CPPSSI5032 Capture new spatial data

Release: 1

CPPSSI5032 Capture new spatial data

Modification History

Release 1 This version first released with CPP Property Services Training Package Release 12.0.

This unit supersedes and is equivalent to CPPSIS5032 Capture new spatial data.

Application

This unit specifies the skills and knowledge required to capture new spatial data to meet client specifications using a variety of data capture methodologies. It includes setting up and using specialist equipment and technologies to capture and manipulate spatial data including attributes, topological features and metadata and checking and validating the integrity and accuracy of results.

This unit is suitable for skilled surveying technicians and skilled spatial information system (SIS) technicians who use a broad range of cognitive, technical and communication skills to select and apply methods and technologies to analyse information and provide solutions to sometimes complex surveying/spatial information problems.

Surveying and spatial information skills are applied in a range of industry contexts, including town planning, civil construction, mining, engineering, health, agriculture and defence.

All work must be carried out to comply with workplace procedures, in accordance with relevant state/territory regulations that govern surveying work, as well as work health and safety (WHS) legislation and regulations that apply to the workplace.

Cadastral surveying must be undertaken under the supervision of a registered surveyor. Users must check with the relevant regulatory state/territory authority before delivery.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil.

Unit Sector

Surveying and Spatial Information Services

Elements and Performance Criteria

Elements describe the essential outcomes.

Performance criteria describe what needs to be done to demonstrate achievement of the element.

- 1 Prepare for data collection.
 - 1.1 Review project and client specifications and schedule key activities and timelines according to organisational requirements.
 - 1.2 Review and comply with administrative and legislative requirements for data collection according to organisational requirements.
 - 1.3 Select equipment and technologies required to capture spatial data according to project specifications.
 - 1.4 Implement safe work practices when operating equipment and collecting data according to organisational requirements.

- 2 Gather spatial data.
 - 2.1 Set up and operate equipment and technologies according to manufacturer specifications.
 - 2.2 Collect data and attributes and relate data to a reference system according to project specifications.
 - 2.3 Manage and manipulate spatial data, including attributes and topological structures, using relevant technologies.
 - 2.4 Apply industry-accepted methods for assessing the validity and integrity of spatial data.
 - 2.5 Identify, record and report discrepancies between specifications and collected data.
 - 2.6 Document metadata according to industry-accepted standards and organisational requirements.

- 3 Finalise collection process.
 - 3.1 Record data correctly and complete documentation according to project specifications and organisational requirements.
 - 3.2 Check and validate data integrity and accuracy according to project specifications.
 - 3.3 Store data and documentation according to organisational and licensing requirements.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to CPPSIS5032 Capture new spatial data.
