**Assessment Requirements for CUAPYR401
Manage health and safety requirements at
fireworks displays**

Release: 2

Assessment Requirements for CUAPYR401 Manage health and safety requirements at fireworks displays

Modification History

Release	Comments
Release 2	This version released with CUA Creative Arts and Culture Training Package version 2.0. Updated assessment conditions section. Updated modification history section to reflect changed name of training package.
Release 1	This version first released with CUA Creative Arts and Culture Training Package version 1.0.

Performance Evidence

Evidence of the ability to:

- supervise a work group during at least one fireworks display
- recognise and report hazards to designated personnel during fireworks displays
- apply procedures for assessing and controlling risks to safety associated with hazards, according to the hierarchy of control measures
- communicate effectively about hazards and risks in the workplace to all relevant personnel
- comply with legislation, procedural requirements and licensing provisions related to the operation of fireworks displays.

Note: If a specific volume or frequency is not stated, then evidence must be provided for each of the above points at least once.

Knowledge Evidence

To complete the unit requirements the individual must:

- provide examples of issues and challenges that typically arise when managing health and safety at fireworks displays, along with examples of how they can be addressed
- explain how legislation and statutory requirements affect business operations with regard to safety and health issues associated with fireworks displays
- explain public liability and workers compensation requirements in relation to operating fireworks displays
- explain the process for identifying and controlling hazards associated with fireworks displays

- explain the relationship between fireworks legislation and organisational management, systems and procedures
- describe characteristics and composition of work groups and other persons associated with fireworks displays.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in creative arts industry environments. The assessment environment must include access to:

- legislative, administrative, and specific technical material and prescribed forms and documents
- typical work procedures, safety management systems, emergency plans, quality systems and case study scenarios
- a suitable work area to conduct risk control or desktop emergency exercises
- personal record-keeping book
- specific assessment requirements as identified by local licensing authorities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational educational and training legislation, frameworks and/or standards.

Significant health and safety issues impact on the delivery and assessment of skills in pyrotechnics. Assessment of these skills must therefore be undertaken in consultation with state or territory licensing authorities and customised according to the specific fireworks (outdoor, close proximity and/or special effects). Assessors may need to meet additional requirements where stipulated by state or territory regulations.

Assessors must be aware of, and consult with authorities on matters regarding, safety of personnel; safety of crowds and spectators; storage and transportation of pyrotechnic materials; and weather, site and venue conditions. Those seeking to assess competency in this unit must consult with the relevant state or territory licensing authority, and work within the requirements and guidelines set down by those authorities.
