternative solutions
  - an understanding of technical issues impacting on hydrant and hose reel designs
  - an understanding of the relevant regulatory approval and fire systems design certification processes
  - the ability to produce designs for hydrant and hose reel systems which comply with applicable legislation, regulations, codes and standards, and meet client requirements, in a range of types of sites, including:
    - low-rise buildings
    - medium-rise buildings
    - high-rise buildings (over 25 metres)
    - buildings over 45 metres in height.

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications
## EVIDENCE GUIDE

<table>
<thead>
<tr>
<th>technology - hardware and software</th>
</tr>
</thead>
<tbody>
<tr>
<td>access to manufacturer's information regarding fittings and components.</td>
</tr>
</tbody>
</table>

### Method of assessment

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- **Project drawings and**
  - architectural
RANGE STATEMENT

**documentation** may include:
- structural
- mechanical
- electrical
- hydraulic
- fire engineer's or estimator's specifications.

**Codes and standards** may include:
- the Building Code of Australia
- current relevant Australian standards for fire systems
- current relevant international standards for fire systems
- codes and standards stipulated by the building insurer.

**Efficient and workable layout and location** relate to:
- selection of cost-effective components and materials
- consideration of:
  - penetrations, especially through passive fire safety elements
  - conflict with other services
  - occupational health and safety risks
  - access constraints
  - installation problems
  - aesthetic requirements
  - efficiencies to facilitate work on site and reduce labour costing.

**Hydrant and hose reel system components** may include:
- hose reels
- hydrant valves
- booster valves.

**Negotiations** regarding amendments to design drawings may arise due to:
- non-compliance with applicable legislation, codes and standards
- impact on installation risks and constraints
- impact on cost-effectiveness.

CPCSFS5008A Create detailed designs for fire detection and warning systems

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to obtain, process and set up drawings for the detailed design of fire detection and warning systems. The unit also involves assessing and selecting component requirements, setting out the locations of components and creating final notated drawings.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems' designers with responsibility for creating detailed designs for fire detection and warning systems.

Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
REQUIRED SKILLS AND KNOWLEDGE

- history
- transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary estimating software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- using BASIC computer programming language to write logic for electronic system interfaces
- numeracy skills for calculating:
  - voltage drops
  - battery capacity
  - battery back-up
  - power supplies
  - cabling sizes and types
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
### REQUIRED SKILLS AND KNOWLEDGE

- architectural
- structural
- mechanical
- hydraulic
- electrical
- researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

  - electrical calculations, including:
    - voltage drops
    - battery capacity
    - battery back-up
    - power supplies
    - cabling sizes and types
- electrical and electronics theory, including:
  - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
  - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
  - relationship between voltage drops around a circuit and applied voltage
  - definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
  - layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
  - basic operation of common electronic and electrical components used in fire detection and warning systems
  - basic operation of communication protocols on addressable systems, peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- communication technologies, including:
  - data transfer
  - networking
  - communication protocols
  - radio frequency technologies
REQUIRED SKILLS AND KNOWLEDGE

- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
- financial management, including:
  - budgeting
  - cost-effectiveness
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the effective performance and application of principles relating to the design of fire detection and occupant warning systems for a range of different types of buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:
- the ability to:
  - read and interpret a range of design drawings
  - create, manipulate, save, file and share design drawings
  - identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on
### EVIDENCE GUIDE

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
REQUIRED SKILLS AND KNOWLEDGE

- section
- detail
- external references
- freezing layers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- numeracy skills for:
  - calculating:
  - dimensions
  - pipe lengths
  - piping friction loss
  - tank size
  - pump capacity
  - motor output
  - performing fluid mechanic calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - fire systems design
    - mechanical
    - hydraulic
    - electrical
## REQUIRED SKILLS AND KNOWLEDGE

- researching and evaluating competing technologies in new products and systems
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent design projects at different stages of the process and with diverse sets of regulatory requirements

### Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
REQUIRED SKILLS AND KNOWLEDGE

- other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
    - water supply tanks
    - fire pump sets
- fire system water supply technology and components, including:
  - electric pumps
  - diesel pumps
  - tanks
  - pressure vessels
  - booster configurations
- purpose and operation of fire systems, including:
  - layout
  - high hazard products
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- characteristics and limitations of products and materials used in water supplies for fire systems and issues relating to material compatibility
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
REQUIRED SKILLS AND KNOWLEDGE

- mechanical engineer
- hydraulic engineer
- electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems, fire systems' water supplies and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- water supplies, including:
  - common water sources
  - conservation requirements
  - in-ground reticulation
  - booster configurations
- fluid mechanics and hydraulics relating to:
  - water supply
  - pressure
  - pump selection
  - tank selection
  - pressure vessels
  - pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of water supply
  - trigonometry, for example to amend dimensions of pipe allowing for fittings
  - flow calculations, including:
    - area of operations
    - discharge rates and quantities
    - discharge times
    - pressure gain and loss
    - K-factors
    - pressure, temperature and volume relationship
    - Hazen-Williams equation
    - Darcy-Weisbach equation
    - computational fluid dynamics
REQUIRED SKILLS AND KNOWLEDGE

- basic principles of organic and inorganic chemistry
- basic principles of physical sciences, including:
  - Boyle’s Law
  - Charles’ Law
  - Dalton’s Law
  - Henry’s Law
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the effective performance and application of principles relating to the design of water supplies for fire systems for a range of different types of buildings.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- an understanding of fluid dynamics, hydraulics and the calculations required for the design of water supplies for fire systems
- the ability to:
  - read and interpret a range of design drawings
## Evidence Guide

- create, manipulate, save, file and share design drawings
- identify, interpret and apply relevant current legislation, codes, standards and regulatory requirements impacting on the design of water supplies for fire systems
- interpret and apply fire engineer's designs for alternative solutions
- the ability to produce fully compliant designs which meet requirements for water supplies for fire systems in a range of types of buildings, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height.

### Context of and Specific Resources for Assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software
- access to manufacturer's information regarding fittings and components.

### Method of Assessment

Assessment must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
### EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- **Project drawings and documentation** may include:
  - proposed water-based fire systems designs
  - mechanical
  - electrical
  - hydraulic.

- **Fire system components** may include:
  - discharge nozzles
  - pipework
  - system valves
  - zone valves
  - fire panels
  - hose reels
  - hydrant valves
  - booster valves.

- **Codes and standards** may include:
  - the Building Code of Australia
  - current relevant Australian standards for fire
## RANGE STATEMENT

<table>
<thead>
<tr>
<th>Systems</th>
<th>Efficient and workable layout and location relate to:</th>
</tr>
</thead>
<tbody>
<tr>
<td>- current relevant international standards for fire systems</td>
<td></td>
</tr>
<tr>
<td>- codes and standards stipulated by the building insurer.</td>
<td>- consideration of a range of sustainable options for producing the required water pressure for water-based fire systems</td>
</tr>
<tr>
<td></td>
<td>- selection of cost-effective components and materials</td>
</tr>
<tr>
<td></td>
<td>- consideration of:</td>
</tr>
<tr>
<td></td>
<td>- penetrations, especially through passive fire safety elements</td>
</tr>
<tr>
<td></td>
<td>- conflict with other services</td>
</tr>
<tr>
<td></td>
<td>- occupational health and safety risks</td>
</tr>
<tr>
<td></td>
<td>- access constraints</td>
</tr>
<tr>

<td>- installation problems</td>
</tr>
<tr>
<td></td>
<td>- aesthetic requirements</td>
</tr>
<tr>
<td></td>
<td>- efficiencies to facilitate work on site and reduce labour costing.</td>
</tr>
</tbody>
</table>

**Water supply components may include:**

- electric pumps
- diesel pumps
- tanks
- pressure vessels
- booster configurations
- components for water recovery systems.

**Negotiations regarding amendments to design drawings may arise due to:**

- non-compliance with applicable legislation, codes and standards
- impact on installation risks and constraints
- impact on cost-effectiveness.

CPCSFS5010A Provide documentation and support for fabrication of fire sprinkler systems

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to assess issues relating to on-site installation of pipework for sprinkler systems. The unit also involves producing specifications and supporting documentation for the cost-effective fabrication of manageable pipework sections. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems’ designers with responsibility for creating specifications and drawings for the fabrication of pipework sections for fire sprinkler systems. Fire systems are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Determine the impact on fabrication plans of installation risks and constraints. | 1.1. *On-site health and safety risks* relating to the installation of sprinkler systems are identified.  
1.2. *Constraints relating to access to on-site installation locations* for sprinkler system pipes and components are identified.  
1.3. Impact of installation risks and constraints on fabrication plans for fire sprinkler system pipes and components is considered and cost-effective and manageable solutions are determined. |
| 2. Plan and specify pipes, fittings and components. | 2.1. *Current accurate drawings and documentation* are obtained and analysed, and measurements are taken on-site during construction if possible to confirm the accuracy of building dimensions.  
2.2. The dimensions and design drawing locations of the selected *fittings and components* are checked and confirmed. |
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
2.3. | Fittings and components are planned and specified for ease and safety of installation and to provide cost-effective solutions.
2.4. | Pipe lengths are calculated, specified and numbered on relevant drawings.
3. | Produce fabrication documentation.
3.1. | Appropriate pipe materials and features are confirmed and specified.
3.2. | Supplier is consulted as necessary to discuss and negotiate efficient and cost-effective pipe fabrication options.
3.3. | Individual *pipe specifications* are numbered and detailed on fabrication lists.
3.4. | Drawings are supplied to support fabrication specifications, as required.

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

#### Required skills
- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- fluent, detailed hand-drawing and sketching ability to convey information to on-site workers
- numeracy skills for:
  - calculating dimensions, pipe lengths and piping friction loss
REQUIRED SKILLS AND KNOWLEDGE

- performing fluid mechanic calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, including water-based systems, such as:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the production of pipe fabrication documentation for a range of fire sprinkler system design projects.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- the ability to:
  - read and interpret a range of design drawings
  - create, manipulate, save, file and share design drawings
  - an understanding of technical issues impacting on fire sprinkler systems designs
  - an understanding of installation risks and constraints impacting on pipe fabrication specifications for fire sprinkler systems
  - the ability to produce safe, efficient and cost-effective solutions and accurate drawings and documentation for pipe fabrication work for fire sprinkler systems, including:
    - wet pipe
## EVIDENCE GUIDE

- deluge and drencher
- dry pipe
- pre-action
- early suppression fast response (ESFR)
- combination systems
- the ability to produce safe, efficient and cost-effective solutions and accurate drawings and documentation for pipe fabrication work for fire sprinkler systems in a range of project types, including:
  - low-rise buildings
  - medium-rise buildings
  - high-rise buildings (over 25 metres)
  - buildings over 45 metres in height.

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- design briefs, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software
- access to manufacturer’s information.

### Method of assessment

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

On-site health and safety risks may include:

- manual handling
- confined spaces
- working at height.

Constraints relating to access may include:

- height of pipe
- length of pipe
- distance from beams
- distance from walls.

On-site installation locations may include:

- ceiling space
- roof space
- under-floor
- under-soffit.

Current accurate drawings and documentation must be obtained from consultants, lead contractor and other service contractors and should include:

- architectural
- structural
- mechanical
- electrical
- hydraulic
- fire engineer's or estimator's specifications if
RANGE STATEMENT

available.

Fittings and components may include:
- hangers
- sprinkler heads
- elbows
- tees
- pumps
- tanks.

Pipe specifications may include:
- length
- dimension
- pap size
- thread
- material, including:
  - black steel
  - galvanised
  - hot dip galvanised
- flange.

3.2. Appropriate solutions are proposed and negotiated with relevant project team members, as required.
3.3. Fire systems installation drawings and documentation are amended to incorporate accepted solutions.
3.4. Solutions are communicated to on-site fire system installation team members and amended documentation is supplied according to workplace and project procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
REQUIRED SKILLS AND KNOWLEDGE

- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- numeracy skills for performing relevant system calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractors
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
REQUIRED SKILLS AND KNOWLEDGE

- fire detection technologies
- fire suppression technologies
- fire containment
- parametric modelling software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, such as:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
    - water supply tanks
    - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems
- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
REQUIRED SKILLS AND KNOWLEDGE

- performance requirements
- maintenance standards
- system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- mathematic principles, equations and calculation methods relevant to the system type

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Installation implications may include:** | • on-site health and safety risks, such as:  
|  | • manual handling  
|  | • confined spaces  
|  | • working at height  
|  | • constraints relating to access, such as:  
|  | • height of pipe  
|  | • length of pipe  
|  | • distance from beams  
|  | • distance from walls. |

| **Monitoring project drawings and documentation may involve:** | • regular review of project management software tools and systems  
|  | • regular review of emails  
|  | • telephone communication with project team, including:  
|  | • architect  
|  | • lead contractor  
|  | • other service contractors. |

| **On-site installation issues may include:** | • discrepancies between designed and actual structure  
|  | • discrepancies between designed and actual systems for other services, including:  
|  | • mechanical  
|  | • hydraulic  
|  | • electrical  
|  | • errors in supplied materials and components  
|  | • scheduling and sequencing changes  
|  | • problems with access to installation locations of fire system components. |

CPCSFS5013A Support commissioning processes and finalise fire systems design projects

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to confirm the post-installation details of fire systems and produce amended drawings and documentation, and to prepare detailed commissioning procedures and specifications. The unit also covers reviewing issues and solutions arising during fire systems design projects and making subsequent improvements to fire systems design project processes. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of fire systems’ designers with responsibility for producing ‘as built’ drawings, block plans, tactical fire plans, and operations and maintenance manuals for fire systems. Fire systems designs are limited to those within the deemed-to-satisfy provisions of the Building Code of Australia or detailed fire systems designs for alternative solutions designed by fire engineers. This unit does not apply to fire systems for special hazard locations. |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Produce accurate final drawings for fire systems.</td>
<td>1.1. Progressive changes to fire systems design drawings resulting from construction phase issues are documented according to workplace and project procedures. 1.2. Site visits are conducted, if possible, to confirm and record final component sizes, locations and building dimensions. 1.3. Accurate 'as built' drawings are prepared, named, notated, filed and submitted according to workplace procedures and project requirements. 1.4. Appropriate block plans and tactical fire plans are produced as required.</td>
</tr>
<tr>
<td>2. Prepare commissioning details, and operation and maintenance</td>
<td>2.1. System performance requirements and commissioning procedures and specifications are prepared according to workplace and project requirements.</td>
</tr>
</tbody>
</table>
### ELEMENT

<table>
<thead>
<tr>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>

#### 2.2. Standard operating procedures for the fire system are prepared based on relevant codes and standards and component manufacturer’s recommendations.

#### 2.3. Regular maintenance procedures for the fire system are produced based on component manufacturer’s recommendations and relevant regulatory requirements.

#### 2.4. Operation and maintenance signage is installed, as required according to relevant workplace, project and regulatory requirements.

#### 3. Review and evaluate the fire systems design process.

#### 3.1. Project documentation is reviewed and processed, and issues that arose and their solutions are noted.

#### 3.2. Project issues and solutions are discussed with relevant workplace personnel and process improvement strategies are explored.

#### 3.3. Project planning, methodologies and quality assurance systems are amended to incorporate agreed process improvement strategies.

---

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
REQUIRED SKILLS AND KNOWLEDGE

- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, installers, suppliers and contractors
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, installers and clients
- initiating and running meetings with lead contractor and other service contractors
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

**Required knowledge**

- workplace design tools and processes
- level of accuracy required in detailed design drawings
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
### REQUIRED SKILLS AND KNOWLEDGE

- fire detection technologies
- fire suppression technologies
- fire containment

- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software

- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers

- protection requirements for different buildings

- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
    - water supply tanks
    - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems

- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
  - performance requirements
REQUIRED SKILLS AND KNOWLEDGE

- maintenance standards
- system activation and operation
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- instruments used in commissioning and measuring fire system performance
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures. |
## EVIDENCE GUIDE

CPCSFS5014A Conduct annual fire systems certification inspections

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor       | This unit of competency specifies the outcomes required to assess all types of fire systems in all types of buildings to ensure that the systems comply with applicable legislation and will perform in the event of a fire. Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the role of annual certifiers of fire systems with responsibility for inspecting existing fire systems; assessing their compliance with the relevant applicable legislation, codes and standards; and advising whether they continue to perform to current fire safety standards. |

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

| Prerequisite units | Nil |
## Employability Skills Information

| Employability skills | This unit contains employability skills. |

## Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for annual fire systems certification inspections. | 1.1. Annual fire systems inspections are scheduled in a timely manner and in consultation with relevant stakeholders, as required.  
1.2. Current building plans are obtained and reviewed and modifications made to the building since the last inspection are identified and noted.  
1.3. Information regarding the current and historical legislation, codes and standards applicable to fire systems is reviewed and used to inform inspection planning.  
1.4. Information regarding the validity of fire systems' compliance documentation is reviewed and used to inform inspection planning.  
1.5. Fire systems certification inspections are planned to ensure efficient and comprehensive implementation. |
| 2. Conduct annual fire systems certification inspections. | 2.1. Fire systems are inspected concurrently in each area of the building in accordance with organisational and regulatory requirements.  
2.2. Each aspect of each fire system is assessed for compliance with the applicable current and historical legislation, codes and standards and findings are documented.  
2.3. The current performance level of each fire system is |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | assessed and recorded.
 | 2.4. Advice is sought from relevant professional personnel, as required and according to workplace and regulatory procedures.

3. Produce annual fire systems certification reports and communicate findings.

| 3.1. The findings of inspections are analysed and works required to address shortfalls in fire systems' compliance or performance are identified and recorded according to regulatory requirements.
 | 3.2. Reports and certificates are produced and processed according to regulatory requirements.
 | 3.3. The findings of the report are communicated to relevant stakeholders according to regulatory requirements, and works required to rectify fire systems are carefully explained.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- language and literacy skills for:
  - listening to and communicating clearly with stakeholders, colleagues and contractors
  - explaining the gravity of fire systems inspection findings to owner
  - researching, accessing, reading, interpreting and applying relevant current and historical legislation, codes and standards
  - letter writing
  - updating knowledge of products, software systems and technology
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
REQUIRED SKILLS AND KNOWLEDGE

- structural
- fire systems design
- block plans
- tactical fire plans
- report writing
- developing constructive and cooperative working relationships with stakeholders, colleagues and clients
- negotiation and conflict management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- inspecting multiple fire systems (with different applicable standards) concurrently, including:
  - attention to detail
  - visual acuity to perceive, for example that the distance between sprinklers is too great
- maintaining a professional detached authority

**Required knowledge**

- auditing processes and protocols
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
- relevant current and historical legislation, codes and standards, including:
### REQUIRED SKILLS AND KNOWLEDGE

- building Acts
- building regulations
- infrastructure supply regulations
- the Building Code of Australia
- Australian standards for fire systems
- international standards for fire systems
- other fire system standards commonly required by building insurers
- protection requirements for different buildings
- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems
  - special hazard fire systems, including:
    - foam systems (low expansion, medium expansion and high expansion)
    - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
    - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
    - chemical powder systems
    - wet chemical systems
  - characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
  - interconnection of fire systems, including:
    - cause and effect matrix
    - interface with other services
  - passive fire safety elements:
    - identification of passive elements
    - requirements for safeguarding the integrity of passive fire element
REQUIRED SKILLS AND KNOWLEDGE

- performance where penetrations have been made
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- human psychology, especially fire avoidance behaviour
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving preparing for, conducting and reporting on annual fire systems inspections for a range of types of fire systems in a variety of buildings with different construction and modification histories.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- an understanding of the range of relevant current and historical legislation, codes, standards and regulatory requirements for the certification of existing fire systems
- an understanding of the function and
### EVIDENCE GUIDE

| Operation of the full range of fire systems, including water-based fire systems, detection and warning systems and special hazard fire systems used in a wide variety of types of buildings, including: |
| - low-rise buildings |
| - medium-rise buildings |
| - high-rise buildings (over 25 metres) |
| - buildings over 45 metres in height |
| - the ability to apply the relevant current and historical compliance requirements to annual inspections of a range of fire systems installed and modified at different dates, in a variety of types of buildings |
| - the visual acuity required to perceive anomalies in fire systems' compliance arising from building modifications, repairs or adjustments; or a lack of fire systems maintenance |
| - the ability to report and communicate findings effectively to ensure that the gravity of non-compliance of fire systems is understood and works required to remedy the situation may be expedited. |

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- documents, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software.

### Method of assessment

Assessment must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - design and drawing software
  - proprietary project management and project scheduling software
- language and literacy skills for:
  - listening to and communicating clearly with stakeholders, colleagues and contractors
  - explaining gravity of fire systems inspection findings to owner
  - researching, accessing, reading, interpreting and applying relevant current
## REQUIRED SKILLS AND KNOWLEDGE

- and historical legislation, codes and standards
- letter writing
- updating knowledge of products, software systems and technology
- reading and interpreting drawings, including:
  - architectural
  - structural
  - mechanical
  - hydraulic
  - electrical
  - report writing
- developing constructive and cooperative working relationships with stakeholders, colleagues and clients
- negotiation and conflict management
- organising own work, including creating personal systems and checklists for planning, managing and checking work

### Required knowledge

- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
- computer software functions and operation, including relevant proprietary software
- relevant current and historical legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
REQUIRED SKILLS AND KNOWLEDGE

- protection requirements for different buildings
- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems
  - special hazard fire systems, including:
    - foam systems (low expansion, medium expansion and high expansion)
    - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
    - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
    - chemical powder systems
    - wet chemical systems
  - characteristics and limitations of products and materials used in fire systems and issues relating to material compatibility
  - interconnection of fire systems, including:
    - cause and effect matrix
    - interface with other services
  - passive fire safety elements:
    - identification of passive elements
    - requirements for safeguarding the integrity of passive fire element performance where penetrations have been made
  - basic principles of structural engineering
  - characteristics of building materials
  - construction industry terminology
  - sustainability requirements and ratings, including:
    - energy conservation
    - water conservation
  - human psychology, especially fire avoidance behaviour
### REQUIRED SKILLS AND KNOWLEDGE

- contractual processes

### Evidence Guide

#### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the establishment of the legislation, codes and standards that apply to existing fire systems in a range of buildings. The activity should include assessment of the compliance of fire safety schedules and inspection, testing and maintenance documentation.

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular the person should demonstrate:

- a comprehensive understanding of the range of relevant current and historical legislation, codes, standards and regulatory requirements for the certification of existing fire systems
- an understanding of the function and operation of the full range of fire systems, including water-based fire systems, detection and warning systems and special hazard fire systems used in a wide variety of types of buildings, including:
  - low-rise buildings
  - medium-rise buildings
**EVIDENCE GUIDE**

- high-rise buildings (over 25 metres)
- buildings over 45 metres in height
- the ability to research and identify the applicable current and historical compliance requirements for a range of fire systems installed and modified at different dates, in a variety of types of buildings
- the ability to assess fire safety schedules and inspection and testing documentation for currency and completeness
- the ability to identify and report on anomalies and omissions in fire safety compliance documentation
- the ability to produce checklists and notes regarding issues of particular interest found in fire safety documentation, to assist annual inspection processes.

**Context of and specific resources for assessment**

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- documents, drawings, plans and specifications
- copies of codes, standards, legislation and regulatory requirements
- access to information and communications technology - hardware and software.

**Method of assessment**

Assessment must:
- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Fire systems may include:

- water-based systems, including:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
- detection and warning systems, including:
  - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems
- special hazard fire systems, including:
  - foam systems (low expansion, medium
## RANGE STATEMENT

Artibus Innovation
CPCSFS7001A Define scope of and initiate special hazard fire systems design projects

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to define the scope of a project to design a complex special hazard fire system and put in place mechanisms to support the design work.

The unit addresses the careful clarification of the special hazards project's scope, including an assessment of the level of risk attached to the equipment or facility for which the fire system is being designed, and the development of fire risk solutions. The unit covers the conduct of a thorough analysis of any relevant standards as well as of the project brief itself.

Processes to guide and manage the special hazard fire systems design project are also covered. The development of a fire systems design project is subject to significant complexities due to the typical requirement to integrate multiple fire suppression and detection systems.

Special hazard fire systems include gaseous, foam and water spray solutions which offer protection for life safety, and to facilities and equipment vital to business operation and success.

Special hazard fire systems may fall outside the ambit of the Building Code of Australia. Client requirements may specify use of the U.S. National Fire Protection Association (NFPA) standards.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |
Application of the Unit

This unit of competency supports the attainment of skills and knowledge necessary for the effective and efficient scoping of special hazard fire suppression and detection systems in preparation for the technical development of the design.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

</table>
| project management details. | of communication are established.  
1.2. Required project outcomes are consulted, clarified and finalised with the client.  
1.3. Relevant project scheduling and sequencing information is established.  
1.4. Tasks in the design process are assigned to relevant personnel, and mechanisms to coordinate their input are established and communicated.  
1.5. Project file-sharing and communication systems and tools are determined.  
1.6. Workplace quality assurance checks to ensure accuracy and validity of design are determined and procedures to ensure that these are conducted are established.  
1.7. Stages where regulatory or other approval is required for the design are determined and procedures to ensure that these are obtained are established. |
| 2. Interpret fire systems design concepts, briefs or specifications. | 2.1. The nature and purpose of the fire systems design are determined.  
2.2. Project documentation is gathered and assessed for completeness and use in the design of effective special hazard fire systems.  
2.3. Structural characteristics of the equipment or facility are identified and analysed.  
2.4. Functions and occupancies of buildings or facilities are determined from initial project documentation.  
2.5. Clarification of specific building details is sought from the client or relevant contractors and consultants.  
2.6. The appropriate hazard classification for the building or facility is researched and confirmed. |
| 3. Complete the risk assessment of the project. | 3.1. Regulatory requirements and applicable standards for the special hazard fire system are determined.  
3.2. Insurance requirements impacting on applicable codes and standards for the special hazard fire system project are determined.  
3.3. A risk assessment is documented to identify or confirm the type or types of special hazard detection and suppression system that will be used. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - proprietary estimating software
  - parametric modelling software
- using BASIC computer programming language to write logic for electronic system interfaces
- numeracy skills for:
  - calculating:
    - dimensions
    - pipe lengths
    - piping friction loss
    - pump capacity
    - motor output
## REQUIRED SKILLS AND KNOWLEDGE

- performing calculations for electrical systems:
  - voltage drops
  - battery capacity
  - battery back-up
  - power supplies
  - performing fluid mechanic calculations
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, fitters, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractor
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
  - recognition of conflicts and errors on drawings supplied by other service contractors
  - agreements with other services, for example whichever service is fitted last must fit around existing services
  - reading and interpreting drawings, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
    - report writing
- developing constructive and cooperative working relationships with project team members, workplace colleagues, suppliers, fitters and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- lateral thinking and problem solving
- maintaining concentration, focus and attention to detail for long periods
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

### Required knowledge

- workplace design tools and processes
- level of accuracy required in detailed design drawings
### REQUIRED SKILLS AND KNOWLEDGE

- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
- proprietary fire engineering and modelling programs
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - proprietary estimating software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - other fire system standards commonly required by building insurers
- protection requirements for different buildings, including the existence of special zones, the egress requirements of occupants, and the construction materials used
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
## REQUIRED SKILLS AND KNOWLEDGE

- fire systems' technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
  - fire detection and alarm systems
  - smoke control systems
  - emergency lighting systems
  - special hazard fire systems, including:
    - foam systems (low expansion, medium expansion and high expansion)
    - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
    - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
  - chemical systems, including:
    - powder
    - wet chemical
- purpose and operation of fire systems, including:
  - layout
  - special products and hazards
  - system operation
  - performance requirements
  - maintenance standards
  - system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material capability
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- instruments used in commissioning and measuring fire system performance
- basic principles of structural engineering
- characteristics of building materials
REQUIRED SKILLS AND KNOWLEDGE

- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- water supplies, including:
  - common water sources
  - conservation requirements
  - in-ground reticulation
  - booster configurations
- fluid mechanics and hydraulics relating to:
  - water supply
  - pressure
  - pump selection
  - tank selection
  - pressure vessels
  - pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
- pipe fabrication methods and constraints
- mathematic principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - trigonometry, for example to amend dimensions of pipe allowing for fittings
  - flow calculations, including:
    - area of operations
    - discharge rates and quantities
    - discharge times
    - pressure gain and loss
    - K-factors
REQUIRED SKILLS AND KNOWLEDGE

- pressure, temperature and volume relationship
- Hazen-Williams equation
- Darcy-Weisbach equation
- computational fluid dynamics
- electrical calculations (alarm systems), including:
  - voltage drops
  - battery sizes
  - battery back-up
  - power supplies
  - cabling range
  - system calculations for gas or special hazard fire systems
- principles of organic and inorganic chemistry, including basic chemical reactions and substances
- principles of basic physics, including an understanding of:
  - Boyle's Law
  - Charles' Law
  - Dalton's Law
  - Henry's Law
- principles of thermodynamics, including:
  - effects of heat
  - stratification of gases
  - smoke and heat dynamics
- electrical and electronics theory, including:
  - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
  - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
  - relationship between voltage drops around a circuit and applied voltage
  - definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
  - layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
  - basic operation of common electronic and electrical components used in fire detection and warning systems
  - basic operation of communication protocols on addressable systems, peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
REQUIRED SKILLS AND KNOWLEDGE

- organisational frameworks and functions, including:
  - industry associations
  - enterprises
  - government bodies
- financial management, including:
  - budgeting
  - cost-effectiveness
- contractual processes
- risk management processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the determination of the scope of and initiation of a range of fire systems designs for special hazards projects. This entails establishing effective project management processes; correctly interpreting design concepts, briefs or specifications; and conducting risk management processes to ensure the selection of appropriate fire detection and suppression systems that reflect client requirements and are compliant with relevant codes, standards and legislation.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.
### EVIDENCE GUIDE

In particular the person should demonstrate:

- project management skills to coordinate, schedule, resource and oversee the completion of special hazard projects
- the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications
- knowledge of fire sciences sufficient to ensure the design of compliant and effective systems that address the specific conditions of the projects being undertaken
- an understanding of and ability to apply legislation, codes, standards, and regulatory and insurance requirements that may apply to special hazard fire systems design projects, including U.S. NFPA standards
- the ability to conduct risk assessment processes.

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- access to Australian and international codes and standards
- access to legislation relevant to the jurisdiction
- project documentation, including design brief, design drawings, specifications, construction schedules and other supporting documents
- research resources, including product information and data
- theoretical texts and other information to support the assessment of the unit's required skills and knowledge
- relevant computer software packages and suitable hardware.

### Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or
### EVIDENCE GUIDE

<table>

<tr>
<th>Simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application</th>
</tr>
</thead>
<tbody>
<tr>
<td>• reinforce the integration of employability skills with workplace tasks and job roles</td>
</tr>
<tr>
<td>• confirm that competency is verified and able to be transferred to other circumstances and environments.</td>
</tr>
</tbody>
</table>

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

---

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Fire systems design projects:**

- are defined as those projects that are developed as a fire risk solution to offer protection against business interruption by providing fire protection to specific equipment or facility, whose performance-based principles are often outside the ambit of the Building Code of Australia
- must respond to the requirements specified by the client or the client's insuring body and may
### RANGE STATEMENT

| **Project documentation includes:** | • fire engineer's design concepts and recommendations  
• construction drawings and plans  
• specific layout plans for other services, including plumbing, electrical and air conditioning. |
| **Structural characteristics of the building or facility include:** | • fabrication methods used  
• size and layout. |
| **Equipment or facility that will require special hazard fire systems includes that which stores high value or high risk assets, including:** | • data centres  
• computer rooms  
• electrical substations  
• documents (e.g. libraries and archives) and other collections (e.g. art galleries and museums)  
• fuel and gas storage and refineries  
• aeroplane hangars  
• chemical factories  
• warehouses containing highly volatile materials  
• any other storage facility for very high value individual items that would be destroyed by water-based fire suppression systems. |
| **Regulatory requirements and applicable standards:** | • will typically include references to U.S. NFPA standards, including:  
  • NFPA 2001 Clean Agent Fire Extinguishing Systems  
  • NFPA 11 Low, Medium and High Expansion Foam Systems  
  • NFPA 13 The Installation of Sprinkler Systems  
  • NFPA 15 Water Spray Fixed Systems for Fire Protection  
  • NFPA 16 Deluge Foam-Water Sprinkler and Foam-Water Spray Systems  
  • NFPA 750 Water Mist Fire Protection Systems  
  • relevant Australian standards, including:  
    • AS4214 Gaseous fire extinguishing |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- accurate measuring
- accurate naming and filing of drawings, including:
  - formal document control
  - formal amendments, including:
    - history
    - transmittal notices
- editing and creating drawings, including:
  - layout
  - section
  - detail
  - external references
  - freezing layers
- fluent detailed hand-drawing and sketching ability to convey information to on-site workers
- operating computer software packages and systems, including:
  - word processing
  - spreadsheet
  - email
### REQUIRED SKILLS AND KNOWLEDGE

- internet
- proprietary project management software
- proprietary hydraulic calculation software
- proprietary estimating software
- parametric modelling software
- numeracy skills for:
  - calculating:
    - dimensions
    - pipe lengths
    - piping friction loss
    - pump capacity
    - motor output
  - performing calculations for electrical systems:
    - voltage drops
    - battery capacity
    - battery back-up
    - power supplies
  - performing fluid mechanic calculations
  - determining cost-benefit of solutions
- language and literacy skills for:
  - listening to and communicating clearly with colleagues, fitters, suppliers and contractors
  - participating in meetings, such as negotiations with fire engineering consultant, architect, builder or other service contractor
  - researching, accessing, reading, interpreting and applying current relevant legislation, codes and standards
  - letter writing, especially to formalise:
    - recognition of conflicts and errors on drawings supplied by other service contractors
    - agreements with other services, for example whichever service is fitted last must fit around existing services
  - reading and interpreting drawings, plans and specifications, including:
    - architectural
    - structural
    - mechanical
    - hydraulic
    - electrical
    - report writing
- developing constructive and cooperative working relationships with project team
**REQUIRED SKILLS AND KNOWLEDGE**

- members, workplace colleagues, suppliers, fitters and clients
- negotiation and conflict management
- initiating and running meetings with lead contractor and other service contractors
- project management
- organising own work, including creating personal systems and checklists for planning, managing and checking work
- managing detailed input to concurrent fire systems design projects at different stages of the process and with diverse sets of regulatory requirements

**Required knowledge**

- workplace design tools and processes
- naming conventions for design drawings and drawing register
- fire science, including:
  - fire behaviour and dynamics
  - impact of fire on structures and materials
  - products of combustion
  - fire control strategies
  - fire retardants
  - fire detection technologies
  - fire suppression technologies
  - fire containment
- fire engineering principles, including:
  - engineered solutions
  - innovative fire systems
  - fire modelling
- proprietary fire engineering and modelling programs
- parametric modelling of services coordination using proprietary software, such as Navis-Works or MEP-REVIT
- computer software functions and operation, including:
  - word processing
  - spreadsheet
  - email
  - internet
  - proprietary project management software
  - proprietary hydraulic calculation software
  - proprietary estimating software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
**REQUIRED SKILLS AND KNOWLEDGE**

- infrastructure supply regulations
- the Building Code of Australia
- Australian standards for fire systems
- international standards for fire systems
- other fire system standards commonly required by building insurers
- protection requirements for different buildings, including the existence of special zones, the egress requirements of occupants, and the construction materials used
- passive fire safety elements, including:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- fire systems’ technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
    - early suppression fast response (ESFR)
    - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
  - detection and warning systems, including:
    - emergency warning and intercommunications systems (EWIS)
    - fire detection and alarm systems
    - smoke control systems
    - emergency lighting systems
  - special hazard fire systems, including:
    - foam systems (low expansion, medium expansion and high expansion)
    - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
    - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
    - chemical systems, including:
      - powder
      - wet chemical
  - purpose and operation of fire systems, including:
    - layout
    - special products and hazards
### REQUIRED SKILLS AND KNOWLEDGE

- system operation
- performance requirements
- maintenance standards
- system activation and operation
- characteristics and limitations of products and materials used in fire systems and issues relating to material capability
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- instruments used in commissioning and measuring fire system performance
- basic principles of structural engineering
- characteristics of building materials
- construction industry terminology
- roles and responsibilities of relevant building project personnel, including:
  - architect
  - lead contractor
  - mechanical engineer
  - hydraulic engineer
  - electrical engineer
- on-site issues that can arise during the construction phase and impose changes to the designs of fire systems and other services
- installation methods, including:
  - access requirements
  - health and safety requirements
- water supplies, including:
  - common water sources
  - conservation requirements
  - in-ground reticulation
  - booster configurations
- fluid mechanics and hydraulics relating to:
  - water supply
  - pressure
  - pump selection
  - tank selection
  - pressure vessels
  - pipe range
- sustainability requirements and ratings, including:
  - energy conservation
  - water conservation
### REQUIRED SKILLS AND KNOWLEDGE

- pipe fabrication methods and constraints
- mathematical principles, equations and calculation methods, including:
  - financial calculations, for example to assess cost-effectiveness of fire systems
  - trigonometry, for example to amend dimensions of pipe allowing for fittings
  - flow calculations, including:
    - area of operations
    - discharge rates and quantities
    - discharge times
    - pressure gain and loss
    - K-factors
  - pressure, temperature and volume relationship
  - Hazen-Williams equation
  - Darcy Weisbach equation
  - computational fluid dynamics
  - electrical calculations (alarm systems), including:
    - voltage drops
    - battery sizes
    - battery back-up
    - power supplies
    - cabling range
    - system calculations for gas or special hazard fire systems
- principles of organic and inorganic chemistry, including basic chemical substances and reactions
- principles of basic physics, including an understanding of:
  - Boyle's Law
  - Charles' Law
  - Dalton's Law
  - Henry's Law
- principles of thermodynamics, including:
  - effects of heat
  - stratification of gases
  - smoke and heat dynamics
- electrical and electronics theory, including:
  - units used to measure current (AC and DC), power, capacitance, inductance and sound attenuation
  - effects of AC and DC current in series and parallel circuit paths that includes resistive, inductive and capacitive loads
  - relationship between voltage drops around a circuit and applied voltage
REQUIRED SKILLS AND KNOWLEDGE

- definition of voltage ratings as defined in communication and electrical safety regulations, including extra low voltage, low voltage and hazardous voltages
- layout of electrical wiring systems to meet communication and electrical safety regulations applicable to fire detection and warning systems
- basic operation of common electronic and electrical components used in fire detection and warning systems
- basic operation of communication protocols on addressable systems, peripheral devices (printers) and high-level interfaces to other communication devices used in fire detection and warning systems
- acoustics and speech intelligibility for occupant warning systems
- human psychology, especially fire avoidance behaviour
- organisational frameworks and functions, including:
  - industry associations
  - enterprises
  - government bodies
- financial management, including:
  - budgeting
  - cost-effectiveness
- contractual processes

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, responsibilities and procedures.

This unit could be assessed as an activity involving the analysis, design and evaluation of complex special hazard fire systems, including the application of appropriate codes and standards in accordance with the design requirements of the
# EVIDENCE GUIDE

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit. In particular the person should demonstrate:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• knowledge of fire sciences sufficient to ensure the design of compliant and effective systems that address the specific conditions of the projects being undertaken</td>
</tr>
<tr>
<td></td>
<td>• numeracy skills sufficient to ensure accurate calculations of system capacities and performance</td>
</tr>
<tr>
<td></td>
<td>• the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications</td>
</tr>
<tr>
<td></td>
<td>• an understanding of and ability to apply legislation, codes, standards, and regulatory and insurance requirements that may apply to special hazard fire systems design projects, including U.S. NFPA standards</td>
</tr>
<tr>
<td></td>
<td>• the ability to research appropriate special hazard fire detection and warning systems</td>
</tr>
<tr>
<td></td>
<td>• the ability to produce accurate technical drawings of the layout for the special hazard design</td>
</tr>
<tr>
<td></td>
<td>• the ability to design integrated solutions encompassing fire detection, warning and suppression components for special hazard fire systems as they apply to at least three different types of hazards requiring the application of different technical solutions.</td>
</tr>
</tbody>
</table>

<table>

</table>
### RANGE STATEMENT

Work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Fire suppression solutions include: | • gaseous agent systems, including:  
| |  • carbon dioxide  
| |  • inert gases  
| |  • halocarbon systems  
| |  • FM-200  
| |  • FE-25  
| |  • Inergen  
| | • foam systems, including:  
| |  • low expansion foams  
| |  • medium expansion foams  
| |  • high expansion foams  
| | • water spray systems, including:  
| |  • deluge systems  
| |  • medium and high velocity water spray systems  
| |  • high speed deluge systems. |

The **risk profile** of the building or facility will reflect the usage of the building, including:

- the need to protect people
- the value of the goods stored
- the susceptibility of the stored goods to water or other forms of damage.

The **special hazard standards** include:

- U.S. NFPA standards, including:
  - NFPA 2001 Clean Agent Fire Extinguishing Systems
  - NFPA 11 Low, Medium and High Expansion Foam Systems
  - NFPA 11A Medium and High Expansion Foam Systems
  - NFPA 13 The Installation of Sprinkler Systems
  - NFPA 16 Deluge Foam-Water Sprinkler and Foam-Water Spray Systems
  - relevant Australian standards, including:
    - AS4214 Gaseous fire extinguishing systems
### RANGE STATEMENT

| systems | • AS2008 Part 1  
|         | • AS2008 Part 3  
|         | • also note:  
|         | • building insurers may specify the  
|         | • standards they require to issue cover on  
|         | • buildings and facilities  
|         | • increasingly, international ISO  
|         | • standards are being identified for the  
|         | • industry  
|         | • special hazards are not referenced in the  
|         | • Building Code of Australia. |

**Fire detection and occupant warning solutions** include:

| • smoke-sensing detectors  
| • heat-sensing detectors  
| • fire alarms  
| • flame detectors  
| • fire gas detectors. |

**Project drawings and documentation** may include:

| • architectural  
| • structural  
| • mechanical  
| • electrical  
| • hydraulic  
| • fire engineer's or estimator's specifications. |

**Interactions** between multiple systems on a complex site are analysed to:

| • ensure the most effective selection of systems  
| • to protect different assets  
| • maximise the effectiveness of the systems  
| • maximise the efficiency of the installation process. |

**Efficient and workable layout and location** relate to:

| • penetrations  
| • conflict with other services  
| • occupational health and safety risks  
| • access constraints  
| • installation problems  
| • aesthetic requirements  
| • efficiencies to facilitate work on site  
| • reduction of labour costing. |

**System components** may include:

| • discharge nozzles  
| • pipework  
| • brackets  
| • system valves |
### RANGE STATEMENT

<table>
<thead>
<tr>
<th><strong>Calculations</strong> that relate to the various forms of special hazard systems include:</th>
<th><strong>Infrastructure</strong> for special hazard solutions include:</th>
</tr>
</thead>
</table>
| • water-spray system calculations  
  • hydraulic calculations to assess pressure requirements and confirm pipe sizes  
  • gaseous system calculations  
  • foam system calculations. | • pipework  
  • storage containers  
  • delivery systems for the suppression agent (e.g. foam, gas or water)  
  • tanks. |

Large and complex projects may use **expert personnel** to:

- design sub-components of a total solution, for example electrical components.

**Negotiated** changes may be made due to:

- non-compliance with applicable legislation, codes and standards  
- impact on installation risks and constraints  
- impact on cost-effectiveness.

**Fittings and components** may include:

- hangers  
- sprinkler heads  
- elbows  
- tees  
- pumps  
- tanks  
- control valves.

Unit Descriptor

| Unit descriptor | This unit of competency specifies the outcomes required to research, plan and prepare tenders for the design and implementation of cost-effective fire systems design solutions.

The design and implementation of fire systems design projects occur in a competitive commercial environment. It is not sufficient to design effective and technically compliant fire systems design solutions for clients. It is also essential that the solutions are cost-effective and can be commercially competitive.

Client requirements may specify use of the U.S. National Fire Protection Association (NFPA) standards.

Licensing, legislative, regulatory or certification requirements may apply to this unit and so the varying state or territory requirements should be confirmed with the relevant body. |

Application of the Unit

| Application of the unit | This unit of competency supports the attainment of skills and knowledge necessary to research, plan, cost and tender for the design, fabrication and installation of efficient, effective and compliant fire suppression and detection systems. |

Licensing/Regulatory Information

#### Required knowledge

- computer software functions and operation, including relevant proprietary software
- relevant current legislation, codes and standards, including:
  - building Acts
  - building regulations
  - infrastructure supply regulations
  - the Building Code of Australia
  - Australian standards for fire systems
  - international standards for fire systems
  - other fire system standards commonly required by building insurers
- passive fire safety elements:
  - identification of passive elements
  - impact of fire systems design on passive elements
  - specifications required to safeguard integrity of passive fire element performance where penetrations are necessitated by the fire systems design
- fire systems’ technology and components, including:
  - water-based systems, including:
    - wet pipe sprinkler systems
    - deluge and drencher systems
    - dry pipe sprinkler systems
    - pre-action sprinkler systems
  - early suppression fast response (ESFR)
### REQUIRED SKILLS AND KNOWLEDGE

- hydrants, hose reels and monitors
- water supply tanks
- fire pump sets
- detection and warning systems, including:
  - emergency warning and intercommunications systems (EWIS)
- fire detection and alarm systems
- smoke control systems
- emergency lighting systems
- special hazard fire systems, including:
  - foam systems (low expansion, medium expansion and high expansion)
- gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
- water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical systems, including:
  - powder
  - wet chemical
- characteristics and limitations of products and materials used in fire systems and issues relating to material capability
- interconnection of fire systems, including:
  - cause and effect matrix
  - interface with other services
- tendering processes, including:
  - interpretation of bid requirements
  - interpretation of contractual requirements

### Evidence Guide

#### EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Overview of assessment | This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that the simulated or project-based assessment fully replicates workplace conditions, materials, activities, |
### EVIDENCE GUIDE

responsibilities and procedures.

This unit could be assessed as an activity involving the development and submission of tenders for fire systems design projects. This entails researching the capacities of a range of fire system components, preparing detailed schedules of costs for labour and materials, identifying and applying profit margins, and preparing the business proposal or tender response. Integral to the process is the capacity to work with the potential client, build relationships and conduct negotiations leading up to the finalisation of the tender or bid process.

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified within this unit.

In particular, the person should demonstrate:

- knowledge of tendering, bid and contractual processes
- numeracy skills sufficient to ensure accurate calculations of system capacities and performance and their costs
- the ability to read and interpret a range of design documents, including concept briefs, design briefs, drawings, plans and specifications
- an understanding of and ability to apply legislation, codes, standards, regulatory and insurance requirements that may apply to fire systems design projects, including U.S. NFPA standards
- the ability to research appropriate fire detection and warning systems
- the ability to prepare tender or bid documentation that meets the bid specification requirements
- the ability to build relationships with potential clients and conduct business negotiations.

### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian...

Guidance information for assessment

| Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support. |
| Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed. |
Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential italicised conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Industry networks and mechanisms include:**
- participation in professional associations
- reviewing industry websites
- subscribing to and reading professional journals
- attendance at industry workshops and conferences
- attendance at vendor presentations and displays of new fittings and components.

**Relevant legislation, codes and standards include:**
- building Acts
- building regulations
- infrastructure supply regulations
- the Building Code of Australia
- Australian standards for fire systems
- international standards for fire systems
- other fire system standards commonly required by building insurers, including the U.S. NFPA standards.

**Fire suppression and detection solutions include:**
- water-based systems, including:
  - wet pipe sprinkler systems
  - deluge and drencher systems
  - dry pipe sprinkler systems
  - pre-action sprinkler systems
  - early suppression fast response (ESFR)
  - hydrants, hose reels and monitors
  - water supply tanks
  - fire pump sets
- detection and warning systems, including:
  - emergency warning and intercommunications systems (EWIS)
### RANGE STATEMENT

- fire detection and alarm systems
- smoke control systems
- emergency lighting systems
- special hazard fire systems, including:
  - foam systems (low expansion, medium expansion and high expansion)
  - gaseous agent systems (carbon dioxide, inert gas and halocarbon gases)
  - water spray systems (deluge, medium/high velocity water spray and high speed deluge)
- chemical systems, including:
  - powder
  - wet chemical.

**Documentation and drawings**
- Architectural
- Structural
- Mechanical
- Electrical
- Hydraulic
- Fire engineer's or estimator's specifications.

**Options** for securing personnel may include:
- Selecting existing team members
- Recruiting new personnel
- Contracting external personnel.

**Overhead costs** apportioned to the project include:
- WorkCover costs
- Environmental protection agency fees
- Waste management site fees
- Professional indemnity insurance
- Other business insurances
- Travel costs
- Cost of financing the project
- Cost of seeking approvals and lodging designs
- External consulting costs.

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to effectively analyse, implement and monitor environmentally sustainable work practices and their effectiveness on a work site, including contributing to consumer environmental efficiency.

Application of the Unit
Application of the unit
This unit of competency supports the needs of those with responsibility for a specific area or site of work, or those who lead a work group or team by using processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

The context of this competency applies to all sectors of the construction industry. It may be applied to all sections of an organisation, including a work site, designated work area, in transit and/or an office.

| 3. Implement performance improvement strategies. | 2.4. Efficiency targets are set.  
3.1. *Techniques and tools* are sourced to assist in achieving targets.  
3.2. Continuous improvement strategies are applied to work site, including ideas and possible solutions to communicate to stakeholders, key personnel and specialists.  
3.3. Environmental and resource efficiency improvement plans for work site and clients are integrated with other operational activities and implemented.  
3.4. *Suggestions* and ideas about environmental and resource efficiency management are sought from stakeholders, key personnel and specialists and shared with them to act on as appropriate.  
3.5. Costing strategies are implemented to fully value environmental assets and are shared with stakeholders, key personnel and specialists as necessary. |
| 4. Monitor performance. | 4.1. Outcomes are documented and reports on targets are communicated to key personnel and stakeholders.  
4.2. Strategies are evaluated.  
4.3. New targets are set and new tools and strategies investigated and applied.  
4.4. Successful strategies are promoted and, where possible, participants rewarded. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:
- ability to source/identify the latest industry environmental sustainability concepts and technologies
- applying learning to future opportunities
- change management skills
- communication skills to:
REQUIRED SKILLS AND KNOWLEDGE

- answer questions
- clarify and acknowledge suggestions relating to work requirements and environmental efficiency with stakeholders
- enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
- read and interpret:
  - documentation
  - environmental and resource efficiency requirements
- support information flow between various internal and external stakeholders to resolve and report on environmental and resource efficiency issues
- use and interpret non-verbal communication
- use language and concepts appropriate to cultural differences
- creating tools to measure and monitor improvements and report on outcomes to stakeholders
- innovation skills to identify improvements, apply knowledge about resource use to organisational activities and customer service, and develop resource efficiency tools
- numeracy skills to analyse data on company and stakeholder resource consumption and waste product volumes
- problem solving skills to recognise and analyse problems, including:
  - devising approaches
  - implementing and reflecting on environmental and water, energy or resource efficiency management policies and procedures relevant to work site to improve environmental sustainability
  - share alternative approaches as required
- skills to relate to different genders and people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- technology skills, including the ability to:
  - operate and shut down equipment
  - where relevant, use software systems for recording and filing documentation for measurement and improvement of resource usage and consumption.

Required knowledge

Required knowledge for this unit is:

- how tradespersons can contribute to environmental sustainability
- knowledge of compliance requirements for all relevant environmental and sustainability legislation, regulations and codes of practice including resource hazards and risks associated with work site:
  - supervision
  - job specifications
  - strategies and procedures to maximise opportunities and minimise impacts
REQUIRED SKILLS AND KNOWLEDGE

relevant to stakeholders and personal area of responsibility

- relevant knowledge of environmental, resource and energy/water efficiency issues, systems and procedures specific to industry practice
- knowledge of best practice approaches and quality assurance systems relevant to area of responsibility and industry
- ability to identify and advise on water/energy efficiency opportunities for stakeholders and key personnel
- supply chain procedures
- OHS issues and requirements
- organisational structure and reporting channels and procedures
- terms and conditions of employment, including policies and procedures, such as:
  - daily tasks
  - equal opportunity
  - work area responsibilities
  - worker, supervisor and employer rights.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by analysing and monitoring effective sustainable work practices on a construction project work site.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- implement and monitor integrated environmental and resource efficiency management policies and procedures within a work site, including:
EVIDENCE GUIDE

- access, collect, analyse and organise information from a number of sources to provide information, advice and tools or resources for improvement opportunities to stakeholders and key personnel
- identify possible areas for improved practices and resource efficiency for stakeholders
- communicate benefits of changing practices to work team and customers
- implement new approaches and improvement plans, including planning and organising activities for staff and stakeholders in relation to:
  - measurement of current use
  - devising strategies to improve environmental and resource efficiency issues
  - reporting as required ensuring appropriate action is taken within work site in relation to environmental and sustainability compliance and potential hazards
- monitor and evaluate improvement plans and efficiency targets, using evaluation and monitoring tools and technology to potentially revise and adjust approaches and strategies to ensure continuous improvement.

Evidence that could be used, reflecting the requirements of the unit of competency and work being performed as evidence, include:

- reports of activities of work group in relation to:
  - measurement of resources and efficiency
  - development of improvement strategies
- work plans outlining approaches to improved practices, with documented benchmarks
- invoices from stakeholders specifying materials recommended for improved efficiency and those actually used
- quotes and tenders
- lists of environmental hazards, risks and inefficiencies, and opportunities for
EVIDENCE GUIDE

Improvements identified in the work site
- work samples, tools, techniques or simulated activities and the outcomes.

Processes may include:
- relevant authenticated correspondence
- way in which advice is sought and suggestions made about improvements from stakeholders and key personnel
- evidence of implementation of programs, such as:
  - green building program
  - supply chain program for purchasing sustainable products
  - environmental site management framework or product recommendations
- notes on understanding external benchmarks and support for particular benchmarks to be used, with expected outcomes and including approaches to recommend products and practices to stakeholders for improving their resource use.

Resource implications for assessment must include:
- observation by the assessor over a period of time and in a range of situations and/or evidence provided to the assessor in written or verbal form, including:
  - implementing tools and techniques
  - review of work site and stakeholders/key personnel to assess and measure resource use, hazards and compliance
  - application of learning to future activities
  - recommended products and practices to stakeholders
  - access to a range of information and resources for assessment as listed in the range statement, such as:
    - environmental and sustainability legislation
    - compliance documentation
    - organisational and procedural requirements or organisation plans
    - work supervision and work site documentation, including personnel and
EVIDENCE GUIDE

responsible
• quotes, tenders, invoices.

Context of and specific resources for assessment
This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:
• an induction procedure and requirement
• realistic tasks or simulated tasks covering the mandatory task requirements
• relevant specifications and work instructions
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• material safety data sheets
• research resources, including industry-related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment
Assessment methods must:
• satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
• include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• reinforce the integration of employability skills with workplace tasks and job roles
• confirm that competency is verified and able to be transferred to other circumstances and environments.
EVIDENCE GUIDE

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person’s demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Compliance includes:

- meeting relevant Acts, laws, by-laws and regulations, codes of practice or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection,
RANGE STATEMENT

Biodiversity Conservation Act and Building Code of Australia)
- levels include:
  - federal
  - industry
  - international
  - local government
  - organisation
  - reporting breaches
  - state and territory.
- approaches of industry associations, such as:
  - Australian Building Greenhouse Rating
  - green plumbers
  - green purchasing
  - Housing Industry Association (HIA) GreenSmart
  - ISO 14001 Environmental Management Systems
  - lifecycle thinking
  - Master Builders Association of Victoria
  - Green Living, Leadership in Energy and Environmental Design (LEED), or Green Building Council of Australia (GBCA)
  - Green Star environmental rating system
  - National Australian Building Environmental Rating Scheme (NABERS)
  - product stewardship
  - supply chain management
  - Victoria Stormwater Management Guidelines of the Environment Protection Authority (EPA)
- implementing and using alternative practices, procedures or materials to reduce or eliminate resource consumption on work site
- recommendations to stakeholders, including:
  - addressing environmental and resource sustainability initiatives, such as an environmental framework, action plan, recommendations, surveys and audits with stakeholders and key personnel
  - efficient water use (e.g. rainwater tanks,
RANGE STATEMENT

- grey water sprinkler systems or timers
- energy use (e.g. equipment/appliances installed; equipment, appliance and tool maintenance; transporting materials; heating and cooling; and building efficiency)
- environmental site management
- evaluating and implementing most appropriate waste treatment, including waste to landfill, recycling, re-use, recoverable resources and wastewater treatment through site management
- improving resource, energy and water efficiency
- including environmental performance in tender and quote specifications
- initiating and maintaining appropriate work site procedures for operational energy consumption, including stationary and non-stationary (transport) energy
- preventing and minimising risks and maximising opportunities on work site and for stakeholders
- reducing emissions of greenhouse gases
- reducing material usage
- reducing stormwater pollution
- reducing use of non-renewable resources
- types of products and materials used
- reference to standards, guidelines, industry association standards, codes of practice and best practice approaches such as:
  - federal government standards, including five-star rating for all new homes.

Stakeholders, key personnel and specialists (individuals and groups) both within and external to the organisation who have direct or indirect interest in the organisation's conduct, actions, products and services, include:

- clients
- employees at all levels of the organisation
- government
- investors
- key personnel within the organisation
- local community
- specialists outside the organisation who may have particular technical expertise
- suppliers
RANGE STATEMENT

Purchasing strategies include:
- influencing stakeholders to take up environmental sustainability approaches and products
- researching and participating in programs, such as a supply chain program to purchase sustainable products (such as radial timber, sustainable timber, and low flow fittings and appliances).

Techniques and tools include:
- accessing the skills of others as appropriate to the specific industry context
- environmental site management plans
- examination of invoices from suppliers
- examination of relevant information and data
- integration of environmental and sustainability specifications in quotes and tenders
- measurements made under different conditions
- recommendation of sustainable products and practices to stakeholders.

Suggestions include:
- eliminating the use of hazardous and toxic materials
- expressing green purchasing power through using and recommending a selection of suppliers with improved environmental performance (e.g. green power, lifecycle thinking, product stewardship, energy or water efficiency)
- ideas that help to improve energy and water efficiency
- making more efficient use of resources, materials, energy and water
- maximising opportunities to use renewable, recyclable, reusable and recoverable resources (energy, water, materials, products and waste)
- preventing and minimising risks and maximising opportunities, such as use of renewable energy such as solar or grey water, and other alternative forms of water, energy and resources
- recommending and using alternative sustainable products, materials, procedures, practices and installation techniques
- reducing emissions of greenhouse gases by
RANGE STATEMENT

- reducing waste and transport
- reducing the consumption of non-renewable resources, such as water, fuel, and materials
- seeking alternative sources of water and energy or encouraging conservation.

Unit Sector(s)

Unit sector Construction

Co-requisite units

Co-requisite units Nil

Functional area

Functional area
CPCSUS4002A Use building science principles to construct energy efficient buildings

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to incorporate building science principles into the construction of energy efficient buildings.

The unit is relevant for those involved in the construction of energy efficient buildings. It requires the ability to use constructive thinking and problem-solving processes to identify appropriate solutions.

The unit also requires consultation with others.

Application of the Unit

This unit of competency applies to those who apply building science principles to the construction of new buildings in the residential and commercial building sector.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where *bold italicised* text is used, further information is detailed.
Elements and Performance Criteria

1 Define performance measures and expectations of the building envelope.

1.1 Relevant stakeholders are consulted to identify expected type of use for the building and energy efficiency expectations of its owners or occupiers.

1.2 Durability expectations of the building are identified and factored in to decisions relating to construction methods and materials to be used.

1.3 Occupants’ indoor activities and health and safety considerations are identified to inform recommendations of building products, materials and systems.

1.4 Environmental and climatic conditions impacting the building are researched and extreme weather conditions are noted for planning and construction purposes to determine resiliency opportunities.

1.5 Relevant legislation, standards, regulations and codes are consulted to identify minimum energy efficient standards to be met.

1.6 Relevant domestic and international codes, standards and examples of best practice that meet or exceed current energy efficient standards are consulted to reflect client expectations.

2 Review building methods and construction materials for energy efficiency.

2.1 Building science principles supporting energy efficiency are reviewed with reference to contemporary information sources.

2.2 Embodied energy of the specified product or materials is reviewed in relation to the energy efficiency expectations of the client.

2.3 Heating, ventilation and air conditioning (HVAC) systems are researched to identify best contemporary practice that delivers high levels of energy efficiency.
while minimising risks of inadequate ventilation and poor indoor air quality for occupants.

2.4 Mechanical ventilation systems and equipment to aid air flows are reviewed for appropriateness and operational costs.

2.5 Materials for interior and exterior moisture and vapour barriers are researched to identify best contemporary practice that delivers high levels of energy efficiency, durability and appropriateness for the building envelope.

3 Evaluate and select building design and construction methods and materials for energy efficiency.

3.1 Site location and building position are identified and maximised for energy efficiency according to environmental factors, climatic conditions and identified use of building.

3.2 Planned opportunities for heat, air and moisture flows throughout the building are identified and assessed against energy efficiency expectations.

3.3 Planned cavities in the building are identified and strategies for sealing or minimising unwanted air leakages are developed.

3.4 HVAC systems are evaluated and selected for the site to use minimal energy while minimising risks of inadequate ventilation and poor indoor air quality for occupants.

3.5 Mechanical ventilation systems and equipment are evaluated and selected for appropriateness to the site and operational costs.

3.6 Materials for interior and exterior barriers are evaluated and selected for energy efficiency, durability and appropriateness for building site.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills
learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in current work site environmental and sustainability requirements
  - numeracy skills to measure and interpret energy efficiency readings presented in numerical or graphical formats
  - oral communication skills to:
    - enable clear and direct communication, using questioning to identify and confirm expectations, and share information
    - report hazards involved in the work
    - use language and concepts appropriate to cultural differences
  - reading skills to:
    - conduct own research into current building and construction methodologies and new materials technology
    - interpret documentation, including drawings and specifications
    - understand written instructions, procedures and signage
  - writing skills to provide recommendations regarding ways to improve energy efficiency outcomes of buildings

Required knowledge
  - application and limitations of energy efficient construction materials
  - general construction terminology
  - impacts of different climate zones and environmental conditions on the built environment
  - processes for the evaluation of energy efficiencies in buildings
  - theories and principles of energy efficiency applied to buildings and construction processes
  - types, uses and limitations of different construction materials and the role of embodied energy when selecting construction materials and products for energy efficient buildings
  - work health and safety (WHS) requirements in different jurisdictions

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions,
materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- apply building science methodologies as outlined in this unit to the construction of two new construction projects
- undertake research into a range of energy efficient design and construction methods for the two new construction projects with a specific focus on:
  - energy efficient heating, ventilation and air conditioning systems
  - energy efficient materials and construction methods
- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan and WHS legislation, regulations and codes of practice applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- research resources, including industry-related systems information
- safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Relevant stakeholders** may include:
- architects
- builders
- building owners or investors
- building designers
- developers
- engineers
- facility managers
- occupants.

**Extreme weather conditions** may include:
- cyclonic activity
- extreme heat and risk of fire
- heavy rain and flooding
- storm weather.

**Regulations and codes** must include:
- local planning codes and regulations
- National Construction Code.
Contemporary information sources may include:

- local and international research into building science methods
- systems theory and analysis
- manufacturer websites and technical data for energy efficient construction materials and systems.

Cavities may include:

- gaps around ceiling down lights
- gaps around insulating material
- gaps under and around doors
- openings for floor or ceiling ducts used to transmit heating or cooling
- wall, floor or ceiling cracks
- window seals.

Unit Sector(s)

Construction

Custom Content Section

Not applicable.
CPCSUS4003A Maximise energy efficiency through applied trade skills

Modification History

New unit.

This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to undertake a trade using techniques and practices aimed at achieving high levels of energy efficiency in the finished work. Energy efficiency requirements may be specified by legislation or building codes, or commissioned by a client or a site manager. The unit may include working with others and as a member of a team.

Application of the Unit

This unit of competency applies to builders and tradespeople who identify opportunities for energy efficiency gains in a building and apply energy efficiency techniques in residential and commercial construction work.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where **bold italicised** text is used, further information is detailed in the required skills and knowledge and/or the range
statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Identify energy efficiency aims of the project.
   1.1 Building science principles are used to identify the energy efficiency expectations of the work based on plans, drawings and specifications.
   1.2 Relevant personnel and stakeholders are consulted to confirm the building envelope and energy efficiency requirements of the work, and identify specific instructions on priority areas.
   1.3 Limitations to achieving the energy efficiency requirements are identified and communicated to relevant personnel in order to identify appropriate solutions.

2 Prepare for task.
   2.1 Products and materials are identified based on building science knowledge and according to project energy efficiency specifications, substitutions are checked for comparable energy efficiency characteristics, and are approved with relevant personnel before use.
   2.2 Plant, tools and equipment selected to carry out tasks are consistent with building science principles and the requirements of the job to deliver energy efficient outcomes.
   2.3 Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use.
   2.4 Material quantity requirements are calculated according to plans, specifications and energy efficiency.
   2.5 Differences in standard practice to achieving energy efficient outcome are identified and factored into work plan to gain approval, and task timeframe is adjusted where appropriate.
3 Perform tasks using **energy efficient techniques**.

3.1 Unnecessary waste of products and materials is avoided through the use of **energy efficient techniques**, and greenhouse gas emissions are specifically minimised or eliminated.

3.2 Products and materials are handled and used according to manufacturer specifications to ensure energy efficiency ratings are maintained when installed.

3.3 Planned cavities and openings created in the building envelope during the project are minimised or sealed to avoid unnecessary air leakages.

3.4 Opportunities for achieving energy efficiency outcomes by minimising energy leakages are maximised by communicating with others on site when required.

4 Finalise and evaluate work.

4.1 Assessment by qualified energy assessor of work undertaken is arranged to confirm extent of energy efficiency outcomes achieved.

4.2 Improvements required in own work practices to ensure energy efficiency outcomes are identified and noted for future development.

---

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

**Required skills**

- **learning skills to:**
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change such as differences in current work site environmental and sustainability requirements
- **numeracy skills to calculate and confirm correct quantities of materials for work tasks**
- **oral communication skills to:**
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - report hazards on the work site, including faults in tools, equipment or materials
  - use language and concepts appropriate to cultural differences
• reading skills to:
  - interpret documentation, including drawings and specifications
  - understand written instructions, procedures and signage
  - interpret manufacturer instructions for safe handling of tools and equipment
• writing skills to complete pre-operational checklists and simple equipment fault forms

Required knowledge
• general construction terminology
• introductory awareness of building science and energy efficiency principles
• procedures for the safe handling and storage of materials, and environmentally friendly disposal of materials
• processes for calculating material requirements
• quality requirements relevant to the task
• types, characteristics, uses and limitations of tools and equipment
• types, location and use of relevant safety information, such as:
  - job safety analyses (JSA) and safe work method statements
  - safety data sheets
  - safety manuals and instructions for tools, plant and equipment
  - signage
  - environmental and work site safety plans
• workplace and equipment safety requirements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit
A person should demonstrate the ability to:
• undertake three different tasks within the relevant trade specification, using principles or techniques that are designed to maximise the energy efficiency characteristics of the building or project
• locate, interpret and apply relevant information, standards and specifications
• comply with site safety plan and work health and safety (WHS) legislation, regulations and codes of practice applicable to workplace operations
• comply with organisational policies and procedures, including quality, environmental and sustainability requirements
• safely and effectively operate and use tools, plant and equipment and handle materials and components
• communicate and work effectively and safely with others.

Context of and specific resources for assessment

Assessment of this unit:
• must be in the context of the work environment
• may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
• must meet relevant compliance requirements.

Resource implications for assessment include:
• an induction procedure
• realistic tasks or simulated tasks covering the mandatory task requirements
• relevant specifications and work instructions
• tools and equipment appropriate to applying safe work practices
• support materials appropriate to activity
• workplace instructions relating to safe work practices and addressing hazards and emergencies
• research resources, including industry-related systems information
• safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
• direct observation of tasks in real or simulated work conditions
• questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
• review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, such as
• CPCCCMM1012A Work effectively and sustainably in the construction industry
• CPCSUS4001A Implement and monitor environmentally sustainable work practices

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Building science principles** must include:
- building envelope
- effective ventilation
- heat, air and moisture flows:
  - conduction
  - convection
  - radiation
- interaction between occupants, building components and systems, and the environment both indoors and out
- moisture management.

**Energy efficiency expectations** may include:
- acoustic insulation between zones and rooms
- achieving relevant energy efficient requirements in the National Construction Code, and other relevant codes and regulations
- achieving or maintaining a home energy rating, commercial building rating, or equivalent energy rating or industry standards and regulations
- effectively selecting and using thermal mass
- energy conservation
- minimising infiltration
- minimising the heat loss and maximising the heat gain based on the requirements of the building reflective of the climatic
zones
- minimising thermal bridging
- passive solar design approach
- reducing or minimising energy costs and consumption to heat and cool the building
- thermal resistance
- ventilation, heat and energy recovery
- zero energy homes.

Relevant personnel and stakeholders may include:
- architect
- builder
- developer
- draftsperson
- energy assessor
- energy modeller
- facility manager
- heating, ventilation and air conditioning (HVAC) designer
- HVAC engineer
- manufacturer
- other trades working at the site
- owner
- project manager
- site manager
- supplier.

Building envelope must include:
- building enclosure or shell
- the area separating the internal conditioned air from the outside unconditioned air
- the roof, walls, windows and doors.

Materials may include:
- building and construction materials, including:
  - aerated autoclaved concrete products
  - bricks
  - cement
  - concrete
  - mortar
  - plaster
  - plasterboard
  - plumbing
  - roofing materials
  - steel
  - timber
- building envelope - ceiling, floor, windows and wall insulating materials:
• air barriers
• batts
• expanded polystyrene
• joining tape
• reflective foils
• sealant
• vapour barriers.

Energy efficient techniques may include:

• advanced framing or optimal value engineering for energy efficient framing
• appropriate selection and installation of insulation without compressing it
• conserving energy by effectively sealing the building envelope to minimise air leakage (exfiltration and infiltration) in the building envelope, shell or enclosure
• effectively installing windows and flashing without breaking the building envelope
• effectively selecting and installing thermal insulation
• minimising embodied energy
• sealing, insulating and minimising duct leakage
• sealing leaky joints
• selecting recycled materials to minimise production energy
• sourcing materials or products locally to minimise transport energy.

Unit Descriptor
Unit descriptor
This unit of competency specifies the outcomes required to develop and implement policies and procedures to continuously support resource efficiency and environmentally sustainable work practices.

Application of the Unit
Application of the unit
This unit of competency applies to those with managerial responsibility for developing approaches to create strategies within workplaces, including the development and implementation of policy. The unit supports processes and techniques necessary to develop approaches to sustainability within workplaces, including the development and implementation of policy.

The context of this unit applies to all industry sectors and sections within an organisation, including a work site, designated work area, in transit and/or an office.

4. Review policy implementation. | 4.1. Outcomes are documented and feedback is provided to key personnel and stakeholders.
 | 4.2. Success or otherwise of policy is investigated.
 | 4.3. Records are monitored to identify trends that may require remedial action, and used to promote continuous improvement of performance.
 | 4.4. Policies and procedures are modified as required to ensure improvements are made.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Required skills for this unit are:

- effective management of different points of view and dissenting stakeholders
- flexible communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - read and interpret complex and formal documents, such as policy and legislation
  - suit different audiences and support information flow between various internal and external stakeholders, using language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication
  - written skills to prepare written reports requiring:
    - precision of expression
    - language and structures suited to the intended audience
- innovation and problem solving skills to:
  - analyse problems
  - apply knowledge about policy to devise policies and procedures around environmental and water, energy and resource efficiency and new technologies
  - identify improvements and customer service
  - research, analyse and present information and techniques
REQUIRED SKILLS AND KNOWLEDGE

- respond to diversity, including the ability to relate to different genders and people from a range of social, cultural and ethnic backgrounds and with a range of physical and mental abilities
- team work for consultation and validation of policies and procedures
- technology skills for use of software systems, communication, and creating documents and reports.

Required knowledge

Required knowledge for this unit is:

- benchmarking against best practice approaches and support for new approaches
- knowledge of best practice approaches relevant to industry and work area
- knowledge of environmental or sustainability legislation, regulations, compliance and codes of practice applicable to industry and organisation
- knowledge of policy development processes and practices and other relevant organisational policies, procedures and protocols
- principles, practices and available products, tools, technology and techniques of sustainability management relevant to the particular industry context
- quality assurance systems relevant to own organisation
- relevant products, technology, systems and procedures to aid in the achievement of sustainability in the workplace, including environmental and energy efficiency products, technology, issues, systems and procedures specific to industry practice
- sustainability principles and concepts
- terms and conditions of employment, including:
  - equity and diversity principles
  - OHS implications of policy being developed
  - policies and procedures
  - work area responsibilities
  - worker, supervisor and employer rights
- understanding of how the business can contribute to environmental sustainability.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed by
EVIDENCE GUIDE

developing policies and relevant procedures for implementing sustainable work practices on a construction project work site.

This unit of competency can be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- develop enterprise policy for integrated sustainability, ensuring that developed policies comply with legislative requirements, and contain an implementation strategy that has been devised, implemented and reviewed showing a measurable improvement using chosen benchmark indicators
- review the policy after implementation
- communicate with relevant stakeholders
- develop and monitor policies
- communicate with relevant internal and external stakeholders to discuss possible approaches to policy development and implementation, and contribute to the resolution of disputes amongst them
- gather information from a number of sources (including regulatory sources, relevant personnel and organisational specifications) to plan and develop policies
- plan the policy development process, including meetings with stakeholders and key personnel
- develop and monitor policies for analysing data on organisation resource consumption
- use software systems for recording and filing documentation for measurement of current usage, and using word processing and other basic software to:
  - interpret charts, flowcharts, graphs and other visual data and information
  - report.

Items that could be used as evidence include:

- inefficiencies or opportunities for improvements
EVIDENCE GUIDE

- Identified in the workplace
- Case studies
- Work documents from meetings or simulated activities
- Portfolios of evidence on policy processes, including continuous improvement outcomes
- New approaches improved continuously over time.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:

- Specifications of particular workplace roles and work area, equipment, systems, organisational structures and documentation
- Documentation on resources used, and hazards and compliance requirements for benchmarking and continuous improvement.

Access to a range of information and resources for assessment as listed in the range statement (such as compliance obligations, organisational plans and work responsibilities).

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- Satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- Include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- Reinforce the integration of employability skills with workplace tasks and job roles
EVIDENCE GUIDE

- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Scope of sustainability policy includes:

- addressing sustainability initiatives through reference to standards, guidelines and approaches, such as
RANGE STATEMENT

- federal government standards, including five-star rating for all new homes
- ecological footprinting
- Energy Efficiency Opportunities Bill
- Victoria Stormwater Management Guidelines of Environment Protection Agency
- global reporting initiative
- green purchasing programs to purchase sustainable products
- greenhouse challenge
- approaches of industry associations, such as:
  - Housing Industry Association (HIA) GreenSmart
  - Australian Building Greenhouse Rating
  - green plumbers
  - Master Builders Association of Victoria Green Living, Leadership in Energy and Environmental Design (LEED), or Green Building Council of Australia (GBCA) Green Star environmental rating system
  - ISO 14001 Environmental Management Systems
  - lifecycle thinking
  - National Australian Building Environmental Rating Scheme (NABERS)
  - product stewardship
  - supply chain management to influence suppliers to take up sustainability approaches
  - sustainability action plans or frameworks
  - sustainability covenants and compacts
  - triple bottom line reporting
  - integrated approach to sustainability that includes environmental, economic and social aspects, or a narrower one to focus on each aspect individually
  - investigation of the particular business and market context of the industry or organisation
  - meeting relevant Acts, laws, by-laws and
RANGE STATEMENT

regulations or best practice to support compliance in environmental performance and sustainability at each level as required (such as Environmental Protection, Biodiversity Conservation Act, Building Code of Australia) and reporting breaches

- levels include:
  - federal
  - industry
  - international
  - organisation
  - state and territory
- parts of the organisation to which it is to apply, including whether it is for the whole organisation, one site, one work area or combinations of these
- site management.

Stakeholders include:

- individuals and groups both within and external to the organisation that have direct or indirect interest in the organisation's conduct, actions, products and services, including:
  - clients
  - employees at all levels of the organisation
  - government
  - investors
  - key personnel within the organisation, and specialists outside it who may have particular technical expertise
  - local community
  - suppliers
  - other organisations.

Strategies include:

- efficient use of resources, energy and water
- environmental site management to minimise stormwater pollution
- installation of efficient appliances, techniques and recommendations for consumer use and opportunities
- maximising the use of recycled, renewable, reusable and reclaimed resource opportunities
- preventing and minimising risks and maximising opportunities for business and stakeholders, such as:
RANGE STATEMENT

- promotional activities
- purchasing of carbon credits or green power
- raising awareness among stakeholders through product advice and user recommendations
- reduce the consumption of non-renewable resources
- reducing emissions of greenhouse gases
- reducing or eliminating the use of hazardous and toxic materials
- resource, water and energy audits included in quote or tender
- training of staff in principles and techniques of sustainability
- use of solar or renewable energies and water
- waste treatment initiatives (materials and resources, water).

CPCSUS5002A Develop action plans to retrofit existing buildings for energy efficiency

Modification History

New unit.

This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required when planning to improve the energy efficiency of an existing building.

Application of the Unit

This unit of competency applies to those involved in the design or development of retro fits for energy efficiency, including building designers, tradespeople and building project managers.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.
## Elements and Performance Criteria

1. **Commence retro-fit planning processes.**
   
1.1 *Client requirements and expectations* for the specific use of the building and the energy efficient retro-fit priorities are discussed and incorporated into planning.

1.2 *Energy assessment is initiated* or report from a prior assessment is reviewed and discussed with key stakeholders to determine energy conservation measures.

1.3 *Client is provided with overview of recommended processes and information relevant to generating an energy efficient retro fit.*

2. **Identify and evaluate opportunities to improve energy conservation and efficiency of the existing building.**
   
2.1 Recommendations from energy efficiency assessor are reviewed and evaluated for input into the retro-fit action plan.

2.2 *Limitations and obstacles* involved in the energy efficiency upgrade of the building are identified and appropriate solutions developed.

2.3 *Risks* of retrofitting existing building for improved energy efficiency are identified and managed, including possible installation of mechanical ventilation systems.

2.4 *Strategies* that provide a measurable increase in the operational energy efficiency of the existing building are developed and costed.

2.5 Structural adequacy of the existing building is assessed to determine appropriateness of retro-fit solutions for energy efficiency.

3. **Research and select energy efficient materials, products and systems.**
   
3.1 *Materials*, products and systems appropriate to the existing building are researched for energy efficiency specifications.

3.2 Manufacturer representatives and literature are consulted to identify installation and operational specifications.
3.3 Compliance requirements for selecting and installing materials, products and systems are understood and adhered to.

3.4 Thermal and acoustic insulation of the building and quality of installation are assessed where appropriate to determine energy efficiency rating and appropriate solutions to improve insulating properties of the building.

4 Finalise retro-fit action plan.

4.1 Final retro-fit action plan is developed according to organisational procedures.

4.2 Projected benefits of undertaking each of the proposed retro fit measures are explained to client.

4.3 Client sign-off is obtained and documentation of agreed plan is finalised.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to evaluate information from a variety of sources to inform advice to client on retro-fitting buildings for energy efficiency
- numeracy skills to:
  - calculate and confirm correct quantities of materials for work tasks
  - prepare costings for proposed project work
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm requirements, and share information
  - use language and concepts appropriate to cultural differences
- reading skills to:
  - interpret documentation, including drawings and specifications
  - research and interpret manufacturer product information
- writing skills to develop recommendations and reports for clients

Required knowledge
- building science principles and their application to the retro-fitting of existing buildings for improved energy efficiency
- compliance requirements relating to construction materials and methods, including:
  - Australian standards
  - environmental and sustainability requirements, including:
    - energy efficiency
    - fire resistance, including resistance from bushfire attack
  - National Construction Code deemed-to-satisfy requirements
- energy efficiency ratings available for buildings, and their meaning
- general construction terminology
- processes for calculating material requirements
- risks of completely sealing the building envelope and ways to mitigate them
- types, characteristics, uses and limitations of materials, products and systems used when retrofitting for energy efficiency
- types, uses and limitations of previously used materials
- types, uses and limitations of renewable sources of energy
- types, location and use of relevant safety information, such as:
  - job safety analyses (JSA) and safe work method statements
  - environmental and work site safety plans
  - safety data sheets (SDS)

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment** This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit** A person should demonstrate the ability to:
- develop an action plan to retrofit and improve the energy efficiency of either one existing residential building or one existing commercial building, providing evidence of the following:
  - engaging in a team environment working with stakeholders across multiple disciplines, such as engaging or leading an integrated project design or delivery of a
CPCSUS5002A Develop action plans to retrofit existing buildings for energy efficiency Date this document was generated: 26 November 2021

- research undertaken to identify appropriate products, materials and systems for use in the retrofit project
- evaluation of risks involved in the retrofit and identification of appropriate solutions to avoid risks or hazards to occupants and others
- written action plan for the retrofit of the building which responds to identified client requirements and expectations, as well as research undertaken into energy efficiency opportunities and recommended systems, materials and products to be used in the retrofit with relevant costings and timelines

- locate, interpret and apply relevant information, standards and specifications to ensure the development of compliant action plans that meet client expectations and organisational policies and procedures
- comply with work health and safety (WHS) legislation, regulations and codes of practice applicable to workplace operations.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- research resources, including industry-related systems information
- safety data sheets.

Method of assessment

Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:

- direct observation of tasks in real or simulated work
conditions

- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment

This unit could be assessed on its own or in combination with other units relevant to the job function, such as:

- CPPHSA4001A Assess household energy use

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

*Client requirements and expectations may include:*

- enhanced health and safety outcomes for occupants through improved air quality and selection of materials
- improved building durability
- increased return on investment through higher resale or higher rental income
- reduction in energy bills following retro fit.

*Energy assessment:*

- can include financial and non-financial benefits of retrofitting the building to improve energy efficiency
- can include recommendations that will improve the energy efficiency of the building
- identifies existing energy rating of a building using a variety of testing and assessment methods.

*Information must:

- energy efficient materials and installation methods
- regulations, codes and standards governing energy efficient
Limitations and obstacles may include:

- budget constraints
- condition of existing building
- local council planning provisions, including land overlays and requirements relating to neighbourhood character
- orientation of the existing building
- original design and construction of existing building
- position of existing services to the building
- presence of protected vegetation adjacent to existing building
- protection of existing building under heritage listing
- proximity of other buildings or structures.

Solutions may include:

- engaging experts in heritage construction to advise on appropriate solutions for heritage listed buildings undergoing energy efficiency upgrades
- repairing parts of the existing structure before commencing energy efficiency retro fit
- repositioning services to the building
- seeking permission from relevant authorities to remove large trees that may inappropriately overshadow the building and reduce energy efficiency opportunities
- selecting and using economical and effective energy efficient systems and materials.

Risks must include:

- risks associated with completely sealing the building envelope, such as:
  - air pressure differentials
  - combustion
  - moisture and mould
  - poor indoor air quality.

Strategies may include:

- changing light fittings to LEDs
- installing motion sensor lighting
- replacing insulation in ceilings, walls or floors
- sealing building envelope to reduce unwanted air leakage
- sealing openable windows
- repositioning the heating system
- installing solar photovoltaic systems
- replacing electric hot water system with gas or solar hot water system.

Materials may include:

- aerated autoclaved concrete products
- bricks and mortar
- concrete blocks
- insulating materials
- plasterboard.
• reflective paints
• slabs
• timber
• window frames and glass.

**Final retrofit action plan** must address:

• client expectations
• costings
• material use
• other resourcing
• risk management
• timelines.

**Benefits** may include:

• improved levels of comfort for the occupants
• increased air changes per hour to improve indoor air quality
• increased durability of the building
• potential for improved return on investment
• reduction in and prevention of mould
• reduction in heating and cooling costs.

**Documentation may include:**

• applications for permits and service connections
• copies of plans, drawings and specifications
• environmental applications.

Not applicable.
CPCSUS5003A Manage energy efficient building methods and strategies

Modification History

New unit.
This version first released with CPC08 Construction, Plumbing and Services Training Package Version 9.

Unit Descriptor

This unit of competency specifies the outcomes required to ensure that energy efficient building methods and strategies are supported by employees and contractors working on a new or existing residential or commercial building designed to satisfy energy efficiency ratings and requirements.

The unit provides the skills required to ensure that work undertaken to construct an energy efficient building or to retrofit an existing building for improved energy efficiency is performed as designed and reflects energy efficient specifications.

The unit covers developing a culture of energy efficient work practices.

Application of the Unit

This unit of competency supports builders and site managers overseeing the construction or retrofit of buildings designed to meet energy efficient ratings or improve the energy efficiency characteristics of a building.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of publication.

Pre-Requisites

Nil

Employability Skills Information

This unit contains employability skills.
Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan and prepare to construct an energy efficient building.

1.1 Relevant stakeholders are consulted to identify the purpose for which the building is to be used and the energy efficiency expectations of its owners or occupiers.

1.2 Plans, drawings and specifications are reviewed to identify energy efficient requirements of finished building or works.

1.3 Project is resourced with appropriately skilled tradespeople with energy efficiency competency.

1.4 Works to be undertaken are scheduled to support energy efficient building strategy.

1.5 Construction materials and products are costed, selected and sourced to conform to and meet energy efficiency expectations of the building or works.

1.6 Strategies for the disposal or reuse of waste materials are developed for the project.

1.7 Impact of energy efficient project on timelines and budget is communicated to owner or occupier and other stakeholders.

2 Communicate and monitor energy efficiency awareness among tradespeople.

2.1 Trades and other works on the building project are briefed with expectations for techniques to be used, quality of works to be undertaken, and energy efficiency outcomes required.

2.2 Sealing of building envelope is assessed for capacity to
maximise energy efficiency and improvements are made in sealing the building envelope before other works continue.

2.3 Requirements to maintain energy efficient techniques are communicated to subsequent trades to ensure benefits of the work are not lost.

2.4 Alterations to works, construction methods and selected materials are evaluated against project energy efficiency expectations, and impact on energy efficiency is quantified to assist in decision-making processes.

3 Evaluate and communicate energy efficiency outcomes.

3.1 Works undertaken are assessed for adherence to energy efficiency processes.

3.2 Hand held thermal imaging assessment of building or works is conducted to determine presence of unwanted heat and air leakages, and findings are addressed where necessary.

3.3 Duct testing is conducted where appropriate to identify location of leakages and works are implemented to address findings where necessary.

3.4 External rating of energy efficiency, including star ratings, is sought from recognised expert to verify efficiency of construction.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- learning skills to:
  - evaluate own actions and make judgments about performance and necessary improvements
  - respond to change, such as differences in current work site energy efficiency requirements
- numeracy skills to calculate and confirm correct quantities of materials for work tasks
- oral communication skills to:
  - enable clear and direct communication, using questioning to identify and confirm
requirements, and share information
- report hazards on the work site, including faults in tools, equipment or materials
- use language and concepts appropriate to cultural differences
- reading skills to:
  - conduct own research into current building and construction methodologies and new materials technology
  - interpret documentation, including drawings and specifications
  - follow written instructions, procedures and signage
- writing skills to develop reports and recommendations about energy efficient projects

Required knowledge
- approaches to waste management consistent with principles of energy efficiency, including processes for minimising and reusing materials
- benchmarks to meet standards and rating systems (such as star rating) for energy efficiency
- compliance requirements relating to construction materials and methods, including:
  - Australian standards
  - energy efficiency and sustainability requirements in different jurisdictions
  - National Construction Code deemed-to-satisfy requirements
- general construction terminology
- impacts of different climate zones and environmental conditions on the built environment
- performance characteristics and benefits of energy efficiency policies, practices, products and services
- processes for constructing different building types
- processes for evaluating energy efficiencies in buildings
- theories and principles of energy efficiency applied to buildings and construction processes
- types, uses and limitations of different construction materials
- use and limitations of new and advanced construction materials that improve the energy efficiency of buildings

Evidence Guide
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment This unit of competency could be assessed by performing a range of tasks in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions,
Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person should demonstrate the ability to:

- implement energy efficient building methods and management strategies for two building and construction projects, including:
  - resourcing the project with appropriately skilled tradespeople competent in energy efficient works
  - using energy efficient products and materials aligned with the energy efficient aims for the building envelope
  - clearly communicating to trades and other relevant stakeholders the energy efficiency techniques and strategies to be used in order to achieve building energy expectations
  - conducting appropriate performance testing of the construction to determine adherence to energy efficiency methodologies and techniques
- locate, interpret and apply relevant energy efficiency related compliance requirements applicable to the building and construction projects
- locate, interpret and monitor the application of relevant work health and safety (WHS) legislation, regulations and codes of practice applicable to the work site
- comply with organisational policies and procedures relating to managing energy efficiency building methods and strategies, including standards.

Context of and specific resources for assessment

Assessment of this unit:

- must be in the context of the work environment
- may be conducted in an off-site context, provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills
- must meet relevant compliance requirements.

Resource implications for assessment include:

- an induction procedure
- realistic tasks or simulated tasks covering the mandatory task requirements
- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and
addressing hazards and emergencies
- research resources, including industry-related systems information
- safety data sheets.

Method of assessment
Assessment for this unit must verify the practical application of the required skills and knowledge, using one or more of the following methods:
- direct observation of tasks in real or simulated work conditions
- questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- review of relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Guidance information for assessment
This unit could be assessed on its own or in combination with other units relevant to the job function.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should, as far as is practical, take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant stakeholders may include:
- architects
- builders
- building owners or investors
- designers
- developers
- engineers
- facility managers
- occupants.
Construction materials and products may include:

- cladding
- floors
- framing
- heating, ventilation and air conditioning (HVAC) systems
- insulation
- interior and exterior paints
- interior and exterior wall materials
- lights and lighting systems
- plaster
- roof materials
- types and uses of water tanks and recyclable grey water systems
- windows.

Techniques to be used to support energy efficiency may include:

- protecting the air barrier by minimising and sealing gaps using advanced framing techniques to increase construction productivity, reduce thermal bridging and increase operational energy efficiency
- installing insulation on the outside of the frame and in the roof, walls and floor
- reducing the effect of thermal bridging
- selecting appropriately sized HVAC system, which considers the tightness of the structure and incorporates heat or energy recovery systems as appropriate for ventilation
- using air or vapour barriers to ensure the entire building envelope is sealed, separating the inside environment from the outside
- using thicker insulation to improve the building’s thermal performance.

Evaluated may involve:

- occupier
- owner or developer
- relevant trades.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to establish standards for the design and production of organisational documents and to manage document design and production processes to ensure agreed standards are met. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals employed in a range of work environments who require well developed skills in the use of a range of software packages. They use these skills to establish, document and implement consistent standards of document design with an organisation. |

Licensing/Regulatory Information
Not applicable.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- Communication skills to present complex instructions orally, to communicate ideas logically, and to explain technical concepts and designs to others
- Literacy skills to:
  - Read and interpret policies and procedures
  - Review and select technological designs
  - Consider aspects of context, purpose and audience when designing and formatting texts
- Research and analysis skills to evaluate content, structure and purpose of technical
### REQUIRED SKILLS AND KNOWLEDGE

| texts, and to adapt task instructions to suit changes in technology |
| technological skills to manage design requirements and layouts. |

**Required knowledge**

| cost constraints |
| document production processes |
| functions of range of software applications, including desktop publishing, word processing and spreadsheets |
| key provisions of relevant legislation and regulations from all forms of government, codes and standards that may affect aspects of business operations, such as: |
| anti-discrimination legislation |
| ethical principles |
| codes of practice |
| privacy laws |
| organisational policies and procedures relating to document design and formatting |
| sources of expertise external to the organisation or workgroup. |

EVIDENCE GUIDE

- access to samples of high quality standardised documents.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of authenticated documents from the workplace or training environment
- oral or written questioning to assess knowledge of accounting procedures and techniques.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- information and communications technology units
- other general administration units.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Documents may be created:

- using a range of commercial or organisational software packages:
  - databases
  - desktop publishing
  - spreadsheets
  - word processing

Standards and design tasks may include:

- binding
- binding media
- checking final print copy
## RANGE STATEMENT

- client requirements
- colour photocopy
- copying
- creating templates and style or procedures manual
- drafting
- drawing
- editing
- electronic or paper-based
- enterprise policies and procedures
- enterprise templates or house style conventions for margins, fonts, use of colour
- final document presentation
- formatting
- language and style of document
- liaison with external personnel
- locating and collecting appropriate information or precedents
- print quality
- production of graphics
- production of multiple and subsequent copies
- quality standards
- use of page layout software
- writing

### Complex technical functions

may include:

- data transfer
- display features
- embedding
- exporting
- fields
- form fields
- formulae
- importing
- index
- linking
- macros
- merge criteria
- sort criteria
- table of contents

BSBCUS301B Deliver and monitor a service to customers

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 1 | This version first released with *BSB07 Business Training Package version 6.0*
|          | Revised unit. Performance criteria amended so that the learner is not required to ‘incorporate evidence of customer satisfaction in decision to modify products or services’. Required skills updated to focus on learning and development practices and compliance with policy and procedures. Replaces BSBCUS301A Deliver and monitor a service to customers |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to identify customer needs and monitor service provided to customers. Operators may exercise discretion and judgement using appropriate theoretical knowledge of customer service to provide technical advice and support to customers over either a short or long term interaction.

Application of the Unit

This unit applies to individuals who are skilled operators and apply a broad range of competencies in various work contexts.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>

</table>

### Elements and Performance Criteria

| 1. Identify customer needs | 1.1 Use *appropriate interpersonal skills* to accurately identify and clarify *customer needs and expectations*  
1.2 Assess customer needs for urgency to determine priorities for service delivery according to *organisational requirements*  
1.3 Use *effective communication* to inform customers about available choices for meeting their needs and assist in the selection of preferred options  
1.4 Identify limitations in addressing customer needs and seek appropriate assistance from *designated individuals* |
| 2. Deliver a service to customers | 2.1 Provide prompt service to customers to meet identified needs in accordance with organisational requirements  
2.2 Establish and maintain appropriate rapport with customers to ensure completion of quality service delivery  
2.3 Sensitively and courteously handle *customer complaints* in accordance with organisational requirements  
2.4 Provide assistance or respond to customers with *specific needs* according to organisational requirements  
2.5 Identify and use available *opportunities* to promote and enhance services and products to customers |
| 3. Monitor and report on service delivery | 3.1 Regularly review customer satisfaction with service delivery using *verifiable evidence* according to organisational requirements  
3.2 Identify opportunities to enhance the quality of service and products, and pursue within organisational requirements  
3.3 Monitor procedural aspects of service delivery for effectiveness and suitability to customer requirements |
3.4 Regularly seek customer feedback and use to improve the provision of products and services
3.5 Ensure reports are clear, detailed and contain recommendations focused on critical aspects of service delivery

Required Skills and Knowledge

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- analytical skills to identify trends and positions of products and services
- communication skills to monitor and advise on customer service strategies
- literacy skills to:
  - edit and proofread texts to ensure clarity of meaning and accuracy of grammar and punctuation
  - prepare general information and papers according to target audience
  - read and understand a variety of texts
- problem-solving skills to deal with customer enquiries or complaints
- technology skills to select and use technology appropriate to a task
- self-management skills to:
  - comply with policies and procedures
  - consistently evaluate and monitor own performance
  - seek learning opportunities.

**Required knowledge**

- key provisions of relevant legislation from all levels of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - financial legislation
  - occupational health and safety (OHS)
- organisational policy and procedures for customer service including handling customer complaints
- service standards and best practice models
- public relations and product promotion
- techniques for dealing with customers, including customers with specific needs.
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Appropriate interpersonal skills may include: | • listening actively to what the customer is communicating  
• providing an opportunity for the customer to confirm their request  
• questioning to clarify and confirm customer needs  
• seeking feedback from the customer to confirm understanding of needs  
• summarising and paraphrasing to check understanding of customer message  
• using appropriate body language. |
| --- | --- |
| Customers may include: | • corporate customers  
• individual members of the organisation  
• individual members of the public  
• internal or external  
• other agencies. |
| Customer needs and expectations may include: | • accuracy of information  
• advice or general information  
• complaints  
• fairness/politeness  
• further information  
• making an appointment  
• prices/value  
• purchasing organisation’s products and services  
• returning organisation’s products and services  
• specific information. |
| Organisational requirements may include: | • access and equity principles and practice  
• anti-discrimination and related policy  
• defined resource parameters  
• goals, objectives, plans, systems and processes  
• legal and organisational policies, guidelines and requirements  
• OHS policies, procedures and programs  
• payment and delivery options  
• pricing and discount policies  
• quality and continuous improvement processes and |
standards
- quality assurance and/or procedures manuals
- replacement and refund policy and procedures
- who is responsible for products or services.

**Effective communication** may include:
- giving customers full attention
- maintaining eye contact, except where eye contact may be culturally inappropriate
- speaking clearly and concisely
- using active listening techniques
- using appropriate language and tone of voice
- using clear written information/communication
- using non-verbal communication e.g. body language, personal presentation (for face-to-face interactions)
- using open and/or closed questions.

**Designated individuals** may include:
- colleagues
- customers
- line management
- supervisor.

**Customer complaints** may include:
- administrative errors such as incorrect invoices or prices
- customer satisfaction with service quality
- damaged goods or goods not delivered
- delivery errors
- product not delivered on time
- service errors
- warehouse or store room errors such as incorrect product delivered.

**Specific needs** of customers may relate to:
- age
- beliefs/values
- culture
- disability
- gender
- language
- religious/spiritual observances.

**Opportunities** to promote and enhance services and products may include:
- extending time lines
- packaging procedures
- procedures for delivery of goods
- returns policy
- system for recording complaints
- updating customer service charter.

**Verifiable evidence** may include:
- customer satisfaction questionnaires
- audit documentation and reports
- quality assurance data
- returned goods
- lapsed customers
- service calls
- complaints.

BSBFIM501A Manage budgets and financial plans

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to undertake financial management within a work team in an organisation. This includes planning and implementing financial management approaches, supporting team members whose role involves aspects of financial operations, monitoring and controlling finances, and reviewing and evaluating effectiveness of financial management processes in line with the financial objectives of the work team and the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit addresses the requirement for managers to ensure that financial resources are used effectively. This is done by ensuring access to budget/s and ongoing monitoring expenditure against the budget/s. The unit applies to managers working in small and large business environments and not for profit organisations. |

Licensing/Regulatory Information
Not applicable.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Management.

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

- **Budget/financial plans** may include:
  - cash flow projections
  - long-term budgets/plans
  - operational plans
  - short-term budgets/plans
  - spreadsheet-based financial projections
  - targets or key performance indicators for production, productivity, wastage, sales, income and expenditure

- **Relevant personnel** may include:
  - financial managers, accountants or financial controllers
  - supervisors, other frontline managers

- **Contingency plans** may include:
  - contracting out or outsourcing human resources and other functions or tasks
  - diversification of outcomes
  - finding cheaper or lower quality raw materials and consumables
### RANGE STATEMENT

- increasing sales or production
- recycling and re-using
- rental, hire purchase or alternative means of procurement of required materials, equipment and stock
- restructuring of organisation to reduce labour costs
- risk identification, assessment and management processes
- seeking further funding
- strategies for reducing costs, wastage, stock or consumables
- succession planning

**Support** may include:

- access to specialist advice
- documentation of procedures
- help desk or identified experts within the organisation
- information briefings or sessions
- intranet-based information
- training including mentoring, coaching and shadowing

**Required roles** may include:

- arranging for use of corporate credit cards
- banking
- debt collection
- ensuring security, accuracy and currency of financial operations
- invoicing clients, customers and consumers
- maintaining journals, ledgers and other record keeping systems
- maintaining petty cash system
- purchasing and procurement
- wages and salaries payments and record keeping

**Resources and systems** may include:

- hardware and software
- human, physical or financial resources
- record keeping systems (electronic and paper-based)
- specialist advice or support

**Processes to monitor actual expenditure and to control costs across the work team include:**

- reporting of:
  - assets
  - consumables
## RANGE STATEMENT

BSBHRM402A Recruit, select and induct staff

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to execute tasks associated with the recruitment cycle. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with a role in recruitment, selection and induction functions who work under the direction of a human resources manager. It is not assumed that the individuals addressed by this unit have staff who report to them, although this may be the case. Performance of the work described in this unit will be underpinned by in depth knowledge of the work of the organisation, and how recruitment and selection practices fit with other human resource functions. |

Licensing/Regulatory Information
Not applicable.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to use networks to source suitable applicants, to listen to and understand what is being said in interviews, and to advise on the outcomes of the selection process
- literacy skills to work with job descriptions to devise suitable questions for
REQUIRED SKILLS AND KNOWLEDGE

- interviews, to prepare letters for unsuccessful applicants and to make job offers
  - organising and scheduling skills to arrange interviews and venues.

Required knowledge

- documentation required for recruitment and selection
- human resource functions, human resource life cycle and the place of recruitment and selection in that life cycle
- principles of equity, diversity and relevant legislation.
- range of interviewing techniques and other selection processes and their application.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- demonstrated ability to work with job descriptions to source and select suitable staff
- interviewing and other selection techniques that demonstrate awareness of equal opportunity and anti-discrimination requirements
- knowledge of the human resource life cycle.

Context of and specific resources for assessment

Assessment must ensure:

- access to an appropriate range of documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
- assessment of written reports on recruitment and selection
- demonstration of selection techniques
- direct questioning combined with review of portfolios of evidence and third party workplace
### EVIDENCE GUIDE

- Reports of on-the-job performance by the candidate
- Observation of interviewing techniques
- Review of advertisements for staffing vacancies
- Review of documentation provided to successful candidate
- Oral or written questioning to assess knowledge of selection processes.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- Other units from the Certificate IV in Human Resources.

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Job descriptions may include:**

- Attributes
- Competencies required by staff
- Job or person specifications
- Job title and purpose of position
- Necessary skills and knowledge
- Qualifications
- Selection criteria
- Tasks or duties associated with the position

**Legislation, codes and national standards may include:**

- Award and enterprise agreements, and relevant industrial instruments
- Relevant industry codes of practice
- Relevant legislation from all levels of government that affects business operation, especially in regard to OHS and environmental issues, equal opportunity, industrial relations and anti-discrimination
### RANGE STATEMENT

**Occupational health and safety (OHS) considerations** may include:
- establishment and maintenance of OHS training, records, induction processes
- performance against OHS legislation and organisation's OHS system, especially policies, procedures and work instructions

**Advertising** may include:
- electronic or print
- internal or external
- outsourcing

**Staffing requirements** may include:
- permanent, temporary, full-time, part-time or casual

BSBITS401B Maintain business technology

Modification History

<table>
<thead>
<tr>
<th>Release</th>
<th>Comments</th>
</tr>
</thead>
</table>
| Release 1 | This version first released with *BSB07 Business Training Package version 6.0*.  
Revised unit. Required skills updated to focus on learning and development practices and compliance with policy and procedures.  
Replaces BSBITS401A Maintain business technology |

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to maintain the effectiveness of business technology in the workplace. It includes maintaining existing technology and planning for future technology requirements.

Application of the Unit

This unit applies to individuals with a broad knowledge of business technology who contribute well developed skills in creating solutions to maintenance and upgrade issues with existing technology. They may have responsibility to provide guidance or to delegate aspects of these tasks to others.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

</thead>
</table>
| **1. Maintain performance of hardware and software** | 1.1 Monitor and evaluate system effectiveness to ensure it meets organizational and system requirements  
1.2 Use operating system, drive and disk structure, reports and files to identify performance problems  
1.3 *Maintain disk drives and peripherals* according to manufacturers’ and organisational requirements  
1.4 Replace *consumables* in accordance with manufacturers’ and organisational requirements |
| **2. Provide basic system administration** | 2.1 Carry out system back-up procedure at regular intervals according to organisational and system requirements  
2.2 Install and operate *software* applications in accordance with developers’ and organisational requirements  
2.3 Maintain and update security access procedures in line with organisational requirements  
2.4 Ensure that licence for use of software is used, checked and recorded in accordance with organisational requirements  
2.5 Regularly maintain and update virus programs in accordance with organisational requirements |
| **3. Identify future technology requirements** | 3.1 Maintain knowledge of current and new *technology* by regularly accessing *sources of information*  
3.2 Identify and develop *improved technology systems* using feedback from clients and colleagues  
3.3 Assess existing technology against newly available technology to determine future needs and priorities  
3.4 Identify and select new technologies to achieve and maintain continuous organisational development  
3.5 Obtain management and budget approval for new selected |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to explain the operation and troubleshooting of technology in the work environment
- literacy skills to interpret and evaluate the purposes and objectives of various uses of technology; to display logical organisation of written information
- problem-solving skills to address routine and non-routine faults with hardware and software
- research and analytical skills to analyse and identify organisation’s future technology requirements.

Required knowledge

- costs and benefits of technology maintenance strategies
- general features and capabilities of current industry accepted hardware and software products
- principles of environmental sustainable practice in implementing business technology
- importance of back-up and security procedures; maintenance and diagnostic procedures; licensing, installation and purchasing procedures
- key provisions of relevant legislation from all forms of government that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - environmental issues
  - occupational health and safety (OHS).

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment
### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- installing software and hardware
- organising and accessing software, materials and consumables
- maintaining technology security and maintenance systems
- knowledge of costs and benefits of technology maintenance strategies.

### Context of and specific resources for assessment

Assessment must ensure:
- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to examples of technology maintenance and security procedures.

### Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- analysis of responses to case studies and scenarios
- demonstration of techniques
- oral or written questioning to assess knowledge of general features and capabilities of current industry accepted hardware and software products.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other information and communications technology or general administration units.

### Range Statement

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to clarify document requirements
- editing and proofreading skills to check own work for accuracy
- keyboarding skills to enter text and numerical data
- literacy skills to read and understand organisation's procedures, and to use basic models to produce a range of correspondence
- problem-solving skills to solve routine problems.

**Required knowledge**

- formatting styles and their effect on formatting, readability and appearance of documents
- purpose, use and function of word processing software
- organisational requirements for ergonomics, work periods and breaks, and conservation techniques
- organisational style guide.

**Evidence Guide**

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

**Overview of assessment**

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Evidence of the following is essential:
  - knowledge of simple word processing functions, standard document layout and design principles
  - production of a minimum of three simple, word processed documents.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to correctly create and use spreadsheets and charts through the use of spreadsheet software. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who perform a range of routine tasks in the workplace using a limited range of practical skills and fundamental knowledge of creating spreadsheets in a defined context under direct supervision or with limited individual responsibility. |

Licensing/Regulatory Information
Not applicable.

| 3.2. Create chart using appropriate data range in the spreadsheet
| 3.3. Modify chart type and layout using formatting features
| 4. Finalise spreadsheets
| 4.1. Ensure spreadsheet and any accompanying charts are previewed, adjusted and **printed** in accordance with organisational and task requirements
| 4.2. Ensure data input meets **designated time lines** and organisational requirements for speed and accuracy
| 4.3. Name and **store** spreadsheet in accordance with organisational requirements and exit the application without data loss/damage

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to clarify requirements of spreadsheet
- editing and proofreading skills to check own work for accuracy
- keyboarding skills to enter text and numerical data
- literacy skills to read and understand organisation's procedures, and to use basic models to produce a range of spreadsheets
- numeracy skills to create and use spreadsheet formulae.

**Required knowledge**

- formatting of workplace documents
- organisational requirements for ergonomic standards, work periods and breaks, and conservation techniques
- organisational guidelines on spreadsheet manipulation and processing
- purpose and range of use of spreadsheet functions.

**Evidence Guide**

**EVIDENCE GUIDE**
**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

Evidence of the following is essential:
- designing a minimum of two spreadsheets
- using cell-based formulae
- creating charts using relevant data
- knowledge of purpose and range of use of spreadsheet functions.

**Context of and specific resources for assessment**

Assessment must ensure:
- access to an actual workplace or simulated environment
- access to office equipment and resources
- access to examples of spreadsheets and simple formulae.

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of final spreadsheets
- analysis of responses to case studies and scenarios
- demonstration of techniques
- oral or written questioning to assess knowledge of spreadsheet software functions.

**Guidance information for assessment**

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- general administration units
- other IT use units.

### Range Statement

**RANGE STATEMENT**
## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| **Ergonomic requirements** may include: | • avoiding radiation from computer screens  
• chair height, seat and back adjustment  
• document holder  
• footrest  
• keyboard and mouse position  
• lighting  
• noise minimisation  
• posture  
• screen position  
• workstation height and layout |
| **Work organisation requirements** may include: | • exercise breaks  
• mix of repetitive and other activities  
• rest periods |
| **Conservation techniques** may include: | • double-sided paper use  
• recycling used and shredded paper  
• re-using paper for rough drafts (observing confidentiality requirements)  
• utilising power-save options for equipment |
| **Spreadsheet task requirements** may include: | • data entry  
• output  
• presentation  
• storage |
| **Data** may include: | • numbers  
• text |
| **Checking** may include: | • accuracy of data  
• accuracy of formulae with calculator  
• ensuring instructions with regard to content and format have been followed  
• proofreading  
• spelling, electronically and manually |
| **Formatting** may include: | • alignment on page  
• efficiency of formulae  
• enhancements to format - borders, patterns and |

</table>

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- numeracy skills to create simple queries and to use simple formulae
- planning and organising skills to develop effective databases
- problem-solving skills to address inconsistencies in data and issues in database, and to query structures.

**Required knowledge**

- key provisions of relevant legislation from all forms of government, standards and codes that may affect aspects of business operations, such as:
  - anti-discrimination legislation
  - ethical principles
  - codes of practice
  - privacy laws
  - occupational health and safety
  - organisational requirements relating to data entry, storage and presentation.

BSBMGT502B Manage people performance

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage the performance of staff who report to them directly. Development of key result areas and key performance indicators and standards, coupled with regular and timely coaching and feedback, provide the basis for performance management.

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to all managers and team leaders who manage people. It covers work allocation and the methods to review performance, reward excellence and provide feedback where there is a need for improvement.

The unit makes the link between performance management and performance development, and reinforces both functions as a key requirement for effective managers.

This is a unit that all managers/prospective managers who have responsibility for other employees should strongly consider undertaking. |

Licensing/Regulatory Information
Not applicable.

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to articulate expected standards of performance, to provide effective feedback and to coach staff who need development
- risk management skills to analyse, identify and develop mitigation strategies for identified risks
- planning and organisation skills to ensure a planned and objective approach to the performance management system.

Required knowledge

- relevant legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination
- relevant awards and certified agreements
- performance measurement systems utilised within the organisation
- unlawful dismissal rules and due process
- staff development options and information.

BSBMGT515A Manage operational plan

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to develop and monitor implementation of the operational plan to provide efficient and effective workplace practices within the organisation's productivity and profitability plans. Management at a strategic level requires systems and procedures to be developed and implemented to facilitate the organisation's operational plan. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to people who manage the work of others and operate within the parameters of a broader strategic and/or business plan. The task of the manager at this level is to develop and implement an operational plan to ensure that the objectives and strategies outlined in the strategic and/or business plan are met by work teams. However in some larger organisations operational plans may be developed by a strategic planning unit. At this level work will normally be carried out within complex and diverse methods and procedures, which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- literacy skills to access and use workplace information and to write a succinct and
**REQUIRED SKILLS AND KNOWLEDGE**

- practical plan
- technology skills to use software to produce and monitor the plan against performance indicators
- planning and organisational skills
- coaching skills to work with people with poor performance
- numeracy skills to allocate and manage financial resources.

**Required knowledge**

- models and methods for operational plans
- budgeting processes
- alternative approaches to improving resource usage and eliminating resource inefficiencies and waste.

### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE

| Indicators and contingency plans | - evaluation of employee recruitment and induction strategies
| - evaluation of processes implemented to acquire physical resources and services. |

Guidance information for assessment

| Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example: |
| - other units from the Diploma of Management. |

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Resource requirements may include:

- goods and services to be purchased and ordered
- human, physical and financial resources - both current and projected
- stock requirements and requisitions

Relevant personnel, colleagues and specialist resource managers may include:

- employees at the same level or more senior managers
- managers
- occupational health and safety committee/s and other people with specialist responsibilities
- supervisors
- union or employee representatives

Consultation processes may refer to:

- email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual operational plans
- mechanisms used to provide feedback to the work team in relation to outcomes of
### RANGE STATEMENT

| **Operational plans** may also be termed: | consultation  
• meetings, interviews, brainstorming sessions |
| **Key performance indicators** may refer to: | action plans  
• annual plans  
• management plans  
• tactical plans |
| **Contingency plans** may include: | measures for monitoring or evaluating the efficiency or effectiveness of a system which may be used to demonstrate accountability and to identify areas for improvements  
• contracting out or outsourcing human resources and other functions or tasks  
• diversification of outcomes  
• finding cheaper or lower quality raw materials and consumables  
• increasing sales or production  
• recycling and re-using  
• rental, hire purchase or alternative means of procurement of required materials, equipment and stock  
• restructuring of organisation to reduce labour costs  
• risk identification, assessment and management processes  
• seeking further funding  
• strategies for reducing costs, wastage, stock or consumables  
• succession planning |
| **Organisation's policies, practices and procedures** may include: | organisational culture  
• organisational guidelines which govern and prescribe operational functions, such as the acquisition and management of human and physical resources  
• Standard Operating Procedures  
• undocumented practices in line with organisational operations |
| **Designated persons/groups** may include: | groups designated in workplace policies and procedures  
• managers or supervisors whose roles and responsibilities include decision making on operations  
• other stakeholders such as Board members |

BSBOHS201A Participate in OHS processes

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to participate in workplace occupational health and safety (OHS) processes to protect workers own health and safety, and that of others. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals who require a fundamental knowledge of OHS to carry out their own work which may be in a defined context under direct supervision or with some individual responsibility. This unit has broad applicability across industries and workplace contexts. |

Licensing/Regulatory Information
Not applicable.

| 2. Implement workplace safety requirements | 2.1. Identify *designated persons* for reporting queries and concerns about safety in the workplace  
| | 2.2. Identify existing and potential *hazards* in the workplace, report them to designated persons and record them in accordance with workplace procedures  
| | 2.3. Identify and implement workplace procedures and work instructions for controlling risks  
| | 2.4. Report *emergency incidents* and injuries to designated persons |
| 3. Participate in OHS consultative processes | 3.1. Contribute to workplace meetings, inspections or other consultative activities  
| | 3.2. Raise OHS issues with designated persons in accordance with organisational procedures  
| | 3.3. Take actions to eliminate workplace hazards or to reduce *risks* |
| 4. Follow safety procedures | 4.1. Identify and report emergency incidents  
| | 4.2. Follow organisational procedures for responding to emergency incidents |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- literacy skills to interpret safety signs, symbols and notices
- problem-solving skills to analyse options in an emergency situation.

Required knowledge

- responsibilities of employers and employees under relevant health and safety legislation
- emergency procedures including procedures for fires and accidents
- commonly used hazard signs and safety symbols.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:
- accurately following all relevant safety procedures
- identifying and reporting hazards to designated personnel
- knowledge of relevant health and safety legislation
- knowledge of relevant materials, equipment and work processes.

Context of and specific resources for assessment

Assessment must ensure:
- safety processes, hazards and risk are relevant to the area of work

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
## EVIDENCE GUIDE

- analysis of responses to case studies and scenarios
- demonstration of techniques
- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- review of documentation identifying and reporting emergency incidents

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:
- other units related to the work environment

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Safety procedures may include:

- completing required documentation
- local, state and federal legislation
- Materials Safety Data Sheets (MSDSs)
- National Health and Medical Research Council guidelines
- following OH&S guidelines relevant to workplace
- maintenance and use of cleaning apparatus in a work environment, such as:
  - disposing of spilled substances, dangerous products, 'sharps' and waste correctly
  - maintaining stocks of cleaning equipment (eg. disposable gloves, liquid repellent aprons, disinfectant)
- sterilising and/or disposing of cleaning equipment
- using appropriate cleaning equipment to clean spillages and breakages
## RANGE STATEMENT

<table>
<thead>
<tr>

BSBOHS403B Identify hazards and assess OHS risks

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to identify hazards and to assess occupational health and safety (OHS) risks in the workplace.
|                | No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with supervisory responsibilities in managing OHS in the workplace who identify hazards and assess risks using developed processes and tools.
|                          | The unit also introduces basic incident analysis as an important skill underlying incident investigation, which is addressed in greater complexity in BSBOHS508B Participate in the investigation of incidents. |

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Investigate incidents for prevention | 1.1. Select and use appropriate techniques to investigate incidents  
1.2. Establish actions and events leading up to an incident, during an incident and through the post incident management phase  
1.3. Analyse incident to identify the hazards  
1.4. Analyse incident to identify intervention points to prevent re-occurrence |
| 2. Access existing sources of information and data to identify hazards | 2.1. Review workplace sources of information and data to access information and data, and to assist in identifying hazards  
2.2. Access external sources of information and data as required  
2.3. Seek input from stakeholders, key personnel and OHS specialists |
| 3. Conduct hazard | 3.1. Seek formal and informal techniques and tools to |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
Identification  | identify hazards
3.2. Select and modify a suitable technique/tool as appropriate to identify hazards
3.3. Review hazard identification techniques and tools in consultation with workers in the area, and OHS specialists if required, to ensure they are suitably comprehensive
3.4. Utilise techniques and tools and other appropriate hazard identification procedures to identify hazards
3.5. Provide employees and their representatives with an opportunity to participate in workplace hazard identification

4. Assess risk  | 4.1. Select and use a risk assessment tool to identify key factors contributing to risk
4.2. Apply workplace sources of information and data to evaluate the effectiveness of risk controls
4.3. Prioritise risks considering the severity and likelihood of the consequences
4.4. Involve stakeholders and key personnel in risk assessment
4.5. Document the method of risk assessment

5. Participate in implementation process  | 5.1. Maintain a hazard register relevant to the workplace
5.2. Identify the level of authority within the organisation to address the risk/s
5.3. Document and communicate outcomes of hazard identification and risk assessments to key personnel and stakeholders
5.4. Monitor and evaluate the effectiveness of own performance in identifying hazards and conducting risk assessments

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**
This section describes the skills and knowledge required for this unit.

**Required skills**
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities across all levels of an organisation
**REQUIRED SKILLS AND KNOWLEDGE**

- information management skills to evaluate OHS data
- interpersonal skills to establish rapport and to build networks with a range of internal and external stakeholders
- organisational and time management skills to sequence tasks and meet timelines
- research and data analysis skills to evaluate interactions between employees, their activities, equipment, environment and work systems
- technology skills to access internal and external OHS data.

**Required knowledge**

- basic principles of incident causation and injury processes
- legislative requirements for:
  - consultation and communication
  - information and data collection
  - notification of incidents
  - record keeping
  - reporting of incidents
  - specific hazards
- organisational culture as it impacts on the workgroup
- organisational policies and procedures for managing OHS
- organisational work processes for managing OHS
- appropriate data collection methods for OHS issues
- concepts of risks, factors that affect risk and difference between a hazard and a risk
- internal and external sources for OHS information and data
- principles and practices of systematic approaches to managing OHS
- principles, tools and techniques to identify and control workplace hazards and to manage risks in the OHS context
- relevant state/territory and commonwealth OHS legislation, codes of practice and standards
- roles and responsibilities of personnel as specified in relevant OHS legislation
- sources of OHS data.

---

## RANGE STATEMENT

### Workplace sources of information and data may include:
- audits
- hazard, incident and investigation reports
- incident investigations
- legislation, standards, manufacturers' manuals and specifications available at the workplace
- material safety data sheets (MSDSs) and registers
- minutes of meetings
- reports
- workplace inspections

### External sources of information and data may include:
- employer groups
- industry bodies
- OHS professional bodies
- OHS specialists
- Australian Standards
- manufacturers' manuals and specifications
- regulatory authorities (for other relevant legislation such as acts, regulations, codes of practice)
- unions
- websites, journals and newsletters

### Stakeholders may include:
- community
- employees
- health and safety, and other employee representatives
- managers
- OHS committees
- supervisors

### Key personnel may include:
- managers from other areas
- people involved in OHS decision making or who are impacted by decisions

### OHS specialists may include:
- ergonomists
- health professionals
- injury management advisors
- occupational hygienists

### Techniques and tools may include:
- body mapping
- hazard identification procedures based on checklists
- interviews
- MSDSs

<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| controls | 3.2. Identify and document *actions required to achieve change*  
3.3. Consult with and involve workplace stakeholders in implementation of change  
3.4. Provide advice on the fitting, use, maintenance and storage of *personal protective equipment* (PPE) |
| 4. Contribute to monitoring and evaluation of effectiveness of controls | 4.1. Monitor and evaluate the extent of change as a consequence of new controls, in consultation with stakeholders  
4.2. Monitor and document compliance with new procedures  
4.3. Access *workplace sources of information and data* to evaluate effectiveness of risk controls and to check for new hazards introduced as a result of controls  
4.4. Identify areas for further improvement in consultation with stakeholders and action as appropriate  
4.5. Develop and document an improvement plan |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- consultation and negotiation skills to develop risk management plans and implement risk controls effectively  
- culturally appropriate communication skills to relate to people from diverse backgrounds and people with diverse abilities across all levels of an organisation  
- evaluation skills to analyse the effectiveness of own performance in implementing strategies chosen to control OHS risks  
- information management skills to evaluate OHS data  
- interpersonal skills to establish rapport and build networks with a range of internal and external stakeholders  
- literacy skills to prepare reports for a range of target groups  
- organisational and time management skills to sequence tasks and meet timelines  
- research and data analysis skills to assess resources required to systematically manage OHS and to analyse relevant workplace information and data
**REQUIRED SKILLS AND KNOWLEDGE**

- research and data analysis skills to evaluate interactions between employees, their activities, equipment, environment and work systems
- technology skills to access internal and external OHS data.

**Required knowledge**

- appropriate data collection methods for OHS purposes
- characteristics, mode of action and measurement of major hazard types
- concepts of risks, factors that affect risk and difference between a hazard and a risk
- internal and external sources for OHS information and data
- legislative requirements for:
  - consultation and communication
  - information and data collection
  - notification of incidents
  - record keeping
  - reporting of incidents
  - specific hazards
- organisational culture as it impacts on the workgroup
- organisational policies and procedures for managing OHS
- organisational work processes and structure
- principles and practices of systematic approaches to managing OHS
- principles of incident causation and injury processes
- principles of the hierarchy of control
- principles, tools and techniques to identify and control workplace hazards and manage risks in the OHS context
- relevant state/territory and commonwealth OHS legislation, codes of practice and standards
- requirements for individual fitting, use, maintenance and storage of a range of PPE items
- roles and responsibilities of personnel as specified in relevant OHS legislation
- sources of OHS data
- standard industry controls for a range of hazards.

**Evidence Guide**

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Range Statement

#### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Hazard register may include: | • a list of hazards  
| | • location of hazards  
| | • range of possible scenarios or circumstances under which hazards may cause injury or damage  
| | • results of the risk analysis related to the hazards  
| Hazards may include: | • sources of potential harm in terms of human injury, ill health, damage to property, damage to the environment, or a combination of these, including:  
| | • biological  
| | • chemical  
| | • environment  
| | • mechanical and/or electrical  
| | • physical  
| | • psychosocial  
| | • radiological  
| | • nuclear  
| Risks may include: | • the chance of something occurring that will result in injury or damage measured in terms of consequences (injury or damage) and likelihood of the consequence  
| Principles of the hierarchy of control may include: | • eliminating hazards  
| | • and where this is not practicable, minimising risk by:  
| | • substitution

| RANGE STATEMENT | • isolating hazard from personnel  
|                | • using engineering controls  
|                | • using administrative controls (such as procedures, training)  
|                | • using PPE  
| Stakeholders may include: | • community  
|                | • employees  
|                | • health and safety, and other employee representatives  
|                | • managers  
|                | • OHS committees  
|                | • supervisors  
| Key personnel may include: | • managers from other areas  
|                | • people involved in OHS decision making or who are impacted by decisions  
| OHS specialists may include: | • ergonomists  
|                | • health professionals  
|                | • injury management advisors  
|                | • occupational hygienists  
| Technical advisors may include: | • engineers (design, acoustic, safety, mechanical, civil)  
|                | • legal practitioners  
|                | • maintenance and tradespeople  
|                | • workplace trainers and assessors  
| Factors that may limit effectiveness of controls may include: | • cultural diversity  
|                | • language  
|                | • literacy and numeracy  
|                | • shift work and rostering arrangements  
|                | • training required  
|                | • workplace culture related to OHS, including commitment by managers and supervisors, and compliance with procedures and training  
|                | • workplace organisational structures (for example geographic, hierarchical)  
| Actions required to achieve change may include: | • development of new procedures or revision of existing procedures  
|                | • purchase of equipment or modification of equipment  
|                | • training  
| Personal protective equipment | • equipment designed to be worn by a person to
RANGE STATEMENT

may include: provide protection from hazards such as:
- clothing and footwear
- face and eye protection
- hand protection
- head protection
- hearing protection
- respiratory protection

Workplace sources of information and data may include:
- audits
- Australian Standards
- hazard and incident reports
- incident investigations
- manufacturers' manuals and specifications
- material safety data sheets (MSDSs) and registers
- minutes of meetings
- OHS legislation
- reports
- workplace inspections

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to use a generic approach to identify hazards, and to assess and control occupational health and safety (OHS) risks. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to individuals with managerial responsibility for providing a systematic approach to hazard identification, risk assessment and risk control, with the emphasis on elimination or, where this is not possible, minimisation of risk. It also includes conceptual models for understanding the nature of hazards. The unit provides a basis for the hazard specific competencies in BSBOHS505C Manage hazards in the work environment, and BSBOHS506B Monitor and facilitate the management of hazards associated with plant. This unit is underpinned by BSBOHS403B Identify hazards and assess OHS risks, and BSBOHS404B Contribute to the implementation of strategies to control OHS risk. A more advanced approach to risk assessment, which identifies the separate elements of risk analysis and risk evaluation, is provided in BSBOHS603B Analyse and evaluate OHS risk. |

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Access sources of information and data to identify hazards</td>
<td>1.1. Access external sources of information and data to assist in identifying hazards 1.2. Review workplace sources of information and data to access and assist in identification of hazards 1.3. Seek input from stakeholders, key personnel and OHS specialists 1.4. Conduct formal and informal research to ensure currency of information with workplace issues</td>
</tr>
<tr>
<td>2. Analyse the work</td>
<td>2.1. Define, document and communicate occasions</td>
</tr>
<tr>
<td>ELEMENT</td>
<td>PERFORMANCE CRITERIA</td>
</tr>
<tr>
<td>---------</td>
<td>----------------------</td>
</tr>
</tbody>
</table>
| environment to identify hazards | when action for hazard identification is required  
2.2. Source **tools** to assist in analysing potential hazards  
2.3. Examine **task demands** and **task environment** for impact on the person to identify situations with a potential for injury or ill health  
2.4. Examine workforce structure, organisation of work and work relationships to identify situations with a potential for injury or ill health  
2.5. Examine work environment for **agents** with a potential for injury or ill health  
2.6. Seek input from stakeholders to clarify and confirm issues |
| 3. Assess risk associated with hazards | 3.1. Identify **factors contributing to risk**  
3.2. Identify current risk controls for each hazard  
3.3. Evaluate adequacy of current controls (if any), taking account of **relevant standards** and knowledge  
3.4. Identify discrepancies between current controls and required quality of control  
3.5. **Prioritise** hazards requiring further control action  
3.6. Document method and outcomes of **risk assessment** |
| 4. Control risk associated with hazards | 4.1. Develop a range of control options in consultation with stakeholders, taking account of the outcomes of the risk assessment and the **hierarchy of control**  
4.2. Identify potential **factors impacting on the effectiveness of controls**  
4.3. Seek advice from OHS specialists and key personnel if required  
4.4. Identify and seek appropriate authority and relevant resources to initiate and maintain controls  
4.5. Identify and document actions required to achieve change  
4.6. Analyse extent of change and reduction in risk, as a result of controls |
| 5. Maintain hazard identification and risk control processes | 5.1. Establish and maintain a **risk register** relevant to the workplace  
5.2. Document and communicate risk management procedures to stakeholders and key personnel, as appropriate  
5.3. Document and communicate outcomes of risk management processes to stakeholders and key personnel, as appropriate |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytical skills to:
  - identify areas for OHS risk improvement
  - analyse relevant workplace information and data
  - contribute to the assessment of the resources needed to systematically manage OHS and, where appropriate, access resources
- attention to detail when making observations and recording outcomes
- research skills to access relevant OHS information and data
- numeracy skills to carry out simple arithmetical calculations (e.g. % change), and to produce graphs of workplace information and data to identify trends and recognise limitations
- communication skills to:
  - conduct effective formal and informal meetings and to communicate effectively with personnel at all levels of the organisation, OHS specialists and, as required, emergency services personnel
  - prepare reports for a range of target groups including OHS committee, OHS representatives, managers and supervisors
## REQUIRED SKILLS AND KNOWLEDGE

- use language and literacy skills appropriate to the workgroup and the task
- consultation and negotiation skills to develop plans and to implement and monitor designated actions
- project management skills to achieve change in OHS matters
- organisational skills to manage own tasks within a timeframe
- information technology skills to access and enter internal and external information and data on OHS and to use a range of communication media

### Required knowledge

- organisational behaviour and culture as it impacts on OHS and on change
- basic physiology relevant to understanding mode of action of physical, biological and chemical agents on the body and how they produce harm
- basic principles of incident causation and injury processes
- characteristics, mode of action and units of measurement of major hazard types
- concept of common law duty of care
- difference between hazard and risk
- ethics related to professional practice
- how the characteristics and composition of the workforce impact on risk and the systematic approach to managing OHS, for example:
  - communication skills
  - cultural background/workplace diversity
  - gender
  - labour market changes
  - language, literacy and numeracy
  - structure and organisation of workforce e.g. part-time, casual and contract workers, shift rosters, geographical location
  - workers with specific needs
- internal and external sources of OHS information and data
- language, literacy and cultural profile of the workgroup
- legislative requirements for OHS information and data, and consultation
- limitations of generic hazard and risk checklists, and risk ranking processes
- methods of providing evidence of compliance with OHS legislation
- nature of workplace processes (including work flow, planning and control) and hazards relevant to the particular workplace
- organisational culture as it impacts on the workgroup
- organisational OHS policies and procedures
- other function areas that impact on the management of OHS
- principles and practices of systematic approaches to managing OHS
- professional liability in relation to providing advice
- requirements under hazard specific OHS legislation and codes of practice
- risk as a measure of uncertainty and the factors that affect risk
### REQUIRED SKILLS AND KNOWLEDGE

- roles and responsibilities under OHS legislation of employees, including supervisors and contractors
- standard industry controls for a range of hazards
- state/territory and commonwealth OHS legislation (acts, regulations, codes of practice, associated standards and guidance material) including prescriptive and performance approaches and links to other relevant legislation such as industrial relations, equal employment opportunity, workers compensation, rehabilitation
- structure and forms of legislation including regulations, codes of practice, associated standards and guidance material
- types of hazard identification tools, including job safety analysis (JSA)

### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>Evidence of the following is essential:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• products used in:</td>
</tr>
<tr>
<td></td>
<td>• the application of a risk management approach to identifying hazards</td>
</tr>
<tr>
<td></td>
<td>• assessing OHS risk</td>
</tr>
<tr>
<td></td>
<td>• controlling OHS risk</td>
</tr>
<tr>
<td></td>
<td>• how these products were developed and implemented</td>
</tr>
<tr>
<td></td>
<td>• knowledge of relevant OHS legislation (acts, regulations, codes of practice, associated standards and guidance material.</td>
</tr>
</tbody>
</table>

#### Context of and specific resources for assessment

| Assessment must ensure: |
| access to workplace or simulated workplace |
| access to workplace documentation |
| access to office equipment and resources |
| access to relevant legislation, standards and guidelines relating to risks found in the workplace. |

### Method of assessment

| A range of assessment methods should be used to assess practical skills and knowledge. The following examples |
### EVIDENCE GUIDE

- OHS committees  
- supervisors. |
| **Key personnel** may include: | managers from other areas  
- people involved in OHS decision making or who are affected by OHS decisions |
| **OHS specialists** may include: | engineers  
- ergonomists  
- occupational hygienists  
- organisational psychologists  
- toxicologists  
- workplace injury and return to work advisors. |
**RANGE STATEMENT**

**Workplace issues** may include:
- changes in equipment, including technology
- changes in social, political or community environment
- changes in work organisation, including:
  - contracting
  - hire arrangements
  - casualisation
  - supervisory arrangements
  - outworkers
  - rosters
  - shift work
  - work hours
  - work relations
- changes in work practice
- changes to legislation and standards
- new knowledge on hazards
- outcomes of court rulings.

**Occasions when action for hazard identification is required** may include:
- at design or pre-purchase of buildings, equipment and materials
- at regular intervals during normal operations
- before changes are made to workplace, equipment, work processes or work arrangements
- commissioning or pre-implementation of new processes or practices
- following an incident report
- new forms of work and organisation of work
- planning major tasks or activities, such as equipment shut-downs
- prior to disposal of equipment, buildings or materials
- when new knowledge becomes available.

**Tools** may include:
- audits
- cause and effect diagrams
- JSA
- surveys.

**Task demands** may include:
- arousal and alertness
- machine pacing or time pressure to complete a task
- physical or physiological demands

### RANGE STATEMENT

- using engineering controls
- using administrative controls (e.g. procedures, training)
- using personal protective equipment (PPE).

#### Factors impacting on the effectiveness of controls

- cultural diversity
- language
- literacy and numeracy levels
- shift work and rostering arrangements
- training required
- workplace culture related to OHS including commitment by managers and supervisors and compliance with procedures and training
- workplace organisational structures (size of organisation, geographic, hierarchical).

#### Risk register

- list of hazards, their location and people exposed
- possible control measures and dates for implementation
- range of possible scenarios or circumstances under which the hazards may cause injury or damage
- results of the risk analysis related to the hazards.

BSBOHS603B Analyse and evaluate OHS risk

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to conduct a formal risk assessment comprising analysis and evaluation of occupational health and safety (OHS) risk. It has been designed to be consistent with the Australian Standard, AS/NZS 4360: 2004 Risk management.
|                 | No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit addresses the knowledge, processes and techniques necessary to analyse and evaluate OHS risk as part of the risk management process.
|                         | OHS risk analysis involves defining the range of consequences, assessing the effectiveness of existing controls and deciding the likelihood of each consequence, and combining these in some way to obtain a level of risk. Risk evaluation is the comparison of pre established criteria for tolerance and the subsequent ranking of risks requiring control.
|                         | The situation to be analysed and evaluated may involve a single task or a process comprising a series of tasks.
|                         | Application of this unit must be consistent with the pertinent sections of the Australian Standard, AS/NZS 4360: 2004 Risk management. |
Licensing/Regulatory Information

| process          | 2.2. Identify the need for further information using monitoring activities  
|                  | 2.3. Communicate information and data about the OHS risk to stakeholders  
|                  | 2.4. Consult and involve a range of stakeholders in the analysis  
|                  | 2.5. Identify and evaluate existing controls and their effectiveness, taking account of relevant standards  
|                  | 2.6. Determine specific scenarios to be considered  
|                  | 2.7. Determine the range of possible consequence/s from the various scenarios  
|                  | 2.8. Determine the likelihood of the occurrence of the consequence/s  
|                  | 2.9. Undertake steps to ensure comprehensive analysis of information, data and techniques  
|                  | 2.10. Rank OHS risks in order of level of risk  
|                  | 2.11. Consult OHS specialist advisors if required  
| 3. Evaluate OHS risk of a task or process | 3.1. Access and reference relevant legislation, codes of practice and standards  
|                  | 3.2. Consult stakeholders in determining criteria for OHS risk evaluation  
|                  | 3.3. Compare outcomes of OHS risk analysis with criteria to identify risks requiring further risk control and risks deemed as low as reasonably achievable  
|                  | 3.4. Document process and outcomes of analysis and evaluation in a manner that is accessible and facilitates understanding by stakeholders  
|                  | 3.5. Document outcomes to include explanation of the legal ramifications of decision making based on risk prioritisation  

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- analytical skills to:
REQUIRED SKILLS AND KNOWLEDGE

- identify areas for improvement with OHS incidents
- analyse relevant workplace information and data, and to make observations of workplace tasks and interactions between people, their activities, equipment, environment and systems
- contribute to the assessment of resources needed to systematically manage OHS and, where appropriate, access resources
- contribute to the strategic OHS performance of the organisation
- attention to detail when making observations and recording outcomes
- numeracy skills to carry out simple arithmetical calculations (e.g. % change) and to produce graphs of workplace information and data, to identify trends and recognise limitations of information and data
- research skills to access relevant OHS information and data to interpret information and data, to identify areas for improvement
- communication skills to:
  - conduct effective formal and informal meetings and to communicate effectively with personnel at all levels of the organisation, OHS specialists and, as required, emergency services personnel
  - write policies, procedures and plans
  - use language and literacy skills appropriate to the workgroup and the task
- data gathering skills such as brainstorming, polling, interviewing
- consultation and negotiation skills to develop plans, and to implement and monitor designated actions
- project management skills to achieve continuous improvement and action processes in OHS matters
- organisational skills to manage own tasks within a timeframe
- information technology skills to access and enter internal and external information and data on OHS and to use a range of media.

Required knowledge

- benefits, limitations and use of a range of communication strategies and tools appropriate to the workplace
- difference between hazard and risk
- ethics related to professional practice
- formal and informal communication and consultation processes, and key personnel related to communication
- how the characteristics and composition of the workforce impact on risk and the systematic approach to managing OHS, for example:
  - communication skills
  - cultural background/workplace diversity
  - gender
  - labour market changes
### REQUIRED SKILLS AND KNOWLEDGE

- language, literacy and numeracy
- structure and organisation of workforce e.g. part-time, casual and contract workers, shift rosters, geographical location
- workers with specific needs
- internal and external sources of OHS information and data
- language, literacy and cultural profile of the work group
- legislative requirements for OHS information and data, and consultation
- limitations of generic hazard and risk checklists and risk ranking processes
- nature of workplace processes (including work flow, planning and control) and hazards relevant to the particular workplace
- organisational behaviour and culture as it impacts on OHS and on change
- organisational culture as it impacts on the workgroup
- organisational OHS policies and procedures
- other functional areas that impact on the management of OHS
- principles and practices of a systematic approach to managing OHS
- principles of duty of care including concepts of causation, foreseeability, preventability
- principles of human behaviour and response to interactions with human, physical and task environment to identify psychosocial hazards
- principles of incident causation and injury processes
- range of risk analysis/assessment techniques and tools and their application and limitations
- requirements for control of work permits/written authorities in workplace monitoring activities
- requirements of OHS and standards related to systematically managing OHS
- risk as a measure of uncertainty and the factors that affect risk
- roles and responsibilities under OHS legislation of employees including supervisors, contractors, OHS inspectors
- roles and responsibilities in relation to communication and consultation for OHS committees, OHS representatives, line management, employees and inspectors
- sources of occupational disease and their prevention
- standard industry controls for a range of hazards
- state/territory and commonwealth OHS legislation (acts, regulations, codes of practice, associated standards and guidance material) including prescriptive and performance approaches and links to other relevant legislation such as industrial relations, equal employment opportunity, workers compensation, rehabilitation
- structure and forms of legislation including regulations, codes of practice, associated standards and guidance material
### REQUIRED SKILLS AND KNOWLEDGE

- toxicology of hazardous materials and potential health effects in the workplace
- types of hazard identification tools including job system analysis (JSA).

### Evidence Guide

#### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

#### Overview of assessment

EVIDENCE GUIDE

| on-the-job performance by the candidate |
| observation of performance in role plays |
| observation of presentations |
| oral or written questioning |
| review information and data communicated to stakeholders about the OHS risk |
| evaluation of ranking of OHS risks |
| assessment of comparison of outcomes of OHS risk analysis with criteria |
| review of documentation of process and outcomes of analysis and evaluation of OHS risk of a task or process. |

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other OHS units

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards may include:

- source or situation with a potential for harm in terms of human injury or ill health, damage to property or the environment, or a combination of these

Context may include:

- activities
- controls currently in place
- internal and external factors that impact on OHS risk
- level of documentation required
- stakeholders
- workplace

Scope of OHS risk study may

- activities, job role, area, location to be
### RANGE STATEMENT

<table>
<thead>
<tr>
<th>Include:</th>
<th>Analysed</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>who will use the output and for what purpose</td>
</tr>
<tr>
<td></td>
<td>why it is being done</td>
</tr>
</tbody>
</table>

**Monitoring activities may include:**

- air monitoring
- medical monitoring
- noise monitoring

**Information and data about the OHS risk may include:**

- mode/s of action of the hazard causing injury or damage
- outcomes of OHS risk analysis

**Stakeholders may include:**

- customers/users of the product or process
- employees and their representatives
- managers, including boards of management
- the community

**Controls may include:**

- actions implementing risk management decisions
- monitoring
- programs or policies
- re-evaluation and compliance with decisions

**Relevant standards may include:**

- Australian and industry standards
- codes of practice and guidance material
- common law duty of care
- current knowledge
- current practice
- legislation

**Comprehensive analysis of information and data may include:**

- engineering modelling
- experience with enterprise, own/other industries
- past records
- published literature
- research within exposed groups
- specialist and expert groups

**Comprehensive analysis of techniques may include:**

- broad consultation
- multidisciplinary focus groups
- processes and techniques used by specialists, such as modelling, fault tree and Hazard and Operability Studies (HazOps)
- questionnaires
- structured interviews

**OHS specialist advisors may**

- engineers
### RANGE STATEMENT

include:
- ergonomists
- occupational hygienists
- safety professionals
- occupational health practitioners
- psychologists
- people skilled in applying advanced risk analysis processes, such as modelling, fault tree, HazOps and Management Oversight and Risk Tree (MORT)
- toxicologists

| Documentation of risk analysis may include: | description of methods used |
|                                           | groups involved/consulted    |
|                                           | description of consequences and their likelihood |
|                                           | information and data used in estimates |
|                                           | assumptions                  |
|                                           | effectiveness of existing controls |
|                                           | uncertainty in analysis      |
|                                           | factors affecting level of risk |
|                                           | further information/data and/or investigation required |

| Documentation of risk evaluation may include: | criteria determined |
|                                              | descriptions of method used to determine the criteria |
|                                              | groups consulted/involved |
|                                              | list of risks and schedule for action |
|                                              | statement of the legal ramifications of decision making based on risk prioritisation |

**Elements and Performance Criteria Pre-Content**

Elements describe the essential outcomes of a unit of competency.  
Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Contribute to quality planning | 1.1. Contribute to determining quality requirements of project stakeholders  
1.2. Contribute to establishing quantifiable quality criteria for project outcomes and objectives |
## ELEMENT

### PERFORMANCE CRITERIA

1. **Source information** to locate and interpret quality policy and procedures
2. **Contribute to the development of quality requirements** in the project plan and processes

### 2. Apply quality policies and procedures

1. **Undertake work under delegated authority** to implement **quality assurance** within the project in accordance with agreed quality standards and guidelines
2. **Maintain records and documentation in accordance with set procedures to facilitate quality control** and to provide an audit trail
3. **Document and evaluate results of project activities and product performance** to determine compliance with agreed quality standards
4. **Report shortfalls in quality outcomes to others** to enable appropriate action to be initiated

### 3. Contribute to continuous improvement process

1. **Participate in the ongoing review of project outcomes** to determine the effectiveness of quality management activities
2. **Report quality management issues and responses to others for application in future projects**

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- **literacy skills** to work with quality documents and project records, and to produce records for quality control and auditing purposes
- **organisational skills and attention to detail** to monitor compliance with agreed standards
- **teamwork and communication skills** to communicate quality issues.

**Required knowledge**

- **quality auditing processes and requirements**
- **quality standards and their place in the project life cycle.**
# Evidence Guide

## EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Overview of assessment

### Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- application of quality management and continuous improvement techniques in relation to multiple complex projects
- knowledge of quality auditing processes and requirements.

### Context of and specific resources for assessment

Assessment must ensure:

- access to examples of project management documentation used for quality control purposes
- access to project team records.

### Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following assessment methods are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project quality and their application to different situations
- analysis of responses to case studies and scenarios which present issues and problems in project quality management
- review of records documented and maintained
- evaluation of documented results of project activities and product performance
- evaluation of reports developed about shortfalls in quality outcomes.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Certificate IV in Project Management.
## Range Statement

**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Information may include:
- designated standard operating procedures and regulations
- organisation and project standards
- organisational quality management policy and guidelines as applied to specific requirements of a project
- project quality guidelines and instructions

### Delegated authority means:
- carried out under limited guidance and supervision
- subject to frequent change in a multi-disciplinary environment
- within agreed authorisation and limits
- within established organisational framework, procedures and routines

### Quality assurance may include:
- project finalisation process to capture lessons learned and to enable continuous improvement
- systematic review of the project management process to ensure compliance with organisational policy and guidelines

### Quality control may include:
- inspections and audits in compliance with guidelines
- monitoring conformance with the specification
- recommending ways to eliminate causes of unsatisfactory performance of products or processes
- regular inspection by the individual or the monitoring of inspections by internal or external agents
- reporting of variances

### Others may include:
- higher project authority
- project manager
- project specialists or other personnel
- team members

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Delegated authority means: | • subject to frequent change in a multi-disciplinary environment  
| | • under limited guidance and supervision  
| | • within agreed authorisation and limits  
| | • within established organisational framework, procedures and routines |
| Risk analysis methods, techniques and tools may include: | • using personal experience and/or subject matter experts  
| | • assisting in qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development  
| | • using specialist risk analysis tool/s to assist in the decision making process |
| Others may include: | • higher project authorities  
| | • project manager  
| | • project specialists or personnel  
| | • team members |
| Opportunities may include: | • better means of achieving a result  
| | • changes in the project or broader environment that offer scope for rescheduling activities to better effect  
| | • efficiencies or methods to work more effectively, such as ways of shortening an activity  
| | • initial project activities that reveal entirely different sets of priorities for example, product development, research and policy development  
| | • responses to changing commercial/competitive conditions |
| Reviews may include evaluations of: | • agreed major milestones, for example phases and sub-contracts  
| | • change of key personnel  
| | • delivery of major deliverables |

BSBPMG504A Manage project costs

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to identify, analyse and refine project costs to produce a budget, and to use this budget as the principal mechanism to control project cost. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant. In the context of this unit a complex project is defined as a project which involves: the need for a comprehensive and multi-faceted project plan; the need for a formal internal or external communications strategy; a dedicated and diverse project budget; multiple administrative components; multiple operational components; a wide range of stakeholders; a project operations team. The functions performed by a program manager to manage costs within multiple projects are addressed in BSBPMG604A Direct cost management of a project program. |
**Licensing/Regulatory Information**

</tr>
</thead>
</table>
| 2. Monitor and control project costs | 2.1. Implement agreed financial management processes and procedures to monitor actual expenditure and to control costs  
2.2. Select and use cost analysis methods and tools to identify cost variations, evaluate options and recommend actions to a higher project authority  
2.3. Implement, monitor and modify agreed actions to maintain financial and overall project objectives throughout the project lifecycle |
| 3. Conduct financial completion activities | 3.1. Conduct appropriate activities to signify financial completion  
3.2. Review project outcomes using available records and information to determine the effectiveness of cost management processes and procedures  
3.3. Review cost management issues and identify improvements |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- numeracy and budgeting skills to monitor expenditure and manage costs  
- technology skills to use software for recording expenditure and reporting on finances  
- analytical skills to evaluate processes and recommend improvements.

**Required knowledge**

- budgeting processes, tools and techniques  
- methods and tools for costing and cost analysis.

**Evidence Guide**

**EVIDENCE GUIDE**
### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

</tbody>
</table>
### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Others may include: | relevant project authority  
|                     | program manager  
|                     | project specialists or other personnel  
|                     | team members |

| Project costs are estimated to a level of accuracy available considering: | availability of information at the time  
|                                                                     | contingencies to allow for identified risks and uncertainty  
|                                                                     | organisational requirements, for example overhead and profit margin  
|                                                                     | stage of the project life cycle |

| Delegated authority means that activities will: | be conducted routinely or as changing circumstances dictate  
|                                                | be done independently within broad guidance or by taking the lead of a team  
|                                                | involve consultation with other project members, teams and internal stakeholders  
|                                                | involve the selection, use and supervision of appropriate time management methods, tools and techniques  
|                                                | take into account internal organisational change and external environmental change |

| Financial management processes and procedures may include: | approval processes  
|                                                           | communication and reporting processes  
|                                                           | financial authorisations/delegations  
|                                                           | invoice procedures |

| Reviewing may include evaluations of: | agreed major milestones, for example phases and sub-contracts  
|                                      | change of key personnel  
|                                      | delivery of major deliverables  
|                                      | finalisation of project and other agreed milestones |

| Records may include: | budgets, commitment and expenditure  
|                     | cost management lessons learned |

BSBPMG505A Manage project quality

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to manage quality within projects. It covers determining quality requirements, implementing quality assurance processes, and using review and evaluation to make quality improvements in current and future projects. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to an individual who is clearly and solely responsible for the management and leadership of a complex project, either as an employee of an organisation or an external consultant. In the context of this unit a complex project is defined as a project which involves:
- the need for a comprehensive and multi faceted project plan
- the need for a formal internal or external communications strategy
- a dedicated and diverse project budget
- multiple administrative components
- multiple operational components
- a wide range of stakeholders
- a project operations team. The functions performed by a program manager to manage quality within multiple projects are addressed in BSBPMG605A Direct quality management of a project program. |

</tr>
</tbody>
</table>
### ELEMENT | PERFORMANCE CRITERIA
--- | ---
| | achievement of quality and overall project objectives

1.4. Include agreed quality requirements in the project plan and implement as basis for performance measurement

2. Implement quality assurance processes

2.1. Measure and document results of project activities and product performance throughout the project life cycle to determine compliance with agreed quality standards

2.2. Identify causes of unsatisfactory results, in consultation with client, and recommend appropriate actions to a higher project authority to enable continuous improvement in quality outcomes

2.3. Conduct inspections of quality processes and quality control results to determine compliance of quality standards to overall quality objectives

2.4. Maintain a quality management system to enable effective recording and communication of quality issues and outcomes to a higher project authority and stakeholders

3. Implement project quality improvements

3.1. Review processes and implement agreed changes continually throughout the project life cycle to ensure continuous quality improvement

3.2. Review project outcomes against performance criteria to determine the effectiveness of quality management processes and procedures

3.3. Identify and document lessons learned and recommended improvements, and pass on to higher project authority for application in future projects

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

### Required skills

- literacy skills to develop quality objectives and criteria
- communication and leadership skills to motivate staff, convey expectations and ensure outcomes are met
- analytical skills to monitor achievement of project outcomes against quality criteria
**REQUIRED SKILLS AND KNOWLEDGE**

- coaching and mentoring skills to boost performance.

**Required knowledge**

- quality management theory, techniques, tools and methodologies
- roles and responsibilities in project management
- methods for managing and improving performance
- relevant legislation codes and national standards:
  - award and enterprise agreements and industrial instruments
  - industry codes of practice
  - legislation from all levels of government that affects business operation, especially in regard to occupational health and safety and environmental issues, equal opportunity, industrial relations and anti-discrimination.

Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Diploma of Project Management.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Quality objectives may include:

- negotiated trade-offs between cost, schedule and performance
- requirements from a higher project authority
- requirements from the client and other stakeholders
- those quality aspects which may impact on customer satisfaction

Quality management plan may include:

- authorisations and responsibilities for quality control
- continuous improvement
- established processes
- quality assurance
### RANGE STATEMENT

| Quality management methods, techniques and tools may include: | • benchmarking  
• brainstorming  
• charting processes  
• control charts  
• defining control  
• flowcharts  
• group work activities  
• histograms  
• pareto charts  
• processes that limit and/or indicate variation  
• ranking candidates  
• run charts  
• scattergrams  
• undertaking benefit/cost analysis |
| --- | --- |
| Quality control may include: | • monitoring conformance with specifications  
• monitoring of regular inspections by internal or external agents  
• recommending ways to eliminate causes of unsatisfactory performance of products or processes |
| Improvements may include: | • formal practices, such as total quality management or continuous improvement  
• improvement by less formal processes that enhance both the product quality and processes of the project, for example client surveys to determine client satisfaction with project team performance |

2.2. Implement, modify, monitor and control designated information validation processes to optimise quality and accuracy of data.  
2.3. Implement and maintain agreed communication networks between project staff, client and other stakeholders to ensure effective communications at appropriate levels throughout the project life cycle.  
2.4. Identify communication and information management system problems and report them to a higher project authority. |
| 3. Assess communications management outcomes | 3.1. Conduct finalisation activities to ensure agreed ownership of, and responsibility for, information collected.  
3.2. Review project outcomes to determine the effectiveness of management information and communications processes and procedures.  
3.3. Identify and document lessons learned and recommended improvements, and pass on to higher project authority for application in future projects. |

**Required Skills and Knowledge**

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- literacy skills to write reports and communicate key issues
- technology skills to facilitate effective communication
- organisational skills to manage information
- analytical skills to review project outcomes.

### Required knowledge
REQUERED SKILLS AND KNOWLEDGE

- project life cycle and the place of communications within it
- project management information systems and their various applications.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- development and implementation of a range of project communications that facilitate effective outcomes for multiple complex projects
- knowledge of the place of communications within the project life cycle.

Context of and specific resources for assessment

Assessment must ensure:

- access to project communication documentation
- consideration of feedback from project team members and other stakeholders as to how effectively communication was managed.

Method of assessment

A range of assessment methods should be used to assess practical skill and knowledge. The following examples are appropriate for this unit:

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- oral or written questioning to assess knowledge of strategies for managing project communications and their application to different situations
- analysis of responses in addressing case studies and scenarios which present project communication management issues and problems
- observation of performance in role plays which demonstrate communication skills
- evaluation of communications management plan
- review of identification and reporting of
EVIDENCE GUIDE

• other units from the Diploma of Project Management. |

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Delegated authority** means that activities may:

• be conducted routinely or as changing circumstances dictate
• be done independently within broad guidance or by taking the lead of a team
• involve consultation with other project members, teams and internal stakeholders
• involve the selection, use and supervision of appropriate communications management methods and tools
• take into account internal organisational change and external environmental change

**Project management information system** is a means for communicating knowledge about the project and provides a systematic approach to the storing, searching and retrieval of information relevant to the project and may include:

• complex computer-based systems
• modified systems to cater for unique project requirements
• simple manual systems

**Communication networks** may include:

• client organisation and end users
• formal networks
• informal networks
• organisation’s communication networks

## RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Risks may be:
- actual
- likely/probable
- perceived
- potential

### Risk management techniques and tools may include:
- calling upon personal experience and/or subject matter experts
- conducting or supervising qualitative and/or quantitative risk analysis, such as schedule simulation, decision analysis, contingency planning and alternative strategy development
- using specialist risk analysis tools to assist in the decision making process

### Delegated authority refers to planning and activities that may:
- be conducted routinely or as changing circumstances dictate
- be done independently within broad guidance or by taking the lead of a team
- involve consultation with other project members, teams and internal stakeholders
- involve the selection, use and supervision of appropriate risk management methods, tools and techniques

### Risk management processes and procedures may include:
- communication with stakeholders, dispute resolution and modification procedures
- implementation of risk control trigger mechanisms
- measurement of actual progress against planned milestones
- recording and reporting of major variance
- setting key milestones at significant points during the project and at completion

### Recommended responses to variations may be made:
- in consultation with project team members, section heads, project manager and stakeholders
- independently or with higher project authority

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication, reporting, record keeping and consultation skills to operate the business
- literacy skills to interpret legal requirements, to develop policies and procedures and to analyse compliance information
- research skills to investigate legal structures, and taxation and insurance requirements
- time management skills to prioritise tasks and to meet key dates.

**Required knowledge**

- business registration and licensing requirements
- commonwealth, state/territory and local government legislative requirements relating to business operation, especially in regard to OHS and environmental issues, equal employment opportunity, industrial relations, anti-discrimination, taxation
- creation and termination of relevant legal contracts
- cultural differences and legal implications
### REQUIRED SKILLS AND KNOWLEDGE

- duty of care imposed by Law of Torts
- legal rights and obligations of alternative ownership structures
- record keeping to meet minimum legal and taxation requirements
- relevant consumer legislation
- relevant industry codes of practice
- relevant insurance requirements and products.

BSBWOR402A Promote team effectiveness

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to promote teamwork. It involves developing team plans to meet expected outcomes, leading the work team, and proactively working with the management of the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | Frontline managers have an important leadership role in the development of efficient and effective work teams. They play a prominent part in team planning, supervising the performance of the team and developing team cohesion. They provide leadership for the team and bridge the gap between the management of the organisation and the team members. As such they must 'manage up' as well as manage their team/s. |

Licensing/Regulatory Information
Not applicable.

</thead>
</table>
| 3. Participate in and facilitate work team | 3.1. Actively encourage team members to participate in and take responsibility for team activities and communication processes  
3.2. Give the team support to identify and resolve problems which impede its performance  
3.3. Ensure own contribution to work team serves as a role model for others and enhances the organisation's image within the work team, the organisation and with clients/customers |
| 4. Liaise with management | 4.1. Maintain open communication with line manager/management at all times  
4.2. Communicate information from line manager/management to the team  
4.3. Communicate unresolved issues, concerns and problems raised by the team/team members to line manager/management and ensure follow-up action is taken  
4.4. Communicate unresolved issues, concerns and problems related to the team/team members raised by line managers/management to the team and ensure follow-up to action is taken |

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- communication skills to:
  - boost team morale  
  - deal with team conflict  
  - deliver messages from management  
  - facilitate discussion  
  - mentor and coach  
- leadership skills  
- planning and organising skills.

**Required knowledge**
REQUIRED SKILLS AND KNOWLEDGE

- organisational goals, objectives and plans
- organisational policy and procedures framework
- organisational structure, including organisational chart
- principles and techniques associated with:
  - delegation and work allocation
  - goal setting
  - group dynamics and processes
  - individual behaviour and difference
  - leadership
  - motivation
  - negotiation
  - planning.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Evidence of the following is essential:

- teamwork plan with details of how it was generated and how it will be monitored so that team goals can be met
- techniques in communicating information, dealing with team conflict and resolving issues
- knowledge of organisational goals, objectives and plans.

Context of and specific resources for assessment

Assessment must ensure:

- access to appropriate documentation and resources normally used in the workplace.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- analysis of responses to case studies and scenarios
## EVIDENCE GUIDE

- direct questioning combined with review of portfolios of evidence and third party workplace reports of on-the-job performance by the candidate
- observation of demonstrated techniques in working with team dynamics
- observation of performance in role plays
- oral or written questioning to assess knowledge of principles and techniques associated with group dynamics and processes
- evaluation of opportunities provided for input of team members into planning, decision making and operational aspects of work team
- review of feedback provided to team members
- review of teamwork plan.

### Guidance information for assessment

Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, for example:

- other units from the Certificate IV in Frontline Management.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Team purpose, roles, responsibilities, goals, plans and objectives may include:**

- action plans, business plans and operational plans linked to strategic plans
- expected outcomes and outputs
- goals for individuals and the work team
- individual and team performance plans and key performance indicators
- occupational health and safety (OHS) responsibilities

**Consultation may include:**

- attending meetings, interviews, brainstorming sessions
RANGE STATEMENT

- using email/intranet communications, newsletters or other processes and devices which ensure that all employees have the opportunity to contribute to team and individual effectiveness
- using mechanisms to provide feedback to the work team in relation to consultation outcomes

**Responsibility for own work** may involve:
- individual and joint actions
- individuals and teams

**Feedback** may refer to:
- formal/informal gatherings between team members where there is communication on work related matters
- informal communication of ideas and thoughts on specific tasks, outcomes, decisions, issues or behaviours

**Relevant persons** may include:
- colleagues
- direct superior or other management representatives
- OHS committees and other people with specialist responsibilities

**Communication** may include:
- face-to-face
- formal/informal interaction
- verbal, written or electronic communication

**Line manager/management** may refer to:
- direct superior or other management representatives

Modification History
Not applicable.

Unit Descriptor

| Unit descriptor | This unit describes the performance outcomes, skills and knowledge required to facilitate all aspects of teamwork within the organisation. It involves taking a leadership role in the development of team plans, leading and facilitating teamwork and actively engaging with the management of the organisation. No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement. |

Application of the Unit

| Application of the unit | This unit applies to managers and addresses the need for managers to facilitate work teams and to build a positive culture within work teams. The unit takes a systematic and planned approach to developing teams. It includes the soft skills as well as more structured approaches to the management of teams. At this level, work will normally be carried out within complex and diverse methods and procedures which require the exercise of considerable discretion and judgement, using a range of problem solving and decision making strategies. |

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency. The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. *Communicate effectively* with clients and staff | 1.1 Identify and use appropriate communication strategies to:  
- establish rapport  
- exchange information  
- facilitate resolution of issues  
- defuse potentially difficult situations  
1.2 Conduct *interviews* according to *established procedures*  
1.3 Give feedback and advice in a way which reflects current identified good practice  
1.4 Demonstrate respect for individual, cultural and social differences, needs and rights in communicating with clients and colleagues  
1.5 If communication break down occurs, respond appropriately and refer to other staff or specialist services if required to ensure duty of care responsibilities are met  
1.6 Respond to enquiries in a manner that promotes achievement of mutual outcomes  
1.7 Respect and consider differences in views in a way that values and encourages the contributions of others  
1.8 Ensure communication represents the organisation effectively where appropriate |
| 2. Contribute to the implementation of effective | 2.1 Implement strategies to check on the effectiveness of communication with clients and colleagues |
## ELEMENT

<table>
<thead>
<tr>
<th>Communication strategies</th>
</tr>
</thead>
</table>

<table>
<thead>
<tr>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>2.2 Facilitate access to interpretive and translation services as required</td>
</tr>
<tr>
<td>2.3 Regularly review established channels of communication to ensure clients and co-workers are informed of relevant information in a timely way</td>
</tr>
<tr>
<td>2.4 Provide coaching in effective communication to colleagues and clients as required</td>
</tr>
<tr>
<td>2.5 Maintain relevant work-related networks and relationships as required to ensure client needs and organisation objectives are met</td>
</tr>
</tbody>
</table>

3. Use specific communication techniques to maintain constructive interaction

| 3.1 Put in place strategies to develop a trusting relationship that will enable negotiation of communication barriers |
| 3.2 Use communication skills and processes to identify and address barriers to communication and facilitate identification of individual issues |
| 3.3 Use effective skills in listening and providing feedback to ensure stories are heard and to support exploration and validation of issues raised |
| 3.4 Seek agreement on processes to be followed to address issues within scope of own abilities, skills and work role |
| 3.5 Make referral for conflict resolution and mediation as appropriate |

4. Facilitate discussions

| 4.1 Provide *opportunities* to fully explore all relevant issues |
| 4.2 Routinely use strategies that encourage all group members to participate equally, including seeking and acknowledging contributions from all members |
| 4.3 Routinely contribute to and follow objectives and agendas for meetings and discussions |
| 4.4 Provide relevant information to groups as appropriate to facilitate outcomes |
| 4.5 Evaluate group communication strategies to promote ongoing participation of all parties |
| 4.6 Implement strategies to ensure the specific |
ELEMENT

PERFORMANCE CRITERIA

communication needs of individuals within the group are identified and addressed

5. Identify communication strategies to build relationships with clients who are involuntary or present communication challenges

5.1 Identify and address specific communication barriers such as:

- closed or unreceptive attitudes
- mistrust or misunderstanding of people, organisations, systems and/or processes
- emotional states, such as fear, anger and frustration

5.2 Identify areas of mistrust or conflict that may require resolution

5.3 Identify the need to include additional parties

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

**Essential knowledge:**

It is critical that the candidate demonstrate knowledge of:

- Effective communication strategies and techniques to address barriers and build and maintain relationships
- Recognition of communication styles of individuals
- Basic group dynamics and facilitation of group discussion

The candidate must also be able to demonstrate relevant knowledge required to effectively perform task skills; task management skills; contingency management skills and job/role environment skills as outlined in elements and performance criteria, such as knowledge of:

- Cross cultural communication protocols
REQUIRED SKILLS AND KNOWLEDGE

- Non-verbal communication strategies
- Communication techniques to maintain constructive interactions
- Barriers to communication

*Essential skills:*

It is critical that the candidate demonstrate the ability to:

- Provide evidence that all communication with clients and colleagues is appropriate to individual needs and the situation and promotes achievement of organisation objectives
- Use strategies to meet particular communication needs/difficulties
- Address individual issues in a timely way and in a manner which maintains the integrity of the individual
- Know when to provide referrals to conflict resolution and mediation

In addition, the candidate must be able to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role.

These include the ability to:

- Apply a full range of communication techniques including:
  - reflective and active listening, respectful responding, empathy, feedback and rapport
  - addressing communication barriers through application of a range of strategies
  - recognition of non-verbal triggers
  - clarification of boundaries of work role
- Apply oral communication skills required to fulfil job roles as specified by the organisation/service:
  - skills in asking questions, providing clear information, listening to and understanding workplace instructions, and clarifying workplace instructions when necessary
  - service/organisation may require competence in English or community language, depending on client group

Evidence Guide

**EVIDENCE GUIDE**

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the
EVIDENCE GUIDE
Assessment Guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate this unit of competency:

- The individual being assessed must provide evidence of specified essential knowledge as well as skills
- This unit will be most appropriately assessed in a work context or in simulated work environment and under the normal range of work conditions
- Assessment is recommended to be on more than one occasion and must include the range of clients who access the service

Access and equity considerations:

- All workers in community services should be aware of access, equity and human rights issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on Aboriginal and/or Torres Strait Islander clients and communities

Context of and specific resources for assessment:

- This unit can be assessed independently, however holistic assessment practice with other community services units of competency is encouraged
- Resources required for assessment include access to relevant workplace or simulated realistic workplace setting where assessment may take place

Method of assessment:

- Assessment may include observation, questioning and evidence gathered from the workplace and/or simulated work environment, including written work
Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Communicate effectively includes:

- Effective use of questioning, speaking, and listening and non-verbal communication techniques
- Identifying and evaluating what is occurring within an interaction in a non-judgemental way
- Making decisions about appropriate words, behaviour, posture
- Using clarifying, summarising questions
- Putting together a response that is culturally appropriate
- Expressing an individual perspective
- Expressing own philosophy, ideology and background and exploring the impact of this on the communication
- Exploring and unpacking problems
- Using active and reflective listening appropriately
- Providing sufficient time to enable stories to be told
- Providing summarising and reflective responses in conflict situations
- Confirming that required information is accessed or message communicated

Non-verbal communication includes:

- Gestures
- Posture
- Facial expression

Interviews may include:

- Discussion of staffing issues
- Routine information collection
- Maintaining confidentiality
- Evidential-based
- Non disclosure
RANGE STATEMENT

- Disclosure

Established procedures may refer to:
- Commonwealth and State legislation
- International conventions relating to the rights of individuals
- Organisation policy and procedures
- Relevant program standards
- Duty of care and ethical practice

Presentation of information includes:
- Clarity
- Appropriate sequencing
- Delivery within an appropriate time
- Utilising media to enhance presentation, if appropriate
- Addressing audience needs

Opportunities will include:
- Allowing sufficient time to hear individual stories
- Encouraging a full exploration of issues
- Encouraging validation of individual issues

Additional parties may include:
- Trusted friends
- Case workers
- Family members
- Nominated adults

<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 **Establish performance needs of assets.** | 1.1 *Asset* performance needs are established in consultation with *relevant people* according to *organisational requirements*.  
1.2 *Risk* assessment is conducted on asset management outcomes according to organisational and *legislative requirements*.  
1.3 *Industry benchmarks* are analysed to determine expected *asset performance* in varying conditions according to organisational requirements.  
1.4 Applicable legislation is interpreted in order to establish user, contractual and legislative requirements for asset performance.  
1.5 Specifications, conditions and manufacturer requirements for asset maintenance and operation are identified for incorporation into plan. |
| 2 **Prepare asset management plan.** | 2.1 Asset management plan is prepared that facilitates achievement of identified aims and objectives.  
2.2 Operational and maintenance *schedule* detailing a range of activities and time lines is incorporated into asset management plan.  
2.3 Asset management plan is presented to *client* for review according to organisational requirements. |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
2.4 Quality assurance goals and strategies related to implementation of the plan are communicated using established *communication channels*.
2.5 Monitoring and reporting arrangements for asset management plan are established and documented in line with client requirements.
2.6 Financial, physical and human resource requirements are identified and arranged according to asset management plan and organisational requirements.
2.7 Roles and responsibilities for establishing and maintaining *asset register* are identified and documented according to client and legislative requirements.

3 Review and evaluate asset management plan.

3.1 *Maintenance strategies* and plans are reviewed and evaluated in consultation with client and relevant people using appropriate *communication techniques*.
3.2 Systematic review processes and established *evaluation methods* are identified and used to assess planning processes and outcomes.
3.3 Evaluation results are prepared in required format, style and structure and presented to relevant people within agreed timeframes.
3.4 Recommendations for improvement of plan are presented to relevant people according to organisational procedures.
3.5 *Business equipment and technology* are used to securely maintain documentation according to legislative and organisational procedures.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the essential skills and knowledge and their level, required for this unit.

**Required skills:**
- analytical skills to interpret documentation, analyse risk, estimate costings and budget needs, and review and evaluate plan
- communication skills to negotiate and consult with relevant people
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
REQUIRED SKILLS AND KNOWLEDGE

- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- literacy skills to interpret written and oral information
- organisational skills to schedule and meet time lines and client requirements, organise resource and support processes, and plan and document strategies to manage assets
- technical skills to develop schedules and document plans.

Required knowledge and understanding:

- building codes and relevant Australian standards
- building control legislation
- building practices in relevant property types
- building services and operation methods and practices
- customer needs and preferences for different property types
- industry performance benchmarks
- limitations of work role, responsibility and professional abilities
- maintenance procedures, including vendor specifications
- monitoring and evaluation systems
- OHS issues and requirements
- organisational and professional procedures, ethical practices and business standards
- relevant federal and state or territory legislation and local government regulations related to:
  - anti-discrimination
  - consumer protection
  - environmental issues
  - equal employment opportunity (EEO)
  - financial probity
  - franchise and business structures
  - industrial relations
  - OHS
  - privacy
  - property sales, leasing and management
  - standards for building equipment operation.

Evidence Guide

EVIDENCE GUIDE
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of planning for the management of assets. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate’s underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- determining asset performance needs using industry benchmarks and consideration of risk
- documenting resource and support arrangements, incorporating expected costs, and processes for development and maintenance of an asset register and operational and maintenance schedules
- evaluating the asset management plan through consultation with interested parties
- knowledge of organisation's practices, ethical standards and legislative requirements associated with planning for the management of assets
- preparing a detailed asset management plan which incorporates strategies for risk management, resource needs, monitoring and reporting arrangements and quality assurance.

Context of and specific resources for assessment

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.
Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person’s competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Assets** may be static or dynamic and include:
- buildings
- business and marketing contracts
- equipment
- furniture
- goodwill
- land
- property
- vehicles.

**Relevant people** may include:
- agents
- clients
- designated OHS representatives
- emergency personnel
- engineers and technicians
- government personnel
- installers
- legal representatives
- management and colleagues
- members of industry associations
- property owners
- site personnel
- subcontractors
- technical experts
- tenants.

**Organisational requirements** may be outlined and reflected in:
- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals.

**Risk** may relate to:
- industry special risks
- loss of profits
- machinery malfunction
Legislative requirements may be outlined and reflected in:

- OHS
- public liability
- trade practices issues.

- Australian standards, and quality assurance and certification requirements
- award and enterprise agreements
- codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- environmental and zoning laws affecting access security, access and property use
- general duty of care to clients
- home building requirements
- local regulations and by-laws
- privacy laws applying to owners, contractors and tenants
- relevant federal, and state or territory legislation that affects organisational operation, including:
  - anti-discrimination and diversity
  - environmental issues
  - EEO
  - industrial relations
  - OHS
  - strata, community and company titles
  - tenancy agreements
  - trade practices laws and guidelines.

Industry benchmarks may include:

- discounted cash flow
- employment rates
- industry association performance index
- inflation rate
- internal rate of return
- life cycle costing
- published vacancy factors
- tenancy mix.

Asset performance criteria may include:

- age
- condition assessment
- cost
- depreciation
- down time
- emergency operation and backup
- functionality
- life span
- maintenance requirements and cost
- replacement
- security
- service levels.

**Schedules** may be:
- charts
- computerised
- paper-based
- prepared for daily, weekly, monthly or annual timeframes
- to-do lists
- wall-mounted planning boards
- work diary.

**Clients** may include:
- building supervisors
- company management
- fund managers
- fund providers
- government and legal instruments or agencies
- institutions
- insurers
- internal and external property groups
- legal advisers
- private investors
- property agents
- property owners
- risk assessors.

**Communication channels** may include:
- direct line supervision paths
- lateral supervision paths
- organisational communication protocols and procedures
- organisational networks.

**Asset register** may include:
- air conditioning
- cleaning
- heating
- security systems
- telecommunications systems
- utilities
- ventilation
- vertical services
- waste management.

**Maintenance strategies** may relate to:
- cleaning
- electrical
- emergency lighting
- evacuation
- fire lighting
- garden
- housekeeping
- painting
- pests
- plumbing
- sanitary disposal
- security
- vertical movement
- waste disposal
- weather proofing.

**Communication techniques** may include:
- active listening
- clear presentation of options
- consultation methods
- culturally inclusive and sensitive engagement techniques
- questioning to clarify and confirm understanding
- seeking feedback
- two-way interaction
- using language and concepts appropriate to cultural differences
- verbal or non-verbal language.

**Evaluation methods** could be qualitative or quantitative and may include:
- checklists
- cost data analysis
- expert and peer review
- interviews
- observation
- questionnaires
- review of quality assurance data.

**Business equipment and technology** may include:
- data storage devices
- email
- facsimile machines
- internet, extranet and intranet
- photocopiers
- printers
- scanners
- software applications, such as databases and word applications
- work computers.

Employability Skills Information

Employability skills

The required outcomes described in this unit of competency contain applicable facets of employability skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged, will assist in identifying employability skills requirements.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Elements and Performance Criteria

ELEMENT | PERFORMANCE CRITERIA
--- | ---
1 Establish study requirements. | 1.1 Aims and objectives of *investment* feasibility study are clearly established according to *client* and *organisational requirements*.
 | 1.2 Study objectives and time lines are negotiated and agreed in consultation with *relevant people*.
 | 1.3 *Relevant documentation* and *legislative requirements* are gathered and reviewed to identify critical requirements of the study.
 | 1.4 Initial comparisons with similar properties are made to allow effective comparison with *client expectations* according to organisational requirements.
 | 1.5 Situations requiring *specialist advice* are identified and support is sought as required according to organisational requirements.

2 Access relevant information. | 2.1 Relevant *information* is gathered and organised in a format suitable for *analysis* and interpretation.
 | 2.2 Market information is accessed and evaluated in terms of validity, reliability and relevance according to identified analysis requirements.
 | 2.3 Relevant people are consulted to gather additional information using appropriate *communication techniques*. 

---
ELEMENT PERFORMANCE CRITERIA

2.4 Environment is scanned to identify and assess factors that may impact on study according to organisational requirements.

2.5 Reliable methods for gathering information are used according to organisational requirements, making efficient use of time and resources.

3 Analyse information.

3.1 Quantitative and qualitative analysis is undertaken of comparative market data using standard financial analysis techniques.

3.2 Economic trends and market developments are identified and evaluated in terms of potential implications and impact on study objectives.

3.3 Factors increasing or diminishing investment risk are identified, analysed and discussed with client.

3.4 Sound reasoning is applied to ensure consistency of interpretations based on available information.

4 Formulate investment scenarios.

4.1 Alternative investment scenarios are developed to meet study requirements according to organisational requirements.

4.2 Consultative processes are used to obtain views of industry experts as required.

4.3 Scenarios are verified against prescribed criteria and analysed to minimise subjective assessment.

4.4 Sensitivity analysis is performed on data to identify degree of convergence within identified industry and market benchmarks.

4.5 Property trends and market conditions are identified and evaluated against study requirements.

5 Document feasibility study.

5.1 Feasibility study is presented in appropriate format, style and structure using suitable business equipment and technology.

5.2 Report is prepared and distributed to relevant people within agreed timeframes according to organisational requirements.

5.3 Conclusions are documented that are verifiable, current and sufficiently detailed to meet identified client and organisational requirements.

5.4 Information is securely maintained with due regard to client confidentiality, and legislative and organisational requirements.
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

Required skills:
- communication skills to negotiate client requirements and consult with industry experts and other relevant people
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to relate to people from a range of social, cultural and ethnic backgrounds and varying physical and mental abilities
- literacy skills to interpret written and oral information
- organisational skills to plan and schedule time lines and objectives and to manage project processes
- problem solving skills to determine factors that may affect property markets and evaluate risk
- research skills to source, analyse and interpret property and market information
- technical skills to use software for planning and scheduling tasks, use financial and assessment software and spreadsheets, and access market information.

Required knowledge and understanding:
- alternative property uses
- building control legislation, codes and relevant Australian standards
- business and industry property networks
- current property and investment market
- investment risk factors and relationship to return expectations
- limitations of work role, responsibility and professional abilities
- OHS issues and requirements
- organisational and professional procedures, ethical practices and business standards
- project assessment methods
- relevant federal and state or territory legislation and local government regulations related to:
  - anti-discrimination
  - consumer protection
  - environmental issues
  - equal employment opportunity (EEO)
  - financial probity
  - franchise and business structures
  - industrial relations
  - OHS
REQUIRED SKILLS AND KNOWLEDGE

- privacy
- property sales, leasing and management
- sources of industry and market information
- types of property markets
- value management.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of conducting an assessment of investment feasibility. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- analysing market information to identify economic trends, market developments and risk factors
- documenting and presenting investment feasibility study using appropriate business equipment and technology
- formulating investment scenarios against industry benchmarks
- knowledge of organisation's practices, ethical standards and legislative requirements associated with conducting an assessment of investment feasibility
- sourcing documentation and information through consultation to establish study aims and objectives,
and make initial comparisons of similar properties
- sourcing market and environmental information to identify factors affecting study.

**Context of and specific resources for assessment**

Resource implications for assessment include:
- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment
- workplace documentation.

Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:
- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be
undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Investment** may relate to:
- concepts and plans
- strategies and placement of capital in property for investment
- productive use of property and assets
- customer service outcomes.

**Clients** may include:
- financial institutions
- fund managers
- individuals
- internal and external property groups
- investment organisations.

**Organisational requirements** may be outlined and reflected in:
- access and equity principles and practice guidelines
- business and performance plans
- complaint and dispute resolution procedures
- goals, objectives, plans, systems and processes
- legal and ethical requirements and codes of practice
- mission statements and strategic plans
- OHS policies, procedures and programs
- policies and procedures in relation to client service
- quality and continuous improvement processes and standards
- quality assurance and procedure manuals.

**Relevant people** may include:
- accountants
- agents
- clients
Relevant documentation may relate to:

- government personnel
- interested parties
- legal representatives
- management and colleagues
- members of industry associations
- taxation specialists.
- building codes
- current and planned property or site developments
- deposited, survey and other plans and maps
- depreciation schedules
- land title and zoning
- leasing rates
- legal status
- management policy and procedures
- marketing services
- performance of comparable properties
- permits
- rates notices
- sales information
- taxation papers
- tenancy and other contracts or leases.

Legislative requirements may be outlined and reflected in:

- Australian standards
- general duty of care to clients
- home building requirements
- privacy requirements
- relevant federal, and state or territory legislation that affects organisational operation, including:
  - anti-discrimination and diversity
  - environmental issues
  - EEO
  - industrial relations
  - OHS
- relevant industry codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
- strata, community and company titles
- tenancy agreements
- trade practices laws and guidelines.

Client expectations may relate to:

- immediate capital gains
- long-term capital gains.
Specialist advice may be sought from:
- architects
- bankers and financiers
- developers
- investment consultants
- land economists
- members of industry associations
- planners
- real estate agents
- solicitors
- taxation and accounting practitioners
- valuers.

Information sources may include:
- consultants
- industry and organisational databases
- information services
- press clippings
- published industry data, including industry indices
- third parties
- trade journals.

Analysis may include:
- computer modeling
- examination of cash flows and other financial projections
- examination of collected data
- quantitative and qualitative analysis
- probability analysis
- time series recognition.

Communication techniques may include:
- active listening
- clear presentation of options
- consultation methods
- culturally inclusive and sensitive engagement techniques
- questioning to clarify and confirm understanding
- seeking feedback
- two-way interaction
- using language and concepts appropriate to cultural differences
- verbal or non-verbal language.

Comparative market data may include:
- best practice information
- national and international benchmarking
- inter-organisation comparison data.

Factors that may influence complexity of feasibility study:
- constraints on use
- existing land use and ownership
- government zoning and restrictions.
may include:

- project financing
- staging of investment or development
- structure of leases
- type and number of tenants.

**Risk** may relate to:

- asset allocation and investment spread
- borrowing risk
- gearing
- economics
- lifestyle choices
- market and property sector risks, including:
  - fluctuations in economic cycle
  - interest rates
  - stock market
- organisational risk
- risk factors and client return expectations
- volatility of income and capital.

**Consultative processes** may include:

- face-to-face meetings
- telephone, facsimile and written communication.

**Benchmarks** may include:

- building operational costs
- business strategy parameters
- economic parameters
- financial constraints
- historical operational costs
- industry published building occupation data
- market expectations
- research data
- statutory costs.

**Market conditions** may relate to:

- availability of alternatives
- business confidence
- economic conditions
- level of competition.

**Business equipment and technology** may include:

- computers
- data storage devices
- email
- facsimile machines
- internet, extranet and intranet
- photocopiers
- printers
- scanners
- software applications.

1.3 Relevant industry benchmarks are analysed to assess expected performance of assets in varying market conditions.  
1.4 Applicable industry, organisational and legislative requirements are interpreted to establish user, contractual and legal compliance for facilities performance. |
| 2 Prepare plan. | 2.1 Facilities management plan including aims and objectives is prepared in appropriate format for dissemination to relevant people.  
2.2 Quality assurance goals and strategies are established according to facilities management plan.  
2.3 Monitoring and reporting arrangements for facilities management plan are determined in line with client requirements.  
2.4 Life cycle analysis is undertaken and capital investment |
### ELEMENT

<table>
<thead>
<tr>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>strategies are planned.</td>
</tr>
</tbody>
</table>

#### 3 Organise resources and support processes.

- **3.1** Financial, physical and human resource requirements are organised according to facilities management plan.
- **3.2** *Information relating to implementation of facilities management plan* is distributed using established *communication channels*.
- **3.3** Reliable management methods are used, making efficient use of time and resources.
- **3.4** *Roles and responsibilities* associated with implementation of facilities management plan are clearly defined and documented.

#### 4 Review, evaluate and modify facilities management plan.

- **4.1** Facilities management plan is reviewed and evaluated in consultation with relevant people using appropriate *feedback strategies*.
- **4.2** Systematic review processes are established and suitable *evaluation methods* used to evaluate facilities management plan outcomes.
- **4.3** Evaluation results are reviewed and recommendations for modification of plan and corrective actions are incorporated as required into facilities management plan.
- **4.4** Information is securely maintained with due regard to client confidentiality, and legislative and organisational requirements.

---

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the essential skills and knowledge and their level, required for this unit.

**Required skills:**

- analytical skills to interpret documentation, evaluate plan, analyse risk and estimate costings and budget needs
- communication skills to include relevant people in the planning process, discuss issues that may impact on others and receive feedback
- computing skills to access the internet and web pages, prepare and complete online forms, lodge electronic documents and search online databases
- interpersonal skills to obtain feedback that enables a review and evaluation of plan and to relate to people from a range of social, cultural and ethnic backgrounds and
REQUIRED SKILLS AND KNOWLEDGE

- varying physical and mental abilities
- leadership skills to take a leading role in a variety of situations and pursue new challenges and opportunities
- literacy skills to access and interpret relevant information and prepare required documentation and information for those involved in implementation activities
- problem solving skills to identify potential barriers to implementation of the plan and establish contingencies
- research skills to collect reliable and valid information and match forecasting models and techniques with specific asset or facility requirements
- technical skills to design facilities or asset management plan, schedule tasks and report outcomes.

Required knowledge and understanding:

- building services and operation methods and practices
- financial analysis and forecasting principles
- impact analysis and investment scenario planning
- industry benchmarks for maintenance procedures
- industry performance benchmarks, including use and application of value analysis and benchmarking techniques
- long-range and annual facility planning techniques and practices
- organisational and professional procedures, ethical practices and business standards
- organisational quality systems, such as recording systems and strategic planning processes
- principles and practices of performance measurement, including review and evaluation procedures, processes and techniques
- principles and processes of objective setting
- relevant federal and state or territory legislation and local government regulations related to:
  - anti-discrimination
  - consumer protection
  - environmental issues
  - equal employment opportunity (EEO)
  - financial probity
  - franchise and business structures
  - industrial relations
  - OHS
  - privacy
  - property sales, leasing and management.
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the Assessment Guidelines for this Training Package.

Overview of assessment

This unit of competency could be assessed through practical demonstration of developing and implementing a facilities management plan. Targeted written (including alternative formats where necessary) or verbal questioning to assess the candidate's underpinning knowledge would provide additional supporting evidence of competence. The demonstration and questioning would include collecting evidence of the candidate's knowledge and application of ethical standards and relevant federal, and state or territory legislation and regulations. This assessment may be carried out in a simulated or workplace environment.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of:

- conducting a life cycle assessment and planning appropriate investment and disposal strategies for incorporation into facilities management plan
- determining facilities and asset management requirements using industry benchmarks and risk assessment strategies
- evaluating the facilities management plan and making recommendations for immediate action or modification of the plan
- identifying resource requirements, communicating roles and responsibilities and designing an implementation strategy for the plan
- knowledge of organisation's practices, ethical standards and legislative requirements associated with developing and implementing facilities management plans
- preparing a facilities management plan incorporating quality systems and reporting procedures.

Context of and specific resources for assessment

Resource implications for assessment include:

- a registered provider of assessment services
- assessment materials and tools
- candidate special requirements
- competency standards
- cost and time considerations
- suitable assessment venue and equipment
- workplace documentation.
Where applicable, physical resources should include equipment modified for people with disabilities.

Access must be provided to appropriate learning and/or assessment support when required.

Assessment processes and techniques must be culturally appropriate, and appropriate to the language and literacy capacity of the candidate and the work being performed.

Validity and sufficiency of evidence require that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice with a decision of competence only taken at the point when the assessor has complete confidence in the person's competence
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence
- where assessment is for the purpose of recognition (RCC/RPL), the evidence provided will need to be current and show that it represents competency demonstrated over a period of time
- assessment can be through simulated project-based activity and must include evidence relating to each of the elements in this unit.

In all cases activity and must include evidence relating to each of the where practical assessment is used it will be combined with targeted questioning to assess the underpinning knowledge. Questioning will be undertaken in such a manner as is appropriate to the language and literacy levels of the candidate and any cultural issues that may affect responses to the questions, and will reflect the requirements of the competency and the work being performed.

**Range Statement**

**RANGE STATEMENT**
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. **Bold italicised** wording in the performance criteria is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

**Facilities** may include:

- car parking
- child care centres
- community facilities
- educational facilities
- meeting places
- offices
- security facilities
- sport and recreation venues.

**Relevant people** may include:

- agents
- clients
- colleagues
- designated OHS representatives
- emergency personnel
- engineers and technicians
- government personnel
- installers
- legal representatives
- members of industry associations
- property owners
- site personnel
- subcontractors
- supervisors
- technical experts
- tenants
- tradespeople.

**Industry benchmarks** may relate to:

- discounted cash flows
- employment rates
- industry association performance index
- inflation rate
- internal rates of return
- life cycle costings
- published vacancy factors
- tenancy mix.

**Assets** may be static or dynamic and include:

- buildings
- business and marketing contracts
- equipment
- furniture
• goodwill
• land
• property
• vehicles.

**Organisational requirements** may be outlined and reflected in:

• access and equity principles and practice guidelines
• business and performance plans
• complaint and dispute resolution procedures
• emergency and evacuation procedures
• employer and employee rights and responsibilities
• goals, objectives, plans, systems and processes
• legal and ethical requirements and codes of practice
• mission statements and strategic plans
• OHS policies, procedures and programs
• policies and procedures in relation to client service
• policies and procedures relating to own role and responsibility
• quality and continuous improvement processes and standards
• quality assurance and procedure manuals
• records and information systems and processes.

**Legislative requirements** may be outlined and reflected in:

• Australian standards
• codes of practice covering the market sector and industry, financial transactions, taxation, environment, construction, land use, native title, zoning, utilities use (water, gas and electricity), and contract or common law
• consumer protection
• environmental and zoning laws affecting access security, access and property use
• freedom of information relevant federal, and state or territory legislation that affects organisational operation, including:
  • OHS
  • environmental issues
  • EEO
  • industrial relations
  • anti-discrimination and diversity
• home building requirements
• local regulations and by-laws
• privacy laws applying to owners, contractors and tenants
• public health
• quality assurance and certification requirements
• strata, community and company titles
Facilities management plan may include:

- tenancy agreements
- trade practices laws and guidelines
- asset management process and practice recommendations
- building and engineering maintenance plans
- environment plans and guidelines
- funding strategies
- life cycle management plans
- long-term capital and maintenance financial forecasts
- performance benchmarking recommendations and measurement processes
- planning guidelines
- quality standards
- risk management processes and practices
- utilities plans and infrastructure such as energy, water and sewerage.

Quality assurance goals and strategies may relate to:

- a formal structure against which progress can be evaluated
- budgets and timetables that enable the commitment of resources at appropriate points in the project
- compliance with Australian standards
- contingency plans to cater for a change of corporate focus or significant project difficulties
- continuous improvement strategies
- mechanisms for involving a wide variety of interested parties or stakeholders in the project
- procedures for monitoring and evaluating project outcomes and client satisfaction
- reducing risk by anticipating, evaluating and developing strategies for the management of possible problems
- reporting procedures and protocols.

Life cycle analysis may include:

- computer modelling
- examination of cash flows and other financial projections
- quantitative and qualitative analysis
- probability analysis
- time series recognition.

Information relating to implementation of facilities management plan may include:

- a formal structure against which progress can be evaluated
- acquisition and disposal strategies
- budgets and timetables that enable the commitment of resources at appropriate points
- consultation strategies to involve stakeholders.
- contingency plans to cater for changes or significant difficulties
- objectives, scope and expected benefits
- quality assurance procedures
- specifications
- transition plans.

**Communication channels** may include:
- direct line supervision paths
- lateral supervision paths
- organisational communication protocols and procedures
- organisational networks.

**Roles and responsibilities** may be influenced by:
- codes of conduct
- job description and employment arrangements
- organisational policies relevant to work role
- skills, training and competencies
- supervision and accountability requirements, including OHS
- team structures.

**Feedback strategies** may include:
- clients and their legal representatives
- management and colleagues
- documentation and reports
- formal and informal communication
- regular meetings.

**Evaluation methods** could be qualitative or quantitative and may relate to:
- checklists
- cost data analysis
- expert and peer review
- interviews
- observation
- questionnaires
- review of quality assurance data.

**Unit Sector(s)**

**Unit sector**

Property development, sales and management
Competency field

Property operations and development
CPPFES2006A Prepare for installation and servicing operations

Modification History
Revised unit
Element structure and performance criteria expanded to reflect workplace requirements
Skills and knowledge requirements and the range statement updated
Unit based on PRMPFES06C Prepare for installation and servicing operations

Unit Descriptor
This unit of competency specifies the outcomes required for a service technician in the field to select and use tools and equipment to install and service fire protection equipment, systems and products. It also covers access to information given in relevant Australian standards to carry out servicing procedures. Knowledge of the legal and regulatory framework relating to installation and servicing operations is required, as all preparatory work must be completed according to relevant legislative, industry and organisational requirements, including policies and procedures relating to occupational health and safety (OHS), ozone depleting substances (ODS) and synthetic greenhouse gases (SGG).

The unit supports one or more extinguishing agent handling licences prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Application of the Unit
This unit of competency supports fire service technicians involved in non-trade installation or servicing of fire protection equipment.

Licensing/Regulatory Information
Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Apply rules and regulations to service operations.**
   1.1 Requirements of relevant rules and regulations are confirmed and applied to work procedures.
   1.2 Knowledge of ODS and SGG emission and legislative and industry requirements is applied when preparing for installation and servicing operations.
   1.3 Potential and actual breaches of legislative and industry requirements are identified and action is taken according to organisational policies and procedures and ODS and SGG requirements.

2. **Use Australian standards to access information in relation to installation and servicing procedures for fire protection equipment.**
   2.1 Current Australian standards are identified according to fire protection equipment installation and servicing procedures.
   2.2 Information is accessed according to required work procedures.
   2.3 Key principles from Australian standards relating to work procedures are interpreted and legislative, organisational and customer requirements are met.

3. **Manage service vehicle.**
   3.1 Safety of service vehicles is monitored according to organisational requirements and manufacturers’ specifications.
   3.2 Relevant items are safely stored according to organisational policies and procedures, and load carrying
capacity of the service vehicle.

3.3 Motor vehicles are driven and maintained according to organisational requirements.

4 Prepare work area for installation or servicing procedure.

4.1 Surface and surrounding work area are assessed for hazards.

4.2 Intended work area is prepared for installation or servicing procedure according to organisational requirements and OHS policies and procedures.

5 Identify, select and use tools and equipment effectively to perform installation and servicing procedures on fire protection equipment.

5.1 Relevant tools and equipment are identified to suit the required installation or servicing procedure.

5.2 Hardware for product installation is identified that is suitable to specific building surface or particular servicing procedure.

5.3 Relevant tools and equipment for installation or servicing procedure are used according to organisational requirements, and ODS, SGG and OHS policies and procedures.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language and literacy skills to access and use information
- observation skills to:
  - identify hazards in the work area in preparation for service operation
  - identify and remove debris in work area caused by installation or servicing operation
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- skills to work safely when:
  - selecting and using equipment
  - selecting suitable fixing (hardware) for building surface to support items being fixed
according to manufacturers’ technical documents for the hardware

- using tools and equipment

**Required knowledge**

- action to take when a breach of health, safety or other policy occurs
- appropriate tools and equipment to select for fire protection equipment installation and servicing operations
- awareness of on-site work permit requirements
- definition of terms used in Australian standards, such as:
  - commentary
  - informative
  - referenced document
  - shall
  - should
- federal, state or territory legislation that affects organisational operations, including:
  - anti-discrimination and diversity
  - equal employment opportunity
- implications of not applying legislative requirements to job functions
- key features of legislation, regulations, codes and standards applicable to fire protection equipment installation and servicing procedures, including:
  - purpose, function and structure of Australian standards
  - Building Code of Australia (BCA)
  - occupancy permits
  - service manuals and bulletins from manufacturers
- licence requirements for handling ODS and SGG agents
- maintenance requirements for hand and power tools and equipment, including basic daily maintenance procedures for service vehicle
- methods for:
  - converting basic units of measurement and pressure
  - holding work when using power tools
  - using detection equipment for finding hidden utilities
  - using liquid adhesives for attaching location signs
  - preventing ODS and SGG emissions as specified in code of practice
- reasons for preventing ODS and SGG emissions
- reasons and methods for ensuring vehicle stock levels are constantly maintained
- safety requirements for using tools and equipment
- types and purposes of relevant hardware items
- types of electrical safeguards used to protect persons and property
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed by observation of practical demonstration of preparations for installation and servicing operations.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Critical aspects for assessment and evidence required to demonstrate competency in this unit</td>
<td>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit. In particular the person should demonstrate the ability to: • locate, interpret and apply relevant information, standards and specifications • comply with site safety plan, OHS regulations and ODS and SGG regulations (where required) and state and territory legislation applicable to workplace operations • comply with organisational policies and procedures, including quality requirements • communicate and work effectively and safely with others • in a minimum of two different settings: • adhere to safety procedures during preparation procedures • complete workplace housekeeping requirements • create records and documentation • demonstrate knowledge of the BCA, occupancy permits and service manuals and bulletins from manufacturers • identify and interpret Australian standards relevant to installation and servicing operations • identify, select and use tools, equipment and hardware required to perform installation and servicing operations • identify risk reduction measures • identify, select and assemble hardware • prepare work area for installation and servicing operations • manage service vehicles.</td>
</tr>
<tr>
<td>Context of and specific resources for assessment</td>
<td>Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements. Resource implications for assessment include: • actual or simulated work environment • necessary tools, specialist equipment, manuals, spare parts and relevant documentation, including Australian standards</td>
</tr>
</tbody>
</table>
### Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function, for example:
- CPPFES2004A Identify types of installed fire safety equipment and systems
- CPPFES2005A Demonstrate first attack firefighting equipment.

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Rules and regulations may include:
- building surveyor requirements, such as occupancy permit
- dangerous goods regulations
- environmental regulations
- fire protection industry codes of practice
- licensing arrangements, such as extinguishing agent handling licence
- ODS and SGG legislation, codes and regulations, such as Ozone Protection and Synthetic Greenhouse Gas Management
Amendment Regulations, 1995

- OHS legislation, codes and regulations
- relevant Australian standards, such as:
  - AS 1851 Maintenance of fire protection systems and equipment
  - AS 2444 Portable fire extinguishers and fire blankets – Selection and location
  - note: Australian standards are frequently revised and users must always check for currency and amendments
- relevant federal, state and territory building Acts, regulations and codes, including the BCA
- other relevant legislation relating to fire protection equipment, including:
  - international shipping codes
  - marine codes for different Australian States
  - requirements of Australian petroleum industry.

Requirements may be confirmed with:

- colleagues
- managers
- supervisors
- team leaders.

Work procedures may include:

- assignment instructions
- equipment manufacturers’ requirements
- instructions from colleagues, supervisors and managers
- personal protective equipment (PPE) requirements
- reporting and documentation requirements
- specific customer requirements
- work instructions to prevent the emission of ODS and SGG in the workplace.

ODS and SGG extinguishing agents may include:

Note list format:
product name (other names) use

Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the

- ODS and SGG extinguishing agents commonly used in Australia:
  - FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301
  - Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia
  - Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia
  - NAF-P-III (HCFC Blend C) used as a streaming agent
  - NAF-P-IV (HCFC Blend E) used as a streaming agent
  - NAF-S-III (HCFC Blend A) used as a total flooding agent
current list of ODS and SGG extinguishing agents.

| Potential and actual breaches of legislative and industry requirements may include: | SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear |
| SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear |
| ODS and SGG extinguishing agents not commonly used in Australia: |
| Blitz III (HCFC Blend D) used in flooding systems |
| CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) |
| FC-2-1-8 (CEA-308) used in flooding systems |
| FC-3-1-10 (CEA-410) used in flooding systems |
| FC-5-1-14 (CEA-614) used as a streaming agent |
| FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent |
| FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent |
| FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications |
| FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301 |
| FM100 (HBFC-22B1) used in portable fire extinguishers |
| Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia |
| Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent |
| Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301 |
| HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels) |
| HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers. |
| actions by fire protection technicians, such as: |
| failing to: |
| carry out work procedures correctly |
| complete documentation accurately |
| report a system or component fault or malfunction to appropriate personnel |
| making alterations to procedures, equipment or systems without prior authorisation from an approved authority |
| performing:
| **Unauthorised work** | • unauthorised work  
• work without appropriate qualification(s) or training  
• working in an unsafe manner  
• documentation anomalies observed by fire protection technicians, such as:  
  • incorrect or incomplete information or documentation  
  • missing documentation  
  • signed by unauthorised personnel  
• equipment or system is identified as no longer fit for purpose, due to:  
  • component or system faults or malfunctions  
  • changes to:  
    • building structure  
    • site usage or occupancy  
    • protected asset  
  • fire protection equipment or systems not matching ‘as built’ or installation drawings. |

| **Action** may include: | • advising customer  
• documenting non-compliance  
• making equipment safe  
• reporting, as required. |

| **Organisational policies and procedures** may be located in quality assurance and/or procedures manuals and relate to: | • documentation and information systems and processes  
• legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations  
• legislation relevant to service operations  
• ODS and SGG policies, procedures and programs  
• OHS policies, procedures and programs  
• using electronic job scheduling and communication devices. |

| **Australian standards** are: | • often referenced in state or federal legislation  
• published documents developed by technical committees representing the stakeholders  
• set out specifications and procedures designed to ensure that a material, product, method or service is fit for its purpose and consistently performs or is performed in the way intended. |

| **Fire protection equipment** may include: | • delivery lay flat fire hoses  
• dry powder fire-suppression systems  
• fire alarm monitoring systems  
• fire and smoke control features of heating, ventilation and air conditioning systems  
• fire blankets and containers  
• fire detection systems |
- fire hose reels
- fire hydrant installations
- fire pumpsets
- fire sprinklers
- fixed aerosol fire-extinguishing systems
- foam fire-suppression systems
- gaseous fire-suppression systems
- medium and high velocity water spray systems
- passive fire and smoke containment systems
- portable fire extinguishers
- portable foam-generating equipment
- pyrogenic fire-suppression systems
- smoke and heat alarms
- sound and intercom warning systems
- water mist fire-suppression systems
- wet chemical fire-suppression systems
- wheeled fire extinguishers.

**Customer requirements** may include:
- confirming or varying service instructions
- copy or details of occupancy permit
- following sign-in and sign-out procedures for entry to or exit from premises
- providing non-routine or urgent services
- providing routine services
- providing written or verbal confirmation of services provided and future maintenance schedule
- sighting work permits.

**Hazards** may include:
- environmental, such as improper use of hazardous materials and chemicals, including ODS and SGG
- equipment in a work site
- ergonomic, such as incorrect manual-handling methods
- hazards associated with electrical or mechanical faults
- obstructive, such as blocked access to emergency entry or exit points
- people in a work site
- situations with a potential to cause loss
- sources of potential harm
- work methods, plans and procedures.

**OHS policies and procedures** may relate to:
- assessing work site for hazards and risks prior to preparing it for the work procedure
- displaying signs and using barriers in work area
- employer and employee rights and responsibilities
- equipment maintenance and use.
- first aid
- incident and accident investigation
- OHS audits and safety inspections
- OHS hierarchy of control
- risk assessment and control measures
- safe operating procedures and instructions, including:
  - awareness of electrical hazards
  - emergency procedures
  - following confined spaces procedures
  - hazard and risk identification and reporting
  - those for working safely:
    - around electrical wiring, cables and overhead powerlines
    - around tools and equipment
    - on ladders and raised platforms
- use and storage of hazardous substances
- using PPE, including:
  - appropriate gloves and overalls
  - dust masks
  - earmuffs or plugs
  - hard hats
  - safety boots or shoes
  - safety glasses or goggles
  - sunhats.

### Tools and equipment

required to cover range of installation and servicing procedures may include:

- fire equipment spare parts, including:
  - anti-tamper seals
  - hoses
  - labels
  - nozzles
  - pressure indicators
  - seals and gaskets
  - service tags
  - trigger pins
  - valves
- hand tools, including:
  - hammers
  - pliers
  - screwdrivers
  - spanners
  - spirit levels
- manual-handling aids, including:
<table>

Fire protection equipment

**Custom Content Section**

Not applicable.
CPPFES2025A Inspect, test and maintain gaseous fire-suppression systems

Modification History
Revised unit
Unit updated and equivalent to PRMPFES25C Inspect, test and maintain gaseous fire suppression systems

Unit Descriptor
This unit of competency specifies the outcomes required to complete mechanical inspection, testing and maintenance tasks on installed gaseous fire-suppression systems.

Application of the Unit
This unit of competency supports fire protection technicians responsible for inspecting, testing and maintaining gaseous fire-suppression systems. This unit does not apply to any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state and territory regulations).

Licensing/Regulatory Information
Work in this area must be completed according to relevant legislative, industry, customer and organisational requirements, including policies and procedures relating to occupational health and safety (OHS), and where needed, to ozone depleting substances (ODS) and synthetic greenhouse gases (SGG) emissions.

The unit supports one or more extinguishing agent handling licences prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

This unit does not cover all the requirements of AS 1851 Maintenance of fire protection systems and equipment.

Pre-Requisites
Not applicable.
Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Apply rules and regulations to service operations.
   1.1 Requirements of relevant rules and regulations are confirmed and applied to work procedures.
   1.2 Knowledge of ODS and SGG materials and legislative and industry requirements is applied when inspecting and testing gaseous fire-suppression systems.
   1.3 Knowledge of operation of fire protection systems is applied to determine system key functional requirements and operation within design limitations.
   1.4 Compliance requirements are checked and action is taken according to organisational policies and procedures.

2 Research layout and components of gaseous fire-suppression system to be inspected.
   2.1 Relevant gaseous fire-suppression system information is gathered.
   2.2 Gaseous fire-suppression system application and method of operation are identified.
   2.3 Gaseous fire-suppression system components are identified and located on installation drawings.
   2.4 Isolation devices and interface controls to other systems are identified and located on installation drawings.
### Prepare to inspect, test and maintain gaseous fire-suppression systems

3.1 Necessary **work permits** are obtained prior to entering customer premises.

3.2 Relevant persons and occupants are advised of intended tests and associated procedures.

3.3 System and surrounding work area are assessed for **hazards** and relevant precautions are taken.

3.4 Relevant **tools, equipment and testing devices** are identified and assembled according to work procedures and organisational requirements.

3.5 Alarm signalling equipment (ASE) is switched to test mode in **back-to-base facilities**.

3.6 Equipment is physically isolated to ensure testing or maintenance procedures do not cause discharge of extinguishing agent.

3.7 Equipment and interface controls to other systems are electrically isolated to ensure no alarms or actions are unduly generated.

3.8 Test equipment is installed and calibrated to verify operation of components and system.

### Inspect and test installed gaseous fire-suppression system

4.1 System components are identified and located on site, and exact correspondence of system layout to installation drawings is verified and anomalies reported.

4.2 **Mechanical inspection tasks** specified for **maintenance schedule periods** in relevant **maintenance information** are safely completed.

4.3 **Mechanical test tasks** specified for maintenance schedule periods in relevant maintenance information are safely completed.

4.4 Inspection and testing results are recorded and faulty equipment is reported according to organisational and legislative requirements.

4.5 Relevant **documentation** is completed according to organisational and **customer requirements**.
5 Conduct preventive maintenance on installed gaseous fire-suppression system.

5.1 **Mechanical preventive maintenance tasks** specified for maintenance schedule periods and described in relevant maintenance information are safely completed.

5.2 Faulty equipment is repaired or replaced according to organisational, legislative and customer requirements.

5.3 Transportation and refilling of gaseous agent containers by authorised refilling station are organised.

5.4 Preventive maintenance activities, including repairs and replacements of faulty equipment, are recorded according to organisational, legislative and customer requirements.

5.5 Relevant documentation is completed according to organisational and customer requirements.

6 Reinstate installed gaseous fire-suppression system.

6.1 Installed gaseous fire-suppression system is **reinstated** as fully operational.

6.2 Customer premises are left in a clean and tidy condition on completion of work.

**Required Skills and Knowledge**

This section describes the skills and knowledge required for this unit.

<table>
<thead>
<tr>
<th>Required skills</th>
</tr>
</thead>
<tbody>
<tr>
<td>customer service skills</td>
</tr>
<tr>
<td>language, literacy and numeracy skills to:</td>
</tr>
<tr>
<td>communicate with others clearly and concisely, verbally and in writing</td>
</tr>
<tr>
<td>interpret information on engineering drawings, such as installation drawings</td>
</tr>
<tr>
<td>read and comply with work instructions and specifications</td>
</tr>
<tr>
<td>read and record measurements</td>
</tr>
<tr>
<td>record and report information neatly and legibly</td>
</tr>
<tr>
<td>planning and organising skills to:</td>
</tr>
<tr>
<td>estimate time to complete activities</td>
</tr>
</tbody>
</table>
- prioritise tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- skills to work safely when:
  - applying workplace housekeeping procedures
  - handling and transporting gaseous containers according to legislation (including ODS and SGG requirements), manufacturer and work procedures
  - using hand and power tools
- technical skills to:
  - conduct:
    - function system tests with other system interfaces as specified in AS 1851
    - routine mechanical maintenance on equipment as specified in AS 1851
    - visual mechanical inspection, testing and maintenance tasks as specified in AS 1851
  - identify whether gaseous agent is still suitable for existing occupancy risk
  - operate:
    - actuators to determine that operation is within design parameters for installed equipment
    - manual controls of gaseous fire-suppression system
    - standardised control functions on a fire alarm panel that interfaces with the gaseous system to conduct functional tests as specified in AS 1851
  - remove and replace:
    - container actuators (note: the fire protection technician may require manufacturers’ endorsement for specific actuators)
    - containers from container bank manifold
  - verify visually that system complies with original installation requirements

### Required knowledge

- difference between total flooding and local application systems
- difference between various types of extinguishing gaseous agents used
- extent to which pressures and liquid levels in extinguishing agent containers vary according to temperature change
- fire suppressant action of gaseous agents in terms of smothering, cooling and reacting chemically with the fire radical
- how building structures, services and service penetration within and through protected area enclosures influence the holding time of a gaseous agent
- industrial relations issues applicable to inspecting, testing and maintaining gaseous fire-suppression systems
- industry best practice methods used to isolate actuators to prevent ODS and SGG emissions in the workplace
- key features of legislation, regulations, codes and standards, including ODS and SGG, applicable to inspecting, testing and maintaining gaseous fire-suppression systems, including:
  - action to take when a breach of OHS, ODS and SGG or other policy occurs
• container handling, moving and transporting requirements
• environment protection authority, ODS and SGG emission requirements
• implications of not applying legislative requirements to job functions
• manufacturers’ requirements and standards applicable to inspecting, testing and maintaining gaseous fire-suppression systems
• occupational hazards of gaseous agent in terms of:
  • no observable adverse effect level (NOAEL)
  • lowest observable adverse effect level (LOAEL)
• products of combustion from fire and products of decomposition associated with some gaseous agents when extinguishing a fire
• operating principles of:
  • lock-off, directional and pressure-release valves
  • pneumatic and mechanical actuators interfaced with gaseous systems
  • fire alarm components interfaced with gaseous fire-suppression systems
  • gaseous agent discharge nozzles
• operation of different types of equipment used to store and release gaseous extinguishant agent
• pressures generated during release of gaseous agents, pressure rating requirements of pipework and fittings, and the need for adequate support bracing
• reasons for preventing ODS and SGG emissions in the workplace
• relevant federal, state or territory legislation that affects organisational operations, including:
  • anti-discrimination and diversity
  • equal employment opportunity
• safety requirements relevant to inspect, test and maintain procedures
• types of:
  • gaseous fire-suppression agents and how they extinguish fire, including concentration and holding time requirements
  • gaseous fire-suppression systems, including:
    • working principles
    • pre-engineered
    • engineered
• use of flooding factors to check extinguishing agent quality

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed by observation of at least</th>
</tr>
</thead>
</table>
two different practical demonstrations of inspecting, testing and maintaining gaseous fire-suppression systems at customers’ premises.

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit. In particular the person should demonstrate the ability to:
|                                                                                                                |                                                                                                           |
|                                                                                                                | • locate, interpret and apply relevant information, standards and specifications                           |
|                                                                                                                | • comply with OHS and ODS and SGG regulations (where required), and state and territory legislation applicable to workplace operations |
|                                                                                                                | • comply with organisational policies and procedures, including quality requirements                   |
|                                                                                                                | • communicate and work effectively and safely with others.                                             |
| Competency must be demonstrated in a minimum of two different settings, including:                             |                                                                                                           |
|                                                                                                                | • identifying potential hazards and risks                                                                |
|                                                                                                                | • identifying risk-reduction measures                                                                   |
|                                                                                                                | • adhering to safety procedures during inspect, test and maintain procedures                           |
|                                                                                                                | • identifying installed gaseous fire-suppression systems                                                |
|                                                                                                                | • identifying and locating system components                                                             |
|                                                                                                                | • identifying, selecting and using tools, equipment and materials effectively to perform inspect, test and maintain procedures on an installed gaseous fire-suppression system |
|                                                                                                                | • matching installed system to installation drawings                                                    |
|                                                                                                                | • identifying isolation devices and interface controls to other systems                                  |
|                                                                                                                | • switching alarm signalling equipment to test mode                                                      |
|                                                                                                                | • physically isolating equipment and gaseous fire-suppression systems                                   |
|                                                                                                                | • electrically isolating equipment and interface controls to other systems                             |
|                                                                                                                | • installing and calibrating test equipment                                                             |
|                                                                                                                | • completing specified mechanical inspection tasks, documenting results and reporting faulty equipment |
|                                                                                                                | • completing specified mechanical test tasks, documenting results and reporting faulty equipment     |
|                                                                                                                | • completing specified mechanical preventive maintenance tasks, repairing or replacing faulty equipment, and documenting results |
|                                                                                                                | • reinstating system to operational state                                                               |
|                                                                                                                | • completing workplace housekeeping requirements.                                                       |
### Context of and specific resources for assessment

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- access to customer premises or a simulated workplace environment
- assessment documentation
- necessary tools, specialist equipment, manuals and relevant documentation, including ODS and SGG policies and work procedures
- training and assessment record books.

### Method of assessment

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

### Guidance information for assessment

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
### Rules and regulations may include:
- dangerous goods regulations
- environmental regulations
- licensing arrangements
- OHS legislation, regulations and codes
- relevant commonwealth and state or territory building Acts, regulations and codes, such as Building Code of Australia (BCA)
- relevant Australian standards, such as:
  - AS 1851 Maintenance of fire protection systems and equipment
  - note: Australian standards are frequently revised and users must always check for currency and amendments
- other relevant legislation relating to fire protection equipment, including:
  - international shipping codes
  - marine codes for different Australian States.

### Requirements may be confirmed with:
- colleagues
- managers
- supervisors
- team leaders.

### Work procedures may include:
- assignment instructions
- equipment manufacturers’ requirements
- instructions from colleagues, supervisors and managers
- personal protective equipment requirements
- reporting and documentation requirements
- specific customer requirements
- work instructions to prevent the emission of ODS and SGG in the workplace.

### ODS and SGG extinguishing agents may include:
- ODS and SGG extinguishing agents commonly used in Australia:
  - FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301
  - Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia
  - Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia
  - NAF-P-III (HCFC Blend C) used as a streaming agent
  - NAF-P-IV (HCFC Blend E) used as a streaming agent
  - NAF-S-III (HCFC Blend A) used as a total flooding agent

---

Note list format:
product name (other names) use

Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the...
Current list of ODS and SGG extinguishing agents:
- SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear
- ODS and SGG extinguishing agents **not commonly** used in Australia:
  - Blitz III (HCFC Blend D) used in flooding systems
  - CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)
  - FC-2-1-8 (CEA-308) used in flooding systems
  - FC-3-1-10 (CEA-410) used in flooding systems
  - FC-5-1-14 (CEA-614) used as a streaming agent
  - FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent
  - FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent
  - FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications
  - FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301
  - FM100 (HBFC-22B1) used in portable fire extinguishers
  - Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia
  - Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent
  - Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301
  - HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)
  - HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.

**Key functional requirements** relate to interpreting the system functions within design limitations, such as:
- Gaseous flooding discharge time and holding time, and factors that can effect these key design requirements, including:
  - Nozzle location
  - Openings in protected enclosure
  - Orifices
  - Pipe blockages
  - System is total flooding or local gaseous system suppression of fire mechanism in relation to fire triangle
  - Understanding of environmental and occupational hazards
Checking system compliance requirements may include:
- applying inspection, test and survey requirements according to Australian standards
- reviewing documentation to verify that installed systems comply with relevant rules and regulations.

Action may include:
- advising customer
- documenting non-compliance
- making equipment safe
- reporting, as required.

Organisational policies and procedures may be located in quality assurance and procedures manuals relating to:
- documentation and information systems and processes
- legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to service operations
- ODS and SGG policies, procedures and programs
- OHS policies, procedures and programs
- use of electronic job scheduling and communication devices.

Gaseous fire-suppression systems may include:
- synthetic gaseous fire-extinguishing agents (liquefied), such as:
  - ODS and SGG materials
  - Novec 1230
- inert gaseous fire-extinguishing agents (non-liquefied), such as:
  - Inergen
  - Argonite
  - nitrogen
  - carbon dioxide.

Gaseous fire-suppression system information may include:
- as installed drawings
- Australian standards
- design drawings
- manufacturers’ manuals.

Components may include:
- actuators:
  - mechanical
  - pyrotechnic
  - solenoid
- fire alarm system interface components, such as:
  - anti-tamper switches
  - gaseous system controls and indicators on control and indicating equipment (CIE), such as fire indicating panels (FIP) approved to:
    - AS 1603 Automatic fire detection and alarm systems
    - AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment
- positional monitoring switches
- pressure switches
- remote gas control points
- warning system equipment, such as:
  - alarm bells
  - warning lights and strobes
  - warning speakers.

**Installation drawings** may include:

- installation drawings that meet the requirements of AS 4214 Gaseous fire extinguishing systems, and fire alarm standards:
  - in AS 1670.1 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Fire
  - in AS 1670.4 Fire detection, warning, control and intercom systems – System design, installation and commissioning – Sound systems and intercom systems for emergency purposes
  - including:
    - ‘for construction’ drawings
    - ‘as installed’ or ‘as built’ drawings.

**Isolation devices** may include:

- CIE, including:
  - FIP
  - gas control panels
  - mechanical isolation devices
  - pneumatic isolation devices.

**Work permits** may include permits to:

- ensure that specific OHS requirements are met before entering a work site
- enter a restricted area within a work site
- enter a work site
- enter a work site at specific times.

**Hazards** may include:

- environmental hazards, such as improper use of ODS and SGG, hazardous materials and other chemicals
- environmental risks from ODS and SGG emissions that could be caused by:
  - conducting interface tests between actuators, CIE and fire alarm system during inspect, test and maintain procedures
  - installing and removing container valve assembly, manifold connection components and actuators
  - servicing and maintaining container valve assemblies
  - transporting, storing and manual handling ODS and SGG containers
  - equipment in a work site
- ergonomic, such as incorrect manual-handling methods
- hazards associated with electrical or mechanical faults
- obstructive, such as blocked access to emergency entry or exit points
- people in a work site
- sources of potential harm
- situations with a potential to cause loss
- work methods, plans and procedures.

### Tools, equipment and testing devices may include:

- fire equipment spare parts, including:
  - aerosol test smoke
  - anti-tamper seals
  - clamps
  - service tags
- hand tools, including:
  - hammers
  - pliers
  - screwdrivers
  - spanners
  - spirit levels
- power tools, including:
  - battery powered drills
  - hammer drills
- manual-handling aids, including:
  - hand trucks
  - lifting straps
  - trolleys
- servicing tools and testing devices, including:
  - actuator simulators
  - barcode readers
  - container contents-measurement equipment
  - electrical multimeter
  - recharging and pressurising equipment
  - safety equipment
  - scales
  - service tag punch.

### Back-to-base facilities refer to:

- monitoring equipment that is connected by ASE from the CIE to a communication path (telephone line or a radio link) and then to a monitoring centre
- monitoring centres, which can be operated by or on behalf of a fire authority for the purposes of mobilising and directing firefighting resources to site where CIE is installed.
**Mechanical inspection tasks** may include:

- actions to complete mechanical inspection tasks according to AS 1851, such as:
  - checking enclosure for changes in openings, for example any new, unsealed service penetrations
  - checking that gas discharge pipe lock-off valve (if fitted) is correctly labelled and accessible
  - checking that gas containers are secure, accessible and free from damage
  - inspecting each container pressure indicator to check that pressure is within prescribed limits
  - where there is no container pressure indicator, checking that system discharged indicator has not operated
  - checking that release mechanisms, including drop weights, are undamaged, accessible and unimpeded
  - checking gas container enclosure is accessible, adequately illuminated, ventilated and secured against unauthorised entry
  - checking integrity of all pneumatic piping and fittings
  - checking that entire protected area enclosure complies with original design
  - checking that discharge nozzles are clear and unobstructed, correctly aimed and secured
  - checking actuating devices for any condition likely to adversely affect their operation, such as excessive deposits of dust or paint coating
  - inspecting all areas adjacent to protected area to ensure that migration of gas does not create a hazard to personnel
  - inspecting protected area to check that the risk has not changed from original design, such as computer room to combustible storage and equipment
  - checking that all pipework, flexible connectors and manifolds are free from damage and adequately secured
  - checking that discharge from all pressure relief devices and vent valves does not create a hazard to personnel
  - checking that all directional valves and check valves are correctly orientated
  - determining whether container valve overhaul is due
  - determining whether container hydrostatic pressure test is due according to AS 2030 Gas cylinders or AS 1851 Maintenance of fire protection systems and equipment
  - checking age of pyrotechnic actuator to determine if due for replacement.

**Maintenance schedule**

- monthly
| **periods may be:** | six monthly  
yearly  
five yearly  
ten yearly. |
|------------------|------------------|

| **Maintenance information may include:** | Australian standards  
manufacturers’ specifications and recommended procedures  
service manual instructions  
service manuals and bulletins. |
|------------------|------------------|

| **Mechanical test tasks may include:** | actions to complete mechanical test tasks according to AS 1851, such as:  
simulating a system operation and confirming that discharge actuators and directional valves operate correctly  
testing operation of all mechanical manual discharge release systems  
testing operation of mechanical automatic discharge release systems not operated through CIE, such as fusible links  
operating system lock-off valve and confirming that the system inoperative visual warning device (VWD) operates  
confirming, by weighing, liquid level determination or pressure reading (inert gases only), that each gas container is charged with correct quantity of extinguishing agent  
testing to ensure correct operation of all automatic pneumatic controls  
simulating operation of agent release detection device and confirming indication of agent release at system control panel. |
|------------------|------------------|

| **Documentation may include:** | application for credit forms  
certificates of inspection  
corrective action reports  
customer recommendation forms  
equipment recommendation forms  
expense claims  
job cards  
maintenance record systems  
motor vehicle fleet cards  
petty cash vouchers  
product documentation  
service agreements  
service test record logbooks. |
|------------------|------------------|

| **Customer requirements may include:** | confirming or varying service instructions  
following sign-in and sign-out procedures for entry to or exit from premises. |
|------------------|------------------|
- providing non-routine or urgent services
- providing routine services
- sighting work permits
- written or verbal confirmation of services provided and future maintenance schedule.

### Mechanical preventive maintenance tasks may include:

- actions to complete routine mechanical maintenance tasks according to AS 1851, such as:
  - checking operation of mechanical container actuator and lubricating as necessary
  - checking operation of remote mechanical release system and lubricating as necessary
  - checking operation of automatic mechanical release system and lubricating as necessary
  - replacing pyrotechnic container actuator that will exceed its listed lifetime prior to next scheduled maintenance
  - cleaning dampers and nozzles that are subject to deposit of contaminants, such as cooking oil, hot wax, etc.
- actions to conduct non-routine maintenance, such as general isolation to CIE so that building works can be done, then resetting systems after works are completed.

### Reinstate process may involve:

- confirming all interface actuators are isolated and appropriate signage, documentation and lock-off are in place
- removing transport caps on actuator outlets, plugs and locking devices according to manufacturer and organisational requirements
- re-installing pneumatic actuators and pilot and slave tubes and fittings according to finalised design documentation and installation drawings
- checking pneumatic actuator and pilot and slave tubes connection are free from kinks and physically checking for tightness
- re-installing electrical and mechanical actuators according to finalised design documentation and installation drawings
- physically checking tightness of electrical and mechanical actuators, and that they are correctly set to operate
- re-installing manual actuators according to finalised design documentation and installation drawings
- physically checking tightness of manual actuators, and that they are correctly set to operate with safety device engaged
- activating all interfaced actuators and removing signage, documentation and lock-off for functional testing
- advising relevant persons that system is fully operational and providing appropriate technical, maintenance or handover instructions on operation of system
leaving work site clean and tidy with materials disposed of or recycled according to state or territory legislative and industry requirements.

Unit Sector(s)
Fire protection equipment

Custom Content Section
Not applicable.
CPPFES2043A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Modification History
Revised unit
Unit updated and equivalent to PRMPFES43A Prevent ozone depleting substance and synthetic greenhouse gas emissions

Unit Descriptor
This unit of competency specifies the outcomes required to identify and describe agreements, protocols, legislation, regulations, codes of practice and handling licences developed to reduce ozone layer depletion and global warming.

Application of the Unit
This unit of competency supports individuals responsible for:
- complying with legal, industry, regulatory and licensing requirements relating to ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) extinguishing agents used in fire protection
- considering the impact of work practices in the fire protection industry on ozone layer depletion and global warming
- proposing changes to reduce the risk of accidental emissions that contribute to ozone layer depletion and global warming.

Licensing/Regulatory Information
The unit supports one or more fire protection industry extinguishing agent handling licences (EAHL) prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites
Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. **Apply rules and regulations to the use of ODS and SGG extinguishing agents.**
   1.1 Requirements of relevant *rules and regulations* are confirmed and applied to *work procedures* to prevent ODS and SGG emissions.
   1.2 *Compliance requirements are checked* and *action* is taken according to organisational policies and procedures, ODS and SGG policies and procedures, and best practice requirements.

2. **Identify ODS and SGG handling licences, trading authorisations and usage permits.**
   2.1 Types of ODS and SGG *extinguishing agent handling licences*, licence requirements and *entitlements of licensees* are identified.
   2.2 Extinguishant trading authorisations are identified.
   2.3 Halon special permit usage requirements are identified.

3. **Apply an understanding of ozone layer depletion and global warming.**
   3.1 Role and functions of *ozone layer* are identified and explained.
   3.2 Factors involved with, and effects of, *global warming* are identified and described.
   3.3 *ODS and SGG extinguishing agents* used in fire protection industry are identified by type.
   3.4 *Effect of ozone depletion and global warming* on
human health, environment and fire protection industry work practices is described.

3.5 Relevant fire protection industry ODS and SGG work practices are identified.

3.6 Improvements to ODS and SGG work practices are identified and proposed to reduce the risk of accidental emissions.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - read and comply with work industry regulations and codes of practice
  - interpret information
- initiative and enterprise skills to:
  - seek advice on license requirements
  - apply understanding of ozone layer depletion and global warming to change and improve fire protection industry work practices
  - identify and act upon learning opportunities
- technology skills to use technology to access information

Required knowledge

- effect of ozone layer
- actions to take where a breach of ODS and SGG policies and procedures occurs
- effect of:
  - ODS and SGG emissions on ozone depletion and global warming
  - ozone depletion and global warming on environment and human health
- factors involved in global warming
- implications of not applying ODS and SGG legislative requirements to the workplace
- key features of:
  - legislation, regulations and standards applicable to ozone protection in the fire protection industry
  - fire protection industry codes of practice
- ODS and SGG substances used in the fire protection industry
- ODS and SGG EAHL features and requirements, authorisations and permit requirements
- relevant federal, state or territory legislation that affects organisational operations

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed by oral or written questioning covering:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- underpinning knowledge of the effects of ODS and SGG emissions and current arrangements</td>
</tr>
<tr>
<td></td>
<td>- workplace examples of action taken to reduce risk of emissions and responses to potential or actual breaches of legislation.</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Critical aspects for assessment and evidence required to demonstrate competency in this unit</th>
<th>A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit. In particular the person should demonstrate the ability to:</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>- apply understanding of ozone layer depletion and global warming for:</td>
</tr>
<tr>
<td></td>
<td>- discussing the effect of ODS and SGG emissions on the ozone layer and global warming</td>
</tr>
<tr>
<td></td>
<td>- describing the impact of ozone depletion and global warming on human health and the environment</td>
</tr>

</table>

| Context of and specific resources for assessment | Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements. |
Resource implications for assessment include:
- assessment documentation
- necessary legislation and regulatory documents, manuals, textbooks and other relevant documentation
- training and assessment record books.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

**Guidance information for assessment**

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other units relevant to the job function.

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**Rules and regulations may include:**

- dangerous goods regulations
- environmental regulations
- fire protection industry codes of practice
- licensing arrangements, such as EAHL
- manufacturers’ system manuals
- ODS and SGG legislation, codes and regulations, including
penalties and policing  
- OHS legislation, regulations and codes  
- other relevant legislation relating to fire protection equipment, including:  
  - international shipping codes  
  - marine codes for different Australian States  
  - requirements of Australian petroleum industry  
  - relevant agreements and protocols  
  - relevant Australian standards, such as:  
    - AS 1851 Maintenance of fire protection systems and equipment  
    - note: Australian standards are frequently revised and users must always check for currency and amendments  
  - relevant federal, state and territory Acts, regulations and codes.

Requirements may be confirmed with:
- colleagues  
- managers  
- supervisors  
- team leaders.

Work procedures may include:
- assignment instructions  
- equipment manufacturers’ requirements  
- instructions from colleagues, supervisor or manager  
- personal protective equipment requirements  
- reporting and documentation requirements  
- specific customer requirements.

Checking compliance requirements may include ensuring that:
- persons trading in ODS and SGG hold the appropriate trading authorisation or ODS and SGG permit  
- scope of work to be undertaken is covered by the appropriate license.

Action may include:
- advising customer  
- documenting non-compliance  
- making equipment safe  
- reporting, as required.

Types of extinguishing agent handling licence include:
- control systems installation, commissioning and decommissioning  
- fixed system installation and decommissioning  
- fixed system testing and maintenance  
- portable fire extinguisher maintenance  
- recovery, reclamation, fill and recycling  
- warehouse maintenance.

Entitlements of licensees include:
- portable fire extinguisher maintenance licence entitles holder:  
  - to charge and recharge a portable fire extinguisher with
non-ODS and SGG agent
  - note: a reclaim and refill licence is required to charge or recharge a portable extinguisher with ODS or SGG
  - repair the extinguisher valve
  - fixed system installation and decommissioning licence entitles holder to:
    - install and decommission a gaseous fire-extinguishing system (fire protection equipment) including to:
      - install and disconnect actuation devices (mechanisms) to and from container valves
      - install and disconnect gaseous agent containers
      - install and disconnect interconnections to other gaseous system containers
      - install and disconnect ancillary equipment connections to manifold and pipework
      - attach and remove transport equipment, such as valve outlet and actuator port caps, plugs and locking devices installed to prevent accidental discharge
    - commission actuation control devices set to operate and engage safety devices as needed and decommission these devices
  - fixed system testing and maintenance licence entitles holder to:
    - test and maintain a gaseous fire-extinguishing system (fire protection equipment), including to:
      - test actuation release systems
      - disconnect and reconnect actuation devices (mechanisms)
      - disconnect and reconnect interconnections to other gaseous system containers
      - disconnect and reconnect ancillary equipment connections from containers to manifold and pipework
      - test actuation devices (mechanisms)
      - perform tests and maintenance on any fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system
      - perform tests and maintenance on gaseous agent containers and ancillary equipment connections from containers to manifold and pipework
  - recovery, reclamation, fill and recycling licence entitles holder to:
    - recover, reclaim, fill and recycle an extinguishing agent into and from a fire extinguisher and gaseous fire-extinguishing system container, from and to a bulk agent container
### Warehouse Maintenance Licence
- Entitles holder to:
  - Monitor for leakage stocks of extinguishing agent bulk agent containers in a warehouse and, as needed, to transfer extinguishing agent from a leaking storage container.
  - Control systems installation, commissioning and decommissioning licence entitles holder to:
    - Install, commission and decommission a fire detection and alarm system, including any remote operation panel and actuation and control system that interfaces with or forms part of a gaseous fire-extinguishing system.

### Ozone Layer Facts
- Composed of ozone (O₃), which is a form of oxygen in which the oxygen molecule contains three atoms of oxygen instead of the usual two.
- Ozone forms less than 0.4 parts per million of the atmosphere.
- About 90% of ozone is in the upper part of the atmosphere (stratosphere).
- Most ozone is in the layer from 20 to 25 km above the earth’s surface.

### Global Warming Involves
- Carbon dioxide found in small quantities (about 350 parts per million) in the atmosphere.
- Carbon dioxide trapping infra red (heat) radiation and warming the atmosphere – the greenhouse effect.

### ODS and SGG Extinguishing Agents
- May include:
  - Note list format:
    - Product name (other names) use
  - Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents.
- Commonly used in Australia:
  - FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301.
  - Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia.
  - Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia.
  - NAF-P-III (HCFC Blend C) used as a streaming agent.
  - NAF-P-IV (HCFC Blend E) used as a streaming agent.
  - NAF-S-III (HCFC Blend A) used as a total flooding agent.
  - SF₆ (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear.
- Not commonly used in Australia:
  - Blitz III (HCFC Blend D) used in flooding systems.
  - CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign products).
vessels)
- FC-2-1-8 (CEA-308) used in flooding systems
- FC-3-1-10 (CEA-410) used in flooding systems
- FC-5-1-14 (CEA-614) used as a streaming agent
- FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent
- FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent
- FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications
- FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301
- FM100 (HBFC-22B1) used in portable fire extinguishers
- Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia
- Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent
- Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301
- HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)
- HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.

**Effect of ozone depletion and global warming on human health and the environment may include:**

- changes to work practices, including those in the fire protection industry
- constraints on:
  - aquatic ecosystems
  - human immune system
- increased:
  - incidence of photochemical smog
  - risk of:
    - cataracts
    - skin cancer
  - inhibited growth of plants
  - reduced production of agriculture.
Unit Sector(s)
Fire protection equipment

Custom Content Section
Not applicable.
CPPFES2047A Inspect and test control and indicating equipment

Modification History

Revised unit

Unit updated and equivalent to PRMPFES47A Inspect and test control and indicating equipment

Unit Descriptor

This unit of competency specifies the outcomes required to complete routine monthly and six-monthly inspect and test procedures to verify that control and indicating equipment (CIE) for a fire alarm system functions as intended. The unit involves working safely, isolating and resetting CIE, conducting compliance tests, visually inspecting, identifying non-compliance defects, and fulfilling mandatory reporting requirements.

Application of the Unit

This unit of competency supports fire protection technicians responsible for inspecting CIE and routinely testing their operational functions to ensure that fire alarm systems are working as intended.

Licensing/Regulatory Information

The unit supports one or more extinguishing agent handling licences (EAHL) prescribed under the Ozone Protection and Synthetic Greenhouse Gas Management Act 1989.

Licence to practise: The skills and knowledge described in this unit do not require an electrical licence or an Australian Communications and Media Authority cabling licence to practise.

Service technicians are not permitted to undertake any installation, replacement, maintenance and repair functions that are restricted to licensed trades or occupations (subject to relevant state and territory regulations).

Different states and territories may have regulatory mechanisms that apply to this unit. Candidates are advised to check for regulatory limitations.

Pre-Requisites

Not applicable.
Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1 Plan to conduct routine monthly or six-monthly inspect and test operations on CIE.

1.1 Occupational health and safety (OHS) policies and procedures for a given work area are obtained and reviewed.

1.2 Established OHS requirements, risk control measures for ozone depleting substance (ODS) and synthetic greenhouse gas (SGG) emission, and organisational requirements are followed in preparation for maintenance activity.

1.3 Safety hazards are noted, and established risk control measures for on-site work are implemented.

1.4 Work permits are organised prior to entering customer premises.

1.5 Relevant persons are consulted to coordinate work effectively with other work site staff.

1.6 Locations of system components and materials are determined from specifications and installation drawings.

1.7 Inspection and test procedures are arranged to suit CIE according to legislative and industry requirements, Australian standards, job schedule and manufacturers’ instructions.

1.8 Documentation needed to conduct tests is confirmed according to work procedures and job requirements.
1.9 *Tools, equipment and test devices* are checked for correct operation and safety according to work procedures and job requirements.

2 Inspect CIE.

2.1 ODS, SGG and OHS policies and procedures are followed and risk control measures are applied when inspecting CIE.

2.2 CIE functions to be used to conduct routine tests according to relevant Australian standard, are identified in manufacturers’ instructions.

2.3 Alarm zone circuits, plant and other *system interfaces* to be isolated to allow conduct of maintenance activity are identified according to OHS, *ODS and SGG extinguishing agent* emission requirements and work procedures.

2.4 Circuits and *actuators* to be isolated are identified.

2.5 Visual inspections are conducted according to relevant Australian standard for monthly and six-monthly testing.

2.6 CIE inspection results are validated against requirements according to relevant Australian standard.

3 Test CIE.

3.1 ODS, SGG and OHS policies and procedures are followed and risk control measures are applied when testing CIE.

3.2 Circuits, actuators, *back-to-base facilities* and other system interfaces are isolated according to work procedures.

3.3 Alarm zone circuits, plant and other system interfaces are confirmed as isolated to make sure system cannot be activated during testing.

3.4 Monthly and six-monthly tests are performed according to AS 1851, with CIE and components checked to confirm functionality according to manufacturers’ instructions, system *finalised design documentation* and organisational requirements.

3.5 Methods for dealing with unexpected situations are
discussed with relevant persons and documented.

3.6 Approval of authorised relevant persons is obtained in order to deal safely with unexpected situations.

4 Report findings of inspection and testing.

4.1 ODS, SGG and OHS policies and procedures, risk control measures and work procedures are followed when reporting inspect and test findings.

4.2 Work site and equipment are cleaned and made safe according to work procedures.

4.3 Non-compliance defects are identified and reported according to work procedures.

4.4 Recommendations for rectifying defects are made according to work procedures.

4.5 CIE is reset to operational state.

4.6 Documentation is completed according to work procedures and relevant persons are notified.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- customer service skills
- language, literacy and numeracy skills to:
  - communicate with others clearly and concisely, verbally and in writing
  - document test results and non-compliance defects neatly and legibly
  - read and comply with work instructions and specifications
  - read and interpret final design documentation and manufacturers’ instructions
  - read and record measurements
- planning and organising skills to:
  - estimate time to complete activities
  - prioritise tasks
- skills to work safely when:
  - applying workplace housekeeping procedures
  - identifying work area hazards in preparation for inspection and test procedures
- removing debris caused by inspect and test operations in the work area
- selecting and using tools, equipment and materials for specific tasks
- interpersonal skills to relate to people from a range of social and cultural backgrounds
- technical skills to:
  - check routine service details of fire alarm system components and materials
  - identify and isolate zone circuits, plant, back-to-base facilities, actuators and other system interfaces
  - perform routine monthly and six-monthly inspect and test procedures according to AS 1851 Maintenance of fire protection systems and equipment
  - physically isolate actuators to inhibit operation
  - reset CIE to operational state
  - test actuators for operation and reset to operational state
  - verify compliance and functionality of CIE against monthly and six-monthly schedules in AS 1851 Maintenance of fire protection systems and equipment

**Required knowledge**

- action to take when a breach of OHS, ODS and SGG or other policy occurs
- awareness of on-site work permit requirements
- common controls and indicators on CIE
- detection and warning components connected to CIE
- environmental conditions that cause actuators to create false alarms
- federal, state or territory legislation that affects organisational operations, including:
  - anti-discrimination and diversity
  - equal employment opportunity
- industrial relations issues relevant to inspecting and testing CIE
- key features of legislation, regulations, codes and standards applicable to inspecting and testing CIE, including:
  - implications of not applying legislative requirements to job functions
  - intent of Australian standard AS 1851 Maintenance of fire protection systems and equipment, in relation to CIE inspect and test operations
- key functional differences between a conventional and addressable CIE
- key operational principles of CIE specifically interfaced to fire-suppression systems
- local controls (LC), local control stations (LCS), aural alarms, visual warning devices (VWD) and actuators on fire-suppression systems interfaced to CIE
- methodology used to conduct AS 1851 Maintenance of fire protection systems and equipment, monthly and six-monthly maintenance schedules relevant to conventional and addressable CIE
- operation of actuators
- safety requirements for using tools, equipment and materials
- tools, equipment and materials for conducting monthly and six-monthly inspect and test procedures on CIE according to AS 1851 procedures
- types of electrical safeguards used to protect persons and property
# Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Overview of assessment

This unit of competency could be assessed by observation of at least two practical demonstrations of inspecting and testing CIE specifically interfaced to different fire-suppression systems:

- conventional fire indicating panels and microprocessor analogue fire indicating panel fire detection systems
- fire alarm systems that comply with AS 1670 Fire detection, warning, control and intercom systems – Fire
- emergency warning and intercommunication systems that comply with AS 1670.4 Fire detection, warning, control and intercom systems - System design, installation and commissioning - Sound systems and intercom systems for emergency purposes
- fire alarm systems interfaced with activating mechanisms of a fire-suppression system.

The type of CIE interfaced to fire-suppression systems tested should correlate to the workplace setting of the candidate.

## Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit.

In particular the person should demonstrate the ability to:

- locate, interpret and apply relevant information, standards and specifications
- comply with site safety plan, OHS regulations, ODS and SGG regulations (where required), and state and territory legislation applicable to workplace operations
- comply with organisational policies and procedures, including quality requirements
- communicate and work effectively and safely with others
- organise work permits
- adhere to safety procedures during inspect and test procedures
- identify risk-reduction measures
- identify and locate system components and materials
- identify, select and use tools, equipment and test equipment
- identify and isolate alarm zone circuits, back-to-base facilities, actuators, plant and other system interfaces
- confirm that circuits, plant and other system interfaces are isolated
- complete mandatory and optional test and verification requirements applicable to installed fire-suppression systems
- perform test procedures on CIE interfaced to fire-suppression systems
- visually inspect fire-suppression systems
- identify and report non-compliance defects
- develop recommendations to rectify defects
- reset CIE and fire-suppression system to operational state without unwanted CIE outputs or alarms
- complete workplace housekeeping requirements
- complete records and documentation.

**Context of and specific resources for assessment**

Assessment of essential underpinning knowledge may be conducted in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include:
- access to customer premises or a simulated workplace environment
- assessment documentation
- necessary tools, specialist equipment, manuals and relevant documentation
- training and assessment record books.

**Method of assessment**

Assessment methods must:
- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

**Guidance information for assessment**

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

This unit could be assessed on its own or in combination with other
units relevant to the job function.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th>Occupational health and safety policies and procedures may relate to:</th>
<th>• assessing work site for hazards and risks prior to preparing it for work procedure</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>• displaying signs and using barriers in work area</td>
</tr>
<tr>
<td></td>
<td>• employer and employee rights and responsibilities</td>
</tr>

</tbody>
</table>

Organisational

• documentation and information systems and processes
### requirements may include:
- legal and organisational policies and guidelines, including personnel practices and guidelines outlining work roles, responsibilities and delegations
- legislation relevant to inspect and test operations for CIE
- OHS policies, procedures and programs
- procedures and work instructions to prevent the emission of ODS and SGG in the workplace
- use of electronic job scheduling and communication devices.

### Maintenance activity may include:
- actions to conduct routine maintenance according to AS 1851 Maintenance of fire protection systems and equipment
- actions to conduct non-routine maintenance, such as general isolation of a system to allow building works to be completed and subsequent resetting of the system after works completed.

### Hazards may include:
- environmental, including:
  - improper use of hazardous material and other chemicals
  - improper use or emission of ODS and SGG; emissions may be caused by:
    - conducting interface tests during commissioning, servicing and decommissioning procedures between container activating mechanisms, CIE and fire alarm system
    - installing and removing container valve assembly, manifold connection components and activating mechanisms
    - servicing and maintaining container valve assemblies
    - transporting, storing and manually handling containers containing ODS and SGG agents
  - ergonomic, such as incorrect manual-handling methods
  - obstructive, such as blocked access to emergency entry or exit points
  - any situation with a potential to cause loss
  - any source of potential harm
  - equipment in a work site
  - hazards associated with electrical or mechanical faults
  - people in a work site
  - work methods, plans and procedures.

### Work permits may include permits to:
- enter a work site
- enter a work site at specific times
- enter a restricted area within a work site
- ensure that specific OHS requirements are met before entering a work site.

### Relevant persons may
- building owners or nominated representatives
- colleagues
include:

- customers
- managers
- supervisors
- team leaders.

**System components and materials may include:**

- colour graphic visual display units (VDUs)
- fire indicator panel components
- mimic panels
- remote indicating equipment, such as:
  - standby batteries
  - sub-fire indicator panels
- fire detection equipment, such as:
  - data gathering control units
  - analogue and analogue addressable smoke, heat and gas detectors
- warning system equipment, such as:
  - alarm bells
  - mimic and location panels
  - warning and strobe lights
  - warning speakers
- fire-suppression systems equipment, such as:
  - actuators, such as pneumatic, electrical, mechanical and manual operation
  - container discharge valves
  - fittings, including hose fittings
  - flexible discharge hoses
  - pilot and slave tubes
- interface equipment to other fire protection and building services systems, such as:
  - door system release controls
  - electrical interface relays and contacts
  - flow switches and pressure switches
  - optical couplers
  - utility shutdown devices
  - solenoid valves and other activating mechanisms
  - interface communication devices, such as:
    - remote public address (PA) system outputs
    - two-way radios
    - warden intercommunication phones.

**Installation drawings may include:**

- installation drawings that meet the requirements of AS 4214 Gaseous fire extinguishing systems, and AS 1670 Fire detection,
warning, control and intercom systems, parts 1 and 4, including:
- ‘for construction’ drawings
- ‘as installed’ and ‘as built’ drawings.

**Control and indicating equipment** may include:
- fire indicating panels (FIP) approved to AS 1603 Automatic fire detection and alarm systems or AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment
- equipment specifically interfaced to fire-suppression systems:
  - actuation circuit supervision indicators
  - alarm operation requirements
  - discharge time delays
  - dual zone operations
  - inhibit discharge switches
  - inoperative status indicators
  - shutdown operations
  - system operation indicators
  - system warning indications.

**Legislative and industry requirements** may include:
- building surveyor requirements, such as occupancy permits
- dangerous goods regulations
- environmental regulations, including ODS and SGG legislation, codes and regulations
- fire protection industry codes of good practice
- licensing arrangements, such as EAHL
- manufacturers’ system manuals
- OHS legislation, codes and regulations
- relevant federal, state and territory building Acts, regulations and codes, such as:
  - Ozone Protection and Synthetic Greenhouse Gas Management Act 1989
  - Building Code of Australia (BCA)
- relevant Australian standards, such as:
  - AS 1603 Automatic fire detection and alarm systems
  - AS 1670 Fire detection, warning, control and intercom systems, parts 1 and 4
  - AS 1851 Maintenance of fire protection systems and equipment
  - AS 4214 Gaseous fire extinguishing systems
  - AS 4428 Fire detection, warning, control and intercom systems – control and indicating equipment
- note: Australian standards are frequently revised and users must always check for currency and amendments
- other relevant legislation relating to fire protection equipment,
### Documentation may include:
- corrective action reports
- customer recommendation forms
- equipment recommendation forms
- expense claims
- job cards
- maintenance record system
- manufacturers’ system documentation
- product documentation
- service agreements
- service test record logbooks
- test results and test reports.

### Work procedures may include:
- assignment instructions
- equipment manufacturers’ requirements
- instructions from colleagues, supervisors and managers
- ODS, SGG and OHS requirements
- PPE requirements
- reporting and documentation requirements
- specific customer requirements.

### Tools, equipment and test devices may include:
- hand tools, including:
  - hammers
  - pliers
  - screwdrivers
  - spanners
  - spirit levels
- fire equipment spare parts, including:
  - anti-tamper seals
  - batteries
  - bulbs and globes
  - service tags
- manual-handling aids, including:
  - hand trucks
  - lifting straps
  - trolleys
- power tools, including:
  - battery powered drills
  - hammer drills
servicing tools and test devices, including:
- barcode readers
- electrical multimeters
- hydrostatic test equipment
- recharging and pressurising equipment
- safety equipment
- scales
- service tag punches
- simulator actuators
- sound meters.

**System interfaces** may include:
- building management systems
- building warning systems
- controls for pressurisation systems, air conditioning system shutdowns and smoke spills
- operating signals between CIE and building services systems, such as utility shutdown devices.

**ODS and SGG extinguishing agents** may include:

### Note list format:
product name (other names) use

Check the latest amendments to the Ozone Protection and Synthetic Greenhouse Gas Management Act for the current list of ODS and SGG extinguishing agents.

- **ODS and SGG extinguishing agents commonly used in Australia:**
  - FM200 (FE-227 Heptafluoropropane, HFC-227ea) used as a total flooding extinguishing agent and as a replacement for Halon 1301
  - Halon 1211 (BCF, Halon 1211 BCF, Bromochlorodifluoromethane) used as a streaming agent – requires a special permit in Australia
  - Halon 1301 (BTM, Halon 1301 BTM, Bromotrifluoromethane) used as a total flooding agent – requires a special permit in Australia
  - NAF-P-III (HCFC Blend C) used as a streaming agent
  - NAF-P-IV (HCFC Blend E) used as a streaming agent
  - NAF-S-III (HCFC Blend A) used as a total flooding agent
  - SF6 (Sulfurhexafluoride) used as an inerting agent in sealed high voltage switchgear

- **ODS and SGG extinguishing agents not commonly used in Australia:**
  - Blitz III (HCFC Blend D) used in flooding systems
  - CFC-11 (Trichlorofluoromethane) may be found as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)
  - FC-2-1-8 (CEA-308) used in flooding systems
  - FC-3-1-10 (CEA-410) used in flooding systems
  - FC-5-1-14 (CEA-614) used as a streaming agent
- FE-13 (Trifluoromethane, HFC-23) used as a total flooding agent
- FE-241 (Chlorotetrafluoroethane, HCFC-124) used as a total flooding agent for non-occupied spaces and as a streaming agent
- FE-25 (Pentafluoroethane, HFC-125) used in inerting and explosion suppression applications
- FE-36 (Hexafluoropropane, HFC-236fa) used in portable fire extinguishers – is a replacement for Halon 1211 and Halon 1301
- FM100 (HBFC-22B1) used in portable fire extinguishers
- Halon 2402 (Dibromotetrafluoroethane) limited use in military systems – requires a special permit in Australia
- Halotron I (HCFC Blend B or HCFC-123) used as a total flooding agent and streaming agent
- Halotron II (blend of HFC-143a and HFC-125) used as a total flooding agent and as a replacement for Halon 1301
- HCFC-22 (Chlorodifluoromethane) used as a propellant in some powder fire extinguishers (this product is banned in Australia but may be found on incoming foreign vessels)
- HFC-134a (Unsymmetric tetrafluoroethane) used as a propellant in some powder fire extinguishers.

**Actuators** (also known as actuation control devices) may include:

- electrical operation: signal generated from CIE panel as part of a fire alarm detection system
- manual operation: by direct push lever or pull cable system
- mechanical operation: via signal from local control station or fire detector
- pneumatic operation: from fire detector (typically heat).

**Back-to-base facilities** include:

- monitoring equipment which is connected by alarm signalling equipment (ASE) from CIE to a communication path (telephone line or radio link) to a monitoring centre
- monitoring centres can be operated by or on behalf of a fire authority for the purposes of mobilising and directing firefighting resources to the site where the CIE is installed.

**Finalised design documentation** may include:

- documentation that meets the requirements of AS 4214 Gaseous fire extinguishing systems, and AS 1670 Fire detection, warning, control and intercom systems, parts 1 and 4, including:
  - system concentration and calculations
  - technical bulletins
  - material safety data sheets on agents and equipment
  - manufacturers’ information.

Unit Descriptor

Descriptor

This unit of competency describes the skills and knowledge required to recognise and respond to life threatening emergencies using basic life support measures only.

Application of the Unit

The skills and knowledge described here enable a first aider to provide an initial response to an emergency in line with practised actions, Australian Resuscitation Council (ARC) Guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations.

Application should be contextualised as required to reflect workplace and community requirements relating to specific risks and hazards and associated injuries.

Training Package users should ensure that implementation is consistent with State/Territory requirements for currency.

Employability Skills Information

Employability Skills

This unit contains Employability Skills.

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency. The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Respond in an emergency situation  
1.1 Recognise emergency situation and identify hazards to health and safety of self and others  
1.2 Minimise immediate risk to self and casualty health and safety by controlling any hazard in accordance with work health and safety requirements  
1.3 Assess casualty and identify injuries, illnesses and conditions  
1.4 Assess the need for assistance  |
| 2. Apply identified first aid procedures  
2.1 Reassure casualty in a caring and calm manner and make comfortable using available resources  
2.2 Determine and explain relevant first aid procedures to provide comfort  
2.3 Seek consent from casualty prior to applying first aid management  
2.4 Respond to the casualty in a culturally aware, sensitive and respectful manner  
2.5 Use identified first aid procedures as required in accordance with established first aid principles, ARC Guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations |
### ELEMENT  PERFORMANCE CRITERIA

2.6 Use safe manual handling techniques as required

3. Communicate details of the incident

3.1 Request ambulance support and/or appropriate medical assistance according to circumstances
3.2 Accurately convey observation of casualty’s condition and management activities to ambulance services/relieving personnel
3.3 Adopt a communication style to match the casualty’s level of consciousness
3.4 Accurately assess and report details of casualty’s physical condition, changes in condition, management and responses to management in line with established procedures
3.5 Maintain confidentiality of records and information in line with privacy principles and statutory and/or organisation policies

4. Evaluate own performance

4.1 Seek feedback from appropriate clinical expert
4.2 Recognise the possible psychological impacts on rescuers of involvement in critical incidents
4.3 Participate in debriefing/evaluation to improve future response and address individual needs

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

**Essential knowledge:**

The candidate must be able to demonstrate essential knowledge required to effectively do the task outlined in elements and performance criteria of this unit, manage the task and
REQUIRED SKILLS AND KNOWLEDGE

manage contingencies in the context of the identified work role

This includes knowledge of:

- ARC guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations, including requirements for currency
- Awareness of stress management techniques and available support
- Basic anatomy and physiology relating to:
  - absence of:
    - normal breathing
    - response/consciousness
    - choking/airway obstruction
    - severe bleeding
    - shock
- Chain of survival
- Duty of care requirements
- First aid procedures for:
  - airway management
  - bleeding control
  - care of unconscious
  - casualty that is unresponsive/unconscious and not breathing normally
  - chest pain
  - infection control as it relates to standard precautions
  - respiratory distress, including asthma
  - severe allergic reaction
  - shock
- How to access emergency response support services/personnel
- Need to be culturally aware, sensitive and respectful
- Own skills and limitations
- Privacy and confidentiality requirements
- Relevant workplace hazards
- Understanding of the use of an Automated External Defibrillator (AED), including when to use and when not to

Essential skills:

It is critical that the candidate demonstrate the ability to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role

This includes the ability to:

- Assess vital signs and response of casualty
REQUIRED SKILLS AND KNOWLEDGE

- Call an ambulance and/or medical assistance, according to circumstances and report casualty's condition
- Demonstrate first aid casualty management principles:
  - assess and minimise danger
  - check for response
  - maintain casualty's airway, breathing and circulation
- Demonstrate:
  - consideration of the welfare of the casualty
  - control of external bleeding
  - correct procedures for CPR on a resuscitation manikin (i.e. as per units HLT CPR211A Perform CPR)
  - implementation of standard precautions
  - safe manual handling of casualty
- Identify and minimise hazards to health and safety of self and others in the immediate workplace or community environment
- Plan an appropriate first aid response in line with established first aid principles, ARC Guidelines and guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations and respond to contingencies in line with own skills
- Report details of emergency incident and first aid provided

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Critical aspects of assessment:

- The individual being assessed must provide evidence of specified essential knowledge and essential skills
- Competence should be demonstrated working individually and as part of a first aid team.
- Consistency of performance should be demonstrated over the required range of situations relevant to the workplace or community setting
- Currency of knowledge and skills is to be demonstrated in line with ARC Guidelines, guidelines of Australian national peak clinical bodies and State/Territory legislation and regulations
EVIDENCE GUIDE

Context and resources required for assessment:

- For assessment purposes, demonstration of skills in CPR procedures requires using a model of the human body (resuscitation manikin) in line with ARC Guidelines
- Demonstration of first aid procedures for severe bleeding must be demonstrated using standard precautions and first aid equipment including trauma dressings

Access and equity considerations:

- All workers in the health industry should be aware of access and equity issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities

Related unit:

- This unit stands alone and incorporates the content of unit HLTCP211A Perform CPR

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.
RANGE STATEMENT

**Condition of the casualty must include, but is not limited to:**

- Severe bleeding
- Absence of:
  - Response/conciousness
  - Normal breathing
  - Choking/airway obstruction
  - Severe allergic reaction

**Identified first aid procedures must include:**

- Airway management
- Cardiopulmonary Resuscitation (CPR)
- Control severe bleeding
- Provide assistance with self-administered medications, such as auto-injector, bronchodilator and space device in line with State/Territory legislation and regulations and any available medical/pharmaceutical instructions
- Care of the unconscious person

**Resources and equipment are used appropriate to the risk to be met and may include:**

- AED (if available)
- Auto-injector
- Bronchodilator and space device
- First aid kit
- Resuscitation mask or barrier

**A hazard is:**

A source or situation with the potential for harm in terms of human injury or ill-health, damage to property, the environment, or a combination of these

**Appropriate clinical expert may include:**

- Ambulance officer/paramedic
- Appropriately qualified health care professional

**Unit Sector(s)**

Not Applicable
HLTHIR403C Work effectively with culturally diverse clients and co-workers

Modification History

Unit Descriptor
Descriptor
This unit deals with the cultural awareness required for effective communication and cooperation with persons of diverse cultures

Application of the Unit
Application
Work will be within a prescribed range of functions involving known routines and procedures with some accountability for the quality of outcomes

The workplace context may be:
- Specific community
- Community or regional service
- Department of a large institution or organisation
- Specialised service or organisation

Application of this unit should be contextualised to reflect any requirements, issues and practices specific to each workplace

Elements and Performance Criteria Pre-Content

Elements define the essential outcomes of a unit of competency. The Performance Criteria specify the level of performance required to demonstrate achievement of the Element. Terms in italics are elaborated in the Range Statement.

Elements and Performance Criteria

**ELEMENT**

1. Reflect cultural awareness in work practice

   **PERFORMANCE CRITERIA**

   1.1 Demonstrate awareness of culture as a factor in all human behaviour by using culturally appropriate work practices

   1.2 Use work practices that create a culturally and psychologically safe environment for all persons

   1.3 Review and modify work practices in consultation with persons from diverse cultural backgrounds

2. Accept *cultural diversity* as a basis for effective workplace and professional relationships

   **PERFORMANCE CRITERIA**

   2.1 Show respect for cultural diversity in all communication and interactions with co-workers, colleagues and clients

   2.2 Use specific *strategies to eliminate bias and discrimination* in the workplace

   2.3 Contribute to the development of workplace and professional relationships based on acceptance of cultural diversity

3. Communicate effectively with culturally diverse persons

   **PERFORMANCE CRITERIA**

   3.1 Show respect for cultural diversity in all communication with clients, families, staff and others

   3.2 Use communication constructively to develop and maintain effective relationships, mutual trust and
**ELEMENT** | **PERFORMANCE CRITERIA**
--- | ---
 | confidence
3.3 Where language barriers exist, make efforts to communicate in the most effective way possible
3.4 Seek assistance from interpreters or other persons as required

4. Resolve cross-cultural misunderstandings

4.1 Identify issues that may cause conflict
4.2 If difficulties or misunderstandings occur, consider the impact of cultural differences
4.3 Make an effort to sensitively resolve differences, taking account of cultural considerations
4.4 Address any difficulties with appropriate people and seek assistance when required

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This describes the essential skills and knowledge and their level required for this unit.

**Essential knowledge:**

The candidate must be able to demonstrate essential knowledge required to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role.

This includes knowledge of:

- Availability of resources and assistance within and external to the organisation in relation to cultural diversity issues
- Own cultural conceptions and pre-conceptions and perspective of diverse cultures
- Recognition of cultural diversity in Australian society with many individuals living in many cultures
- Recognition of cultural influences and changing cultural practices in Australia and its impact on diverse communities that make up Australian society
- Recognition of culture as a dynamic social phenomenon
REQUIRED SKILLS AND KNOWLEDGE

- Recognition of culture as a range of social practices and beliefs evolving over time
- Recognition of impact of cultural practices and experiences on personal behaviour, interpersonal relationships, perception and social expectations of others
- Recognition of the unique way individuals may experience a culture and respond to past experiences
- Recognition that the word 'normal' is a value-laden, excluding concept that often precludes acknowledgment of the diversity of people, their life experiences and situations
- The principles of equal employment opportunity, sex, race, disability, anti-discrimination and similar legislation and the implications for work and social practices
- The role and use of language and cultural interpreters

Essential skills:

It is critical that the candidate demonstrate the ability to effectively do the task outlined in elements and performance criteria of this unit, manage the task and manage contingencies in the context of the identified work role

This includes the ability to:

- Apply culturally respectful practices in the workplace and to demonstrate respect and inclusiveness of culturally diverse people in all work practices
- Form effective workplace relationships with co-workers and colleagues of diverse backgrounds and cultures
- Participate in identifying and implementing culturally safe work practices
- Respond respectfully and sensitively to cultural beliefs and practices that may cause harm
- Sensitively and respectfully communicate with persons of diverse backgrounds and cultures
- Use basic conflict resolution and negotiation skills
- Use effective strategies to address and eliminate discrimination and bias in the workplace

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate this competency unit:

- The individual being assessed must provide evidence of specified essential knowledge as well as skills
- This unit is most appropriately assessed in the workplace or a simulated workplace environment under the normal range of work conditions
- Assessment should be conducted on more than one occasion to cover a variety of circumstances to establish consistency
- Holistic assessment of this competency unit is encouraged, to ensure application of these skills in conjunction with specific work functions but the unit may be delivered and assessed independently

Access and equity considerations:

- All workers in the health industry should be aware of access and equity issues in relation to their own area of work
- All workers should develop their ability to work in a culturally diverse environment
- In recognition of particular health issues facing Aboriginal and Torres Strait Islander communities, workers should be aware of cultural, historical and current issues impacting on health of Aboriginal and Torres Strait Islander people
- Assessors and trainers must take into account relevant access and equity issues, in particular relating to factors impacting on health of Aboriginal and/or Torres Strait Islander clients and communities

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional
RANGE STATEMENT

contexts.

Work practices may relate to:
- Dealing with persons of diverse gender, sexuality and age
- Compliance with duty of care policies of the organisation
- Collection and provision of information
- Communication
- Provision of assistance
- Contact with families and carers
- Physical contact
- Care of deceased persons
- Handling personal belongings
- Provision of food services

Work practices that are culturally appropriate would be non-discriminatory and free of bias, stereotyping, racism and prejudice.

Cultural diversity may include:
- Ethnicity
- Race
- Language
- Cultural norms and values
- Religion
- Beliefs and customs
- Kinship and family structure and relationships
- Personal history and experience, which may have been traumatic
- Gender and gender relationships
- Age
- Disability
- Sexuality
- Special needs

Communication may be:
- Verbal
- Appropriate gestures and facial and physical expressions
- Posture
RANGE STATEMENT

- Written
- Signage
- Through an interpreter or other person

Strategies to eliminate bias and discrimination may include:

- Cross cultural work teams
- Cross cultural employee representation on committees
- Workplace free of culturally insensitive literature, posters, signage
- Inclusion in decision-making

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate word-processing applications and perform basic operations, including creating and formatting documents, creating tables and printing labels.

Application of the Unit

This unit applies to workers who perform a range of routine tasks in the workplace using fundamental knowledge of word processing under direct supervision or with limited responsibility.

Operating a word-processing application is a core function and essential skill for most businesses.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

</tbody>
</table>
| 5. Create tables | 5.1 Insert standard table into document  
5.2 Change cells to meet information requirements  
5.3 Insert and delete columns and rows as necessary  
5.4 Use formatting tools according to style requirements |   |
| 6. Add images | 6.1 Insert appropriate images into document and customise as necessary  
6.2 Position and resize images to meet document formatting needs |   |
| 7. Print documents | 7.1 Preview document in print preview mode  
7.2 Select basic print settings  
7.3 Print document or part of document from printer |   |

**Required Skills and Knowledge**

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- communication skills to:
  - communicate with peers and supervisors  
  - seek assistance and expert advice  
- literacy skills to:
  - interpret user manuals and help functions  
  - read and write basic workplace documents  
- problem-solving skills to address common operational problems when using word-processing applications  
- technical skills to:
  - operate a personal computer (PC)  
  - use a keyboard to enter text and numerical data.

**Required knowledge**

- formatting styles and their effect on formatting, readability and appearance of documents  
- organisational requirements for ergonomics, such as work periods and breaks
Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

Where applicable, physical resources should include equipment modified for people with special needs.

Method of assessment

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- verbal or written questioning to assess candidate’s knowledge of word-processing operations
- direct observation of candidate creating and formatting documents
- review of documents prepared by candidate demonstrating word-processing skills, including formatting, tables and images.

Guidance information

Holistic assessment with other units relevant to the industry sector,
for assessment

workplace and job role is recommended, where appropriate. Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.

Indigenous people and other people from a non-English speaking background may need additional support.

In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Ergonomic work practices may include: | • pause exercises  
| • personal strategies:  
| • chair height  
| • footrests  
| • monitor and keyboard alignment  
| • monitor reflection angle  
| • task and postural variety. |
| Ergonomic work environment may relate to: | • air quality  
| • furniture and storage  
| • lighting  
| • noise  
| • temperature. |
| Information requirements may include: | • agendas  
| • letters  
| • memos  
| • minutes  
| • other business documents required by the organisation. |
| Formatting tools may include: | • menu commands within the application:  
| • borders  
<p>| • copy, cut and paste |</p>
<table>

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to connect to the internet, securely send and receive emails, search the internet using web browsers and interact securely and in a socially responsible manner with a range of different internet sites.

Application of the Unit
This unit applies to individuals who use business technology to perform a range of routine tasks in the workplace or home office. They use fundamental knowledge of internet connection requirements, email and web browsers to perform tasks under direct supervision or with limited responsibility.

Licensing/Regulatory Information
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Elements</th>
<th>Performance Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Connect to and access the internet</td>
<td>1.1 Connect to the internet through the existing internet connection and confirm functionality</td>
</tr>
<tr>
<td></td>
<td>1.2 Open an internet browser and set a home page of personal choice by setting internet options</td>
</tr>
<tr>
<td></td>
<td>1.3 Ensure internet browser software security</td>
</tr>
<tr>
<td></td>
<td>1.4 Adjust the display of the internet browser to suit personal requirements</td>
</tr>
<tr>
<td></td>
<td>1.5 Modify toolbar to meet user and internet browser needs</td>
</tr>
<tr>
<td></td>
<td>1.6 Access a particular website, note privacy and other conditions of use and retrieve data</td>
</tr>
<tr>
<td></td>
<td>1.7 Use socially responsible behaviour when sharing information on the internet</td>
</tr>
<tr>
<td></td>
<td>1.8 Enter uniform resource locator (URL) in address line of internet browser</td>
</tr>
<tr>
<td>2. Use email for communications</td>
<td>2.1 Open email application package, create new email message and add addressees</td>
</tr>
<tr>
<td></td>
<td>2.2 Compose the text of an email message according to organisational guidelines and spell check and edit text as required</td>
</tr>
<tr>
<td></td>
<td>2.3 Create and add an automatic signature for the user</td>
</tr>
<tr>
<td></td>
<td>2.4 Attach files to the email message where required</td>
</tr>
<tr>
<td></td>
<td>2.5 Determine and set a priority and send the email message</td>
</tr>
<tr>
<td></td>
<td>2.6 Reply to and forward a received message using available features</td>
</tr>
<tr>
<td></td>
<td>2.7 Open and save an attachment to the relevant folder</td>
</tr>
<tr>
<td>2.8 Search for, sort and save email message using available settings</td>
<td></td>
</tr>
<tr>
<td>2.9 Adjust email accounts to restrict and quarantine possible <em>email security</em> problems</td>
<td></td>
</tr>
<tr>
<td>2.10 Print an email message as required</td>
<td></td>
</tr>
</tbody>
</table>

| 3. Search the internet |
| 3.1 Review organisational guidelines on internet access |
| 3.2 Open an internet application and locate and access a *search engine* on the internet and define search expressions based on the data required |
| 3.3 Enter appropriate key words into the search engine to locate the desired information |
| 3.4 Refine a search depending on outcomes of the original search |
| 3.5 Save search expression results and present them in a report according to the information requirements |
| 3.6 Create a bookmark within the internet browser or a link for the required web page for the key results |
| 3.7 Save the key results in a bookmark folder |
| 3.8 Modify the internet browser options for printing and print a web page |
| 3.9 Close the internet browser |

| 4. Access and use consumer-specific sites on the internet |
| 4.1 Identify, access and review information-specific sites to gain consumer information |
| 4.2 Identify and use *internet application sites* to lodge details and gain access and information |
| 4.3 Access and use online forms on the internet |

| 5. Undertake online transactions |
| 5.1 Access an online transaction site |
| 5.2 Ensure security of transaction site |
| 5.3 Enter required information into fields on merchant's website |
| 5.4 Ensure that pop-up dialog boxes, prompts or feedback mechanisms are completed |
5.5 Enter, check and make changes to preferred transaction options
5.6 Complete online transaction
5.7 Record and archive receipts according to business processes
5.8 Close down and leave transaction process

| 6. Conduct an advanced search | 6.1 Use search tools and advanced search features
|                             | 6.2 Use Boolean search techniques when required to enhance the search
|                             | 6.3 Use multiple or meta-search tools with a range of key words
|                             | 6.4 Use search engines particular to a field of knowledge to refine the outcome
|                             | 6.5 Access related virtual community sites and newsgroups and note their objectives and operational arrangements
|                             | 6.6 Conduct a search with domain names to refine the search

| 7. Use information that has been located | 7.1 Cross-reference information found by using several websites to determine accuracy of information obtained
|                                           | 7.2 Check date that website was last updated or properties of website to determine currency of information
|                                           | 7.3 Determine website authority by looking at copyright statements, privacy statements and organisational information
|                                           | 7.4 Save and print information found in different file forms

**Required Skills and Knowledge**

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- communication skills to:
  - communicate with peers and supervisors
  - seek assistance and expert advice
  - undertake online transactions
- literacy skills to:
  - compose email messages
  - interpret user manuals and help functions
  - read and interpret basic online documents
  - read and write basic workplace documents
- problem-solving skills to address common operational problems when using web browsers
- research skills to locate varied sources of information online
- technical skills to use:
  - digital device
  - email applications
  - internet search functions
  - peripheral hardware
  - keyboard to enter text into web browsers and email applications.

**Required knowledge**

- basic technical terminology related to reading help files and prompts
- basic knowledge of copyright and privacy statements
- different types of messages that occur, such as:
  - error messages
  - message to install plug-ins
- different types of search engines
- procedures for using email applications
- procedures for evaluating and assessing the authority, reliability and authenticity of information
- internet search functions
- internet speed, traffic loads related to times of accessing the internet
- internet web browsers
- makeup and structure of internet addresses
- organisational guidelines on internet and email use (web etiquette or netiquette)
- different internet search techniques
- web browser update techniques
- use of key words and bookmarks.

**Evidence Guide**

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

• Google Chrome  
• Internet Explorer  
• Konqueror  
• Lynx  
• Mozilla  
• Netscape Navigator  
• Opera  
• Phoenix. |
| Internet options may include: | • configuring:  
• history  
• home page  
• location of temporary files  
• privacy level  
• security level  
• type of connection. |
| **Browser software security** may include: | • application enabling  
• cookie handling  
• pop-up blocking  
• privacy levels  
• security zones  
• trusted sites. |
| **Socially responsible behaviour** may relate to: | • not using obscene, profane, lewd, vulgar, rude, inflammatory or threatening language  
• not publishing information that, if acted upon, could cause damage to property or persons, nor publish deliberately false or defamatory information about a person or organisation  
• not engaging in personal attacks, including prejudicial or discriminatory attacks, not harass (distress or annoy) another person  
• not accessing material that is profane, obscene, pornographic or paedophilic, that promotes illegal acts, or that advocates violence or discrimination  
• not sending inappropriate emails  
• taking responsibility for protecting personal information by not revealing personal information, including names, addresses, photographs, credit card details and telephone numbers. |
| **Organisational guidelines** may include: | • content of emails  
• downloading information and accessing particular websites  
• opening mail with attachments  
• personal use of emails and internet access  
• virus risk (MS Windows OS and Mac OS only). |
| **Files** may include: | • email messages  
• HTML pages  
• music  
• PDF files  
• pictures  
• text files. |
| **Email security** may relate to: | • taking steps to restrict:  
  • malware  
  • phishing  
  • spam. |
| **Search engine** may include: | • Alexa Internet  
• AllTheWeb  
• AltaVista |
### Internet application sites may include:
- consumer:
  - banking
  - shopping
  - education and training
  - government
  - health
  - interest groups
  - news
  - travel.

### Transaction options may include:
- currency
- delivery address
- freight
- invoice address.

### Boolean search may include terms:
- AND
- OR
- NOT
- NAND
- NOR
- NE
- GE
- LE
- GT
- LT.

</table>

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate spreadsheet applications and perform basic operations, including creating and formatting spreadsheet data, incorporating charts and objects, and customising and printing spreadsheets.

Application of the Unit

This unit applies to individuals who perform a range of routine tasks in the workplace using a fundamental knowledge of spreadsheets under direct supervision or with limited responsibility.

The use of spreadsheets for business and mathematical applications is widespread. In some cases, spreadsheets can operate as sophisticated computerised ledgers and enable the collation, manipulation and presentation of complex data.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.
# Elements and Performance Criteria

</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>

## Elements and Performance Criteria

1. **Create spreadsheets**

   1.1 Open spreadsheet application, create spreadsheet files and enter numbers, text and symbols into cells according to information requirements
   1.2 Enter *simple formulas and functions* using cell referencing where required
   1.3 Correct formulas when error messages occur
   1.4 Use a range of common tools during spreadsheet development
   1.5 Edit columns and rows within the spreadsheet
   1.6 Use the auto-fill function to increment data where required
   1.7 Save spreadsheet to directory or folder

2. **Customise basic settings**

   2.1 Adjust page *layout* to meet user requirements or special needs
   2.2 Open and view different *toolbars*
   2.3 Change *font settings* so that they are appropriate for the purpose of the document
   2.4 Change *alignment* options and line spacing according to spreadsheet *formatting features*
   2.5 *Format* cell to display different styles as required
   2.6 Modify margin sizes to suit the purpose of the spreadsheets
   2.7 View multiple spreadsheets concurrently

3. **Format spreadsheet**

   3.1 Use formatting features as required
   3.2 Copy selected formatting features from another cell in the spreadsheet or from another active spreadsheet
   3.3 Use *formatting tools* as required within the spreadsheet
   3.4 Align information in a selected cell as required
3.5 Insert headers and footers using formatting features  
3.6 Save spreadsheet in another format  
3.7 Save and close spreadsheet to *storage device*

4. Incorporate object and chart in spreadsheet  
4.1 Import an object into an active spreadsheet  
4.2 Manipulate imported *object* by using formatting features  
4.3 Create a chart using selected data in the spreadsheet  
4.4 Display selected data in a different chart  
4.5 Modify chart using formatting features

5. Print spreadsheet  
5.1 Preview spreadsheet in print preview mode  
5.2 Select basic printer options  
5.3 Print spreadsheet or selected part of spreadsheet  
5.4 Submit the spreadsheet to *appropriate person* for approval or feedback

**Required Skills and Knowledge**

*This section describes the skills and knowledge required for this unit.*

**Required skills**

- communication skills to:  
  - communicate with peers and supervisors  
  - seek assistance and expert advice  
- literacy skills to:  
  - interpret user manuals and help functions  
  - read and write basic workplace documents  
- numeracy skills to enter simple formulas into spreadsheet  
- problem-solving skills to address common operational problems when using spreadsheet applications  
- technical skills to:  
  - operate a personal computer (PC)  
  - use a keyboard to enter text and numerical data.

**Required knowledge**
- basic technical terminology related to reading help files and prompts
- formatting styles and their effect on formatting, readability and appearance of spreadsheets
- log-in procedures relating to accessing a PC
- purpose, use and function of spreadsheet application.

**Evidence Guide**

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.*

<table>

</tr>
<tr>
<td>IGIN</td>
<td>• appropriate learning and assessment support when required.</td>
</tr>
</tbody>
</table>

**Method of assessment**

A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:

- verbal or written questioning to assess candidate’s knowledge of spreadsheet operations
- direct observation of candidate creating and formatting spreadsheets
- review of spreadsheets, including formatting, formulas, objects and images.

**Guidance information**

Holistic assessment with other units relevant to the industry
for assessment

sector, workplace and job role is recommended, where appropriate.

Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.

Indigenous people and other people from a non-English speaking background may need additional support.

In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

**Range Statement**

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.*

| Simple formulas and functions may include: | • addition  
• division  
• multiplication  
• subtraction  
• application of the above to a series of cells. |
|------------------------------------------|--------------------------------------------------|
| **Tools may include:**                   | • help  
• search and replace  
• simple formatting tools  
• spell check  
• undo. |
| **Edit may relate to:**                  | • adding  
• copying  
• deleting  
• moving  
• pasting  
• selecting. |
| **Data may include:**                    | • symbols added to the document  
• text added to the document. |
| **Layout may include:**                  | • display modes  
• orientation |
| **Toolbars** may contain: | • size. |
| • buttons |
| • menus |
| • a combination of both. |
| **Font settings** may include: | • colour |
| • size |
| • type. |
| **Alignment** may refer to: | • centred |
| • justified |
| • left |
| • right. |
| **Formatting features** may include: | • bold |
| • hyphenation |
| • italics |
| • underline. |
| **Format** may refer to: | • saving the spreadsheet as another type of document: |
| • comma separated values or text |
| • HTML |
| • XML. |
| **Formatting tools** may include: | • menu commands within the application: |
| • copy |
| • cut |
| • help |
| • paste |
| • search and replace |
| • spell check |
| • undo. |
| **Storage device** may include: | • disks: |
| • CD |
| • DVD |
| • blu-ray |
| • external hard drive, such as universal serial bus (USB) flash drive |
| • internal hard drive |
| • web storage area. |
| **Object** may include: | • items that can be inserted into the spreadsheet, such as: |
| • other documents |
| • pictures |
| • sound. |
**Appropriate person** may include:

- authorised business representative
- client
- supervisor.

<td>This Unit first released with ICA11 Information and Communications Technology Training Package version 1.0</td>
</tr>
</tbody>
</table>

Unit Descriptor
This unit describes the performance outcomes, skills and knowledge required to select, configure and use computer operating systems and basic computer hardware.

Application of the Unit
This unit applies to workers who require the information and communications technology (ICT) skills to select and install operating system software on to a specific hardware configuration. This includes configuring the operating system to work with a variety of hardware peripherals and types of ICT equipment.

The ability to communicate effectively, simplify and solve technical incompatibility conflicts and problems are key components of this ICT support role.

Licensing/Regulatory Information
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.
### Elements and Performance Criteria Pre-Content

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>Element</th>
<th>Performance Criteria</th>
</tr>
</thead>
</table>
| 1. Identify operating system and hardware components | 1.1 Determine ICT *organisational requirements* and specifications  
1.2 Identify and select *operating system*  
1.3 Identify appropriate *external hardware components*  
1.4 Identify *internal hardware components* |
| 2. Install and configure operating system and application software with hardware components | 2.1 Install and configure operating system to meet organisational requirements  
2.2 Identify the functions associated with the operating system and associated boot process  
2.3 Configure *power-management settings* to minimise power consumption as an environmentally sustainable measure  
2.4 Use both the graphical user interface and the command line interface to perform basic tasks  
2.5 Install or upgrade *application software* onto the operating system and hardware configuration  
2.6 Determine the relationship between an application program, the operating system and hardware  
2.7 Identify general differences between the different *computer platforms* and their respective operating systems |
| 3. Optimise operating system and hardware components | 3.1 Optimise operating system using included tools or *third-party utilities*  
3.2 Customise the graphical user interface  
3.3 Use techniques unique to the command line interface  
3.4 Set up and configure external hardware components and check functionality  
3.5 Install drivers as appropriate and check functionality |
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with peers and supervisors
  - seek assistance and expert advice
- literacy skills to:
  - interpret user manuals and help functions
  - read and write basic workplace documents
- problem-solving skills to address common operational problems when using computer operating systems and operating computer hardware
- technical skills to:
  - apply user changes for a multi-user operating system
  - configure, use and optimise operating system
  - create users for a multi-user system
  - install and support peripheral devices
  - operate a personal computer (PC)
  - set passwords for different users
  - use PC peripheral hardware.

Required knowledge

- basic knowledge of current industry-accepted operating system, hardware and software products
- compatibility of an operating system, in respect to other versions
- function of single-user and multi-user operating systems
- interoperability between operating systems
- OHS principles and responsibilities, including ergonomic principles to avoid injury associated with using computer systems.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Guidance information for assessment | Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate. |
Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed.

Indigenous people and other people from a non-English speaking background may need additional support.

In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

## Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Organisational requirements may include: | • maintenance procedures  
• OHS procedures  
• security procedures. |
|----------------------------------------|-------------------------------------------------|
| External hardware components may include: | • Bluetooth device  
• fax  
• modem  
• keyboard  
• laptop  
• mobile phone  
• monitor  
• mouse  
• multimedia kit  
• PC  
• personal digital assistant (PDA), such as palmtop  
• printer  
• scanner  
• speaker  
• tape cartridge  
• universal serial bus (USB) device  
• wi-fi router. |
| Internal hardware components may include: | • cabling  
• central processing unit (CPU) |
include:
- memory chip
- motherboard
- network interface card
- sound card
- video display card.

**Power-management settings** after a period of non-use may include:
- automatic power off
- hibernation settings
- monitor power-saver settings.

**Application software** may include:
- databases
- email
- internet browsers
- spreadsheets
- system browsers
- word processing.

**Computer platforms** may include:
- Macintosh
- PC
- operating systems used on each.

**Third-party utilities** may include:
- backing up data
- diagnostic tools
- disk scanning
- partitioning and defragmenting
- recovery.

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to operate database applications and perform basic operations.

Application of the Unit

This unit applies to individuals who create and design databases using pre-existing data (e.g. documents, spreadsheet data, and data from database tables) or create new data when creating and manipulating databases and tables.

They may provide administrative support working under direct supervision or with limited responsibility.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

</tr>
</tbody>
</table>

#### 1. Create database

1. Open a database application and design a two-table simple relational database incorporating basic *design principles*
2. Develop a table with fields and *attributes* according to database usage, as well as user requirements
3. Create a primary key and establish an index for each table
4. Modify table layout and field *attributes* as required
5. Create a *relationship* between the two tables
6. Add and modify data in a table according to information requirements
7. Add and delete records as required
8. Save and close down database to *storage area*

#### 2. Customise basic settings

1. Adjust *page layout* to meet user requirements
2. Open and view different *toolbars*
3. Format *font* as appropriate for the purpose of the database entries

#### 3. Create reports

1. Design reports to present data in a logical sequence
2. Modify reports to include or exclude additional requirements
3. Distribute reports to *appropriate person* in a suitable format

#### 4. Create forms

1. Use a wizard to create a simple form
2. Open existing database and modify records through a simple form
3. Rearrange *objects* within the form to accommodate information requirements

#### 5. Retrieve information

1. Access existing database and locate required records
2. Create simple query and retrieve required information
Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - communicate with peers and supervisors
  - seek assistance and expert advice
- literacy skills to:
  - interpret user manuals and help functions
  - read and write basic workplace documents
- numeracy skills to create simple queries
- problem-solving skills to address inconsistencies in data and issues in database
- technical skills to create a simple database.

Required knowledge

- basic database design
- forms, reports and queries for retrieving and displaying information
- relationships between tables (cardinality)
- purpose, use and function of database software.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

- collect, organise and understand information related to work orders, installation plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any backtracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate installation problems, avoid reworking and avoid wastage
- use the limited workplace technology related to the installation, including tools, equipment and measuring devices

### Required knowledge

- the interpretation of plan representation of furniture design
- the preparation of drawings/set-outs
- workflow in relation to furniture production
- identification of hand and/or power tools, materials, equipment, processes and procedures
### Evidence Guide

**EVIDENCE GUIDE**

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

| Critical Aspects of Evidence | • Interpret work order and locate and apply relevant information  
|                            | • Follow work instructions, operating procedures and inspection practices to:  
|                            |   • minimise the risk of injury to self or others  
|                            |   • prevent damage to goods, tools, equipment or products  
|                            |   • maintain required production output and product quality  
|                            | • Install four different and significant furnishing products, including at least:  
|                            |   • one floor mounted, and  
|                            |   • one wall mounted  
|                            | • Work effectively with others  
|                            | • Modify activities to cater for variations in workplace context and environment |

| Resource Implications | Access to plans, hand and/or power tools, equipment, materials, woodworking machinery, furnishing products and a work area. |

| Method of Assessment | Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.  
|                      | Assessment should be by direct observation of tasks and questioning on underpinning knowledge.  
|                      | Assessment should be conducted over time and may be in conjunction with assessment of other units of competency. |

| Context of Assessment | Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines. |
## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

| Furnishing products for installation may include but are not limited to: | • kitchen cabinets  
• bathroom cabinets  
• wall units  
• desks  
• counters  
• wardrobes  
• dressing tables  
• entertainment units  
• laundry cabinets |
|---|---|
| Appliances to be installed may include but are not limited to: | • ovens  
• range hoods  
• sinks  
• basins  
• cooktops  
• refrigerators |
| Unit context | • OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures  
• Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements  
• Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the installation of furnishing products  
• Competency may be demonstrated on work sites of enterprises involved in the installation of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets |
| Tools and equipment may | • measuring tapes or rulers |
**RANGE STATEMENT**

**include but not be limited to:**
- hammers
- mallets
- squares
- bevels
- chisels
- levels
- plumb lobs
- planes
- hand saws
- power saws
- power plainers
- cordless drills
- screwdrivers
- power drills
- explosive fixing gun
- clamps
- supporting devices
- screwdrivers

**Materials to be used may include but are not limited to:**
- timber
- manufactured board
- laminates
- granite
- marble
- stainless steel
- adhesives
- screws
- nails
- masonry anchors
- dowels
- cavity wall fixing

**Product checking is to cover:**
- level
- plumb
- twirl
- and alignment of doors and/or drawers

**Personal protective equipment**
Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices

**Information and procedures**
- Workplace procedures relating to the use of tools and equipment
- Work instructions, including job sheets,

### Required Skills and Knowledge

| REQUIRED SKILLS AND KNOWLEDGE |
REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications and the reporting of work outcomes and problems
- plan and organise activities to avoid any backtracking or workflow interruptions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow
- use mathematical ideas and techniques to correctly complete measurements, calculate area, perimeter, volume, mass, scales and ratios and estimate material requirements
- use pre-checking techniques to anticipate measurement and drawing problems and avoid reworking
- use workplace technology related to measurement and drawing, including tools, equipment, calculators and measuring devices

Required knowledge

- furniture design and planning criteria
- drawing techniques, technologies and processes
- furniture installation methods, criteria and techniques
- structural geometry
- measurement techniques and equipment/tools
- the theory and practice of calculations (addition, subtraction, multiplication, division)
- conventional signs and markings for plans and drawings

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Identify the factors relevant to the measurements and drawings
- Communicate effectively to enable accurate calculations, measurements and drawings
- Accurately measure and record particulars for
## EVIDENCE GUIDE

<table>
<thead>
<tr>
<th>Required sector sites and materials</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Draw accurate, scaled plans and elevations relevant to the site using manual or computer-aided methods</td>
</tr>
<tr>
<td>- Superimpose the furniture product accurately to scale onto the plan and elevation</td>
</tr>
<tr>
<td>- Identify and communicate on measurements and dimensions which may impact on manufacture and/or installation</td>
</tr>
</tbody>
</table>

### Resource Implications

- Information on the site and products for measurement and calculation, suitable work area appropriate to the activity, suitable site plans/drawings and/or specifications, and measuring, calculating and recording devices.

### Method of Assessment

- Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.
- Assessment should be by direct observation of tasks and questioning on underpinning knowledge.
- Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

### Context of Assessment

- Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

## Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Unit scope

This unit applies to the measurement and drawing of site layout related to the manufacture and installation of furniture, cabinets, glass, soft furnishings, upholstery, picture framing, and floor
## RANGE STATEMENT

<table>
<thead>
<tr>
<th>Covering Products</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drawing</td>
</tr>
<tr>
<td>Measurements</td>
</tr>
</tbody>
</table>

**Critical dimensions that may impact on manufacture and installation include:**

- the square of the structure
- angles floor to walls
- walls to ceiling
- vertical walls
- horizontal floor and ceiling
- service locations and critical structural criteria

**Calculations to include:**

- area
- perimeter
- volume
- mass
- scales and ratios (ingredients/elements and triangulation) and require the application of addition
- subtraction
- multiplication and division processes
- Calculations are to be performed both manually and with the aid of a calculator

**Unit context**

- Workplace health and safety requirements may include OH&S legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements

**Personal protection equipment**

- Personal protective equipment is to include that prescribed under legislation, regulation and enterprise policies and practices

**Information and procedures**

- Workplace procedures relating to the measuring and drawing of site layouts
- Work instructions, including job sheets, plans,

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Prepare for work | 1.1. Work instructions are used to determine job requirements, including design, tolerances, process, materials, finish and quantity  
1.2. Fabrication sequence are planned  
1.3. Procedures are determined for checking quality at each stage of the process  
1.4. Workplace health and safety requirements, including personal protection needs, are observed throughout the work  
1.5. Suitable work area is selected for the task  
1.6. Preparatory drawings and set-outs for tasks are completed  
1.7. Cutting list for components is developed  
1.8. Materials are selected following work instructions  
1.9. Tools and equipment suitable for fabrication are identified and checked for safe and effective operation |
| 2. Complete fabrication | 2.1. Materials are set out and prepared according to work instructions and components are marked according to industry practices  
2.2. Tools, machines and equipment are used in accordance with safety requirements and manufacturers’ specifications  
2.3. Components are fabricated and checked against set-outs for accuracy tolerances, fit and distortion  
2.4. Doors, drawers, shelves or decorative treatments are fitted as required  
2.5. Product is prepared for final finish, including the removal of bruises, scratches, dents and marks |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
2.6. | Product is checked against plans at identified checkpoints
3. | Finalise operation
3.1. | Faulty and/or defective equipment is tagged and reported in accordance with workplace practices
3.2. | Work area is cleaned, hand and/or power tools and equipment are cleaned, maintained and stored in accordance with workplace procedures
3.3. | Off-cuts and unused materials are collected and stored for reuse or disposed following workplace procedures
3.4. | Waste and scrap materials are dealt with following workplace procedures

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- collect, organise and understand information related to synthetic solid surface materials, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate area and estimate material requirements
- use pre-checking and inspection techniques to anticipate fabrication problems, avoid reworking and avoid wastage
- use the limited workplace technology related to fabrication, including tools, equipment and measuring devices

**Required knowledge**

- the types, characteristics, uses and limitations of synthetic solid surface materials
- the interpretation of plan representation of furniture design
REQUIRED SKILLS AND KNOWLEDGE

- the preparation of drawings and set-outs
- identification of hand and/or power tools, materials, machines, equipment, processes and procedures
- workflow in relation to furniture production

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Interpret work order and locate and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Follow work instructions, operating procedures and inspection processes to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - maintain required production output and product quality
- Fabricate a minimum of three synthetic solid surface material products, including at least one full benchtop
- Work effectively with others
- Modify activities to cater for variations in workplace context and environment

Resource Implications

Access to plans, hand and/or power tools, machines, equipment, materials, and a work area.

Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

- collect, organise and understand information related to CNC sizing operations, work orders, plans and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with site supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities, including the preparation and layout of the worksite and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, compute input data and estimate material requirements
- use pre-checking and inspection techniques to anticipate CNC sizing problems, avoid reworking and avoid wastage
REQUIRED SKILLS AND KNOWLEDGE

- use the workplace technology related to CNC sizing, including machinery, tools, equipment and measuring devices

Required knowledge

- types, characteristics, uses and limitations of CNC sizing machines
- CNC theory, practices and techniques
- characteristics of materials used and uses of products produced
- workflow processes
- procedures for reporting materials, product or equipment faults

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical Aspects of Evidence

- Locate, interpret and apply relevant information
- Apply safe handling requirements for equipment, products and materials, including use of personal protective equipment
- Identify materials used in the work process
- Follow work instructions, operating procedures and inspection practices to:
  - minimise the risk of injury to self or others
  - prevent damage to goods, equipment or products
  - maintain required production output and product quality
- Identify, set up and operate CNC sizing equipment, including the use of safety cut-outs and guards, to produce a range of complex cutting patterns to its full potential
- Conduct operator maintenance on the machine and related equipment
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

Resource Implications

CNC controlled equipment, standard operating procedures, unprocessed materials.
EVIDENCE GUIDE

**Method of Assessment**

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment should be conducted over time and may be in conjunction with assessment of other units of competency.

**Context of Assessment**

Assessment may occur on the job or in a workplace simulated facility with relevant process equipment, materials, work instructions and deadlines.

Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

**CNC machining and processing centres are to include three axis machining centre and may include:**

- multi-tasking machining centres
- flat-bed routers and mortiser

**Material to be machined and processed is to include:**

- solid timber and manufactured board

**Unit scope**

Work involves reading and interpreting drawings, selecting and installing tooling, setting jigs and fixtures, programming skills (sub-programs and parametrics), performance of CAM functions, downloading and storage of data to complete
## RANGE STATEMENT

<table>
<thead>
<tr>

## Unit context

- OH&S requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods code and local safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, manual handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate some discretion, judgement and problem solving skills in the set up and operation of machining and processing centres
- Competency may be demonstrated in workplaces involved in the manufacture of solid timber furniture, domestic furniture, commercial furniture, kitchen and bathroom cabinets and/or furniture components

## Tools and equipment are to include:

- stand-alone or integral computing systems and machine-specific tools

## Personal protective equipment

Personal protective equipment is to include that prescribed under legislation, regulations and enterprise policies and practices

## Information and procedures

- Workplace procedures relating to the use of tools and equipment
- Work instructions, including job sheets, cutting lists, plans, drawings and designs
- Workplace procedures relating to reporting and communication
- Manufacturers’ specifications and operational procedures

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

#### Required skills

- research, collect, organise and understand information related to production costing including the relevant technical, commercial, industrial and accounting requirements
- communicate ideas and information to enable clarification of the production and related requirements and to present the outcomes in an appropriate manner
- plan and organise activities to avoid backtracking and re-working of solutions
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly estimate and validate labour, materials and on-costs and calculate production costs
- create and apply systematic problem solving techniques to anticipate costing problems, avoid re-working and avoid wastage
- use the workplace technology related to costing, including calculators and measuring devices and computing/computer-aided systems

#### Required knowledge

- production systems documentation processes
- enterprise costing procedures
- mathematical formulae and processes relevant to costing
- components of labour costs
- enterprise/commercial approach to overhead costs
- enterprise/commercial approaches to warehousing and physical distribution costs
- enterprise information management processes, including storage requirements
## Evidence Guide

### EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

### Critical aspects of evidence

- Apply safety requirements throughout the work sequence, including the use of personal protective clothing and equipment
- For a significant mass production operation, determine the production and product costs using the following or equivalent steps:
  - obtain all information relevant to the determination of costs
  - interpret plans, specifications and instructions for production and materials to be used
  - estimate quantities of materials required
  - determine the types and amount of labour required to complete the work
  - estimate time required to complete the work
  - determine/calculate overheads
  - document the process and outcomes
- Work effectively with others

### Resource implications

Access is required to real or appropriately simulated situations involving estimation and costing of production operations and products.

Access is required to specifications and costs of relevant equipment and materials and information on labour costs and availability, on costs, safety costs, regulations, quality standards, and enterprise procedures.

Access is required to all necessary facilities and associated equipment, including calculators, computers and relevant software.

### Method of assessment

Assessment methods must confirm consistency or the potential for consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of performance and samples of work outcomes and questioning on underpinning knowledge.

Assessment may be conducted over time and may be in conjunction with assessment of other units of
## Evidence Guide

<table>
<thead>

<th>Context of assessment</th>
<th>Assessment may occur on the job or in a simulated workplace facility with a relevant scenario, simulated work instructions and deadlines.</th>
</tr>
</thead>
</table>

## Range Statement

### Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

### Unit Scope

- Work involves the estimating and costing of production and products in a significant mass production environment
- Work may involve referral of matters to other enterprise personnel

### Unit Context

- OHS requirements include legislation, building codes, material safety management systems, hazardous substances and dangerous goods codes and safe operating procedures
- Work is carried out in accordance with legislative obligations, environmental legislation, relevant health regulations, authorised handling procedures and organisation insurance requirements
- Work requires individuals to demonstrate organisational and administrative ability, discretion, judgement and problem solving skills

### Workplace Environment

- Work undertaken in accordance with established procedures involving a range of products, equipment and installation sites
- Interaction with customers and other personnel from the operator's workplace
- Use of relevant tools, equipment and resources, including:
### RANGE STATEMENT

| **Overhead costs** | Overheads may be calculated for a specific product or be a constant component based on historical records and may include such costs as rental/lease costs, utilities, non-production resources, depreciation of plant and equipment, warehousing margins, physical distribution unit costs, insurance and other costs incurred by doing business |
| **Information and procedures** | - Enterprise production plan and schedule  
- Enterprise financial management policy and procedures  
- Enterprise policy and procedures for cost and apportioning overheads  
- Labour employment costs (awards, EBA, contracts)  
- Material/supply costs (contracts, standing agreements, market rates, warehousing margins)  
- Physical distribution contracts or arrangements  
- Australian, international and enterprise quality standards and procedures |

## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Identify work requirements</td>
<td>1.1. Work requirements in the form of type of glass and the method of fixing are identified from work instructions</td>
</tr>
<tr>
<td></td>
<td>1.2. Workplace health and safety requirements for glazing/reglazing of windows and doors, including personal protection needs, are observed throughout the work</td>
</tr>
<tr>
<td></td>
<td>1.3. The process for fitting glass to window and door frames is identified</td>
</tr>
<tr>
<td>2. Prepare for work</td>
<td>2.1. Work sequence is planned in a logical order to suit the job</td>
</tr>
<tr>
<td></td>
<td>2.2. Tools, equipment and materials (less glass and frames) are selected and checked prior to use to ensure that they are appropriate for the work, serviceable and in a safe condition</td>
</tr>
<tr>
<td></td>
<td>2.3. Type of glass to be fitted and frames are selected to match:</td>
</tr>
<tr>
<td></td>
<td>2.3.1. customer order</td>
</tr>
<tr>
<td></td>
<td>2.3.2. existing glass type</td>
</tr>
<tr>
<td></td>
<td>2.3.3. requirements for security, noise or light control</td>
</tr>
<tr>
<td></td>
<td>2.3.4. Australian Standards</td>
</tr>
<tr>
<td></td>
<td>2.4. Glass is checked for type, size and imperfections</td>
</tr>
<tr>
<td></td>
<td>2.5. Glass fixing method is selected according to:</td>
</tr>
<tr>
<td></td>
<td>2.5.1. specification</td>
</tr>
<tr>
<td></td>
<td>2.5.2. type of glass and frame</td>
</tr>
<tr>
<td></td>
<td>2.5.3. security requirements</td>
</tr>
<tr>
<td></td>
<td>2.5.4. sealing methods</td>
</tr>
<tr>
<td></td>
<td>2.5.5. Australian Standards</td>
</tr>
<tr>
<td></td>
<td>2.6. Frame condition is assessed to ensure suitability for glazing in accordance with customer order and Australian Standards. Defective frames are reported</td>
</tr>
<tr>
<td>ELEMENT</td>
<td>PERFORMANCE CRITERIA</td>
</tr>
<tr>
<td>-------------------------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------</td>
</tr>
<tr>
<td>2. Fixing and sealing materials</td>
<td>2.7. Fixing and sealing materials are prepared by mixing or cutting to length as appropriate</td>
</tr>
<tr>
<td>3. Identify site conditions and</td>
<td>3.1. On-site difficulties are recognised and action taken to resolve in accordance with regulations and workplace requirements</td>
</tr>
<tr>
<td>restraints</td>
<td>3.2. Covering material is applied where necessary to protect existing fixtures and fittings</td>
</tr>
<tr>
<td></td>
<td>3.3. Special characteristics of the window or door which may affect the finished job are identified and corrective action taken</td>
</tr>
<tr>
<td>4. Perform glazing</td>
<td>4.1. Frame is prepared to receive glass by:</td>
</tr>
<tr>
<td></td>
<td>4.1.1. Checking size against specification</td>
</tr>
<tr>
<td></td>
<td>4.1.2. Removing remains of glass and any sealants</td>
</tr>
<tr>
<td></td>
<td>4.1.3. Cleaning</td>
</tr>
<tr>
<td></td>
<td>4.1.4. Surface preparation (if required)</td>
</tr>
<tr>
<td></td>
<td>4.2. Glass is fixed to the frame using the selected method and in accordance with recognised industry procedures and Australian Standards</td>
</tr>
<tr>
<td></td>
<td>4.3. Solvents and sealants are used in accordance with manufacturer recommendations and Australian Standards</td>
</tr>
<tr>
<td></td>
<td>4.4. Excess sealing material is removed</td>
</tr>
<tr>
<td></td>
<td>4.5. Glass and frame are cleaned after fixing</td>
</tr>
<tr>
<td>5. Complete work</td>
<td>5.1. Completed installation is checked to ensure compliance with customer requirements and specifications</td>
</tr>
<tr>
<td></td>
<td>5.2. Tools, equipment and materials are cleaned and stored following workplace procedures</td>
</tr>
<tr>
<td></td>
<td>5.3. Work area is cleaned and left in a safe condition and rubbish disposed of as appropriate</td>
</tr>
<tr>
<td></td>
<td>5.4. Waste and scrap materials are removed for disposal or recycling as required</td>
</tr>
<tr>
<td></td>
<td>5.5. Workplace documentation is completed in accordance with workplace requirements</td>
</tr>
</tbody>
</table>
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- collect, organise and understand information related to work orders, basic plans, and safety procedures
- communicate ideas and information to enable confirmation of work requirements and specifications, coordination of work with work supervisor, other workers and customers, and the reporting of work outcomes and problems
- plan and organise activities including the preparation and layout of the work area and the obtaining of equipment and materials to avoid any back tracking, workflow interruptions or wastage
- work with others and in a team by recognising dependencies and using cooperative approaches to optimise workflow and productivity
- use mathematical ideas and techniques to correctly complete measurements, calculate work requirements, optimise glass sizes for economical cutting and assemble required materials
- use pre-checking and inspection techniques to plan work, avoiding re-working and wastage
- use the limited workplace technology related to the glazing of simple window and door frames

Required knowledge

- the qualities and characteristics of glass, including the hazards and handling requirements
- the techniques, methods, materials and process of glazing simple/complex window and door frames
- workplace safety system requirements related to the glazing simple/complex window and door frames
- relevant Australian Standards
- workflow in relation to fitting glass
- characteristics, purpose and operation of tools and equipment used in glazing simple/complex window and door frames
- identification of equipment, processes and procedures

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the
EVIDENCE GUIDE

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>

<td></td>
</tr>
<tr>
<td>- Re-glaze timber and metal windows and doors, including:</td>
<td></td>
</tr>
</tbody>
</table>
# Evidence Guide

- Prepare work area and drop sheets
- Select reglazing tools and equipment
- Hack out/remove beads and glass safely from timber windows and doors
- Remove and disassemble metal window sashes and doors and remove glass safely
- Select glass thickness and type in accordance with AS1288
- Calculate glazing clearance and cutting size
- Cut glass to industry standards AS4667
- Select glazing tools, equipment, glazing sealants, vinyls and tapes
- Glaze timber and metal windows and doors
- Install sash cords, unique and spring balances on timber and metal double hung windows
- Clean glass, tools, equipment and work area
- Work effectively with others
- Modify activities to cater for variations in workplace contexts and environment

## Resource Implications

Frames, glass, fixing material, sealants, workplace operating procedures and work orders, personal protective equipment and an appropriate work area/site.

## Method of Assessment

Assessment methods must confirm consistency of performance over time and in a range of workplace relevant contexts.

Assessment should be by direct observation of tasks and questioning on underpinning knowledge.

Assessment may be in conjunction with assessment of other relevant units of competency.

## Context of Assessment

Assessment may occur on the job or in a workplace simulated facility with relevant glazing equipment, materials, work instructions and deadlines.

## Range Statement

### Range Statement
**RANGE STATEMENT**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

<table>
<thead>
<tr>
<th><strong>Unit context</strong></th>
<th><strong>Glaze/re-glaze</strong></th>
<th><strong>Types of glass may include but are not limited to:</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>- Work is carried out in accordance with statutory requirements, environment legislation, manual handling procedures and relevant regulations and organisation insurance requirements</td>
<td>- Involves the installation of glass to metal and/or timber doors, windows and other frames and reglazing of existing windows and doors</td>
<td>- annealed glass</td>
</tr>
<tr>
<td>- OHS requirements may include legislation, standards, building codes, material safety management systems and local safe operating procedures</td>
<td>- Residential glazing/re-glazing is confined to simple doors and windows and may include:</td>
<td>- toughened glass</td>
</tr>
<tr>
<td>- Work requires individuals to demonstrate discretion, judgement and problem solving skills in the handling and installation of glass products</td>
<td>- residential windows, such as fixed, sliding, casement, awning and double hung and louvres</td>
<td>- laminated glass</td>
</tr>
<tr>
<td>- Work may be performed in workplaces which are involved in on-site and off-site fabrication, installation and/or replacement of glass to commercial or residential windows, doors and other openings or to other frames</td>
<td>- residential doors, such as sliding, hinged, pivot and bi-fold</td>
<td>- wired glass</td>
</tr>
</tbody>
</table>

Glazing or reglazing for non-residential situations is addressed in commercial and architectural/engineering AQF III units. Tinted and heat reflective glass may also be included.

Unit Descriptor

<table>
<thead>
<tr>
<th>Unit descriptor</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit of competency covers applying fabrication, forming and shaping of a wide variety of shapes and products undertaken by an Engineering Tradesperson - Fabrication using a variety of forming and shaping techniques. The fabrication, forming and shaping is done to specifications interpreted from technical drawings and job specifications using a variety of tools and equipment.</td>
</tr>
</tbody>
</table>

Application of the Unit

<table>
<thead>
<tr>
<th>Application of the unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>This unit of competency applies to fabrication, forming and shaping of plate, sheet and tubular ferrous and non-ferrous metal to specified measurements, tolerances and shapes. Skills covered by this unit are generally applied in occupational and work situations associated with steel fabrication, boilermaking or sheet metal work. This unit has been developed for Engineering Tradesperson - Fabrication apprenticeship training and the recognition of trade level skills in fabrication, forming and shaping. Predetermined standards of quality and safety are observed and work is carried out following standard operating procedures. This unit includes the ability to produce a wide range of shapes and products such as pipework, chamfers, cylinders, cones, angles, hoppers, ductwork, 'square to round', 'transitions', 'lobster backs' and all forms of tubular shapes, including hand rails, reticulation pipework and mufflers. Materials may include ferrous and non-ferrous and non-metallic materials. A variety of tools and equipment may be used including presses, shapers, benders, rollers</td>
</tr>
</tbody>
</table>
and drop hammers.

If heating or thermal cutting is required, MEM05007C Perform manual heating and thermal cutting should be accessed.

Where marking off/out skills are required, then MEM12007D Mark off/out structural fabrications and shapes should be selected. Where welding is required, relevant welding units should be selected.

This unit does not cover repetitive fabrication, bending and shaping of metal and non-metallic materials by production workers, trades assistants etc. such as where the bending or shaping equipment has been pre-set and the material to be fabricated, formed or shaped has been pre-marked up or pre-cut to size. This unit is also not intended to apply in situations where products or shapes are merely bent using hand tools or equipment.

### Required Skills and Knowledge

#### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

#### Required skills

Required skills include:
- selecting tools and equipment
- setting up and adjusting equipment
- calculating allowances
- taking measurements
- starting up and shutting down the machine
- positioning material
- positioning safety guards
- obtaining drawings and/or specifications
- selecting the most appropriate forming/shaping process to achieve the required size and specification
- forming/shaping material to size and specification
- checking the final form/shape of the object for conformance with specifications
- reworking the object to ensure conformance with specifications
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information

#### Required knowledge

Required knowledge includes:
- variety of hot and cold forming/shaping processes
- machines, tools and/or equipment required to perform forming/shaping processes
- reasons for selecting chosen tools, equipment and processes
- adjustments that can be made to the equipment and the effect of adjustments on the object being formed/shaped
- allowances when forming/shaping materials
- sources of data relating to allowances
- startup and shutdown procedures
- the material positioning/feeding requirements
- the location and function of all safety guards
- procedures for the forming/shaping process
- defects in formed/shaped materials
- defects that can be rectified by further work/adjustment
REQUIRED SKILLS AND KNOWLEDGE

- hazards and control measures associated with undertaking fabrication, forming and shaping, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to apply fabrication, forming and shaping techniques to meet specifications. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include:

- examining drawings and specifications to determine correct equipment to be used and sequence of fabrication, forming and shaping processes
- correctly identifying any specified tolerances
- correctly calculating allowances for shrinkage, thickness and inside/outside measurements
- setting up and safely operating equipment to ensure forming and shaping outcome is to specifications
- ensuring equipment is shut down and made safe
- carrying out hot and cold forming processes safely and to specifications including levelling, straightening, rolling, pressing or bending.

Context of and specific resources for assessment

This unit has been developed to support training in and recognition of trade level competency in fabrication, forming and shaping as applied to a sheet metal or metal fabrication environment. Assessment should emphasise a workplace context and procedures found in the
<table>
<thead>
<tr>
<th>EVIDENCE GUIDE</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>candidate's workplace.</td>
<td>The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.</td>
</tr>
<tr>
<td><strong>Method of assessment</strong></td>
<td>Typically, persons engaged in Engineering Tradesperson - Fabrication work are required to exercise fabrication, forming and shaping skills and techniques across a range of jobs and specifications.</td>
</tr>
<tr>
<td></td>
<td>A single assessment event is not appropriate. On the job assessment should be included as part of the assessment process wherever possible. Where assessment occurs off the job, judgement must consider evidence of the candidate's performance in a productive work environment that includes a sufficient range of appropriate tasks and materials to cover the scope of application for this unit.</td>
</tr>
<tr>
<td></td>
<td>Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency.</td>
</tr>
<tr>
<td></td>
<td>The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.</td>
</tr>
<tr>
<td><strong>Guidance information for assessment</strong></td>
<td>This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying fabrication, forming and shaping techniques or other units requiring the exercise of the skills and knowledge covered by this unit.</td>
</tr>
<tr>
<td></td>
<td>Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.</td>
</tr>
</tbody>
</table>
Range Statement

### RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. | 3. Prepare equipment for welding | 3.1. Welding equipment is set up correctly.  
| | 3.2. Settings and consumables are selected to suit application. |
| 4. Perform routine welding using GTAW | 4.1. Safe welding practices are applied.  
| | 4.2. Materials are welded to job requirements.  
| | 4.3. Welds are cleaned to standard operating procedures. |
Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- preparing materials
- setting up welding equipment
- welding with GTAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- using measurement skills for joint preparation and routine GTAW

Required knowledge

Look for evidence that confirms knowledge of:

- preparatory requirements
- properties and characteristics of materials and consumables
- equipment and equipment settings
- fuel gas properties and applications
- post welding treatments
- weld characteristics
- safe welding practices
- use and application of personal protective equipment for routine GTAW

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to perform routine gas tungsten arc welding (GTAW).
### EVIDENCE GUIDE

| Critical aspects for assessment and evidence required to demonstrate competency in this unit | Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts. |
| Context of and specific resources for assessment | This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with carrying out routine gas tungsten arc welding or other units requiring the exercise of the skills and knowledge covered by this unit. |
| Method of assessment | Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials. |
| Guidance information for assessment | |

### Range Statement

MEM05050B Perform routine gas metal arc welding

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers preparing materials and routine gas metal arc welding (GMAW). |

Application of the Unit

| Application of the unit | This unit applies in a maintenance or manufacturing environment where the weld quality is not required to meet an Australian Standard or equivalent. Fillet and butt welds would typically be performed on low carbon/mild steels. Where welding is required to meet Australian Standard 1554 General Purpose or equivalent codes, occupational health and safety regulations and/or licensing requirements, Unit MEM05017D (Weld using gas metal arc welding process) should be selected. |

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:
- preparing materials
- setting up welding equipment
- welding with GMAW
- reading and interpreting routine information on written job instructions, specifications and standard operating procedures
- following oral instruction
- using measurement skills relating to joint preparation and routine GMAW

Required knowledge

Look for evidence that confirms knowledge of:
- different current and voltage settings, gas flow rates wire diameters, wire feed speed and other variables to suit typical situations.
- material and equipment preparation
- properties and characteristics of materials and consumables
- equipment and equipment settings
- fuel gas properties and applications
- post-welding treatments
- weld characteristics
- safe welding practices
- use and application of personal protective equipment for routine GMAW

MEM10009B Install refrigeration and air conditioning plant and equipment

Modification History
Not Applicable

Unit Descriptor

| Unit descriptor | This unit covers installing refrigeration/air conditioning systems in commercial, industrial, marine and transport applications. |

Application of the Unit

| Application of the unit | This unit applies to refrigeration/air conditioning systems in commercial, industrial, marine and transport applications - refer to field definitions. All work is to be undertaken in accordance with all relevant Commonwealth, State or Territory legislation and regulatory requirements. Modifications and alterations are of a minor nature and do not require specification changes or technical recording, for example, the fitting of spacers, relocation of brackets, alignment of holes, etc. Work is undertaken using new or existing internal or external locations and sites. Footings, foundations, beds and frameworks are completed prior to installation. Work is undertaken autonomously or in a team environment using predetermined standards of safety, quality and workshop procedures. This unit should not be selected with Unit MEM10006B (Install machine/plant). Where extensive fitting and alignment is required, then Unit MEM18006C (Repair and fit engineering components) and Unit MEM18009B (Perform levelling and alignment of machines and engineering components) should also be selected. Where modifications involve electrical disconnection and |

Approved
reconnection, then Unit MEM18049C (Disconnect/reconnect fixed wired equipment up to 1000 volts a.c./1500 volts d.c.) should also be selected.

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

This section describes the skills and knowledge required for this unit.

**Required skills**

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking task-related information
- checking the site for correct location, dimensions and levels
- detecting and reporting non-conformance to specifications
- preparing surfaces for installation
- checking for conformance to specifications
- preparing plant for start-up
- adjusting refrigeration plant and equipment
- using appropriate tools, techniques and equipment

**Required knowledge**

Look for evidence that confirms knowledge of:

- procedures for non-compliances
REQUIRED SKILLS AND KNOWLEDGE

- procedures for checking the refrigeration/air conditioning plant and associated equipment
- procedures for making alterations, corrections or adjustments to the refrigeration/air conditioning plant and associated equipment
- correct sequential installation of all components
- methods of fixing/fastening and locating/holding the components
- procedures for checking refrigeration systems for leaks
- procedures for checking refrigeration/air conditioning plant and associated equipment prior to start-up
- procedures for adjusting the refrigeration/air conditioning plant and associated equipment to specification
- codes and regulations relevant to the refrigeration/air conditioning industry including environmental and ozone and greenhouse substance legislation
- hazards and control measures associated with installing refrigeration and/or air conditioning plant and associated equipment, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to install refrigeration and air conditioning plant and equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic

## Required Skills and Knowledge

### REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

### Required skills

Look for evidence that confirms skills in:

- planning and sequencing operations
- developing operating procedures for equipment as required
- selecting correct refrigerant for a given system
REQUIRED SKILLS AND KNOWLEDGE

- obtaining and interpreting drawings, instructions, specifications, procedures, codes and regulations
- testing and checking refrigeration components and systems including electrical safety checks and tests
- checking for conformance to specifications
- undertaking numerical operations within the scope of this unit
- determining pressures and temperatures
- documenting test results and procedures undertaken
- using equipment and test techniques
- identifying faulty components and system contamination
- applying safety procedures, standard operating procedures and legislative requirements to all work undertaken
- selecting appropriate materials, equipment and solutions for specific refrigeration systems

Required knowledge

Look for evidence that confirms knowledge of:

- operating principles of refrigeration systems
- characteristics, properties and operating specifications of each type of refrigerant
- safety precautions and work practices to be undertaken when handling or working with refrigerants
- methods of identifying stored refrigerants
- methods of identifying the type of refrigerant used in refrigeration systems
- relevant codes and regulations applying to refrigeration systems
- procedures and safety precautions for testing/checking refrigeration systems
- corrective actions for system and component faults including appropriate basic electrical safety checks
- types of leak detection equipment/techniques and their applications
- causes of contamination in refrigeration systems and their effect on refrigeration system performance
- procedures, tools and equipment to be used to clean up contaminated systems
- care and use of vacuum pumps
- tools, techniques and equipment required to carry out recovery procedures
- procedures for storing/disposing of recovered refrigerant
- consequences of releasing quantities of refrigerant into the atmosphere
- procedures for charging refrigeration systems
- correct refrigerant for a range of given applications
- tools, techniques and equipment required to charge a refrigeration system with refrigerant
- precautions to be taken when charging by various methods, refrigeration systems with refrigerant
REQUIRED SKILLS AND KNOWLEDGE

- procedures for checking level and adding lubricating oil
- properties and uses of refrigeration oil
- hazards and control measures associated with handling refrigerants, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

A person who demonstrates competency in this unit must be able to test, recover, evacuate and charge refrigeration systems. Competency in this unit cannot be claimed until all prerequisites have been satisfied.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.

Context of and specific resources for assessment

This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.

This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with the assessment, evacuation and charging of refrigeration systems, or other units requiring the exercise of the skills and knowledge covered by this unit.
EVIDENCE GUIDE

Method of assessment
Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Guidance information for assessment

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Relevant information
Manufacturers' technical data, pressure temperature charts, operating manuals

Appropriate operating procedures
In the case where specific equipment does not have standard operating procedures

Appropriate corrective action
Isolation and tagging of faulty components, repair and/or replacement

Contamination
Moisture, non-condensables, solids, acids etc.

Refrigerant
All refrigerants including CFCs, HCFCs, HFCs, natural refrigerants, ammonia, etc.

Relevant codes and regulations
Australian Standards Refrigeration and Air Conditioning codes of practice, relevant ozone
RANGE STATEMENT

| and greenhouse substance legislation |

RIICCM210A Install trench support

Modification History
Not applicable.

Unit Descriptor
This unit covers the installation of trench support in the civil construction industry. It includes planning and preparing, installing trench shoring, removing trench shoring, and cleaning up. Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors. Relevant information must be sourced prior to application of the unit.

Application of the Unit
This unit is appropriate for those working in an operational role at worksites within:
- Civil construction

Licensing/Regulatory Information
Refer to Unit Descriptor.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency. | Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide. |
## Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Plan and prepare            | 1.1. Access, interpret and apply **compliance documentation** relevant to the work activity  
1.2. Obtain and confirm **safety requirements** from the site safety plan and organisational policies and procedures, and apply to the allotted task  
1.3. Identify, obtain and implement **traffic control signage** requirements from the project traffic management plan  
1.4. Select plant, **tools and equipment** to carry out tasks consistent with the requirements of the job, check for serviceability and rectify or report any faults  
1.5. Identify **environmental protection requirements** from the project environmental management plan, and confirm and apply to the allotted task |
| 2 Install trench shoring      | 2.1. Communicate with plant operator to ensure the **excavation of trenches** complies with site plan, line and depth  
2.2. Determine and prepare **shoring method**  
2.3. Set out positioning of shoring  
2.4. Position or **erect shoring** within the trench  
2.5. Secure shoring in position and check to ensure structural conformity with regulations  
2.6. Clean out excavation out by hand to job requirements  
2.7. Provide ladders for access and egress to site safety plan requirements |
| 3 Remove trench shoring       | 3.1. Release jacking mechanisms and remove ladders  
3.2. Check shoring and prepare it for lifting from the trench  
3.3. Remove shoring from trench and store it on site |
| 4 Clean up                    | 4.1. Clear work area and dispose of or recycle materials in accordance with project environmental management plan  
4.2. Clean, check, maintain and store tools and |

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the
### Overview of assessment

#### Critical aspects for assessment and evidence required to demonstrate competency in this unit

The evidence required to demonstrate competency in this unit must be relevant to worksite operations and satisfy all of the requirements of the performance criteria, required skills and knowledge and the range statement of this unit and include evidence of the following:

- knowledge of the requirements, procedures and instructions for installing trench support
- implementation of requirements, procedures and techniques for the safe, effective and efficient completion of trench support installation
- working with others to undertake and complete the installation of trench support in a way that meets all of the required outcomes
- consistent timely completion of trench support installation that safely, effectively and efficiently meets the required outcomes
- installation of trench support on two projects in trenches deeper than 1.5 metres requiring the trench support to be installed, moved along or within the trench and removed from the trench

#### Context of and specific resources for assessment

- This unit must be assessed in the context of the work environment. Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of workplace performance, including task skills, task management skills, contingency management skills and job role environment skills.
- Assessment of this competency requires typical resources normally used in a resources and infrastructure sector environment. Selection and use of resources for particular worksites may differ due to the site circumstances.
- The assessment environment should not disadvantage the participant. For example, language, literacy and numeracy demands of assessment should not be greater than those required on the job.
• Customisation of assessment and delivery environment to sensitively accommodate cultural diversity.
• Aboriginal people and other people from a non English speaking background may have second language issues.
• Where applicable, physical resources should include equipment modified for people with disabilities. Access must be provided to appropriate learning and/or assessment support when required.

**Method of assessment**

This unit may be assessed in a holistic way with other units of competency. The assessment strategy for this unit must verify required knowledge and skill and practical application using more than one of the following assessment methods:

- written and/or oral assessment of the candidate’s required knowledge
- observed, documented and/or first hand testimonial evidence of the candidate’s:
  - implementation of appropriate requirement, procedures and techniques for the safe, effective and efficient achievement of required outcomes
  - consistent achievement of required outcomes
- first hand testimonial evidence of the candidate’s:
  - working with others to undertake and complete the trench support installation

**Guidance information for assessment**

Consult the SkillsDMC User Guide for further information on assessment including access and equity issues.

---

**Range Statement**

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and
regional contexts) may also be included.

| Relevant compliance documentation may include: | • legislative, organisational and site requirements and procedures  
  • manufacturer's guidelines and specifications  
  • Australian standards  
  • Employment and workplace relations legislation  
  • Equal Employment Opportunity and Disability Discrimination legislation |
| Safety requirements may include: | • OHS requirements in accordance with state or territory legislation and regulations, organisational safety policies and procedures, and project safety plan including: protective clothing and equipment, use of tools and equipment, workplace environment and safety, handling of materials, use of fire fighting equipment, use of First Aid equipment, hazard control and hazardous materials and substances  
  • safe operating procedures including recognising and preventing hazards associated with high voltage power lines, uneven/unstable terrain, trees, overhead service lines, bridges, surrounding buildings, obstructions, structures, facilities, dangerous materials, recently filled trenches, other machines, personnel, traffic control, working at heights, working in proximity to others, worksite visitors and the public  
  • safe parking practices including ensuring access ways are clear, equipment/machinery is away from overhangs and refuelling sites, safe distance from excavations, and secured from unauthorised access or movement  
  • recognising hazards and risks including uneven/unstable terrain, trees, fires, overhead and underground services, bridges, buildings, excavations, traffic, embankments, cuttings, structures and hazardous materials  
  • emergency procedures related to equipment operation including emergency shutdown and stopping, extinguishing equipment fires, organisational First Aid requirements and evacuation |
| Traffic control signage may include: | • site safety signage  
  • temporary signage for the benefit of motorists |

Application

This unit describes a participant’s skills and knowledge required to install trench support in Civil construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Unit Sector

Civil construction

Elements and Performance Criteria

| 1. Plan and prepare for installing trench support | 1.1 Access, interpret and apply trench support documentation, and ensure the work activity is compliant |
| 1.2 Obtain, read, interpret, clarify and confirm work requirements |
| 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures |
| 1.4 Select and wear personal protective equipment appropriate for work activities |
| 1.5 | Identify, obtain and implement traffic signage requirements   |
| 1.6 | Select, and check for faults, equipment and/or attachments for work activities |
| 1.7 | Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency |

2. Install trench shoring

| 2.1 | Communicate with plant operator and ensure the excavation of trenches complies with site plan, line and depth |
| 2.2 | Determine and prepare shoring method |
| 2.3 | Set out positioning of shoring |
| 2.4 | Position/erect shoring within the trench |
| 2.5 | Secure shoring in position and ensure structural conformity with regulations |
| 2.6 | Clean out excavation |
| 2.7 | Locate ladders for safe access and egress |

3. Remove trench shoring

| 3.1 | Release jacking mechanisms and remove ladders |
| 3.2 | Check shoring and prepare it for lifting from the trench |
| 3.3 | Remove shoring from trench and store it |

4. Conduct housekeeping activities

| 4.1 | Clear work area and dispose of or recycle materials |
| 4.2 | Clean and maintain condition of equipment, ensure suitability for use, and address/report issues |
| 4.3 | Manage/report hazards, and maintain a safe working environment |
| 4.4 | Process written records |

**Foundation Skills**

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

</table>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of trench support installation including:
  - selecting and using relevant tools/equipment
  - using shoring methods and systems
  - working in confined spaces
  - communicating effectively to confirm work requirements
- works effectively with others to undertake and complete the installation of trench support in a way that meets all of the required outcomes including:
  - using a range of communications techniques and equipment to convey information to others
  - complying with written and verbal reporting requirements and procedures
- demonstrates completion of installing trench support that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - installation of trench support in trenches deeper than 1.5 metres requiring the trench support to be installed, moved along or within the trench, and removed from the trench
Knowledge Evidence

The candidate must demonstrate knowledge of the following when installing trench support:

- accessing, interpreting and applying the organisation and site requirements and procedures for:
  - using JSAs/JSEA/safe work methods
  - achieving project quality outcomes
  - identifying and reporting on hazards related to the worksite and work activity
  - applying materials handling methods and using safety data sheets
- organising work activities
- using relevant tools and equipment safely
- equipment types, characteristics, technical capabilities and limitations
- excavation techniques
- construction techniques
- site isolation and traffic control responsibilities and authorities
- using civil construction terminology
- completing housekeeping activities

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
• assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction</td>
<td>1</td>
<td>1 Year</td>
</tr>
<tr>
<td></td>
<td>2</td>
<td>2 Years</td>
</tr>
<tr>
<td>Drilling, Coal Mining and Extractive (Quarrying)</td>
<td>3-6</td>
<td>3 Years</td>
</tr>
<tr>
<td>Metalliferous Mining and Civil Construction</td>
<td>3-6</td>
<td>5 Years</td>
</tr>
<tr>
<td>Other sectors</td>
<td></td>
<td>Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.</td>
</tr>
</tbody>
</table>

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant legislation, documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient preparation of work zone traffic management plans including:
  - accessing and interpreting plans, drawings, specifications and traffic management plan briefs
  - accessing and interpreting engineering survey information
  - accessing and interpreting hydrological, meteorological, cultural and heritage data
  - accessing and interpreting traffic analysis data
  - selecting and applying appropriate implementation techniques
  - applying engineering graphical presentation techniques
- works effectively with others to undertake and complete the preparation of work zone traffic management plans that meets all the required outcomes including:
  - complying with written and verbal reporting requirements and procedures
  - communicating clearly and concisely with others to receive and clarify work instructions
  - communicating clearly and concisely with others to coordinate work activities
- demonstrates completion of work zone traffic management plan that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - carry out risk assessments
• interpret and analyse data
• prepare a traffic management plan
• determine traffic management plan capacity requirements
• select traffic management plan options
• size traffic management plan components
• develop and applying traffic management plans
• calculate flow rates, level of service, capacities and percentages
• maintain plan and cost records
• prepare a cost estimate
• obtain plan approval
• complete and submitting plan cost
• participate in performance review of the plan process
• provide clarification and advice to those applying the plan
• perform a validation of the plan

Knowledge Evidence

The candidate must demonstrate knowledge in preparing work zone traffic management plans through:

• accessing, interpreting and applying legislative, organization and site requirements and procedures for:
  • risk assessment and management
  • statutory compliance
  • work health and safety
  • environmental management
  • cultural and heritage
  • quality management
  • Australian and other relevant standards
  • industry and organisational design
  • current industry best practice
  • traffic management plan options
  • traffic management plan geometrics
  • plan approvals and reviews
  • documentation, recording and reporting
  • performance reviews
  • systems close out
• potential hazards, constraints and conditions
• techniques for choosing preferred options
• team leadership techniques
• operational techniques
- traffic management plan implementation structures and capabilities
- cost estimation techniques
- principles of road user behaviour

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment; and,
- outcomes of this unit that occur in an office-based setting may be assessed in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>

Other sectors

Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

Application

This unit describes a participant’s skills and knowledge required to enter and work in confined spaces in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles undertaking work in confined spaces.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

| 1 Plan and prepare for working in confined space | 1.1 Access, interpret and apply procedures for confined space entry and the environmental management plan and ensure the work activity is compliant |
|                                               | 1.2 Obtain, confirm, clarify and apply work instructions and agreed procedure |
|                                               | 1.3 Obtain, confirm, clarify and apply safety requirements |
1.4 Obtain and confirm authorisation (entry permit) meets regulatory requirements
1.5 Confirm the emergency response procedure is with the stand-by person and understood
1.6 Identify, obtain and implement signage and barrier requirements
1.7 Select tools and equipment for the tasks, check for serviceability and rectify or report any faults
1.8 Identify, confirm and apply the environmental protection requirements
1.9 Position rescue equipment by the entry permit

<table>
<thead>
<tr>
<th>2 Work in confined space</th>
</tr>
</thead>

</tbody>
</table>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of entering and working in confined spaces that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - obtain appropriate entry permit and instructions for performing work in confined space
  - interpreting and applying safe work method statements
  - apply tagging and lock out
  - selecting, wearing and caring for personal protective equipment applicable to all tasks and environment identified
  - entering the confined space
  - using atmospheric monitoring devices prior to entering the confined space
  - working in the confined space
  - using atmospheric monitoring devices during confined space activity
  - applying safe materials handling methods
  - exiting the confined space
  - remove tagging and lock out
Knowledge Evidence

The candidate must demonstrate knowledge of enter and work in confined spaces through:

- identifying areas that constitute confined spaces
- complying with site and equipment safety requirements
- complying with the entry and exit procedures, risks and regulations
- types of air contaminants and toxic gases
- identifying the limitations of breathing apparatus
- identifying equipment types, characteristics, technical capabilities and limitations
- complying with site isolation and site control responsibilities and authorities
- locations of safety data sheets (SDS) information and application
- using confined space and Industry terminology

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector’s work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

</table>

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- demonstrates completion of controlling traffic with a stop-slow bat that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - reading and interpreting the work instruction and planning work activity accordingly
  - positioning signage and barriers
  - directing and controlling vehicle traffic
  - directing and controlling pedestrian traffic
  - communicating to drivers and pedestrians clearly using hand signals
  - using approved communication devices such as hand held radios or phones to transmit message and report of offenders
  - removing or covering signs after work completion

Knowledge Evidence

The candidate must demonstrate knowledge of controlling traffic with stop-slow bat through:

- site and equipment safety requirements
• traffic controlling requirements and procedures
• complying with traffic management plans
• erecting traffic control signage and barricades
• communication device operations
• determine equipment types, characteristics, technical capabilities and limitations
• operational and maintenance procedures for equipment
• detailing site isolation and traffic control responsibilities and authorities
• describing the effects of travel speed and vehicle mass on stopping distances
• interpreting and implementing safe work method statement

Assessment Conditions
• An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
• this unit is best assessed in the context of this sector’s work environment;
• where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
• this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
• assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
• assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
• assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
• where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
• assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>

</tbody>
</table>

Application

This unit develops a participant’s skills and knowledge required to implement a traffic management plan in Civil construction.

This unit is appropriate for those working in supervisory roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

*Note:* The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

| 1 Plan and prepare to implement traffic management plan | 1.1 Access, interpret and apply traffic management documentation and ensure the work activity is compliant |
| 1.2 Obtain, read, interpret, clarify and confirm work requirements |
| 1.3 Identify, address and report potential risks, hazards and environmental issues and implement control measures |
| 1.4 Select and wear personal protective equipment appropriate for the work activity |
| 1.5 | Identify, obtain and implement traffic control signage and devices |
| 1.6 | Select, and check for faults, tools and equipment to carry out tasks |
| 1.7 | Identify, confirm and apply environmental protection requirements |
| 1.8 | Check the designated traffic controllers’ training and qualifications for currency |
| 1.9 | Advise traffic controllers of the traffic flow requirements |

| 2.1 | Select traffic guidance scheme to suit site conditions, traffic volumes and work activities |
| 2.2 | Determine and ensure adherence to work schedule, maximum traffic delays, signals and site communications |
| 2.3 | Ensure signs and devices are correctly positioned on the approaches to the work area |
| 2.4 | Ensure that signs and devices are positioned and displayed on each approach |
| 2.5 | Ensure signs and devices are positioned and displayed laterally |
| 2.6 | Ensure traffic is controlled effectively to protect the work crew |

| 3.1 | Ensure traffic flow is monitored and effectiveness of guidance scheme determined |
| 3.2 | Monitor work activities and provide guidance to adjust scheme |
| 3.3 | Apply process for dealing with traffic controllers who fail to adhere to approved procedures |
| 3.4 | Apply procedures to deal with offending motorists |

| 4.1 | Ensure traffic is controlled to protect work crew removing control devices |
| 4.2 | Ensure signs are removed in sequence to provide maximum warning during removal |
| 4.3 | Ensure guidance scheme details are recorded and reported as required |
| 4.4 | Ensure incidents are recorded and reported as required |

| 5.1 | Ensure work area is appropriately cleared |
| 5.2 | Ensure tools and equipment are cleaned, checked, maintained |
Foundation Skills
Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- works effectively with others to undertake and complete the traffic management plans that meet all of the required outcomes including:
  - complying with written and verbal reporting requirements and procedures
  - communicating clearly and concisely with others to receive and clarify work instructions
  - communicating clearly and concisely with others to resolve coordination requirements prior to commencing and during work activities
- demonstrates completion of implementing traffic management plans that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - complying with State/Territory regulations on three separate live traffic projects, and
  - completing one (1) project controlling site construction vehicles
  - identify and select traffic guidance scheme according to conditions
  - identify and select traffic guidance scheme according to conditions select and implement signage and device requirements, position and display according to site plan
• monitor and adjust scheme according to variances in requirements
• apply procedures to deal with non-compliant crew and motorists

Knowledge Evidence
The candidate must demonstrate knowledge of implementing a traffic management plan through:
• accessing, interpreting and applying legislative, organization and site requirements and procedures for:
  • JSAs/JSEA/Safe work method statement
  • potential hazards and risks
  • controlling traffic
  • basic signalling
  • signs and devices
  • radio operations
• identifying equipment types, characteristics, technical capabilities and limitations
• identifying site isolation and traffic control responsibilities and authorities
• identifying quality requirements
• applying civil construction terminology

Assessment Conditions
• An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
• this unit is best assessed in the context of this sector’s work environment;
• where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
• this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
• assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
• assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
• assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
• where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,

• assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Performance Evidence

Evidence is required to be collected that demonstrates a candidate’s competency in this unit. Evidence must be relevant to the roles within this sector’s work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of the draining and dewatering of a civil construction site including:
  - selecting and using the required tools and equipment
  - interpreting and applying work instructions
  - draining surface water
  - constructing sumps and wells and removing water
- works effectively with others to undertake and complete the draining and dewatering of civil construction sites that meets all of the required outcomes including:
  - using a range of communication techniques to convey information to others
  - maintaining written and verbal reporting requirements and procedures
- demonstrates completion of draining and dewatering civil construction sites that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - dewatering a trench or pit using at least one type of pump
  - establishing sedimentation controls
  - constructing a sump
  - installing surface or submersible pumps
• pumping and dispersing water
• draining surface water from a site using surface drains

Knowledge Evidence
The candidate must demonstrate knowledge in draining and dewatering civil construction sites through:

• identifying and applying operational, maintenance and basic diagnostic procedures
• identifying and complying with construction principles
• interpreting engineering drawings
• identifying equipment types, characteristics, technical capabilities and limitations
• identifying and complying with site isolation and traffic control responsibilities
• using and interpreting civil construction terminology

Assessment Conditions
• An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
• this unit must be assessed in the context of this sector’s work environment; and,
• this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
• assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
• assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
• assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
• where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,
• assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

<table>
<thead>
<tr>
<th>Industry sector</th>
<th>AQF** Level</th>
<th>Required assessor or Industry subject matter expert experience</th>
</tr>
</thead>
<tbody>
<tr>
<td>Drilling, Metalliferous Mining, Coal</td>
<td>1</td>

</tr>
</tbody>
</table>

**Other sectors**

Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level**

Application

This unit describes skills and knowledge required to plan, organise and facilitate learning for individuals in a workplace, using real work activities as the basis for learning.

It applies to a person working as an entry-level trainer, teacher or facilitator or an employee, team leader or workplace supervisor responsible for guiding learning through work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Delivery and facilitation

Elements and Performance Criteria

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- preparing and facilitating work-based learning
- providing a minimum of two examples of developing work-based learning pathways, that include:
  - identifying needs for learning
  - analysing work practices, work environment and work activities
  - organising and allocating work in a way that reflects learning needs, and provides effective learning opportunities through work processes
- conducting a learning facilitation relationship:
  - with at least two individuals
  - demonstrating communication skills and flexibility
  - demonstrating one or more of the processes, or techniques, identified.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- systems, processes and practices within the organisation where work-based learning is taking place
- systems for identifying skill needs within the workplace
- different learning styles, and how to encourage learning for those who learn in different ways
- workplace health and safety (WHS) relating to the work role, including:
  - hazards relating to the industry and specific workplace
  - reporting requirements for hazards and incidents
  - specific procedures for work tasks
- safe use and maintenance of relevant equipment
- emergency procedures
- sources of WHS information.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment, and include access to any documentation relating to workplace procedures required by the candidate.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessors of this unit must hold the TAE50116 Diploma of Vocational Education and Training or the TAE50111 Diploma of Vocational Education and Training or be able to demonstrate equivalence of competencies.

TLIB3011A Set up and rig crane for lift

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to set up and rig a mobile crane for a lift, including the systematic positioning and stabilisation of the crane and its assembly. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations.

Work is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to the setting up and rigging of a crane prior to lift in a variety of operational contexts.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS
REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation and rigging of mobile cranes
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational procedures for crane crews
- Procedures for prioritising and multi-tasking work
- Procedures for fitting attachments and fly jibs
- Company work procedures concerning the setting up and rigging of a mobile crane at a worksite
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements
- Procedures for the identification and correct use of equipment, processes and procedures

Required skills:

- Communicate effectively with others when setting up and rigging a crane for a lift
- Read and interpret instructions, procedures, information and signs relevant to the setting up and rigging of a crane for a lift
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the setting up and rigging of a crane for a lift
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when setting up and rigging a crane for a lift
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unexpected events
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when setting up and rigging a crane for a lift
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating
Required skills:

- procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Monitor condition of equipment
- Fit fly jibs and attachments

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of:
  - applying the underpinning knowledge and skills
  - applying relevant legislation and workplace procedures
  - applying procedures for fitting attachments and fly jibs
  - demonstrating an understanding of the consultation processes

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and equipment, and
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
EVIDENCE GUIDE

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- by day or night
- in a variety of weather conditions
- using a workcage/workbox
- using a superlift attachment (300t and over cranes)

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
RANGE STATEMENT

- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:
- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:
- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff
- dogman/rigger

Requirements for access and/or lift may include:
- site restrictions and procedures
- authorities and permits
- hours of operation
- induction
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:
- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing

Documentation/records may include:
- site plans
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
RANGE STATEMENT

- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to carry out routine maintenance of a mobile crane, including obtaining and confirming job instructions and work specifications, coordinating the loading of gear and equipment, assessing job requirements and work areas, designing the job plan and setting up the work area. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit

Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations and maintenance.

Work is performed under general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine maintenance principles and procedures to servicing and maintenance of mobile cranes in a variety of operational contexts.

This unit applies to maintenance activity on equipment used by the operator and is limited to lubrication, fluid, filter and accessory changing and checks for cracks, surface or structural faults or other damage.

Licensing/Regulatory Information

</table>
ELEMENT | PERFORMANCE CRITERIA
--- | ---
 | tensions
4.4 Mechanical adjustments are made
4.5 The maintenance plan is followed and appropriate adjustments are made to the plan to deal with unexpected events
4.6 Own work and crane system operations are checked to ensure that the crane’s operational condition is to the required specifications
4.7 Tools, equipment and unused consumables are returned to the appropriate locations and waste is disposed of within workplace policy and procedures

5 Complete maintenance records
5.1 Accurate reporting of the results of the safety check and the maintenance conducted is completed and filed in accordance with procedures, industry guidelines and any statutory requirements
5.2 Clear reference in reports is made to any items which may not yet require maintenance but may affect the future working condition or safety of the mobile crane

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant regulations, permit and licence requirements pertaining to mobile crane operational safety and maintenance
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Operational safety and maintenance procedures for crane crews
- Use, characteristics, capabilities and limitations of the lubrication and adjustment tools and equipment
- Workplace procedures for the planning of mobile crane jobs and the setting up of work areas
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of crane systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements
Required skills:

- Communicate effectively with others when maintaining a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to the maintenance of a mobile crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to the maintenance of a mobile crane
- Work collaboratively with others when maintaining a mobile crane
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Plan own work including predicting consequences and identifying improvements
- Identify non-conformities which may compromise operational capability
- Implement contingency plans for unexpected maintenance issues
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Prioritise and multi-task work when maintaining a mobile crane
- Monitor work activities in terms of planned maintenance schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self, others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards
- Identify and correctly use crane equipment and related maintenance processes and procedures
- Service equipment in terms of maintenance schedule and standard operating procedures
- Check and replenish fluids and carry out lubrication processes when maintaining a mobile crane

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.
EVIDENCE GUIDE

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.
RANGE STATEMENT

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Maintenance may include:
- routine inspections of crane and its associated equipment
- checks prior to operations
- checks on completion of operations
- checks on completion of repairs

Routine checks/servicing may include:
- checking and topping up of water levels
- replacement of oils
- replacement of air in tyres
- checking pressure, fluid leaks, temperature
- checking tightness of bolts, fixtures, attachments and fittings to ensure they are within specifications
- checking for cracks, surface or structural faults or other damage

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:
- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Safety checks may include:
- warning devices
- operating lights or audible cues
- braking and transmissions
- lifting devices
- steering and suspension
- windscreen wipers
- isolation switches and shut down devices
- mechanical, electrical, electronic, hydraulic or pneumatic components
RANGE STATEMENT

Hazards may include:
- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials

- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- material safety data sheets
- communications technology equipment, oral, aural or signed communications
- personal and work area procedures and practices
- induction documentation
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations pertaining to the maintenance and safety of mobile cranes
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Unit Descriptor
Unit Descriptor
This unit involves the skills and knowledge required to undertake a site inspection in preparation for a lift requiring a mobile crane, including arranging the site inspection, clarifying customer requirements, defining job requirements and completing necessary records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Application of the Unit
Work must be carried out in compliance with the licence/permit requirements and regulations of the relevant state/territory authorities pertaining to mobile crane operations and safety.

Work is performed with general supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes. It involves the application of routine principles and procedures to conduct of site inspections prior to mobile crane lifts in a variety of operational contexts.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

### Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1  **Arrange site inspection** | 1.1 Available information about customer requirements is obtained from relevant personnel  
1.2 Need for site inspection is confirmed through appropriate questioning and discussion  
1.3 Mutually acceptable meeting time is arranged with customer  
1.4 Full customer details are recorded according to workplace procedures |
| 2  **Clarify customer requirements** | 2.1 Customer needs and perception of job are clearly established through appropriate questioning and discussion  
2.2 Alternative job methods are suggested where applicable and a safe and cost effective method negotiated with the customer  
2.3 Clients ability to provide any necessary competent personnel is ascertained |
| 3  **Define job requirements** | 3.1 Information regarding load and movement requirements is accessed and any necessary measurements are taken to enable accurate estimation of job requirements  
3.2 Specific scheduling needs are ascertained taking into account legislative and customer requirements  
3.3 Information from site inspection and customer is used to identify hazards and contingencies  
3.4 Specific site and job requirements are identified  
3.5 Lift study is arranged as required to provide additional information or meet customer expectations  
3.6 Necessity to be on site during lift is assessed in line with workplace policy taking into consideration complexity of job, potential hazards and expertise of available personnel  
3.7 Need for permits/authorisations is determined |
| 4  **Complete records** | 4.1 Required records are updated accurately, legibly and promptly according to workplace procedures |
ELEMENT PERFORMANCE CRITERIA
4.2 Records include all relevant information about the job

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements pertaining to mobile crane operation and safety
- Relevant OH&S and environmental procedures and regulations
- Mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- Site inspection procedures and protocols
- Operational procedures for crane crews for the conduct of a site inspection for a lift using a mobile crane
- Guidelines relating to the safe use of machinery and equipment
- Focus of operation of work systems and equipment
- Application of relevant agreements, codes of practice or other legislative requirements

Required skills:

- Communicate effectively with others when conducting a site inspection for a lift using a mobile crane
- Read and interpret instructions, procedures, information and signs relevant to a site inspection for a lift using a mobile crane
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to a site inspection for a lift using a mobile crane
- Work collaboratively with others when conducting a site inspection for a lift using a mobile crane
- Plan own work including predicting consequences and identifying improvements
- Prioritise and multi-task work
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems that may be identified when conducting a site inspection for a lift using a mobile crane in accordance with regulatory requirements and workplace procedures
Required skills:

- Implement contingency plans for unexpected events that may occur when conducting a site inspection for a lift using a mobile crane
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Identify and correctly use equipment, processes and procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is
EVIDENCE GUIDE

required to:
- relevant and appropriate materials and equipment,
- and
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment
- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Operations may be conducted:
- day or night
- in a variety of weather conditions

Environment may include:
- movement of equipment, goods, materials and vehicular traffic

Customers may be:
- internal or external

Mobile crane may be involved in work in a range of industry sectors including:
- construction and demolition
- manufacturing
- waterfront
- mining
- primary industry
- utilities (electricity, gas, water)
- arboricultural
- swimming pool
- quarrying

Sites may include:
- building and construction sites
- demolition sites
RANGE STATEMENT

- wharves
- tree lopping/removal sites
- mining sites

Hazards may include:

- power lines
- noise, light, energy sources
- overhead service lines
- surrounding buildings, structures, facilities
- underground services
- obstructions
- uneven or unstable ground and recently filled trenches
- stationary and moving machinery and equipment
- hazardous or dangerous materials
- traffic hazards and congestion
- other vehicles and personnel

Hazard management is:

- consistent with the principle of hierarchy of control with elimination, substitution, isolation and engineering control measures being selected before safe working practices and personal protective equipment

Consultative processes may involve:

- other employees and supervisors
- management
- union representatives
- clients
- industrial relations and OH&S specialists
- other professional or technical staff

Requirements for access and/or lift may include:

- site restrictions and procedures
- authorities and permits
- hours of operation
- induction processes
- slings, chains, nets, brackets and other specialised lifting equipment
- noise restrictions
- personal protective equipment
- support trucks
- additional gear and equipment
- communications equipment

Personal protective equipment may include:

- gloves
- safety headwear and footwear
- sunscreen, sunglasses and safety glasses
- two-way radios
- high visibility clothing
RANGE STATEMENT

Depending on the type of organisation concerned and the local terminology used, workplace procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- site plan
- Safe Working Load (SWL) and Working Load Limit (WLL)
- operations manuals including load charts and crane and rigging manuals
- induction documentation
- competency standards and training materials
- job specifications and procedures
- manufacturers specifications
- workplace operating procedures and policies
- supplier and/or client instructions
- communications technology equipment, oral, aural or signed communications
- personal and work area work procedures and practices
- conditions of service, legislation and industrial agreements including:
  - workplace agreements and awards
  - occupational health & safety procedures
  - standards and certification requirements
  - quality assurance procedures
  - emergency procedures

Applicable regulations and legislation may include:

- relevant state/territory regulations and licence/permit requirements pertaining to mobile cranes
- relevant state/territory road rules
- relevant state/territory OH&S legislation
- relevant state/territory environmental protection legislation

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1 Respond to the incident | 1.1 Response to the incident or accident is in accordance with workplace emergency procedures and relevant regulatory requirements  
1.2 Details of the cause(s) and effects of the incident are identified and reported  
1.3 Assistance requirements for accidents and emergencies are clarified and reported immediately to the appropriate parties  
1.4 Requests for assistance are made to relevant personnel and emergency services |
| 2 Control and assist at accident or emergency site | 2.1 Site is controlled and protected until the arrival of authorised personnel  
2.2 Assistance is provided to injured persons, within the limitations of duty of care and workplace procedures  
2.3 Relevant authorities at the site are cooperated with and assisted within workplace policies |
| 3 Finalise accident - emergency process and complete records | 3.1 Relevant information is exchanged in accordance with state/territory law and workplace procedures  
3.2 Documentation and reports are completed and processed in accordance with workplace and relevant regulatory requirements |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:

- Relevant regulatory and code requirements applicable in accident/emergency situations
- Relevant OH&S and environmental protection policies and procedures
- Workplace procedures for accident-emergency response
- Workplace emergency, fire and accident procedures
- Site layout
- Focus of operation of work systems, equipment or management, site and organisational operating and emergency procedures
- Typical problems that can occur during a safety incident, accident or emergency and related action that can be taken

Required skills:

- Communicate effectively with others when responding to an accident or an emergency
- Read and interpret instructions, procedures and information relevant to a response to an accident or an emergency
- Interpret and follow operational instructions and prioritise work
- Negotiate and resolve issues when responding to an accident or an emergency
- Complete documentation related to a response to an accident or an emergency
- Operate electronic communication equipment to required protocol
- Work collaboratively with others when responding to an accident or an emergency
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unplanned events that may occur when responding to an accident or an emergency
- Analyse the working environment in order to identify hazards, assess safety risks and design and implement appropriate OH&S control procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when responding to an accident or an emergency
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Select and appropriately apply technology, information systems and policies during a safety incident, accident or emergency
Required skills:

- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
EVIDENCE GUIDE

- through activities in an appropriately simulated environment at the registered training organisation, and/or
- in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Work may be conducted:
- in a range of work environments
- by day or night

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites

Work may be conducted in:
- limited or restricted spaces
- exposed conditions
- controlled or open environments
- even or uneven surfaces
- wet or dry surfaces

Workplace hazards may include but are not restricted to:
- moving heavy loads in an unsafe work environment
- unsecured machinery, components or repaired equipment
- slippery floors
- welding equipment
- sharp tools and implements
- power tools
- moving and rotating machinery
- flammable liquids, vapours and fuel
- faulty machinery equipment handling equipment and lifting gear
- using equipment beyond safe working limits
- poor housekeeping procedures
- non-compliance with safe working procedures
- electrical wiring and systems, including exposed electrical circuits
- working at heights and in confined spaces
- toxic gases and substances
RANGE STATEMENT

Consultative processes may involve:

- chemicals and other harmful substances
- damaged goods, pallets and containers
- dangerous/hazardous goods
- OH&S specialists
- trainers
- other employees and supervisors
- management
- union representatives
- manufacturers representatives
- supplier representatives
- customers/clients
- other maintenance, professional or technical staff

Depending on the type of organisation concerned and the local terminology used, workplace plans/procedures may include:

- company plans/procedures
- enterprise plans/procedures
- organisational plans/procedures
- established plans/procedures

Information/documentation may include:

- workplace accident-emergency procedures and policies
- workplace OH&S management system including hazard/safety risk control strategies
- OH&S training notes and materials
- journals and work related literature concerning OH&S
- competency standards
- customer/client instructions
- customer service standards and procedures
- workplace products and services information
- quality assurance standards and procedures
- relevant agreements, codes of practice including the national standards for services and operations
- manufacturers/suppliers' specifications, advice, recommended procedures, policies and instructions
- workplace guidelines on appropriate workplace language and communication strategies and interpretation of relevant information
- regulations and policies relating to minimising risks to the environment and ensuring compliance with OH&S requirements
- emergency procedures
- relevant regulations, standards and codes of practice
- hazardous substances and dangerous goods codes
- relevant Australian and state/territory OH&S legislation including regulations and codes of practice relating to
RANGE STATEMENT

hazards present in the workplace or industry, including:
- general duty of care under OH&S legislation and common law
- requirements for the maintenance and confidentiality of records of occupational injury and disease
- requirements for provision of OH&S information and training
- provisions relating to health and safety representatives and/or OH&S committees
- provisions relating to OH&S issue resolution
- environmental protection regulations
- relevant Australian standards and certification requirements including Australian Standard AS 1885.1

Unit Sector(s)

Competency Field

Competency Field F - Safety Management
TLIF2010A Apply fatigue management strategies

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to apply fatigue management strategies, including identifying and acting upon signs of fatigue and implementing appropriate strategies to minimise fatigue during work activities, in accordance with legislative and regulatory requirements. Licensing or certification requirements are not applicable to this unit.

Application of the Unit
Persons achieving competence in this unit will need to fulfil the applicable federal and state/territory legislation and relevant regulations covering the management of fatigue in the workplace.

Work is performed under some supervision generally within a team environment. It involves the application of the relevant regulations, codes and guidelines of the federal government and state/territory authorities concerning fatigue management during work activities and in particular when operating equipment, trains, vehicles, load shifting equipment, marine vessels and aircraft.

| 1 Identify and act upon signs of fatigue | 1.1 Potential causes of fatigue are identified and action is taken to minimise their effects in accordance with company procedures  
1.2 Personal warning signs of fatigue are recognised and necessary steps are taken in accordance with workplace procedures to ensure that effective work capability and alertness are maintained |
| 2 Implement strategies to minimise fatigue | 2.1 Workplace procedures are assessed to minimise fatigue  
2.2 Factors which increase the risk of fatigue-related accidents and safety incidents are understood and minimised  
2.3 Strategies to manage fatigue are implemented in accordance with company policy  
2.4 Lifestyle choices are made which promote the effective long-term management of fatigue  
2.5 Effective practices in combating fatigue are adopted and applied  
2.6 Personal fatigue management strategies are communicated to other relevant people  
2.7 Appropriate counter measures are planned to combat fatigue |

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.
REQUIRED KNOWLEDGE AND SKILLS

Required knowledge:
- Relevant codes, regulations, permit and licence requirements related to fatigue management
- Relevant OH&S regulations as they relate to fatigue
- Workplace policies and procedures related to fatigue management and the control of factors that can contribute to fatigue and fatigue-related accidents
- Sources of information on fatigue
- The risks and hazards created by fatigue in the workplace
- How fatigue affects workplace performance
- How fatigue contributes to workplace accidents
- Ways of recognising fatigue
- Strategies and ways of managing fatigue
- Causes and effects of fatigue on workers/drivers
- Factors which increase fatigue-related accidents
- Lifestyles which promote the effective long-term management of fatigue

Required skills:
- Communicate effectively with others when applying fatigue management strategies
- Read and interpret instructions, procedures, regulations and signs related to fatigue management and apply them to work activities
- Recognise symptoms of fatigue and take appropriate action in accordance with fatigue management regulations and workplace procedures
- Work collaboratively with others to manage and minimise the effects of fatigue during work activities
- Adjust lifestyle patterns to ensure effective fatigue management during work activities
- Modify activities and take appropriate initiatives to manage fatigue in the workplace depending on differing work contexts, risk situations and environments
- Apply precautions and required action to minimise and control the effects of fatigue when carrying out own work functions
- Adapt to changes in rosters and standard operating procedures as they may relate to fatigue management
- Participate in identifying and meeting own learning needs on matters related to fatigue management
Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation and workplace procedures
  - other relevant aspects of the range statement

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and other/or simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
  - In both real and simulated environments, access is required to:
    - relevant and appropriate materials and/or equipment, and/or
    - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment, and/or
  - in an appropriate range of situations in the workplace

Range Statement

RANGE STATEMENT
RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Workplace may include:
- any work environment requiring safety critical operational judgements to be made and in particular when operating equipment, vehicles, load shifting equipment, trains, marine vessels and aircraft at night

The need for fatigue management in a range of industry situations including:
- operations conducted at all times but particularly at night
- typical weather conditions
- while working and/or driving at a workplace, depot, base or warehouse
- while working and/or driving at a client's workplace or worksite
- driving a motor vehicle on the open road
- driving a motor vehicle on a private road
- driving a train, locomotive or motive power unit
- operating a marine vessel in coastal or international waters
- operating an aircraft
- operating load shifting equipment
- operating safety critical industrial plant and equipment

Work-related factors that may contribute to fatigue include:
- work demands such as: workload, work duration, shift pattern, time of day, frequency and duration of breaks and the type of work (such as working in isolation, repetitive tasks and boring, monotonous or under-challenging tasks)
- organisational factors such as: work environment (including temperature, ventilation, continual rhythmic vibration from equipment), payment system, trip and work scheduling, and the predictability of work

Worker/operator-related factors that may contribute to fatigue include:
- lifestyle factors such as: sleep patterns, alcohol and drug use, quantity and timing of food and drink, and opportunities for relaxation with family and friends
- working multiple jobs
- personal or biological factors such as: state of mental and/or physical health, inadequate sleep, sleep disorders, emotional stress, family responsibilities, relationship difficulties, inadequate competence to complete work tasks, and circadian rhythms

Responsibilities of individual for fatigue risk management may include:
- following the organisation's fatigue management policy and procedures
- using time away from work appropriately to rest and recover
- checking and ensuring fitness for work
- reporting symptoms of fatigue
RANGE STATEMENT

- taking action to minimise risk when symptoms of fatigue are recognised
- rosters
- vehicle schedules
- timetabling
- workplans
- standard operating procedures
- company procedures
- enterprise procedures
- organisational procedures
- established procedures
- federal and state/territory regulations and guidelines concerning fatigue management in various transport and workplace situations
- workplace instructions and procedures on fatigue management
- relevant OH&S regulations and procedures
- work schedules and shift rosters
- emergency procedures
- log book or record book (where required)
- records and reports of fatigue-related errors and safety incidents
- relevant standards and certification requirements
- quality assurance procedures
- relevant regulations and codes of the federal government and the state/territory regulatory authorities concerning fatigue management
- relevant state/territory road rules
- relevant rail industry safe working codes and regulations (where applicable)
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation

Competency Field

Competency Field  F - Safety Management
TLIF3084A Follow mobile crane safety procedures

Modification History
Not Applicable

Unit Descriptor
This unit involves the skills and knowledge required to follow and apply mobile crane safety procedures and OH&S procedures when carrying out mobile crane operations. It includes identifying and following mobile crane and workplace procedures for hazard identification and risk control, contributing to arrangements for the management of occupational health and safety, and completing all relevant safety records. Licensing, legislative, regulatory or certification requirements are applicable to this unit.

Application of the Unit
Work must be carried out in compliance with the relevant mobile crane safety and workplace procedures and OH&S regulations and procedures.

Mobile crane operations are performed under some supervision generally within a team environment. It involves the application of established mobile crane and workplace procedures, OH&S and hazard minimisation principles and procedures to the conduct of mobile crane operations.

PERFORMANCE CRITERIA

3 Complete workplace and occupational health and safety records

3.1 Mobile crane and OH&S records are completed in accordance with workplace requirements

3.2 OH&S records and legal requirements for the maintenance of records of occupational injury and diseases are followed

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant mobile crane safety procedures
- Relevant OH&S procedures and guidelines
- Risks associated with mobile cranes, and related precautions to control the risk
- Risks associated with multiple crane operations
- Hazards associated with crane operations on a demolition site
- Hazards associated with mobile crane operations on a construction site
- Lifting personnel using a workcage/workbox
- Reporting procedures in regard to unsafe situations, fire hazards, broken or damaged equipment or fittings, sickness and accidents
- Location and use of safety alarms, emergency shut-off systems, emergency communication systems
- Signs and signals used for warnings
- Terms used in material safety data sheets (where relevant)
- HAZCHEM symbols and implications for safe work and storage
- Storage and use of hazardous substances
- Handling of broken or damaged equipment
- Manual and mechanically assisted lifting and load shifting procedures
- Transport requirements for goods within workplace
- Mobile crane and workplace emergency and evacuation procedures
- Housekeeping standards and procedures required in the workplace
- Site layout and obstacles
Required skills:

- Communicate effectively with others when following mobile crane and OH&S procedures
- Read and comprehend simple statements in English
- Read and interpret relevant safety-related information including safety labels, instructions for safe work, relevant material safety data sheets, mobile crane and workplace procedures and codes of practice
- Identify containers and goods coding, ADG and IMDG markings and, where applicable, emergency information panels
- Interpret and follow operational instructions and prioritise work
- Complete documentation related to mobile crane procedures and OH&S in the workplace
- Operate electronic communication equipment to required protocol
- Estimate the size, shape and special requirements of loads
- Work collaboratively with others when following procedures
- Adapt appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- Promptly report and/or rectify any identified problems, faults or malfunctions that may arise when following mobile crane and OH&S procedures in accordance with regulatory requirements and workplace procedures
- Implement contingency plans for unanticipated situations that may occur when following mobile crane and OH&S procedures
- Apply precautions and required action to minimise, control or eliminate hazards that may exist during mobile crane operations and workplace activities
- Monitor work activities in terms of planned schedule
- Modify activities depending on differing operational contingencies, risk situations and environments
- Apply fatigue management knowledge and techniques
- Work systematically with required attention to detail without injury to self or others, or damage to goods or equipment
- Operate and adapt to differences in equipment in accordance with standard operating procedures
- Select and use required personal protective equipment conforming to industry and OH&S standards

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment
EVIDENCE GUIDE

guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
  - relevant legislation, mobile crane safety procedures and workplace procedures
  - procedures for identifying mobile crane safety hazards and OH&S issues
  - appropriate action to report identified mobile crane and site hazards in the workplace to minimise or eliminate risk to personnel, workplace and the environment
  - mobile crane and OH&S recording procedures in accordance with workplace requirements

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

Method of assessment

- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through appropriately simulated activities at the registered training organisation, and/or
  - in an appropriate range of situations in the workplace
Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

The operations may be conducted:
- in a range of work environments
- by day or night
- using multiple cranes
- using a workcage/workbox

Customers may be:
- internal or external

Workplaces may comprise:
- large, medium or small worksites
- demolition sites
- construction site

Work may be conducted in:
- restricted spaces
- exposed conditions
- controlled or open environments

Workplace hazards may include:
- chemicals and other harmful substances
- electrical and other overhead services
- movements of equipment, goods, vehicles
- toxic substances
- damaged packing material and containers
- broken and damaged equipment
- inflammable materials and fire hazards
- lifting practices
- waste management and disposal
- extremes in weather conditions
- lighting levels
- floor surfaces
- water hazards
- traffic flows, vehicle and equipment operation
- a range of storage areas

Personnel in the work area may include:
- workplace personnel
- site visitors
- OH&S specialists
- union representatives
- contractors
- official representatives

Participative arrangements may include:
- formal and informal meetings which deal with OH&S issues
- toolbox talks
RANGE STATEMENT

- workplace OH&S committees
- other committees, for example, consultative, planning and purchasing
- OH&S representatives
- suggestions, requests, reports and concerns put forward by staff

Communication in the work area
may include:

- phone
- electronic data interchange (EDI)
- fax
- email
- internet
- radio/hand or whistle signals

Designated personnel may
include:

- workplace personnel
- supervisors
- dogman/rigger
- team leaders
- management
- occupational health and safety personnel
- other persons authorised or nominated by the organisation

Personal protective equipment
may include:

- gloves
- safety headwear and footwear
- safety glasses
- two-way radios
- high visibility clothing

Depending on the type of
organisation concerned and the
local terminology used, workplace
procedures may include:

- company procedures
- enterprise procedures
- organisational procedures
- established procedures

Information/documents may
include:

- OH&S regulations
- mobile crane safety procedures
- workplace OH&S procedures and policies
- codes of practice including the National Standards for Manual Handling and the Industry Safety Code
- ADG Code and material safety data sheets (where relevant)
- policies and procedures for entry and work in confined spaces
- manufacturers instructions concerning the use and servicing of equipment
- supplier and/or client instructions
RANGE STATEMENT

- emergency procedures
- regulations and policies concerning noise, smoking, workstation ergonomics and other critical OH&S issues
- goods identification numbers and codes
- manifests, bar codes, goods and container identification
- relevant legislation, regulations and related documentation
- award, enterprise bargaining agreement, other industrial arrangements
- standards and certification requirements
- quality assurance procedures
- relevant state/territory OH&S legislation and safety codes, including manual handling, noise, confined spaces, smoking, workplace ergonomics, etc.
- mobile crane codes of practice
- Australian Standards
- general duty of care under OH&S legislation
- workplace relations regulations
- workers compensation regulations
- dangerous goods regulations

Regulations and legislation may include:

Unit Sector(s)

Competency Field

Competency Field F - Safety Management
TLILIC0003 Licence to operate a forklift truck

Modification History
Release 1. This is a release of this unit of competency in the TLI Transport and Logistics Training Package.

Application
This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck High Risk Work Licence (HRWL).
This unit requires a person operating a forklift truck to:
• plan for the work/task
• prepare for the work/task
• perform work/task
• pack up

 Licensing/Regulatory Information
Legislative and regulatory requirements are applicable to this unit of competency.
This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.
The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENTS</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes.</td>
<td>Performance criteria describe the performance needed to demonstrate achievement of the element.</td>
</tr>
</tbody>
</table>

1 Plan work/task

1.1 Task requirements are identified from work orders or equivalent and confirmed with relevant people and site inspection is conducted in accordance with workplace procedures.

1.2 Work area operating surface is assessed to determine suitability for operational use of forklift truck in accordance with workplace procedures.

1.3 Suitability of forklift truck and attachment working load limit (WLL) is determined for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures.

1.4 Working area is inspected and appropriate paths for operating the forklift truck and moving and placing load/s in work area are assessed and managed in accordance with workplace procedures.

1.5 Hazard and risk control measures are identified and reported to relevant person/s in accordance with workplace procedures.

1.6 Traffic management plan implementation is confirmed in accordance with workplace procedures.

1.7 Appropriate communication procedures are identified with relevant people in accordance with workplace procedures.

1.8 All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures.
2 Prepare for work/task

2.1 Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with safe work procedures

2.2 Weather and work environmental conditions are assessed to determine any impact on forklift truck operations in accordance with manufacturer requirements and safe work procedures

2.3 Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures

2.4 Forklift truck is accessed in a safe manner in accordance with manufacturer requirements and workplace procedures

2.5 Forklift truck logbook is checked in accordance with manufacturer, regulatory requirements and safe work procedures

2.6 Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements

2.7 Forklift truck is set up correctly with any relevant attachments as per work plan in accordance with relevant manufacturer requirements including data plate and safe work procedures

2.8 Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures

2.9 Hazard and risk control measures are checked for implementation and communicated to people in the work area in accordance with safe work procedures

3 Perform work/task

3.1 Weight and positioning of load is assessed to ensure compliance with forklift truck data plate requirements and in accordance with safe work procedures

3.2 Forklift truck is operated safely in accordance with manufacturer requirements and safe work procedures
3.3 Loads are monitored constantly when lifting, moving, lowering and placing to ensure stability of load and avoidance of hazards in accordance with safe work procedures

3.4 Unplanned and unsafe situations are responded to in accordance with safe work procedures

3.5 Loads are picked up, transported and placed using all forklift truck movements in accordance with safe work procedures

3.6 Forklift truck is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures

4 Pack Up

4.1 Forklift truck shutdown procedures are carried out in accordance with manufacturer requirements and safe work procedures

4.2 Forklift truck is secured to prevent unauthorised access/use in accordance with safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2001 Licence to operate a forklift truck

Links

Assessment Requirements for TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for a forklift truck including:
  - maintaining safe operating speed
  - travelling with load lowered to an appropriate height for the terrain, operating surface and visibility in relation to direction of travel
  - applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements
- carrying out pre-start checks, including visual inspection which must include:
  - battery charge as required by manufacturer requirements
  - checking and interpreting data plate/s are relevant to the attachment and the forklift truck
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - document evidence of damage
  - engine / mechanical fluid level checks including fuel as required by manufacturer requirements
  - ensuring availability of correct forklift truck logbook and updating records as required
  - ensuring forklift truck tynes or other attachment/s are securely fitted
  - ensuring seat and mirrors are adjusted appropriately and seat belt is functional
  - fluid leaks
  - lights are working effectively
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
  - insufficient lighting
  - other specific hazards including dangerous goods
  - overhead hazards and fixed structures, roof beams and doorways
  - restricted and poorly ventilated areas
• surface suitability based on forklift truck and task requirements
• the risk of collision with people, moving plant and fixed structures
• weather conditions
• complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures
• conducting operational checks, which must ensure:
  • all controls are located, identified and tested for functionality
  • all hydraulic functions operated to maximum extension and ensuring attachment (if fitted) movements and control functions are smooth and comply with operating requirements
  • hazard warning systems (e.g. reversing beepers, lights and horns) are functional
  • recording and maintaining accurate information relating to forklift truck operations
  • safety devices as fitted
  • start-up is in accordance with manufacturer requirements
  • steering, transmission and brake functions comply with operating requirements
  • there are no unusual noises
• confirming and following traffic management plan procedures relevant to their role in the work area
• conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE
• determining relevant lifting attachment to perform work/task
• determining lift requirements including:
  • positioning of unusually balanced/shaped loads
  • centre of gravity
  • dynamic nature of load
  • tyne/attachment positioning
  • weight
• ensuring risk control measures within the work area are effective as per workplace procedures
• identifying, isolating and tagging out defective equipment and reporting to authorised person/s
• interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
• interpreting workplace procedures in relation to various environmental conditions
• maintaining communication with other workplace personnel through using worksite procedures including:
  • audible and visual warning devices
  • signage
  • two-way radio
  • verbal instructions
  • written instructions
• maintaining three points of contact whilst accessing and egressing forklift truck and ensuring
rungs / steps are free of hazards
- operating and monitoring safe forklift truck operations using minimum 250kg dynamic and non-dynamic loads that include:
  - aligning tynes/attachment to load
  - carrying out a lift to 75% of the maximum height
  - conducting trial lift to ensure forklift truck and load are stable, and load is safe to move
  - correctly using horns and mirrors in workplace
  - correctly positioning and using an observer to assist when operating with a load that may restrict vision or be placed out of vision of the operator
- driving applicable to conditions and moving loads safely
- driving a forklift truck safely with load in forward and reverse, while maintaining visibility through an obstacle course including:
  - an 'S' bend with a minimum 90 degrees left and right turn
  - ensuring load/s remains stable through pick up, transport and placement
  - forklift truck speed is appropriate to load and surroundings
  - lowering dynamic and non-dynamic loads to appropriate height for travel in forward and reverse
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely at various heights within a compliant racking system
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely into/onto an elevated, flat, stable area
  - tilting mast (or forks if applicable) to ensure balance of load
  - using gluts/dunnage appropriately and lowering load safely
  - using tilt and side shift (where fitted) safely to manoeuvre dynamic and non-dynamic loads into allocated space
- reporting to relevant person/s on site risk control measures that are not in place or are deficient
- setting up an exclusion zone
- securely parking forklift truck and isolating in appropriate position including:
  - minimising possible access by unauthorised person/s
  - tynes/attachment lowered to required position in accordance with manufacturer requirements
  - park brake applied
  - switching off, isolating fuel/power source and removing key according to workplace procedures
- shutting down a forklift truck in accordance with manufacturer requirements and workplace procedures

**Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:
• Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
• communication procedures including:
  • audible and visual warning devices
  • hand signals
  • questioning techniques
  • signage
  • traffic warning systems
  • two-way radio
  • written instructions
• forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments
• impact of the following on the operation of the forklift truck including:
  • failure/loss of control including brakes and steering
  • failure of equipment during forklift truck operations
  • forklift truck instability causes including:
    • deterioration of ground condition
    • overloading
    • pick up and placement of load
    • irregular loads
  • operating on ramps and uneven surfaces and in restricted spaces
• use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted including the estimation or determination from:
  • labels on the actual load
  • markings on the actual load
  • paperwork such as consignment notes, running sheets and weighbridge dockets
  • weighing a carton and calculating load
• manufacturer requirements, instructions and operator's manual
• problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
  • wind
  • lightning
  • water/ice impacted surface/ground
  • rain
  • extreme heat
  • Ultra violet (UV) exposure
• problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including:
  • lock out and tag out procedures
• relevant procedures for refuelling and recharging forklift truck using appropriate PPE
including:
  - gas bottle
  - connecting battery to charger and disconnecting battery from charger and reconnecting to forklift truck
  - refuelling
  - procedures for recording, reporting and maintaining workplace records and information
  - risk assessment process including hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - personal protective equipment (PPE)
  - safe use and compliance of different types of attachments including:
    - bale clamps
    - carpet spike for carpet rolls
    - drum carrier
    - jib attachment
    - paper roll clamps
    - personnel work platforms
    - rotators
    - slippers/fork extensions on tynes
  - suitability and lifting capability of the attachment to be used
  - shut down procedures for a forklift truck in accordance with manufacturer requirements
  - traffic management plan procedures and requirements
  - typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction
  - workplace procedures including work plan which may be verbal, documented/written, or electronically generated
  - work area operating surface suitability including issues with:
    - backfilled ground
    - bitumen (damaged, cracked)
    - concrete (damaged, cracked)
    - hard compacted soil
    - potholes
    - railway tracks
    - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
    - soft soils
    - trench covers
  - Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety
and Health (OSH) requirements, safe work and workplace procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- associated equipment for forklift truck operations
- suitable dynamic and non-dynamic loads
- suitable compliant racking system
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
  - approved codes of practice and relevant guidance material
  - relevant Australian technical standards
  - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable)

TLILIC2001 Licence to operate a forklift truck

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application
This unit specifies the skills and knowledge required to operate a forklift truck safely.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other arms that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck high risk work (HRW) licence.

This unit requires a person operating a forklift truck to plan the work, conduct routine checks on a forklift truck, shift loads in a safe manner, and safely shut down and secure equipment after completing operations.

Licensing/Regulatory Information
This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.

Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit
Not applicable.

</table>
2.7 All forklift truck functions and safety devices are tested to their maximum in accordance with manufacturer specifications and workplace procedures.

2.8 Issues, defects and damage identified during routine checks are reported and recorded in accordance with workplace procedures, and appropriate action is taken.

3 Shift load

3.1 Weight of load is assessed to ensure compliance with forklift truck data plate specifications.

3.2 Appropriate hazard prevention/control measures are implemented and communicated to personnel in the work area.

3.3 Forklift truck is operated at a safe speed in accordance with manufacturer specifications and workplace procedures.

3.4 Loads are moved and placed to ensure stability of material and avoidance of hazards.

3.5 Load movement is monitored constantly to ensure safety of personnel and load, and structural stability.

3.6 Unplanned and/or unsafe situations are responded to in accordance with workplace procedures and emergency plans.

4 Shut down and secure forklift truck

4.1 Forklift truck is parked to avoid hazards.

4.2 Forklift truck is shut down in accordance with manufacturer specifications and workplace procedures.

4.3 Routine post-operational forklift truck checks are carried out in accordance with manufacturer specifications and workplace procedures.

4.4 Forklift truck is secured to prevent unauthorised access/use.

4.5 All defects and damage are reported and recorded in accordance with manufacturer specifications and workplace procedures, and appropriate action is taken.
Foundation Skills

The language, literacy, numeracy and employment skills that are essential to performance that are not explicit in the unit are listed below.

<table>
<thead>
<tr>
<th>Skill</th>
<th>Performance feature</th>
</tr>
</thead>
</table>
| Employment skills to:        | • operate a forklift truck in different types of workplaces transferring key principles of safe operation to different contexts  
                                 • improve own performance in safely and efficiently operating a forklift truck by incorporating learnings from different workplaces and different conditions into current performance |
| Numeracy skills to:          | • interpret numerical information including:                                                                    |
|                              |   • selecting appropriate forklift in accordance with load and workplace conditions                               |
|                              |   • load weight assessment, to ensure compliance with forklift truck data plate specifications                    |
|                              |   • controlling and monitoring instrument readings                                                               |
| Language skills to:          | • use and interpret vocabulary specific to forklift truck operations and workplace procedures to communicate with other workplace personnel |
|                              | • use non-verbal feedback to support effective communication                                                       |
|                              | • use relevant communications conventions                                                                       |
| Literacy (reading) skills to:| • interpret documentation that includes technical specificity including:                                          |
|                              |   • forklift truck data plate                                                                                    |
|                              |   • plant operation manuals and manufacturer specifications                                                       |
|                              |   • workplace procedures, including emergency plan                                                              |
|                              |   • workplace signage and labels                                                                                  |
| Literacy (writing) skills to:| • accurately record and maintain information relating to operating a forklift truck, including:                   |
|                              |   • incident reports                                                                                             |
|                              |   • vehicle checking and maintenance records                                                                      |
| Self-management skills       | • implement risk control measures                                                                              |
|                              | • initiate emergency management strategies                                                                       |

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.
Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit is equivalent to TLILIC2001A Licence to operate a forklift truck

Links

Assessment Requirements for TLILIC2001 Licence to operate a forklift truck

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence
A person who demonstrates competency in this unit must provide evidence of safely operating a forklift truck and satisfy all of the unit elements, performance criteria and foundations skills requirements on at least one occasion including:

- applying risk assessment and hazard control strategies, including hierarchy of control as applied to safely operating a forklift truck
- carrying out post-start operational checks, which must ensure:
  - attachment movements and control functions are smooth and comply with operating requirements
  - hazard warning systems (e.g. lights and horns) are functional
  - safety devices are checked, including
    - deadman’s switch
    - emergency descent device (hydraulic)
    - reversing beepers
  - start-up is in accordance with procedures
  - steering, transmission and brake functions comply with operating requirements
- carrying out pre-start operational checks, which must include:
  - battery charge checks, as required
  - ensuring availability of logbook, records, handbook and/or operating manuals
  - fitting and interpreting forklift truck data plate
  - fluid checks
  - forklift truck attachment security checks
  - identifying approved modifications and/or attachments fitted, to manufacturer specifications in accordance with forklift truck or attachment data plate
  - locating, identifying and confirming all controls
  - safety equipment checks
  - signage and label visibility and legibility checks
  - updating records as required
- communicating with other workplace personnel through
  - using appropriate worksite protocols
Assessment Requirements for TLILIC2001 Licence to operate a forklift truck

- listening
- making and interpreting hand signals
- questioning to confirm understanding
- signage
- verbal and non-verbal language
- written instructions
- complying with Commonwealth, state and territory work health and safety (WHS)/occupational health and safety (OHS) legislation and regulations
- conducting and monitoring safe forklift truck operations that include moving loads safely, driving and manoeuvring, picking up and placing loads at various stack heights and carrying out all functions to the maximum height and load capacity
- driving a forklift truck with load in forward and reverse, while maintaining visibility
- planning and preparing for forklift truck operations including:
  - conducting a workplace risk assessment
  - identifying hazards associated with operating a forklift truck, which must include
    - forklift truck instability (e.g. due to overloading, poor load placement, irregular loads)
    - ground conditions (e.g. condition of pavement, slopes)
    - insufficient lighting
    - overhead hazards (e.g. electric lines, service pipes)
    - traffic (e.g. pedestrians, vehicles, other plant) and the risk of collision with people, moving plant and fixed structures
    - weather conditions (e.g. wind, lightning, rain)
  - selecting hazard prevention strategies in accordance with the hierarchy of control
  - putting in place effective controls for identified hazards
  - visually checking a forklift truck for any damage or defects prior to operation including
    - evidence of damage
    - leaks
    - structural weaknesses (including paint separation or stressed welds)
- receiving and interpreting workplace instructions, safety information and emergency procedures
- shutting down a forklift truck in accordance with manufacturer specifications and workplace procedures including
  - parking in a suitable location away from dangerous areas
  - correctly positioning fork arms (tips down, tilted forward, lowered to ground)
  - selecting appropriate transmission/gear for parking (relevant to transmission type)
  - applying hand/parking brake
  - turning off engine power
  - removing ignition key as required
  - shutting off LPG gas cylinder valve as required
- securing equipment in accordance with manufacturer specifications and against unauthorised operation
- securing site
- ensuring access ways are clear
- identifying and segregating defective equipment and reporting to authorised personnel
- connecting batteries to charger as required
- verifying problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including
  - environmental conditions (e.g. wind, lightning, storms)
  - failure/loss of control (e.g. brakes and steering)
  - failure of equipment (e.g. hydraulic system)
  - forklift truck instability (e.g. due to deterioration of ground condition, overloading, poor load placement, irregular loads).

**Knowledge Evidence**

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and industry standards relevant to operating a forklift truck
- Commonwealth, state or territory WHS/OHS legislation and approved codes of practice in relation to one's own responsibilities
- forklift truck characteristics and capabilities (including use of load data plates)
- forklift truck operations and safe operating techniques
- hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- methodology to determine weight of a load including the estimation or determination from labels, markings or load paperwork such as:
  - control labels
  - forklift data plates/labels
  - forklift warning decals
- organisational and workplace standards, requirements, policies and procedures for operating a forklift truck
- procedures for recording, reporting and maintaining workplace records and information
- relevant Australian and industry standards, codes of practice and guidelines to safely
operate a forklift truck

- risk control measures including:
  - barricades and traffic control (e.g. traffic management plan)
  - compliance with permit condition requirements from electrical supply authority, including
    - adequate illumination
    - disconnected power
    - excavation safeguards
    - insulated electric lines
    - maintaining safety observer zone
    - movement of obstructions
    - observing limits of approach
    - pedestrian control (barricades, signs, etc.)
    - power disconnection or compliance with electrical supply authority requirements
    - safety tags on electrical switches/isolators
    - using safety observer inside exclusion zone
    - using personal protective equipment
- selecting forklift truck to suit load and workplace conditions
- typical routine problems encountered operating a forklift truck and equipment, and adjustments required for correction.

Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:
- performing tasks/activities within timelines that would be expected in a workplace
- standard and authorised work practices, safety requirements and environmental constraints
- using full-scale equipment

Forklift truck operation assessment must be conducted in a working zone in accordance with state/territory arrangements.
If the working zone is located at a ‘live’ site, assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.

Simulators must **not** be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring that candidates have access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe condition
- associated equipment appropriate to forklift truck operations
- suitable loads
- required personal protective equipment (PPE) for the purpose of Performance Assessment
- relevant workplace procedures and standards for operating a forklift truck, including:
  - approved codes of practice and guidance
  - relevant Australian and international technical standards
  - manufacturer guidelines (instructions, specifications or checklists) for the purpose of Performance Assessment
  - relevant industry standards and operating procedures (where applicable)
  - safe work method statements (SWMS), as required.

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to safely operate a boom-type elevating work platform where the length of the boom is 11 metres or more.

Boom-type elevating work platform means a telescoping device, hinged device, or articulated device, or any combination of these, used to support a platform on which personnel, equipment and materials may be elevated.

A person performing this work is required to hold a boom-type elevating work platform high risk work (HRW) licence.

This unit requires a person operating a boom-type elevating work platform to plan the work, conduct routine checks, set up elevating work platform, operate elevating work platform, and shut down and secure elevating work platform.

Licensing/Regulatory Information

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.

Any alteration to this unit would result in a unit that would not be acceptable to work health and safety (WHS)/occupational health and safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit

Not applicable.

<td>• improve own performance in safely and efficiently operating a boom-type elevating work platform by incorporating learnings from different workplaces and different conditions into current performance</td>
</tr>
<tr>
<td>Numeracy skills to:</td>
<td>• interpret numerical information including:</td>
</tr>
<tr>
<td></td>
<td>• selecting appropriate boom-type elevating work platform in accordance with load and workplace conditions</td>
</tr>
<tr>
<td></td>
<td>• load weight assessment, to ensure compliance with boom-type elevating work platform data plate specifications</td>
</tr>
<tr>
<td></td>
<td>• controlling and monitoring instrument readings</td>
</tr>
<tr>
<td>Language skills to:</td>
<td>• use and interpret vocabulary specific to boom-type elevating work platform operations and workplace procedures to communicate with other workplace personnel</td>
</tr>
<tr>
<td></td>
<td>• use non-verbal feedback to support effective communication</td>
</tr>
<tr>
<td></td>
<td>• use relevant two-way radio conventions</td>
</tr>
<tr>
<td>Literacy (reading)</td>
<td>• interpret documentation that includes technical specificity including:</td>
</tr>
<tr>
<td>skills to:</td>
<td>• boom-type elevating work platform data plate</td>
</tr>
<tr>
<td></td>
<td>• plant operation manuals and manufacturer specifications</td>
</tr>
<tr>
<td></td>
<td>• workplace procedures, including emergency plan</td>
</tr>
<tr>
<td></td>
<td>• workplace signage and labels</td>
</tr>
<tr>
<td>Literacy (writing)</td>
<td>• accurately record and maintain information relating to operating a boom-type elevating work platform including:</td>
</tr>
<tr>
<td>skills to:</td>
<td>• incident reports</td>
</tr>
<tr>
<td></td>
<td>• vehicle checking and maintenance records</td>
</tr>
<tr>
<td>Self-management</td>
<td>• implement risk control measures</td>
</tr>
<tr>
<td></td>
<td>• initiate emergency management strategies</td>
</tr>
</tbody>
</table>
Range of Conditions
Range is restricted to essential operating conditions and any other variables essential to the work environment.
Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information
This unit is equivalent to TLILIC2005A Licence to operate a boom-type elevating work platform (boom length 11 metres or more).

Links
Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=df441c6e-213d-43e3-874c-0b3f7036d851
Assessment Requirements for TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Modification History
Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence
A person who demonstrates competency in this unit must provide evidence of safely operating a boom type elevating work platform with a boom lengths of 11 metres or more and satisfy all of the elements, performance criteria and foundation skills requirements of the unit on at least one occasion including:

- applying appropriate mathematical procedures to estimate loads
- applying best operating practice including:
  - avoiding ground depressions
  - gently accelerating and braking
  - minimum speed
  - minimum boom/jib length
- applying emergency procedures and safety equipment, including the use of safety harnesses, energy absorbers, lanyard and anchor points
- applying hazard prevention/control measures including:
  - disconnected power
  - illumination requirements
  - insulated electric lines
  - moving obstructions
  - pedestrian controls
  - personal protective equipment
  - safety tags on electrical switches/isolators
  - using safety observer inside exclusion zone
  - suitable area for set-up
  - suitable firm and stable standing
  - traffic barricades and controls
  - trench covers
- applying relevant plant movements including:
  - articulating
  - hinging
lowering boom
raising boom
slewing
telescoping

- applying risk assessment and hazard control strategies, including hierarchy of control as applied to positioning and safely operating an elevating work platform
- assessing ground conditions to confirm site is suitable (e.g. firm, level and safe) to extend and travel the elevating work platform
- communicating with other workplace personnel through:
  - appropriate worksite protocols
  - bells
  - buzzers
  - listening
  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage
  - two way radios
  - verbal and non-verbal language
  - written instructions
- complying with WHS/OHS licensing legislation
- identifying problems and equipment faults and where practicable demonstrating appropriate response procedures
- operating and controlling a boom type elevating work platform including all functions to their maximum extension within the safe working (rated) capacity including:
  - a telescoping device
  - articulated device
  - hinged device
  - or any combination of the above used to support a platform on which personnel, equipment and materials may be elevated to perform work
- positioning, stabilising, set up of elevating work platforms, including the use of outriggers/stabilisers and packing to ensure that the safest lift is performed
- receiving and interpreting workplace instructions, safety information, emergency procedures
- recording and maintaining accurate information relating to operating elevating work platform
- shutting down a boom type elevating work platform in accordance with manufacturer specifications and workplace procedures including:
  - idling engine to stabilise temperature
  - folding boom/jib into the transport position
  - removing key from ignition
  - retracting boom/jib
  - retracting outriggers/stabilisers
- turning off engine
- stabilising a boom type elevating work platform by:
  - correctly positioning plates or packing
  - deploying outriggers
  - establishing correct size plates or packing
- using and interpreting manufacturer specifications and data
- using communications signals including:
  - luff boom down – hand
  - luff boom down – whistle and/or two-way radio
  - luff boom up – hand
  - luff boom up – whistle and/two-way radio
  - stop – hand
  - stop – whistle and/or two-way radio
  - telescope out – hand
  - telescope out – whistle and/or two-way radio
  - telescope in – hand
  - telescope in – whistle and/or two-way radio
- using outriggers/stabilisers and packing to ensure safest lift is performed
- verifying problems and equipment faults and applying appropriate response procedures to unplanned and/or unsafe situations including:
  - contact with overhead electrical conductors
  - damage caused by contact with obstructions
  - environmental conditions (e.g. wind, lightning, storms, etc.)
  - failure of controls
  - illness of personnel
  - loss of power.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate mathematical procedures for estimating loads to ensure elevating work platform is not overloaded
- Australian and industry standards relevant to operating a boom-type elevating work platform (boom length 11 metres or more)
- boom length capability including:
  - nominal reach, measured horizontally from centre point of rotation to outer edge of
platform in its most extended position
- vertical distance from floor of platform to surface supporting elevating work platform with platform at its maximum height
- Commonwealth, state or territory WHS/OHS legislation, standards and codes of practice relevant to the full range of processes for the crane class
- ground stability including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - rock
  - rough uneven ground
  - soft soils
- elevating work platform characteristics, operations and operating techniques
- emergency procedures and safety equipment, including the use of safety harness, energy absorber, lanyard and anchor points
- hazards including:
  - environmental conditions (e.g. wind, lightning, storms, etc.)
  - ground stability (e.g. ground condition, recently filled trenches, slopes)
  - insufficient lighting
  - other specific hazards (e.g. tidal areas, chainsaws, pressure washers, dangerous materials)
  - overhead hazards (e.g. electric lines, service pipes, trees, buildings etc.)
  - traffic (e.g. pedestrians, vehicles, plant)
- hierarchy of hazard identification and control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- procedures for recording, reporting and maintaining workplace records and information, including using the service logbook
- organisational and workplace standards, requirements, policies and procedures for conducting elevating work platform operations
- rated capacity and working load limits
- risks associated with overhead electric lines/electrical cables, ground conditions, wind, pedestrians and tipping
- systematic process of eliminating or reducing risk to personnel and property through the application of controls
- typical routine problems encountered in the process and with equipment, and adjustments required for correction.
Assessment Conditions

Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which may include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessment must be conducted in the English language.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- performing tasks/activities within timelines that would be expected in a workplace
- standard and authorised work practices, safety requirements and environmental constraints
- using full-scale equipment

Boom-type elevating work platform (boom length 11 metres or more) operation assessment must be conducted in a working zone in accordance with state/territory arrangements.

If the working zone is located at a ‘live’ site, assessment should continue in all weather conditions unless the safety of the candidate or others could be compromised.

Simulators must not be used in the assessment of this unit of competency.

Accredited assessors are responsible for ensuring candidates have access to:

- appropriate boom-type elevating work platform (boom length 11 metres or more) and associated equipment in safe condition
- appropriate safety equipment and devices including:
  - anchor points
  - audible and visual reversing devices
  - energy absorber
  - horns/sirens
  - lanyard
  - lights as required
  - operator restraint devices (platform gate)
  - safety harness
- communications equipment including:
  - mobile phone
  - two-way radios
Assessment Requirements for TLILIC2005 Licence to operate a boom-type elevating work platform (boom length 11 metres or more)

Date this document was generated: 26 November 2021

- required personal protective equipment (PPE) for the purpose of the Performance Assessment

- where appropriate, relevant workplace procedures and standards for operating a boom-type elevating work platform including:
  - approved codes of practice and guidance
  - Australian Standards
  - checklists
  - industry operating procedures
  - relevant industry standards (where applicable)
  - manufacturer guidelines (instructions, specifications or checklists) for the purpose of the Performance Assessment
  - safe work method statement (SWMS), as required
  - service logbooks/logbooks
  - signage and labels
  - history record system where service and maintenance history is kept.

TLILIC2016A Licence to drive heavy rigid vehicle

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor
This unit involves the skills and knowledge required to obtain a licence to drive a heavy rigid vehicle. It includes systematic and efficient control of all vehicle functions, monitoring of traffic and road conditions, management of vehicle condition and performance and effective management of hazardous situations. Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant Heavy Vehicle Driver Licensing Authority.

Application of the Unit

Application of the Unit
Driving must be carried out in compliance with the licence requirements and regulations of the relevant state/territory roads and traffic authority pertaining to heavy rigid vehicles.

Driving is performed with limited or minimum supervision, with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain the safety and operation of a heavy rigid vehicle across a variety of driving contexts.

Licensing/Legislative Requirements

The primary legislative requirements applicable to this unit of competency are State/Territory legislation in relation to road use and driver licensing.

This unit addresses the underlying knowledge and skills necessary for the granting of a Heavy Rigid Driver Licence. Drivers may require additional training to drive particular vehicles of the class or in particular contexts.

Obtaining this competency is a necessary pre-requisite for obtaining a Heavy Rigid Driver Licence. However, it is only one of several criteria for obtaining the licence. Prospective licence applicants should check with the State/Territory driver licensing
authority for other criteria (for example: licence tenure and medical fitness) to confirm compliance with other eligibility requirements before undertaking training and/or assessment.

Licensing/Regulatory Information
Refer to Unit Descriptor

Pre-Requisites
Not Applicable

Employability Skills Information
Employability Skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Drive the heavy rigid vehicle</td>
<td>1.1 The heavy rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations and manufacturers instructions</td>
</tr>
<tr>
<td></td>
<td>1.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage</td>
</tr>
<tr>
<td></td>
<td>1.3 Braking system of heavy rigid vehicle is managed and operated to ensure effective control of the vehicle under all conditions</td>
</tr>
<tr>
<td></td>
<td>1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving</td>
</tr>
<tr>
<td></td>
<td>1.5 The heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning.</td>
</tr>
</tbody>
</table>
ELEMENT

PERFORMANCE CRITERIA

1.6 The heavy rigid vehicle is parked, shut down and secured in accordance with traffic regulations, safe and secure

1.7 Load is safely and effectively restrained

1.8 Where required, overwidth and overweight permit applications are undertaken in accordance with relevant regulatory requirements

1.9 Appropriate procedures are followed in the event of a driving emergency

2 Monitor traffic and road conditions

2.1 An appropriate route of travel is observed taking into account prescribed routes.

2.2 Traffic and road conditions are constantly monitored and acted upon to enable safe operation and ensure no injury to people or damage to property, equipment loads and facilities

2.3 Interaction with other road users is conducted courteously and in accordance with road rules to ensure safe and efficient traffic flow

3 Monitor and maintain vehicle performance

3.1 Vehicle performance is maintained through pre-operational inspections and checks of the vehicle

3.2 Appropriate signage, lights and the like are checked for operational effectiveness and for conformity to prescribed traffic regulations

3.3 Performance and efficiency of vehicle operation is monitored during use

Required Skills and Knowledge

REQUIRED KNOWLEDGE AND SKILLS

This describes the essential knowledge and skills and their level required for this unit.

Required knowledge:

- Relevant road rules, regulations, permit and licence requirements of the relevant state/territory road traffic authority
- Relevant OH&S and environmental procedures and regulations
- Heavy rigid vehicle controls, instruments and indicators and their use
- Heavy rigid vehicle handling procedures
- Procedures to be followed in the event of a driving emergency
- Engine power management and safe driving strategies
- Efficient driving techniques
REQUIRED KNOWLEDGE AND SKILLS

- Pre-operational checks carried out on heavy rigid vehicle and related action
- Differences between transmission types
- Principles of operation of air brakes and procedures for their use
- Map reading and navigation of the vehicle and related action (including prescribed routes)
- Driving hazards and related defensive driving techniques
- Principles of stress management when driving a vehicle
- Factors which may cause traffic delays and diversions and related action that can be taken by a driver
- Causes and effects of fatigue on drivers
- Fatigue management strategies and on-road techniques

Required skills:

- Communicate effectively with others when driving a heavy rigid vehicle
- Read and interpret instructions, procedures, information and signs relevant to when the driving of a heavy rigid vehicle
- Complete documentation related to the driving of a heavy rigid vehicle
- Apply precautions and required action to minimise, control or eliminate hazards that may exist when driving a heavy rigid vehicle
- Monitor and anticipate traffic hazards and take appropriate action
- Apply fatigue management knowledge and techniques
- Monitor performance of the vehicle and its equipment and take appropriate action where required
- Carry out pre-operational checks

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required knowledge and skills, the range statement and the assessment guidelines for this Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- The evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria of this unit and include demonstration of applying:
  - the underpinning knowledge and skills
EVIDENCE GUIDE

- relevant legislation
- other relevant aspects of the range statement
- Assessment of competency for this unit must be subject to the successful completion of the Mandatory Assessment Instrument as approved by the Licensing Authority

Context of and specific resources for assessment

- Performance is demonstrated consistently over a period of time and in a suitable range of contexts
- Resources for assessment include:
  - a range of relevant exercises, case studies and/or other simulated practical and knowledge assessment, and/or
  - access to an appropriate range of relevant operational situations on road or in the workplace
- In both real and simulated environments, access is required to:
  - relevant and appropriate materials and equipment, and
  - applicable documentation including regulations, codes of practice and operation manuals
- The mandatory assessment tool provided by the Licensing Authority must be used to conduct the final assessment.
- The Licensing Authority may prescribe approved routes which must be used for the conduct of the final assessment
- Practical driving aspects must be assessed in a vehicle typical of the class as approved by the Licensing Authority. The use of simulators for driver testing is not permitted.

Method of assessment

- Assessment of this unit must be undertaken by a registered training organisation
- As a minimum, assessment of knowledge must be conducted through appropriate written/oral tests
- Practical assessment must occur:
  - through activities in an appropriately simulated environment at the registered training organisation, and/or
  - in an appropriate range of situations on road or in the workplace
- The assessor must use the mandatory assessment tool provided by the Licensing Authority to conduct the assessment for this unit in accordance with Licensing
EVIDENCE GUIDE

Authority requirements
- Practical driving aspects must be assessed in a vehicle typical of the class as approved by the Licensing Authority. The use of simulators for driver testing is not permitted.

EXCEPTION

Where the candidate is already the holder of a valid Australian driver licence of the Heavy Rigid class, the Licensing Authority has already deemed the candidate to be competent against this standard for the purposes of issuing a driver licence. In this case the requirement to conduct the assessment using the Mandatory Assessment Instrument provided by the Licensing Authority is waived and the assessor may use any suitable process and materials for conducting the assessment.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance.

Type of vehicle includes:
- all heavy rigid vehicles, for example any rigid vehicle with 3 or more axles, including trucks or buses, greater than 8 tonnes GVM

Driving may be carried out in typical road transport situations, including:
- operations conducted at day or night
- typical weather conditions
- on the open road
- on a private road
- while at a depot, base or warehouse
- while at a client's workplace or work site

Driving must be carried out in typical road transport situations, including:
- negotiating hills
- negotiating a range of more complex traffic infrastructure (for example: roundabouts, traffic lights, stalemate intersections, level crossings of railways)

Vehicle handling procedures may include:
- starting a vehicle
- steering and manoeuvring a vehicle
- accelerating and braking
- positioning and stopping a vehicle
- reversing a vehicle
- operating vehicle controls, instruments and indicators
- using air brakes
- using defensive driving techniques
RANGE STATEMENT

Pre-operational checks may include:
- managing engine performance
- visual check of vehicle
- checking and topping up of fluid levels
- checks of tyre pressures
- checks of operation of vehicle lights and indicators
- checks of brakes

Driving hazards may include (examples only):
- wet and iced roads
- oil on road
- animals and objects on road
- fire in vehicle
- leaking fuel
- faulty brakes
- parked vehicles on the road
- faulty steering mechanism on vehicle
- pedestrians crossing the road
- flooded sections of road
- windy sections of road
- foggy conditions

Factors that can cause traffic delays and diversions may include:
- traffic accidents
- flooded sections of road
- road damage
- bridge/tunnel damage
- road works
- building construction
- emergency situations such as bushfires, building fires, etc.
- road closures for special events such as marches, parades, sporting events, etc.
- holiday traffic
- road closures for utility works such as electricity, water, sewerage, telecommunications, gas, etc.

Documentation/records may include:
- state/territory heavy rigid vehicle driving licence and permit requirements
- vehicle log book or record book (where required)
- relevant standards and certification requirements

Applicable procedures and codes may include:
- relevant state/territory roads and traffic authority driving regulations and licence/permit requirements pertaining to heavy rigid vehicles
- relevant state/territory road rules
- relevant state/territory permit regulations and requirements
- relevant state/territory OH&S legislation
RANGE STATEMENT

- relevant state/territory fatigue management regulations
- relevant state/territory environmental protection legislation

Unit Descriptor

| Unit Descriptor | This unit specifies the outcomes required to operate a slewing mobile crane (up to 20 tonnes) for licensing purposes. It encompasses the requirement for non-slewing mobile crane licence and the vehicle loading crane licence. |

Application of the Unit

| Application of the Unit | This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane. |
| | This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work. |
| | This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing. |

Pre-Requisites
Not Applicable
Employability Skills Information

| Employability Skills | This unit contains employability skills. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency | Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide. |

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan work | 1.1 Potential workplace hazards are identified  
| | 1.2 Hazard prevention/control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment  
| | 1.3 The weight of the load is identified and estimated in consultation with associated personnel  
| | 1.4 Crane is appropriate to the load/s and workplace conditions  
| | 1.5 Appropriate path for the movement of loads in the work area is inspected and determined  
| | 1.6 Appropriate communication methods are identified with associated personnel |
| 2. Conduct routine checks | 2.1 Crane is visually checked for any damage or defects  
| | 2.2 Crane is accessed in a safe manner  
| | 2.3 All signage and labels are visible and legible according to the appropriate standard  
| | 2.4 Routine pre-operational crane checks are carried out according to procedures  
| | 2.5 All controls are located and identified  
| | 2.6 Crane service logbook is checked for compliance  
| | 2.7 Crane is started according to procedures and checked for any abnormal noise |
## PERFORMANCE CRITERIA

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>2.8 All crane safety devices are tested according to procedures</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>2.9 Post-start operational checks are carried out according to procedures</td>
</tr>
<tr>
<td></td>
<td>2.10 All communication equipment is checked for serviceability</td>
</tr>
<tr>
<td></td>
<td>2.11 All damage and defects are reported and recorded according to procedures, and appropriate action is taken</td>
</tr>
</tbody>
</table>

### 3. Set up crane

| 3.1 Ground suitability is checked |
| 3.2 Crane is driven to the work area according to procedures |
| 3.3 Crane is positioned for work application and stability according to procedures |
| 3.4 Appropriate crane configuration for work task is determined according to procedures (where applicable) |
| 3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required) |
| 3.6 Appropriate hazard prevention/control measures are applied to the work area according to procedures |
| 3.7 All communications equipment is tested for functionality |

### 4. Transfer load

| 4.1 Lifts are determined within the capacity of the crane |
| 4.2 Boom/jib and hoist block is positioned over load following directions from associated personnel |
| 4.3 Test lift is carried out according to procedures |
| 4.4 Loads are transferred using all relevant crane movements according to procedures and the appropriate standard |
| 4.5 All required communication signals are correctly interpreted according to procedures and the appropriate standard |
| 4.6 Crane is operated according to procedures |
| 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability |
| 4.8 Unplanned and/or unsafe situations are responded to in line with procedures |

### 5. Mobile load

| 5.1 Suitability of planned route is checked for the crane according to procedures |
| 5.2 Crane is configured to mobile load according to |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
| procedures | 5.3 Load is moved using best mobile practice according to the appropriate standard
6. Shut down and secure crane | 6.1 Crane boom/jib and equipment are stowed and secured where appropriate according to procedures and the appropriate standard
6.2 Relevant motion locks and brakes are applied (where applicable)
6.3 Outriggers/stabilisers are stowed and secured according to procedures
6.4 Crane is shut down according to procedures
6.5 Plates or packing are stowed and secured
6.6 Routine post-operational crane checks are carried out according to procedures
6.7 All damage and defects are reported and recorded according to procedures, and appropriate action is taken

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level required for this unit.

Required skills:

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a slewing mobile crane (up to 20t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)
- Use and interpret crane manufacturer's specifications and data, including load
REQUIRED SKILLS AND KNOWLEDGE

- charts, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures

**Required knowledge:**

- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Mobile slewing crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

**Evidence Guide**

**EVIDENCE GUIDE**

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.*

**Overview of assessment**

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

**Critical aspects for assessment and evidence required to demonstrate**

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
EVIDENCE GUIDE

**Competency in this unit**
- Risk assessment and management procedures (particular awareness of the risks associated with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).
- Complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 20 tonne capacity in conjunction with other associated personnel.
- Appropriate mathematical procedures for estimation of loads.

**Context of and specific resources for assessment**
- Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Assessment is to comply with relevant appropriate standard requirements.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
  - appropriate slewing mobile crane (up to 20 tonne) and associated equipment in safe condition
  - suitable loads as specified by the endorsed Assessment Instrument
  - communication equipment (e.g. two-way radios, whistles, etc.)
  - other associated personnel to sling and direct the loads

**Method of assessment**
- Assessment must be conducted using the endorsed
EVIDENCE GUIDE

| Assessment Instruments. These Instruments provide advice on their application. |
| • Assessment may be in conjunction with the assessment of other units of competency. |
| • The use of 'simulators' in the assessment of this unit of competency is not acceptable. |
| • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. |
| • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances. |

Guidance information for assessment

Further information about endorsed Assessment Instruments may be obtained from state/territory OH&S regulators.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.

| Hazards | May include but not limited to: |
| • ground stability (e.g. ground condition, recently filled trenches, slopes) |
| • overhead hazards (e.g. powerlines, service pipes) |
| • traffic (e.g. pedestrians, vehicles, other plant) |
| • insufficient lighting |
| • environmental conditions (e.g. wind, lightning, storms, etc.) |
| • other specific hazards (e.g. dangerous materials) |

<p>| Hazard control measures | Refers to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls |
| It includes the application of the hierarchy of control, the six-step preference of control measures to manage |</p>

### RANGE STATEMENT

- rough uneven ground
- backfilled ground
- soft soils
- hard compacted soil
- rock
- bitumen
- concrete

### Stability

May include but not limited to:
- deploying outriggers
- establishing correct size plates or packing
- correctly positioning plates or packing

### Crane configuration

May include but not limited to:
- boom/jib
- fly-jib
- counterweights

### Hazard prevention/control measures

May include but not limited to:
- safety tags on electrical switches/isolators
- insulated powerlines
- safety observer used inside exclusion zone
- disconnected power
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination

### Test lift

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:
- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all crane equipment is functioning properly
- adjustments to the slinging can be made in a safe manner
### RANGE STATEMENT

**Relevant crane movements** | May include but not limited to:
---|---
- telescope in and out
- boom/jib up and down
- slew boom/jib
- operation of outriggers/stabilisers
- raise and lower hoist
- travel

**Communication signals** | May include but not limited to:
---|---
- stop - hand
- stop - whistle
- hoist up - hand
- hoist up - whistle
- hoist down - hand
- hoist down - whistle
- luff boom down - hand
- luff boom down - whistle
- luff boom up - hand
- luff boom up - whistle
- telescope out - hand
- telescope out - whistle
- telescope in - hand
- telescope in - whistle
- slew left - hand
- slew left - whistle
- slew right - hand
- slew right - whistle
- travel - hand

**Unplanned and/or unsafe situations** | May include but not limited to:
---|---
- failure/loss of control (e.g. brakes and steering)
- failure of equipment (e.g. hydraulic system)
- environmental conditions (e.g. wind, lightning, storms, etc.)

**Planned route** | May include but not limited to:
---|---
- unusual or difficult terrains
- obstacles or obstruction

**Best mobile practice** | May include but not limited to:
---|---
- minimum speed
## RANGE STATEMENT

- gentle acceleration and braking (to minimise load swing)
- minimum boom/jib length
- carrying the load near to the ground surface
- boom/jib in line with the crane
- boom/jib as low as possible
- load faces uphill
- use of handheld taglines

### Shut Down

May include but not limited to:
- retracting boom/jib
- retracting hoist rope and hook block
- positioning/securing boom/jib
- retracting outriggers/stabilisers
- idling engine to stabilise temperature
- turning off engine (where applicable)
- removing key from ignition (where applicable)
- locking and securing cabin (where applicable)

## Unit Sector(s)

Not Applicable
TLILIC4009A Licence to operate a slewing mobile crane (up to 60 tonnes)

Modification History
Not Applicable

Unit Descriptor

| Unit Descriptor | This unit specifies the outcomes required to operate a slewing mobile crane (up to 60 tonnes) for licensing purposes. It encompasses the requirement for the up to 20 tonnes licence. |

Application of the Unit

| Application of the Unit | This unit requires the operator to plan the work, conduct routine checks, set up crane, transfer loads, mobile loads and shut down and secure the crane. |
| | This unit is based on the requirements of the National Standard for Licensing Persons Performing High Risk Work. |
| | This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing. |

Elements and Performance Criteria Pre-Content

| Elements describe the essential outcomes of a unit of competency | Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide. |

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
</table>
| 1. Plan work | 1.1 Potential workplace hazards are identified  
1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment  
1.3 The weight of the load is identified and estimated in consultation with associated personnel  
1.4 The crane is appropriate to the load/s and workplace conditions  
1.5 Appropriate paths for the movement of loads in the work area are inspected and determined  
1.6 Appropriate communication methods are identified with associated personnel |
| 2. Conduct routine checks | 2.1 Crane is visually checked for any damage or defects  
2.2 Crane is accessed in a safe manner  
2.3 All signage and labels are visible and legible according to the appropriate standard  
2.4 Routine pre-operational crane checks are carried out according to procedures  
2.5 All controls are located and identified  
2.6 Crane service logbook is checked for compliance  
2.7 Crane is started according to procedures and checked for any abnormal noises |
<table>
<thead>
<tr>

<tr>
<td></td>
<td>2.10 All communication equipment is checked for serviceability</td>
</tr>
<tr>
<td></td>
<td>2.11 All damage and defects are reported and recorded according to procedures, and appropriate action is taken</td>
</tr>
</tbody>
</table>

3. Set up crane

| 3.1 Ground suitability is checked |
| 3.2 Crane is driven to the work area according to procedures |
| 3.3 Crane is positioned for work application and stability according to procedures |
| 3.4 Appropriate crane configuration for work task is determined according to procedures (where applicable) |
| 3.5 Boom/jib and counterweight configuration data is input into the crane computer (as required) |
| 3.6 Appropriate hazard prevention/control measures are applied to the work area according to procedures |
| 3.7 All communications equipment is tested for functionality |

4. Transfer load

| 4.1 Lifts are determined within the capacity of the crane |
| 4.2 Boom/jib and hoist block is positioned over load following directions from associated personnel |
| 4.3 Test lift is carried out according to procedures |
| 4.4 Loads are transferred using all relevant crane movements according to procedures and the appropriate standard |
| 4.5 All required communication signals are correctly interpreted according to procedures and the appropriate standard |
| 4.6 Crane is operated according to procedures |
| 4.7 Load movement is monitored constantly ensuring safety to personnel and load, and crane stability |
| 4.8 Unplanned and/or unsafe situations are responded to in line with procedures |

5. Mobile load

| 5.1 Suitability of planned route is checked for the crane according to procedures |
| 5.2 Crane is configured to mobile load according to procedures |
| 5.3 Load is moved using best mobile practice according to |
ELEMENT | PERFORMANCE CRITERIA
--- | ---
6. Shut down and secure crane | 6.1 *Crane* boom/jib and equipment are stowed and secured where appropriate according to *procedures* and the *appropriate standard*
| 6.2 Relevant motion locks and brakes are applied (where applicable)
| 6.3 Outriggers/stabilisers are stowed and secured according to *procedures*
| 6.4 Crane is **shut down** according to *procedures*
| 6.5 Plates or packing are stowed and secured
| 6.6 Routine post-operational crane checks are carried out according to *procedures*
| 6.7 All damage and defects are reported and recorded according to *procedures*, and appropriate action is taken

**Required Skills and Knowledge**

**REQUIRED SKILLS AND KNOWLEDGE**

*This describes the essential skills and knowledge and their level required for this unit.*

**Required skills:**

- Accurately record and maintain information relating to crane operations
- Use communication techniques in the workplace including whistles, hand signals and use of two-way radios
- Use interpersonal communication skills at a level sufficient to communicate with other site personnel
- Load data into crane computer (where fitted) and check operation to accurately reflect the crane configuration
- Operate a slewing mobile crane (21t up to 60t capacity) for the lifting and moving of loads to the safe working rated capacity in conjunction with other associated personnel
- Apply risk assessment and hazard control strategies, including hierarchy of control as applied to the positioning and safe operation of the crane (particular awareness of the risks associated with overhead powerlines/electrical cables, wind, erection, pack up and crane stability)
- Use and interpret crane manufacturer’s specifications and data, including load charts, to enable the crane to be configured for the load
- Verify problems and equipment faults and demonstrate appropriate response procedures
## REQUIRED SKILLS AND KNOWLEDGE

**Required knowledge:**

- Appropriate mathematical procedures for estimation and measurement of loads
- Commonwealth, state or territory OH&S legislation, standards and codes of practice relevant to the full range of processes for the crane class
- Level of literacy to be able to read and comprehend manufacturer's instructions, procedures and safety signs
- Mobile slewing crane characteristics and capabilities to allow the configuration of the crane to suit the range of loads
- Mobile slewing crane operating techniques
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Rated capacity and working load limits (including use of crane load charts)
- Typical routine problems encountered in the process and with equipment and adjustments required for correction

## Evidence Guide

### EVIDENCE GUIDE

*The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.*

**Overview of assessment**

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

**Critical aspects for assessment and evidence required to demonstrate competency in this unit**

- Compliance with OH&S licensing legislation.
- Effectively communicate and work safely with others in the work area.
- Risk assessment and management procedures (particular awareness of the risks associated
| EVIDENCE GUIDE | with overhead powerlines/electrical cables, ground conditions, crane tipping and demolition sites).  
| | • Effectively complete the pre-operational check, positioning, stabilising, set up, operation, post-operational checks of a mobile crane including all functions to their maximum extension in the lifting and moving of loads to the safe working rated capacity of the mobile crane up to 60 tonne capacity in conjunction with other associated personnel.  
| | • Appropriate mathematical procedures for estimation of loads.  
| Context of and specific resources for assessment | • Assessment of the safe and effective application of knowledge and skill to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.  
| | • Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.  
| | • Assessors must ensure that the assessment in the workplace is organised to ensure that all the required equipment and materials and a suitable working area is made available to suit the assessment and the workplace.  
| | • Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.  
| | • Assessment is to comply with relevant appropriate standard requirements.  
| | • Applicants must have access to:  
| | • Personal Protective Equipment (PPE) for the purpose of the Performance Assessment.  
| | • appropriate slewing mobile crane (21tonne up to 60 tonne) and associated equipment in safe condition  
| | • suitable loads as specified by the endorsed Assessment Instrument  
| | • communication equipment (e.g. two-way radios, whistles, etc.)  
| | • other associated personnel to sling and direct the loads.  
| Method of assessment | • Assessment must be conducted using the |
EVIDENCE GUIDE

| endorsed Assessment Instruments. These Instruments provide advice on their application. |
| • The use of 'simulators' in the assessment of this unit of competency is **not acceptable**. |
| • Assessment may be in conjunction with the assessment of other units of competency. |
| • Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge. |
| • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstances, but is able to be transferred to other circumstances. |

Guidance information for assessment

| • Further information about endorsed Assessment Instruments may be obtained from State/territory OH&S regulators. |

Range Statement

RANGE STATEMENT

</table>

**Stability**

May include but not limited to:

- deploying outriggers
- establishing correct size plates or packing
- correctly positioning plates or packing

**Crane configuration**

May include but not be limited to:

- boom/jib
- fly-jib
- counterweights

**Hazard prevention/control measures**

May include but not limited to:

- safety tags on electrical switches/isolators
- powerlines insulated
- safety observer used inside exclusion zone
- power disconnected
- traffic barricades and control
- pedestrian barricades
- trench covers
- movement of obstructions
- personal protective equipment
- adequate illumination

**Test lift**

The load is lifted just clear of the lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure that:

- near capacity loads do not overload the crane
- loads of unusual shape or weight distribution are correctly slung
- load measuring equipment can be used to verify the calculated weight of the load
- all crane equipment is functioning properly
- adjustments to the slinging can be made in a safe manner

**Relevant crane movements**

May include but not limited to:

- telescope in and out
- boom/jib up and down

TLILIC2001A Licence to operate a forklift truck

Modification History
Not Applicable

Unit Descriptor

| Unit Descriptor | This unit specifies the outcomes required for the operation of a powered industrial truck equipped with a mast and an elevating load carriage to which is attached a pair of fork arms or other attachment, for licensing purposes. This definition also includes a truck on which the operator is raised with the attachment for order-picking. |

Application of the Unit

| Application of the Unit | THIS UNIT REQUIRES THE OPERATOR TO BE ABLE PLAN THE WORK, CONDUCT ROUTINE CHECKS ON THE FORKLIFT, SHIFT LOADS IN A SAFE MANNER, AND SHUT DOWN AND SECURE THE EQUIPMENT AFTER THE COMPLETION OF OPERATIONS.  

This unit is based on the National Standard for Licensing Persons Performing High Risk Work.  

This unit in its current form meets state and territory licensing requirements. Any alteration will result in a unit which is not acceptable to regulators for the purpose of licensing. |

Licensing/Regulatory Information

Elements and Performance Criteria

<table>
<thead>
<tr>
<th>ELEMENT</th>
<th>PERFORMANCE CRITERIA</th>
</tr>
</thead>
<tbody>
<tr>
<td>Elements describe the essential outcomes of a unit of competency.</td>
<td>Performance criteria describe the required performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge and/or the range statement. Assessment of performance is to be consistent with the evidence guide.</td>
</tr>
</tbody>
</table>

1. Plan work

1.1 Potential workplace hazards are identified
1.2 Hazard control measures are identified consistent with appropriate standards to ensure the safety of personnel and equipment
1.3 Appropriate forklift truck is selected according to the load and workplace conditions
1.4 Working area is inspected to determine appropriate path of movement for loads and forklift truck
1.5 Communication methods are identified according to procedures

2. Conduct routine checks

2.1 Forklift is visually checked for any damage or defects
2.2 All signage and labels are visible and legible according to the appropriate standard
2.3 All controls are located and identified
2.4 Pre-start operational checks are carried out according to procedures
2.5 Forklift is started according to procedures and checked for any abnormal noise

2.6 Post-start operational checks are carried out according to procedures
2.7 All forklift functions and safety devices are tested to their maximum according to procedures
2.8 Defects and damage are reported and recorded according to *procedures*, and appropriate action is taken.

| 3. Shift load | 3.1 The weight of load is assessed to ensure compliance with *forklift* truck data plate specifications.  
| 4. Shut down and secure forklift truck | 3.2 Appropriate *hazard prevention/control measures* are implemented and communicated with personnel in the work area.  
| | 3.3 *Forklift* is operated at a safe speed and according to *procedures*.  
| | 3.4 Loads are moved and placed to ensure stability of material and avoidance of hazards.  
| | 3.5 Load movement is monitored constantly ensuring safety to personnel and load, and structural stability.  
| | 3.6 *Unplanned and/or unsafe situations* are responded to in line with *procedures*.  
| 4.1 *Forklift* truck is parked to avoid hazards.  
| | 4.2 *Forklift* is *shut down* according to *procedures*.  
| | 4.3 Routine post-operational forklift checks are carried out according to *procedures*.  
| | 4.4 *Forklift* is secured to prevent unauthorised access/use.  
| | 4.5 All defects and damage are reported and recorded according to *procedures*, and appropriate action is taken.  

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

*This describes the essential skills and knowledge and their level required for this unit.*

**Required skills:**

- Accurately interpret information relating to conducting forklift truck operations (e.g. procedures).
- Safely conduct forklift truck operations including all functions to the maximum height and load capacity.
- Identify hazards associated with the operation of the forklift truck, assess risks and put into place effective hazard prevention/control measures for those hazards identified.
- Use communication skills at a level sufficient to communicate with other site personnel (e.g. receive and interpret work instructions, safety information, emergency procedures).
REQUIRED SKILLS AND KNOWLEDGE

- Drive forklift with load in forward and reverse, maintaining visibility
- Verify problems and equipment faults and demonstrate appropriate response procedures

Required knowledge:

- Methodology of determining the weight of a load
- Commonwealth, state or territory OH&S legislation, standards relevant to the safe operation for the forklift trucks
- Understanding of forklift characteristics and capabilities (including use of load data plates)
- Understanding of the hierarchy of hazard identification and control
- Organisational and workplace standards, requirements, policies and procedures for conducting operations for the crane class
- Procedures for the recording, reporting and maintenance of workplace records and information
- Forklift truck operations and safe operating techniques
- Typical routine problems encountered in the operation of the crane and equipment and adjustments required for correction

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for the Training Package.

Overview of assessment

- Successful assessment of this unit meets the competency requirement of the National Standard for Licensing Persons Performing High Risk Work.
- State/territory OH&S regulators have mandated the use of Assessment Instruments and Instructions for Assessment for this unit which have been endorsed by the national body responsible for OH&S matters.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

- Compliance with OH&S licensing legislation.
- Communicate and work safely with others in the work area.
- Identify hazards associated with the operation of the forklift truck and put in place effective hazard controls for those hazards identified.
# EVIDENCE GUIDE

- Conduct pre-start-up, operational, moving loads and shut down and secure checks of the forklift truck according to procedures.
- Operate the forklift truck and move loads safely, including driving and manoeuvring, picking up and placing of loads at various stack heights.
- Drive forklift truck with load in forward and reverse, maintaining visibility.

## Context of and specific resources for assessment

- Assessment of the safe application of knowledge and skills to workplace tasks (performance) must be undertaken using the endorsed Assessment Instrument.
- Assessment of performance must be undertaken either in the workplace or in a realistically simulated workplace setting.
- Assessment must occur under standard and authorised work practices, safety requirements and environmental constraints.
- Applicants must have access to:
  - Personal Protective Equipment (PPE) for the purpose of the Performance Assessment
  - associated equipment appropriate to forklift truck operations
  - suitable loads as described by the endorsed Assessment Instrument
  - manufacturers specifications
  - appropriate forklift truck in a safe condition.

## Method of assessment

- Assessment must be conducted using the endorsed Assessment Instrument. These Instruments provide instruction on their application.
- The use of 'simulators' in the assessment of this unit of competency is **not acceptable**.
- Assessment may be in conjunction with the assessment of other units of competency.
- Assessment methods must confirm consistency and accuracy of performance together with application of underpinning knowledge.
- Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances.

## Guidance information for

- Further information about endorsed Assessment Instruments may be obtained from state/territory...
## Range Statement

**RANGE STATEMENT**

*The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below.*

## RANGE STATEMENT

| Forklift truck | May include but not be limited to:  
|---------------|----------------------------------|
|               | • counterbalanced  
|               | • reach trucks  
|               | • rough terrain  
|               | • internal combustion petrol, diesel, gas  
|               | • electric  

| Communications methods | May include but not limited to:  
|------------------------|----------------------------------|
|                        | • verbal and non-verbal language  
|                        | • written instructions  
|                        | • signage  
|                        | • hand signals  
|                        | • listening  
|                        | • questioning to confirm understanding  
|                        | • appropriate worksite protocol  

| Procedures | May include but not limited to:  
|------------|----------------------------------|
|            | • manufacturer's guidelines (instructions, specifications or checklists)  
|            | • industry operating procedures  
|            | • workplace procedures (work instructions, operating procedures, checklists)  

| Pre-start operational checks | May include but not limited to:  
|------------------------------|----------------------------------|
|                             | • safety devices fitted where appropriate  
|                             | • forklift data plate fitted and interpreted  
|                             | • logbook, handbook or operating manuals available  
|                             | • external visual check including, evidence of damage, leaks, visual evidence of structural weaknesses (including paint separation or stressed welds) is carried out  
|                             | • forklift attachment is checked for security  
|                             | • approved modifications and/or attachments fitted to manufacturer's specifications (e.g. as per forklift or attachment data plate) are identified  
|                             | • checks for adaptations or modifications outside manufacturer's specifications (e.g. not listed on the forklift or attachment data plate) are carried out  
|                             | • maintenance logbook/records checked  

<table>
<thead>
<tr>
<th>RANGE STATEMENT</th>
<th></th>
</tr>
</thead>
</table>
| **Post-start operational checks** | May include checks of the forklift truck and equipment after start-up to ensure:  
  - hazard warning systems (for example lights and horns), are functional  
  - attachment movements and control functions are smooth and comply with operating requirements  
  - steering, transmission and brake functions comply with operating requirements |
| **Hazard prevention/control measures** | May include but not limited to:  
  - barricades and traffic control  
  - safety tags on electrical switches/isolators  
  - insulated powerlines  
  - safety observer used inside exclusion zone  
  - disconnected power  
  - pedestrian control (barricades, signs, etc.)  
  - excavation safeguards  
  - movement of obstructions  
  - personal protective equipment  
  - adequate illumination |
| **Unplanned and/or unsafe situations** | May include but not limited:  
  - failure/loss of control (e.g. brakes and steering)  
  - failure of equipment (e.g. hydraulic system)  
  - environmental condition |
| **Shut down** | May include, but is not limited to:  
  - parking in a suitable location away from dangerous areas  
  - fork arms are correctly positioned (tips down, tilted forward, lowered to ground)  
  - appropriate transmission/gear is selected for parking (relevant to transmission type)  
  - hand/parking brake is applied  
  - engine power is turned off  
  - ignition key is removed (if applicable)  
  - LPG gas cylinder valve is shut off (where fitted)  
  - securing equipment against unauthorised operation  
  - securing the site  
  - ensuring access ways are clear  
  - identifying and segregating defective equipment |

### Unit Sector(s)

Not Applicable
CPPCMN2002A Participate in workplace safety arrangements

Modification History
Revised unit
Unit updated and equivalent to PRMCMN201A Participate in workplace safety arrangements.

Unit Descriptor
This unit of competency specifies the outcomes required to ensure own safety and that of others in the workplace. It also covers recognising hazards and following workplace emergency procedures.

Application of the Unit
This unit of competency supports employees without managerial or supervisory responsibilities. Performance would usually be carried out under routine supervision, within company guidelines.

Licensing/Regulatory Information
No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement.

Pre-Requisites
Not applicable.

Employability Skills Information
This unit contains employability skills.

Elements and Performance Criteria Pre-Content
Elements describe the essential outcomes of a unit of competency. Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.
Elements and Performance Criteria

1 Follow workplace procedures for hazard identification and risk control.
   1.1 **Hazards** in work area are **identified** and reported to **appropriate personnel** according to **workplace procedures** and **company requirements**.
   1.2 Workplace procedures and work instructions for controlling risks are followed according to company requirements.

2 Participate in arrangements for managing occupational health and safety (OHS).
   2.1 OHS issues are raised with appropriate personnel according to relevant **OHS legislation**, workplace procedures and company requirements.
   2.2 Opportunities to **participate** in OHS management in workplace are identified and used within scope of own role and responsibilities, according to workplace procedures and company requirements.

3 Follow emergency procedures in workplace.
   3.1 **Emergency procedures** are followed within scope of own role and responsibilities according to company requirements.
   3.2 Details of **hazardous events** are reported to appropriate personnel according to company requirements.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

**Required skills**

- interpersonal skills to relate to people from diverse backgrounds
- language and literacy skills to:
  - communicate clearly and concisely verbally and in writing
  - communicate OHS information to personnel
  - participate in OHS training
  - read and interpret directions and information, including:
- emergency responses
- product instructions
- safety signs
- work instructions
- report potential and existing risks or hazards
- skills to work safely when:
  - identifying hazards and controlling risks
  - using tools, equipment and products

**Required knowledge**

- common workplace hazards and risk control measures, including:
  - equipment and material use, storage, cleaning and disposal procedures
  - range and meaning of workplace safety signs and symbols
  - site safety plan
  - types and purpose of personal protective equipment (PPE)
  - ways to maintain OHS in emergency situations
- communication channels and procedures to report OHS concerns
- rights and responsibilities of parties in workplace under relevant OHS Acts, regulations and codes of practice

**Evidence Guide**

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

<table>
<thead>
<tr>
<th>Overview of assessment</th>
<th>This unit of competency could be assessed by observing the recognition of hazards in the workplace, ensuring own safety and that of others, and following emergency procedures.</th>
</tr>
</thead>
</table>
| Critical aspects for assessment and evidence required to demonstrate competency in this unit | A person who demonstrates competency in this unit must be able to provide evidence of the required skills and knowledge specified in this unit. In particular the person should demonstrate the ability to:
  - follow emergency procedures in emergency situations (note that evidence in this area may be gathered through simulations)
  - identify hazards and risks in the workplace and report them to appropriate personnel
  - follow workplace procedures for controlling risks in the workplace. |
| Context of and specific | Assessment of essential underpinning knowledge may be conducted |
resources for assessment | in an off-site context. It is to comply with relevant regulatory or Australian standards’ requirements.

Resource implications for assessment include access to:

- assessment documentation forms and record books
- manuals and relevant documentation, including OHS policies and procedures
- PPE commonly used to reduce workplace risk
- relevant products, tools, specialist equipment and associated instructions
- suitable work area, or simulated workplace environment, that allows for identification of hazards.

Method of assessment | Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Property Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

This unit could be assessed on its own or in combination with other units relevant to the job function.

Guidance information for assessment | Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.
| **Hazards may include:** | • blocked access to emergency entry and exit points  
• electrical and mechanical faults  
• unsafe manual handling methods  
• improper use of hazardous materials and chemicals. |
| **Identifying hazards may include:** | • checking equipment or work area before and during work  
• housekeeping  
• inspecting workplace equipment and work areas. |
| **Appropriate personnel may include:** | • health and safety representatives  
• managers  
• OHS personnel  
• other persons, including emergency service personnel authorised or nominated by organisation or industry to:  
  • approve specified work  
  • direct specified work and functions  
  • inspect specified work  
  • perform specified work and functions  
• supervisors and team leaders. |
| **Workplace procedures may include specific OHS procedures and organisational policies or procedures relating to:** | • assessment and control of risks  
• consultation and participation arrangements for employees  
• emergency response  
• OHS issue resolution  
• safe operating procedures or instructions that cover but are not limited to:  
  • awareness of electrical hazards  
  • awareness of environmental hazards  
  • confined space procedures  
  • provision of first aid  
  • safe use of tools and equipment  
  • working safely around electrical wiring, cables and overhead powerlines  
• specific hazards  
• reporting OHS issues  
• use of PPE  
• workplace safety inspections. |
| **Company requirements may include:** | • counselling and disciplinary processes  
• following procedures to dispose of, re-use or recycle resources  
• maintaining plant and equipment  
• purchasing supplies and equipment  
• work procedures and work instructions. |
| **OHS legislation may** | • general duty of care under OHS legislation and common law  
• provisions relating to OHS issue resolution |
include:

- provisions relating to roles and responsibilities of health and safety representatives and OHS committees
- regulations and codes of practice, including regulations and codes of practice relating to hazards present in workplace or industry
- state, territory and commonwealth OHS Acts.

**Participating** may include:

- formal and informal meetings of:
  - OHS committees
  - other committees, such as consultative, planning and purchasing
  - suggestions, requests, reports and concerns put forward by employees to management.

**Emergency procedures** may include:

- accident and incident reporting
- chemical containment
- evacuations
- following instructions from authorised or appropriate personnel during hazardous events
- provision of first aid.

**Hazardous events** may include:

- accidents, including motor vehicle accidents
- acts of violence
- bomb threats
- chemical spills
- fire and explosions
- inhalation of dangerous substances
- natural disasters.

Unit Descriptor

1) 1.1) Descriptor

This unit specifies the mandatory requirements of occupational health and safety and how they apply to the various electrotechnology work functions. It encompasses responsibilities for health and safety, risk management processes at all operative levels and adherence to safety practices as part of the normal way of doing work.

Application of the Unit
Not Applicable

Licensing/Regulatory Information

1.2) License to practice

During Training: Competency development activities are subject to regulations directly related to licencing, occupational health and safety and where applicable contracts of training such as apprenticeships.

In the workplace: The application of the skills and knowledge described in this unit require a license to practice in the workplace where work is carried out on electrical equipment or installations which are designed to operate at voltages greater than 50 V a.c. or 120 V d.c.

Other conditions may apply under State and Territory legislative and regulatory requirements.
Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

There are no prerequisite competencies for this unit.

Employability Skills Information

Employability Skills 3)

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Application of the Unit 4)

This unit addresses information, processes and techniques for the application of general occupational health and safety requirements in workplaces and is essential for employees without managerial or supervisory responsibilities.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit of competency

Elements and Performance Criteria

ELEMENT PERFORMANCE CRITERIA

1 Prepare to enter a 1.1 Work area access permits are obtained from appropriate personnel according to established

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and applying OHS practices in the workplace.

The knowledge and skills shall be contextualised to current industry standards, technologies and practices.

**KS01-EE101A Occupational Health and Safety principles**

Evidence shall show an understanding of Occupational Health and Safety to an extent indicated by the following aspects:

**T1** The basic legal requirements covering occupational health and safety in the workplace encompassing:

- underlying principles of OH&S
- general aims and objectives of the relevant state or territory legislation relating to OH&S.
- employer and employee responsibilities, rights and obligations.
- major functions of safety committees and representatives.
- powers given to Occupational Health and Safety Inspectors
- housekeeping and potential hazards in relation to improper housekeeping
- selecting appropriate personal protective equipment (PPE) given hazardous situations

**T2** The work environment encompassing:

- typical hazards associated with a range of work environments
- procedures used to control the risks associated with these hazards
- principles of risk assessment / management and state the purpose of each.
- hierarchy of OH&S hazard control measures.
- required documentation for risk assessment.
- commonly used workplace safety signs.
- workplace emergencies that pose a threat to health and safety and suitable procedure for an emergency workplace evacuation.
- appropriate fire extinguisher for a given type of fire.
- requirements for the location, mounting and maintenance of portable fire extinguishers.
- basic process of fighting a fire.
- Importance of safe premises, buildings and security in an industrial setting and the consequences of non-compliance.
- standard work procedure.

**T3** Manual Handling encompassing:
REQUIRED SKILLS AND KNOWLEDGE

- typical manual handling injuries and the effect they can have on lifestyle
- situations that may cause manual handling injuries
- correct procedures for lifting and carrying to prevent manual handling injuries

T4 Chemicals in the workplace encompassing:
- hazardous substances and dangerous goods.
- classification of chemicals as hazardous substances and/or dangerous goods
- requirements for labelling of chemicals in the workplace
- safe storage procedures for chemicals
- purpose and interpretation of material safety data sheet (MSDS)

T5 Working at heights encompassing:
- dangers associated with working on ladders and scaffolds
- identification of work area as a height risk and use appropriate safety equipment to prevent a fall
- selecting an appropriate ladder for a given situation and perform a safety check before use
- precautions that should be taken when ascending and working off a ladder
- precautions that should be taken when working on and around a scaffold and elevated platforms.

T6 Confined spaces encompassing:
- hazards associated with working in a confined space
- identifying workplace situations that could be classified as a confined space
- control measures for working in a designated confined space

T7 Physical and psychological hazards encompassing:
- short and long term effects of excessive noise and techniques to avoid damage to hearing due to excessive noise
- effects of vibration on the human body and work practices to protect against vibration
- effects of thermal stress on the human body and work practices to protect against thermal stress
- effects of ultraviolet (UV) radiation on the human body and work practices to protect against UV radiation.
- dangers associated with laser operated equipment and tools and suitable protective measures to overcome the danger.
- occupational overuse syndrome, how it occurs and means to overcome it
- factors that cause stress in the workplace, symptoms of a person suffering from stress and personal stress management techniques
- detrimental effects and dangers of drug and alcohol use in the workplace

T8 Working safely with electricity encompassing:
- effects of electric shock on the human body
REQUIRED SKILLS AND KNOWLEDGE

- common causes of electrical accidents
- precautions that can minimise the chance of electric shock (earthing, extra low voltage, fuses, circuit breakers and residual current devices – RCDs)
- protection offered by a residual current device (RCD)
- need for ensuring the (safe) isolation of an electrical supply
- appropriate method of removing an electric shock victim from a live electrical situation

T9 Life support - CPR in the workplace encompassing:

- First Aid.
- responsibilities of the First Aider.
- priorities of first aid management for any accident or injury.
- procedures required at an accident scene.
- legal and ethical issues, which may impact on the management of care.
- 'Duty of Care'.
- examination of a casualty for injuries.
- effect of cardio pulmonary arrest on the body.
- Managing simulated conditions of: airway obstruction; respiratory arrest and cardio pulmonary arrest,
- single and two-person cardio pulmonary resuscitation (CPR).
- signs and symptoms of an altered level of consciousness
- management of simulation of a casualty with an altered level of consciousness.
- signs and symptoms of shock.
- management of simulation of a casualty in shock

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this unit. It must be used in conjunction with all parts of the unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over
EVIDENCE GUIDE

time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. It is recognised that, in some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work have a bearing on the decision as to how much and how detailed the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able
EVIDENCE GUIDE

to:

- Implement Occupational Health and Safety workplace procedures and practices, including the use of risk control measures as specified in the performance criteria and range statement encompassing:

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement

- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.

- Demonstrate an appropriate level of skills enabling employment

- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures

- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:

  - Applying OHS practices in the workplace as described in 8) and including:

    A Preparing to enter the workplace including, the use of work permits and clearances and isolation permissions.

    B Understanding and following risk control safe work methods.

    C Applying work procedures and instructions as they apply to risk control measures.

    D Dealing with accidents and emergencies within the scope of responsibility.

    E Participation in consultation processes, identifying hazards and implementing and monitoring control measures.

    F Dealing with unplanned events

Note:
Ability to implement these Occupation Health and Safety
EVIDENCE GUIDE

measures shall be demonstrated on all occasions safety issues arise.

9.3) This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed in this unit.

These should be used in the formal learning/assessment environment.

Note:

Where simulation is considered a suitable strategy for assessment, conditions for assessment must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

The resources used for assessment should reflect current industry practices in relation to applying OHS practices in the workplace.

9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:

Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires that the specified essential knowledge and associated skills are assessed in a structured environment which is primarily intended for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

9.5) This unit shall be assessed concurrently, as it relates to other units undertaken in a possible skill clusters or qualification.

Components of this unit are included in the critical aspects of evidence of all units to help ensure the appropriate level of responsibility for safety has been acquired.
Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit shall be demonstrated in relation to each of the following:

- Relevant Occupational Health and Safety legislation, regulations and codes of practice related to hazards present in the industry and particular workplace.
- Accepted industry work procedures and the specific safety procedures and work instructions for particular workplace.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Descriptor

1.1) Descriptor

This unit covers the basic connection of refrigeration and air conditioning piping/tubing and fittings. It encompasses the safe use of hand, fixed and portable power tools for cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, bundy tube and brass and steel fittings, measurement and reading drawings and diagrams.

Application of the Unit

4) This competency standard is suitable for employment-based programs under an approved contract of training at the AQF level of the qualification in which the unit is first packaged or higher. The unit may be selected as an elective from the relevant schedule (see qualification packaging rules) provided that all prerequisite units are undertaken or addressed through recognition processes.

This unit may be included in a skill set provided that it is listed in the schedule of electives (see Qualification Framework) and all prerequisite units are undertaken or addressed through recognition processes.

Delivery and assessment of this unit should be undertaken within regard to the requirements of License to Practice (1.2 above), Prerequisite Competencies and Literacy and Numeracy skills (2 above) and the recommendations for concurrent assessment and relationship with other units (9.5 below).
Application of the Unit

Practice in the workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control and lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting, risk safety measures etc.

Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:

1. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

2. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures etc.
Pre-Requisites

dimensions and pressure testing.

3 Complete work and report

3.1 OHS work completion risk control measures and procedures are followed.

3.2 Work site is cleaned and made safe in accordance with established procedures.

3.3 Work supervisor is notified of the completion of the work in accordance with established procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and preparing refrigerant tubing and fittings.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ102A Refrigerant tubing and fittings techniques

Evidence shall show an understanding of cutting, bending and joining refrigeration piping and tubing tools, equipment and techniques, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Piping
- Refrigeration & water grade copper tube
- Maintaining cleanliness (always capped, do not blow out with mouth etc)
- Soft and hard drawn tube
- tubing applications (soft, hard, pair coil, water grade etc)
- Tube qualities - diameter, wall thickness (gauge) and pressure ratings (R410A etc)
- Pipe insulation (types - tube, slit tube, sheet etc and joining methods - glue, tape etc)
- Other tube materials (Bundy, steel, aluminum, brass)

T2 Cutting
- Cutting tools (Imps, normal & large pipe cutters, tube cutting rings etc)
- Precautions while cutting (sharp burrs, sharp blades etc)
REQUIRED SKILLS AND KNOWLEDGE

- Deburring tools (reamers, deburrers etc)

T3 Bending
- Bending tools (springs, levers, presses etc)
- Precautions while bending (work hardening, collapsing etc)
- Bending hard drawn tube - the process of annealing

T4 Joining
- Flare nuts (plain, short barrel, frost proof, reducing)
- Flaring tools (flare block, eccentric with clutch for high pressure tube)
- Precautions while flaring (deburred, length past block face, cleanliness)
- Swaging tools (punch, flare block, expander etc)
- Precautions while swaging (length past block face, tube shortening effect, cleanliness etc)
- Other tube fittings (BSP to flare elbows, tees, unions, plugs, flare washers, Lokrings etc)
- Thread sealants (tapes, pastes etc)
- Access valves (Schrader, piercing, cut-away of service valve/s)
- Precautions using access valves (refrigerant leakage, core removal, limitations on piercing valves etc)

T5 Soldering and brazing equipment
- Gas types (oxy acetylene, air acetylene, propane, Mapp gas)
- Hazards associated with their use (cylinder transport, remove regulator, oil & oxy = bang)
- Personal safety (MSDS - oxy, acetylene, propane, MAPP gas)
- Flash back arrestors
- Setting up equipment (fitting regulator, adjusting pressures, tip selection)
- Igniting and flame types (flint guns, oxidising, neutral, carburising)
- Care and maintenance of equipment (hoses, regulator, tips, cylinders, flash back arrestors)

T6 Silver solder
- Types (yellow, brown, blue and their metal components)
- Personal safety (MSDS - silver brazing alloys)
- Flux and its use (dissimilar metals)
- Personal safety (MSDS - flux)
- Preparing surfaces (removing oxides, oils, applying flux)

T7 Soldering techniques
- Dry nitrogen
- Personal safety (MSDS - nitrogen)
- Applying dry nitrogen to a piping circuit
REQUIRED SKILLS AND KNOWLEDGE

- Silver soldering copper to copper
- Silver soldering copper to dissimilar metals
- Annealing copper tube

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and
EVIDENCE GUIDE

operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)
Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit.
  - It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
  - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
    - Prepare refrigerant tubing and fittings as described in 8) and including:
      - Applying tubing and fitting appropriately to equipment layout
EVIDENCE GUIDE

B Using established methods to cut, flare, bend, swage and silver brazing copper tube

C Attaching fittings correctly

D Conducting component routine quality checks

E Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items

Note:
Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly identified.

Context of and specific resources for assessment

9.3)
This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:
Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in preparing refrigerant tubing and fittings.

Method of assessment

9.4)
This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is
EVIDENCE GUIDE

expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5) There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to preparing refrigerant tubing and fittings for at least two basic different refrigeration/air conditioning equipment layouts, which require cutting, flaring, bending, swaging, silver brazing copper tube to copper tube, bundy tube, brass and steel fittings.

Note:

This includes piping/tubing and fittings for high pressure refrigerants.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Competency Field 5)

Refrigeration and Air Conditioning
UEENEEJ105A Position, assemble and start up single head split air conditioning and water heating heat pump systems

Modification History
Not Applicable

Unit Descriptor
1) Descriptor

This unit covers the assembly, installation and starting up and de-commissioning of single head split air conditioning systems and split water heating heat pump systems up to a maximum of 18kW refrigeration capacity. It encompasses working safely and to standards, following routine procedures to install equipment, connecting pipe work, pressure testing, evacuating, perform functional checks and complete installation / regulatory documentation.

Note: The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Application of the Unit
4) Application of the Unit

This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training. It may also be used to augment previously acquired competencies.
Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some jurisdictions, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:
1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

2. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.

3. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures.

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- UEENEEJ172 A Recover, pressure test, evacuate, charge and leak test refrigerants split systems
- UEENEE10 1A Apply Occupational Health and Safety regulations, codes and practices in the workplace
- UEENEE102 A Prepare and connect refrigerant tubing and fittings
Employability Skills Information

ELEMENT                  PERFORMANCE CRITERIA

requirements (Note 2)

4.3 Work site and equipment is cleaned and made safe in accordance with established procedures. (Note 3)

4.4 Work completion is documented and appropriate person(s) notified in accordance with established procedures

Note.
1. a. Electrical connection shall be carried out by an appropriately licensed electrician.
   b. Mains water connection shall be carried out by an appropriately licensed plumber.
2. Unit performance is completed after associated electrical work is carried out by an appropriate electrically licensed person.
3. Making safe includes leak testing and fitting of caps to all refrigerant access ports, which could allow refrigerant to escape into the environment. It includes de-commissioning.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and positioning, assembling and starting up split air conditioning and water heating heat pump systems.

All knowledge and skills detailed in this unit should be contextualised to current industry practices and technologies.

KS01-EJ105A Split air conditioning and water heating heat pump system installation

Evidence shall show an understanding of split air conditioning and water heating heat pump system installation, start-up and decommissioning; applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated by the following aspects:

T1 Sustainable energy
- The earth’s atmosphere
- The greenhouse effect
- Energy usage in Australia (gases, coal, fuel oil etc)
- Projected population increase and its effects
- International and national greenhouse imperatives: the role of regulators and similar bodies (Kyoto Protocol)
REQUIRED SKILLS AND KNOWLEDGE

T2 Sustainable energy work practices
- Definitions
- Renewable energy technologies (solar, wind, biomass, geothermal, tidal, hydro, nuclear)
- The concept of co-generation
- Economic benefits of sustainable energy initiatives

T3 Heritage awareness
- Heritage listings (concept and types (world, national, commonwealth etc))
- Purpose of regulations related to maintenance of listed sites
- Responsibilities while working in and around listed sites
  - Environmental protection
- Government agencies (AGO, EPHC, DEC etc)
- Environmental protection (land, water, atmosphere, human settlement, biodiversity etc)
- Purpose of regulations related to environmental protection
- Responsibilities while working in and around environmentally protected sites
- Protocols for working in and around protected sites (legislated acts - ozone protection etc)

T4 Relevant installation codes
- Applicable standards and codes (building, electrical, health, environmental – OH&S act, ozone protection act, Refrigerant Handling Code of Good Practice)
- Introduction to MEPS (minimum energy performance standards) and the star rating

T5 Split air conditioning systems

T6 Types and applications
- categories (high wall, floor mounted, ceiling mounted, cassette, ducted)
- sub categories (single head, multi head)
- types (cooling only, reverse cycle, inverter, dc)
- typical applications for each category / type
- system ratings (hp vs kw, standard ambient conditions for capacity ratings ,actual star rating examples)
- Components, construction and operation
- evaporators (finned induced and forced draught)
- metering devices (capillary, restrictor)
- service ports (ball valves, post valves, schrader valves)
- reverse cycle (reversing valves)
- air distribution – non-ducted (fans, filters, swing louvers etc)
- air distribution - ducted (ducting types, bto's, dampers, outlets, grilles, plenums, filters etc)
- typical ducting layouts (maps)
- typical mechanical system layouts (cooling only, reverse cycle)
REQUIRED SKILLS AND KNOWLEDGE

- evaporating and condensing temperatures / pressures - design and typical operating values
- controls - operating and safety (encapsulated lp & hp sensors, compressor overload, de-ice stat etc)

T7 Split water heating heat pump systems

- Types and typical applications, including hot water heating and swimming pool heating
- Components, construction and operation
- Cooling coil
- Heating coil
- Metering devices (capillary, restrictor)
- Service ports (ball valves, post valves, Schrader valves)
- Typical mechanical system layouts
- Evaporating and condensing temperatures / pressures - design and typical operating values
- Controls - operating and safety (encapsulated LP & HP sensors, compressor overload, etc)

T8 Installation of unit and pipework

- Respect for customers premises (on-time, respectful language, private commodities, toilets, clean-up etc)
- Noise and vibration (problems for neighbours, typical council requirements)
- Location & mounting - outdoor unit (suitable locations, slabs, brackets (wall/roof), machine pads (e.g. waffle) etc)
- Location & mounting - indoor unit/water heater (suitable locations, penetrations, hanging, mounting methods)
- Refrigerant piping (layout, installation, insulation, pair coil, protection (steel trunking, plastic pipe duct))
- Condensate drains and pumps (correct drainage, safety drain on FCU, condensate pumps)
- Personal safety (safe lifting, correct use of ladder and platforms)
- Manufacturers installation instructions (examples of typical manufacturers installation guides)
- Electrical connections by electrician
- Mains water connections by plumber

T9 System start up

- Manufacturers start-up instructions (examples of typical manufacturers guides)
- Pressure testing refrigerant pipework and system (nitrogen)
- Evacuation
- Opening outdoor unit valves
- Checking refrigerant charge (pressures, temperatures, sweat line, evaporator superheat etc)
REQUIRED SKILLS AND KNOWLEDGE

- Adding refrigerant (manufacturers recommended top-up values for longer pipework runs)
- Leak detection
- Customer familiarisation (completing warranty card, operating instructions, general maintenance instructions)

T10 De-commission split air conditioning systems

- Closing isolations valves on outdoor unit.
- Indoor unit pump down and recovery
- Sealing refrigerant components
- Electrical isolation and disconnection by electrician
- Mains water isolation and disconnection by plumber
- Unit, piping, drain and electrical cable removal

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment

9.1) Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time. This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be
EVIDENCE GUIDE

required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control measures as specified in the performance criteria and range statement
  - Apply sustainable energy principles and practices as specified in the performance criteria and range statement
  - Demonstrate an understanding of the essential knowledge and associated skills as described in this unit. It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
  - Demonstrate an appropriate level of skills enabling employment
  - Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
  - Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
EVIDENCE GUIDE

- Position, assemble and start up split air conditioning and water heating heat pump systems as described in 8) and including:
  
  A  Determining job requirements correctly
  
  B  Positioning and assembling system components to specifications
  
  C  Assembling piping and tubing to specifications
  
  D  Pressure testing an evacuating the system in accordance with manufacturer’s instructions and industry standards, codes and regulations.
  
  Note:
  Refrigerant purging is not permitted in Australia
  
  E  Giving notification to appropriate person for electrical connections to be completed
  
  F  De-commissioning single head split air conditioning and water heating heat pump units
  
  G  Testing system performance correctly to manufacturer design specifications
  
  H  Documenting work activities
  
  I  Demonstrating a basic understanding of system performance outside manufacturers design specifications
  
  J  Demonstrating a basic understanding of the compressor, condenser, evaporator and flow control types and their function relevant to single head split system installation
  
  K  Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items
  
  Note:
  Successful completion of relevant vendor training may be used to contribute to evidence on which competency is deemed. In these cases the alignment of outcomes of vendor training with performance criteria and critical aspects of evidence shall be clearly
EVIDENCE GUIDE

Context of and specific resources for assessment

9.3) This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:

- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note: Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in positioning, assembling and starting up split air conditioning and water heating heat pump systems.

Method of assessment

9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note: Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5) There are no concurrent assessment recommendations for this unit.

Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to
RANGE STATEMENT

which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to the assembly, installation and starting up and de-commissioning of single head split air conditioning and water heating heat pump systems (hot water or swimming pool) up to a maximum of 18kWr ‘refrigeration’ capacity with the following attributes:

- safe working
- Australian/New Zealand standards applied
- routine procedures followed
- equipment installation
- pipe work connection
- pressure test
- evacuation
- functional performance checks
- installation/regulatory documentation completion

Note:
1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill and the Ozone Protection and Synthetic Gas Management Regulations apply to this qualification. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

2. This includes the installation, commissioning and de-commissioning of single head wall hung split air conditioning and water heating heat pump systems. The maximum plant capacity for each system is 18 kWr.

3. This unit DOES NOT COVER COMPETENCIES FOR service, repair, maintenance, diagnostic/fault finding and electrical work and the safe and proper installation of commercial refrigeration and air conditioning and water heating heat pump plant and equipment.

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable
Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'.

<table>
<thead>
<tr>
<th>Reading</th>
<th>Writing</th>

Competency Field 5)

Refrigeration and Air Conditioning
UEENEEJ172A Recover, pressure test, evacuate, charge and leak test refrigerants - split systems

Modification History
Not Applicable

Unit Descriptor

Unit Descriptor 1)
1.1) Descriptor
This competency standard unit covers the recovery of refrigerant, pressure and leak testing, evacuation and refrigerant charging in split air conditioning and heat pump systems. It encompasses working safely and to standards, following regulations and industry practices for handling refrigerants and completing the necessary documentation.

Note:
The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this competency standard unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.

Application of the Unit

Application of the Unit 4)
This unit is intended for competency development entry-level employment-based programs incorporated in approved contracts of training and may be used to augment other electrotechnology qualifications at AQF 2 level or higher.
Licensing/Regulatory Information

1.2) License to practice

The skills and knowledge described in this unit may, in some States/Territories, require a license to practice in the workplace subject to regulations for undertaking refrigeration and air conditioning work. Practice in workplace and during training is also subject to regulations directly related to occupational health and safety and where applicable contracts of training such as apprenticeships.

Note:
1. The Ozone Protection and Synthetic Greenhouse Gas Legislation Amendment Bill 2003 may apply to this unit. Prior to planning the delivery of any training and/or assessment activities all legislative and regulatory requirements shall be identified and included.
2. Compliance with permits may be required in various jurisdictions and typically relates to the operation of plant, machinery and equipment such as elevating work platforms, powder operated fixing tools, power operated tools, vehicles, road signage and traffic control, lifting equipment. Permits may also be required for some work environments such as confined spaces, working aloft, near live electrical apparatus and site rehabilitation.
3. Compliance may be required in various jurisdictions relating to currency in First Aid, confined space, lifting and risk safety measures

Pre-Requisites

Prerequisite Unit(s) 2)

2.1) Competencies

Granting competency in this unit shall be made only after competency in the following unit(s) has/have been confirmed.

- UEEENEEJ102 A
  Prepare and connect refrigerant tubing and fittings

- UEEENEE10 IA
  Apply Occupational Health and Safety regulations, codes and practices in the workplace
Employability Skills Information

This unit contains Employability Skills

The required outcomes described in this unit of competency contain applicable facets of Employability Skills. The Employability Skills Summary of the qualification in which this unit of competency is packaged will assist in identifying Employability Skill requirements.

Elements and Performance Criteria Pre-Content

6) Elements describe the essential outcomes of a unit

### Required Skills and Knowledge

**REQUIRED SKILLS AND KNOWLEDGE**

7) This describes the essential skills and knowledge and their level, required for this unit.

Evidence shall show that knowledge has been acquired of safe working practices and recovering, pressure and leak testing, evacuating and charging refrigerants split systems.

All knowledge and skills detailed in this unit should be contextualised to current
REQUIRED SKILLS AND KNOWLEDGE

industry practices and technologies.

KS01-EJ172A Split system basic operating principles, refrigerants and lubricants

Evidence shall show an understanding of refrigerants and lubricants used in split air conditioning and heat pump systems, applying safe working practices and relevant Standards, Codes and Regulations to an extent indicated.

T1 The Residential Air Conditioning and Heat Pump Industry and Licensing Requirements

- Brief overview and history of the Australian residential air conditioning/heat pump industry
- Typical applications and equipment
- Overview of the State and federal agencies (environment and heritage, greenhouse office, ARC, OFT etc)
- State and federal licensing requirements
- The ozone protection act
- The ozone layer (function, ozone depleting substances)
- Overview of the Australia and New Zealand refrigerant handling code of practice 2007, Part 2, Systems other than Self-contained low charge systems

T2 Heat

- Matter (atoms, molecules, energy and its different forms)
- Heat energy (definition, unit of measurement)
- Enthalpy (definition, unit of measurement)
- Heat flow (hot to cold)
- Heat transfer
  - methods (conduction, convection, radiation)
  - requirements
  - effects

T3 Temperature and Relative Humidity

- Temperature
- Scale types (imperial, metric, absolute) and their units of measurement
- Conversion to/from absolute values
- Temperature difference/change (td, Δt, unit of measurement)
- Relative humidity

T4 Sensible and Latent Heat

- Definition of specific heat capacity, latent heat and sensible heat (including units of measurement)
- Types of latent heat
- Heat calculations
REQUIRED SKILLS AND KNOWLEDGE

T5 Pressure

- Define
- Scale types (imperial, metric, absolute) and their units of measurement
- Vacuum scales (Pascals, microns)
- Conversion to/from absolute values
- The basic Gas Laws – Boyles, Charles and Daltons (excl combined or general gas law)
- Pressure gauge types and applications (pressure, compound, vacuum, manometer, magnehelic, barometer)
- Hazards and related safe working practices (dangerous system pressures)
- Care and maintenance (ingress of oil and contaminants (dirt), avoiding needle bounce (especially HP) etc)
- Calibration (atmospheric pressure, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations

T6 Refrigerant conditions

- Saturation temperature
- Saturated liquid / saturated vapour
- Superheated vapour
- Sub-cooled liquid
- Pressure temperature relationships
- P/T charts
- Enthalpy

T7 The Vapour Compression Cycle

- Major system components
- High and low pressure sides
- Basic system operation

T8 Thermometers and relative humidity devices

- Thermometer types and applications (digital, stem, dial, max/min, non-contact, data loggers)
- Relative Humidity measurement devices and applications (dry bulb/wet bulb, sling, digital)
- Hazards and related safe working practices (working near rotating machinery - fans, pulleys, belts etc)
- Care and maintenance (bending stems, overheating, removing batteries after use, uncoiling capillary)
- Calibration (boiling water, iced water, send to a specialist etc)
- Appropriate and safe methods of use
- Typical locations on a system
REQUIRED SKILLS AND KNOWLEDGE

- Fitting temperature and relative humidity instruments

T9 Leak Detectors

- Detector types and applications (electronic, halide, bubble, ultra violet)
- Hazards and related safe working practices (working around rotating machinery, open flame, ultra violet light etc)
- Care and maintenance (delicate electronic equipment, changing sensor tip filters, changing gas cartridges etc)
- Calibration (auto calibrating, send to a specialist etc)
- Leak detection procedures

T10 Service Gauges

Manifold Gauges

- Types (dial gauges or electronic, manifolds with additional vacuum and charging ports & sight glasses)
- Typical uses for service gauges (high & low side pressure readings, charging, evacuating)
- Care and maintenance (oil and contaminants (dirt) in hoses, avoiding needle bounce, changing hose seals)
- Calibration (hoses open to atmosphere, adjusting screw etc)
- Hose shut-off valves and adaptors (access control valves, kwik couplers, etc)

System Access Fittings

- Types (Schrader, service valve, post valve, quick couplers etc)
- Typical applications for each
- Hazards and related safe working practices (oil or liquid spray, keeping clean, leaks etc)
- Care and maintenance (gland nuts loosened/tightened, seal caps fitted, regulations on piercing valves)

Using Service Gauges

- Service gauge manifold hose fitting
- Purging
- Pressure readings
- Service gauge manifold hose removal
- Pressure to temperature conversion

T11 Properties of Split Heat Pump Refrigerants

- Types (R22, R407C, R410a, R12 (old units) Hydrocarbons)
- Terms (blend, azeotrope, zeotrope, glide, CFC, HCFC, HFC, HC, bubble point, dew point, critical point, ODP, GWP etc)
- Typical properties of the current refrigerants used in split systems (boiling point, glide, composition (components), comparative latent heat performance etc)
REQUIRED SKILLS AND KNOWLEDGE

T12 Properties of Split Heat Pump Refrigerant Oils
- Types (mineral, POE, AB) and their applications
- Basic properties (miscibility, dielectric strength and viscosity)
- Typical issues regarding compatibility (neoprene and POE, POE and mineral etc)
- Safe handling (MSDS - POE's, Mineral, AB’s - Residual acid’s in used oil)

T13 Procedures for Working with Refrigerants
- Contaminants (Non-condensables, moisture, carbon, copper etc), effects of contamination (Acid, motor burnout, oil contamination, seizing, RMD blockage etc) and methods of contamination prevention
- Reclaiming/recovering refrigerants (using recovery pumps)
- Recovery cylinders (suitable types, markings and precautions – Code of Practice)
- Disposing of recovered refrigerants (Code of Practice)
- Pressure testing systems (suitable gases (nitrogen), test pressure etc)
- Purging pipework (illegal in Australia)
- Evacuation of newly installed split systems (vacuum pumps, correct use, 'drop testing')
- Charging refrigerant into a newly installed split system (pre-charged, charging cylinders, electronic scales)
- Detecting refrigerant leaks (electronic, bubbles, halide for R22)
- De-commissioning a split system (recovering refrigerant, isolating in outdoor unit)
- The practice of retrofitting (overview)
- Working with high pressure refrigerants (R410A) and Hydrocarbons (special precautions, tools etc)

Evidence Guide

EVIDENCE GUIDE

9) The evidence guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

The Evidence Guide forms an integral part of this Unit. It must be used in conjunction with all parts of this unit and performed in accordance with the Assessment Guidelines of this Training Package.

Overview of Assessment 9.1)

Longitudinal competency development approaches to assessment, such as Profiling, require data to be reliably gathered in a form that can be consistently interpreted over time.
EVIDENCE GUIDE

This approach is best utilised in Apprenticeship programs and reduces assessment intervention. It is the industry-preferred model for apprenticeships. However, where summative (or final) assessment is used it is to include the application of the competency in the normal work environment or, at a minimum, the application of the competency in a realistically simulated work environment. In some circumstances, assessment in part or full can occur outside the workplace. However, it must be in accordance with industry and regulatory policy.

Methods chosen for a particular assessment will be influenced by various factors. These include the extent of the assessment, the most effective locations for the assessment activities to take place, access to physical resources, additional safety measures that may be required and the critical nature of the competencies being assessed.

The critical safety nature of working with electricity, electrical equipment, gas or any other hazardous substance/material carries risk in deeming a person competent. Sources of evidence need to be 'rich' in nature to minimise error in judgment.

Activities associated with normal everyday work influence decisions about how/how much the data gathered will contribute to its 'richness'. Some skills are more critical to safety and operational requirements while the same skills may be more or less frequently practised. These points are raised for the assessors to consider when choosing an assessment method and developing assessment instruments. Sample assessment instruments are included for Assessors in the Assessment Guidelines of this Training Package.

Critical aspects of evidence required to demonstrate competency in this unit

9.2)

Before the critical aspects of evidence are considered all prerequisites must be met.

Evidence for competence in this unit shall be considered holistically. Each Element and associated performance criteria shall be demonstrated on at least two occasions in accordance with the 'Assessment Guidelines - UEE07'. Evidence shall also comprise:

- A representative body of work performance demonstrated within the timeframes typically expected of the discipline, work function and industrial environment. In particular this shall incorporate evidence that shows a candidate is able to:
  - Implement Occupational Health and Safety workplace procedures and practices including the use of risk control
EVIDENCE GUIDE

- Apply sustainable energy principles and practices as specified in the performance criteria and range statement
- Demonstrate an understanding of the essential knowledge and associated skills as described in this unit.
  It may be required by some jurisdictions that RTOs provide a percentile graded result for the purpose of regulatory or licensing requirements.
- Demonstrate an appropriate level of skills enabling employment
- Conduct work observing the relevant Anti Discrimination legislation, regulations, polices and workplace procedures
- Demonstrated consistent performance across a representative range of contexts from the prescribed items below:
  - Determine the basic operating conditions, recover, pressure and leak test, evacuate and charge refrigerants in split systems as described in 8) and including:
    A Selecting and using appropriate measuring devices, materials and equipment correctly
    B Recording measurements
    C Using calculation methods accurately
    D Identifying the conditions of a refrigerant at various locations in the vapour compression system
    E Documenting operating conditions correctly
    F Removing and storing refrigerant correctly
    G Conducting pressure testing at the appropriate pressure level and without damaging components
    H Locating and rectifying leaks
    I Evacuating the system to the required standard and using appropriate vacuum measuring instruments
    J Charging the system with the appropriate refrigerant
    K Completing the necessary documentation
EVIDENCE GUIDE

L. Dealing with unplanned events by drawing on essential knowledge and skills to provide appropriate solutions incorporated in the holistic assessment with the above listed items.

Context of and specific resources for assessment

9.3) This unit should be assessed as it relates to normal work practice using procedures, information and resources typical of a workplace. This should include:
- OHS policy and work procedures and instructions.
- Suitable work environment, facilities, equipment and materials to undertake actual work as prescribed by this unit.

These should be part of the formal learning/assessment environment.

Note:
Where simulation is considered a suitable strategy for assessment, conditions must be authentic and as far as possible reproduce and replicate the workplace and be consistent with the approved industry simulation policy.

Evidence should show demonstrated competency in recovering, pressure and leak testing, evacuating and charging refrigerants split systems.

Method of assessment

9.4) This unit shall be assessed by methods given in Volume 1, Part 3 'Assessment Guidelines'.

Note:
Competent performance with inherent safe working practices is expected in the Industry to which this unit applies. This requires assessment in a structured environment which is intended primarily for learning/assessment and incorporates all necessary equipment and facilities for learners to develop and demonstrate the essential knowledge and skills described in this unit.

Concurrent assessment and relationship with other units

9.5) There are no concurrent assessment recommendations for this unit.
Range Statement

RANGE STATEMENT

8) This relates to the unit as a whole providing the range of contexts and conditions to which the performance criteria apply. It allows for different work environments and situations that will affect performance.

This unit must be demonstrated in relation to testing and charging split systems encompassing the following:

- Determining operating conditions using measurement and basic calculation methods of vapour compression split systems whether used for refrigeration or air conditioning. These conditions include suction and discharge pressures, ambient, evaporator and condensing temperatures, evaporator, and condenser temperature difference.
- Recovering refrigerant from an existing split system including split single head air conditioning and hot water heat pump systems
- Pressure and leak testing a newly installed systems
- Evacuating newly installed systems in preparation for charging with refrigerant
- Charging newly installed systems with refrigerant

Generic terms used throughout this Vocational Standard shall be regarded as part of the Range Statement in which competency is demonstrated. The definition of these and other terms that apply are given in Volume 2, Part 2.1.

Unit Sector(s)

Not Applicable

Competency Field

2.2) Literacy and numeracy skills

Participants are best equipped to achieve competency in this unit if they have reading, writing and numeracy skills indicated by the following scales. Description of each scale is given in Volume 2, Part 3 'Literacy and Numeracy'

Reading 3  Writing 3  Numeracy 3
Custom Content Section

Competency Field  5)

Refrigeration and Air Conditioning
