1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFBM008A Operate a chaff firing system. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 1.2 removed

Application

This unit describes the skills required to operate a chaff firing system. It includes handling ammunition, and loading and unloading a chaff firing system. It also involves strict compliance with safety precautions and responding to commands from a supervisor.

This unit typically applies to a Naval Defence environment and was developed for boatswain's mates but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would generally perform routine tasks as part of a team and under indirect supervision. They would need to be prepared for a wide of range of contexts that could be unfamiliar and highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Maritime Operations

Elements and Performance Criteria

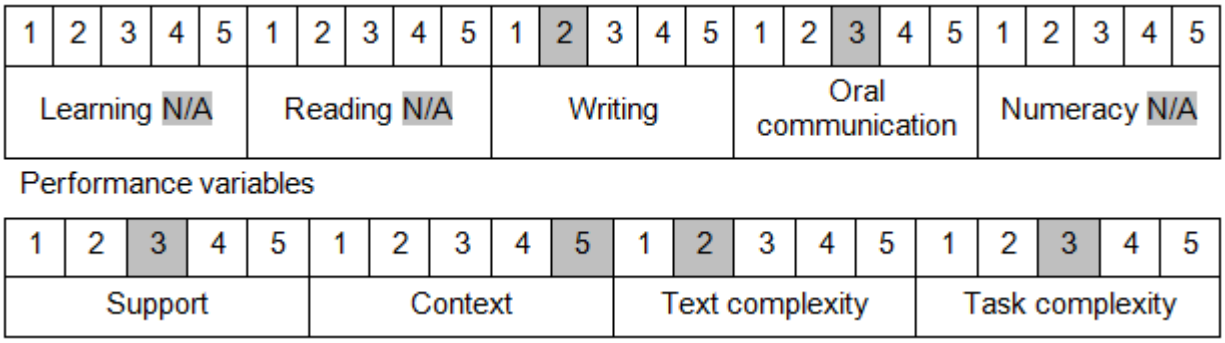
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Load and unload chaff firing system	1.1 Collect task requirements and confirm with supervisor. 1.2 Select and wear appropriate personal protective equipment. 1.3 Maintain communication with team members throughout chaff firing operations. 1.4 Conduct pre-firing checks under supervisor directions. 1.5 Identify and select ammunition. 1.6 Load and unload chaff firing system under supervisor directions. 1.7 Recognise and act on pre-firing warnings. 1.8 Respond to emergencies/incidents.
2. Secure chaff firing system	2.1 Check chaff firing system for serviceability and safety under supervisor directions. 2.2 Report faults or damage. 2.3 Clean, inspect, carry and secure ammunition.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFBM008A Operate a chaff firing system.

Assessment Requirements for DEFSEA008 Operate a chaff firing system

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- following instructions
- participating in a team
- responding to directions

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- operational procedures
- impact of environmental conditions on operations

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSEA009 Operate a visual target designation system

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFBM009A Operate a visual target designator system. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 1.1 removed

Application

This unit describes the skills required to operate a visual target designation system. It includes preparing the equipment for operation, acquiring air and surface targets, interpreting position data and communicating information for use in targeting.

This unit typically applies to a Naval Defence environment and was developed for boatswain's mates but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would generally perform routine tasks as part of a team and under indirect supervision. They would need to be prepared for a wide of range of contexts that could be unfamiliar and highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

DEFSEN001 Operate a radar system

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSO001C Operate a radar system. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 1.1 removed • PC 1.4 revised • PC 2.1 and 2.2 merged

Application

This unit describes the skills required to operate a radar system. It includes the requirement to configure the system, build and maintain the collection, and collate and analyse information to track existing contacts or identify new contacts. This activity could continue for a prolonged period, requiring the operator to hand over effectively to another operator.

This unit was developed for Sensor Operators working within Defence but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work as part of a team, under supervision, while performing routine tasks in a broad range of contexts and environments. They use discretion and judgement and take responsibility for the quality of their output.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- conducting daily system operability tests (DSOTs)
- detecting contacts via electronic means
- optimising operations room equipment
- using correct voice procedures
- using identification procedures
- identifying, tracking and reporting contacts over a minimum of one hour
- completing a minimum eight hours of radar systems operations using a manual or automated system
- working within one’s delegated authority

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- basic principles and characteristics of radar
- cryptographic materials
- environmental prediction system
- external/internal communication techniques and voice procedures
- tactical data systems

DEFSEN003 Operate a torpedo fire control system

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSO003C Operate a torpedo fire control system. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 1.2 removed • PC 2.2 and 2.3 merged

Application

This unit describes the skills required to operate a torpedo fire control system. It includes the requirement to enable the torpedo fire control system, input pre-firing data and ensure accurate information is entered into the system. This activity could continue for a prolonged period, requiring the operator to hand over effectively to another operator.

This unit was developed for Sensor Operators working within Defence but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work as part of a team, under supervision, while performing routine tasks in a broad range of contexts and environments. They use discretion and judgement and take responsibility for the quality of their output.

DEFSEN004 Operate an electronic support suite

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSO004C Operate an electronic support suite. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 2.2 and 2.3 merged and PC 3.2 and 3.3 merged

Application

This unit describes the skills required to operate an electronic support suite. It includes the requirement to configure the suite, build and maintain the continuous collection, and collate, analyse and log information to track and identify new intercepts and to monitor own force emissions. This activity could continue for a prolonged period, requiring the operator to hand over effectively to another operator.

This unit was developed for Sensor Operators working within Defence but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work as part of a team, under supervision, while performing routine tasks, in a broad range of contexts and environments. They use discretion and judgement and take responsibility for the quality of their output.

Assessment Requirements for DEFSEN004 Operate an electronic support suite

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- applying organisational doctrine and procedures
- optimising electronic support suite equipment
- using databases/libraries
- completing a minimum of twelve hours of accumulated electronic support suite operations
- classifying and logging intercepts as required and in accordance with electronic support tasking, using databases and libraries for analysis/identification

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- cryptographic materials
- daily system operability tests (DSOTs)
- electronic logging requirements
- internal and external communications
- pulse analysis theory
- radar principles
- tactical data systems

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSO005C Operate decoy systems. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 2.1 and 2.2 merged and PC 3.2 and 3.3 merged

Application

This unit describes the skills required to operate decoy systems as part of a team and under supervision. It includes the requirement to prepare, optimise and deploy the decoy systems. This activity could continue for a prolonged period, requiring the operator to hand over effectively to another operator.

This unit was developed for Sensor Operators working within Defence but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work as part of a team, under supervision, while performing routine tasks in a broad range of contexts and environments. They use discretion and judgement and take responsibility for the quality of their output.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Sensor Operations

Elements and Performance Criteria

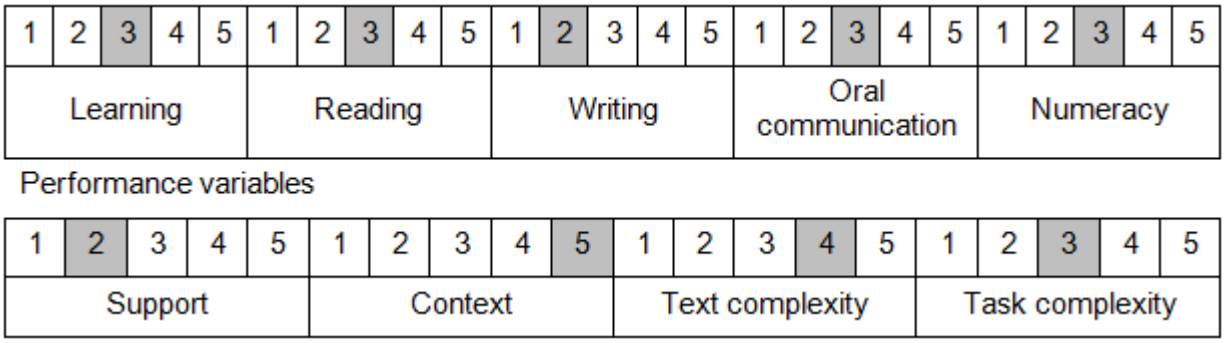
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare decoy systems	1.1 Establish internal and external communications. 1.2 Confirm serviceability of decoy system and recognise and report any faults to supervisor. 1.3 Determine outside environmental conditions. 1.4 Optimise decoy system for appropriate threat.
2. Operate decoy systems	2.1 Receive instructions from supervisor or relevant authority and deploy decoy as directed. 2.2 Reload decoy system. 2.3 Report any problems or issues beyond own capability to rectify to supervisor.
3. Finalise operations	3.1 Transfer decoy system status to new operator as required or cease operation as directed by supervisor. 3.2 Secure system and secure and stow documentation.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFSO005C Operate decoy systems.

Assessment Requirements for DEFSEN005 Operate decoy systems

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- applying organisational doctrine
- detecting contacts via electronic or sonar means
- optimising electronic suite or sonar equipment
- confirming serviceability of decoy systems including all fitted anti-ship torpedo defence (ASTD) or anti-ship missile decoy (ASMD) systems

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- basic principles and characteristics of anti-ship torpedoes or basic principles and characteristics of missiles
- cryptographic materials
- daily system operability tests
- external and internal communications

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSEN006 Optimise and monitor sensor display

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSO006A Optimise and monitor sensor display. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 1.1 removed

Application

This unit describes the skills required to optimise and monitor sensor displays. This includes setting up and applying settings to sensor display. It also includes monitoring the sensor display for irregularities and taking steps to return the sensor display to optimal performance.

This unit was developed for Sensor Operators working within Defence but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work as part of a team, under supervision, while performing routine tasks in a broad range of contexts and environments. They use discretion and judgement and take responsibility for the quality of their output.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Sensor Operations

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Set up sensor display	1.1 Set up tactical display in accordance with required function and shift supervisor tasking. 1.2 Access and display tactical information. 1.3 Set up sensor display and build tactical picture using operational data from other sources.
2. Apply settings to sensor display	2.1 Select and set appropriate range scale. 2.2 Select and display sensor video to support the compilation of the tactical picture. 2.3 Prepare IFF system equipment to support the compilation of the tactical picture. 2.4 Perform sensor index error checks.
3. Monitor sensor performance and respond to sensor degradation	3.1 Monitor sensors for degradation and recommend rectification action to shift supervisor. 3.2 Liaise with other sensor operators to achieve optimum sensor performance. 3.3 Recognise and respond to sensor alarms.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

Assessment Requirements for DEFSEN006 Optimise and monitor sensor display

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- identifying and responding to degradation in sensor display
- communicating with operations room personnel
- receiving and interpreting instructions
- operating sensor display settings based on tasking and required function
- applying settings to sensor display in accordance with the requirements of the intended function
- optimising and monitoring a sensor display

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- IFF system operation and settings
- operational data relevant to required function
- procedure for sensor index error checks
- requirements of a tactical display over the range of functions
- roles and responsibilities of other sensor operators
- selection criteria for sensor range scale
- sensor alarms and meaning
- tactical information relevant to required function

© Commonwealth of Australia, 2024 Public Skills Australia

- theory of radar
- theory of sonar
- types of sensor degradation and effect on sensor

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSEN007 Provide general support to combat systems operations

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSO007A Provide general support to combat systems operations. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • Element 5 removed • Elements 3 and 4 merged • PC 1.1 and 1.2 merged • PC 2.2 revised • PC 3.4 removed

Application

This unit describes the skills required to provide general support to combat systems operations. It includes administration support, preparing equipment for operations, processing and distributing information, and cleaning and securing operation room.

This unit was developed for Sensor Operators working within Defence but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work as part of a team, under supervision, while performing routine tasks in a broad range of contexts and environments. They use discretion and judgement and take responsibility for the quality of their output.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Participate in workplace briefings	1.1 Record relevant information from the attended briefing and clarify as required. 1.2 Incorporate information or tasks into own duty performance.
2. Prepare and enable equipment for operation	2.1 Gather ancillary equipment and make it available. 2.2 Perform daily system operability tests. 2.3 Recognise and report equipment faults or defects. 2.4 Load operational data required to enable equipment function. 2.5 Confirm ability to communicate internally and externally with the operations room by checking communication links.
3. Process and distribute information to promote situational awareness	3.1 Receive and act upon tasks relating to the processing and distribution of information. 3.2 Gather and interpret relevant information. 3.3 Display and distribute relevant information. 3.4 Maintain currency of information in accordance with shift supervisor instructions. 3.5 Compile, maintain and distribute correspondence and official records.
4. Secure operations room in preparation for periods of inactivity	4.1 Close internal and external communications links. 4.2 Sanitise equipment to prevent loss of data or breach of security requirements. 4.3 Shut down and secure departmental equipment. 4.4 Recover, refurbish and store ancillary equipment ready for later use.

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- complying with security requirements
- communicating with operations room personnel
- receiving and interpreting instructions
- maintaining a small equipment inventory
- preparing operations room equipment for function
- contributing to information management that promotes operations room situational awareness

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- operations room security and information support requirements within operations room
- scope and nature of general support tasks applicable to operations room environment
- use and application of operations room ancillary equipment

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

DEFSEN008 Support the compilation of the tactical picture

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSO008A Support the compilation of the tactical picture. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • Element 2 reworded • PC 1.3 and 1.4 revised

Application

This unit covers the competency required to provide support to the compilation of a tactical picture. It includes operating a sensor display to display and allow interpretation of tactical information. It also includes monitoring the sensor display for irregularities and taking steps to return the sensor display to optimal performance.

This unit was developed for Sensor Operators working within Defence but is applicable to any individual in this field of work.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work as part of a team, under supervision, while performing routine tasks in a broad range of contexts and environments. They use discretion and judgement and take responsibility for the quality of their output.

DEFSIM001 Fault find and repair simulator power distribution and control systems

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages.

Application

This unit describes the skills required to conduct fault finding and repairs to the simulator power distribution and control systems. This includes analysing fault reports, identifying and rectifying faults, conducting functional tests and the documentation and certification processes. In the context of this unit, simulators are used to replicate land, air, sea and undersea systems to facilitate training and development.

Power distribution systems include power distribution software interfaces, programmable logic controllers, uninterruptible power supplies and control systems, power distribution cabinets/units, circuit breakers, emergency power/communication systems, emergency stop circuits and fire protection systems.

Simulator control systems include DC low voltage supplies, DC high voltage supplies, AC low voltage supplies (less than 600VAC), uninterrupted power supplies and control systems, power distribution cabinets/units, hydraulic systems and electric systems.

This unit was developed in a Defence environment but may be relevant to others who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently, or as part of a team, with minimal supervision, while performing complex tasks, including complex problem solving, in a limited range of contexts. They would use discretion and judgement and take responsibility for the quality of their outputs.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Receive and analyse fault report	1.1 Receive and analyse simulator power distribution and/or control system fault report. 1.2 Identify and select appropriate fault finding method(s) that will apply across the range of power distribution and control systems. 1.3 Prepare the simulator power distribution and/or control system for fault finding, including the isolation of all energy sources.
2. Identify and find fault	2.1 Apply fault finding method(s). 2.2 Identify and analyse fault indicators. 2.3 Identify the power distribution and/or control system fault. 2.4 Confirm that the fault is the one initially reported.
3. Repair fault	3.1 Identify and confirm cause of fault. 3.2 Identify and confirm repair method(s). 3.3 Complete power distribution and/or control systems repair. 3.4 Conduct post repair safety check. 3.5 Restart simulator power distribution and/or control system.
4. Conduct functional test	4.1 Test simulator power distribution and/or control systems to ensure operational integrity. 4.2 Confirm operational parameters.
5. Finalise repair process	5.1 Finalise simulator power distribution and/or control system repair reports including a detailed synopsis of the fault and the repair process and any certification requirements. 5.2 Report the operational status of the simulator power distribution and/or control system.

Assessment Requirements for DEFSIM001 Fault find and repair simulator power distribution and control systems

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- undertaking research and analysis related to simulator power distribution and control systems
- following logical complex fault finding techniques
- using measuring instruments such as megaohmeters, multimeters, cathode ray oscilloscopes (CRO), 240-415v portable appliance testers, 240-415v phase angle meters and 240-415v clamp meters
- applying simulator power distribution and control systems repair methodologies
- following configuration management processes
- using appropriate information technology and software including general online diagnostic tools and proprietary simulator management databases
- identifying, reviewing and analysing information that may impact on the simulator power distribution and control systems fault finding
- conducting simulator power distribution and control systems functional testing
- negotiating and communicating with key stakeholders

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- operational capabilities and limitations of the relevant simulator
- operational capabilities and limitations of the relevant simulator power distribution and control systems
- simulator operating modules comprising the simulator system being worked on
- fault indicators related to the simulator power distribution and control systems being worked on

© Commonwealth of Australia, 2024 Public Skills Australia

- repair methodologies related to the simulator power distribution and control systems being worked on
- legislative and regulatory requirements related to the simulator being worked on
- organisational policy and procedures related to the relevant simulator power distribution and control systems
- configuration management related to the simulator power distribution and control systems being worked on
- product knowledge related to systems and/or equipment in service

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSIM002 Fault find and repair simulator computer systems and peripheral hardware

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages.

Application

This unit describes the knowledge and skills required to conduct fault finding and repairs to the simulator computer systems and peripheral hardware. This includes analysing fault reports, identifying and rectifying faults, conducting functional tests and the documentation and certification processes. In the context of this unit, simulators are used to replicate land, air, sea and undersea systems to facilitate training and development.

Computer systems include Generic Simulator Computer Systems (x86 and x64), host computers, input/output systems, visual computers and instructor operating systems of simulators.

Peripheral hardware includes instruments, visual display unit equipment, printers, hard drives and data storage devices, switches and routers.

This unit was developed in a Defence environment but may be relevant to others who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently, or as part of a team, with minimal supervision, while performing complex tasks, including complex problem solving, in a limited range of contexts. They would use discretion and judgement and take responsibility for the quality of their outputs.

Assessment Requirements for DEFSIM002 Fault find and repair simulator computer systems and peripheral hardware

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- undertaking research and analysis related to simulator computer systems and peripheral hardware
- following logical, complex fault finding techniques
- applying simulator computer systems and/or peripheral hardware repair methodologies
- following configuration management processes
- using appropriate information technology and software including at least one of:
  - general online diagnostic tools
  - proprietary simulator management databases
  - customer diagnostics software
  - burn in test software
  - image management software
  - file comparison software
- identifying, reviewing and analysing information that may impact on the simulator computer systems and peripheral hardware fault finding
- conducting simulator computer systems and peripheral hardware functional testing
- negotiating and communicating with key stakeholders

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- operational capabilities and limitations of the relevant simulator
- operational capabilities and limitations of the relevant simulator computer systems and peripheral hardware

© Commonwealth of Australia, 2024 Public Skills Australia

- simulator operating modules comprising the simulator system being worked on
- fault indicators related to the simulator computer systems and peripheral hardware being worked on
- repair methodologies related to the simulator computer systems and peripheral hardware being worked on
- legislative and regulatory requirements related to the simulator being worked on
- organisational policy and procedures related to the relevant simulator computer systems and peripheral hardware
- configuration management related to the simulator computer systems and peripheral hardware being worked on
- product knowledge related to systems and/or equipment in service

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSIM003 Fault find and repair simulator image generator and visual display systems

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages.

Application

This unit describes the knowledge and skills required to conduct fault finding and repairs to the simulator image generator and visual display systems. This includes analysing fault reports, identifying and rectifying faults, conducting functional tests and the documentation and certification processes. In the context of this unit, simulators are used to replicate land, air, sea and undersea systems to facilitate training and development.

Both software and hardware components may be involved. Image generator hardware components include commercial off-the-shelf systems, proprietary designed systems and high-end rack mount personal computers with engineering graphic cards installed.

Image generator software components include proprietary software to process visual databases stored on the information gateway, under direction of simulators' host computing system, to produce drive signals for the visual display, and/or commercial software.

Maintenance tasks include fault finding hardware to line replacement at unit level, image and backup of software installation, configuration and updating.

Visual display systems include liquid crystal display, digital light processing, liquid crystal on silicon, light emitting diode, organic light emitting diode, cathode ray tube and/or laser.

Mechanisms include projection (direct and/or rear, including optics and display surfaces), and/or direct display (television, monitor).

Maintenance tasks may include setup, fault finding, alignment of projectors, optics alignment and colour matching and balance.

© Commonwealth of Australia, 2024 Public Skills Australia

This unit was developed in a Defence environment but may be relevant to others who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently, or as part of a team, with minimal supervision, while performing complex tasks, including complex problem solving, in a limited range of contexts. They would use discretion and judgement and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Competency Field

Simulator Operations

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Receive and analyse fault report	1.1 Receive and analyse simulator image generator and/or visual display system fault report. 1.2 Identify and select appropriate fault finding method(s) that will apply across the range of simulator image generator and/or visual display system. 1.3 Prepare the simulator image generator and/or visual display system for fault finding.
2. Identify and find fault	2.1 Apply fault finding method(s). 2.2 Identify and analyse fault indicators. 2.3 Identify the simulator image generator and/or visual display system fault. 2.4 Confirm that the fault is the one initially reported.
3. Repair fault	3.1 Identify and confirm cause of fault. 3.2 Identify and confirm repair method(s). 3.3 Complete simulator image generator and/or visual display system

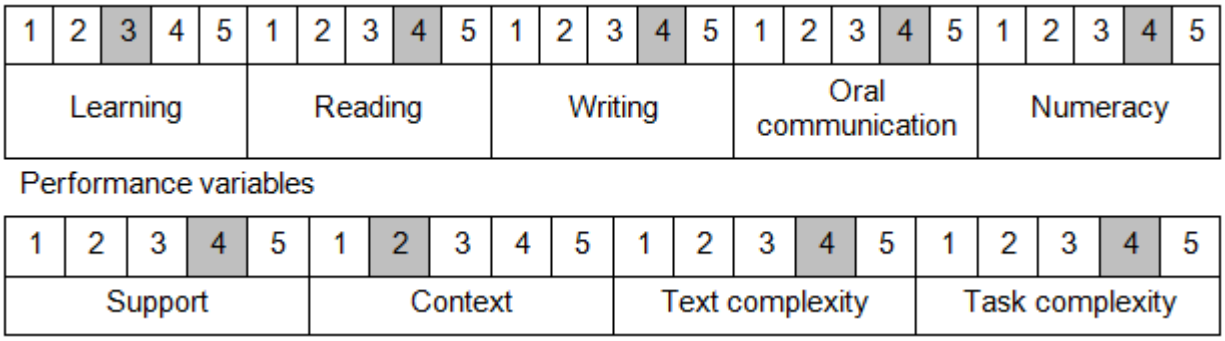
© Commonwealth of Australia, 2024 Public Skills Australia

	repair. 3.4 Conduct post repair safety check. 3.5 Restart simulator image generator and/or visual display system.
4. Conduct functional test	4.1 Test simulator image generator and/or visual display system to ensure operational integrity. 4.2 Confirm operational parameters.
5. Finalise repair process	5.1 Finalise simulator image generator and/or visual display system repair reports including a detailed synopsis of the fault and the repair process and any certification requirements. 5.2 Report the operational status of the simulator image generator and/or visual display system.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

DEFSIM004 Fault find and repair simulator motion and control loading systems

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages.

Application

This unit describes the knowledge and skills required to conduct fault finding and repairs to the simulator motion and control loading systems. This includes analysing fault reports, identifying and rectifying faults, conducting functional tests and the documentation and certification processes. In the context of this unit, simulators are used to replicate land, air, sea and undersea systems to facilitate training and development. Simulator motion system are mechanical/electric and/or mechanical/hydraulic.

Simulator control loading systems include electric and hydraulic.

This unit was developed in a Defence environment but may be relevant to others who work in this field. This unit applies to those working in fault finding and repairing simulator motion and/or control loading systems and was developed for technicians who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to, particularly those relating to WHS, fault finding and repairing the simulator motion and/or control loading systems.

Those undertaking this unit would work independently, or as part of a team, with minimal supervision, while performing complex tasks, including complex problem solving, in a limited range of contexts. They would use discretion and judgement and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

DEFSIM006 Fault find and repair simulator weapons systems

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages.

Application

This unit describes the knowledge and skills required to conduct fault finding and repairs to the simulator weapons systems including fire control, aiming and sighting systems. The unit includes analysing fault reports, identifying and rectifying faults, conducting functional tests and the documentation and certification processes. In the context of this unit, simulators are used to replicate land, air, sea and undersea systems to facilitate training and development.

Simulator weapons systems include simulated cannons/guns, non-guided weapons and guided weapons.

Simulator fire control systems include simulator fire control safety interlock systems, simulator armament control systems and simulator armament control buses.

Simulator aiming and sighting systems include simulator helmet mounted displays, simulator head-up displays, simulator head-in displays, simulator TV sighting systems, simulator on-screen displays and simulator infrared/thermal sighting systems.

This unit was developed in a Defence environment but may be relevant to others who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently, or as part of a team, with minimal supervision, while performing complex tasks, including complex problem solving, in a limited range of contexts. They would use discretion and judgement and take responsibility for the quality of their outputs.

Assessment Requirements for DEFSIM006 Fault find and repair simulator weapons systems

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- undertaking research and analysis related to simulator weapons systems
- following logical, complex fault finding techniques
- using measuring instruments including thermal array recorders
- applying simulator weapons systems, fire control, aiming and sighting systems repair methodologies
- following configuration management processes
- using appropriate information technology and software including at least one of:
  - customer diagnostics software
  - electronics configuration software
  - electronics instrument check diagnostics software
  - proprietary helmet mounted sight diagnostic software
  - Vector CANalyzer CAN bus diagnostic software
- identifying, reviewing and analysing information that may impact on the simulator weapons systems fault finding
- conducting simulator weapons systems functional testing
- negotiating and communicating effectively with key stakeholders
-

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- operational capabilities and limitations of the relevant simulator

© Commonwealth of Australia, 2024 Public Skills Australia

- operational capabilities and limitations of the relevant simulator weapons systems, fire control, aiming and sighting systems
- simulator operating modules comprising the simulator system being worked on
- fault indicators related to the simulator weapons systems being worked on
- repair methodologies related to the simulator weapons systems being worked on
- legislative and regulatory requirements related to the simulator being worked on
- organisational policy and procedures related to the relevant simulator weapons systems, fire control, aiming and sighting systems
- configuration management related to the simulator weapons systems being worked on
- product knowledge related to systems and/or equipment in service

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSIM007 Conduct simulator performance evaluation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages.

Application

This unit describes the knowledge and skills required to evaluate the operational performance of components and/or elements of a simulator. This includes identifying the performance evaluation requirement, conducting the operational performance evaluation, analysing the results, and the documentation and certification processes. In the context of this unit, simulators are used to replicate land, air, sea and undersea systems to facilitate training and development.

The simulator components include the complete simulator, power distribution and control systems, computers and peripheral hardware, image generator and visual display systems, motion and control loading systems, sound systems and weapons systems.

The simulator elements include subjective tests and credit sequences which affect the operational performance of the simulator.

The outcomes of the performance evaluation include immediate fault finding and repair, scheduling the simulator for routine maintenance or calibration of simulator systems.

This unit was developed in a Defence environment but may be relevant to others who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently, or as part of a team, with minimal supervision, while performing complex tasks, including complex problem solving, in a limited range of contexts. They would use discretion and judgement and take responsibility for the quality of their outputs.

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Identify evaluation requirement	1.1 Identify the type of simulator evaluation to be undertaken. 1.2 Identify the components and/or elements to be evaluated. 1.3 Consult simulator documentation. 1.4 Identify evaluation parameters to be met. 1.5 Prepare simulator for performance evaluation.
2. Undertake performance evaluation	2.1 Conduct performance evaluation. 2.2 Collect and collate evaluation data.
3. Analyse performance results	3.1 Conduct analysis of performance data. 3.2 Identify performance abnormalities. 3.4 Identify cause of performance variations. 3.5 Determine remedial action if necessary.
4. Finalise performance evaluation process	4.1 Complete certification and other documentation for future application. 4.2 Report abnormalities as required.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

Assessment Requirements for DEFSIM007 Conduct simulator performance evaluation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- undertaking research and analysis related to simulator operational performance
- following logical, complex analysis techniques
- using measuring instruments including thermal array recorders, sound analysers, light and chroma meters and acoustic calibrators
- following configuration management processes
- using tools including signal generators
- using appropriate information technology and software including at least one of proprietary simulator management databases, proprietary motion control loading system calibration software, proprietary sound analysis software and proprietary simulator performance test systems
- identifying, reviewing and analysing information that may impact on the simulator operational performance
- identifying simulator performance abnormalities
- determining simulator operational performance remedial action
- negotiating and communicating effectively with key stakeholders

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- operational capabilities and limitations of the relevant simulator
- simulator operating modules comprising the simulator system being worked on
- subjective tests and credit sequences which affect the operational performance of the simulator
- calibration methodologies related to the simulator being evaluated

© Commonwealth of Australia, 2024 Public Skills Australia

- legislative and regulatory requirements related to the simulator being evaluated
- organisational policy and procedures related to the relevant simulator
- configuration management related to the simulator being evaluated
- product knowledge related to systems and/or equipment in service

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSIM008 Work effectively with simulator systems

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages.

Application

This unit describes the skills required to analyse and apply a knowledge of simulator systems that is required to support a variety of applications including maintenance, fault finding, repair, and testing of simulators. This includes accessing and analysing relevant simulator systems information and implementing recommendations specific to simulator systems. In the context of this unit, simulators are used to replicate land, air, sea and undersea systems to facilitate training and development.

The application of simulator systems knowledge is specific to a variety of component processes in simulator operations, including simulator systems maintenance and support to simulator operations.

This unit was developed in a Defence environment but may be relevant to others who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently, or as part of a team, with minimal supervision, while performing complex tasks, including complex problem solving, in a limited range of contexts. They would use discretion and judgement and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for DEFSIM008 Work effectively with simulator systems

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- applying simulator systems knowledge relevant to work being performed
- following logical, complex analysis techniques
- using appropriate information technology and software
- identifying, reviewing and analysing information relevant to simulator systems
- interpreting organisation role relevant to simulator systems
- conducting research
- negotiating and communicating effectively with key stakeholders

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- capabilities and limitations of the relevant simulator
- simulator operating modules of simulator systems
- generic understanding of hosted software and hardware
- legislative and regulatory requirements related to simulator systems
- organisational policy and procedures related to the relevant simulator
- application of appropriate information technology and software
- logical complex analysis techniques
- research techniques

DEFSIM009 Operate the simulator for testing purposes

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages.

Application

This unit describes the skills required to operate the simulator for testing purposes following maintenance. The unit includes identifying the testing requirement, conducting the test and analysing the results, and the documentation and certification processes. In the context of this unit, simulators are used to replicate land, air, sea and undersea systems to facilitate training and development.

Testing includes particular component tests or complete simulator operational tests. The simulator components include the complete simulator or, power distribution and control systems, computers and peripheral hardware, image generator and visual display systems, motion and control loading systems, sound systems and weapons systems.

The outcomes of the test include immediate fault finding and repair or scheduling the simulator for routine maintenance.

This unit was developed in a Defence environment but may be relevant to others who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently, or as part of a team, with minimal supervision, while performing complex tasks, including complex problem solving, in a limited range of contexts. They would use discretion and judgement and take responsibility for the quality of their outputs.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

DEFSUR001 Catch aquatic animals in a survival situation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU001B Catch aquatic animals in a survival situation. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to catch aquatic animals in a survival situation. This includes preparing improvised fishing resources and conducting fishing operations. The individual is not expected to be an expert fisherperson but rather to have sufficient skills and knowledge to obtain, where possible, a measure of sustenance from waterways to increase their chances of survival.

This unit was developed for Defence personnel but may be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Survival

Elements and Performance Criteria

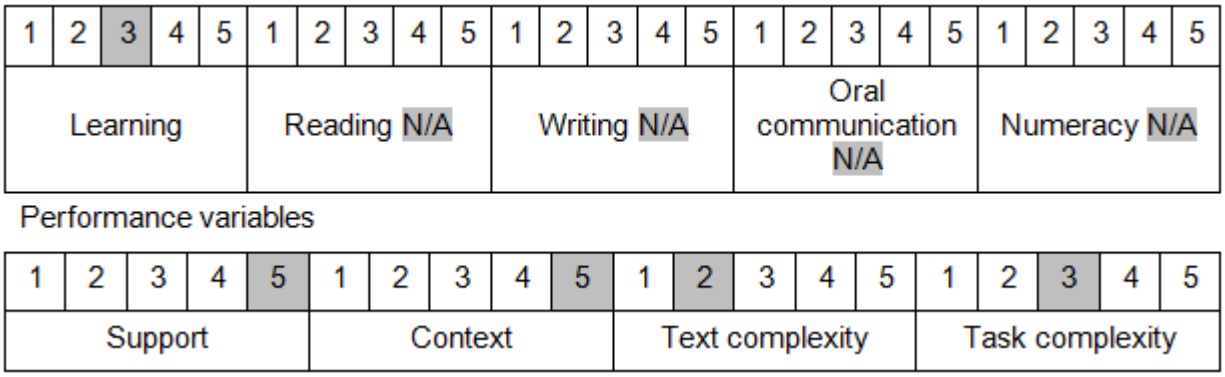
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare improvised fishing resources	1.1 Assemble improvised tackle from natural resources and basic survival resources (i.e. wire, fish hooks and fishing line). 1.2 Identify and prepare natural fish-stunning agents. 1.3 Bait tackle using locally acquired insects and animals appropriate to the type of aquatic animal being sought.
2. Conduct fishing operation	2.1 Choose location and timing of fishing operation to optimise the chances of success. 2.2 Apply basic fishing techniques to attract the desired aquatic animal to strike. 2.3 Land hooked aquatic animals. 2.4 Site and enhance tidal pools (includes making use of inlets, natural constrictions) to trap aquatic animals during tidal ranges. 2.5 Handle, dispatch, gut and fillet captured aquatic animals, and remove undesirable/poisonous animals from catch. 2.6 Examine guts to identify animals' preferred diet with the aim of targeting particular species and reinvesting offal and offcuts in ongoing fishing operations. 2.7 Implement techniques for maintaining aquatic animals in fresh condition until required for consumption.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:



Performance variables

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Assessment Requirements for DEFSUR001 Catch aquatic animals in a survival situation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- siting an appropriate fishing location that optimises the chances of success
- siting and constructing a functional tidal pool of at least two square metres surface area
- maintaining a landed fish either by tethering or depositing in an enclosed pool
- recognising dangerous aquatic animals and predators

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- ciguatera poisoning signs and symptoms
- awareness of dangerous/poisonous aquatic animals and of predators

Assessment Conditions

Competency should be demonstrated over time in a range of fishing activities that could be expected in a survival situation. Competency must be assessed in a simulated workplace environment with access to a suitable assessment area, fish hooks (maximum of five) and fishing line (maximum of five metres).

Consideration must be given to holistic assessment with other survival units.

© Commonwealth of Australia, 2024 Public Skills Australia

While a person can demonstrate the ability to catch aquatic animals, doing so in a survival situation is crucial. Assessment under simulated survival conditions includes:

- food restrictions
- absence of normal living conditions and amenities
- significant period of time

Refer to advice in the companion volumes.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR002 Construct improvised weapons and equipment in a survival situation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU002B Construct improvised weapons and equipment in a survival situation. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to use traditional techniques to construct and maintain improvised weapons and equipment in a survival situation. The individual is not expected to be an expert tool maker or craftsperson, but rather to have sufficient skills and knowledge to produce functional items of equipment that will increase their chances of survival.

This unit was developed for Defence personnel but may be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for the construction of improvised weapons and equipment	1.1 Determine required weapons (such as bolas, boomerang, spear) and equipment (such as bed, coolamon, digging stick, rock hammer, seat, table, traps and snares) to increase chances of survival and prioritise as appropriate to the situation. 1.2 Develop a basic plan for construction, including general design, labour and resource requirements of desired items. 1.3 Gather natural resources to meet the concept of design. 1.4 Make two-ply string from fibrous material for use in binding and securing.
2. Construct improvised weapons and equipment	2.1 Use heat to shape timber (induce and/or remove bends). 2.2 Cut notches, edges and settings into timber to fit and secure additional items. 2.3 Use heat to harden timber to prevent wearing, blunting and splitting. 2.4 Use knots and lashes to secure additional items. 2.5 Add padding using grasses and barks to survival equipment. 2.6 Weave or assemble baskets using natural resources to store survival items. 2.7 Maintain and preserve weapons and equipment using improvised preservation techniques, including plant and animal oils, saps and smoking.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

Assessment Requirements for DEFSUR002 Construct improvised weapons and equipment in a survival situation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- sharpening and maintaining a knife
- tying knots and lashings/seizing/whipping
- maintaining a range of survival weapons and equipment
- producing a range of items according to the survival situation, but must include:
  - either digging stick:
    - length – minimum half user's body length
    - shaft diameter – minimum 2.5 centimetres
    - plumb – not greater than seven degrees off 'true' from point to end
    - point – fire hardened sufficiently to deny fingernail from making any marking/indentation
  - or spear:
    - length – minimum three-quarters user's body length
    - shaft diameter – maximum two centimetres
    - plumb – not greater than seven degrees off 'true' from point to end
    - point – fire hardened sufficiently to deny fingernail from making any marking/indentation
  - either bed:
    - length and width – must cover user's body when flat with arms by sides
    - height – must elevate user at least ten centimetres off the ground
    - level – must be level

© Commonwealth of Australia, 2024 Public Skills Australia

    - strength – must withstand weight of user and frame must remain rigid under user's movements
    - comfort – must have sufficient padding to prevent framework from unduly discomforting user
- or seat:
    - dimensions – seat must cover user's posterior
    - height – must elevate to user's knee level off the ground
    - level – must be level
    - strength – must withstand weight of user and frame must remain rigid under user's movements
    - comfort – must have sufficient padding (including bark, grass)to prevent discomfort through pressure of framework
    - improvised cordage:
    - six metres
    - minimum two-ply lay
    - capable of supporting twenty kilograms weight
    - maximum six millimetres diameter
- basket:
    - minimum side and bottom length twenty centimetres
    - carry handle attached
    - capable of securing survival items during travel

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- knife and weapon safety
- fire safety

Assessment Conditions

Competency must be assessed in a simulated workplace environment with access to a suitable assessment area, with natural resources and a knife.

Consideration must be given to holistic assessment with other survival units.

While a person can demonstrate the ability to construct improvised weapons and equipment, doing so in a survival situation is crucial. Assessment under simulated survival conditions includes:

- food restrictions

© Commonwealth of Australia, 2024 Public Skills Australia

- absence of normal living conditions and amenities
- significant period of time

Refer to advice in the companion volumes.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR003 Employ visual emergency signalling techniques in a survival situation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU003B Employ visual emergency signalling techniques in a survival situation. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 3.3 revised

Application

This unit describes the skills required to employ visual emergency signalling techniques in a survival situation. The individual is not meant to be an expert signaller, but must demonstrate sufficient skills and knowledge to construct, maintain and employ functional emergency signalling devices to enhance their survival through the attraction of, and basic communication with, search and rescue (SAR) agencies.

This unit was developed for Defence personnel but may be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Survival

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for construction of visual emergency signals	1.1 Assess available natural and artificial resources for their application in emergency signalling. 1.2 Examine local area and identify the ground that would afford optimum visibility to searchers but minimum physical effort to the survivor. 1.3 Observe and note sun's transit to determine the optimum placement of reflective signalling devices.
2. Prepare emergency signalling devices for use	2.1 Site and construct ground-to-air emergency signals using purpose signal marker panels and/or improvised markers to optimise visibility from the air. 2.2 Site and construct tinsel/Christmas tree devices using artificial resources to optimise visibility from the air. 2.3 Site and construct an emergency signal fire to optimise visibility from the air, considering the prevailing wind's effect (if any) on smoke trails. 2.4 Site and excavate shadow trenches, considering the sun's movement. 2.5 Prepare purpose-built signalling devices.
3. Employ visual emergency signals	3.1 Initiate an emergency signal fire and utilise fuel to maximise the visual signature. 3.2 Attract search aircraft attention by employing purpose-built signalling devices. 3.3 Interpret and respond to recognition and response signals from search aircraft.

Assessment Requirements for DEFSUR003 Employ visual emergency signalling techniques in a survival situation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- selecting combustible and ‘smoking’ materials
- constructing, igniting and maintaining a fire
- siting and building a trench symbol, visible from the air at 2000 metres may be a simulated trench if ground is too hard.
- siting and constructing a tinsel tree, visible from the air at 2000 metres
- siting, constructing and maintaining the fuel and foliage stock for the fire
- lighting the fire so that it is well ablaze within 120 seconds and then generating smoke through the application of green foliage
- interpreting and responding to recognition and response signals from search aircraft, including :
  - I require your attention
  - message received and understood
  - message received but not understood
  - follow aircraft in same direction

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- air search/ground search procedures
- aircraft recognition and response/international distress signals

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Competency should be demonstrated using a range of simulated visual emergency signalling techniques that could be expected in a survival situation with access to emergency signalling devices.

Consideration must be given to holistic assessment with other survival units.

While a person can demonstrate the ability to employ visual emergency signalling techniques, doing so in a survival situation is crucial. Assessment under simulated survival conditions includes:

- food restrictions
- absence of normal living conditions and amenities
- significant period of time

Refer to advice in the companion volumes.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR004 Erect a survival shelter using natural resources in a survival situation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU004B Erect a survival shelter using natural resources in a survival situation. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 2.2 and 2.3 revised

Application

This unit describes the skills required to erect a survival shelter in a survival situation. The individual is not expected to be an expert in building construction, but rather to have the requisite skills and knowledge to identify the elemental threats to his/her survival such as sun, wind and rain, and to establish a survival shelter to provide the necessary protection. The shelter may take advantage of established natural features or may demand stand-alone construction from natural resources. This unit assumes that manufactured resources are not available.

This unit was developed for Defence personnel but may be relevant to others

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Survival

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare resources for erection of survival shelter	1.1 Identify potential threat to personal survival posed by the elements and use natural features to provide immediate protection. 1.2 Optimise survival shelter's siting for protection from the elements and to minimise hazards to the survivalist, taking advantage, where possible, of existing natural resources. 1.3 Collect resources to construct survival shelter to maximise shelter strength and protection, while minimising physical effort.
2. Construct survival shelter	2.1 Construct traditional two-ply string for use in binding and securing. 2.2 Establish survival shelter's framework, taking maximum advantage of the strength of natural junction points such as forks, by using and binding with improvised cordage. 2.3 Protect survival shelter from wind and rain, using shingling (bark sections and large leaves) and thatching (bound grass and bundled grass) for roofing and siding.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning					Reading N/A					Writing N/A					Oral communication N/A					Numeracy N/A				

Performance variables

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

© Commonwealth of Australia, 2024 Public Skills Australia

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFSU004B Erect a survival shelter using natural resources in a survival situation.

Assessment Requirements for DEFSUR004 Erect a survival shelter using natural resources in a survival situation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- tying knots and lashes
- constructing at least two shelters capable of withstanding a vertical or horizontal loading to the framework of 300N; that repels all water when twenty litres is poured along the top/leading edge of the structure to simulate rain; whose tiling and thatching remains adhered to the shelter under wind conditions of Beaufort scale 4 (11–16 knots)
- using and binding with improvised cordage including at least one of
  - animal skins/gut
  - bark strips
  - reeds and grasses
  - traditional two-ply string

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- priorities of survival
- threats to survival from elements

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Competency must be assessed in a simulated workplace environment, including access to an appropriate remote survival area that has suitable natural resources and natural features; and a knife.

Consideration must be given to holistic assessment with other survival units.

While a person can demonstrate the technical ability to construct and maintain a shelter, doing so in a survival situation is crucial. Assessment under simulated survival conditions includes:

- food restrictions
- absence of normal living conditions and amenities
- significant period of time

Refer to advice in the companion volumes.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR005 Maintain physical and emotional health and fitness in a survival environment

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU005B Maintain physical and emotional health and fitness in a survival environment. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to demonstrate the personal qualities of resilience and resoluteness under the hardships that must be endured to survive at the individual level, as well as the interpersonal skills to optimise the survival opportunities of the team. This unit also includes the discipline to ration food and water despite constant hunger and thirst, and to undertake arduous tasks despite increasing levels of fatigue and the diminishing potential of rescue. Individuals must demonstrate a robust standard of physical health and a meticulous attitude to personal safety and hygiene.

This unit was developed for Defence personnel but may be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Survival

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Maintain personal health and safety	1.1 Minimise threats of disease, distraction and discomfort. 1.2 Minimise threats posed by exposure to the sun. 1.3 Handle equipment safely to prevent cuts. 1.4 Immediately treat injuries such as cuts and burns. 1.5 Take opportunities to improve personal hygiene, including cleaning teeth, grooming, washing skin and clothes.
2. Maintain a healthy and safe environment	2.1 Treat fire with respect to prevent injury or ignition of campsite and surrounds. 2.2 Establish latrine and slaughter areas away from the camp area to prevent disease and attraction of disease carriers. 2.3 Clear camp area of rubbish and food scraps to prevent disease and attraction of disease carriers. 2.4 Maintain safe distances from potential animal dangers.
3. Optimise the chances of survival	3.1 Maintain a positive and proactive attitude towards the survival situation by constantly reinforcing the goal of rescue. 3.2 Contain personal fears and tensions and avoid allowing them to impact on others. 3.3 Provide positive and constructive input to the group to support agreement on the survival tasks and the priority and manner in which they will be conducted to maximise outcomes and minimise energy expenditure. 3.4 Accept and undertake survival tasks allocated by the team. 3.5 Consume available resources, as rationed by the team. 3.6 Identify signs of concern in others and provide reassurance accordingly to prevent deterioration of the individual and/or the group.

Assessment Requirements for DEFSUR005 Maintain physical and emotional health and fitness in a survival environment

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- maintaining personal health and fitness by cleaning and treating minor injuries
- maintaining a positive attitude

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- factors impacting on stress and personal health and fitness
- fire safety
- health and hygiene
- natural remedies provided by plant material
- safety in a survival situation

Assessment Conditions

Competency must be assessed in a simulated workplace environment (with access to a suitable assessment area), and in a team.

Consideration must be given to holistic assessment with other survival units.

© Commonwealth of Australia, 2024 Public Skills Australia

While a person can demonstrate the ability to maintain physical and emotional health and fitness, doing so in a survival situation is crucial. Assessment under simulated survival conditions includes:

- food restrictions
- absence of normal living conditions and amenities

DEFSUR006 Navigate using celestial aids

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU012 Navigate using celestial aids. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 1.3, 5.2 and 6.2 revised • PC 3.3 and 3.4 merged

Application

This unit describes the skills required to navigate using celestial aids, by both day and night, to a destination, within standard tolerances of accuracy, without the use of the normal range of navigation aids.

This unit was developed for military personnel required to operate in a remote, deployed operational environment, but is applicable to any individual who is required to navigate using celestial aids. Alternatively, if an approximate position is known relative to a highway, waterway or coast, where either survival or rescue is better effected, the individual will have sufficient skills and knowledge to remain on a constant bearing and estimate distance travelled.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

© Commonwealth of Australia, 2024 Public Skills Australia

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Survival

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Establish cardinal points by day using the sun	1.1 Construct a sun compass in an open and level area to record complete movement of the sun over a solar day. 1.2 Mark true north, associated cardinal points and the arc of the sun on the sun compass. 1.3 Mark true north and associated cardinal points using a quick shadow stick method (maximum of twenty minutes of solar transit) and making allowance for the deviation arising from early morning or late afternoon siting.
2. Establish cardinal points by night using celestial aids	2.1 Extrapolate the location of cardinal points by identifying and using celestial bodies. 2.2 Extrapolate the location of the celestial pole by identifying and using celestial bodies. 2.3 Extrapolate true south (or north) by using the celestial pole on the earth/sky horizon and by establishing a compass showing all cardinal points on the ground.
3. Employ improvised direction measuring techniques	3.1 Select appropriate direction of travel to optimise survival or rescue, after analysing the survival situation. 3.2 Construct an improvised protractor using a multi-folded sheet of paper and mark the desired angle of direction. 3.3 Use established cardinal points and directional markings on an improvised protractor to navigate towards a recognisable feature in the distance.
4. Employ improvised time measuring techniques	4.1 Estimate elapsed time by measuring the angle of a segment of the sun’s transit and applying an angle by rate calculation. 4.2 Estimate elapsed time by measuring the rotation of a celestial body around the celestial pole, and applying an angle by rate calculation.
5. Employ	5.1 Estimate distance by counting number of paces taken and

© Commonwealth of Australia, 2024 Public Skills Australia

improvised distance measuring techniques	applying a pace by length of pace calculation. 5.2 Estimate distance by travelling at constant estimated velocity walking pace of four km/h and applying a velocity by time calculation.
6. Determine overall position relative to start point and navigate back	6.1 Draw grid system using a standard scale on a sheet of paper, and mark cardinal points and start point. 6.2 Draw physical navigation movements as scaled vectors from the start point. 6.3 Aggregate individual navigation vectors to determine final position relative to the start point. 6.4 Determine return vector, including bearing and distance, to return to the start point.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning N/A					Reading N/A					Writing N/A					Oral communication N/A					Numeracy				

Performance variables

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Assessment Requirements for DEFSUR006 Navigate using celestial aids

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- identifying celestial bodies
- navigating
  - five kilometres within a solar day, which may be broken into legs of not less than one kilometre, but must include at least four legs, as part of a navigation circuit; on completion, navigators are to submit a vector diagram detailing their final position relative to their start point accurate to within 10% (of distance and direction)
  - five kilometres within eight hours at night, which may be broken into legs of not less than one kilometre, but must include at least four legs, as part of a navigation circuit; on completion, navigators are to submit a vector diagram detailing their final position relative to their start point accurate to within 10% (of distance and direction)
- locating cardinal points and true north
  - by day: make adjustments for the shadow arc, dependent upon the time, when using only a partial segment of a solar day (maximum twenty minute fix) to locate the cardinal points; and to indicate true north to within 10% with a sun compass, using a twenty minute fix
  - by night: implement contingency skills when there is partial cloud in the night sky; and to employ five different celestial body indication techniques to locate the cardinal points, either directly or through extrapolation via the celestial pole

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- angles (in degrees)
- basic physics (velocity/distance/time)
- cardinal points (magnetic and true)
- earth's orbit and rotation in relation to the sun and night sky, including the celestial pole phenomenon
- mathematical calculations including:
  - distance travelled:
    - velocity x time
    - pace length x number of paces
  - elapsed time:
    - rate of (apparent) movement of sun (15 degrees/hour x solar angle subtended)
    - rate of (apparent) movement of night sky around the celestial pole (15 degrees/hour x angle subtended by nominated celestial body)
    -

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations. Competency must be assessed in an area that has an unmodified landscape, with access to pen and paper.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR007 Preserve and cook foodstuffs in a survival situation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU007B Preserve and cook foodstuffs in a survival situation. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to preserve and cook foodstuffs in a survival situation. This unit also covers the prudent management of food assets and implementing personal measures to minimise energy expenditure to enhance survival chances. The individual is not expected to be a camp chef, but rather to possess sufficient skills and knowledge to obtain, where possible, a measure of sustenance from the environment through cooking, or preserving for longer-term consumption.

This unit was developed for Defence personnel but may be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Assessment Requirements for DEFSUR007 Preserve and cook foodstuffs in a survival situation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- using improvised cooking techniques for at least one animal and at least one vegetable foodstuff by two of the following methods on different meal occasions:
  - roasting
  - earth oven
  - boiling
  - grilling/frying
- applying safety principles to ensure potential parasites and other organisms are destroyed by cooking, without destroying the foodstuff by burning or overcooking
- preserving foodstuff for at least one animal and at least one vegetable foodstuff quantity sufficient for at least two separate survival meals by two of the following methods:
  - drying
  - smoking
  - salting
- using curing techniques, making sure that maggot or bacterial infestation does not spoil the foodstuff (the preserved foodstuff should not suffer deterioration for two days [minimum] after curing, and must then be consumed by the survivor as part of their survival diet)

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- fire safety
- food testing procedures
- recognition of edible plants

Assessment Conditions

Competency must be assessed in a simulated workplace environment and demonstrated at least once in the test procedure for unknown flora and, as detailed, over a range of occasions for cooking and preserving that could be expected in a survival situation.

Consideration must be given to holistic assessment with other survival units.

While a person can demonstrate the technical ability to cook and preserve foodstuffs, doing so in a survival situation is crucial. Assessment under simulated survival conditions includes:

- food restrictions
- absence of normal living conditions and amenities
- significant period of time

Refer to advice in the companion volumes.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR008 Produce fire using improvised means in a survival situation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU008B Produce fire using improvised means in a survival situation. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 2.1 revised

Application

This unit describes the skills required to initiate and maintain fire in a survival situation. Fire is one of the most critical survival resources because of the range of applications, from preventing hypothermia and sterilising water to initiating rescue signals. The individual is expected to produce fire from improvised means (which may include traditional means if there are no alternatives).

This unit was developed for Defence personnel but may be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for fire starting	1.1 Collect, dry and protect tinder. 1.2 Collect, prepare and store kindling. 1.3 Collect, prepare and store fuel (branches, logs) in a dry location.
2. Start and maintain fire	2.1 Site and prepare a fire-safe area, minimising threat to survivor effects and equipment and preventing escape of the fire into surrounding vegetation. 2.2 Use improvised means to start fire. 2.3 Prevent fire from extinguishing in all weather conditions.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning N/A					Reading N/A					Writing N/A					Oral communication N/A					Numeracy N/A				

Performance variables

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

© Commonwealth of Australia, 2024 Public Skills Australia

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFSU008B Produce fire using improvised means in a survival situation.

Assessment Requirements for DEFSUR008 Produce fire using improvised means in a survival situation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- implementing fire safety
- producing fire from traditional means and friction
- nurturing the ember into a robust flame through the careful and sequential additions of tinder, kindling and fuel
- maintaining a fire continuously regardless of weather conditions
- demonstrating due regard to the safety of persons and equipment, and the surrounding environment

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- fire safety
- hypothermia
- range of applications of fire in a survival situation

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Competency must be demonstrated once under the range of methods detailed in the establishment of fire but the maintenance of fire should be assessed over time. Competency must be assessed in a simulated workplace environment in an appropriate assessment area with access to sufficient suitable dry organic material to start fires; friction method fire-starting resources including bootlace (as bow string); and a knife. Fire should be maintained in all weather conditions including rain.

Consideration must be given to holistic assessment with other survival units.

While a person can demonstrate the technical ability to start and maintain a fire, doing so in a survival situation is crucial. Assessment under simulated survival conditions includes:

- food restrictions
- absence of normal living conditions and amenities
- significant period of time

Refer to advice in the companion volumes.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR009 Trap and kill animals in a survival situation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU009B Trap and kill animals in a survival situation. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 1.1, 2.6, 2.8 and 2.9 revised • PC 2.1, 2.2 and 2.3 merged

Application

This unit describes the skills required to trap and kill animals in a survival situation. The individual is not expected to be an expert trapper or butcher, but rather to have sufficient skills and knowledge to catch animals using trapping techniques, and to kill and butcher the animal including inspecting for signs of disease.

This unit was developed for Defence personnel but may be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete, tasks in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Survival

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Trap animals	1.1 Develop a capture plan including trap height, location and type, as well as means of attraction, by identifying animal signs and by interpreting drinking, eating, foraging, mating, and sleeping habits. 1.2 Acquire bait attractive to the targeted animal. 1.3 Create traps from natural resources. 1.4 Deploy and camouflage traps on likely animal travel routes. 1.5 Check traps regularly for captured animals.
2. Slaughter animals	2.1 Conduct slaughter humanely to cause minimum stress for the animal. 2.2 Skin or pluck carcass. 2.3 Hang carcass for butchering. 2.4 Butcher carcass by cutting edible portions (dressing) of meat and by removing internal organs. 2.5 Inspect offal for signs of disease. 2.6 Protect meat from the elements including flyblow, scavenging animals and the sun. 2.7 Maintain hygiene of the slaughterer. 2.8 Maintain hygiene of the carcass.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

Assessment Requirements for DEFSUR009 Trap and kill animals in a survival situation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- demonstrating safe knife-handling
- constructing, siting, setting and camouflaging the following traps:
  - simple snare – focusing on the functionality of the snare and the fixing of the aperture
  - Fig 4 – focusing on the functionality of the mechanism
  - a frame – focusing on the functionality of the mechanism
- ensuring own safety
- efficiently despatching the slaughter
- removing offal and cuts of meat without rupturing the animal’s internal organs, thereby spoiling the meat
- examining carcasses for disease and parasites

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- basic animal anatomy
- hazards associated with animals

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Competency must be demonstrated in a simulated workplace environment, with access to animals for slaughter. The candidate should have access to a knife as minimum equipment.

Consideration must be given to holistic assessment with other survival units.

While a person can demonstrate the technical ability to capture and kill animals, doing so in a survival situation is crucial. Assessment under simulated survival conditions includes:

- food restrictions
- absence of normal living conditions and amenities
- significant period of time

Refer to advice in the companion volumes.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR010 Locate, treat and manage water in a survival situation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU010B Locate, treat and manage water in a survival situation. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 2.1, 2.2 and 2.3 revised

Application

This unit describes the skills required to locate, treat (for human consumption) and manage water in a survival situation. This unit also includes extracting water directly through evaporation, transpiration and desalination; filtering techniques; and treating foul water to render it potable. Of equal importance to optimising the input of water, is minimising the expenditure of water. Individuals will need to protect and ration their water assets and to implement measures to minimise water loss to increase their chances of survival.

This unit was developed for Defence personnel but may be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Survival

Elements and Performance Criteria

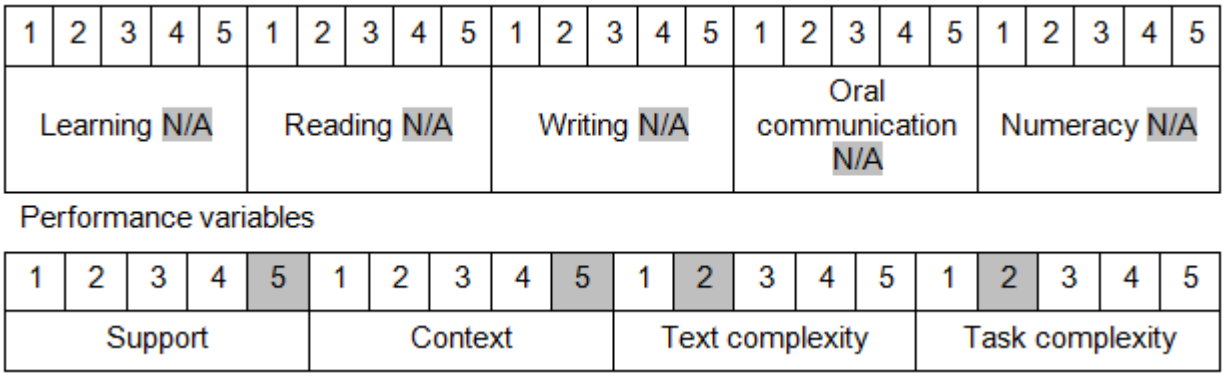
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Locate and extract water	1.1 Discover water by recognising and investigating the likely locations and the indicators of water. 1.2 Collect water during periods of rain and high atmospheric moisture content. 1.3 Extract water from the ground through evaporation. 1.4 Extract water from vegetation using transpiration.
2. Prepare water for consumption	2.1 Filter water (i.e. clarify content, remove debris and large contaminants) using improvised filtration methods. 2.2 Make water safe for drinking using improvised desalinator system, including boiler (i.e. drum), collector (i.e. bag) and condenser (i.e. tube/pipe). 2.3 Taste and smell water to confirm it is safe for drinking.
3. Manage water resources	3.1 Store water using improvised storage receptacles. 3.2 Minimise loss of water by implementing water loss reduction management techniques. 3.3 Ration water in accordance with minimum daily requirements as per the survival situation.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFSU010B Locate, treat and manage water in a survival situation.

Assessment Requirements for DEFSUR010 Locate, treat and manage water in a survival situation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- assembling basic improvised equipment
- demonstrating extreme care in handling critical survival items
- extracting water through:
  - evaporation – a minimum of 20 millilitres of water in 24 hours through the use of a desert still
  - transpiration – a minimum of 200 millilitres of water in a solar day using a plastic (transpirator) bag (0.6 metres by 0.4 metres)
  - desalination – a minimum of five litres of potable water in 24 hours using the following:
    - a ten litre metal drum
    - plastic (transpirator) bag (0.6 metres by 0.4 metres)
    - pipe section (ten to twenty centimetres)

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- desalinator construction including:
  - drum
  - condensing tube
  - collecting device

© Commonwealth of Australia, 2024 Public Skills Australia

  - connections of the following to each other
  - cooling options for the condensing device
- desalinator non-compliant liquids
- transpirator non-compliant vegetation

Assessment Conditions

Competency must be assessed with access to improvised desalinator kits, the desalinator is to provide the only source of water for a minimum of two days unless safety/health reasons require additional supplementation. Competency must be demonstrated once in the evaporation and transpiration of water and competency must be demonstrated in the desalination and management of water, and minimisation of water loss, over a minimum of two days.

Consideration must be given to holistic assessment with other survival units.

While a person can demonstrate the technical ability to locate and treat water, the aspect of longer-term survival, i.e. management of water (including care of the desalinator), is crucial.

Assessment under simulated survival conditions includes:

- food restrictions
- absence of normal living conditions and amenities
- significant period of time

Refer to advice in the companion volumes.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFSUR011 Survive at sea

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFSU011B Survive at sea. • Unit code updated • Content and formatting updated to comply with new standards • All PC transitioned from passive to active voice • PC 1.2 revised

Application

This unit describes the skills required to survive at sea and the immediate measures that would need to be taken upon exposure to the water, including both surface and underwater swimming, treading water, rigging improvised and purpose flotation devices, and adopting heat-loss minimisation positions. It also covers the use of purpose survival craft and equipment, including water procurement, food procurement and emergency signalling devices.

This unit was developed for Defence personnel but may be relevant to others. The context of this competency would typically be when a ship is sunk or an aircraft is downed over water. The survivor can be on their own or in a group.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would act autonomously, while performing concrete tasks, in a broad range of contexts which may be highly unpredictable.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Survival

Elements and Performance Criteria

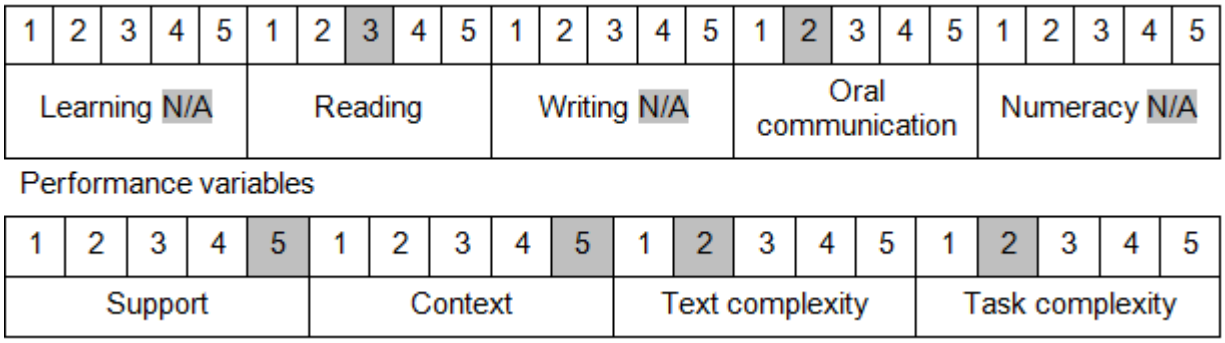
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Survive in the water	1.1 Use surface and underwater swimming techniques to escape from dangerous situations. 1.2 Enter water from a height and then surface. 1.3 Assume heat-retaining positions in the water as an individual and in a group environment. 1.4 Use improvised flotation devices to supplement buoyancy. 1.5 Fit personal flotation device (PFD) and maintain buoyancy through manual techniques.
2. Operate and maintain survival flotation craft and its resources	2.1 Deploy, inflate, right (upon inversion) and board survival flotation craft (multi-person or single-person life raft). 2.2 Escape from inside the survival flotation craft after inversion. 2.3 Rig survival flotation craft for protection from the elements and optimisation (or minimisation) of movement. 2.4 Inspect and maintain survival flotation craft throughout the survival period. 2.5 Manage survival resources. 2.6 Deploy and operate water and food procurement devices. 2.7 Operate signal equipment from the survival flotation craft. 2.8 Interpret and respond to recognition and response signals from search aircraft.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFSU011B Survive at sea.

Assessment Requirements for DEFSUR011 Survive at sea

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- fitting personal floatation devices
- using duck dive technique
- swimming 30 metres in clothing
- treading water for a minimum of five minutes in clothing
- adopting the HELP for at least ten minutes
- rigging and using two different improvised flotation devices for at least five minutes each
- surviving at sea over three hours using a multi-person raft by:
  - rigging the drogue
  - rigging the canopy
  - rigging water procurement devices including solar stills and reverse osmosis machines, and producing at least 300 millilitre of water
  - bailing
  - inspecting the craft
- rigging and employing the following signalling devices from the survival craft:
  - heliograph – accurately illuminating a target at least 300 metres away
  - sea marker dye – deploying a sea marker dye effectively and safely using prevailing currents to optimise signature
  - flare – employing a signal flare effectively without threatening persons or survival equipment
- use surface and underwater swimming techniques including at least one of:
  - duck diving
  - swimming while clothed

© Commonwealth of Australia, 2024 Public Skills Australia

  - treading water in location

- Deploy and operate water and food procurement devices including at least one of:
  - reverse osmosis machine
  - solar stills
  -

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- aircraft response signals
- emergency signalling
- heat-retaining position
- improvised flotation techniques

Assessment Conditions

Competency should be demonstrated over time in a range of situations that could be expected in a survival situation.

Competency must be assessed in a simulated workplace environment, with access to a suitable sea-survival area, buoyancy devices, signalling devices and life rafts. All aspects of competence must be tested as part of an unbroken continuum from entry into the water at the individual level to the boarding and conduct aboard a survival flotation craft.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFTRP001 Operate a vehicle in an environment of threat

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTP001B Operate a vehicle in an environment of threat. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • Element 1 reworded

Application

This unit describes the skills required to operate a vehicle in a work environment where there are a range of threats to the security of the vehicle and driver. These threats may include actions by an adversarial or enemy force targeted at destroying the vehicle and driver. The focus of the threat may be towards disablement of the driver, vehicle and/or load and may be carried out using a range of weapons from the ground and/or the air.

This unit was developed for military drivers in a threat environment but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform routine tasks in a broad range of unpredictable contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Transport

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Camouflage and conceal a vehicle	1.1 Obtain specialist equipment appropriate to the task and check for serviceability. 1.2 Prepare vehicle for tactical employment and operational driving in a threat environment. 1.3 Camouflage vehicle from observation, surveillance and detection. 1.4 Conceal vehicle and its signature from observation, surveillance and detection using natural and artificial resources.
2. Apply tactical deployment drills and contingency actions when driving in a threat environment	2.1 Drive vehicle singularly and in convoy in a threat environment. 2.2 Deploy vehicle tactically during halts. 2.3 Employ vehicle contingency actions when threatened.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5
Learning NA	Reading NA	Writing NA	Oral communication	Numeracy NA

Performance variables:

1 2 3 4 5	1 2 3 4 5	1 2 3 4 5	1 2 3 4 5
Support	Context	Text complexity	Task complexity

© Commonwealth of Australia, 2024 Public Skills Australia

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTP001B Operate a vehicle in an environment of threat.

Assessment Requirements for DEFTRP001 Operate a vehicle in an environment of threat

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- preparing a vehicle for operational driving
- driving a vehicle under operational conditions
- following instructions/directives and verbally reporting information
- selecting halt and hide positions that make best use of the natural terrain and vegetation, and provide maximum concealment
- occupying halt and hide positions, optimising the position of the vehicle and the timely application and erection of camouflage
- applying procedures for camouflaging a vehicle, including use of natural vegetation and artificial aids including camouflage nets and support sets that allow emergency redeployment of the vehicle without entanglement
- reducing vulnerability through preparation of the vehicle, the use of camouflage and concealment, and the application of contingency actions that minimise risk
- carrying out contingency actions to prevent or minimise damage to the person, the vehicle and the load, both when travelling alone and in convoy with other vehicles when in a threat environment
- applying counter surveillance doctrine and procedures and the employment of operational driving techniques, in driving both a light and medium vehicle, carrying both general cargo and personnel, in a simulated operational environment

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- tactical deployment procedures including convoy driving procedures and actions at a halt and occupation of a hide or administrative position
- threats to vehicle security, observation and detection
- contingency actions

Assessment Conditions

Competency should be assessed carrying both general cargo and personnel. While assessment will normally be conducted as a team activity involving a number of vehicles and drivers, evidence of individual performance should be gathered on operational driving, the tactical deployment of vehicles, the use of camouflage to prevent observation and detection, and the employment of contingency actions including counter-ambush and counter-air attack. Most assessment tasks require the cooperation and assistance of other team members, therefore the ability to work as part of a team should be included in the overall assessment.

Assessment should be sequential from the actions of the individual on the receipt of instructions for movement through to the employment of contingency actions. Given that most of this unit of competency is based on the application of drills and procedures the assessment will be conducted primarily through the observation of practical skills. Errors detected in performance can be used to prompt a more detailed examination of a particular knowledge or skill and verbal and/or a written questioning of underpinning knowledge may complement practical assessments.

Competency should be demonstrated as part of a broader assessment activity involving the tactical deployment of drivers and vehicles over an extended period. Performance will need to demonstrate reacting to a range of threats and carrying out contingency actions on a number of occasions.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFTRP002 Operate a vehicle at night

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTP002B Operate a vehicle at night. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to drive, navigate and direct a vehicle at night under field conditions using white, reduced and blackout lighting where the threat(s) by an adversary or enemy may prohibit the full use of normal vehicle headlights, tail lights and interior lighting. In these circumstances, to assist in the control, operation and navigation of the vehicle, the driver may use guides and other aids, including specialist ‘blackout’ lighting equipment fitted to vehicles.

This unit was developed for military drivers in a threat environment, but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform routine tasks in a broad range of unpredictable contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare a vehicle for driving at night	1.1 Conduct serviceability check of vehicle and any external aids to night driving. 1.2 Rectify and report any faults. 1.3 Configure vehicle for night driving.
2. Drive a vehicle at night	2.1 Drive vehicle at night using various types of lighting and external aids in different types of terrain, road and light conditions. 2.2 Respond to directions from a co-driver and a guide, both with and without the assistance of external aids. 2.3 Navigate vehicle at night using navigational equipment.
3. Direct a vehicle at night	3.1 Identify, obtain and check appropriate external aids for serviceability. 3.2 Rectify or report any vehicle faults. 3.3 Direct vehicle using external aids. 3.4 Retrieve and check aids and return external to storage area.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning NA					Reading					Writing					Oral communication					Numeracy					

Performance variables:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTP002B Operate a vehicle at night.

Assessment Requirements for DEFTRP002 Operate a vehicle at night

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- scanning terrain
- judging terrain, distance and speed at night
- driving a vehicle at night under normal lighting conditions
- manoeuvring a vehicle in confined spaces
- navigating a vehicle
- responding to directions when driving
- reading maps and using navigational aids
- driving and navigating a vehicle at night using white, reduced and blackout lighting
- acting as guide while using external aids
- preparing a vehicle for night driving then driving the vehicle under field conditions in a range of environments including cross country, and on tracks and formed roads utilising the three types of lighting under a range of lighting and driving conditions

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- WHS requirements for driving at night
- characteristics of night vision
- vehicle navigation
- vehicle signalling and directing techniques

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Competency should be demonstrated as part of a broader assessment activity involving the tactical deployment of drivers and vehicles over an extended period.

Competency should be assessed progressively with the levels of complexity of driving with reduced lighting increasing i.e. the sequence should be white, reduced, then blackout. Activities should commence with the receipt of instructions for a night move. The individual should be assessed in the inspection and preparation of the vehicle for night driving.

Assessment under the particular light condition should test the individual's competence including the conduct of more complex tasks including manoeuvring in confined spaces with and without the use of guides and associated aids. Navigation may be assessed as part of a vehicle navigation exercise conducted under various lighting conditions driving cross country as well as on tracks and sealed roads.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFTRP003 Operate a vehicle over difficult terrain

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTP003B Operate a vehicle over difficult terrain. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to prepare a vehicle and drive over difficult terrain, including cross country and other off road situations. This involves the application of low risk driving techniques, dealing with hazards, and the assessment (where necessary) and the safe negotiation of obstacles, including water courses such as rivers and streams. The driver must be able to deal with contingencies related to an emergency that may occur in the hazardous situations that may be encountered in driving over difficult terrain under field conditions.

This unit was developed for military drivers in a threat environment, but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform complex tasks in a broad range of unpredictable contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Transport

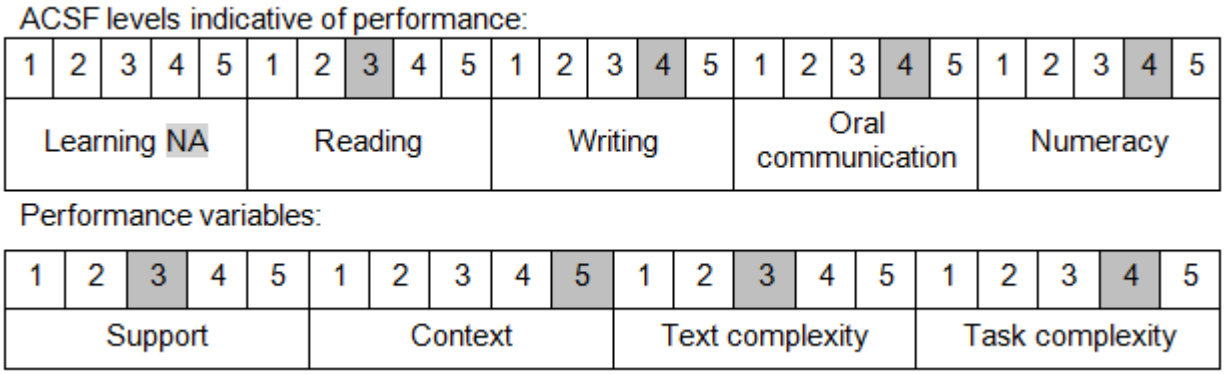
Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare a vehicle for driving over difficult terrain	1.1 Conduct serviceability check of a vehicle for driving over difficult terrain. 1.2 Rectify and/or report any vehicle faults. 1.3 Configure vehicle for driving in difficult terrain.
2. Drive over difficult terrain	2.1 Conduct reconnaissance of the terrain to be traversed by map and/or visual observation identifying potential hazards, including entry and exit routes, obstructions and bypasses. 2.2 Plan task and discuss potential hazards and contingency actions with a supervisor. 2.3 Reconfigure vehicle and adjust the load as necessary. 2.4 Apply low risk driving techniques when driving over difficult terrain. 2.5 Apply vehicle contingency actions when required to deal with accidents and emergencies that may occur when negotiating hazards.
3. Refurbish vehicle	3.1 Inspect vehicle for damage after hazardous situations are negotiated and on completion of the task. 3.2 Rectify and/or report faults and damage to the supervisor. 3.3 Clean and reconfigure vehicle and load as necessary for standard driving conditions.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTP003B Operate a vehicle over difficult terrain.

Assessment Requirements for DEFTRP003 Operate a vehicle over difficult terrain

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- carrying out contingency actions
- recovering a vehicle
- applying first aid
- evacuating injured people
- reading maps and use navigational aids
- conducting route reconnaissance and task planning
- driving a vehicle over difficult terrain including:
  - crossing a defile
  - crossing soft terrain
  - crossing a water obstacle
  - negotiating thick scrub
- dealing with contingencies including:
  - engine stall on a steep grade
  - breakdown of a vehicle while crossing a water obstacle
  - recovery of a vehicle from an obstacle
  - recondition a vehicle after driving in difficult terrain
- preparing and driving a vehicle over difficult terrain in a range of environments by day and night, and dealing with contingencies in hazardous situations
- applying sound judgement, this must be displayed in the analysis of difficult terrain to determine whether it is trafficable, and if so, what are the implications for vehicle preparation, safety of passengers and load planning

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- route and task planning
- obstacles and hazards
- vehicle capabilities

Assessment Conditions

Competency should be demonstrated over a time frame that allows for driving a vehicle over a variety of difficult terrain, encountering hazardous situations and applying contingency actions all under a range of field conditions.

Competency should be assessed using a number of practical assessments of driving over difficult terrain including inclines and declines (to the rated capability of the vehicle), waterways, thick scrub, defiles, sand and soft bottoms. Individuals should be assessed in each of these environs and then collectively over a ‘vehicle run’ in which a number of the types of difficult terrain, including watercourses, are encountered requiring a contingency response.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFTRP004 Operate a vehicle using night fighting equipment (NFE)

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTP004B Operate a vehicle using night fighting equipment (NFE). • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to operate a vehicle, including all wheeled road transport vehicles, using night fighting equipment (NFE) as an aid to driving at night in limited or no light under field conditions. NFE is a collective term that refers to image intensification equipment. It is used by the driver in limited or no light conditions to enhance and improve natural vision at night, when other forms of lighting are prohibited by the operational situation. The driver is required to perform all of the standard driving activities using NFE including vehicle preparation, serviceability checks, driving and navigation. In addition, the driver, while dismounted, is required to direct another vehicle using hand signals.

This unit was developed for military drivers in a threat environment, but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform routine tasks in a broad range of unpredictable contexts.

© Commonwealth of Australia, 2024 Public Skills Australia

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Transport

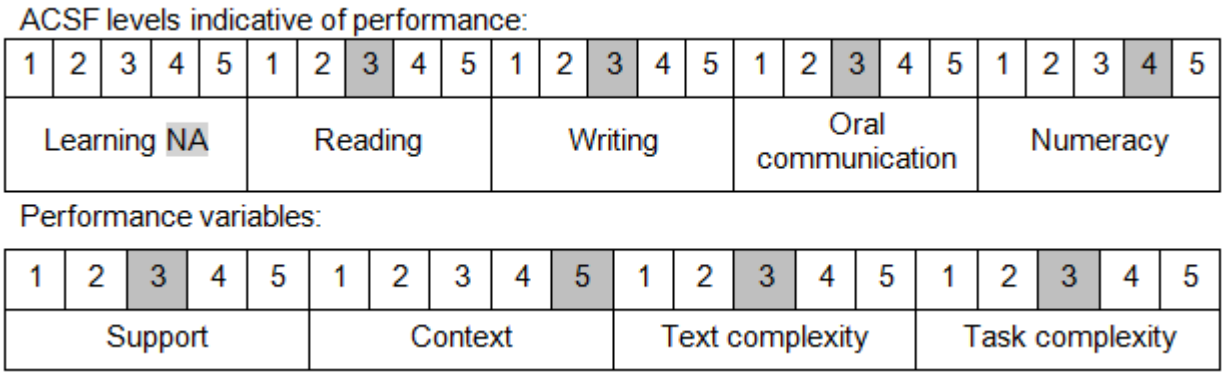
Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare a vehicle for driving at night using NFE	1.1 Inspect NFE for driving and set up. 1.2 Conduct serviceability check of the vehicle using NFE and rectify and/or report faults. 1.3 Configure vehicle for night driving using NFE.
2. Direct a vehicle using NFE	2.1 Identify, obtain and check appropriate NFE for serviceability. 2.2 Report any faults with NFE to appropriate personnel, rectify and/or return to store. 2.3 Direct vehicle as an external guide using NFE. 2.4 Retrieve and check NFE and return to storage area with any faults rectified and/or reported.
3. Drive a vehicle using NFE	3.1 Drive vehicle singularly and in convoy using NFE. 3.2 Respond to directions from an external guide while driving with NFE. 3.3 Navigate vehicle while driving with NFE. 3.4 Carry out contingency actions on failure of NFE.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTP004B Operate a vehicle using night fighting equipment (NFE).

Assessment Requirements for DEFTRP004 Operate a vehicle using night fighting equipment (NFE)

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- driving a vehicle at night under a variety of lighting conditions
- reading maps and using navigational aids
- setting up NFE for night driving
- preparing, checking for serviceability, driving, directing and navigating the vehicle at night using NFE
- operating a vehicle both on roads and cross country and in convoy using NFE

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- NFE safety requirements
- characteristics of night vision
- characteristics and operation of NFE

Assessment Conditions

Competency should be assessed in operating with NFE as a complete activity commencing with the issue of instructions for a night move. The individual should conduct all preliminaries using NFE and complete a number of night driving tasks on both roads and cross country.

© Commonwealth of Australia, 2024 Public Skills Australia

The individual should be responsible for navigation along the route using NFE. During the assessment, the individual will be required to drive the vehicle in accordance with instructions from an external guide and then dismount and act as a guide for another vehicle.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFTRP005 Operate a multi-axle trailer

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTP005B Operate a multi-axle trailer. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • Element 1 reworded

Application

This unit describes the skills required to configure, load, tow, manoeuvre and unload a multi-axle trailer coupled to a wheeled vehicle authorised to tow this type of trailer. Multi-axle trailers in this context are used to transport wheeled and tracked vehicles, containers and items of general cargo in a range of operating environments.

This unit was developed for military drivers in a threat environment, but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform routine tasks in a broad range of unpredictable contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Transport

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to tow a multi-axle trailer	1.1 Conduct serviceability check of the trailer. 1.2 Rectify and/or report faults. 1.3 Prepare and configure trailer to meet the requirements of the load/cargo. 1.4 Load trailer with different types of loads. 1.5 Secure and protect load.
2. Tow a multi-axle trailer	2.1 Couple and uncouple multi-axle trailer to a vehicle. 2.2 Tow multi axle trailer.
3. Refurbish a multi-axle trailer	3.1 Unload multi-axle trailer on completion of the task. 3.2 Conduct serviceability and damage checks. 3.3 Rectify and/or report faults.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	**3**	4	5	1	**2**	3	4	5	1	2	3	4	5
Learning NA					Reading NA					Writing					Oral communication					Numeracy NA				

Performance variables:

1	2	**3**	4	5	1	2	3	4	5	1	2	**3**	4	5	1	2	**3**	4	5
Support					Context					Text complexity					Task complexity				

© Commonwealth of Australia, 2024 Public Skills Australia

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTP005B Operate a multi-axle trailer.

Assessment Requirements for DEFTRP005 Operate a multi-axle trailer

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- loading, restraining and protecting loads
- manoeuvring a trailer through a range of driving situations and road conditions
- monitoring and anticipating traffic hazards
- managing stressful and emergency situations
- operating medium and heavy vehicles and towing multi-axle trailers applying WHS requirements
- inspecting, loading, coupling/uncoupling, towing, manoeuvring and unloading a multi-axle trailer under a range of road transport operating conditions by day and night carrying different types of loads
- configuring a multi-axle trailer to suit the requirements of different types of loads and tasks
- loading and unloading a trailer with different types of loads and securing devices
- handling emergency situations
- demonstrating the ability to manoeuvre, brake, corner, reverse, push the trailer, overtake other vehicles and handle emergency situations.

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- WHS requirements for operating medium and heavy vehicles and towing multi-axle trailers

© Commonwealth of Australia, 2024 Public Skills Australia

- road traffic rules and regulations for operating medium and heavy vehicles and towing multi-axle trailers
- safe loading and restraint procedures and limits for trailers
- trailer coupling systems
- emergency situations that may require towing trailers

Assessment Conditions

Competency should be demonstrated under a range of road transport operating environments towing a multi-axle trailer carrying various types of loads. Assessment will need to be undertaken on a number of occasions to provide the individual with the opportunity to demonstrate competence in manoeuvring a loaded trailer in a range of contexts and conditions.

Competency should be assessed under a range of road and traffic conditions to assess performance in stressful conditions. The assessment should be conducted as part of a ‘long haul’ activity of extended duration loading and towing a number of types of cargo. The individual should be assessed in the interpretation of an instruction for a transport task requiring a multi-axle trailer, preparation and configuration of the trailer and the subsequent loading, restraint and protection of the load.

The individual should then be assessed in coupling a trailer and driving the vehicle which includes the requirement to manoeuvre, brake, corner, reverse, push, overtake other vehicles and handle emergency situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFTST001 Plan testing and evaluation processes

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTE001A Plan testing and evaluation processes. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 2.3, 3.1, 3.3 and 3.4 revised • PC 4.2 and 4.3 merged

Application

This unit describes the skills required to plan a test and evaluation process which may be complex in terms of scope; degree of risk; environmental, political, cultural and social factors that apply; consequences of failure; and degree of control. It includes the requirement to identify the scope of the testing process, to determine the testing methodology and to prepare the plan.

This unit was developed for Defence test and evaluation workers, but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform sophisticated tasks in a range of contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

© Commonwealth of Australia, 2024 Public Skills Australia

Competency Field

Testing

Elements and Performance Criteria

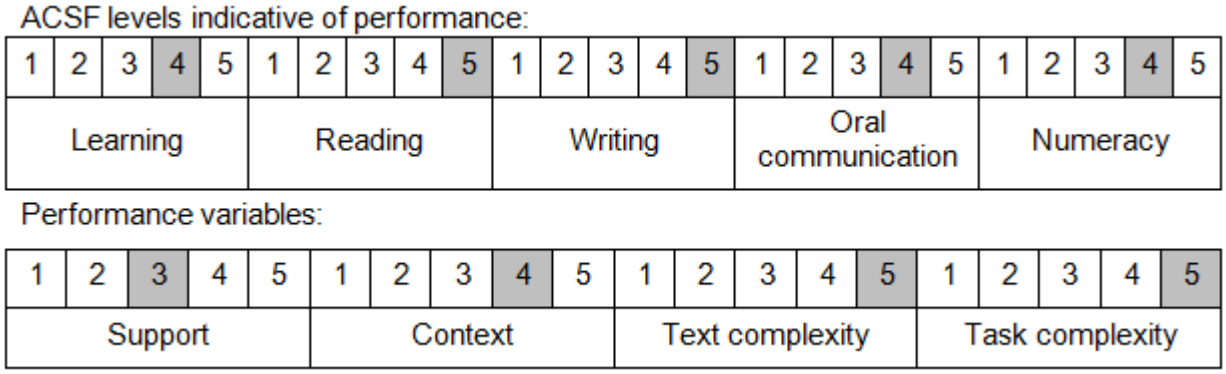
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Identify testing requirements and undertake scoping	1.1 Analyse the need for testing. 1.2 Undertake definition study where necessary, to determine scope of testing process. 1.3 Complete scoping, identifying rationale for the testing that includes purpose and outcomes. 1.4 Identify and canvas stakeholders to ensure that their requirements are addressed in planning.
2. Determine testing methodology	2.1 Undertake research and analysis to identify impacts and risks, constraining factors and alternate options. 2.2 Analyse methodology technical feasibility, supportability and cost effectiveness and report outcome to key stakeholders. 2.3 Assess alternatives for testing design. 2.4 Identify and report preferred option that fits organisational requirements. 2.5 Consult relevant specialists to determine extent of potential risks. 2.6 Prepare business case and obtain approvals to proceed with test development.
3. Develop test and evaluation plans	3.1 Define aims, objectives and impacts in test plan and timeframes. 3.2 Identify resources to complete quality deliverables on time and within budget. 3.3 Determine test methods by consideration of resource constraints, environmental constraints, evidence requirements, existing capabilities and their compatibility with existing procedures. 3.4 Record testing outcomes in measurable and achievable forms. 3.5 Develop indicators to monitor test performance and seek agreement by relevant parties. 3.6 Investigate potential risks and identify them in the plan. 3.7 Establish a risk management process to analyse information and options.

© Commonwealth of Australia, 2024 Public Skills Australia

	3.8 Clarify and agree on skills, roles and responsibilities of team members and stakeholders, and identify reporting requirements. 3.9 Address management of test parameters in the plan and design evaluation criteria. 3.10 Design and document planning process utilising management tools, in accordance with test and users' requirements, in consultation with specialists.
4. Finalise test plans	4.1 Maintain security and confidentiality of data. 4.2 Promulgate and maintain test plans.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTE001A Plan testing and evaluation processes.

Assessment Requirements for DEFTST001 Plan testing and evaluation processes

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- applying risk management techniques
- negotiating timelines, roles and responsibilities with stakeholders and team members
- scheduling testing activities
- use planning techniques related to testing and evaluation that may be complex in terms of scope; degree of risk; environmental, political, cultural and social factors that apply; consequences of failure; degree of control
- using public relations strategies to promote and gain endorsement

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- approval processes
- integrated logistics support
- legislation, organisational policy and procedures that may impact on the test and evaluation process
- management tools suited to implementing testing processes
- organisational change management
- principles relating to the implementation phase of testing processes
- resource plans
- resource scheduling packages

© Commonwealth of Australia, 2024 Public Skills Australia

- test and evaluation implementation methods which may be complex in terms of scope; degree of risk; environmental, political, cultural and social factors that apply; consequences of failure; degree of control
- work breakdown structures (WBS)

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFTST002 Prepare testing and evaluation processes

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTE002A Prepare testing and evaluation processes. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 1.6, 2.3 and 3.2 revised

Application

This unit describes the skills required to prepare for a test and evaluation process. It includes the requirement to establish the testing process, to integrate the testing processes and to develop, review and maintain the test plan.

This unit was developed for Defence test and evaluation workers, but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform sophisticated tasks in a range of contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Testing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Establish test and evaluation processes	1.1 Confirm drivers for the test and evaluation with stakeholders. 1.2 Develop test plan in accordance with direction from Test and Evaluation Master Plan. 1.3 Determine test methods by consideration of resource constraints, environmental constraints, evidence requirements, existing capabilities and their compatibility with existing procedures. 1.4 Brief and negotiate with stakeholders to obtain endorsement for testing process. 1.5 Obtain resources. 1.6 Review and analyse scope and objectives. 1.7 Develop a strategy establishing work breakdown structures in order to implement testing process. 1.8 Identify and establish testing infrastructure. 1.9 Identify and establish safety systems and procedures. 1.10 Identify and obtain specialist and technical support relevant to the testing. 1.11 Maintain security and confidentiality of data. 1.12 Establish governance structure and processes as detailed in test plan.
2. Conduct start up activities	2.1 Refine test plans in consultation with steering committee and team members, and include precise details for schedules of activities, milestones and resources. 2.2 Establish and maintain required systems throughout the process in accordance with the complexity of the testing and in line with test plan. 2.3 Confirm team members' understanding of testing and evaluation and commitment to fulfilling the requirements. 2.4 Confirm team members' roles and responsibilities for the duration of the process. 2.5 Utilise and apply management tools to achieve outcomes.
3. Manage test and	3.1 Integrate all aspects of testing and related processes and establish

© Commonwealth of Australia, 2024 Public Skills Australia

evaluation preparedness	links to ensure objectives are met in accordance with test plan. 3.2 Establish consultation and reporting mechanisms in accordance with test plan. 3.3 Consult with staff and contractors regularly to discuss progress and to ensure effective results. 3.4 Monitor integration, and review and amend management plans and any related contracts as appropriate, with results reported in accordance with mechanisms identified in test plan. 3.5 Establish ongoing progress monitoring processes against agreed milestones in accordance with test plan, to provide a measure of performance throughout the life of the testing process. 3.6 Plan and establish programmed review of objectives and achievement in accordance with test plan.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning					Reading					Writing					Oral communication					Numeracy NA					

Performance variables:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTE002A Prepare testing and evaluation processes.

Assessment Requirements for DEFTST002 Prepare testing and evaluation processes

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- using management techniques related to testing and evaluation that may be reasonably complex in terms of scope; degree of risk; environmental, political, cultural and social factors that apply; consequences of failure; degree of control
- using management tools suited to implementing testing processes
- using public relations strategies to promote and gain endorsement

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- approval processes
- change management
- cost schedule control systems
- integrated logistics support
- legislation, organisational policy and procedures that may impact on the test and evaluation process
- management tools suited to planning testing and evaluation processes
- principles relating to the planning phase of testing and evaluation processes
- resource plans
- scheduling packages

© Commonwealth of Australia, 2024 Public Skills Australia

- test and evaluation planning methods which may be reasonably complex in terms of scope; degree of risk; environmental, political, cultural and social factors that apply; consequences of failure; degree of control
- work breakdown structure (WBS)

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for and conduct tests	1.1 Obtain and comply with test plan. 1.2 Brief stakeholders and test participants. 1.3 Check and initiate safety systems and procedures. 1.4 Commence test and evaluation activities. 1.5 Perform qualitative and quantitative tests to observe and to measure relevant critical parameters. 1.6 Collect and record test data.
2. Monitor testing processes	2.1 Monitor and amend test plans based on changing circumstances in consultation with team members, and include precise details for schedules of activities, milestones and resources. 2.2 Monitor systems throughout the process. 2.3 Identify risks and apply the risk management process. 2.4 Apply management tools throughout the process to achieve outcomes. 2.5 Compare data with standards, charts and tables in order to meet compliance with required specification or test specific requirements. 2.6 Check initial analyses against test plan procedures when non-standard results are obtained. 2.7 Recognise and manage contingencies.
3. Finalise testing processes	3.1 Evaluate testing process, equipment performance and achievement against objectives and report initial results. 3.2 Maintain security and confidentiality of data. 3.3 Debrief stakeholders and test participants. 3.4 Forward test data for analysis. 3.5 Review and amend management plans and any related contracts as appropriate. 3.6 Conduct review of objectives and achievement and prepare outcomes for test report.

DEFTST004 Evaluate testing

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTE004A Evaluate testing. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 3.3 and 3.4 merged • Element 1 one new PC

Application

This unit describes the skills required to evaluate the results of a testing process. It involves analysing data and solving complex problems where the information may not be obvious but can be determined by direct and logical reasoning.

This unit was developed for Defence test and evaluation workers, but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform complex tasks in a range of contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Determine report structure	1.1 Collate input from stakeholders and test participants. 1.2 Analyse and select most appropriate communication means. 1.3 Select report structure and format. 1.4 Select categories and logical sequences of data, information and knowledge to achieve report objectives. 1.5 Develop overview of report structure and content.
2. Draft report	2.1 Collate, interpret and summarise data, information and knowledge to prepare text that satisfies report purposes and objectives. 2.2 Maintain security and confidentiality of data. 2.3 Include multimedia as appropriate to report purposes and objectives. 2.4 Identify and action gaps in required data and information. 2.5 Use language and writing styles appropriate to audience and that clearly reports purposes and objectives. 2.6 Use appropriate software to apply design elements to texts that satisfies report purposes and objectives. 2.7 Circulate draft report for comment to stakeholders and test participants.
3. Prepare and distribute final report	3.1 Incorporate amendments from comments. 3.2 Check grammar, spelling, punctuation and style for accuracy. 3.3 Approve report by stakeholders. 3.4 Produce and distribute report.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning NA					Reading					Writing					Oral communication					Numeracy				

Performance variables:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTE005A Produce test and evaluation reports.

DEFTST006 Analyse test data

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTE006A Analyse test data. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 2.4 removed

Application

This unit describes the skills required to analyse data collected during a test and evaluation process. It includes establishing trends and relationships in the data, and establishing the acceptability of the data.

This unit was developed for Defence test and evaluation workers, but is applicable to any individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform complex tasks in a range of contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Testing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Perform scientific calculations	1.1 Ensure consistency of raw data with expectations and reasonable ranges. 1.2 Calculate scientific quantities. 1.3 Determine calculated quantities and estimations. 1.4 Present results using the appropriate units, uncertainties and number of significant figures.
2. Analyse trends and relationships in data	2.1 Determine relationships between sets of data. 2.2 Prepare and analyse data to determine if a process is in control. 2.3 Identify possible causes for out of control condition.
3. Determine variation and/or uncertainty in data distributions	3.1 Organise raw data into appropriate frequency distributions. 3.2 Calculate statistical properties for ungrouped and grouped data. 3.3 Interpret statistical properties to determine characteristics of sample or population. 3.4 Calculate standard deviations and confidence limits for means and replicates. 3.5 Determine uncertainty in measurements using statistical analysis. 3.6 Determine data acceptability using statistical tests and organisational procedures.
4. Check for aberrant results	4.1 Identify results that cannot be reconciled with documentation, testing procedures and/or expected outcomes. 4.2 Determine appropriate actions in consultation with supervisor as required.
5. Maintain results	5.1 Store, retrieve and manipulate data following document traceability procedures. 5.2 Present results in an appropriate format. 5.3 Verify entry of data and results. 5.4 Maintain security and confidentiality of data. 5.5 Prepare reports in a format and style consistent with their intended use and organisational guidelines.

Assessment Requirements for DEFTST006 Analyse test data

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- completing mathematical calculations involving fractions, decimals, ratios, proportions and percent
- evaluating mathematical formulae
- interpreting scientific properties
- preparing and interpreting graphs and data

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- characteristics of a valid measurement
- procedures for data traceability
- procedures for maintaining and filing records, security of data
- procedures for verifying data and rectifying mistakes
- relevant scientific terminology
- sources of uncertainty in measurements

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFTST007 Apply knowledge of test and evaluation processes

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFTE007A Apply knowledge of test and evaluation processes. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to analyse and apply knowledge of test and evaluation processes. This includes the specific knowledge of test and evaluation processes required to support these areas. Applying knowledge of test and evaluation processes is specific to work undertaken by Defence personnel and may be included within a variety of areas such as management, acquisitions, audits, inspections, policy implementation, technical manual development, platform integration, configuration, staff processes, transport and inter-operability.

This unit applies to those working within Defence where knowledge of test and evaluation processes is necessary, but where the worker is not a test and evaluation practitioner.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under direct and indirect supervision, use discretion and judgement, and take responsibility for the quality of their output. They would perform complex tasks in a range of contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Testing

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Access and analyse relevant test and evaluation information	1.1 Identify and obtain relevant test and evaluation process, safety, legislative and statutory requirements. 1.2 Analyse obtained information to determine relevance and application to the organisation. 1.3 Formulate outcomes of the analysis and provide recommendations relevant to workplace requirements.
2. Implement recommendations specific to test and evaluation	2.1 Apply workplace requirements relevant to test and evaluation processes. 2.2 Determine work requirements while applying relevant recommendations. 2.3 Assess, review and record effectiveness of the recommendations. 2.4 Adjust recommendations, if required, and document for future application.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning NA					Reading					Writing					Oral communication NA					Numeracy NA				

Performance variables:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFTE007A Apply knowledge of test and evaluation processes.

Assessment Requirements for DEFTST007 Apply knowledge of test and evaluation processes

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- analysing and evaluating information
- applying safety, legislative and statutory requirements relevant to test and evaluation
- interpreting organisational role relevant to test and evaluation
- applying knowledge of testing and evaluation processes to assist in work and to guide problem solving

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- organisational role relevant to test and evaluation
- safety, legislative and statutory requirements relevant to test and evaluation
- test and evaluation knowledge relevant to work being performed
- test and evaluation processes

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFVEH001 Conduct recovery vehicle operations in a field environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to undertake recovery of broken down vehicles and equipment, requiring the operation of specialist recovery vehicles and equipment.

It includes preparing for recovery vehicle tasks, dispatching the recovery vehicle to an incident site, retrieving disabled equipment and moving it to a place of repair. It also includes transporting disabled equipment and finalising recovery tasks.

This unit does not cover the extraction of disabled equipment by winching techniques, which is covered by DEFVEH002 Extract disabled equipment using winching techniques in a field environment.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit lead a small team to recover vehicles and equipment. Specialist recovery vehicles and equipment includes towing, lifting and winching equipment.

Persons must be capable of assessing recovery situations in remote environments and tasking personnel to complete operations in isolation from supervision or support.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for recovery tasks	**1.1** Obtain and confirm orders and instructions
	1.2 Check and prepare recovery vehicle and equipment for deployment in accordance with organisational procedures
	1.3 Confirm and organise resources required for operational tasks
	1.4 Brief recovery crew about task in accordance with organisational procedures
	1.5 Report identified problems/shortfalls to appropriate personnel in accordance with organisational procedures so corrective action can occur prior to deployment
	1.6 Apply work health and safety (WHS)/occupational health and safety (OHS) requirements and recognised safety precautions throughout the operation in accordance with organisational procedures
	1.7 Identify, assess and implement environmentally sustainable work practices, as required
2 Deploy recovery equipment	**2.1** Deploy recovery vehicle to recovery site in accordance with organisational procedures
	2.2 Communicate effectively with relevant vehicle recovery activity stakeholders to ensure everyone is aware of recovery procedures
3 Recover disabled equipment	**3.1** Diagnose equipment casualty faults, where possible, to ensure efficient and cost effective recovery actions
	3.2 Assess recovery situation in accordance with organisational procedures to determine appropriate recovery method
	3.3 Assess safety risks associated with recovery task and implement control measures to ensure a safe working environment in accordance with organisational

© Commonwealth of Australia, 2024 Public Skills Australia

		procedures
	3.4	Brief on-site personnel, allocate tasks and supervise personnel in accordance with organisational procedures
	3.5	Complete recovery tasks in accordance with organisational procedures
	3.6	Respond to minor unplanned situations in accordance with organisational procedures, in a manner that minimises risk to personnel and equipment
	3.7	Report major incidents outside scope of vehicle recovery team capability to appropriate personnel
4 Transport disabled equipment	**4.1**	Secure disabled equipment to recovery vehicle in accordance with manufacturer instructions and organisational procedures
	4.2	Assess the stability and braking capability of recovery vehicle to ensure it is safe to transport disabled equipment
	4.3	Drive recovery vehicle to maintenance facility
	4.4	Manage unplanned incidents as they occur in accordance with organisational procedures
5 Finalise recovery tasks	**5.1**	Hand over equipment casualty to owner or recover further, as required
	5.2	Complete documentation, including reports and returns, in accordance with organisational procedures
	5.3	Supervise and conduct maintenance in accordance with organisational procedures
	5.4	Report faulty equipment and take corrective actions, as required
	5.5	Debrief recovery crew as required, in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2024 Public Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to DEFVH001A Conduct recovery vehicle operations in a field environment.

Assessment Requirements for DEFVEH001 Conduct recovery vehicle operations in a field environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- allocating appropriate materials and personnel to tasks
- applying relevant legislation and organisational policies and procedures
- applying safety, legislative and statutory requirements relevant to the recovery vehicle operations risk assessment
- assessing recovery situations in remote environments and tasking personnel to complete operations isolated from supervision or support
- communicating effectively in the workplace
- conducting vehicle operations taking into account the characteristics of the equipment casualty and recovery equipment when determining suitable recovery methods
- deploying recovery equipment appropriate for tasks and field environment
- directing, briefing, coordinating and monitoring personnel
- finalising recovery tasks
- identifying, interpreting and analysing risk assessment requirements relevant to recovery vehicle operations in a field environment
- interpreting instructions and directions
- operating specialist recovery vehicles and equipment
- performing a lift/tow recovery of a light and a medium/heavy rigid vehicle
- performing a trailer recovery involving a medium/heavy rigid vehicle (or equivalent)
- preparing for recovery tasks
- recovering and transporting disabled equipment
- solving task specific problems and unplanned events/incidence in accordance with organisational procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic engineering principles including:
  - characteristics and capabilities of recovery vehicles and equipment

© Commonwealth of Australia, 2024 Public Skills Australia

    - material capabilities
    - theory of levers and pulleys
- basic vehicle mechanical principles
- common equipment casualty faults including:
    - damaged driveline
    - electrical system faults
    - engine/transmission faults
    - fuel system faults
- functions and responsibilities of team members
- maintenance requirements and procedures
- relevant minor problems, major incidents and unplanned situations risk mitigation organisational procedures
- recovery methods and procedures
- recovery vehicle and equipment specifications and capabilities
- relevant organisational policies and procedures including:
    - work health and safety (WHS)/occupational health and safety (OHS) procedures relevant to field recovery operations
- reporting requirements and procedures
- safety risk and precautions associated with recovery tasks.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in field environment operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated field environment operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- recovery vehicle, associated equipment and crew
- actual or simulated vehicle/equipment casualties
- applicable documentation including relevant organisational workplace procedures, publications, regulations, codes of practice and operation manuals.

DEFVEH002 Extract disabled equipment using winching techniques in a field environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to assess equipment and vehicles requiring recovery and to employ suitable winching techniques and procedures to extricate casualties utilising specialist recovery vehicles equipped with motorised winching equipment.

It includes operating winching equipment capable of extracting a range of vehicles and equipment that have become bogged or broken down due to terrain or environmental factors, and cannot be extracted by other means.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Typically, winching operations are conducted by persons acting independently or in charge of a small team, isolated from assistance or supervision. They exercise judgement and work within agreed safety procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2024 Public Skills Australia

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Respond to call for assistance	**1.1** Obtain winching tasks and confirm details in accordance with operational requirements
	1.2 Assess tasks to determine equipment requirements
	1.3 Check and prepare recovery vehicle for task in accordance with organisational procedures
	1.4 Deploy recovery vehicle to casualty site in preparation to conduct task
2 Assess winching task	**2.1** Liaise with on-site personnel
	2.2 Assess equipment casualty to determine suitability for winching
	2.3 Inspect site, identify hazards and obstacles associated with winching, assess risks and implement control measures in accordance with organisational procedure
	2.4 Determine winching equipment requirements to extricate casualty and ensure suitable recovery vehicle and equipment for task
	2.5 Develop winching plan taking into account terrain conditions, requirements of casualty, site, recovery equipment and vehicle capabilities
	2.6 Determine and apply work health and safety (WHS)/occupational health and safety (OHS) requirements during winching operations in accordance with organisational procedures
3 Prepare for winching task	**3.1** Prepare equipment casualty for winching in accordance with winching plan
	3.2 Prepare winching equipment in accordance with winching plan
	3.3 Brief on-site personnel, allocate tasks and supervise personnel in accordance with organisational procedures
4 Extricate equipment casualty using winch	**4.1** Conduct winching process in accordance with winching plan
	4.2 Respond to minor unplanned situations in accordance with organisational procedures, in a manner that

© Commonwealth of Australia, 2024 Public Skills Australia

		minimises risk to personnel and equipment
	4.3	Seek assistance from appropriate personnel when major problems outside scope of vehicle winching team capability occur
5 Finalise winching operations	**5.1**	Hand over equipment casualty to owner or recover further as required to complete task
	5.2	Recover and inspect winching equipment for damage in accordance with organisational procedures
	5.3	Report unserviceable equipment and take appropriate actions in accordance with organisational procedures
	5.4	Maintain equipment in accordance with manufacturer instructions
	5.5	Compile documentation and make reports, as required
	5.6	Refurbish worksite in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for DEFVEH002 Extract disabled equipment using winching techniques in a field environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- allocating appropriate materials and personnel to winching task
- applying relevant organisational policies and procedures
- applying safety, legislative and statutory requirements relevant to winching risk assessment
- assessing site and winching risks and applying control measures
- assessing winching task
- briefing and supervising personnel
- communicating effectively in the workplace
- conducting a winching operation to extricate a light and a medium/heavy rigid vehicle
- conducting winching operations on ground that is soft enough to simulate the conditions encountered when winching bogged vehicles
- extricating equipment casualty using a winch
- finalising winching operations
- identifying, interpreting and analysing risk assessment requirements relevant to winching work being performed
- preparing for winching task
- providing reports and appropriate documentation
- responding to call for winching assistance
- solving problems relevant to winching task
- using motorised winches, winch ropes and associated fittings.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- basic engineering principles relevant to winching including:
  - characteristics and capabilities of recovery vehicles and equipment
  - material capabilities
  - theory of levers and pulleys
- basic vehicle mechanical principles

DEFWDV001 Dive using self-contained underwater breathing apparatus in open water to 30 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to dive using self-contained underwater breathing apparatus (SCUBA) in an open water environment to a depth of 30 metres.

It includes planning the dive (including using decompression tables); selecting, inspecting and fitting equipment; entering the water from a range of platforms; conducting descent to, and servicing time at, the required depth. It also includes ascending (including using decompression techniques), exit from the water to the original platform, and removing and refurbishing equipment.

This unit has been aligned with existing standards in the Australian Diver Accreditation Scheme (ADAS). It relates, in part, to the minimum standard for a diver using SCUBA to a depth of 30 metres. ADAS refers to this as ‘restricted’. Further experience is required to gain an ADAS ‘unrestricted’ rating.

This unit was developed for Defence divers but may be applicable to anyone in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for a decompression dive	**1.1** Develop a dive plan using decompression tables and obtain supervisor's clearance in accordance with organisational procedures
	1.2 Select, fit and test equipment in accordance with manufacturer specifications
	1.3 Inspect equipment for serviceability, quarantine any unserviceable equipment and report defects to maximise diver safety
	1.4 Ensure independent safety check of fit and function of equipment is carried out by a diver's attendant or dive supervisor
2 Enter and exit the water	**2.1** Position markers in the water to identify presence of divers
	2.2 Conduct in-water leak test at the surface to ensure the integrity and functionality of equipment
	2.3 Adjust buoyancy to commence dive and as required throughout dive
3 Descend to, and ascend from, a 30 metres bottom	**3.1** Maintain measured and controlled breathing and finning
	3.2 Implement diving descent and ascent techniques, and decompression techniques in accordance with dive plan and safety procedures
	3.3 Monitor relevant risk factors throughout dive to manage threats and personal safety, in accordance with organisational procedures
	3.4 Recover spatial awareness when balance is lost under conditions of zero visibility
	3.5 Recover any lost and/or separated diver
	3.6 Maintain awareness of, and distance from, surface and sub surface hazards

© Commonwealth of Australia, 2024 Public Skills Australia

		3.7	Ensure minimal disturbance to bottom to enable maximum visibility and a safe work environment, in accordance with dive plan
		3.8	Undertake checks to ensure safety to surface
4	**Identify and manage dive-specific medical problems**	**4.1**	Recognise signs and symptoms of compression and/or decompression related problems in self and others, and take immediate corrective action in accordance with dive plan and safety procedures
		4.2	Recognise and manage heat and cold related problems in self or others and hazards, in accordance with dive plan and safety procedures
5	**Communicate underwater**	**5.1**	Inspect electronic communications device and accessories for serviceability and fit
		5.2	Transmit and receive messages using electronic communications devices in accordance with dive plan
		5.3	De-service and stow electronic communications device and accessories in accordance with manufacturer specifications
		5.4	Communicate non-verbally with other divers using hand signals, writing boards and standard single line signals, in accordance with dive plan
6	**Perform a simple navigation leg underwater**	**6.1**	Maintain compass bearing underwater
		6.2	Estimate and maintain distance for a constant swim rate underwater
		6.3	Estimate distance travelled in dive
7	**React to individual and group contingencies and/or emergencies**	**7.1**	Resolve flooded face mask and/or blocked mouthpiece by clearing and refitting
		7.2	Resolve failed primary breathing system and manage irrecoverable malfunctions in accordance with dive plan
		7.3	Manage lost and/or severed safety line/s, as required
		7.4	Manage significant systemic failures through ditching drill and emergency surfacing drill, in accordance with

© Commonwealth of Australia, 2024 Public Skills Australia

		dive plan and safety procedures
8	**Maintain equipment**	**8.1** Maintain equipment in accordance with manufacturer specifications
		8.2 De-service, test and stow post dive equipment
		8.3 Quarantine unserviceable equipment and report defects in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces but is not equivalent to DEFDV001B Dive using self-contained underwater breathing apparatus in open water to 30 metres.

Assessment Requirements for DEFWDV001 Dive using self-contained underwater breathing apparatus in open water to 30 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- acting as a relay between two callsigns
- applying relevant legislation, and organisational policies and procedures
- communicating verbally by radio and non-verbally through signalling methods
- compiling briefs and clear messages
- complying with assigned callsigns
- conducting decompression stops and requirements
- conducting unplanned decompression procedures arising from the onset of (simulated) compression related problems
- demonstrating situational awareness of position and orientation, equipment (including depth, time and air gauges), and other divers
- implementing emergency surfacing
- managing hazards during dives
- managing medical complications during dives and perceiving these in self and others
- navigating underwater, using a compass only, a complete triangle of side length not less than 30 m (way-points only to be distinguishable within 8 m)
- performing buddy breathing
- switching from primary to reserve air system
- taking necessary corrective action/s and managing a range of individual and group contingencies and/or emergencies.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- decompression calculations
- decompression tables to determine decompression time/s and depth/s for a range of dive profiles
- decompression techniques

© Commonwealth of Australia, 2024 Public Skills Australia

- dive equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- general precautions to be taken against a range of hazards
- handling procedures for nonfunctional items
- line signals
- marine hazards including marine animal threats
- navigation theory
- oceanography
- principles of underwater communication systems and diver intercom systems, and their limitations
- radio frequency hazards
- radio telephone procedures (RTP)
- relevant hand signals
- relevant legislation, industry standards, and organisational policies and procedures
- safe operating ranges for airsupplies
- surfacing procedures including awareness of surface and sub-surface hazards.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational

© Commonwealth of Australia, 2024 Public Skills Australia

situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- ocean with a range of oceanic, diurnal and nocturnal environments
- applicable documentation including organisational procedures, decompression tables, regulations, codes of practice and operation manuals.

When practicable, assessment should relate to the diver's vocational focus.

DEFWDV002 Support SCUBA diving operations from the surface

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to support self-contained underwater breathing apparatus (SCUBA) diving operations from the surface by acting as a 'lazy shot/bailout operator' and/or diver's attendant in an open water environment.

It includes preparing bailout cylinder, rigging 'lazy shot' and attending to SCUBA (air) diver/s from the surface.

The lazy shot/bailout operator's purpose is to mark the required decompression depth (through the use of the lazy shot) for ascending divers to service their decompression requirements. As part of the lazy shot rig, additional supplies of air (bailout cylinders) are provided in the event that divers' personal supplies expire prior to surfacing. This can occur when multiple and/or lengthy decompression periods must be served.

The diver's attendant covers all aspects of assistance given to a diver in preparation for the dive, the conduct of the dive (such as managing and monitoring safety/communications lines) and the post dive refurbishment of equipment.

This unit was developed for Defence divers but may be applicable to anyone in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work under supervision and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare bail-out cylinder and rig lazy shot	**1.1** Inspect and prepare lazy shot, cordage and bail-out cylinder
	1.2 Deploy and set lazy shot, cordage and bail-out cylinder at required depth for decompression stop, in accordance with dive plan
	1.3 Ensure adjustment for subsequent decompression stops in accordance with dive plan
	1.4 Re-stow lazy shot, cordage and bail-out cylinder
2 Attend to a SCUBA (air) diver from the surface	**2.1** Assist diver in fitting and inspecting dive equipment prior to undertaking dive
	2.2 Assist diver's entry into, and exit from, the water
	2.3 Ensure diver's equipment is confirmed for fit and absence of leaks on entering the water
	2.4 Manage diver's safety line throughout the dive
	2.5 Interpret and respond to all line signals between diver and supervisor
	2.6 Report diver's condition, position and progress to supervisor as required
	2.7 Assist diver from the surface during a poor visibility search
	2.8 Assist diver in the removal and stowage of equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2024 Public Skills Australia

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces but is not equivalent to DEFDV002B Support SCUBA diving operations from the surface.

Assessment Requirements for DEFWDV002 Support SCUBA diving operations from the surface

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant industry standards, and organisational policies and procedures
- assembling equipment
- assisting a searching diver in poor visibility (less than 2 metres) in a parallel search
- diving using selfcontained underwater breathing apparatus (SCUBA) in open water to 30 metres
- measuring distance
- maintaining attention to diver throughout dives
- reading gauges
- relaying at least two messages from diver to supervisor
- rigging and setting lazy shot and bailout at appropriate depth/s
- transmitting at least two messages from supervisor to diver.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dive equipment including:
  - bailout cylinder
  - lazy shot
  - SCUBA and associated equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours

© Commonwealth of Australia, 2024 Public Skills Australia

  - diving in tidal waters, currents and tides
  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- general boat awareness and safety
- line signals
- marine animal threats
- marine hazards
- oceanography
- relevant industry standards, and organisational policies and procedures including:
  - dive plan and/or instructions
  - emergency response.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, SCUBA equipment and personal protective equipment currently used in industry
- relevant documentation including organisational procedures, regulations, codes of practice and operation manuals.

When practicable, assessment should relate to the diver's vocational focus.

DEFWDV003 Act as a standby diver

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to act as a standby (air) diver in support of diving operations (from a platform and in water) in an open water environment.

It includes preparing and positioning required diving equipment and emergency resources; meeting the readiness states as detailed by the dive supervisor; maintaining communications with dive supervisor throughout the dive; and taking rapid steps to resolve incidents, ranging from resupplying emergency air reserves to locating and rescuing injured or unconscious diver/s.

This unit covers the Australian Diver Accreditation Scheme (ADAS) occupational grouping of standby diver.

This unit was developed for Defence divers but may be applicable to anyone in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare as a standby diver	**1.1** Inspect and don diving equipment for immediate readiness
	1.2 Confirm dive plan and reaction to incidents with dive supervisor
	1.3 Prepare and position emergency resources in accordance with dive plan
2 Operate as a standby diver	**2.1** Maintain situational awareness and status of deployed diver/s during dive operation
	2.2 Respond to incidents or unplanned situations in accordance with emergency response and dive plan
	2.3 Locate deployed diver via life line or float line
	2.4 Ferry emergency air supplies to submerged divers
	2.5 Recover unconscious diver in accordance with emergency response and dive plan

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces but is not equivalent to DEFDV003B Act as a standby diver.

DEFWDV004 Dive using surface-supplied breathing apparatus in open water to 30 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to dive using surface-supplied breathing apparatus (SSBA) in an open water environment to a depth of 30 metres.

It includes operating a surface-supply panel, and inspecting and operating SSBA equipment.

This unit has been aligned with existing Defence and Australian Diver Accreditation Scheme (ADAS) standards. It relates, in part, to the minimum standard for a diver using SSBA to a depth of 30 metres. ADAS refers to this as a Part 2 restricted qualification. Further experience is required to gain an ADAS Part 3 licence, based, in part, on SSBA diving to 50 metres.

This unit was developed for Defence divers but may be applicable to anyone in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS		PERFORMANCE CRITERIA	
Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Operate a surface-supply panel**	**1.1**	Inspect surface-supply panel and associated equipment for serviceability and check all gauges to ensure they are in date
		1.2	Connect main and reserve air supplies and confirm supply
		1.3	Check seals and connections for integrity, correct function and correct line up
		1.4	Ensure each umbilical from the surface-supply panel is supplying a specific diver
		1.5	Perform operator level maintenance on surface-supply panel at the work site
		1.6	De-service surface-supply panel after use
2	**Conduct dive operations**	**2.1**	Select, inspect, fit and test SSBA in accordance with manufacturer specifications
		2.2	Conduct dive/s using SSBA and demonstrate dive contingencies in accordance with organisational procedures
		2.3	De-service SSBA and report defects in accordance with organisational procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for DEFWDV004 Dive using surface-supplied breathing apparatus in open water to 30 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant industry standards, and organisational policies and procedures
- arranging for others to check equipment and maintain equipment during dive
- conducting inwater checks
- diving using self-contained underwater breathing apparatus (SSBA) in open water to 30 metres
- entering and exiting the water appropriate to the launch platform, equipment and conditions
- implementing contingency and emergency response plan
- preparing equipment for dive
- preparing surface control panel for dive
- recovering and clearing mask and mouthpiece
- switching from SSBA primary to reserve air system.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general occupational/diving safety awareness including:
  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship’s bottom
  - lost/separated
  - entrapment/foul lines

© Commonwealth of Australia, 2024 Public Skills Australia

  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- hazards to the umbilical
- marine hazards including marine animal threats
- oceanography
- relevant industry standards, and organisational policies and procedures
- safe operating ranges for air supplies
- SSBA dive equipment characteristics and limitations
- surface-supply panel characteristics and limitations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

DEFWDV005 Dive using closed-circuit breathing apparatus (N2O2) in open water to a maximum depth of 40 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to dive using closed circuit breathing apparatus (CCBA) (N2O2) in an open water environment to a maximum depth of 40 metres.

It includes operating the N2O2 compressor/handbooster pump, inspecting and operating CCBA (N2O2) equipment, and conducting CCBA (N2O2) specific contingency drills.

This unit applies to persons working as Defence divers but can be applied to others working in this field

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for DEFWDV005 Dive using closed-circuit breathing apparatus (N2O2) in open water to a maximum depth of 40 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least 15 dives, with diver diving to a depth not greater than 40 metres using closed-circuit breathing apparatus (CCBA) (N2O2) in open water and include:

- applying relevant industry standards, and organisational policies and procedures
- arranging for others to check equipment
- conducting CCBA (N2O2) open water dive operations in accordance with dive plan during the day and at night
- conducting inwater apparatus checks
- handling nonfunctional equipment items
- maintaining equipment during dive operations
- monitoring CCBA (N2O2) equipment and gauges
- operating an N2O2 compressor/handbooster pump in accordance with manufacturer specifications.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- CCBA (N2O2) characteristics and limitations
- CCBA (N2O2) dive equipment specifications and limitations
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours
  - diving in tidal waters, currents and tides

© Commonwealth of Australia, 2024 Public Skills Australia

  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- hazards of nitrox
- relevant industry standards, and organisational policies and procedures
- relevant occupational/diving safety awareness
- safe operating ranges for airsupplies.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

DEFWDV006 Dive using closed-circuit breathing apparatus (O2) in open water to a maximum depth of 10 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to dive using closed-circuit breathing apparatus (CCBA) (O2) in an open water environment to a maximum depth of 10 metres.

It includes operating the oxygen compressor/handbooster pump, inspecting and operating CCBA (O2) equipment, and conducting CCBA (O2) specific contingency drills.

This unit applies to persons working as Defence divers, but can apply to others working as work divers.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

DEFWDV007 Dive using closed-circuit breathing apparatus (HeO2) in open water to a maximum depth of 60 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to dive using closed circuit breathing apparatus (CCBA) (HeO2) in an open water environment to a maximum depth of 60 metres.

It includes operating the HeO2 compressor/handbooster pump, inspecting and operating CCBA (HeO2) equipment, and conducting CCBA (HeO2) specific contingency drills.

This unit applies to persons working as Defence Divers but could also apply to others working as work divers.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for DEFWDV007 Dive using closed-circuit breathing apparatus (HeO2) in open water to a maximum depth of 60 metres

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least four separate dives, with diver diving to a depth not greater than 60 metres using closed-circuit breathing apparatus (CCBA) (HeO2) in open water (oceans, seas, lakes and rivers) and include:

- applying relevant industry standards, and organisational policies and procedures
- conducting CCBA (HeO2) dive operations:
  - in open water to a maximum depth of 60 metres during the day and at night
  - in water time of 60 minutes
  - with a total accrued sub-surface time of 0–60 minutes
  - in a range of sub-surface conditions including:
    - a range of surface and sub-surface hazards
    - current (0–2 knots)
    - temperature (0 degrees +)
    - visibility (0 metre +)
- conducting unconscious companion diver drills in accordance with dive plan
- identifying changes in divers, including distress and illness at depth
- inspecting and preparing CCBA (HeO2) equipment and gauges monitoring CCBA (HeO2) equipment and gauges
- operating an HeO2 compressor/handbooster pump in accordance with manufacturer specifications.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- CCBA (HeO2) characteristics and limitations
- CCBA (HeO2) dive equipment specifications and limitations
- dive physics
- dive physiology and medicine including:

© Commonwealth of Australia, 2024
Public Skills Australia

  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- hazards of Heliox
- relevant diving safety awareness
- relevant industry standards, and organisational policies and procedures
- safe operating ranges for airsupplies
- standby diver responsibilities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- oceans, seas, lakes and rivers with a range of conditions, and diurnal and nocturnal environments
- relevant documentation including organisational procedures, regulations, codes of practice and CCBA (HeO2) operation manuals.

When practicable, assessment should relate to the diver's vocational focus.

DEFWDV008 Employ hand tools in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to use hand tools in an underwater environment.

It includes preparing appropriate hand tools for work task and inspecting them for serviceability, ensuring tools are secured on own body throughout dive, and employing tools during work task. It also includes recovering waste arising from work task and deservicing, maintaining and storing tools for ongoing use.

This unit relates, in part, to existing standards in the Australian Diver Accreditation Scheme (ADAS).

This unit applies to persons working as Defence divers but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Work Diving

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare hand tools	**1.1** Determine specific requirements for hand tools to meet work task and worksite requirements
	1.2 Develop a work plan that is consistent with dive plan
	1.3 Select and inspect hand tools and protective equipment, and report any faults
	1.4 Safely secure hand tools for transport to/from dive site
	1.5 Conduct a risk assessment of worksite hazards and take action/s to manage identified risks
2 Operate hand tools underwater	**2.1** Secure hand tools on self during dive for ease of accessibility, and lack of interference with mobility and dive equipment
	2.2 Establish a work safe area and confirm location and safety of divers prior to commencing work task/s
	2.3 Operate hand tools underwater in accordance with work plan
3 Maintain hand tools	**3.1** Minimise environmental impact arising from use of hand tools and recover waste products in accordance with dive plan
	3.2 Undertake activity to de-service hand tools and protective equipment after use

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for DEFWDV008 Employ hand tools in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include:

- applying relevant industry standards, organisational policies and procedures
- attending to personal and collective safety
- developing a work plan in agreement with dive plan
- employing hand tools underwater in accordance with work plan
- identifying hazards, assessing risks and implementing control measures
- inspecting hand tools and protective equipment
- maintaining hand tools
- using not less than four different hand tools in underwater work tasks for a total usage time of not less than 60 minutes across a number of work tasks.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- care of hand tools
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship’s bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats

DEFWDV009 Conduct an underwater search of a ship's hull

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to conduct an exterior search of the underwater component of a ship’s hull.

It includes defining a ship’s hull search area and searching the underwater component of a ship’s hull.

This unit relates, in part, to existing standards in the Australian Diver Accreditation Scheme (ADAS). All information was correct at the time of development; however, any diver seeking ADAS accreditation should consult ADAS and not rely on the information contained in this unit.

This unit applies to persons working as Defence personnel with diving duties. But can apply to others working as work divers

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently in a small team and perform routine tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Define search area of ship's hull	**1.1** Determine and analyse search task and worksite data to define search area
	1.2 Develop a search plan consistent with dive plan, ensuring scope addresses task requirements
	1.3 Prepare and position search control devices on ship's hull in accordance with search and dive plan
2 Refurbish search site	**2.1** Apply manual or visual search methods in accordance with visibility levels, search plan and task requirements
	2.2 Refurbish search site in accordance with search plan
	2.3 Recover, disconnect, refurbish and stow search control devices on completion of search activity

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for DEFWDV009 Conduct an underwater search of a ship's hull

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant industry standards, organisational policies and procedures
- conducting an underwater dive to search ship’s hull in accordance with dive plan, organisational procedures and search plan
- locating an object (such as a mine) that is attached to a ship’s hull and is of a minimum underwater length of 30 metres during a search conducted under poor visibility (maximum of 0.5 metres) that demands the use of manual search techniques
- planning to conduct a ship’s hull manual search
- using search control devices in accordance with manufacturer specifications
- working safely throughout dive operation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dive equipment and search control devices
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship’s bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats

© Commonwealth of Australia, 2024 Public Skills Australia

  - pollution/weeds
  - working in confined spaces
- marine, ship and dive hazards
- oceanography
- relevant industry standards, and organisational policies and procedures
- relevant occupational/diving safety awareness
- relevant search device manufacturer specifications
- search techniques.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

DEFWDV010 Employ power tools in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to use power tools in an underwater environment.

It includes operating a compressor, selecting appropriate tools for work task, inspecting them for serviceability and deservicing and storing tools. It also includes recovering waste arising from work task.

This unit relates, in part, to existing standards in the Australian Diver Accreditation Scheme (ADAS).

This unit applies to persons working as Defence Divers but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to use power tools under water	**1.1** Determine specific requirements for power tools in accordance with work task, worksite and work object requirements
	1.2 Develop a work plan consistent with dive plan
	1.3 Select and inspect power tools, protective equipment and compressor to meet task requirements
	1.4 Secure power tools, compressor, and associated leads and hoses for transport to/from dive site
	1.5 Assess access obstructions and other hazards, and manage risks as required
2 Operate power tools under water	**2.1** Secure power tools on self during dive for ease of accessibility, and lack of interference with mobility and dive equipment
	2.2 Determine safe route for leads and hoses for dive activity
	2.3 Determine work safe area and location and confirm safety of divers prior to commencing work task/s
	2.4 Operate power tools underwater ensuring management of their associated hazards
	2.5 Conduct operator maintenance at worksite on power tools, leads and hoses, as required
	2.6 Disconnect power tools temporarily and render safe to evaluate work task in accordance with operational procedures
3 Operate compressor	**3.1** Perform pre-start checks and connect hoses and leads in accordance with manufacturer instructions
	3.2 Develop pressure gradually without surging and stabilise compressor to establish required output
	3.3 Conduct routine operational checks, and diagnose and address any warning signs

© Commonwealth of Australia, 2024 Public Skills Australia

	3.4	Shut down compressor or conduct an emergency shut down procedure in accordance with dive plan
4 Conclude power tool operations	**4.1**	Minimise environmental impact arising from use of power tools and recover waste products in accordance with operational procedures
	4.2	Undertake activity to de-service equipment and compressor after use
	4.3	Complete equipment log book/s, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Assessment Requirements for DEFWDV010 Employ power tools in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant industry standards, and organisational policies and procedures
- operating any four of the following power tools:
  - power wrench, including changing sockets on site, tightening and loosening nuts
  - drill, including drilling a hole in a steel plate and changing bits on site
  - disc cutter, including cutting steel or concrete and changing disc on site
  - jack hammer, including breaking concrete
  - chainsaw, including cutting wooden beams 230 mm x 100 mm
  - angle grinder, including cleaning and smoothing a fillet, chamfering a 12 mm plate and changing disc on site
  - scrubber, including cleaning 2 m2 of horizontal and vertical surface
- operating a pneumatic or hydraulic compressor must include one or more of the following:
  - connecting hoses and leads
  - connecting to power supply
  - adjusting output power
  - switching compressor on/off.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dive equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:

© Commonwealth of Australia, 2024 Public Skills Australia

  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- oceanography
- power tool equipment, compressor, hoses and leads for the power tools operated:
  - causes and remedies for surging
  - control of output
  - effects of temperature and compression ratio pressure/temperature relationships and effects on condensation (e.g. moisture and/or gas)
  - methods of resolving problems
  - principles of operation
  - physics of operation
- relevant industry standards, and organisational policies and procedures
- relevant workplace hazards
- use of compressor
- use of power tools.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

DEFWDV011 Perform non-technical structural inspections underwater

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to conduct underwater non-technical structural inspections, such as examining bridges, piers or ship hulls.

It includes preparing and conducting general qualitative underwear inspection (visual and manual), as well as quantitative analysis such as taking basic measurements including angles, dimensions and lengths.

This unit relates to existing standards in the Australian Diver Accreditation Scheme (ADAS).

This unit applies to person working as Defence Divers. but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform routine tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for underwater inspection	**1.1** Identify and determine inspection task, target and available worksite data
	1.2 Develop inspection plan consistent with dive plan in accordance with organisational procedures
	1.3 Select and inspect inspection equipment to meet task requirements
	1.4 Secure inspection equipment safely for transport to/from dive site
	1.5 Identify obstructions and underwater hazards, assess risks and manage risk control measures in accordance with dive plan
2 Conduct underwater inspection	**2.1** Secure inspection equipment on self for ease of accessibility and lack of interference to mobility and dive equipment
	2.2 Clear dive area surface of debris and/or marine growth in accordance with inspection plan
	2.3 Conduct visual analysis of dive area to identify significant features or defects
	2.4 Measure underwater structures and record lengths, gaps angle and holes, in accordance with inspection plan and task requirements
	2.5 Take appropriate visual imagery of target
3 Complete post inspection procedures	**3.1** Undertake activity to de-service and store inspection equipment after use
	3.2 Report inspection outcomes and identified faults in accordance with organisational procedures and inspection plan

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of

Assessment Requirements for DEFWDV011 Perform non-technical structural inspections underwater

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant industry standards, organisational policies and procedures
- assisting in providing information for an inspection report
- completing underwater dives
- conducting an inspection task requiring angular and linear measurements on one of the following:
  - pier/bridge – assessment is to be constructed around the examination of an existing pier/bridge requiring some expedient reinforcement to make fit for operational use
  - ship's hull – assessment is to be constructed around a sonar dome housing inspection and poker/feeler gauge surveys
- developing inspection plan in accordance with relevant organisational procedure
- documenting non-technical inspection report
- making underwater field notes and sketches
- measuring and recording underwater structure lengths, gaps, angles and holes in accordance with inspection plan
- planning underwater inspection requirements
- taking measurements under water.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dive equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:

© Commonwealth of Australia, 2024 Public Skills Australia

  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- oceanography
- relevant architecture of piers and bridges
- relevant documentation and inspection proformas
- relevant industry standards, and organisational policies and procedures
- relevant mechanics requirements
- relevant pier/bridge non-technical structural assessment techniques
- relevant ship's hull non-technical structural assessment techniques
- underwater workplace hazards.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

DEFWDV012 Perform underwater beach and waterway surveys

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to conduct underwater surveys of beaches and waterways, such as estuaries and lakes.

It includes preparing and conducting an underwater beach and waterway survey relating to the potential establishment of structures such as bridges or piers, or to determine the feasibility of establishing a beachhead.

This unit relates, in part, to existing standards in the Australian Diver Accreditation Scheme (ADAS).

This unit applies to persons working as Defence Divers. but is applicable to all individuals who work in this field

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for DEFWDV012 Perform underwater beach and waterway surveys

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one underwater survey of a beach/waterway (which should include at least two of: bottom gradient, bottom composition, sub surface features marking of obstacles/channels) and include:

- applying relevant legislation, standards and organisational policies and procedures
- applying safe diving principles and relevant risk control measures
- carrying and securing equipment throughout dive
- determining scope of survey task
- developing beach and underwater survey plans
- documenting beach/waterway survey outcomes including:
  - measuring bottom gradient
  - determining bottom composition
  - recording waterway sub-surface features
  - identifying obstacles/channels and waterway hazards
  - making underwater field notes and sketches
- using survey equipment relevant to beach and underwater surveys effectively.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dive equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours

© Commonwealth of Australia, 2024 Public Skills Australia

  - diving in tidal waters, currents and tides
  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- oceanography
- relevant legislation, and organisational policies and procedures
- relevant organisational documentation
- relevant references and Australian Standards
- underwater beach/waterway survey techniques including:
  - waterway bottom gradient
  - waterway bottom composition
  - waterway sub-surface features
  - obstacles/channels and waterway hazards
- underwater workplace hazards.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- ocean with a range of oceanic, diurnal and nocturnal environments
- applicable documentation including organisational procedures, regulations, codes of practice and operation manuals.

When practicable, assessment should relate to the diver's vocational focus.

DEFWDV013 Employ air-lift devices underwater

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to move submerged objects using air-lift devices.

It includes preparing, selecting and inspecting air-lift bags appropriate to the lift, securing bags to the object and inflating bags to required buoyancy to manoeuvre object under control.

This unit relates, in part, to existing standards in the Australian Diver Accreditation Scheme (ADAS).

This unit applies to persons working as Defence Work Divers, but may apply to others working in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable

Competency Field

Work Diving

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2024 Public Skills Australia

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Prepare for underwater air-lift operation**	**1.1** Identify and analyse load metrics and worksite data to determine specific requirements for air-lift bags
		1.2 Develop a work plan consistent with dive plan
		1.3 Select, inspect and prepare air-lift bags in accordance with manufacturer specifications and safe weight limits
		1.4 Secure air-lift bags to/from dive site
		1.5 Assess obstructions and other underwater hazards to determine risks and manage risk control measures in accordance with dive plan
2	**Operate air-lift devices**	**2.1** Secure air-lift bags to object's lift point/s
		2.2 Determine a safe work area, confirm location of other divers and nearby vessels and/or structures prior to commencing and during air-lift operation, in accordance with work plan
		2.3 Inflate air-lift bags in accordance with work plan
		2.4 Control buoyancy and movement in accordance with work plan
3	**Complete air-lift operations**	**3.1** Minimise environmental impact arising from work task and recover waste products
		3.2 Carry out de-servicing and storage requirements for air-lift bags

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

© Commonwealth of Australia, 2024 Public Skills Australia

Unit Mapping Information

This unit replaces but is not equivalent to DEFDV013B Employ air-lift devices underwater.

Assessment Requirements for DEFWDV013 Employ air-lift devices underwater

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying centre of gravity of lifted object
- applying relevant legislation, standards and organisational policies and procedures
- applying underwater risk control measures and work plan requirements
- controlling neutrally buoyant objects
- coordinating with other operators during lift
- demonstrating air-lift operations with manually inflated air bags including:
  - 1 x vertical lift to surface
  - 1 x lateral lift
- determining hydrodynamics of object as it is raised through the water
- developing underwater air-lift work plan
- rigging and de rigging air-lift equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- calculations to determination hydrodynamics, centre of gravity and mass of submerged objects
- characteristics and employment of airlift bags
- dive equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours

© Commonwealth of Australia, 2024 Public Skills Australia

  - diving in tidal waters, currents and tides
  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- oceanography
- relevant manufacturer specifications
- relevant marine workplace hazards
- relevant legislation, standards and organisational policies and procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

DEFWDV014 Perform concreting in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to concrete simple forms and excavations in an underwater environment.

It includes preparing for underwater concreting, constructing simple formwork, and positioning reinforcement rods and fixed anchorages. It also includes pouring and screeding the concrete to the required finish, recovering formwork and waste, and deservicing and storing tools.

This unit relates, in part, to existing standards in the Australian Diver Accreditation Scheme (ADAS).

This unit applies to persons working as Defence Divers, but is applicable to other people in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare for underwater concreting	**1.1** Identify and analyse work task and worksite data to determine the specific requirements for the concrete
	1.2 Develop work plan consistent with dive plan
	1.3 Select, inspect and prepare equipment
	1.4 Secure concreting equipment safely to/from dive site
	1.5 Assess access obstructions and other underwater hazards to determine risks and to manage risk control measures in accordance with dive plan
2 Concrete underwater site	**2.1** Determine safety of work area at worksite
	2.2 Prepare site in accordance with work plan
	2.3 Assemble formwork to meet task requirements
	2.4 Position reinforcing bars, rods, stirrups and mesh, bar chairs and spacers as required
	2.5 Mix cement and deliver to site in accordance with work plan and concrete strength specifications
	2.6 Take measures to confirm location and safety of divers prior to commencing pour, in accordance with operational procedures
	2.7 Spread and screed concrete in accordance with work plan
	2.8 Undertake tasks to finish surface, ensuring it is protected during curing
3 Complete underwater concreting	**3.1** Minimise environmental impact arising from concreting and recover waste materials on completion of task
	3.2 De-service and store all equipment, in accordance with operational procedures

Assessment Requirements for DEFWDV014 Perform concreting in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation, standards and organisational policies and procedures
- applying underwater risk control measures and work plan requirements
- calculating cement mix ratios according to strength specifications
- completing underwater concrete work including:
  - assembling formwork and stripping agent
  - clearing and levelling site to prepare for pouring
  - ensuring a consistent pour when delivering cement
  - operating cement tools and equipment
  - protecting concrete during curing
- conducting at least one of the following underwater concreting tasks:
  - reinforcing pier legs
  - placing footings
  - laying a slab or ramp.
- developing underwater concreting work plan
- planning underwater concreting work
- using floats and brooms to finish surface.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- concrete setting and strength specifications
- dive equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses

© Commonwealth of Australia, 2024 Public Skills Australia

- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship's bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces
- oceanography
- relevant legislation, standards, and organisational policies and procedures
- relevant risk mitigation organisational procedures including workplace hazard mitigation.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

DEFWDV015 Employ explosive power tools in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to employ explosive power tools (EPTs) in an underwater environment.

It includes preparing and selecting an appropriate EPT for underwater work task and inspecting it for serviceability. It also includes recovering waste, and deservicing and storing of equipment.

This unit applies to persons working as Defence Divers or to others working in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for DEFWDV015 Employ explosive power tools in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria where the diver fires at least two charges into concrete, masonry or steel over a minimum of two underwater work tasks and include:

- applying relevant legislation, standards, and organisational policies and procedures
- applying underwater risk control measures and work plan requirements
- developing underwater explosive power tools work plan, including managing identified risks
- handling explosive charges and protective equipment safely
- using explosive power tools safely underwater in accordance with work plan.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- dive equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- general diving safety awareness including:
  - diving in harbours
  - diving in tidal waters, currents and tides
  - diving on and/or near a ship’s bottom
  - lost/separated
  - entrapment/foul lines
  - marine animal threats
  - pollution/weeds
  - working in confined spaces

© Commonwealth of Australia, 2024 Public Skills Australia

- oceanography
- principles of underwater explosive power tool (EPT) operation
- relevant explosive hazards and control measures
- relevant EPT safety distances
- relevant legislation, standards, and organisational policies and procedures
- relevant underwater workplace hazards and control measures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

DEFWDV016 Perform underwater rigging work

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to complete underwater rigging work.

It includes securing and moving submerged loads by employing blocks and tackle, chains, slings and cordage. It also includes establishing secure lift points, setting rigging equipment between load and lifting platform, and controlling the conduct of the lift.

This unit applies to persons working as Defence divers.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit work independently and perform specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for DEFWDV016 Perform underwater rigging work

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- analysing constraints of object to be lifted to determine technique
- applying relevant legislation, standards, and organisational policies and procedures
- applying underwater risk control measures and work plan requirements
- calculating load parameters
- conducting one vertical lift to the surface with mechanical devices
- constructing rigs including:
  - assembling equipment to ensure load can be lifted with available equipment
- determining load capacity of components
- developing underwater rigging work plan
- planning underwater rigging work
- preparing accurate reports and required documentation
- rigging load within safe lifting weight limits.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- determination of mass of submerged objects
- dive equipment
- dive physics
- dive physiology and medicine including:
  - heat and cold illnesses
  - compression illnesses
  - decompression illnesses
- diving descent and ascent techniques
- equipment inspection and checking specifications
- general diving safety awareness including:
  - diving in harbours

DEFWDV017 Employ thermal cutting and welding tools (non-load bearing) in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Application

This unit specifies the skills and knowledge required to use thermal cutting and welding tools in an underwater environment.

It includes preparing underwater cutting and welding tools, operating the generator, selecting appropriate work task tools and inspecting them for serviceability, and securing tools on own body throughout dive. It also includes the surface operation of the electrical generator or gas cylinders supplying the tools, recovering waste, and deservicing and storing equipment.

This unit applies to persons working as Defence Work Divers, or to others working in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Persons undertaking this unit would work independently performing specific tasks in a range of contexts that could be unpredictable.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for DEFWDV017 Employ thermal cutting and welding tools (non-load bearing) in an underwater environment

Modification History

Release 1. This is the first release of this unit of competency in the DEF Defence Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least two separate occasions and include:

- applying relevant legislation, standards, and organisational policies and procedures
- completing underwater cutting and welding operations safely
- cutting 12 mm steel plates
- identifying and addressing relevant cutting/welding workplace hazards and problems
- operating generator to support welding tasks in an underwater environment
- operating thermal cutting and welding tools underwater
- planning for cutting and welding underwater
- stabilising a generator
- undertaking underwater welding activities including:
  - preparing surface of work object for cut or weld
  - controlling voltage and amperage of arc welding equipment
  - turning on gas supplies
  - adjusting ratios of oxygen and acetylene
  - controlling pressure of oxy acetylene torch
  - making cuts and welds ensuring minimal distortion to object
  - inspecting and cleaning cuts and welds
  - developing power gradually without surging
- using a number of thermal cutting and welding tools (non-load bearing) in an underwater environment work tasks:
  - at depths between 5 metres and 20 metres
  - on at least one night work task
- welding manual metal arc using electric welding equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

DEFWHS001 Identify and monitor radiation hazards

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH003B Identify and monitor radiation hazards. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 1.3 reworded • PC 2.1 and 3.1 revised • Element 1 one new PC

Application

This unit describes the skills required to effectively identify the sources of radiation, non-ionising and ionising radiations, that may be a hazard in the workplace and to monitor the hazard and implement the hazard controls that have been recommended. Licensing conditions may be required for those working in this field.

This was developed for those working as Defence workers involved in identifying and monitoring radiation hazards as part of a workplace responsibility, but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform complex tasks in a range of familiar contexts.

© Commonwealth of Australia, 2024 Public Skills Australia

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Work Health and Safety

Elements and Performance Criteria

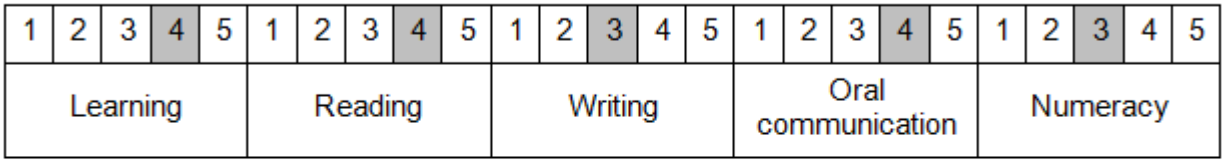
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Identify workplace radiation hazards	1.1 Identify source of radiation and/or equipment. 1.2 Identify and access existing organisational records relevant to the radiation. 1.3 Apply regulatory requirements, including those contained in organisational procedures, throughout the operation. 1.4 Take immediate action to bring source of radiation under control. 1.5 Conduct consultation with stakeholders.
2. Monitor radiation abatement plans or controls	2.1 Monitor pre-existing controls and determine controls are adequate. 2.2 Record and report breaches of protocols, plans and local controls. 2.3 Inspect monitoring equipment regularly, where installed.
3. Maintain workplace radiation records/ documentation	3.1 Maintain radiation safety management plans. 3.2 Maintain equipment/instrument deployment and maintenance records/documentation. 3.3 Maintain inventory of radiation sources. 3.4 Maintain records of radiation exposure.

Foundation Skills

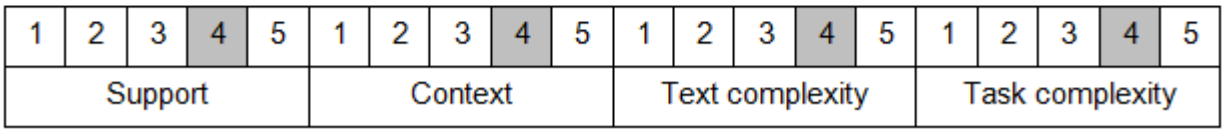
The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:



Performance variables:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Range of Conditions

Relevant legislation, organisational policies and procedures include:	▸ Australian or international standards ▸ equipment manufacturers' specifications ▸ exposure standards ▸ job safety analysis ▸ legislation, regulations, and codes of practice ▸ previous testing reports ▸ risk assessments ▸ Standing Operating Procedures (SOPs)
Australian or international standards include:	▸ ARPANSA RHS and RPS ▸ AS/NZ ▸ ISO ▸ ICNRP ▸ ICRP

Unit Mapping Information

This unit supersedes and is equivalent to DEFOH003B Identify and monitor radiation hazards.

Assessment Requirements for DEFWHS001 Identify and monitor radiation hazards

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- accessing, reading, interpreting and applying radiation safety plan
- identifying radiation sources
- undertaking risk assessment and control
- observing and responding to changing circumstances and unusual situations in the workplace
- making a subjective and qualitative assessment during a walk through/survey
- identifying changes in workplace configurations
- applying knowledge of relevant WHS legislative framework
- identifying inspection tools and methods appropriate to the workplace
- applying the principles and practices of WHS inspections
- identifying intervention points for advice to assist in work and to guide problem solving

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- meaning of WHS symbols, signs and labels in the workplace
- WHS requirements relevant to radiation in the workplace
- WHS requirements for the workplace, including ways in which WHS is managed and designated personnel responsible for WHS
- organisational policy and standards relevant to radiation

© Commonwealth of Australia, 2024 Public Skills Australia

- relevant Australian and international standards

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFWHS002 Develop noise management plans

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH004B Develop noise management plans. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 2.2 removed • Elements 1 and 2 merged • Element 1 one new PC

Application

This unit describes the skills required to measure and analyse work noise and develop relevant noise management plans and procedures. This includes developing and drafting, procedures and plans/instructions for the management, amelioration and/or control of hazardous noise in the workplace.

This unit for developed for Defence workers involved in developing noise management plans as a workplace responsibility, but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team under indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform complex tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Work Health and Safety

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare to develop a workplace noise management plan	1.1 Recognise and acknowledge noise hazards and identify their sources. 1.2 Identify and access legislation and standards appropriate to noise hazard and work noise exposure levels. 1.3 Identify and access existing organisational records relevant to noise hazards. 1.4 Identify, acquire and prepare equipment and resources required for the measurement of noise. 1.5 Measure workplace noise. 1.6 Deploy measuring equipment and record readings.
2. Analyse workplace noise	2.1 Interpret and confirm measurements. 2.2 Analyse and/or determine workplace noise and report findings to appropriate authorities/superiors.
3. Develop noise management plans	3.1 Conduct consultation with stakeholders. 3.2 Identify and interpret technical standards, organisational environmental requirements and occupational noise exposure levels. 3.3 Develop noise management plans and forward to the relevant authority.

© Commonwealth of Australia, 2024 Public Skills Australia

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

1	2	**3**	4	5	1	2	3	**4**	5	1	2	**3**	4	5	1	2	3	**4**	5	1	2	3	**4**	5
Learning					Reading					Writing					Oral communication					Numeracy					

Performance variables:

1	2	3	**4**	5	1	2	3	**4**	5	1	2	3	**4**	5	1	2	3	**4**	5
Support					Context					Text complexity					Task complexity				

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Range of Conditions

Relevant organisational policies and procedures include:	• Australian or international standards • equipment manufacturers' specifications • exposure standards • previous testing reports • risk assessments • Standing Operating Procedures (SOPs) • state/territory/Commonwealth WHS acts, regulations, codes of practice and guidance material
Work noise includes:	• any noise in the workplace that exceeds a comfort level equivalent to that of the normal hearing capacity of human beings • any noise that is unusual or inappropriate in that work environment/role • any noise that may have an adverse impact on human beings

Unit Mapping Information

This unit supersedes and is equivalent to DEFOH004B Develop noise management plans.

Assessment Requirements for DEFWHS002 Develop noise management plans

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- analysing work environment and identifying hazards
- assessing resources needed to establish and maintain WHS in the workplace, including a range of control measures
- assessing risks and design and implementing appropriate WHS systems
- operating noise measuring/monitoring equipment
- measuring and analysing workplace noise
- developing noise management plans that adhere to Australian and organisational standards and recognising stakeholder requirements
- applying knowledge of relevant WHS legislative frameworks
- identifying inspection tools and methods appropriate to the workplace
- identifying intervention points for advice to assist in work and to guide problem solving

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- environmental factors relevant to workplace noise
- noise control requirements
- noise legislation
- noise measuring and monitoring techniques and equipment
- occupational noise exposure level standards/requirements

© Commonwealth of Australia, 2024 Public Skills Australia

- organisational policy and standards relevant to workplace noise levels
- provisions and principles of effective WHS management requirements for the organisation/industry.
- relevant Australian and international standards
- reliability of measures
- tolerances of error that may apply

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFWHS003 Apply radio frequency radiation safety procedures

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH005B Apply radio frequency radiation safety procedures. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 1.3 removed

Application

This unit describes the skills required to apply appropriate safety procedures or plans related to the control or mitigation of radio frequency radiation, including microwaves,radar radio transmissions. This includes researching, consulting about and applying procedures that have been specifically developed for the organisation.

This unit was developed for Defence workers involved in application of radio frequency radiation procedures and also applies to individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform complex tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

1. Prepare for the development of ionising radiation safety plans	1.1 Identify and confirm ionising radiation sources. 1.2 Identify and access standards and legislation appropriate to ionising radiation exposure levels. 1.3 Identify and access existing organisational records relevant to ionising radiation. 1.4 Identify, acquire and prepare equipment and resources required for the measurement of ionising radiation. 1.5 Measure ionising radiation. 1.6 Deploy measuring equipment and record readings.
2. Analyse ionising radiation	2.1 Interpret and confirm measurements. 2.2 Analyse and/or determine ionising radiation and report findings to appropriate authorities/superiors.
3. Develop ionising radiation safety plans	3.1 Conduct consultation with stakeholders. 3.2 Identify and interpret technical standards, organisational environmental requirements and ionising radiation exposure levels. 3.3 Develop ionising radiation safety plans. 3.4 Forward ionising radiation safety plans.
4. Record and interpret data from personal monitors	4.1 Record full exposure data from personal monitors. 4.2 Provide access to individual records to the radiation worker. 4.3 Initiate action whenever anomalous records are obtained. 4.4 Review personal monitoring records regularly and provide recommendations for changes in workplace procedures as appropriate.

Assessment Requirements for DEFWHS006 Develop ionising radiation safety plans

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- measuring and analysing ionising radiation
- developing practical ionising safety plans that adhere to Australian and organisational standards and recognise stakeholder requirements
- monitoring and recording data from personal ionising radiation monitors
- identifying inspection tools and methods appropriate to the workplace
- identifying intervention points for advice to assist in work and to guide problem solving

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- principles and practices of WHS and ionising radiation inspections
- ionising radiation control requirements
- ionising radiation exposure level standards/requirements
- ionising radiation legislation
- ionising radiation measuring techniques and equipment
- WHS requirements for the organisation/industry and for supervisors/managers in the workplace
- relevant Australian and international standards
- relevant environmental factors relating to workplace ionising radiation
- relevant organisational policy and standards

© Commonwealth of Australia, 2024 Public Skills Australia

- reliability of measures
- tolerances of error that may apply

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFWHS007 Work safely with lasers

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH009B Work safely with lasers. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to work safely in an environment where lasers may be employed. This includes identifying Australian Standard class lasers, understanding potential laser hazards, and preparing appropriate laser safety controls, labels and signage.

This unit applies to those working with lasers as a workplace responsibility.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team under, indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform routine tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

DEFWHS009 Develop laser safety plans

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH011B Develop laser safety plans. • Unit code updated • Content and formatting updated to comply with the new standards. • All PC transitioned from passive to active voice • PC 1.5 removed

Application

This unit describes the skills required to develop laser safety plans and procedures. This includes identifying, evaluating and overseeing the control of laser hazards; developing laser safety papers and templates; providing technical advice on laser safety; developing and drafting laser safety policy, procedures and instructions; and preparing the selection of laser safety controls, labels and signage.

This unit applies to those involved in the development of laser safety plans as a workplace responsibility.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team under, indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform complex tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

DEFWHS010 Identify confined space

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH012B Identify confined space. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 2.1 removed

Application

This unit describes the skills required to identify actual or potential confined spaces prior to entering a confined space for work purposes. The unit includes recognising actual and potential confined spaces in one's work environment and understanding the broad limitations they impose on work practices. It also covers identifying potential work health and safety (WHS) concerns and seeking further advice and/or applying appropriate procedures when dealing with WHS issues.

In the context of this unit, a confined space is any compartment or area that has the capability of accumulating a toxic, flammable or explosive atmosphere, or of being flooded, in addition to one of the following characteristics:

- limited opening for access
- no escape route or very restricted means of escape
- limited natural ventilation
- atmosphere containing more than 23.5% or less than 19.5% oxygen

This unit was developed for Defence personnel involved in the identification of confined spaces as a workplace responsibility, but is applicable to all individuals who work in this field.

© Commonwealth of Australia, 2024 Public Skills Australia

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team under, indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform routine tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Work Health & Safety

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Recognise a confined space	1.1 Select and don required personal protective equipment (PPE) to identify a confined space. 1.2 Review nature of the possible work space and its characteristics. 1.3 Assess possible work space for its potential to be a confined space. 1.4 Determine precautions to be taken in the presence of a harmful atmosphere. 1.5 Identify and assess other hazards and factors associated with the possible work space to determine the level of risk associated with that space. 1.6 Refer identified hazards to appropriate personnel/authority for further investigation and analysis, where uncertainty exists about confined space potential. 1.7 Confirm safety of possible work space.
2. Carry out appropriate action after identifying a confined space	2.1 Identify and document potential WHS issues. 2.2 Undertake, document and revise risk assessment, whenever there is evidence to indicate that it is no longer valid. 2.3 Document broad limitations the confined space may impose on work practices.

© Commonwealth of Australia, 2024 Public Skills Australia

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

Assessment Requirements for DEFWHS010 Identify confined space

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- accessing, reading, interpreting and applying information on confined spaces
- identifying and reporting hazards
- understanding the possible nature of the environment
- identifying intervention points for expert advice to assist work and to guide problem solving
- identifying principle risks and associated mitigation

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- appropriate signage, symbols, labels and warning devices
- location of applicable organisational procedures and documents
- preferred order of ways to control WHS risk – hierarchy of controls
- rights and responsibilities of workplace parties under WHS legislation

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFWHS011 Enter confined space

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH013B Enter confined space. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 1.3, 1.5 and 2.7 removed

Application

This unit describes the skills required to prepare to enter confined spaces, to enter the confined space and to finalise egress at the conclusion of the task/s. An individual undertakes this as part of a team in conjunction with other individuals who also have this competency. It is expected that one or more of the team members, or a team member not working in the confined space, will hold a current, recognised, first aid certificate.

In the context of this unit, a confined space is any compartment or area that has the capability of accumulating a toxic, flammable or explosive atmosphere, or of being flooded, in addition to one of the following characteristics:

- limited opening for access
- no escape route or very restricted means of escape
- limited natural ventilation
- atmosphere containing more than 23.5% or less than 19.5% oxygen

This unit was developed for Defence personnel involved in entering confined spaces as a workplace responsibility, but it is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

© Commonwealth of Australia, 2024 Public Skills Australia

Those undertaking this unit would work independently or as part of a team under indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform routine tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Work Health & Safety

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for confined space entry	1.1 Identify and confirm requirement for confined space entry from work requests/instructions. 1.2 Identify duration of and limitations on the tasks to be performed in the confined space. 1.3 Identify, acquire and prepare equipment and resources required for the confined space entry. 1.4 Prepare confined space for entry. 1.5 Confirm and delegate team and individual roles and responsibilities within the team. 1.6 Conduct pre-entry tests and checks in accordance with organisational and manufacturers' requirements.
2. Enter confined spaces	2.1 Identify entry/egress points. 2.2 Monitor environmental conditions. 2.3 Maintain verbal and non-verbal communication. 2.4 Operate equipment and resources in accordance with manufacturers' requirements and organisational procedures. 2.5 Adhere to entry permit conditions. 2.6 Recognise and respond to unexpected situations.
3. Finalise confined space entry	3.1 Exit confined space. 3.2 Clean and refurbish equipment. 3.3 Complete documentation and reports.

Assessment Requirements for DEFWHS011 Enter confined space

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- accessing, reading, interpreting and applying information on confined spaces
- assessing risks and applying effective risk control measures
- communicating effectively
- identifying and reporting hazards
- identifying stored energy sources
- operating equipment pertinent to the confined space entry and task to be performed
- reporting abnormalities
- identifying intervention points for expert advice to assist work and to guide problem solving

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- applicable organisational procedures and documents
- appropriate signage and protective barriers
- risk assessment procedures
- safety equipment operations
- work methods analysis

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFWHS012 Test confined space environment

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH014B Test confined space environment. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 2.4 removed • PC 2.2 and 2.3 merged

Application

This unit describes the skills required to test the environment of confined spaces to ensure safe entry and egress. This includes the preparation for and conduct of the test procedures and all post test procedures.

In the context of this unit, a confined space is any compartment or area that has the capability of accumulating a toxic, flammable or explosive atmosphere, or of being flooded, in addition to one of the following characteristics:

- limited opening for access
- no escape route or very restricted means of escape
- limited natural ventilation
- atmosphere containing more than 23.5% or less than 19.5% oxygen

This unit was developed for Defence personnel involved in the testing of confined space environments as a workplace responsibility, but is applicable to all individuals who work in this field.

© Commonwealth of Australia, 2024 Public Skills Australia

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit must demonstrate the ability to work independently or as part of a team under indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs.They would perform routine tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Work Health & Safety

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for environmental testing	1.1 Identify confined space potential contaminants. 1.2 Identify organisational restrictions or requirements pertinent to the confined space. 1.3 Identify, acquire and prepare equipment and resources required for testing.
2. Test confined space for contaminants/ threats	2.1 Obtain testing sample and conduct tests in accordance with testing protocols. 2.2 Record and analyse test results in accordance with testing protocols.
3. Finalise test/s	3.1 Complete documentation and reports. 3.2 Clean and refurbish testing equipment.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

DEFWHS013 Control entry to confined spaces

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH015B Control entry to confined spaces. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 1.5 removed

Application

This unit describes the skills required to control entry and egress to confined spaces. While exercising the control of entry to confined space may not require the competency to enter confined space, it requires awareness of the legislative requirements and organisational procedures related to confined space entry.

In the context of this unit, a confined space is any compartment or area that has the capability of accumulating a toxic, flammable or explosive atmosphere, or of being flooded, in addition to one of the following characteristics:

- limited opening for access
- no escape route or very restricted means of escape
- limited natural ventilation
- atmosphere containing more than 23.5% or less than 19.5% oxygen

This unit was developed for Defence personnel involved in the control of entry to confined spaces as a workplace responsibility, but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

© Commonwealth of Australia, 2024 Public Skills Australia

Those undertaking this unit would work independently or as part of a team under, indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform routine tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Plan and prepare for control of confined space entry	1.1 Identify and confirm requirement for confined space entry from work requests/instructions. 1.2 Identify confined space entry permit and any requirements or limitations. 1.3 Confirm team and individual roles and responsibilities through question and answer.
2. Control access and egress to confined space	2.1 Monitor and record entry and egress of the confined space in accordance with work permit conditions. 2.2 Maintain verbal and non-verbal communication and consultation with the confined space entry team in accordance with work permit conditions. 2.3 Complete documentation and reports.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

Assessment Requirements for DEFWHS013 Control entry to confined spaces

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- accessing, reading, interpreting and applying information on confined spaces
- analysing relevant workplace data to identify hazards, assess risks and evaluate effectiveness of WHS control measures
- analysing working environment to identify hazards, assess risks and design and implement appropriate WHS control measures
- assessing the resources needed to establish and maintain systematic approaches to managing WHS including a range of control measures
- operating equipment pertinent to the control of confined space entry
- identifying intervention points for expert advice to assist in work and to guide problem solving

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- appropriate emergency response procedures
- appropriate signage, symbols, labels and barriers
- entry permit procedures
- incident and accident investigation including WHS record keeping
- risk management principles and application of appropriate measures including hierarchy of control

© Commonwealth of Australia, 2024 Public Skills Australia

- role of technical information and experts in designing control measures, and monitoring systems
- training and competency requirements for confined space entry

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFWHS014 Monitor and report on hazardous substances safety

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH016B Monitor and report on hazardous substances safety. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 1.3 removed • PC 3.1 and 3.2 merged • Elements 2 and 3 merged

Application

This unit describes the skills required to effectively identify hazardous substances that may be present in the workplace and to monitor the hazard and hazard controls that have been recommended/implemented. The unit includes reporting the results of this identification and monitoring to commanders/managers.

In the context of this unit, a hazardous substance includes any substances with the potential, when used at work, to impact on the health or safety of persons and/or the environment (surface/ground water, flora, fauna, atmosphere, soil etc.) at or near the workplace.

This unit was developed for Defence personnel involved in the monitoring and reporting of hazardous substances as a workplace responsibility, but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

© Commonwealth of Australia, 2024 Public Skills Australia

Those undertaking this unit would work independently or as part of a team under, indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform routine tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

DEFWHS015 Conduct a work health and safety audit

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH017 Conduct a work health and safety audit. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • PC 1.3, 2.4, 3.1, 3.3 and 4.1 removed • PC 3.2 and 3.4 merged • Elements 3 and 4 merged

Application

This unit describes the skills required to conduct an audit of work health and safety (WHS) requirements in Defence. It includes researching applicable legislation and codes of practice, selecting audit tools, conducting the audit, and following up on the audit to monitor the implementation of recommendations.

This unit was developed for Defence personnel who are involved in the audit of work health and safety requirements as a workplace responsibility, but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform routine tasks in a range of familiar contexts.

DEFWHS016 Conduct work health and safety inspections

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFOH018 Conduct work health and safety inspections. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice

Application

This unit covers the competency required to conduct specific work health and safety (WHS) workplace inspections in Defence. It includes researching the background of the workplace, consulting with stakeholders prior to the inspection and following up on the inspection to ensure that recommendations are implemented.

This unit was developed for Defence personnel who are involved in WHS workplace inspections as a workplace responsibility, but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team, under indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform complex tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Assessment Requirements for DEFWHS016 Conduct work health and safety inspections

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- interpreting WHS legislation, codes of practice and standards, and management systems
- selecting and using appropriate inspection tools and methods
- identifying hazards and assessing risks
- analysing workplace environment
- evaluating WHS environment
- solving problems
- using a variety of verbal and non-verbal communication techniques including
- reading to a level required to interpret and analyse job instructions, workplace forms and inspection reports
- writing at the level required to complete workplace forms and reports
- applying principles and practices of WHS inspections
- identifying intervention points for advice to assist in work and to guide problem solving

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- relevant work health and safety legislation
- work health and safety codes of practice and standards
- work health and safety management systems
- hierarchy of risk control

© Commonwealth of Australia, 2024 Public Skills Australia

- incident investigation and process improvement
- inspection techniques
- interpersonal communication
- techniques for giving and receiving feedback
- negotiation techniques
- research techniques
- analysis techniques
- team dynamics
- techniques for supporting others
- composition of teams and roles and responsibilities of team members

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

DEFWHS017 Apply knowledge of WHS legislation

Modification History

Release	Comments
1	This unit was released in DEF Defence Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to DEFCP008 Apply knowledge of WHS legislation. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice

Application

This unit describes the skills required to analyse and apply knowledge of Work Health and Safety (WHS) legislation. The application of WHS legislation knowledge is specific to a variety of component processes in safety case activities.

This unit applies to those working in Defence who are not specialists in the field but need the knowledge to inform their decision making and underpins advice to stakeholders. This unit was developed for Defence workers involved in the evaluation and review of safety cases but is applicable to all individuals who work in this field.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work independently or as part of a team under indirect supervision. They must be able to use discretion and judgement and take responsibility for the quality of their outputs. They would perform complex tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

© Commonwealth of Australia, 2024 Public Skills Australia

Competency Field

Work Health & Safety

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Access and interpret relevant WHS legislation information	1.1 Identify and obtain relevant WHS legislation requirements. 1.2 Analyse WHS legislation information obtained to determine the relevance and application to the organisation. 1.3 Formulate outcomes of the analysis and determine recommendations relevant to WHS legislation requirements.
2. Use knowledge of WHS legislation	2.1 Apply WHS legislation requirements and recommendations relevant to safety cases. 2.2 Assess, review and record effectiveness of the recommendations. 2.3 Adjust recommendations if required and document for future application.

Foundation Skills

The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

ACSF levels indicative of performance:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Learning					Reading					Writing					Oral communication NA					Numeracy NA				

Performance variables:

1	2	3	4	5	1	2	3	4	5	1	2	3	4	5	1	2	3	4	5
Support					Context					Text complexity					Task complexity				

© Commonwealth of Australia, 2024 Public Skills Australia

Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to DEFCP008 Apply knowledge of WHS legislation.

Assessment Requirements for DEFWHS017 Apply knowledge of WHS legislation

Modification History

Release	Comments
1	These Assessment Requirements were released in DEF Defence Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- applying organisational requirements relevant to WHS
- applying statutory requirements relevant to the WHS legislation
- identifying, interpreting and analysing WHS legislation requirements relevant to work being performed
- using appropriate information technology and software
- adhering to relevant compliance requirements
- applying knowledge of WHS legislation to assist in work and to guide problem solving

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- configuration management
- WHS legislation relevant to the work performed
- organisational requirements relevant to WHS
- statutory requirements relevant to safety case and safety systems

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

FDFAU4001A Assess compliance with food safety programs

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers skills and knowledge required to assess compliance against an approved food safety program where the program is supported by a prescriptive template or tool or where compliance is checked against a food safety program that has been validated by a technical expert.

Application of the Unit

Application of the unit	This unit applies to regulatory, commercial or internal auditors. When this unit is applied to regulatory auditing it should be noted that the National Food Safety Audit Policy for regulatory auditing requires that the unit FDFAU4002A Communicate and negotiate to conduct food safety audits, must be pre or co-assessed with this unit when applied to assessing compliance against approved food safety programs that have been validated by a technical expert.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2024 Public Skills Australia

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan the audit	1.1. An audit plan is developed to meet the audit scope 1.2. The plan is capable of delivering the required outcomes within resource and time allocations 1.3. Plan includes audit purpose, scope and relevant templates or approved food safety program 1.4. Activities and responsibilities for the audit are identified 1.5. Audit timing (as required by legislation and/or client) is identified including timetable for each stage of the audit 1.6. Resource, personnel and reporting requirements are identified 1.7. Follow up and completion procedures are identified 1.8. Communication protocols are identified and established to facilitate the effective exchange of information and suited to the auditee environment

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
2. Confirm that the food business has documented required preliminary work	2.1. The food and the method of distribution are defined 2.2. Customers and intended use of food is identified 2.3. The process is described and documented 2.4. The food business has checked their documentation for accuracy and completeness
3. Confirm the food safety program is supported by a tool or template or has been validated	3.1. The documented food safety program and related procedures and prerequisite programs are assessed to confirm that they have a prescriptive tool or have been validated by a technical expert 3.2. The food business method of identifying and analysing food safety hazards is reviewed 3.3. Templates or the approved food safety program are correctly selected to meet audit scope 3.4. Templates or the approved food safety program are appropriately adapted to suit the needs of the business without adversely affecting food safety 3.5. Documented verification records are reviewed to confirm that the requirements of the food safety program are being met 3.6. Corrective actions required where processes are identified as not meeting targets or critical limits are assessed to confirm they meet the requirements of the template or food safety program 3.7. Food safety prerequisite programs are assessed to confirm they are appropriate for the food business/industry sector to maintain a safe food environment 3.8. Food safety program documents are reviewed to confirm currency, accuracy and adequacy to facilitate maintenance of an adequate food safety program
4. Collect evidence to review and assess implementation of food safety programs	4.1. Evidence is collected to confirm that documented programs and procedures are working effectively, reflect actual practice and are consistently applied 4.2. Evidence is collected to confirm that food safety monitoring and corrective actions are carried out according to procedure 4.3. Evidence is collected to confirm that safety prerequisite programs are effective and consistently followed 4.4. Evidence is collected to confirm that food safety records are completed and provide an accurate

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	record of events 4.5. Evidence is collected to confirm that records are accessed and analysed to confirm effective program maintenance in accordance with the template or food safety program 4.6. Evidence is collected to confirm that food safety skills and knowledge of food business personnel is commensurate with their work role 4.7. Evidence is collected to confirm that the food safety program has been internally monitored and assessed, updated and improved by a technical expert
5. Manage the audit process	5.1. Audit progress is monitored against the audit plan and any variation to plan is identified and addressed 5.2. Circumstances requiring the audit plan to be adjusted are identified and negotiated in a timely manner 5.3. Audits address audit scope and are conducted within time and resource constraints to meet quality and professional standards 5.4. The audit process is reviewed to identify opportunities for improvement
6. Consolidate audit outcomes	6.1. Audit evidence is analysed and assessed to identify any areas of non-compliance with legislation and/or the food safety program 6.2. Non-conformities are identified and classified as agreed by the audit plan 6.3. Non-conformities are reported in accordance with agreed client and/or legislative requirements 6.4. Audit reports and/or certificates are prepared and submitted or presented as required to meet regulatory and client requirements 6.5. A corrective action implementation plan defining proposed actions and timelines developed by the auditee is reviewed by the auditor to confirm that template or food safety program requirements are met 6.6. Audit findings are reviewed to confirm that evidence is sufficient as defined by the template or approved food safety program
7. Confirm and close out corrective actions	7.1. Implementation and effectiveness of corrective action is monitored and verified against the template or the approved food safety program

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	7.2. Audit records are maintained to record corrective actions

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Ability to: • plan and organise audit activities • identify work processes and work flow • interpret food safety programs including flow charts, standard operating procedures (SOPs), and other process documentation • describe each process step and identify food safety hazards • conduct research to identify, collect and analyse evidence of compliance with food safety programs • use communication skills to support evidence collection and outcome presentation • identify and classify non-compliances • prepare audit reports and certificates to meet regulatory and client requirements • review corrective action implementation plans • monitor the implementation of corrective actions • maintain audit records
Required knowledge
Knowledge of: • required content and scope of food safety programs as defined in the National Food Safety Standard 3.2.1 or other relevant standards • purpose and minimum requirements of risk-based approaches to managing food safety hazards, including the role of prescriptive templates or approved food safety programs in supporting a risk-based approach and the process used to validate these tools • guidelines on implementing industry templates or approved food safety programs • legal requirements of food businesses • legal liability of auditors and protection against litigation and professional practice issues, including the circumstances under which an auditor could be prosecuted and insurance requirements • audit activities and principles, including guidelines on audit stages and activities as

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
outlined in ISO 19011:2002 • personal attributes required of food safety auditors, including those outlined in ISO 19011:2002, and additional system owner requirements where required • role, responsibilities and powers of enforcement agencies, authorised officers and commercial auditors, including reporting responsibilities, legal liability of auditors and delegation of authority to commercial auditors as may apply in some states and territories • information handling and management system protocols, including issues, such as rights of access to information, maintenance of confidentiality of audit information and reports and information dissemination requirements • evidence appropriate for use in audit processes, including the difference between objective and hearsay evidence and methods for recording and managing evidence to provide reliable reference information in the event that evidence is challenged • vocabulary and terms relating to food safety programs, includign terms and jargon to describe technical processes, industry standards and common biological and chemical terms • common biological, physical and chemical hazards that may occur in the food business and appropriate methods of control and critical limits as outlined in the approved food safety program or template • the impact of (1) the design and construction of premises and (2) the selection, application and condition of equipment, on food safety as defined in Food Safety Standard 3.2.3 • role of prerequisite programs in controlling hazards, including the relationship between prerequisite programs and risk-based approaches, such as HACCP to controlling food safety hazards • circumstances, implications and responsibilities in the event that the auditee requests that the audit ceases • circumstances and authority to initiate cessation of an audit • methods to assess skill requirements and options to confirm that the responsible personnel within the food business have the of food safety and food hygiene relevant to the food business

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competence in this unit must be able to assess compliance against an approved food

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	safety program where the program is supported by a prescriptive template or tool or where compliance is checked against a food safety program that has been validated by a technical expert. Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • confirm that the food safety program and/or template is appropriate to the activities of the business • review food safety program records to assess compliance against the approved food safety program and/or template • collect and analyse evidence to confirm that the food safety program is consistently followed and controls all critical risks • identify circumstances where variation or customising of the template or food safety program requires further validation • submit non-compliance reports to clearly identify the aspects of the food safety program that have broken down/need further development in order to prevent recurrence.
Context of and specific resources for assessment	Competency may be assessed in an actual workplace or simulated environment that provides access to the required resources. At least one of the scenarios should be assessed in an actual workplace context. Assessment is to occur under standard and authorised work practices, safety requirements and environmental constraints. The following resources must be available: • food safety plans • food safety-related documentation required to implement and record the food safety plan • evidence and documentation relevant to processes that would typically be used to assess compliance with the food safety program • plant and equipment that would typically be used in a commercial manufacturing business.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
Method of assessment	Assessment methods must satisfy the endorsed Assessment Guidelines of FDF10 Food Processing Industry Training Package. The following assessment methods should be considered to gather sufficient and valid evidence of competency: • observation and a report covering the critical aspects for assessment identified above • questioning to test the level and application of knowledge • workplace example or scenario to allow a valid decision on the compliance of the food safety program to be made, with evidence of recording and feedback.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Food safety program	Food safety programs include both prerequisite programs and a risk-based analysis of food safety hazards to determine required control measures to eliminate, prevent or reduce hazards. Minimum legal requirements for food safety programs are specified in National Food Safety Standard 3.2.1 or other relevant legislative requirements. The food safety program may be based on a template or externally developed program that is adapted to the needs of the business

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Licensing/certification requirements	Licensing and certification requirements are determined by system owners
Technical expert	The requirements of a technical expert are determined by the system owner. System owners may include: • government regulators as well as private system owners
Audit scope	The scope describes the purpose, extent and boundaries of the audit. This may include: • physical locations • products • processes • time period covered by the audit • extent of authority of the auditor
Prerequisite programs	Prerequisite programs are also referred to as support programs, such as Good Manufacturing Practice (GMP), Good Agricultural Practice (GAP) and Good Hygiene Practice (GHP) Prerequisite programs can be divided into two categories. **Infrastructure and maintenance programs**. These may include: • layout, design and construction of buildings and facilities • supplies of air, water energy and other utilities • equipment, including preventative maintenance, sanitary design and accessibility for maintenance and cleaning • support services, including waste and sewage disposal **Operational prerequisite programs**. These may include: • personal hygiene • cleaning and sanitation • pest control • measures for the prevention of cross-contamination • packaging and labelling procedures

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• supplier assurance • chemical storage • employee training • maintenance • calibration • document control • internal audit programs • traceability and recall programs • on-farm food safety schemes • inspecting and testing regimes, including analytical and microbiological testing
Legal requirements	The scope of the audit determines and may be determined by food safety legislation which may include: • Food Standards Code • relevant state and territory legislation and related codes of practice, including industry sector-specific legislation and related codes of practice, such as that relating to meat, seafood, dairy and primary production and processing • regulatory and commercial requirements relevant to importing countries • Commonwealth legislation (e.g. Export Control Act) Other legislation which may impact on the conduct of a food safety auditor may include legislation covering: • occupational health and safety (OHS), anti-harassment, anti-discrimination and industrial relations • trade practices legislation • environmental risk management • legal contracts or agreements
Food businesses	A food business refers to a business, enterprise or activity where food is produced, processed, stored, displayed and/or sold. It may also include primary producers
Food safety program documents	Food safety program documents may include: • documented statements of food safety policy

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	and objectives • documented procedures and records • documented complaints register • documents and records to ensure the effective development, implementation and updating of the food safety program
Risk-based approaches	Risk-based approaches to controlling food safety are typically based on HACCP, described in the Codex Alimentarius guidelines

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop a communication plan to support audit processes	1.1. Roles and responsibilities of the auditee are defined and agreed by both parties to address the audit scope 1.2. Roles and responsibilities of all personnel involved in the audit process are defined, communicated and agreed 1.3. Appropriate communication methods and protocols are determined and specific arrangements, including reporting requirements, are agreed 1.4. A communication plan is developed to identify the communication requirements and responsibilities of personnel involved in the audit process
2. Select and use appropriate communication methods to conduct an audit	2.1. Appropriate communication methods are used to establish and maintain effective client relationships, collect audit evidence, provide and present information, facilitate meeting processes, facilitate issue management and conflict resolution and communicate audit findings 2.2. Communication methods are selected to take account of system owner and food business requirements, workplace culture and individual differences 2.3. Information provided by the auditee is interpreted in the context of the industry sector, language and culture of the business
3. Negotiate to achieve agreement on audit outcomes	3.1. Areas of disagreement over audit outcomes are identified and clarified with the auditee 3.2. Understanding is sought on actions to be followed to

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	resolve outstanding issues 3.3. Communication techniques are applied to encourage all relevant parties to participate and express their views fully 3.4. Auditee views are treated with respect 3.5. Options for resolving differences are explored to reach agreement and meet audit timeline and resource parameters 3.6. Appropriate issue resolution strategies are explored to increase the likelihood of agreement on steps required to conclude the audit 3.7. The negotiation process is managed to maintain constructive client relationships 3.8. Any areas of continuing non-compliance that result from unresolved differences are reported to system owners and appropriate authorities as required

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Ability to: • select, design and use appropriate communication methods and techniques to support the audit process and the needs of the audience • apply strategies to communicate with people at different levels of the food business with different English language, literacy and technical skill levels • facilitate groups to resolve sensitive and/or conflict-based issues • structure and present written and verbal information that is thorough, legible, clear, accurate and appropriate to the purpose and the audience • use information systems, technologies and software to manage security, authorisation and distribution of audit data and records • communicate information in environments where the recipients may be hostile to the information being presented • apply issue resolution strategies
Required knowledge

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
Knowledge of: • legislation that impacts on acceptable communication methods and conduct, including anti-discrimination, anti-harassment and privacy legislation • vocabulary and terms relevant to audit process, including terms and jargon to describe food safety legislation, technical processes and industry standards • confidentiality needs and expectations of food businesses • strategies to communicate in culturally diverse environments • dynamics of conflict and strategies to manage resolution • the structure, authority levels and lines of reporting within a food business • communication methods relevant to different groups and audiences • reporting formats and requirements to meet client and legislative needs

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competence in this unit must be able to select and use appropriate methods of communication and negotiation to support audit processes. This unit should be assessed together with other food safety auditing units. Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • design a communication plan to meet the needs of stakeholders in an audit process, specifically where a number of participants have limited English language and literacy skills • facilitate and negotiate to seek understanding of audit outcomes in a conflict-based situation where the outcomes are contested by the auditee. This component of assessment must provide opportunities to select and apply appropriate communication

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	methods.
Context of and specific resources for assessment	Competency may be assessed in an actual workplace or simulated environment where the simulated context provides access to audit findings which are disputed by the auditee. At least one of the audit scenarios should be assessed in an actual workplace context. A simulated environment must provide access to a typical range of personnel with communication skill levels appropriate to food businesses and to the roles of personnel involved in food safety audit processes.
Method of assessment	The following assessment methods should be considered to gather sufficient and valid evidence of competency: • observation of communication and conflict management skills • a report for a communication plan to conduct a food safety audit • questioning to test the level and application of knowledge • a journal or report on communication strategies used in conducting a food safety audit. Assessment methods must satisfy the endorsed Assessment Guidelines of FDF10 Food Processing Industry Training Package.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Licensing/certification requirements	This unit is part of a set of units that are a minimum requirement for auditors of food safety programs
Communication plan	A communication plan identifies: • the type and purpose of information to be provided through each stage of the audit process • audiences for types of information • the form or method of communication (e.g. written report, verbal presentation) • when/how often the communication will occur reporting procedures and responsibilities, including reporting timelines, formats and procedure for reporting serious/critical food safety hazards
Communication methods and protocols	Methods of communication may include: • written presentations and reports • two-way verbal interaction • constructive feedback • active listening • questioning to elicit, confirm and clarity information • interview techniques • facilitation of meetings and group processes • interpreting non-verbal skills and body language Communication protocols may include: • confidentiality • objectivity • information access and dissemination • levels of communication/lines or reporting • timeliness of providing information/responding to information requests
Food business requirements	Business requirements may require that communication is consistent with: • confidentiality requirements • legal requirements and related policies and procedures relating to communication

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	requirements • professional codes of conduct/personal attributes of auditors • information that is accurate, thorough and clearly presented • resource parameters • organisational structure and delegated levels of authority • existing communication mechanisms and systems used in the auditee's workplace
Individual differences	Individual differences may include but are not limited to: • age • race • gender • culture • religion • impairment/disability • physical features • educational background • technical skill level • communication styles and skill levels • English language and literacy • any other individual characteristics that may need to be taken into account in designing communication as covered by relevant legislation
Issue resolution strategies	Issue resolution strategies may include: • establishing open communication practices to encourage the trust and engagement of all parties • designing processes that ensure all parties have opportunities to fully express their position • involving personnel with additional expertise (this may include other expertise from the auditing body and/or the regulator) • validating evidence used to support audit findings

FDFAU4004A Identify, evaluate and control food safety hazards

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to identify, evaluate and control food safety hazards for the purposes of validating specific control measures in a food safety program.

Application of the Unit

Application of the unit	This unit applies to regulatory, commercial and internal food safety system auditors. When this unit is applied to regulatory auditing it should be noted that the National Food Safety Audit Policy for regulatory auditing requires that, when assessing compliance of food safety programs in a medium or high risk environment, the following units must be pre or co-assessed with this unit: • FDFAU4002A Communicate and negotiate to conduct food safety audits • FDFAU4003A Conduct food safety audits. When applied to conducting regulatory food safety audits of high risk food businesses or processes, additional food safety auditing unit/s relevant to the specified business or process may be required under the National Food Safety Audit Policy. Current high risk food safety auditing units are: • FDFAU4005A Audit bivalve mollusc growing and harvesting processes • FDFAU4006A Audit a cook chill process • FDFAU4007A Audit a heat treatment process • FDFAU4008A Audit manufacturing of ready-to-eat meat products.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify food safety hazards in a food business	1.1. Biological food safety hazards that could present a risk in the food at the point of consumption are identified by type, origin and food association and assessed to determine risk level and control requirements 1.2. Intrinsic and extrinsic chemical food safety hazards that could present a risk in the food at the point of consumption, including toxin presence, are identified

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	by type, origin and food association and assessed to determine risk level and control requirements 1.3. Physical food safety hazards that present a risk in food are identified and assessed to determine control requirements
2. Control food safety hazards in a food business	2.1. Processing hazards and related control measures and critical limits, monitoring and recording requirements are established and validated to eliminate or reduce food safety hazards to acceptable levels 2.2. Food storage and handling requirements necessary to eliminate or reduce food safety hazards are determined 2.3. Personal hygiene practices required to eliminate or reduce food safety hazards are established 2.4. Cleaning and sanitation, housekeeping and pest control practices and procedures required to prevent or reduce food safety hazards are established 2.5. Other prerequisite programs are developed to eliminate or reduce food safety hazards to acceptable levels

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Ability to: • interpret and apply relevant legislation, codes of practice and technical standards • identify biological, chemical and physical food safety hazards • determine critical control points and critical limits for identified hazards • establish the required procedures, systems and records to monitor critical control points in order to demonstrate that the critical control point is in control • specify required corrective actions and corrections to be taken when critical limits are not achieved
Required knowledge
Knowledge of:

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

- sources of advice and research on foods, processing methods, production technologies and associated food safety hazards and control methods
- ways in which food can cause illness and injury, including incidence and trends in food-borne illness
- intrinsic and extrinsic factors that can impact on food safety
- common biological food safety hazards (including toxin production and spore formation) and conditions required for survival and growth of each, including growth rates, transmission routes, likely carriers and threshold levels
- sources of information on acceptable (and legal) levels of biological, chemical and physical contamination
- food supply chains and potential of a breakdown in control at one point to impact other parts of the chain
- survival and growth requirements of biological food safety hazards
- common allergenic substances as described by the Food Standards Code (and may be additionally defined by system owners)
- common control methods necessary to eliminate or reduce the risk of food-borne illness to acceptable levels for each common pathogen, including the role of food storage, temperature control, preservation and process methods, traceability, product shelf-life, cleaning and sanitation, and pest control
- methods to detect and minimise the risk of food contamination by personal carriers, including convalescent and symptomless carriers, and related minimum legal illness reporting requirements and personal hygiene procedures
- the role of microbiological sampling, swabbing and testing in assessing the presence of biological contamination
- methods to determine the appropriateness and effectiveness of control measures and critical limits, including identifying the effect of control measures on the identified food safety hazard, method and feasibility of monitoring, the relationship to other control measures, and the severity of consequences and required corrective action in the event of failure of control
- types and causes of acute and chronic chemical food borne illness
- the food safety and legal impact of chemical contamination, including residual agricultural and environmental chemicals, residual industrial (including cleaning) chemicals, and chemical contamination as a result of packaging methods and materials
- physical hazards that pose a food safety risk
- common control methods to eliminate or reduce the risk of chemical or physical food-borne illness to acceptable levels for each common form of chemical and physical food safety hazard, including:
  - chemicals that pose a food safety risk
  - common food allergens
  - physical hazards
- the role and requirements of prerequisite programs and procedures to eliminate, prevent or reduce biological, chemical and physical food safety hazards to

REQUIRED SKILLS AND KNOWLEDGE
acceptable levels

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to establish or validate specific control measures in a food safety program based on demonstration of the identification, evaluation and control of food safety hazards. Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competency in this unit must be achieved in accordance with food safety standards and regulations.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to:
	• select a food supply chain and identify:
	  • known biological food safety hazards that could occur across the chain and could present a risk in food at the point of consumption
	  • likely patterns of growth and transmission from source of contamination to onset of consumer symptoms for pathogens likely to occur in the supply chain, including threshold levels
	  • sources of chemical and physical contamination that could present a food safety risk at the time of food consumption, across the chain
	  • impact and indicators of the presence of biological or chemical food safety hazards throughout the food chain
	  • acceptable levels of contamination. These may be established by reference to relevant legislation and/or reference to system requirements
	• select one stage in the food supply chain (which must be a medium or high risk business or process) and establish or validate control measures and

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	verification records and procedures.
Context of and specific resources for assessment	Assessment may occur in a real or simulated food business context where the simulated context provides access to food safety programs for a multi-staged food supply chain which includes the point of delivery to the consumer. The selected supply chain must include at least one medium or high risk business and/or process and provide opportunity to apply a depth and breadth of food safety knowledge.
Method of assessment	The following assessment methods should be considered to gather sufficient and valid evidence of competency: • observation and documentation showing the identification of critical aspects of a food chain • questioning to test the level and application of knowledge • workplace example or scenario to produce validated control measures and verification records and procedures for food safety hazards.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Licensing/certification requirements	Licensing and registration arrangements are determined by system owners
Food safety hazards	A food safety hazard is a biological, chemical, or

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	physical agent in, or condition of, food with the potential to cause an adverse health effect in humans (defined in 'Hazard Analysis and Critical Control Point System and Guidelines for its Application', Codex Alimentarius Commission)
Biological food safety hazards	Common biological food safety hazards include but are not limited to: • Salmonella spp • Campylobacter jejuni • Bacillus cereus • Clostridium perfringens • Clostridium botulinum • Cryptosporidium • Pathogenic escherichia coli • Giardia • Listeria moncytogenes • Shigella spp • Staphylococcus aureus • Vibrio parahaemolyticus • Yersinia enterocolitica • Hepatitis A virus • Norwalk virus Classifications by type of micro-organism include: • bacteria • viruses • moulds/fungi • parasites • algae
Chemical food safety hazards	Common origins of chemical contamination may include: • cleaning chemicals • pesticides • veterinary residues • chemical additives • allergenic substances • toxic metals • nitrites, nitrates and N-nitroso compounds • polychlorinated biphenyls (PCBs)

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• plasticizers and packaging migration • phytotoxins • zootoxins
Physical food safety hazards	Physical food safety hazards refer to objects not normally found in food which may cause illness or injury to the consumer
Acceptable levels	Acceptable levels define the level of a particular hazard in the end product that is acceptable to ensure food safety. Acceptable levels are typically defined by: • the Food Standards Code • commonwealth, state or territory legislation or codes • industry codes of practice • international protocols (CODEX Alimentarius) • customer food safety requirements (including intended use)
Prerequisite programs	Prerequisite programs are also referred to as support programs, such as Good Manufacturing Practice (GMP), Good Agricultural Practice (GAP) and Good Hygiene Practice (GHP). Prerequisite programs can be divided into two categories. **Infrastructure and maintenance programs**. These may include: • layout, design and construction of buildings and facilities • supplies of air, water, energy and other utilities • equipment, including preventative maintenance, sanitary design and accessibility for maintenance and cleaning • support services, including waste and sewage disposal **Operational prerequisite programs**. These may include: • personal hygiene • cleaning and sanitation • pest control

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• measures for the prevention of cross-contamination • packaging and labelling procedures • supplier assurance • chemical storage • employee training • maintenance • calibration • document control • internal audit programs • traceability and recall programs • on-farm food safety schemes • inspecting and testing regimes, including analytical and microbiological testing
Critical control point	Critical control point is a step at which control can be applied and is essential to prevent or eliminate a food safety hazard or reduce it to an acceptable level
Critical limit	Critical limit refers to criterion which separates acceptability from unacceptability
Food supply chain	Food supply chain refers to a sequence of stages and operations involved in the production, processing, distribution and handling of food from primary production to consumption
Growth requirements	Factors which influence the growth of pathogenic micro-organisms may include: • temperature • water activity • gases • pH • time • moisture • nutrients
Validation	Validation refers to obtaining evidence to confirm that a HACCP-based food safety program is complete and effective and will deliver the expected food safety outcomes
Validation evidence	Validation evidence confirms that control

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	measures are capable of being consistently effective and may include the application of: • existing Australian legislative requirements • challenge tests • peer reviewed scientific papers • targeted scientific reports • validation already carried out in other jurisdictions and recognised by the responsible authority • mathematical modelling (e.g. predictive microbiology models) • industry codes of practice (where implementation by food business is verified during audits)

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Implement the food safety program	1.1. Food handling requirements are identified 1.2. Food handling is carried out according to the food safety program 1.3. Food safety hazards are controlled as required by the food safety program 1.4. Where food safety control requirements are not met, the incident is promptly reported and corrective action is taken 1.5. Food safety information is recorded to meet requirements of the food safety program 1.6. The workplace is maintained in a clean and tidy order to meet workplace standards 1.7. Work is conducted in accordance with workplace environmental guidelines
2. Participate in maintaining and improving food safety	2.1. Work area, materials, equipment and product are routinely monitored to ensure compliance with food safety requirements 2.2. Processes, practices or conditions which could result in a food safety breach are identified and reported according to workplace reporting requirements 2.3. Corrective action is taken in accordance with the food safety program 2.4. Food safety issues are raised with designated

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	personnel
3. Comply with personal hygiene standards	3.1. Personal hygiene meets the requirements of the food safety program 3.2. Health conditions and/or illness are reported as required by the food safety program 3.3. Clothing and footwear worn is appropriate for the food handling task and meets the requirements of the food safety program 3.4. Movement around the workplace complies with the food safety program

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- locate and follow workplace information relating to food safety responsibilities
- follow workplace procedures to maintain food safety as required by the food safety program relating to own work
- monitor food safety hazards as required by the food safety program, including methods such as visual inspection, sampling and testing
- record results of monitoring, and maintain records as required by the food safety program
- identify and report situations that do not meet the requirements of the food safety program and/or could result in unsafe food
- take corrective action as required by food safety program within level of responsibility
- handle, clean and store equipment, utensils, packaging materials and similar items according to the requirements of the food safety program as required by work role
- maintain personal hygiene consistent with the food safety program
- take necessary precautions when moving around the workplace and/or from one task to another to maintain food safety
- wear and maintain appropriate clothing/footwear as required by work tasks and consistent with the requirements of the food safety program
- report health conditions and illness as appropriate according to the food safety program
- handle and dispose of out-of-specification or contaminated food, waste and

© Commonwealth of Australia, 2024 Public Skills Australia

recyclable material according to food safety program as this requirement relates to own work responsibility
- maintain the work area in a clean and tidy state
- identify and report signs of pest infestation
- record food safety information in appropriate format
- clean and sanitise equipment according to enterprise procedures
- collect samples and conduct tests according to the food safety program according to enterprise procedures
- participate in investigating food safety breaches according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- sources of information and expertise on procedures and responsibilities for food safety relating to own work
- basic concepts of HACCP-based food safety, including identification of hazards that are likely to occur, establishing appropriate methods of control and confirming that controls are met
- food safety management arrangements in the workplace, including awareness of food safety legislation, workplace policies and procedures to implement responsibilities, understanding the relationship between the quality system and food safety program, personnel responsible for developing and implementing the food safety program, the role of internal and external auditors as appropriate, procedures followed to investigate contamination events, and performance improvement processes
- awareness of common microbiological, physical and chemical hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences and control methods to prevent occurrence
- basic understanding of the properties, handling and storage requirements of ingredients, materials and products handled and used
- suitable standard for materials, measuring devices, equipment and utensils used in the work area
- food safety requirements related to work responsibilities, including personal hygiene, requirements and procedures to report illness and safe food handling practices for own work
- methods used to monitor that food safety is under control, including the purpose of sampling and taking measurements, such as temperature and pH, and conducting inspections and tests
- action required in the event of non-compliance (corrective action is typically described in the food safety program and/or related workplace information)
- purpose of keeping records and the recording requirements of the food safety

© Commonwealth of Australia, 2024 Public Skills Australia

program
- methods used in the workplace to isolate or quarantine food which may be unsafe
- product and ingredient traceability procedures, such as product recall where required by work responsibilities
- clothing and footwear requirements for working in and/or moving between food handling areas
- personal clothing maintenance, laundering and storage requirements
- appropriate bandages and dressings to be used when undertaking food handling
- housekeeping requirements and responsibilities relating to own work, and use and storage of housekeeping/cleaning equipment where relevant
- procedures to follow in the event of pest sighting or discovery of infestation
- purpose and importance of cleaning and sanitation procedures
- waste collection, recycling and handling procedures relevant to own work responsibilities
- cleaning and sanitation procedures where relevant
- impact of rework handling/addition on food safety where relevant
- sampling and test methods where relevant

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • identify own responsibilities with regard to food safety • identify food safety risks in the workplace and the control measures used to manage them • apply control measures in own work • monitor compliance with food safety standards • identify and act on non-compliances and participate in improving safety • maintain required standards of personal hygiene • complete workplace records as required

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	• apply safe work practices and identify OHS hazards and controls • apply food safety procedures.

Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to:
	• food safety information relating to the workplace, including a food safety program outlining food safety hazards and control methods. It may also include company policies, procedures and codes of practice, such as:
	  • Good Manufacturing Practice (GMP)
	  • related work instructions and procedures
	  • work tasks and responsibilities
	  • appropriate clothing and related apparatus
	  • reporting and monitoring systems
	  • cleaning and sanitation policies and procedures as required
	  • sampling and test procedures and related equipment as required.

Method of assessment	This unit should be assessed together with other units of competence relevant to the function or work role. Examples could be: • FDFOP2004A Clean and sanitise equipment • FDFOP2013A Apply sampling procedures • FDFOP2063A Apply quality systems and procedures • MSL973001A Perform basic tests.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
A food safety program	A food safety program is a written document that specifies how a business will control all food safety hazards that may be reasonably expected to occur in all food handling operations of the food business. The food safety program and related procedures must comply with legal requirements of the food safety standards and must be communicated to all food handlers. Where no food safety program is in place, food safety requirements may be specified in general operating procedures
Workplace information	Workplace information may be provided in: • food safety program • standard operating procedures (SOPs) • specifications • log sheets • written or verbal instruction
Food handling	Food handling refers to: • food receipt and storage • food preparation • cooking, holding, cooling, chilling and reheating • packaging, disposal
Products/materials handled and stored	Products/materials handled and stored can include: • raw materials • ingredients • consumables • part-processed product • finished product • cleaning materials
Examples of a breach of food safety procedures	Examples of a breach of food safety procedures could include: • failure to check delivery temperatures of potentially hazardous chilled food

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• failure to place temperature-sensitive food in temperature controlled storage conditions promptly • failure to wash hands when required • use of cloths for unsuitable purposes
Responsibility for monitoring food safety	Responsibility for monitoring food safety, identifying breaches in food safety procedures and taking corrective action relates to own tasks and responsibilities and occurs in the context of the food safety program in the workplace
Monitoring	Monitoring describes the methods used to confirm that a food safety hazard is in control, such as: • taking temperatures • collecting samples • conducting visual inspections • conducting other tests as required
Food safety hazard	A food safety hazard is a biological, chemical or physical agent in, or condition of, food that has the potential to cause an adverse health effect
Hygiene requirements	Minimum personal hygiene requirements are specified by the food safety program. At a minimum this must meet legal requirements as set out in the Food Safety Standard 3.2.2, Division 4:14 and/or state or territory legislation/regulations
Reporting of health conditions and illnesses requirements	Reporting of health conditions and illnesses requirements are specified by the food safety program. At a minimum this must meet legal requirements as set out in Food Safety Standard 3.2.2, Division 4:13 and/or state or territory legislation/regulations
Appropriate clothing and footwear	Appropriate clothing and footwear depends on work requirements. It should be designed to ensure that the body and clothing itself does not contaminate food or surfaces likely to come into contact with food. Examples of clothing designed to prevent contamination by the body include: • purpose designed overalls or uniforms • hair-nets

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• beard snoods • gloves • overshoes

FDFFS3001A Monitor the implementation of quality and food safety programs

Modification History

November 2011: minor typographical error corrected.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to provide a leadership role in supporting day-to-day implementation of the food safety/quality programs in a work area. It also involves supporting others to implement the requirements of the food safety/quality procedures.

Application of the Unit

Application of the unit	This unit applies to those with formal responsibility for others, and to those required to model workplace policies and procedures but who have no formal management role. This unit is based on and equivalent to the guideline food safety unit GFSOFSA Oversee the day-to-day implementation of food safety in the workplace. Note that this unit does not apply to the pharmaceutical industry. Refer to FDFPH3001A Monitor and maintain Good Manufacturing Practice procedures.

Licensing/Regulatory Information

Not applicable.

Prerequisite units		
	FDFFS2001A	Implement the food safety program and procedures

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Ensure others in the work area are able to meet quality and food safety requirements	1.1. Hazard control and clothing and equipment appropriate to work requirements are available, functional and correctly fitted 1.2. Information on food safety/quality responsibilities and procedures is current, accessible and communicated to others in the work area 1.3. Information about identified hazards and the outcomes of risk assessment and risk control procedures is accessible and communicated to others in the work area 1.4. Food safety/quality hazards and control measures used in the work area can be identified by those in the work area 1.5. Mentoring and coaching support is available to support individuals/groups to implement quality and

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	safe food handling procedures 1.6. Training needs are identified and addressed within level of responsibility
2. Monitor observance of quality standards and food safety programs in the work area	2.1. Work procedures in the work area are clearly defined, documented and followed 2.2. Deviation from identified procedures is identified, reported and addressed within level of responsibility 2.3. Personal behaviour is consistent with workplace policies and procedures that support food safety and quality 2.4. Food safety and/or quality hazards are identified and reported according to workplace procedures 2.5. Food safety and quality information is recorded to meet workplace reporting requirements 2.6. The work area is maintained according to housekeeping standards 2.7. Work is conducted in accordance with workplace environmental guidelines
3. Take corrective action in response to quality and food safety non-compliance	3.1. Workplace procedures for responding to quality and food safety non-compliance are promptly implemented 3.2. Hazardous events are investigated to identify cause 3.3. Control measures to prevent recurrence and minimise risks of hazardous events are implemented
4. Maintain and improve quality and food safety in the work area	4.1. Processes or conditions which could result in a breach of food safety procedures or quality specifications are identified, assessed, removed or and/reported within level of responsibility and according to workplace procedure 4.2. Risk assessments are conducted and appropriate control measures are identified and implemented in the work area 4.3. Recommendations arising from risk assessments are implemented within level of responsibility 4.4. Inadequacies in control measures are identified and reported according to company reporting requirements 4.5. Matters raised relating to quality/food safety are promptly resolved and/or referred to appropriate personnel 4.6. The work group is consulted and advised of

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	quality/food safety matters relevant to work role 4.7. Opportunities for improving food safety and quality are identified and raised with relevant personnel 4.8. Procedures are developed or revised to support effective control of quality and food safety hazards 4.9. Quality/food safety records are reviewed to ensure they are complete and meet the quality system, food safety program and legal requirements

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access, interpret and communicate information about the food safety program, quality requirements and related procedures to others in the work area
- demonstrate two-way communication, including active listening and responding constructively to feedback
- provide access to and maintain current food safety/quality documentation
- model safe food handling and quality practices and procedures to achieve required outcomes, including demonstrating:
  - work procedures that meet the requirements of quality and food safety
  - cleaning and sanitising equipment
  - sampling and testing as appropriate according to quality and food safety requirements
  - maintaining personal hygiene
  - wearing appropriate clothing and footwear as required by the work task
  - following procedures when moving within and between work areas
  - reporting health conditions and illnesses according to workplace procedures
  - handling, cleaning and storing equipment, utensils and packaging materials as appropriate
- identify control points in the work area and demonstrate monitoring techniques used (control points include critical, quality and regulatory control points)
- support others to meet quality standards and follow food safety procedures by ensuring that all personnel in the work area receive the information required and have the necessary skills and equipment to carry out their responsibilities

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

- identify, report and/or address food safety/quality non-compliance in an appropriate and timely manner within level of responsibility
- determine when and how to make adjustments to maintain output within level of responsibility
- identify, report and/or address food safety/quality training and development needs of others in the work area
- ensure that appropriate and timely action is taken in response to non-compliance
- handle and dispose of out-of-specification or contaminated food, waste and recyclable material according to food safety program as this requirement relates to own work responsibility
- participate in investigations of non-compliance and risk assessment processes
- participate in consultation processes to improve quality and food safety outcomes in the workplace
- review practice and procedures to implement recommendations arising from risk assessments and/or improvement proposals within level of responsibility, such as collecting and analysing food safety/quality records, reviewing operating procedures and communicating changes to others in the work area
- ensure that housekeeping standards are maintained and that equipment is in operational order, such as participating in the management of equipment calibration
- monitor the recording of quality and food safety information to confirm that records accurately reflect performance and meet the requirements of the food safety and quality programs
- participate in food recall procedures as required, within level of responsibility
- facilitate consultation processes according to enterprise procedures
- lead investigations of quality and food safety incidents according to enterprise procedures
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- sources of information and expertise on procedures and responsibilities for food safety relevant to the workplace
- principles of a HACCP-based approach to managing food safety, including identifying hazards that are likely to occur, establishing appropriate methods of control and confirming that controls are met
- basic concepts of quality assurance including hazards, risk assessment and control methods
- company programs and systems in place to manage and support quality and food safety in the workplace, which may involve separate or integrated programs, including systems for maintaining and updating documents, such as operating procedures and specifications
- clothing and footwear requirements for working in and/or moving between food

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
handling areas, including personal clothing maintenance, laundering and storage requirements • appropriate bandages and dressings to be used when undertaking food handling • housekeeping requirements and responsibilities relating to own work, where relevant this includes use and storage of housekeeping/cleaning equipment • procedures to follow in the event of pest sighting or discovery of infestation • purpose and importance of cleaning and sanitation procedures • legal obligations for food safety and quality, including an awareness of government legislation and customer requirements • food safety and quality responsibilities and requirements relating to the work area • awareness of common micro biological, physical and chemical hazards related to the foods handled in the work area, including the types of hazards likely to occur, the conditions under which they occur, possible consequences and control methods to prevent occurrence • suitable standard for materials, measuring devices, equipment and utensils used in the work area • properties of food and ingredients used that affect food safety, including an understanding of related storage, processing and handling requirements • current technical and process knowledge required to participate in investigations of food safety/quality hazards, risks and incidents within level of responsibility, including an understanding of common micro biological, physical and chemical hazards, related control methods and the way changes in equipment and/or processing methods can affect food safety and quality outcomes • procedures for identifying unsafe and/or non-conforming product, including control points and evidence of out-of-specification product or materials • sampling procedures, test methods and inspections • options for responding to non-compliance, including legal responsibility, risk management and cost/implications of different responses and level of responsibility for decision making • methods used in the workplace to isolate or quarantine food which may be unsafe • waste collection, recycling, handling and disposal, including handling/disposal requirements for different types of waste, such as hazardous waste where relevant • traceability and recall procedures within level of responsibility • documentation system and procedures, including record keeping to meet both company and legal requirements, procedures for developing and/or reviewing workplace procedures, and document control systems used in the workplace • auditing arrangements, roles and responsibilities as they relate to own work responsibilities, such as internal and external audit processes • appropriate communication skills and techniques to convey information on quality and food safety requirements to others in the workplace • cleaning and sanitation procedures where relevant • impact of rework handling/addition on food safety where relevant • sampling and test methods where relevant

REQUIRED SKILLS AND KNOWLEDGE
• facilitation and consultation techniqueswhere relevant

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • describe quality and food safety program, risks and control measures of the work area • confirm that control measures are in place and that personnel in the work area are equipped and informed to implement programs • identify, address and follow up on non-compliances • identify causes of non compliances • conduct risk assessments and recommend responsive action • provide support to others to implement the programs • complete and maintain documentation.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: • food safety program for the work area which identifies critical control points, control measures and corrective action • quality policy, system and procedures • work area or system in which quality and food safety practices and procedures are to be monitored • personal protective clothing and equipment as required • review/audit arrangements • reporting and monitoring systems.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
Method of assessment	This unit should be assessed together with other units of competence relevant to the function or work role. Examples could be: • FDFPPL3001A Participate in improvement processes • FDFPPL3004A Lead work teams and groups • BSBRES401A Analyse and present research information.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Work responsibilities	Work responsibilities may include formal or informal responsibility for modelling appropriate quality/food safety policies and procedures and providing a support role to others in the work area
Food safety program	A food safety program is a written document that specifies how a business will control all food safety hazards that may be reasonably expected to occur in all food handling operations of the food business. The food safety program and related procedures must comply with legal requirements of the food safety standards and must be communicated to all food handlers. Where no food safety program is in place, food safety requirements may be specified in general operating procedures

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Quality systems	Quality systems may be externally accredited, such as an ISO system, or internally designed and managed
Workplace information	Workplace information may be provided in: • food safety and quality policies and programs • standard operating procedures (SOPs) • specifications • log sheets • written or verbal instruction incorporating food safety and quality requirements
Incidents	A food safety incident is: • a situation where the safe limits or parameters identified by the food safety program are not met A quality incident is: • a situation where the quality limits or parameters identified in specifications or processing instructions are not met
Monitoring	Monitoring describes the methods used to confirm that a food safety or quality hazard is in control, such as: • taking temperatures • collecting samples • conducting visual inspections • additional testing as required
Responsibility for identifying breaches of food safety procedures	Responsibility for identifying breaches of food safety procedures and taking corrective action occurs in the context of the food safety program and within scope of responsibility
Responsibility for identifying non-compliance against quality standards	Responsibility for identifying non-compliance against quality standards occurs within the context of defined standards or specifications and relates to work area
Personal hygiene requirements	Minimum personal hygiene requirements are specified by the food safety program. At a minimum this must meet legal requirements as set out in the Food Safety Standard 3.2.2, Division 4:14 and/or state or territory

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	legislation/regulations
Reporting of health conditions and illnesses	Reporting of health conditions and illnesses requirements are specified by the food safety program. At a minimum this must meet legal requirements as set out in Food Safety Standard 3.2.2, Division 4:13 and/or state or territory legislation/regulations
Operator responsibilities	The operator at this level may not have direct responsibility for overseeing the training/development of team members. At a minimum they must be able to identify development needs of others in the work area and refer this information to the relevant personnel. The operator at this level may not have responsibility for independently assessing risks and determining the effectiveness of control measures. However, they would be expected to observe day-to-day effectiveness and participate in assessment and review processes. Responsibilities at this level may include facilitating consultation processes within level of responsibility
Record keeping	Record keeping complies with customer, legal and food safety program requirements

FDFOP2013A Apply sampling procedures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to understand the requirements of sampling plans, and to collect and transfer samples to retain sample integrity.

Application of the Unit

Application of the unit	This unit has application in a food production environment. Operators requiring this competency would typically be required to follow specific sampling procedures, such as aseptic sampling. When applied to the pharmaceutical industry, relevant Good Manufacturing Practice (GMP) codes apply and reference to food safety is replaced by GMP.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for sampling	1.1. Sampling requirements are identified in accordance with the sampling plan 1.2. Sampling equipment, containers and labels are prepared
2. Collect samples	2.1. Samples are collected according to sampling procedures and the requirements of the sampling plan 2.2. Samples are handled and prepared to preserve sample and source integrity 2.3. Defects or abnormalities in source material and/or sample are identified and reported 2.4. Sample information is recorded according to workplace sample recording requirements 2.5. The work area is maintained according to housekeeping standards 2.6. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- access and interpret sampling plan to identify sampling requirements
- select, fit and use personal protective clothing and/or equipment
- prepare for sampling to ensure required tools, containers and labels are available
- follow sampling procedures and the sampling plan to collect samples from the points, in the quantities and at the times specified
- identify atypical source materials and/or samples and take corrective action, such as reporting abnormalities, repeating sample collection and/or following intensive sampling schedules as required
- complete sample records according to workplace requirements, such as labelling samples as required
- transfer samples for testing
- maintain work area to meet housekeeping standards
- prepare samples according to enterprise procedures
- use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor
- work cooperatively within a culturally diverse workforce

Required knowledge

Knowledge of:

- basic sampling principles, including the importance of following the sampling plan to obtain representative sampling reflecting characteristics of source material, the sample characteristics and related preservation, handling and storage requirements, and the labelling system purpose and requirements
- tests to be conducted on samples and related handling and preparation requirements and responsibilities
- characteristics of materials sampled and common contaminants and related conditions under which contamination is likely to occur
- sampling techniques relevant to samples collected, such as sterilisation methods and procedures
- the relationship between sampling, testing and production processes, including different sampling regimes that may apply in response to non-standard conditions or after corrective action is taken to adjust production outputs
- procedures and responsibility for reporting and recording sampling information, such as legislative requirements
- procedures for preparing samples where relevant

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • conduct pre-start checks on equipment used for collecting and handling samples • collect, handle and store samples according to sampling requirements and standards • take corrective action in response to typical defects and inconsistencies • complete workplace records as required • apply safe work practices and identify OHS hazards and controls • apply food safety procedures.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: • sampling plan • documentation, including specifications, work instruction and other advice on sampling requirements • recording and reporting system • sampling instrumentation and containers as required • product/source material to be sampled.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role. Example could be: • MSL973001A Perform basic tests
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where

EVIDENCE GUIDE	
	possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Policies and procedures	Work is carried out according to company policies and procedures, regulatory and licensing requirements, legislative requirements and industrial awards and agreements
Workplace information	Workplace information may include: • standard operating procedures (SOPs) • specifications • production schedules and instructions • manufacturers' advice • sampling plans
Sampling requirements	Sampling requirements include: • sampling under standard conditions • sampling after processes are adjusted in response to variation or non-conformance
Sampling	Sampling typically occurs at a number of points and using a range of techniques
Maintenance of sample integrity	Maintenance of sample integrity may be achieved by: • use of appropriate personal protective clothing • use of clean sampling tools and containers (sterilised tools/containers for aseptic sampling) • temperature control • addition of preservatives as required

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Sampling techniques	Sampling techniques may include: • sub-sampling

FDFTEC3001A Participate in a HACCP team

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the skills and knowledge required to participate in the development and/or review of a HACCP-based food safety program under direction.

Application of the Unit

Application of the unit	This unit is appropriate where the operator requires a detailed understanding of the steps and techniques used to develop and review a HACCP-based food safety program. This unit can be aligned at either AQF 3 or 4. When aligned at AQF 3 the person would typically participate in the development of the food safety program as part of a group. The scope of contribution would typically be limited to their immediate work area. When this unit is applied at AQF 4 the person may take a lead role in facilitating the development of the food safety program and would apply an understanding of food safety across more diverse operations or work areas. This unit is based on and achieves part of the guideline food safety unit GFSDFSPA Develop food safety programs.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		
	FDFFS2001A	Implement the food safety program and procedures

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Prepare to develop and/or review a food safety program	1.1. Roles and responsibilities for participating in, developing or reviewing a food safety program are identified 1.2. The scope of the food safety program is identified
2. Identify and/or review food safety hazards	2.1. Processes to be covered by the food safety program are identified and steps within each process are described 2.2. Food safety hazards that are reasonably expected to occur are identified for each process 2.3. Handling methods, processing techniques and existing support programs used in the workplace are identified
3. Establish and/or	3.1. Acceptable methods of control are established for

ELEMENT	PERFORMANCE CRITERIA
review methods to monitor and control food safety hazards	each food safety hazard that is reasonably expected to occur 3.2. Control methods are validated 3.3. Procedures for taking preventative action are established 3.4. Appropriate methods for monitoring that processes remain within control are established 3.5. Required corrective action to respond to situations where hazards are not effectively controlled is established 3.6. Work is conducted in accordance with workplace environmental guidelines

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify personal roles and responsibilities for participating in the development or review of a food safety program
- identify processes and steps to be covered
- identify hazards that are reasonably expected to occur and establish appropriate methods of control, such as participating in validating existing control methods and where there is no adequate control method in place, establishing an appropriate method
- establish or review procedures for implementing preventative action, such as revision of materials, processes and/or food handling procedures, and where required, the revision of workplace practices and documentation, such as specifications, operating procedures and approved supplier programs
- describe the appropriate monitoring requirements for each food safety hazard, including the method or procedure to be followed, the frequency and timing, the person responsible, and the information to be recorded (procedures to be followed would typically be specified in the form of a standard operating procedure or work instruction)
- describe corrective action requirements in the event that acceptable limits or

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
requirements of support programs are not met • develop or review documentation relating to the design and maintenance of the food safety program, such as flow diagrams, hazard analysis charts and tables, support program requirements, data analysis reports, corrective action reports and verification reports • develop or review documentation to communicate food safety responsibilities, such as standard operating procedures (SOPs), processing parameters and recording devices (e.g. log sheets) • communicate food safety responsibilities within level of responsibility using techniques and presentation styles appropriate to the audience • use oral communication skills/language competence to fulfil the job role as specified by the organisation, including questioning, active listening, asking for clarification and seeking advice from supervisor • work cooperatively within a culturally diverse workforce
Required knowledge
Knowledge of: • the purpose and intent of food safety legislation • purpose and responsibilities for maintaining records as required by legislation and workplace procedures • roles and responsibilities for development and maintenance of the food safety program, including roles of internal and external auditors and of authorised officers • techniques for applying HACCP-based principles, including techniques for identifying hazards, assessing the likelihood of occurrence, determining acceptable methods of control, monitoring and recording requirements for each control point, identifying corrective action if controls are not met, and developing system review procedures • techniques used to map operations and analyse food safety requirements, such as preparation of flow charts, hazard analysis charts and tables, and data analysis reports • raw materials, ingredient and finished product composition and characteristics, and related handling and storage requirements • food processing methods used in the workplace or work area and their effect on food safety • sources of technical expertise on food safety requirements • the role of consultation in the development, implementation and ongoing maintenance of the food safety program • documentation and recording requirements to support communication and monitoring of the food safety program, including procedures for maintaining and updating relevant documents, such as operating procedures • main types of food safety hazards/contamination likely to occur given the type of

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
product and processing methods used • conditions required for bacterial food poisoning to occur, such as water activity, pH, composition, time and temperature as relevant to food handled • acceptable control methods for the hazards identified and required corrective action when control requirements are not met • typical support programs, such as cleaning schedules, pest control, stock rotation, product traceability and personal hygiene, and how they can be used as part of a food safety program • acceptable control methods for the hazards identified and required corrective action when control requirements are not met • validation and verification processes and techniques and responsibilities

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment must be carried out in a manner that recognises the cultural and literacy requirements of the assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • identify components and parameters of a food safety program • identify food safety hazards in production processes • establish and validate control standards and methods for each hazard • establish procedures for unpredicted hazards • communicate and document hazards and control procedures • complete workplace records • apply safe work practices and identify occupational health and safety (OHS) hazards and controls • apply food safety procedures.
Context of and specific resources for	Assessment must occur in a real or simulated workplace

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
assessment	where the assessee has access to: • workplace food safety program documentation • advice on quality and food safety legislation • procedures for developing or modifying specifications and other advice on food safety requirements • procedures for developing or modifying documentation, such as work instructions and procedures, log sheets and other recording requirements • review/audit arrangements • consultative mechanisms • communication systems • training system • reporting/recording system.
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Food safety programs	A food safety program is a written document that specifies how a business will control all food safety hazards that are reasonably expected to occur in the food business. The food safety program must provide for the systematic

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	monitoring of the controls as well as appropriate corrective action if a hazard is found not to be under control. Records must be kept to demonstrate action in relation to, or in compliance with, the food safety program. A food safety program may be developed as a stand-alone program or may be integrated with the quality program in a workplace
Methods used to control hazards	Methods used to control hazards include: • both support programs and specific hazard control limits or requirements Typical examples of support programs include: • product recall • cleaning schedules • pest control programs • personal hygiene practices • calibration procedures and related operating procedures
Food safety hazards	Food safety hazards include: • microbiological • chemical • physical hazards
Validation	Validation refers to: • the use of objective evidence in order to prove that materials, processes, procedures or equipment used are capable of delivering the intended result
Verification	Verification refers to: • reviewing all aspects of the food safety program and related records to determine compliance with and adequacy of the food safety program At a minimum, food safety programs must be verified annually
Scope of the HACCP based plans	The scope of the HACCP-based plan depends on workplace requirements and may extend outside the direct area of responsibility of the team participants

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify legal responsibilities to produce quality, safe food	1.1. Legal and ethical responsibilities to produce safe food are identified 1.2. Legal, company and customer quality standards for products are identified
2. Identify common causes of food poisoning and contamination	2.1. Food-borne pathogens and contamination that can occur in processed food are identified 2.2. Patterns of contamination and spoilage are traced through processing, storage and shelf-life for a given product 2.3. Conditions required for contamination to occur are identified 2.4. Laboratory results used to detect the presence of contamination and/or related conditions are analysed and applied
3. Manage control measures to eliminate and/or minimise the risk of contamination	3.1. Control measures related to receivals, handling and processing, storage and/or transport stages to guarantee food safety in the workplace are identified 3.2. Control measures to prevent food contamination and spoilage are documented and followed
4. Manage cleaning and sanitation regimes	4.1. The main types of cleaners and sanitisers used in the food industry are identified 4.2. Application methods and related materials, labour and equipment requirements are identified

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	4.3. Cleaning and sanitation methods and regimes are assessed for environmental impact 4.4. Appropriate cleaning and sanitation methods are selected to suit a given product, processing method and risk factors and to ensure minimal impact on the environment 4.5. Inspection and/or test methods are in place to confirm the effectiveness of the cleaning and sanitation program 4.6. Responsibilities for cleaning and sanitation are documented and communicated

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Ability to:

- identify the requirements of legislative responsibilities relating to food production, including food composition, specification of safe handling, processing, storage and transportation methods as appropriate, and establishment of related programs, such as cleaning and sanitation, personal hygiene practices, training and food traceability and recall procedures
- identify how legislative requirements have been applied in a production context (this will typically be based on the food safety program (HACCP) for a production process)
- identify related roles and responsibilities for implementing, maintaining and reviewing the food safety program in a production environment
- identify the types of pathogenic bacteria, viruses and chemicals that can occur in food, including the main types of pathogens and contamination that can occur for a given product and production method, as well as the specific strains that can occur
- identify the main types and causes of food spoilage that can occur, including:
  - bacterial growth
  - growth of yeasts and moulds
  - fermentation
  - enzymic reactions
  - physical degradation (oxidation)
- identify the conditions that cause or promote the growth of pathogens and other

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
forms of contamination and food spoilage • identify typical control measures used to prevent contamination from occurring, including microbiological, chemical and physical types of contamination • distinguish between measures to control pathogenic growth (critical control measures) and those used to prevent other forms of contamination • interpret test results and apply this information in a production context • identify the types of contamination that can occur and the controls in place to prevent or minimise the likelihood of contamination occurring (where a food safety plan has been developed, compare the outcomes of this process with the provisions of the food safety plan) • review workplace information to ensure that critical control measures and procedures are documented in a form appropriate to meet company and legal requirements and that quality control measures and procedures are documented to meet company and customer requirements (documentation includes action to be followed in the event of an incident or emergency and should be reflected in food safety plans and operating procedures) • identify the cleaning and sanitation requirements/standards appropriate for a food processing environment • identify the types of cleaners, sanitisers and combined cleaning/sanitation agents used in the food industry and related application methods • evaluate the appropriateness of available methods to a given production process/product type • develop and/or review a cleaning regime suited to a given production process, including the nature, frequency and methods of cleaning and sanitation required, such as removal of residues as appropriate, inspection and/or test methods to confirm effectiveness and allocation of roles and responsibilities (the cleaning regime should balance the need to ensure effective cleaning and sanitation at the same time as minimising the disruption to production) • identify the possible consequences of failing to follow the cleaning regime • develop and/or review procedures to describe the methods, frequency, recording, inspection and test requirements related to implementation of cleaning and sanitation • analyse and interpret test results relating to cleaning and sanitation • for a given type of microbacterial and/or chemical contamination, identify likely causes, relevant tests and review of the effectiveness of existing controls, including cleaning and sanitation measures • use communication skills to interpret and complete work information to support operations of work team or area • demonstrate and support cooperative work practices within a culturally diverse workforce
Required knowledge
Knowledge of:

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

• the types of pathogenic bacteria, viruses and chemicals that can occur in food
• the main types of pathogens and contamination that can occur
• the main types and causes of food spoilage that can occur, including:
  • bacterial growth
  • growth of yeasts and moulds
  • fermentation
  • enzymic reactions
  • physical degradation (oxidation)
• the conditions that cause or promote the growth of pathogens and other forms of contamination and food spoilage
• criteria for evaluation to take account of the effectiveness of the method in controlling contamination risk, equipment requirements, cost and other criteria as identified by the workplace.
• issues of compatibility of cleaning agents with materials used in equipment/instrument fabrication
• the legal responsibilities to maintain food production facilities in a clean and sanitary condition, the difference between a surface that appears clean and one that is microbiologically described as clean, and use of terms, such as sterile and commercially sterile
• laboratory procedures used to avoid erroneous results, including practices such as use of negative controls and the purpose of false positives/false negatives
• common terms,such as:
  • plate count
  • culture
  • colony
  • bacteriophage
  • spores
  • yeasts and moulds
  • water activity

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

EVIDENCE GUIDE	
	assessee and is appropriate to the work performed. Competence in this unit must be achieved in accordance with food safety standards and regulations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of ability to: • identify legal, company and quality standards for food products • identify common causes of contamination and poisoning, and techniques used to verify status • identify and manage control measures used to address risks • manage cleaning procedures to ensure workplace standards meet food safety requirements.
Context of and specific resources for assessment	Assessment must occur in a real or simulated workplace where the assessee has access to: • food safety plan and related information, including operating procedures, cleaning and sanitation regimes/plans • laboratory test results • a given production process and product as the basis for tracing contamination/spoilage and identifying control measures • cleaning and sanitation methods, equipment and procedures .
Method of assessment	This unit should be assessed together with core units and other units of competency relevant to the function or work role.
Guidance information for assessment	To ensure consistency in one's performance, competency should be demonstrated on more than one occasion over a period of time in order to cover a variety of circumstances, cases and responsibilities, and where possible, over a number of assessment activities.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

RANGE STATEMENT	
conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Food-borne pathogens and contamination	Food-borne pathogens and contamination includes: • those listed in the World Health Organisation(WHO) table on 'Food-borne pathogens and chemicals of public health importance'. This is reproduced in a number of food safety-related documents, including 'Food Safety Standards Costs and Benefits' ANZFA, May 1999
Food-related legislation	Food-related legislation relevant to this unit includes: • relevant state, territory and federal food safety legislation • the Food Standards Code
Identification	Identification can be based on active ingredients and includes but is not limited to: • alkaline and acid-based detergents • steam/hot water-based methods of sanitation • bleach-based sanitisers • quaternary ammonium compounds (QUATs) • alcohol-based sanitisers • use of UV light, gamma radiation and combined cleaners/sanitisers

FNSASIC301 Establish client relationship and analyse needs

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to interpret and comply with industry regulations and codes of practice when considering the characteristics of financial products and services for individual client needs.

It applies to individuals with excellent communication skills who are authorised as Australian Securities and Investments Commission (ASIC) registered Australian financial services licence (AFSL) holders to provide advice on deposit products, non-cash payment facilities and general insurance products at Tier 2 level.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

ASIC units

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Establish relationship with client	1.1 Use range of communication and interpersonal skills to establish knowledge level of client 1.2 Respond to enquiries in relation to products and services by explaining range available and associated fee and charging

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	schedule 1.3 Inform client of role of adviser and licensee or principal responsible for adviser's conduct, including procedures for complaints handling and circumstances in which they should be engaged
2. Identify client objectives, needs and financial situation	2.1 Employ range of communication and interpersonal skills to gather client personal, financial and business details 2.2 Identify client's needs and product risk profile by encouraging expression of objectives and short-term, medium-term and long-term goals as relevant to product 2.3 Establish and confirm client expectations of cash flow and relevant taxation obligations
3. Analyse client objectives, needs, financial situation and risk profile	3.1 Undertake assessment of client's needs, using all information gathered and taking into account client's product expectations and specific needs 3.2 Consult client throughout analysis for further clarification where necessary 3.3 Analyse need for specialist advice and refer client to appropriate adviser for higher level or specialist advice if required 3.4 Complete product risk profile of client that demonstrates correct application of ASIC generic and specialist knowledge relevant to products being offered

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	3.1	• Recognises and interprets information from relevant sources to safeguard client needs
Writing	1.1-1.3, 2.1-2.3, 3.1-3.4	• Uses clear, specific and industry related terminology to complete and update workplace documentation
Oral Communication	1.1-1.3, 2.1-2.3, 3.1-3.4	• Elicits the view and opinions of others by listening and questioning • Clearly articulates requirements using language

© Commonwealth of Australia, 2024 Public Skills Australia

		appropriate to the audience and environment, and participates in a verbal exchange of ideas and solutions
Numeracy	1.2	• Interprets financial product information and analyses numerical data within spreadsheets and databases
Navigate the world of work	1.2, 1.3, 3.4	• Takes responsibility for providing effective advisory services that comply with legislative, regulatory and organisational requirements
Interact with others	1.1, 2.1, 2.2	• Selects and uses appropriate conventions and protocols to build rapport with clients to elicit and provide relevant information • Adapts personal communication style to show respect for the values, beliefs and cultural expectations of others
Get the work done	2.1-2.3, 3.1, 3.3, 3.4	• Takes responsibility for the sequence and priority of tasks within own workload to achieve effective outcomes • Uses analytical thinking and organisational techniques to assess relevant and key information that informs critical and non-critical decisions about client needs, risk profile and the potential need for input from others • Uses familiar digital tools and systems to complete job tasks

Assessment Requirements for FNSASIC301 Establish client relationship and analyse needs

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- work effectively with clients to collect relevant personal and/or business information that will enable identification of their objectives, needs, expectations, financial situation and risk profile
- interpret and comply with relevant industry regulations and codes of practice requirements that relate to the provision of financial product advice
- analyse client information and assess client risk profile to determine the characteristics of financial products and services relevant to client needs.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must satisfy the knowledge requirements relevant to the products and activities in which advice is given.

For general insurance, deposit products and non-cash payments and relevant first home saver account products the individual must:

- explain the legal environment including disclosure and compliance covering:
  - role of the representative or adviser
  - relevant legal principles including the Corporations Act, Financial Services Reform Act (FSRA), Competition and Consumer Act, Insurance Contracts Act and Australian Securities and Investments Commission (ASIC) Act
  - the relationship between ethics and regulatory requirements including good faith, utmost good faith, full disclosure of remuneration and fees, and any other conflicts of interest which may influence the adviser's recommendation
- name relevant industry codes of practice and conduct

© Commonwealth of Australia, 2024 Public Skills Australia

- identify complaints resolution procedures (internal and external)
- outline relevant ASIC regulatory guidelines.

For general insurance the individual must:

- summarise the characteristics and participants of Australian insurance markets and the roles played by intermediaries, and identify insurance products including:
  - definition of an insurance product
  - conditions, exclusions and level of coverage of risk transfer products
  - types of insurance products
  - pricing of risk products
- identify taxation issues relating to insurance products
- explain advisory functions including:
  - role of the representative, broker or adviser
  - participants in the insurance advisory services market
  - range of services provided
  - profile and financial information of the client
  - appropriateness of a risk assessment
- summarise the specific product knowledge for the general insurance products in which advice is given including:
  - standard cover (and deviations)
  - policy wordings
  - taxes and charges
  - insurance claims
  - premium rating and risk selection
  - reporting
  - product development
  - underwriting.

For deposit products and non-cash payment facilities the individual must:

- name the types of deposit products and non-cash payment products
- summarise the product characteristics.

For first home saver accounts the individual must:

- name the types of first home saver account products including the range of accounts, associated risks and alternative products
- summarise the product characteristics – eligibility and withdrawal, and government conditions
- explain the taxation issues relating to first home saver accounts.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the financial services and products advice field of work and include access to:

- office equipment, technology, software and consumables
- financial services product information.

Assessors must satisfy NVR/AQTF assessor requirements.

FNSCRD405 Manage overdue customer accounts

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to identify customer accounts which have outstanding payments and negotiate agreements that are monitored for compliance or further action.

It applies to individuals who may use a range of organisational and negotiation skills to plan, manage and monitor their work. This unit may be adapted to meet a range of debt recovery and debt management job roles.

Work functions in the occupational areas where this unit may be used are subject to regulatory requirements. Refer to the FNS Implementation Guide Companion Volume or the relevant regulator for specific guidance on requirements.

Unit Sector

Credit management

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify customers requiring collection activity	1.1 Monitor organisational reporting system regularly for possible overdue accounts 1.2 Access relevant customer information and retrieve records 1.3 Review overdue accounts and customer credit histories in accordance with organisational policy and procedures, and relevant legislation

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
2. Establish contact with customers and attempt to resolve outstanding payment matters	2.1 Determine proposed communication with customers to collect outstanding payments 2.2 Obtain approval to initiate communication with customers from authorised personnel in the organisation and inform other relevant external parties 2.3 Establish rapport with customers and ensure all communication complies with relevant legislation and organisational policy and procedures 2.4 Advise purpose of contact clearly and comprehensively to customers in accordance with legislative requirements
3. Negotiate resolution of outstanding payments	3.1 Advise customers of possibility of legal action and any other implications if outstanding payments are not resolved 3.2 Use appropriate techniques to achieve resolution and record negotiation outcomes accurately 3.3 Schedule further action to be undertaken in relation to outstanding payment matters
4. Monitor agreements to ensure adherence	4.1 Review accounts regularly to ensure that payments are received in accordance with negotiated arrangements 4.2 Address breaches of agreements in accordance with organisational policy and procedures, and legislative requirements 4.3 Refer outstanding payment matters to appropriate personnel as required

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 1.3, 4.1	• Critically evaluates relatively complex texts and other information to determine if action is required
Writing	1.3, 2.1, 2.4, 3.1, 3.2, 3.3	• Documents actions and required information using clear and detailed language specific to the purpose of a range of communications with customers and external entities

© Commonwealth of Australia, 2024 Public Skills Australia

Oral Communication	2.2-2.4, 3.1, 3.2, 4.3	• Clearly articulates requirements using language, tone and pace appropriate to the audience and the environment • Uses careful listening and questioning techniques to negotiate and confirm mutual understanding of the agreement
Numeracy	1.1, 1.3, 4.2	• Uses a range of mathematical skills to interpret accounting records for breaches and calculate overdue amounts
Navigate the world of work	1.3, 2.3, 2.4, 4.2	• Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements • Identifies and acts on issues that contravene relevant policies, procedures and legal requirements in managing customer accounts
Interact with others	2.1-2.4, 3.1, 4.3	• Uses a range of strategies and reads verbal and non-verbal signals to establish a sense of connection and build rapport with customers • Negotiates positive outcomes for complex problematic exchanges • Recognises and accommodates basic differences and priorities of others
Get the work done	1.1-1.3, 3.2-3.3, 4.1-4.2	• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes • Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more complex and non-routine situations • Uses the main features and functions of digital tools to complete work tasks

Assessment Requirements for FNSCRD405 Manage overdue customer accounts

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- follow organisational procedures and policy for identifying overdue accounts and collecting outstanding payments
- communicate effectively with customers, explaining the implications of overdue accounts and alternative payment arrangement options following organisational guidelines and legislative requirements
- apply effective negotiation skills to resolve customer outstanding payment matters
- use the data entry and reporting system correctly to identify and monitor overdue accounts.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and explain organisational policy changes that reflect current developments in the credit management sector
- explain the key steps or actions in legal debt recovery processes
- explain relevant legislative requirements of overdue account review and management
- outline a range of negotiation techniques that can be used in managing overdue customer accounts.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the credit management field of work and include access to:

© Commonwealth of Australia, 2024 Public Skills Australia

- common office equipment, technology and consumables
- credit product information
- relevant software systems and data
- organisational policy and procedures for payment recovery.

Assessors must satisfy NVR/AQTF assessor requirements.

FNSCUS402 Resolve disputes

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to investigate, negotiate and resolve disputes between financial services customers and organisations.

It applies to individuals in any sector of the financial services industry who work with others as part of a formal internal dispute resolution process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Customer service

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Establish that dispute exists	1.1 Identify all information relating to original problem and clarify grounds for dispute 1.2 Contact all parties to identify and clarify disputed issues and confirm that customer has a legitimate dispute, or that initial complaint has not already been settled to customer's satisfaction 1.3 Ensure that organisational operating procedures have been followed and all information relevant to dispute resolution process is provided to customer 1.4 Obtain additional information from relevant parties as required

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	and manage information exchange appropriately 1.5 Inform customer of organisation's obligations, procedures and timeframes where existence of genuine dispute is established
2. Investigate dispute and determine action to be taken	2.1 Collect all information from prior dealings with customer and undertake further investigations if necessary 2.2 Inform customer of progress and advise of any delays 2.3 Determine resolution action with consideration of facts, legislation, organisational policy and procedures and industry codes of practice, and inform appropriate personnel of action to be taken
3. Negotiate and resolve dispute	3.1 Inform customer of decision, including reasons if appropriate, and negotiate with claimant or representative if required 3.2 Resolve dispute effectively and in a timely manner, aiming to reduce need for litigation or formal conciliation services 3.3 Respect rights of customer in all dispute settlement procedures and refer any unresolved disputes to formal conciliation services
4. Finalise dispute	4.1 Record dispute resolution process outcomes and advise all parties affected by the decision clearly and promptly on the outcome and their rights to review of the decision 4.2 Prepare relevant documentation for unresolved disputes which have been referred to formal conciliation services according to legislation, regulations and codes of practice 4.3 Act on decisions of external dispute resolution as required 4.4 Complete all documentation in accordance with legislation and organisational procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 2.3	• Interprets, analyses and assesses a range of textual information from a variety of sources to ensure fully informed and compliant actions

© Commonwealth of Australia, 2024 Public Skills Australia

Writing	1.1-1.5, 2.2, 2.3, 3.1, 3.3, 4.1, 4.2	• Prepares specific, relevant information which clearly informs customer and relevant others of organisation's action and obligations consistent with regulatory requirements and timeframes • Uses logical, organised structures to document decisions and outcomes which comply with legislative and organisational requirements
Oral Communication	1.1-1.5, 2.2, 2.3, 3.1, 3.2, 3.3	• Engages in complex verbal interactions considering aspects of context, purpose and audience • Uses clear and direct language to clarify process, decisions and required actions to customer and others • Uses careful listening and questioning techniques to clarify understanding and elicit all relevant information
Numeracy	1.1, 1.3	• Extracts, interprets and evaluates numerical information relevant to disputes
Navigate the world of work	1.3, 1.5, 2.3, 3.3, 4.2, 4.4	• Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	1.1-1.5, 2.2, 2.3, 3.1, 3.2, 3.3, 4.1	• Selects and uses appropriate conventions and protocols when communicating with internal and external stakeholders involved in disputes • Collaborates and negotiates with others to achieve agreeable outcomes, playing an active role in facilitating consensus in contentious situations • Recognises behaviours and triggers that contribute to conflict and implements strategies to moderate conflict
Get the work done	1.1-1.5, 2.1-2.3, 3.1-3.3, 4.1-4.4	• Organises, plans and sequences own workload • Accesses, interprets and manages dispute documentation and related information • Applies problem-solving processes to address negotiation and related dispute resolution issues • Uses decision-making processes to form recommendations in operational situations • Uses the main features and functions of digital tools to complete work tasks and access information

Assessment Requirements for FNSCUS402 Resolve disputes

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify, investigate and obtain all relevant information relating to the dispute
- apply dispute resolution and negotiation techniques effectively
- settle disputes in the financial services industry in line with organisational policy and procedures, and relevant industry and legislative requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline the possible grounds for dispute
- explain current industry compliance requirements and dispute settling procedures and requirements
- describe current organisational policy and procedures
- identify and explain key requirements of legislation relevant to dispute resolution
- explain effective negotiation principles and dispute resolution practices
- outline the role and process for referring disputes to formal conciliation.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the customer service field of work and include access to:

- common office equipment, technology, software and consumables
- financial services product information
- information about workplace disputes.

FNSORG501 Develop and manage a budget

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to collect and analyse information and apply sound accounting principles to the development and ongoing management of a budget for a small organisation or section of a large organisation.

It applies to individuals who use a range of specialist and managerial techniques to plan, monitor and control budgetary work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Organisational skills

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan for and collect information for budget	1.1 Determine and confirm areas for which budget is being prepared with appropriate personnel, and identify, access and analyse data required for development of budget 1.2 Determine budget parameters with estimates based on research, consultation and negotiation with appropriate personnel 1.3 Consult relevant colleagues in budget planning process as required

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
2. Develop budget	2.1 Draft budget based on analysis of all available information in accordance with organisational policy 2.2 Identify and support income and expenditure estimates with reliable information and circulate draft budget for comment
3. Finalise budget and allocate resources	3.1 Provide final budget which incorporates agreed modifications to appropriate personnel 3.2 Inform personnel affected by budget of its limits and goals in their work area and clarify financial management and reporting responsibilities 3.3 Obtain agreement to budget priorities and allocate resources
4. Monitor and control budget	4.1 Check actual income and expenditure against budget at regular intervals, and prepare and present budget reports to appropriate personnel 4.2 Identify and respond to deviations, take appropriate action and advise relevant personnel on budget status
5. Complete financial and statistical reports	5.1 Complete all required financial and statistical reports accurately within designated timelines 5.2 Make appropriate recommendations about future financial planning 5.3 Provide clearly presented and accurate reports to appropriate personnel

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 2.2, 4.1, 4.2	• Extracts, analyses and monitors complex textual information from a range of sources to determine relevance, accuracy and compliance with organisational policy
Writing	1.1, 1.3, 2.1, 2.2, 3.1, 3.2, 4.2, 5.1, 5.2, 5.3	• Analyses and compiles numerical data and text information to convey specific information and recommendations accurately and effectively to others using clear and detailed language

© Commonwealth of Australia, 2024 Public Skills Australia

		• Demonstrates effective control of text types required by financial and statistical report conventions and documentation
Oral Communication	1.1 -1.3, 3.2, 3.3, 4.1, 4.2, 5.2	• Participates in verbal exchanges of information, demonstrating control of a range of oral techniques to elicit the views and opinions of others and confirm understanding • Clearly articulates requirements and outcomes using language, tone and pace appropriate to the audience and environment
Numeracy	1.1, 1.2, 2.1, 2.2, 3.1, 4.1, 4.2, 5.1, 5.3	• Interprets, analyses and uses numerically expressed data to effectively prepare, monitor, amend and present accurate budgetary information
Navigate the world of work	2.1, 3.2, 5.1	• Works independently and collectively in making decisions about budge requirements in accordance with organisational policy
Interact with others	1.1-1.3, 2.2, 3.1, 3.2, 4.1, 5.3	• Selects and uses appropriate conventions and protocols to gain and provide relevant budgetary information • Plays a lead role in situations requiring effective collaborative skills, demonstrating high level negotiation skills and ability to gather information through consultation
Get the work done	1.1, 1.2, 2.1, 3.3, 4.1, 4.2, 5.1, 5.2	• Accepts responsibility for planning and sequencing complex tasks and workload • Applies systematic and analytical decision-making processes to make recommendations in complex and non-routine situations • Uses digital technologies to access, extract and share relevant information to achieve required outcomes

Assessment Requirements for FNSORG501 Develop and manage a budget

Modification History

Release	Comments
Release 1	This version first released with FNS Financial Services Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- collect and accurately interpret relevant data to develop and finalise a budget
- consult effectively and negotiate outcomes with others on budgetary issues
- accurately complete financial and statistical reports related to budgeting.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the evidence requirements safely and effectively, the individual must:

- define basic accounting and financial services industry terminology
- outline types of data required to develop the budget
- explain accounting techniques relevant to budget preparation and maintenance
- describe budgeting techniques and tools
- describe organisational and industry policy and procedures related to budget development and management.

Assessment Conditions

Assessment must be conducted in a safe environment where evidence gathered demonstrates consistent performance of typical activities experienced in the organisational skills field of work and include access to:

- a range of common office equipment, technology, software and consumables
- an integrated financial software system and data.

Assessors must satisfy NVR/AQTF assessor requirements.

HLTAID002 Provide basic emergency life support

Modification History

Release	Comments
Release 3	Updated mapping information. Changes to assessment requirements. Equivalent outcome.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the New Standards for Training Packages. Significant changes to elements and performance criteria, changes to scope of unit. Changes to evidence requirements relative to revised scope of unit.

Application

This unit describes the skills and knowledge required to recognise and respond to life-threatening emergencies in line with the Australian Resuscitation Council (ARC) Guidelines.

This unit applies to all workers who may be required to provide an emergency response in a range of situations, including community and workplace settings.

Specific licensing /regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Respond to an emergency situation	1.1 Recognise an emergency situation

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
	1.2 Identify, assess and minimise immediate hazards to health and safety of self and others
	1.3 Assess the casualty and recognise the need for first aid response
	1.4 Assess the situation and seek assistance from emergency response services
2. Apply appropriate first aid procedures	2.1 Perform cardiopulmonary resuscitation (CPR) in accordance with ARC guidelines
	2.2 Provide first aid in accordance with established first aid principles
	2.3 Display respectful behaviour towards casualty
	2.4 Obtain consent from casualty where possible
	2.5 Use available resources and equipment to make the casualty as comfortable as possible
	2.6 Operate first aid equipment according to manufacturer's instructions
	2.7 Monitor the casualty's condition and respond in accordance with first aid principles
3. Communicate details of the incident	3.1 Accurately convey incident details to emergency response services
	3.2 Report details of incident to workplace supervisor as appropriate
	3.3 Maintain confidentiality of records and information in line with statutory and/or organisational policies

Foundation Skills

The Foundation Skills described those required skills (such as language, literacy,

© Commonwealth of Australia, 2024 Public Skills Australia

numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTAID002 Provide basic emergency life support

Modification History

Release	Comments
Release 3	Updated mapping information. Changes to assessment requirements. Equivalent outcome.
Release 2	Minor corrections to formatting to improve readability. Equivalent competency outcome.
Release 1	This version was released in *HLT Health Training Package release 1.0* and meets the requirements of the New Standards for Training Packages. Significant changes to elements and performance criteria, changes to scope of unit. Changes to evidence requirements relative to revised scope of unit.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be evidence that the candidate has completed the following tasks in line with state/territory regulations, first aid codes of practice, Australian Resuscitation Council (ARC) guidelines and workplace procedures:

- Followed DRSABCD in line with ARC guidelines, including:
  - performed at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
  - performed at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
  - responded appropriately in the event of regurgitation or vomiting
  - managed the unconscious breathing casualty
  - followed single rescue procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
  - followed the prompts of an Automated External Defibrillator (AED)

© Commonwealth of Australia, 2024 Public Skills Australia

- Responded to at least one simulated first aid scenario contextualised to the candidate's workplace/community setting, including:
  - demonstrated safe manual handling techniques
  - provided an accurate verbal or written report of the incident
- Applied first aid procedures for the following:
  - allergic reaction
  - anaphylaxis
  - bleeding control
  - choking and airway obstruction
  - respiratory distress, including asthma
  - shock

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- State/Territory regulations, first aid codes of practice and workplace procedures including:
  - ARC Guidelines relevant to provision of CPR and first aid
  - safe work practices to minimise risks and potential hazards
  - Infection control principles and procedures, including use of standard precautions
  - requirements for currency of skill and knowledge
- legal, workplace and community considerations, including:
  - awareness of potential need for stress-management techniques and available support following an emergency situation
  - duty of care requirements
  - respectful behaviour towards a casualty
  - own skills and limitations
  - consent
  - privacy and confidentiality requirements
  - importance of debriefing
- considerations when providing basic emergency life support, including:
  - airway obstruction due to body position
  - appropriate duration and cessation of CPR
  - appropriate use of an AED
  - chain of survival
  - standard precautions
- principles and procedures for first aid management of the following scenarios:
  - allergic reaction
  - anaphylaxis
  - bleeding control

© Commonwealth of Australia, 2024 Public Skills Australia

  - cardiac conditions, including chest pain
  - chocking and airway obstruction
  - respiratory distress, including asthma
  - shock
  - stroke
- basic anatomy and physiology relating to:
  - considerations in provision of first aid for specified conditions
  - chest
  - how to recognise a person is not breathing normally
  - response/consciousness
  - upper airway and effect of positional change

Assessment Conditions

Skills must be demonstrated working individually in an environment that provides realistic in-depth, industry-validated scenarios and simulations to assess candidates' skills and knowledge.

Assessment resources must include:

- adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device
- AED training device
- placebo bronchodilator and spacer device
- roller bandages
- triangular bandage
- workplace First Aid kit
- workplace injury, trauma and/or illness record, or other appropriate workplace incident report form
- wound dressing

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessor requirements

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

In addition hold current first aid certificate HLTAID003 or higher.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role.

There must be demonstrated evidence that the candidate has completed the following tasks at least once in line with state/territory regulations, first aid codes of practice, Australian Resuscitation Council (ARC) guidelines and workplace procedures:

- conducted a hazard assessment and identified strategies to minimise risk
- demonstrated safe manual handling techniques
- assessed airway, breathing and responsiveness of casualty
- performed at least four minutes of uninterrupted CPR on both an infant resuscitation manikin and an adult resuscitation manikin placed on the floor, demonstrating the following techniques on each:
  - checking for response and normal breathing
  - recognising abnormal breathing
  - opening and clearing the airway
  - using correct hand location, compression depth rate in line with the ARC recommended ratio of compressions and ventilations
  - acting in the event of regurgitation or vomiting
  - following single rescuer procedure, including the demonstration of a rotation of operators with minimal interruptions to compressions
- followed the prompts of an Automated External Defibrillator (AED)
- conducted a verbal secondary survey

© Commonwealth of Australia, 2024 Public Skills Australia

- applied first aid procedures for the following:
  - allergic reactions
  - anaphylaxis
  - asthma
  - basic wound care
  - severe bleeding
  - burns
  - cardiac arrest
  - choking and airway obstruction
  - convulsions
  - envenomation (using pressure immobilisation)
  - fractures, sprains and strains (using arm slings, roller bandages or other appropriate immobilisation techniques)
  - poisoning
  - respiratory distress
  - shock
- provided an accurate verbal report of the incident
- responded to at least two simulated emergency scenarios contextualised to the candidate's workplace/community setting.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- state/territory regulations, first aid codes of practice and workplace procedures including:
  - ARC Guidelines relevant to provision of CPR and first aid
  - safe work practices to minimise risks and potential hazards
  - infection control principles and procedures, including use of standard precautions
  - requirements for currency of skill and knowledge
- legal, workplace and community considerations including:
  - need for stress-management techniques and available support following an emergency situation
  - duty of care requirements
  - respectful behaviour towards a casualty
  - own skills and limitations
  - consent
  - privacy and confidentiality requirements
  - importance of debriefing
- considerations when providing first aid including:
  - airway obstruction due to body position

© Commonwealth of Australia, 2024 Public Skills Australia

  - appropriate duration and cessation of CPR
  - appropriate use of an AED
  - standard precautions and infection control
- principles and procedures for first aid management of the following scenarios:
  - abdominal injuries
  - allergic reactions
  - anaphylaxis
  - bleeding control
  - burns
  - cardiac conditions
  - choking and airway obstruction
  - cold and crush injuries
  - diabetes
  - dislocations
  - drowning
  - envenomation
  - environmental impact (including hypothermia, hyperthermia, dehydration and heat stroke)
  - epilepsy
  - eye and ear injuries
  - fractures
  - head, neck and spinal injuries
  - minor skin injuries
  - needle stick injuries
  - poisoning and toxic substances
  - respiratory distress, including asthma and other respiratory conditions
  - seizures
  - severe allergic and anaphylactic reactions
  - shock
  - soft tissue injuries
  - unconsciousness, abnormal breathing or not breathing
- basic anatomy and physiology relating to:
  - absence of normal breathing
  - anatomy of the external chest
  - physiology relating to response/consciousness
  - upper airway anatomy and effect of positional change
  - anatomy and physiology considerations in provision of first aid for specified conditions

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Skills must be demonstrated working individually:

- in an environment that provides realistic in-depth, industry-validated scenarios and simulations to enable assessment of candidates' skills and knowledge.

Assessment resources must include:

- adult and infant resuscitation manikins in line with ARC Guidelines for the purpose of assessment of CPR procedures
- first aid equipment including
  - roller bandages
  - triangular bandages cloth
  - trauma dressings
  - placebo bronchodilator and spacer device
  - adrenalin auto-injector training device
  - an AED training device
  - emergency rescue blanket
  - workplace first aid kit.

Simulated assessment environments must simulate the real-life working environment where these skills and knowledge would be performed, with all the relevant equipment and resources of that working environment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

In addition, assessors must hold:

- a current advanced first aid certificate

OR

- at least three years' experience as a health professional, nurse or emergency services provider.
-

HLTDEF001 Participate in a land based deployed health capability

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Application

This unit describes the skills and knowledge required to prepare for deployment and function effectively at the operational level as part of a deployed health element.

This unit applies to Australian Defence Force (ADF) personnel working under direction in the context of a land based operational environment. Operational environments vary in accordance with Government directives and include war fighting, peacekeeping and humanitarian assistance.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Prepare for deployment	1.1 Check stores and equipment to ensure they are operational and prepared for movement and complete required documentation 1.2 Safely pack and load dedicated stores and equipment

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	to facilitate anticipated transport outcomes
	1.3 Complete personal preparation for deployment according to requirements
2. Participate in deployment activities	2.1 Use effective communication and teamwork skills
	2.2 Prioritise work in consultation with other members of the team
	2.3 Set up designated work areas, stores and equipment for use
	2.4 Identify equipment and basic facility shortfalls and report to supervisor
3. Operate within a deployed health capability element	3.1 Receive and transfer patients in accordance with operational procedures
	3.2 Adapt to specific deployment requirements in performance of operational duties
4. Participate in re-deployment activities	4.1 Work effectively as part of a team to re-deploy the health element
	4.2 Refurbish stores and equipment for future operations
	4.3 Identify stores and equipment shortfalls and report to supervisor
	4.4 Safely pack and load dedicated stores and equipment for redeployment
	4.5 Participate in debriefing/evaluation activities to improve future deployments and address individual's needs

© Commonwealth of Australia, 2024 Public Skills Australia

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTDEF001 Participate in a land based deployed health capability

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- completed the following according to the overarching operational mandate and standing orders, policies and instructions for that deployment:
  - participated in core role as an effective member of a deployed health capability over a 36-hour period
  - completed the following individual preparations:
    - inoculations
    - fitness and medical/dental checks
    - personal kitting
    - wills
  - loaded, set-up and operated the following stores and equipment using safe manual handling techniques:
    - tentage
    - medical equipment
    - power systems
    - general field equipment
    - personnel kitting
  - erected deployment shelters
  - adapted to the unique requirements of a specific deployment
- used effective communication and teamwork skills:

© Commonwealth of Australia, 2024 Public Skills Australia

- active listening
- questioning
- feedback
- information sharing
- collaborative planning

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- legal, ethical and military requirements for working in land based deployment:
  - codes of practice
  - duty of care
  - infection prevention and control
  - informed consent
  - mandatory reporting
  - privacy, confidentiality and disclosure
  - records management and documentation
  - rights and responsibilities of workers, employers and clients
  - specific military information sources that inform work practice:
    - ADF publications
    - health policy directives
    - land warfare manuals
    - Law of Armed Conflict (LOAC)
    - Geneva conventions
    - maritime and aviation orders
    - operational mandate
    - operational/movement orders and expectations
    - organisation/unit standard operating procedures
    - current operational mandate
  - work role boundaries – responsibilities and limitations
  - work health and safety
- organisation policies and procedures pertinent to own capability
- individual readiness requirements
- manual handling techniques that support safe work practice and safe loading:
  - preparing the load/client
  - preparing the environment
  - using the stronger muscles in the legs where possible, rather than spinal muscles
  - maintaining a neutral spine when lifting and carrying

© Commonwealth of Australia, 2024 Public Skills Australia

  - using two hands to lift or carry
  - keeping the load close to the body/centre of gravity
  - avoiding lifting objects above shoulder height
  - minimising repetitive movements
  - positions not held for long periods of time
  - avoiding twisting by repositioning feet whilst turning
- equipment and stores operating instructions and maintenance requirements pertaining to designated deployment logistics
- general health element components, organisation of roles and associated support (i.e. Roles 1, 2 & 3**)** logistical supply chain for the deployment
- operational posture requirements (duty systems, weapons, daily routines, shifts and rosters, local defence procedures, movements orders and environmental constraints)
- role of other health care providers and capabilities
- set-up and operation of equipment contained within own health capability
- structure, function and layout of own health capability

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions over a continuous 36 hour period. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a simulated operations area requiring the establishment of a health element to support the embedded forces
  - multiple mannequins, actors and support staff to establish a working environment for operations and participate in military based scenarios
  - a land based health element
  - catering, shelter, hygiene facilities (personnel barracks/sleeping quarters)
  - transport vehicles
- modelling of industry operating conditions, including presence of, and interaction with, sufficient personnel to support the exercise requirements

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors. In addition, assessors must have at least 3 years' experience as a military officer/senior non-commissioned officer (SNO) with deployment experience for all military components.

Subject matter experts with a minimum of 3 years clinical experience will also be required for any clinical scenarios assessed during the exercise.

HLTPOP002 Monitor and maintain sewage systems

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 3.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTPOP216D/HLTPOP217D. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Application

This unit describes the skills and knowledge required to identify the basic way in which sewage systems function and the strategies needed to maintain sewage systems in the community.

This unit applies to work in a public health context and workers at this level will work under supervision and within defined guidelines.

Plumbing work must only be performed by a person authorised by registration or licence granted by the relevant State or Territory regulatory authority under legislation.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes.	*Performance criteria specify the level of performance needed to demonstrate achievement of the element.*
1. Identify potential problems and faults with sewage systems in the community	1.1 Identify components of the sewage system in the community 1.2 Check for signs of contamination and identify potential problems that can occur with sewage systems and household plumbing and fixtures, including septic tanks
2. Monitor and maintain the sewage system	2.1 Identify strategies required to prevent the transmission of disease through sewage disposal 2.2 Develop and implement a work plan in relation to the identified strategies in conjunction with supervisor 2.3 Report any difficulties or problems to supervisor in accordance with organisation policy and procedure 2.4 Refer any problems or difficulties that are outside own area of responsibility or expertise to appropriate people or agencies

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit

Assessment Requirements for HLTPOP002 Monitor and maintain sewage systems

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 3.0* and meets the requirements of the 2012 Standards for Training Packages. Merged HLTPOP216D/HLTPOP217D. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- identified at least 2 potential health risks or problems associated with sewage systems and developed and implemented a work plan that includes strategies to deal with each issue.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in the elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- legal and organisation requirements relating to sewage systems work, including:
  - organisation standards, policies and procedures, including:
    - infection control
    - manual handling
    - personal protective equipment
    - immunisation requirements and/or recommendations
  - scope of own role and responsibilities
  - approvals required and process of obtaining approvals
  - referral agencies and procedures

© Commonwealth of Australia, 2024 Public Skills Australia

- household plumbing design and fixtures and the way in which effluent and sullage waste leaves the house or building to go out to the waste disposal system
- water and sewerage plans for the community, if available
- type, design and components of the sewage system in the community and how they function, including:
  - septic or onsite systems
  - sewage or effluent systems
- what sewage is and the difference between effluent (black) and sullage (grey) water
- causes of common faults, risks and problems associated with household plumbing and sewage systems and how to identify and prevent them
- sewerage disposal strategies for communities or outstations without a sewerage disposal system (onsite and/or septic system or sewerage and/or effluent system), including knowledge of grease trap and soakage pit, pit toilets and shallow trench latrines.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - work health and safety (WHS) procedures
  - personal protective equipment
  - organisation guidelines and procedures
  - suitable work area, equipment and materials
- modelling of industry operating conditions.

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

ICAICT206A Install software applications

Modification History

Release	Comments
Release 1	This Unit first released with *ICA11 Information and Communications Technology Training Package version 1.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to select, install or upgrade basic commercial software applications.

Application of the Unit

This unit applies to workers who require the information and communications technology (ICT) skills to select, install and upgrade basic commercial software applications within a small to large office environment. Communicating effectively and supporting software application packages are key components of any ICT business or office environment.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
Elements describe the essential outcomes of a	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised*

Element	Performance Criteria
unit of competency.	*text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Determine software or software upgrade requirements	1.1 Document ***client*** requirements and report to ***appropriate person*** 1.2 Act on instructions to meet client requirements, according to ***organisational requirements***
2. Obtain software or software upgrade	2.1 Investigate and select a ***software application program*** that best conforms to requirements and organisational policies 2.2 Obtain application program under instruction from appropriate ***person*** 2.3 Determine ***licensing requirements*** and record, according to organisational guidelines 2.4 Ensure target ***computer*** conforms to the minimum hardware and ***operating system*** requirements of the ***application program***
3. Install or upgrade software	3.1 Install new or upgraded ***software application program*** according to ***appropriate person*** or organisational instructions 3.2 Complete the installation process efficiently and effectively to minimise disruption 3.3 Carry out testing and acceptance, according to corporate guidelines, paying particular attention to possible ***effect*** on other systems 3.4 Ensure client requirements are satisfied 3.5 Refer outstanding ***client*** issues to ***appropriate person*** as necessary

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

© Commonwealth of Australia, 2024 Public Skills Australia

- communication skills to:
  - communicate with peers and supervisors
  - support software application deployment
- literacy skills to:
  - interpret user manuals and help functions
  - make decisions about licensing requirements
  - read and write basic workplace documents
  - seek assistance and expert advice
- technical skills to:
  - carry out testing
  - upload and install software
  - use computer hardware.

Required knowledge

- broad general knowledge of:
  - client business domain
  - hardware storage devices
  - input and output devices
  - licensing arrangements and responsibilities
  - operating systems supported by the organisation
  - organisational guidelines for purchasing
  - software application packages
  - software copyright responsibilities.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • install software applications through operating system instructions • configure computer to accept new software or upgrade

© Commonwealth of Australia, 2024 Public Skills Australia

	• carry out testing and acceptance according to corporate guidelines.
Context of and specific resources for assessment	Assessment must ensure access to: • PC where software installation may be performed • use of application software currently used in industry • documents detailing organisational testing and acceptance policy and procedures • appropriate learning and assessment support when required. Where applicable, physical resources should include equipment modified for people with special needs.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • verbal or written questioning to assess candidate's underpinning knowledge of software upgrade requirements, current industry standard application software and acceptance testing procedures • direct observation of candidate upgrading or installing new software.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate. Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed. Indigenous people and other people from a non-English speaking background may need additional support. In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2024 Public Skills Australia

Client may include:	• employees • external organisations • individuals • internal departments.
Appropriate person may include:	• authorised business representative • client • supervisor.
Organisational requirements may include:	• budget • corporate purchasing • guidelines • licensing arrangements.
Software application program may include:	• database programs • email programs • internet browsers • spreadsheets • system browsers • word processing.
Licensing requirements may include:	• cost of licence • number of licences required • support provided • type of licence.
Computer may include:	• laptops • servers • workstations.
Operating system may include:	• Mac OS X • Linux • Windows.
Effect may relate to:	• data entry • effect on normal business • installation time • problems.

Unit Sector(s)

General ICT

ICAICT302A Install and optimise operating system software

Modification History

Version	Comments
ICAICT302A	This version first released with *ICA11 Information and Communications Technology Training Package version 1.0*

Unit Descriptor

This unit defines the performance outcomes, skills and knowledge required to install operating system (OS) software and to make adjustments as a means of optimising the system to accommodate business and client needs.

Application of the Unit

This unit applies to individuals in a technical support role who are required to identify the most suitable OS to meet organisational requirements. The unit develops the ability to install, configure and optimise the OS to identified vendor specifications.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
Elements describe the essential outcomes of a	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised*

© Commonwealth of Australia, 2024 Public Skills Australia

Element	Performance Criteria
unit of competency.	*text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Determine function of operating system	1.1 Identify and demonstrate understanding of the purposes of ***operating system***
	1.2 Distinguish between batch system, real-time system, multi-tasking system
	1.3 Compare and contrast different operating systems and their features
	1.4 Identify and demonstrate knowledge of the basic functions of operating system, including file system, memory management, process scheduling
	1.5 Identify and demonstrate management of virtual memory
2. Obtain operating system	2.1 Contact operating system vendors to obtain technical specifications and system requirements
	2.2 Identify the process and steps required to install and configure the operating system using ***installation components***
	2.3 Document adjustment recommendations and provide to ***appropriate person***
	2.4 Determine and apply knowledge of licensing, hardware and security requirements
3. Install, configure and optimise operating system	3.1 Install, configure and test operating system using installation components and ***boot-utility options***
	3.2 Use the relevant ***operating system user interface*** to correctly configure the installation
	3.3 Optimise the system to meet ***organisational requirements***
	3.4 Document the system according to organisational requirements
	3.5 Install the operating system with minimal disruption to ***client*** or users
4. Provide instruction to meet new software	4.1 Provide one-to-one instruction about changes to the client or users as required

© Commonwealth of Australia, 2024 Public Skills Australia

requirements	4.2 Obtain client evaluation about new system to ensure requirements are met, using appropriate ***feedback mechanism***

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - liaise with people working across different levels and in different contexts, such as operating system vendors and clients
- literacy skills to:
  - interpret technical computer installation manuals
  - obtain written and verbal feedback from clients
  - present information, such as the use of diagnostic tools
  - provide verbal instructions to client
- technical skills to:
  - install and configure operating system software
  - write instructions for clients.

Required knowledge

- current industry-accepted hardware and software products
- functions and features of operating systems used by the organisation
- installation and configuration of systems software
- architecture of current technical systems
- deployment of current organisational systems
- organisational requirements for operating system software
- prerequisites for system software installation
- set-up and configuration procedures
- software packages supported by the organisation
- system's current functionality
- system's diagnostic software
- vendor specifications and requirements for installation.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

© Commonwealth of Australia, 2024 Public Skills Australia

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • install, configure and test an operating system to improve system performance with minimum disruption to clients.
Context of and specific resources for assessment	Assessment must ensure access to: • personal computer where installation may be performed • OS software and technical documentation • organisational documentation • appropriate learning and assessment support when required • modified equipment for people with special needs.

Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit:
	• direct observation of candidate:
	  • questioning team members, supervisors and clients
	  • installing and testing an operating system
	• review of candidate's practical assignments and reports.

Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate. Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed. Indigenous people and other people from a non-English speaking background may need additional support. In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

© Commonwealth of Australia, 2024 Public Skills Australia

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Operating system may include:	• Linux:
	  • Debian
	  • Fedora
	  • Google Chrome OS
	  • Kubuntu
	  • Linux Mint
	  • Red Hat
	  • Ubuntu
	• Mac OS X
	• Microsoft Windows:
	  • Windows 2000
	  • Windows XP (32 bit versus 64 bit)
	  • Windows Vista (32 bit versus 64 bit)
	  • Windows 7 (32 bit versus 64 bit)
	• mobile operating systems:
	  • Android
	  • Blackberry
	  • iPhone
	  • Palm
	  • Symbian
	  • Windows Phone 7 series.

Installation components may include:	• configure power management:
	  • hibernate
	  • sleep timers
	  • standby
	  • suspend
	  • wake on local area network (LAN)
	• demonstrate safe removal of peripherals
	• device manager:
	  • driver signing
	  • install and update devices drivers

© Commonwealth of Australia, 2024 Public Skills Australia

	• verify
	• directory structures:
	  • create folders
	  • navigate directory structures
	• disk preparation order:
	  • format drive
	  • partition
	  • start installation
	• files:
	  • attributes
	  • creation
	  • extensions
	  • permissions
	• file systems, such as FAT32 versus new technology file system (NTFS)
	• installation methods:
	  • boot media, such as DVD, CD, floppy or universal serial bus (USB)
	  • factory recovery partition
	  • install from image
	  • network installation
	  • recover CD
	• operating system installation options:
	  • file system type
	  • network configuration
	  • repair install
	• user data migration - user state migration tool (USMT)
	• verification of hardware compatibility and minimum requirements
	• virtual memory.

Appropriate person may include:	• authorised business representative • client • supervisor.
Boot-utility options may include:	• automated system recovery (ASR) • boot options • boot to restore point • disk boot order or device priority • emergency repair disk (ERD) • recovery console • recovery options • safe mode

© Commonwealth of Australia, 2024 Public Skills Australia

	• types of boot devices (disk, network, USB).

Operating system user interface may include:	• Windows-adopting interface to undertake similar tasks with chosen operating system:
	  • administrative tools, such as performance monitor, event viewer, services and computer management
	  • command prompt utilities, such as ipconfig, Ping and Telnet
	  • control panel
	  • location of basic network settings between OS versions
	  • MMC
	  • my computer
	  • my network places or home group
	  • run line utilities:
	  • cmd
	  • direct diagnostics (DXdiag)
	  • msconfig
	  • MSINFO32
	  • REGEDIT
	  • start menu
	  • task bar or systray
	  • task manager
	  • Windows Explorer - Libraries in Windows 7.

Organisational requirements may include:	• availability of system to be optimised • client support documentation • in-house or vendor • contracting arrangements relating to IT purchasing • IT policy and procedures relating to service levels and installation • level of complexity of technical manuals.
Client may include:	• department within the organisation • person with special needs • person within a department • third party.
Feedback mechanism may include:	• interview • meeting • questionnaire • survey.

ICAICT303A Connect internal hardware components

Modification History

Release	Comments
Release 1	This Unit first released with *ICA11 Information and Communications Technology Training Package version 1.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to modify and connect system hardware components according to client and user requirements.

Application of the Unit

This unit applies to support technicians who modify and connect system components. Ensuring the integrity of the system after the operation is critical in the context of minimising client disruption and need for continuing desktop operation.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
Elements describe the essential outcomes of a unit of competency.	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills*

© Commonwealth of Australia, 2024 Public Skills Australia

Element	Performance Criteria
	and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1. Identify, categorise and distinguish between the different types of internal hardware components	1.1 Identify and categorise the different ***internal hardware components*** 1.2 Explain the purpose and characteristics of the different internal hardware component categories 1.3 Distinguish between the different types of devices within each internal hardware component category
2. Determine components required	2.1 Identify and clarify user internal hardware component requirements according to ***organisational guidelines*** 2.2 Organise and record user component requirements, pass on to ***appropriate person*** for evaluation and vendor selection
3. Obtain components	3.1 Contact vendors to obtain technical specifications for the proposed components 3.2 Assess the options and provide recommendations to the appropriate person for final analysis 3.3 Obtain components to prepare for installation
4. Install components	4.1 Develop plans, with prioritised tasks and contingency arrangements, for the installation of selected components with minimum disruption to ***clients*** 4.2 Liaise with appropriate person to obtain approval for the plans 4.3 Install and configure components according to plan, installation procedures and ***organisational requirements*** 4.4 Test components for error-free performance, using available technology 4.5 Identify and resolve identified problems 4.6 Test and enhance system performance, using knowledge of the system, to meet organisational benchmarks 4.7 Document the installation and configuration process according to organisation guidelines
5. Evaluate modified	5.1 Collect client or user feedback and analyse against client

© Commonwealth of Australia, 2024 Public Skills Australia

system	requirements 5.2 Correct identified shortcomings in the system and record actions

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - consult with peers and supervisors, and internal and external clients
  - interpret technical computer installation manuals
  - interpret user manuals and help functions
- literacy skills to:
  - organise resources for one-to-one instruction
  - plan, prioritise and organise work
  - write technical reports and maintain records
- planning and organisational skills to address technical issues
- problem-solving skills to anticipate and respond to a range of driver-related errors that may arise
- technical skills to:
  - comprehend how the operating system will communicate with the installed component
  - install components
  - test components using available technology
  - test system performance.

Required knowledge

- areas of the operating system relevant to configuration and testing
- current industry-accepted hardware and software products
- environmental considerations in e-waste disposal
- organisational guidelines and organisational requirements with regard to safety, recycling and component installation
- system's diagnostic software and current functionality
- vendor specifications and requirements for component installation.

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • identify and categorise the different types of internal hardware components • modify system's hardware to meet client requirements • plan the modification and connect internal hardware components according to vendor and technical specifications • install components across a variety of situations and account for unexpected contingencies.
Context of and specific resources for assessment	Assessment must ensure access to: • personal computer and internal hardware components for installation • current industry standard performance testing software • documents detailing organisational guidelines and requirements • technical manuals and tools • appropriate learning and assessment support when required • modified equipment for people with special needs. Note: The careful planning and promotion of hardware upgrades and changes are critical to the effective support of business functions. Hardware modifications need to be risk managed similar to other business processes. The effective management and execution of the component maintenance and replacement process may significantly determine the amount of downtime a company encounters.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • verbal or written questioning to assess candidate’s knowledge of system diagnostic software and system functionality • direct observation of candidate connecting internal hardware components • evaluation of client requirements and candidate’s final recommendations

© Commonwealth of Australia, 2024 Public Skills Australia

	• review of candidate's written notes. Note: Evidence for assessment from industry or vendor-certified training may be presented for the whole or part of this unit depending on the range of variables and performance criteria.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate. Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed. Indigenous people and other people from a non-English speaking background may need additional support. In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Internal hardware components may include:	• adapter card components:
	  • communications:
	  • modem
	  • network interface card (NIC)
	  • I/O:
	  • parallel
	  • small computer system interface (SCSI)
	  • serial
	  • universal serial bus (USB)
	  • multimedia:
	  • capture cards
	  • sound card
	  • TV tuner cards
	  • video:

ICASAS203A Connect hardware peripherals

Modification History

Release	Comments
Release 1	This Unit first released with *ICA11 Information and Communications Technology Training Package version 1.0*

Unit Descriptor

This unit describes the performance outcomes, skills and knowledge required to connect hardware peripherals according to instructions.

Application of the Unit

This unit applies to workers who require the information and communications technology (ICT) skills to connect a variety of hardware peripherals to different configurations and types of ICT equipment. Communicating effectively, and simplifying and solving technical incompatibility conflicts and problems are key components of this ICT support role.

Licensing/Regulatory Information

No licensing, legislative, regulatory or certification requirements apply to this unit at the time of endorsement but users should confirm requirements with the relevant federal, state or territory authority.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Element	Performance Criteria
Elements describe the essential outcomes of a	*Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text*

Element	Performance Criteria
unit of competency.	*is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.*

Elements and Performance Criteria

1. Confirm client requirements	1.1 Identify and confirm ***peripheral*** requirements of ***client*** according to ***organisational standards***
	1.2 Document client requirements and peripherals needed and report findings to the appropriate person according to organisational standards
	1.3 Verify client requirements with ***appropriate person*** according to organisational standards and reporting procedures
	1.4 Take action to ensure client support expectations are covered by vendor warranty and support services
2. Obtain required peripherals	2.1 Obtain peripherals under instruction from appropriate person
	2.2 Enter details of peripherals into ***equipment inventory*** according to organisational standards
	2.3 Validate that contents of delivered components and physical contents match the packing list and resolve discrepancies if necessary
	2.4 ***Store*** peripherals according to vendors guidelines
3. Connect hardware peripherals	3.1 Verify timeframe for installation schedule with client
	3.2 Remove old peripherals with minimal disruption to clients if they are to be replaced, taking into account ***environmental considerations*** and ***OHS standards***
	3.3 Connect new peripherals with minimum disruption to clients, taking into account ***operating system*** procedures
	3.4 Configure computer to accept new peripherals
	3.5 Test hardware peripherals and confirm client satisfaction, paying particular attention to possible effect on other systems and making adjustments as required

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- customer service and conflict-resolution skills to:
  - ensure proposed actions are consistent with client's expectations
  - transfer and collect information
- literacy skills to:
  - document client requirements
  - follow vendor guidelines
  - present information
  - update equipment inventory
- negotiation skills to interact with other team members and clients
- problem-solving skills to resolve routine installation and configuration issues
- technical skills and decision-making skills to:
  - ensure compatibility of peripherals with operating system
  - remove and install peripherals
  - undertake maintenance procedures.

Required knowledge

- broad general knowledge of:
  - computer operating systems
  - help desk and maintenance practices
  - peripheral devices
  - OHS procedures for electrical equipment
  - interconnectivity of technical system components
- current industry-accepted hardware and software products
- detailed knowledge of inventory procedures
- organisational guidelines relating to external suppliers and vendors.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

© Commonwealth of Australia, 2024 Public Skills Australia

Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence of the ability to: • safely connect several different types of hardware peripherals to the system according to vendor instructions with a minimum of downtime using known routines and procedures • locate, interpret and use vendor documentation related to connection and storage of hardware peripherals • test operation of newly installed hardware peripherals and confirm client satisfaction • adhere to OHS regulations when working with electrical equipment.
Context of and specific resources for assessment	Assessment must ensure access to: • sites with a representative range of workstations, hardware peripherals, internet connections, cabling, and software to be installed, interconnected and configured • hardware and software currently used in industry • technical documentation, including organisational hardware blueprint • vendor support • appropriate learning and assessment support when required. Where applicable, physical resources should include equipment modified for people with special needs.
Method of assessment	A range of assessment methods should be used to assess practical skills and knowledge. The following examples are appropriate for this unit: • direct observation of candidate installing, connecting and configuring hardware peripheral devices • review of reports that document client requirements and peripherals completed for different scenarios and situations • verbal or written questioning to assess candidate's ability to locate, use and interpret vendor documentation • direct observation of candidate testing hardware peripherals added to a system.
Guidance information for assessment	Holistic assessment with other units relevant to the industry sector, workplace and job role is recommended, where appropriate. Assessment processes and techniques must be culturally appropriate, and suitable to the communication skill level, language, literacy and numeracy capacity of the candidate and the work being performed. Indigenous people and other people from a non-English speaking

	background may need additional support. In cases where practical assessment is used it should be combined with targeted questioning to assess required knowledge.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Peripheral may include:	• Bluetooth device • firewire (IEEE 1394) device • hard drive • keyboard • laptop • mobile phone • modem • mouse • multimedia kit • pen • personal digital assistant (PDA), such as palmtop • printer • scanner • speaker • tape cartridge • touch pad • universal serial bus (USB) device • wireless fidelity (wi-fi) router.
Client may include:	• external organisations • individuals • internal departments.
Organisational standards may include:	• communication methods • content of emails • dispute resolution • document procedures and templates • downloading information and accessing particular websites • financial control mechanisms

© Commonwealth of Australia, 2024 Public Skills Australia

	• opening mail with attachments • personal use of emails and internet access • virus risk.
Appropriate person may include:	• authorised business representative • client • help-desk person • subject matter expert • supervisor • system administrator.
Equipment inventory may include detailed lists of peripherals, including:	• hard drives • hubs • modems or other connectivity devices • monitors • other peripheral devices • personal computers • PDA • printers • switches.
Store may include:	• anti-static packaging • controlled humidity • controlled temperature • secure storage area • shock and vibration minimisation • silica gel desiccant • stacking limits.

Environmental considerations may include:	• recycling of packaging:
	  • cardboard
	  • paper
	  • polystyrene
	• recycling or disposal of ewaste:
	  • cathode ray tube (CRT) monitors
	  • printed circuit boards
	  • redundant hardware.

OHS standards may include:	• electrical safety • safe lifting methods • ventilation.
Operating system may include:	• GNUs Not Unix (GNU) • Linux • Mac OS X • Microsoft Windows

© Commonwealth of Australia, 2024 Public Skills Australia

	• Unix-like operating systems:
	  • HP-UX
	  • IBM AIX
	  • Silicon Graphics IRIX
	  • Sun Solaris.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

- communication skills to:
  - clarify instructions
  - communicate with peers and supervisors
  - present information
  - seek assistance and expert advice
- literacy skills to:
  - interpret user manuals, technical documentation and help functions
  - read and write basic workplace documents
- problem-solving skills to address common operational problems when carrying out system backup and recovery
- technical skills to perform:
  - backup and recovery operations
  - basic diagnostic tests in system integrity.

Required knowledge

- broad knowledge of:
  - organisational standards regarding:
    - backup and recovery procedures and operations
    - label and store backups
  - current industry-accepted hardware and software products
  - current viruses and protection methods
  - diagnostic tools
  - inventory procedures
  - maintenance procedures
  - storage and retrieval guidelines
  - system performance
- software copyright and general public licence (GPL) or copyright responsibilities.

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

ICTICT103 Use, communicate and search securely on the internet

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to connect to the internet, securely send and receive emails, search the internet using web browsers and interact securely and in a socially responsible manner with a range of different internet sites.

It applies to individuals who use business technology to perform a range of routine tasks in the workplace or home office with limited responsibility.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Connect to and access the internet	1.1 Connect to internet via existing internet connection and confirm functionality 1.2 Open internet browser and set home page of personal choice by setting internet options 1.3 Ensure internet browser software security 1.4 Adjust display of the internet browser to suit personal requirements

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	1.5 Modify toolbar to meet user and internet browser needs 1.6 Access a particular website, note privacy and other conditions of use, and retrieve data 1.7 Use socially responsible behaviour when sharing information on the internet 1.8 Enter uniform resource locator (URL) in address line of internet browser
2. Use email for communications	2.1 Open email application package, create new email message and add addressees 2.2 Compose text of an email message according to organisational guidelines, and spell check and edit text as required 2.3 Create and add an automatic signature for the user 2.4 Attach files to email message where required 2.5 Determine and set priority and send email message 2.6 Reply to and forward a received message using available features 2.7 Open and save an attachment to the relevant folder 2.8 Search for, sort and save email message using available settings 2.9 Adjust email accounts to restrict and quarantine possible email security problems 2.10 Print email message as required
3. Search the internet	3.1 Review organisational guidelines on internet access 3.2 Open internet application and locate and access a search engine on the internet, and define search expressions based on data required 3.3 Enter appropriate key words into the search engine to locate desired information 3.4 Refine a search depending on outcomes of original search 3.5 Save search expression results and present them in a report according to information requirements 3.6 Create a bookmark within the internet browser or a link for the required web page for the key results 3.7 Save key results in a bookmark folder 3.8 Modify internet browser options for printing and print a

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	web page 3.9 Close internet browser
4. Access and use consumer specific sites on the internet	4.1 Identify, access and review information specific sites to gain consumer information 4.2 Identify and use internet application sites to lodge details and gain access and information 4.3 Access and use online forms on the internet
5. Undertake online transactions	5.1 Access online transaction site 5.2 Ensure security of transaction site 5.3 Enter required information into fields on merchant's website 5.4 Ensure pop-up dialog boxes, prompts or feedback mechanisms are completed 5.5 Enter, check and make changes to preferred transaction options 5.6 Complete online transaction 5.7 Record and archive receipts according to business processes 5.8 Close down and leave transaction process
6. Conduct an advanced search	6.1 Use search tools and advanced search features 6.2 Use Boolean search techniques when required to enhance the search 6.3 Use multiple or meta-search tools with a range of key words 6.4 Use search engines particular to a field of knowledge to refine the outcome 6.5 Access related virtual community sites and newsgroups, and note their objectives and operational arrangements 6.6 Conduct a search with domain names to refine the search
7. Use information that has been located	7.1 Cross reference information found by using several websites to determine accuracy of information 7.2 Check date that website was last updated or properties of website to determine currency of information 7.3 Determine website authority by looking at copyright statements, privacy statements and organisational information 7.4 Save and print information found in different file forms

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.3, 1.6, 2.1, 2.6-2.8, 3.1, 3.2, 4.1-4.3, 5.1, 5.2, 5.4, 5.5, 6.5, 7.1-7.3	• Interprets textual information and instructions to efficiently undertake the task
Writing	2.1-2.3, 3.5, 5.3, 5.4, 5.7	• Uses required format to accurately enter information specific to requirements • Composes short and specific messages using format, grammar and language appropriate to audience
Navigate the world of work	1.7	• Understands main responsibilities and boundaries of own role
Get the work done	1.1-1.8, 2.1, 2.3-2.10, 3.2-3.9, 4.1-4.3, 5.1-5.8, 6.1-6.6, 7.4	• Plans routine tasks with familiar goals and outcomes, taking limited responsibility for decisions regarding sequencing • Understands the purpose and specific functions of common digital tools used in work contexts • Recognises and responds to common operational problems when using web browsers • Takes responsibility for routine low-impact decisions within familiar situations • Implements basic security requirements related to own tasks

Assessment Requirements for ICTICT103 Use, communicate and search securely on the internet

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- connect to and access the internet
- send and receive emails
- secure internet access and email communications
- use search tools to locate information
- use different internet search techniques
- research and select appropriate website
- undertake online transactions
- assess the accuracy, currency, authority and reliability of the site and information located.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must :

- list basic technical terminology related to reading help files and prompts
- describe the basics of copyright and privacy statements
- explain different types of messages that occur, including error messages and messages to install plug-ins
- list different types of search engines and web browsers
- list procedures for using email applications
- list procedures for evaluating and assessing the authority, reliability and authenticity of information
- outline internet search functions
- describe internet speed and traffic loads related to times of accessing the internet
- describe the makeup and structure of internet addresses

© Commonwealth of Australia, 2024 Public Skills Australia

- list organisational guidelines on internet and email use (web etiquette or netiquette)
- describe business process related to online transactions
- describe web browser update techniques
- explain what key words and bookmarks are used for.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer or digital device with internet
- search engines currently used in industry
- organisational policies on internet usage.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT206 Install software applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to select, install or upgrade basic commercial software applications.

It applies to individuals who require basic information and communications technology (ICT) skills to undertake related tasks under supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine software or software upgrade requirements	1.1 Document client requirements and report to appropriate person 1.2 Act on instructions to meet client requirements, according to organisational requirements
2. Obtain software or software upgrade	2.1 Investigate and select a software application program that best conforms to requirements and organisational policies 2.2 Obtain application program under instruction from appropriate person

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	2.3 Determine licensing requirements and record, according to organisational guidelines 2.4 Ensure target computer conforms to the minimum hardware and operating system requirements of the application program
3. Install or upgrade software	3.1 Install new or upgraded software application program according to appropriate person or organisational instructions 3.2 Complete the installation process efficiently and effectively to minimise disruption 3.3 Carry out testing and acceptance, according to organisational guidelines, paying particular attention to possible effect on other systems 3.4 Ensure client requirements are satisfied 3.5 Refer outstanding client issues to appropriate person as necessary

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	2.1, 2.3	• Uses available literature to appropriately address requirements • Interprets and responds to complex text to ascertain and confirm requirements
Writing	1.1, 2.3	• Records key information relevant to requirements, using basic punctuation, text and correct spelling
Oral Communication	1.1, 2.2, 3.1, 3.4, 3.5	• Uses listening and questioning techniques to confirm understanding of requirements • Uses clear and specific language to convey requirements
Navigate the world of work	2.1	• Takes some personal responsibility for adherence to organisational requirements
Get the work done	1.2, 2.1, 2.2, 2.4, 3.1-3.3	• Follows routine procedures for using digital technology to enter, store and retrieve information directly relevant to role • Understands purposes, specific functions and key

© Commonwealth of Australia, 2024 Public Skills Australia

		features of common digital systems and tools, and operates them effectively to complete routine tasks • Plans routine tasks with familiar goals and outcomes, taking some limited responsibility for decisions regarding sequencing

Unit Mapping Information

Assessment Requirements for ICTICT206 Install software applications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- install software applications through operating system instructions
- configure computer to accept new software or upgrade
- carry out testing and acceptance according to organisational guidelines.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a typical client business domain
- identify typical hardware storage devices
- identify typical input and output devices
- describe key licensing arrangements and responsibilities to ensure they are adhered to
- identify operating systems supported by the organisation
- describe the organisational guidelines for purchasing
- identify the installation requirements for key software application packages
- describe typical software copyright responsibilities.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer (PC) where software installation may be performed

© Commonwealth of Australia, 2024 Public Skills Australia

- application software currently used in industry
- documents detailing organisational testing and acceptance policy and procedures.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT302 Install and optimise operating system software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit defines the skills and knowledge required to install, configure and optimise operating system (OS) software to meet business and client needs.

It applies to individuals who may work under supervision and support others using well developed skills in creating solutions through analysis and evaluation of information.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine function of operating system	1.1 Identify and demonstrate understanding of the purposes of operating system 1.2 Distinguish between batch system, real-time system and multi-tasking system 1.3 Compare and contrast different operating systems and their features 1.4 Identify and demonstrate knowledge of the basic functions of operating system, including file system, memory

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	management, process scheduling 1.5 Identify and demonstrate management of virtual memory
2. Obtain operating system	2.1 Contact operating system vendors to obtain technical specifications and system requirements 2.2 Identify process and steps required to install and configure the operating system using installation components 2.3 Document adjustment recommendations and provide to appropriate person 2.4 Determine and apply knowledge of licensing, hardware and security requirements
3. Install, configure and optimise operating system	3.1 Install, configure and test operating system using installation components and boot-utility options 3.2 Use the relevant operating system user interface to correctly configure the installation 3.3 Optimise the system to meet organisational requirements 3.4 Document the system according to organisational requirements 3.5 Install the operating system with minimal disruption to client or users
4. Provide instruction to meet new software requirements	4.1 Provide one-to-one instruction about changes to the client or users as required 4.2 Obtain client evaluation about new system to ensure requirements are met, using appropriate feedback mechanism

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3-1.5, 2.1, 2.2, 2.4, 3.1, 3.2, 4.2	• Identifies, analyses and evaluates a range of on-line and hard-copy text containing complex, OS specific terminology, and applies the information to the selection, installation, configuration and optimisation of operating systems

© Commonwealth of Australia, 2024 Public Skills Australia

		• Interprets and comprehends a large range of syntax, diagrams, icons, symbols, text, numbers and letters necessary to install and configure operating systems
Writing	2.3, 3.4	• Uses the correct spelling and grammar, clear plain English and systems related text to document recommendations and processes, and develop feedback tools
Oral Communication	2.1, 3.5, 4.1, 4.2	• Elicits and evaluates information using OS related terminology and effective listening and questioning techniques • Uses simple and relevant language to liaise with clients, present information and obtain feedback
Navigate the world of work	2.4	• Takes some personal responsibility for adherence to legal and regulatory requirements, and seeks clarification when required
Get the work done	1.1-1.5, 2.1, 2.2, 3.1-3.3, 3.5	• Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency and considering how to link with the work of others • Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Assessment Requirements for ICTICT302 Install and optimise operating system software

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- install, configure and test an operating system to improve system performance with minimum disruption to clients.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- compare current industry accepted hardware and software products
- outline functions and features of operating systems used by the organisation
- explain the installation and configuration of systems software
- explain the architecture of current technical systems
- outline the deployment of current organisational systems
- list organisational requirements for operating system (OS) software
- explain prerequisites for system software installation
- outline set-up and configuration procedures
- list software packages supported by the organisation
- describe system’s current functionality
- list system’s diagnostic software
- outline vendor specifications and requirements for installation.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- a personal computer where installation may be performed
- OS software and technical documentation
- organisational documentation.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT303 Connect internal hardware components

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to acquire, install, configure and evaluate system hardware components according to client and user requirements.

It applies to individuals who work with a degree of self-sufficiency and provide support in a range of information and communications technology (ICT) work areas and activities.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify, categorise and distinguish between the different types of internal hardware components	1.1 Identify and categorise the different internal hardware components 1.2 Define the purpose and characteristics of the different internal hardware component categories 1.3 Distinguish between different types of devices within each internal hardware component category
2. Determine components required	2.1 Identify and clarify user internal hardware component requirements according to organisational guidelines

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	2.2 Organise and record user component requirements, pass on to appropriate person for evaluation and vendor selection
3. Obtain components	3.1 Contact vendors to obtain technical specifications for the proposed components 3.2 Assess options and provide recommendations to the appropriate person for final analysis 3.3 Obtain components to prepare for installation
4. Install components	4.1 Develop plans, with prioritised tasks and contingency arrangements, for the installation of selected components with minimum disruption to clients 4.2 Liaise with appropriate person to obtain approval for the plans 4.3 Install and configure components according to plan, installation procedures and organisational requirements 4.4 Test components for error-free performance, using available technology 4.5 Identify and resolve identified problems 4.6 Test and enhance system performance, using knowledge of the system, to meet organisational benchmarks 4.7 Document the installation and configuration process according to organisation guidelines
5. Evaluate modified system	5.1 Collect client or user feedback and analyse against client requirements 5.2 Correct identified shortcomings in the system and record actions

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	2.1, 3.2, 4.3, 5.1	• Identifies, interprets and evaluates online and hard copy documentation containing complex ICT related terminology, acronyms and concepts

© Commonwealth of Australia, 2024 Public Skills Australia

Writing	2.2, 3.2, 4.1, 4.7	• Uses correct spelling, grammar and plain English together with the ICT specific terminology and diagrams to convey recommendations and requirements, and complete organisational documentation
Oral Communication	1.1, 2.2, 3.1-3.3, 4.1, 4.2, 5.1	• Converts highly technical language and terminology into plain English to communicate ideas and plans, and gather feedback from clients • Uses effective listening and questioning techniques and technical terminology to elicit information and make the correct component selection
Navigate the world of work	2.1, 4.3	• Recognises and follows explicit protocols and meets expectations associated with own role
Get the work done	1.1, 1.3, 2.1, 2.2, 3.2, 3.3, 4.1, 4.4-4.6, 5.1, 5.2	• Initiates standard procedures when responding to familiar problems within immediate context • Recognises some general design and operating principles of digital tools and uses these to help when modifying systems and when troubleshooting • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency

Unit Mapping Information

Code and title current version	**Code and title previous version**	**Comments**	**Equivalence status**

Assessment Requirements for ICTICT303 Connect internal hardware components

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify and categorise the different types of internal hardware components
- modify system's hardware to meet client requirements
- plan modification of and connect internal hardware components according to vendor and technical specifications
- install components across a variety of situations and account for unexpected contingencies
- evaluate the system on completion.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe areas of the operating system relevant to configuration and testing
- compare current industry accepted hardware and software products
- outline environmental considerations in e-waste disposal
- outline organisational guidelines and organisational requirements with regard to safety, recycling and component installation
- outline system's diagnostic software and current functionality
- interpret vendor specifications and requirements for component installation.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

© Commonwealth of Australia, 2024 Public Skills Australia

- a personal computer and internal hardware components for installation
- current industry standard performance testing software
- documents detailing organisational guidelines and requirements
- technical manuals and tools.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT304 Implement system software changes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to implement system software changes and to hand over the modified system to the client's operational area.

It applies to individuals working in support roles who are required to update operating systems on client computers with the latest technology fixes, working under minimum supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine system changes required	1.1 Determine and record required changes to system 1.2 Ensure documentary evidence exists to support changes and evaluate changes required 1.3 Complete documentation required according to maintenance methodologies 1.4 Clarify and confirm nature of the changes with the client 1.5 Obtain technical data from reliable sources and request

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	other resources that may be required to complete the changes
2. Carry out system changes	2.1 Plan the procedure to effect intended changes 2.2 Consult with colleagues and users involved in the proposed changes and agree a mutually acceptable timeline and method of implementation 2.3 Copy initialisation or configuration files prior to implementation 2.4 Create a roll-back path in the event of failure 2.5 Ensure changes required in software are made according to project or organisational guidelines 2.6 Test and verify that the changes have been made according to implementation guides and organisational standards
3. Present changes to client	3.1 Demonstrate changes to the client and explain the impact of these changes 3.2 Work towards making these changes acceptable to the client if changes are rejected, or making further modifications if required 3.3 Update documentation and repositories according to standards and update modifications made to the change management system
4. Perform handover to client	4.1 Update documentation and client procedures to reflect changes made 4.2 Secure sign-off of acceptance documents by client 4.3 Facilitate handover of modified system to client's operational area

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 1.5	• Identifies and interprets hard copy, online and computer generated text, numerical and diagrammatic information with systems

© Commonwealth of Australia, 2024 Public Skills Australia

		software specific terminology • Reviews a range of organisational documentation to identify relevant information relating to the requirements of both the job role and organisation
Writing	1.1, 1.3, 3.3, 4.1	• Uses correct spelling and grammar, plain English and, when necessary, systems related text and terminology to complete documentation and update client procedures
Oral Communication	1.1, 1.2, 1.4, 1.5, 2.1, 2.2, 3.1, 3.2, 4.2, 4.3	• Uses effective listening and questioning techniques and systems related terminology to elicit information about the systems and determine the job requirements • Converts highly technical language and terminology to plain English to communicate changes to, and gather feedback from, the client(s)
Navigate the world of work	2.5, 2.6, 3.3	• Recognises and follows explicit protocols and meets expectations associated with own role
Get the work done	1.1, 2.1-2.4, 2.6, 3.2, 3.3, 4.3	• Initiates standard procedures when responding to familiar problems within immediate context • Recognises some general design and operating principles of digital tools and uses these to help when modifying systems and when troubleshooting • Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency

Assessment Requirements for ICTICT304 Implement system software changes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- evaluate, document and implement changes to the system with minimum disruption to the system and client users
- hand over the project to the client with instructions and updated documentation.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify and describe business scheduling requirements
- identify change control procedures
- describe client business domain
- discuss current industry accepted hardware and software products
- discuss emerging standards for data and voice communications
- outline the system's current functionality
- discuss the features of the system under modification
- outline the organisational policy and procedures with regard to system changes
- recognise vendor software services with regard to system changes.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

© Commonwealth of Australia, 2024 Public Skills Australia

- a computer
- system software currently used in industry
- technical manuals and tools.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT401 Determine and confirm client business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to determine client business system requirements and verify the accuracy of the information gathered.

It applies to information and communications technology (ICT) personnel who are required to analyse client expectations and needs, and recommend business system changes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine context of business need or problem	1.1 Establish the business problem to be investigated, including determining system boundaries, scope and the development methodology to be used 1.2 Choose information gathering method and develop questions appropriate to business problem 1.3 Develop objectives and identify expected outcomes to be achieved 1.4 Document the business problem

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	1.5 Submit documentation to appropriate person for substantiation
2. Gather information	2.1 Use chosen information gathering method to identify clients of the system and problems they encounter 2.2 Record client responses 2.3 Analyse gathered information to identify new system requirements and establish problem specifications 2.4 Document system requirements and problems 2.5 Analyse physical requirements and identify changes required to implement new systems
3. Confirm system specifications	3.1 Check documentation to ensure it meets client business needs 3.2 Submit documentation to the client for verification of accuracy and approval 3.3 Make changes to the documentation as necessary and indicated by the client 3.4 Submit documentation to client for final approval or sign-off

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 2.3, 2.5, 3.1	• Identifies, analyses and evaluates information from a variety of sources containing complex systems related terminology to determine system performance requirements and establish solutions
Writing	1.2-1.4, 2.2, 2.4, 3.3	• Uses the correct spelling and grammar, plain English and, when necessary, systems related text and terminology to develop information gathering tools and document recommendations
Oral Communication	1.1, 2.1, 2.5, 3.2, 3.4	• Uses plain English, effective listening and questioning techniques and, where necessary, systems related terminology to elicit information

© Commonwealth of Australia, 2024 Public Skills Australia

		• Uses plain English and relevant terminology to liaise with clients, present information and obtain feedback
Get the work done	1.1-1.3, 2.1, 2.3, 2.5	• Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements so work is undertaken methodically • Recognises and takes responsibility for addressing predictable and some less predictable problems in familiar work contexts • Understands the purposes, specific functions and key features of common digital systems and tools to provide current advice on systems and data gathering products

Unit Mapping Information

Assessment Requirements for ICTICT401 Determine and confirm client business requirements

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- use investigative techniques to obtain information and document the business system problem
- produce a clear statement of business expectations and needs, including critical business requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe a variety of data gathering techniques
- describe areas related to the client business in detail
- interpret functional organisational charts
- outline physical requirements of the client's business, taking into account current system functionality, geography, environment, client user and cost constraints
- describe products related to data capture
- discuss the role of stakeholders and the degree of stakeholder involvement.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- current business needs
- a client expectations brief

© Commonwealth of Australia, 2024 Public Skills Australia

- business objectives
- systems, data gathering and appropriate software products.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT403 Apply software development methodologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to apply traditional and non-traditional systems development methodologies.

It applies to individuals in a senior development role who exercise discretion and judgement to create solutions using appropriate technical knowledge and analysis skills.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine and select appropriate methodology for a given activity	1.1 Determine and define subject activity 1.2 Define criteria for selection of development methodology 1.3 Review and evaluate a range of traditional and non-traditional system development methodologies 1.4 Select appropriate system development methodology to suit the activity
2. Apply the selected	2.1 Create an initial project plan to guide developmental

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
development methodology	processes 2.2 Identify appropriate task types according to development methodology 2.3 Clearly describe and articulate task types 2.4 Define appropriate control structures that need to be created during task type execution 2.5 Associate each task type with a set of input and output parameters
3. Adjust project to suit appropriate methodology	3.1 Identify resources to support methodology selection 3.2 Apply appropriate methodology to solve tasks 3.3 Monitor project flow and record effectiveness against project plan 3.4 Review and document opportunities for improvement, lessons learned and recommendations for future projects 3.5 Submit results to appropriate person for approval

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 3.1, 3.4	• Identifies, analyses and evaluates a range of textual information containing complex systems development specific terminology, syntax and diagrams, and applies the information to the task
Writing	2.1, 2.3, 3.3, 3.4	• Uses the correct spelling and grammar, and technical terminology to develop project plans, document recommendations, processes and reports in a format suitable to the audience
Oral Communication	1.1, 1.3, 2.3, 3.1-3.4	• Elicits and evaluates information using project related terminology and effective listening and questioning techniques • Uses plain English and, where necessary, project related terminology to liaise with clients, present information and obtain feedback • Uses specific and complex systems development

© Commonwealth of Australia, 2024 Public Skills Australia

		terminology to liaise with co-workers
Get the work done	1.1-1.4, 2.2, 2.4, 2.5, 3.1-3.4	• Uses familiar digital systems and tools to access, organise, analyse and display information relevant to the role • Applies formal processes when planning more complex tasks, producing plans with logically sequenced steps, reflecting an awareness of time and resource constraints and the needs of others • Reflects on the appropriateness and effectiveness of project methodologies and identifies some key principles that may be relevant in future situations

Assessment Requirements for ICTICT403 Apply software development methodologies

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- develop a project plan
- apply a methodology to a project
- produce documentation as required by the chosen methodology.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe client business domain and organisational requirements
- explain current project requirements
- explain role of stakeholders and the degree of stakeholder involvement in the development process
- describe at least two current system development methodologies.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- design specifications and current methodologies
- organisational standards for documentation and version control
- detailed user requirements document, including model and scope.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessors must satisfy NVR/AQTF assessor requirements.

ICTICT502 Develop detailed component specifications from project specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to analyse requirements of the project specifications in order to produce a set of high-level component specifications.

It applies to systems designers who are required to produce component specifications for programmers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

General ICT

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Develop components	1.1 Document behaviour scenarios according to documentation standards 1.2 Identify or develop components according to project specifications 1.3 Prepare diagrams according to standards
2. Prepare schema	2.1 Analyse and document component connectivity

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	2.2 Identify and incorporate data flow iteration 2.3 Prepare component action diagrams according to standards
3. Prepare component model	3.1 Describe roles and responsibilities 3.2 Review and update functional requirements 3.3 Specify interface components and component relationships 3.4 Prepare interaction diagrams according to standards
4. Iterate and review model	4.1 Conduct walk-through of current model and review functionality 4.2 Identify relationships to ensure integration of model 4.3 Review class service requirements 4.4 Prepare initial test criteria 4.5 Implement process for incremental testing

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 2.2, 3.2, 4.1-4.3	• Interprets and analyses text with complex terminology, diagrams, code, syntax, icons and symbols to evaluate current system functionality and technical requirements, and develop diagrams using industry specific software
Writing	1.1-1.3, 2.1-2.3, 3.1-3.4, 4.4, 4.5	• Uses the correct spelling and grammar, clear plain English, task related terminology, and a formal document structure, format and style appropriate to the audience and organisation • Selects suitable vocabulary, terminology, labelling and naming conventions to develop diagrams using industry specific design tools
Numeracy	1.2	• Interprets numerical information and applies basic mathematical calculations relating to time durations and budgetary information
Navigate the	1.1, 1.3, 2.3, 3.4	• Recognises and follows explicit and implicit protocols,

© Commonwealth of Australia, 2024 Public Skills Australia

world of work		and meets expectations associated with own role
Get the work done	1.2, 2.1, 2.2, 3.2, 3.3, 4.1- 4.5	• Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for efficiency • In familiar contexts, responds intuitively to problems requiring immediate attention • Considers purpose, needs and limitations when selecting devices and applications for different tasks

Unit Mapping Information

Assessment Requirements for ICTICT502 Develop detailed component specifications from project specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify and document high level component specifications relevant to the project specifications
- analyse and document component connectivity and relationships
- document and review component modelling.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline appropriate design tools and their use
- discuss and explain configuration management
- outline the key features of a cost-benefit analysis
- identify and apply current industry accepted design methodologies and hardware and software products, including broad knowledge of general features and capabilities
- explain data modelling techniques
- describe program development methodologies
- describe quality assurance practices for preparing component models
- outline relevant standards and organisational policies
- specify current system functionality for analysing components.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the general information and communications technology (ICT) industry, and include access to:

- technical specifications
- organisational and process goals
- standards for model development
- computer aided software engineering (CASE) tools
- project deliverables
- test plan
- project budget
- outcomes of the business analysis process
- appropriate software and hardware.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTNWK305 Install and manage network protocols

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to install and manage network protocols in a networking environment.

It applies to individuals with competent information and communications technology (ICT) skills, working as network administrators who are required to ensure that appropriate protocols have been installed in networks to allow user functionality and maintenance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Install and manage network protocols	1.1 Select, test and validate appropriate network protocol services 1.2 Design a network addressing system, with subnet and host IDs, including appropriate devices 1.3 Configure hosts and workstations to use IP addresses either manually or through automatic allocation of addresses, such as found with dynamic host configuration protocol (DHCP)
2. Identify network	2.1 Review a range of well-known network protocol applications

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
protocol applications	2.2 Evaluate client user requirement and recommend network protocol services 2.3 Apply internet protocol (IP) addressing scheme according to approved policy and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	2.2, 2.3	• Recognises and interprets textual information, including technical manuals, to establish the job requirements
Writing	2.2	• Uses specific and relevant language to document new file systems, user access and disaster recovery procedures
Oral Communications	2.2	• Articulates clearly using specific and relevant language suitable to audience to convey requirements • Uses listening and questioning techniques to confirm understanding
Navigate the world of work	2.3	• Complies with explicit organisational policies and procedures • Ensures knowledge of legislative requirements and products is kept up to date
Get the work done	1.1-1.3, 2.1	• Takes responsibility for planning and organising own workload, identifying ways of sequencing and combining elements for greater efficiency, and considering how to link with the work of others • Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks • Initiates standard procedures when developing and refining configuration protocols

Assessment Requirements for ICTNWK305 Install and manage network protocols

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- configure, test and validate network protocols in order to facilitate interconnectivity
- install and manage network protocols in a network, and troubleshoot problems.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the client business domain, including client organisation structure and business functionality
- list current communications technologies and their associated protocols
- outline current industry accepted hardware and software products, and general features and capabilities
- summarise network protocols currently in use in the organisation and industry, including:
  - transmission control protocol
  - internet protocol (TCP/IP)
  - OSI models
- clarify the vendor product range and development directions
- describe how network protocols transcend organisational size and network complexity.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

© Commonwealth of Australia, 2024 Public Skills Australia

- a live network
- application software and operating system
- appropriate learning and assessment support when required
- networked computers
- organisational guidelines
- technical documentation and installation manuals
- vendor software.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTNWK410 Install hardware to a network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to plan, manage and install new hardware components in a network.

It applies to individuals employed in technical information and communications technology (ICT) support roles, such as network administrators, who support network hardware in a peer-to-peer or client-server networked environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine network hardware requirements	1.1 Assess client network hardware and cabling requirements, considering compatibility with existing application software and operating system 1.2 Analyse requirements against local area network (LAN), wide area network (WAN), wireless networks, and mobile equipment access design limitations and organisational guidelines 1.3 Evaluate client requirements according to organisational guidelines, corporate purchasing procedures, licensing

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	arrangements and budget
2. Obtain network hardware	2.1 Contact vendors and obtain technical specifications 2.2 Evaluate or test hardware according to client requirements and organisational guidelines 2.3 Document recommendations and provide copies to appropriate person 2.4 Determine and document licensing requirements and security issues 2.5 Acquire hardware according to recommendations and organisational procedures 2.6 Organise cabling infrastructure where required
3. Install network hardware	3.1 Conduct installation with minimal disruption to clients 3.2 Install hardware according to appropriate installation procedures 3.3 Configure and test the installation to ensure that it meets client needs
4. Provide instruction and support for installed products	4.1 Determine and document client instructions and needs 4.2 Provide one-to-one or group instruction to client and users as required 4.3 Obtain client evaluation and feedback to ensure that client requirements have been met

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.2, 2.2, 2.5	• Recognises and interprets licensing and security issues, technical information and organisational procedures to determine job requirements
Writing	2.4, 4.1	• Prepares information which incorporates evaluation of information and specialised and cohesive language in a format and style appropriate to a specific audience

© Commonwealth of Australia, 2024 Public Skills Australia

Oral Communication	2.1, 2.3, 4.1-4.3	• Uses listening and questioning skills to confirm understanding for requirements • Participates in regular verbal exchanges and uses appropriate, detailed and clear language to address key personnel and to disseminate information
Numeracy	1.3	• Uses mathematical formulas and calculations to estimate and plan costs according to business budgets
Navigate the world of work	1.2, 1.3, 2.4, 2.5	• Appreciates the implications of legal and regulatory responsibilities related to own work
Get the work done	1.1-1.3, 2.2, 2.5, 2.6, 3.1- 3.3	• Determines job priorities, resources and equipment, and works logically and systematically to maintain the continuity of network operations and business functions during network installation tasks • Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks • Recognises and responds to predictable routine problems related to own role in the immediate work context • Automatically implements standard procedures for routine decisions

Assessment Requirements for ICTNWK410 Install hardware to a network

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- evaluate client user requirements and hardware installation
- install a range of network hardware by planning, managing and supporting the installation of new components in a network, according to organisational policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- summarise current industry, data and voice networking, security products, devices and procedures, including:
  - current industry accepted network protocols
  - organisational contracting procedures and responsibilities
  - system diagnostic software
- outline current industry accepted network hardware and software products
- explain hardware and software installation procedures
- describe local area network (LAN) capabilities and characteristics, such as network type, internet protocol (IP) addressing, switch or hub operation
- describe various features of network connections, including types of cables, cabling distance limitations and wireless connections
- outline operating systems sufficient to enable basic installation
- summarise set-up and configuration procedures
- describe software packages supported by the organisation.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the network industry, and include access to:

- vendor hardware and software components
- application software and operating system
- hardware maintenance tools
- a live network
- networked computers
- organisational guidelines
- technical documentation and installation manuals.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTNWK411 Deploy software to networked computers

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to plan, manage and support the installation of new or upgraded software to networked computers according to vendor and organisation specifications.

It applies to individuals involved in installing, configuring, maintaining and supporting software, such as network administrators and network support staff.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Networking

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine operating system and software and hardware requirements	1.1 Assess client software and licensing requirements, considering compatibility with existing application software and operating system 1.2 Assess hardware requirements 1.3 Analyse requirements against local area network (LAN), wide area network (WAN), and wireless networks within organisational guidelines 1.4 Evaluate client requirements according to organisational

ICTPRG524 Develop high-level object-oriented class specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to analyse requirements and produce a set of high-level object-oriented class specifications.

It applies to individuals who are required to develop object designs as part of the systems design process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Programming and software development

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Analyse the behaviour of objects	1.1 Analyse behaviour scenarios and the prepare documentation, according to standards 1.2 Identify classes, objects and abstract data types, according to requirements 1.3 Prepare class, object, module and process diagrams, according to specifications

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
2. Prepare a state model	2.1 Analyse data requirements and iterate data flows 2.2 Prepare state-transition diagrams, according to standards 2.3 Improve the abstract data types and specifications
3. Describe the roles and responsibilities of classes	3.1 Review the functional requirements, assign responsibilities and update class structures 3.2 Specify the interface and class communication requirements 3.3 Prepare the interaction diagrams, according to standards
4. Iterate and review the object model	4.1 Review the current object model, class functionality and data transformation 4.2 Identify and develop class relationships, priorities, and the inheritance hierarchy 4.3 Review the class-service requirements and initial test criteria 4.4 Identify object processes and reuse classes 4.5 Document the model and forward it to the appropriate person

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.3, 4.1, 4.2	• Interprets, and analyses, complex technical documentation
Writing	1.1, 1.3, 2.2, 3.3, 4.5	• Accurately records and completes documentation according to organisational formats and protocols • Writes and edits documents to ensure accuracy and consistency of information, and clarity of meaning
Interact with others	4.5	• Shares knowledge, information and experience openly, liaising with colleagues to achieve the best possible outcome
Get the work done	1.3, 3.1, 3.2, 4.1, 4.2, 4.3, 4.4	• Uses a range of digitally-based technologies to access, extract and share relevant information, in order to achieve the required outcomes • Identifies technical or conceptual issues, and applies analytical processes, to resolve these issues

© Commonwealth of Australia, 2024 Public Skills Australia

		• Uses analytical and lateral thinking to review current practices, and to develop new or improved software or systems

Assessment Requirements for ICTPRG524 Develop high-level object-oriented class specifications

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- specify and model abstract data types
- specify the interface between classes and objects
- document the results.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- outline configuration management
- outline current industry-accepted object-oriented methodologies
- outline current program development methodologies
- describe data modelling techniques
- describe object-oriented analysis tools
- describe quality assurance practices.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the programming and software development industry, and include access to:

- the business, system and user requirement
- a unified modelling language (UML) modelling tool
- the appropriate learning and assessment support, when required.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessors must satisfy NVR/AQTF assessor requirements.

ICTSAD501 Model data objects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to understand business operations, identify entities and data, diagrammatically represent their relationships, and prepare a data model.

It applies individuals who have a broad range of analytical, technical and communication skills and who work within broad but established parameters.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify entities and relationships	1.1 Analyse business data to understand operations 1.2 Identify boundaries of the system 1.3 Identify entities, attributes, data types and relationships of data 1.4 Review business rules to determine impact 1.5 Document relationships in an entity relationship diagram

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
2. Develop normalisation	2.1 Identify suitable business data 2.2 Undertake normalisation of business data and document results 2.3 Compare normalisation results with entity relationship diagram 2.4 Reconcile differences between data
3. Validate model	3.1 Validate data model with client 3.2 Resolve issues or recommendations 3.3 Document completed data model 3.4 Submit to client for final approval

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.4, 2.3, 2.4	• Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements
Writing	1.5, 2.2, 2.4, 3.3, 3.4	• Prepares and produces diagrammatic models and associated documents that convey complex relationships between data • Documents outcomes and changes to discussions, using industry relevant terminology and recognised symbols
Oral Communication	3.1-3.4	• Participates in verbal exchanges by listening and questioning clients to elicit information, resolve issues, and obtain final product and work outcome approval
Interact with others	3.1, 3.2, 3.4	• Selects, implements and seeks to improve protocols governing communications to clients and co-workers in a range of work contexts • Elicits feedback and provides feedback to others
Get the work done	1.1-1.4, 2.1, 3.2, 3.3	• Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness • Applies systematic and analytical decision making

Assessment Requirements for ICTSAD501 Model data objects

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- document client business requirements
- construct an entity relationship diagram
- construct and document a data model
- normalise the model
- validate the model.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- fully describe:
  - database identifiers and their impact on database usability
  - normalisation rules and processes
  - type hierarchies, including sub-types, super-types and root-types related to development of structured data types
  - validation procedures and processes
- describe the function and features of:
  - an approach to data modelling, such as the entity-relationship model
  - keys, e.g. unique keys, composite keys, primary keys and primary index
  - time stamps related to the use of keys
  - user defined types, structured types, reference types and user defined functions
  - data types and their application
- summarise the particular business domain.

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- client's business requirements
- special purpose tools, equipment and materials
- industry software packages
- computer aided software engineering (CASE) tools
- entity relationship diagrams.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTSAD502 Model data processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to gather process data and business information in order to model data processes within an organisation.

It applies to individuals who can apply a broad range of technical knowledge and skills within the context of a complex project.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems analysis and design

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Develop scope of model	1.1 Identify relevant data processes and sources of information 1.2 Identify information gathering method and modelling methodology to be used 1.3 Document modelling information gathered 1.4 Validate modelling information with client
2. Gather process data	2.1 Identify business functions and collect process data using chosen method

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	2.2 Identify external events, procedures and results 2.3 Identify processes and required decomposition
3. Develop and validate data model	3.1 Model process data according to modelling methodology 3.2 Validate process model with client to determine inaccuracies 3.3 Incorporate identified changes, as required 3.4 Review business rules to determine impact on process models and change as required 3.5 Validate completed process models with client

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 2.3, 3.4	• Critically analyses complex documentation from a variety of sources and consolidates information relating to specific criteria to determine requirements
Writing	1.3, 1.4, 3.3-3.5	• Prepares and produces diagrammatic models and associated documents that convey complex relationships between data
Oral Communication	1.4, 3.2, 3.5	• Determines and confirms client requirements using collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and confirm understanding
Interact with others	1.4, 3.2, 3.5	• Implements strategies for a diverse range of colleagues and clients to build rapport and foster strong relationships
Get the work done	1.1, 1.2, 2.1-2.3, 3.1, 3.4	• Accepts responsibility for planning and sequencing complex tasks and workload, negotiating key aspects with others and taking into account capabilities, efficiencies and effectiveness • Applies systematic and analytical decision making processes for complex and non-routine situations • Uses and investigates new digital technologies and applications to manage and manipulate data, and

Assessment Requirements for ICTSAD502 Model data processes

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- identify data processes that represent the client's business reality
- model data processes according to industry and organisation standards
- complete documentation of the data model.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- discuss modelling rules and conventions with reference to naming processes and events
- outline features and functions of process mappers
- explain features of data analysis, particularly in determining process flows
- describe processes and techniques, using logical design concepts related to designing process models.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems analysis and design field of work, and include access to:

- client’s business requirements
- special purpose tools and equipment
- industry software packages.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTSAS203 Connect hardware peripherals

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to connect hardware peripherals according to instructions.

It applies to individuals employed in an information and communications technology (ICT) support role who are required to solve technical hardware and software incompatibility conflicts and problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Confirm client requirements	1.1 Identify and confirm peripheral requirements of client according to organisational standards 1.2 Document client requirements and peripherals needed, and report findings to the appropriate person according to organisational standards 1.3 Verify client requirements with appropriate person according to organisational standards and reporting procedures

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	1.4 Take action to ensure client support expectations are covered by vendor warranty and support services
2. Obtain required peripherals	2.1 Obtain peripherals under instruction from appropriate person 2.2 Enter details of peripherals into equipment inventory according to organisational standards 2.3 Validate that contents of delivered components and physical contents match the packing list and resolve discrepancies if necessary 2.4 Store peripherals according to vendors guidelines
3. Connect hardware peripherals	3.1 Verify timeframe for installation schedule with client 3.2 Remove old peripherals with minimal disruption to clients if they are to be replaced, taking into account environmental considerations and work health and safety (WHS) standards 3.3 Connect new peripherals with minimum disruption to clients, taking into account operating system procedures 3.4 Configure computer to accept new peripherals 3.5 Test hardware peripherals and confirm client satisfaction, paying particular attention to possible effect on other systems and making adjustments as required

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.4, 2.1-2.4, 3.1-3.5	• Interprets textual information from a range of sources to identify and adhere to requirements
Writing	1.2, 1.3, 1.4, 2.1	• Develops materials and resources using simple vocabulary to convey and record information and inventory, according to client and vendor requirements
Oral Communication	1.2, 1.3, 1.4, 2.1, 3.1, 3.5	• Participates in verbal exchanges of familiar ideas and information using questioning and active listening to elicit views, opinions and feedback from others
Navigate the	1.1, 1.3, 1.4, 2.1-2.4,	• Understands roles and responsibilities for task and makes basic decisions on work completion parameters

© Commonwealth of Australia, 2024 Public Skills Australia

world of work	3.2-3.5	in accordance with organisational requirements, WHS standards and environmental considerations
Interact with others	1.1-1.4, 2.1, 3.1	• Identifies and takes steps to follow accepted communication practices and protocols
Get the work done	1.1-1.4, 2.1-2.4, 3.1-3.5	• Plans and implements routine tasks, aiming to achieve them efficiently • Responds to predictable routine problems and implements standard or logical solutions • Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Unit Mapping Information

Assessment Requirements for ICTSAS203 Connect hardware peripherals

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- connect several different types of hardware peripherals to the system safely and according to vendor instructions with a minimum of downtime, using known routines and procedures
- locate, interpret and use vendor documentation related to connection and storage of hardware peripherals
- test the operation of newly installed hardware peripherals and confirm client satisfaction
- follow work health and safety policies and procedures.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- describe the commonly used computer operating systems
- identify help desk and maintenance practices
- describe common peripheral devices
- summarise WHS procedures for electrical equipment
- list the system components and describe their interconnectivity
- identify current industry accepted hardware and software products
- describe procedures relevant to maintaining inventory
- list the organisational guidelines and standards that impact on service support including:
  - external suppliers and vendors
  - internal and external communications
  - internet access
  - security of information and data

© Commonwealth of Australia, 2024 Public Skills Australia

- identify common principles for environmentally sustainable business practices.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Noise levels, production flow, interruptions and time variances must be typical of those experienced in the systems administration and support field of work and include access to:

- sites with a representative range of workstations, hardware peripherals, internet connections and cabling
- software to be installed, interconnected and configured
- hardware and software currently used in industry
- technical documentation, including organisational hardware blueprint and vendor support.

Assessors must satisfy NVR/AQTF assessor requirements.

ICTSAS205 Maintain ICT system integrity

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Application

This unit describes the skills and knowledge required to protect and secure stand-alone or networked client server environments.

It applies to technical support individuals who are required to maintain workflow and quality processes in a small or large office environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Systems administration and support

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Carry out system backup	1.1 Create and review organisational backup schedule 1.2 Determine storage media and hardware for backups 1.3 Ensure backups are carried out according to the schedule 1.4 Label and store backups according to organisational standards 1.5 Maintain records of backups
2. Restore system backup	2.1 Determine and test restoration procedures according to

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	organisational standards 2.2 Restore data under instruction from an appropriate person 2.3 Restore data according to organisational standards 2.4 Document and report on backup results
3. Maintain virus protection	3.1 Maintain and update virus protection software according to operating system in use 3.2 Carry out virus scanning and report detected viruses to appropriate person 3.3 Remove viruses and update scanning software
4. Follow copyright procedures and record software licences where appropriate	4.1 Identify copyright procedures for licensed software used by the organisation 4.2 Maintain records of licence number and location 4.3 Monitor operation and use of licensed software where applicable 4.4 Check personal computers and networks to ensure software compliance 4.5 Report licensing anomalies related to software to an appropriate person

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1-1.5, 2.1-2.3, 3.1-3.3, 4.1-4.5	• Interprets familiar textual information from a range of sources to identify and review practices and determine that appropriate standards have been maintained • Researches and interprets information to identify, monitor and evaluate technical information and maintain appropriate standards
Writing	1.4, 1.5, 2.4, 4.2, 4.5	• Develops materials and resources using simple vocabulary to record information in a sequential manner, adhering to standards for client engagement as well as internal reference

© Commonwealth of Australia, 2024 Public Skills Australia

Navigate the world of work	1.1-1.5, 2.1-2.4, 3.1-3.3, 4.1-4.5	• Understands roles and responsibilities for task and makes basic decisions on work completion parameters in accordance with organisational standards
Interact with others	2.2, 4.5	• Identifies and takes steps to follow accepted communication practices and protocols
Get the work done	1.1-1.5, 2.1-2.4, 3.1-3.3, 4.1-4.5	• Plans and implements routine tasks, aiming to achieve them efficiently • Makes low-impact decisions within familiar situations, based on a range of predefined or routine solutions, and evaluates the effectiveness of the outcome • Understands the purposes, specific functions and key features of common digital systems and tools, and operates them effectively to complete routine tasks

Assessment Requirements for ICTSAS205 Maintain ICT system integrity

Modification History

Release	Comments
Release 1	This version first released with ICT Information and Communications Technology Training Package Version 1.0.

Performance Evidence

Evidence of the ability to:

- protect and secure stand-alone or networked client server environments and operating systems according to system maintenance procedures
- complete file backup according to organisational standards
- recover, delete and archive according to backup and recovery procedure
- check computers and networks for compliance with licensing requirements.

Note: If a specific volume or frequency is not stated, then evidence must be provided at least once.

Knowledge Evidence

To complete the unit requirements safely and effectively, the individual must:

- identify organisational standards regarding:
  - backup and recovery procedures and operations
  - labelling and storage of backups
- describe current industry accepted hardware and software products
- describe current viruses and protection methods
- identify common diagnostic tools
- identify inventory procedures
- identify maintenance procedures
- describe storage and retrieval guidelines
- explain system performance
- identify software copyright and General Public Licence (GPL) or copyright responsibilities.

LGADMIN425A Develop a communication plan

Modification History

LGADMIN425A Release 2: Layout adjusted.

LGADMIN425A Release 1: Primary release.

Unit Descriptor

This unit covers preparing and developing an integrated communication plan to enable the effective communication to the community and specific groups of council services and other relevant information. The unit is suitable for a range of contexts in the organisation and can be applied to promotional and marketing material, informative material and material related to specific events or activities.

Application of the Unit

This unit supports the attainment of skills and knowledge required for competent workplace performance in councils of all sizes. Knowledge of the legislation and regulations within which councils must operate is essential. The unique nature of councils, as a tier of government directed by elected members and reflecting the needs of local communities, must be appropriately reflected.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a Unit of Competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Where ***bold italicised*** text is used, further information is detailed in the

© Commonwealth of Australia, 2024 Public Skills Australia

	Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Develop communication objectives	1.1 The target audience is identified. 1.2 Relevant and appropriate media are identified and assessed in accordance with council requirements and audience needs. 1.3 Relevance of existing materials and activities is assessed based on changing communication needs and organisational policies. 1.4 Communication objectives are determined and integrated into council strategies and priorities.
2. Prepare a communication plan	2.1 The elements of a communication plan are determined in accordance with council requirements. 2.2 ***Forms of communications*** are evaluated in relation to communication objectives. 2.3 ***Promotions*** are evaluated for inclusion in the communication plan. 2.4 Objectives of ***the communication plan*** are developed and evaluated for cost effectiveness and for effectiveness. 2.5 Communication plan is prepared in accordance with council requirements.
3. Implement the communication plan	3.1 Resources required to complete the communication activities are obtained. 3.2 Responsibilities and functions are allocated to relevant personnel. 3.3 Communication materials are developed to suit purpose of the communication activity and requirements of the audience. 3.4 Professional assistance in the development of materials is sought as appropriate. 3.5 Communication is paced and sequenced to meet a range of requirements and types of audience.
4. Review and report on the communication plan	4.1 ***Feedback mechanisms*** are established and utilised to evaluate and review communication activities. 4.2 Reports are prepared in accordance with organisational requirements.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	4.3 Communication activities are adjusted as appropriate.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit

Required Skills

- verbal and written communication
- consultation
- analytical
- problem solving
- research
- evaluative
- collating and interpreting statistical data, including trend analysis
- risk management
- cost-benefit analysis
- strategic thinking
- negotiation
- report writing

Required Knowledge

- organisation's marketing plan
- organisation's services
- data collection and analysis techniques
- basic financial records
- communication models

Evidence Guide

Overview of assessment requirements	A person who demonstrates competency in this unit will be able to perform the outcomes described in the Elements to the required performance level detailed in the Performance Criteria. The knowledge and skill requirements described in the Range Statement must also be demonstrated. For example, knowledge of the legislative framework and safe work practices that underpin the performance of the unit are also required to be demonstrated.

© Commonwealth of Australia, 2024 Public Skills Australia

Critical aspects of evidence to be considered	The demonstrated ability to: • undertake appropriate, detailed and thorough research to determine communication objectives using a range of techniques • develop a communication plan based on the analysis undertaken to provide a strategic direction for communications and promotions in a clear and unequivocal manner • manage the implementation of the communication plan within the organisation and unit/area • monitor, evaluate and review the communication plan and prepare a report that includes recommendations for adjustments
Context of assessment	Competency is demonstrated by performance of all stated criteria, with particular attention to the critical aspects and the knowledge and skills elaborated in the Evidence Guide, and within the scope of the Range Statement. Assessment must take account of the endorsed Assessment Guidelines in the Local Government Training Package. Assessment of the performance requirements in this unit should be undertaken in an actual workplace or simulated environment. Assessment should reinforce the integration of the key competencies for the particular AQF level. Refer to the key competency levels at the end of this unit.
Relationship to other units(prerequisite or co-requisite units)	To enable holistic assessment this unit may be assessed with other units that form part of the job role.
Method of assessment	The following assessment methods are suggested: • observation of the learner performing a range of workplace tasks over sufficient time to demonstrate handling of a range of contingencies • written and/or oral questioning to assess knowledge and understanding • completion of workplace documentation • third-party reports from experienced practitioners • completion of self-paced learning materials including personal reflection and feedback from trainer, coach or supervisor
Evidence required for demonstration of	Evidence should be collected over a set period of time that is sufficient to include dealings with an appropriate range and

© Commonwealth of Australia, 2024 Public Skills Australia

consistent performance	variety of situations.
Resource implications	The learner and trainer should have access to appropriate documentation and resources normally used in the workplace.

Range Statement

The Range Statement relates to the Unit of Competency as a whole. It allows for different work environments and situations that may affect performance. ***Bold italicised*** wording in the Performance Criteria is detailed below.

Forms of communication may include:	• fliers, brochures and pamphlets • media products • press releases • posters • kits • public relations materials • invitations • presentations and demonstrations • audio and videotapes • electronic press hits • web sites • focus groups on relevant issues • community programs • guidance materials • descriptions • labels • signs
Promotions may include:	• films • multimedia products • seminars and workshops • public forums • special occasions and festivals • performances • open days • ceremonies
The communication plan may include:	• the rationale, aims, objectives and expected outcomes in financial and other terms • facilities and equipment needed • target audience • communication and promotion requirements

© Commonwealth of Australia, 2024 Public Skills Australia

	• time constraints • budget allocation • resources, including human resources • staff training
Key stakeholders may include:	• government and non-government organizations • community leaders • networks • staff and colleagues • board or committee of management • specialist organisation • media • partners or potential partners • senior management • technical specialists
Feedback mechanisms may include:	• surveying clients • informal discussion • focus groups

MEM07001B Perform operational maintenance of machines/equipment

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers carrying out programmed safety and maintenance checks on machines/equipment.

Application of the Unit

Application of the unit	This unit mainly applies in a manufacturing setting, where routine programmed operational maintenance to machines/equipment is required. It is not intended to be used where higher level maintenance activities are performed. Machines/equipment range includes manual, semi-automatic and automatic machines of a stand-alone continuous production or process nature. This unit should not be selected when any of the following are selected: Unit MEM18055B (Dismantle, replace and assemble engineering components), Unit MEM18006C (Repair and fit engineering components), Unit MEM07005C (Perform general machining). **Band**: **A** **Unit Weight**: **2**

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		
Path 1	MEM18001C	Use hand tools

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Undertake programmed safety and maintenance checks	1.1. Checks are undertaken safely and to prescribed procedure. 1.2. Status/report is recorded on proforma or reported orally.
2. Undertake programmed maintenance	2.1. Removal/replacement of consumable components is undertaken to prescribed procedure and instructions are followed. 2.2. Fluids and lubricants are replaced and/or topped up to prescribed schedule.

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • undertaking programmed safety and maintenance checks • undertaking programmed operational maintenance • entering routine and familiar information onto proformas and standard workplace forms • following routine information on written procedures • following oral instructions • orally reporting routine information
Required knowledge
Look for evidence that confirms knowledge of: • programmed maintenance and safety check procedures for the specified machine/equipment • recording/reporting requirements • safe work practices and procedures • hazards and control measures associated with operational maintenance of machines/equipment

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform operational maintenance of machines/equipment. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with operational maintenance of machines/equipment or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating

MEM14086A Apply mechatronic engineering analysis techniques

Modification History

Release 1 - New unit. Replaces MEM14062A, but not equivalent.

Unit Descriptor

This unit of competency covers the skills needed to undertake a range of mechatronic analyses. The analyses may relate to design or contribution to the design of mechatronic devices or automated plant or be for other purposes, including fitness for purpose evaluations, installation and commissioning, system changes or improvements or other mechatronic engineering-related tasks. It includes application of mechanical, fluid, electrical and controller design and analytical techniques.

Application of the Unit

This unit applies to mechatronic analyses undertaken as part of a mechatronic engineering design or assessment of automated plant or devices for projects, system changes or improvements.

It is suitable for people working as mechatronic or automated system designers and draftspersons and those pursuing careers and qualifications in mechatronic, automation, maintenance or manufacturing engineering. The work may be undertaken individually or as part of a team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

MEM23004A	Apply technical mathematics
MEM23111A	Select electrical equipment and components for engineering applications
MEM23112A	Investigate electrical and electronic controllers in engineering applications
MEM14090A	Integrate mechatronic fundamentals into an engineering task

© Commonwealth of Australia, 2024 Public Skills Australia

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate mechatronic analysis context and need	1.1	Review the context and negotiate parameters of the engineering design brief in consultation with stakeholders
		1.2	Identify relevant engineering scientific principles and required analysis techniques
		1.3	Investigate life cycle design and sustainability implications of mechatronic design or existing mechatronic systems, devices or equipment
		1.4	Determine specification, documentation and graphical techniques required for analysis
		1.5	Confirm work health and safety (WHS), regulatory requirements, codes of practice, standards, and risk management relevant to mechatronic analysis task
		1.6	Determine available sources for any required technical and professional assistance
2	Apply mechatronic analysis techniques	2.1	Plan, schedule and coordinate the analysis task
		2.2	Create adequate and accurate calculations, preliminary graphics and maintain design process records
		2.3	Evaluate multiple solutions against analysis criteria
		2.4	Integrate mechatronic techniques, hardware and software, including mechanical, fluid, electrical, electronic, controller and networking

© Commonwealth of Australia, 2024 Public Skills Australia

		2.5	Apply systems thinking, problem solving and decision making
		2.6	Incorporate professional and technical assistance, as required
		2.7	Apply specification, documentation and graphical techniques modelling, mock-up or prototyping techniques, where required, to achieve or test solution
3	Report results	3.1	Record results of analysis
		3.2	Provide documentation such as calculations, specifications, diagrams, computer-aided design (CAD) files, control circuits and controller programs, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating with stakeholders and team
- determining or confirming relevance of mechatronic scientific principles and analysis techniques, including principles of:
  - mechanical
  - fluid power
  - fluid dynamics
  - thermodynamics
  - electrical and electronic fundamentals
  - controller and system control and data acquisition (SCADA) or distributed control systems (DCS) programming
  - engineering materials, properties and processes
  - techniques for integration of mechanical, fluid, electrical, electronic, controller and networking elements
- evaluating relevance of WHS, and regulatory requirements, standards and codes of practice
- evaluating multiple solutions against design criteria, risk, sustainability and cost factors

© Commonwealth of Australia, 2024 Public Skills Australia

- applying life cycle design and sustainability parameters to analysis task
- planning, scheduling and coordinating the mechatronic analysis task
- solving problems and making decisions with systems thinking approach for contingencies and constraints, and continuous improvement
- integration of hardware and software and mechatronic techniques, such as mechanical, fluid, electrical, electronic, controller and networking
- specifying, documenting and applying graphical techniques, including modelling
- undertaking or supervising mock-up or prototyping techniques, where required, to achieve solution
- creating and maintaining adequate and accurate calculations and analysis process records
- reporting and documenting, results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

- implications of life cycle design, fitness for purpose evaluation and sustainability for mechatronic analysis process
- mechatronic analysis processes and techniques to investigate, synthesise and develop proposals, evaluate feasibility against design criteria, and review and revise in consultation with stakeholders, team or support functional group
- common model, mock-up and prototyping techniques relevant to mechatronic engineering
- systems thinking, problem solving and decision making, and continuous improvement methods
- WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements with particular emphasis on automation safety requirements
- sources of professional and technical assistance
- procedures for planning, scheduling and coordination of analysis
- hardware requirements of typical mechatronic or automation applications
- engineering mechatronic scientific principles and techniques required for analysis tasks:
  - mechanical
  - fluid power
  - fluid dynamics
  - thermodynamics
  - electrical and electronic fundamentals
  - controller and SCADA or DCS programming
  - engineering materials, properties and processes
  - techniques for integration of mechanical, fluid, electrical, electronic, controller and networking elements
- mechatronic analysis calculations techniques
- software for product planning and design, such as CAD, circuit design, controller

© Commonwealth of Australia, 2024 Public Skills Australia

programming and project management
- required documentation prototyping options, including mock-ups, physical and virtual modelling and rapid prototyping

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply mechatronic design techniques consistent with a design brief information, relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • communicate, negotiate and review design brief with stakeholders and team or support functional group • determine or confirm relevant scientific principles and analysis techniques, WHS and regulatory requirements • evaluate multiple solutions • investigate life cycle design and sustainability • plan, schedule and coordinate the design task • integrate mechatronic techniques, hardware and software • solve problems and make decisions with systems thinking for contingencies and constraints, and continuous improvement • define analysis, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • create and maintain adequate and accurate calculations and design process records • report and document results and processes.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then a simulated working environment must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical

© Commonwealth of Australia, 2024 Public Skills Australia

	resources should include equipment modified for people with disabilities.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions (real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Mechatronic engineering analysis	Mechatronic engineering analysis may be required for a variety of reasons, including: • design of automated devices and plant • design or evaluation of significant modifications, process changes or improvements • sustainability issues relevant to plant, equipment or processes • fitness for purpose evaluation • installation and commissioning of plant and equipment
Planning processes	Planning processes may include: • establishing design parameters and design criteria

© Commonwealth of Australia, 2024 Public Skills Australia

	• contributing to the negotiation and advice process • preliminary planning, design investigations and costing • identifying design, development, prototyping activities and skills requirements • planning and scheduling design activities • improving, adjusting and rescheduling as required by emergency contingencies and constraints
Analysis process	Designing as a systematic process includes: • establish design parameters and criteria • research, measurement, experimentation and investigation • generating ideas • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques • evaluating solutions against design criteria • consultation, adjustments and agreement • finalise design and sign-off
Analysis criteria	Analysis includes relevant technical criteria and may also include criteria relating to: • function • aesthetics • manufacturability and maintainability • marketability • sustainability • cost constraints • ergonomics and anthropometrics and physiology • manufacturability, maintainability • facilities, plant and skills available • safety and risk
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides • minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer

© Commonwealth of Australia, 2024 Public Skills Australia

Life cycle assessment	Life cycle analysis can be used to improve sustainability of products and services. It may be applied to: • all aspects of manufacture of a single product • the entire operations of an organisation • a particular aspect of operations, such as environmental implications
Prototyping	Prototyping may include: • mock-ups, physical and virtual modelling with post-processing for computer numeric control (CNC) and rapid prototyping

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular mechatronic analysis task
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or

© Commonwealth of Australia, 2024 Public Skills Australia

	support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain
Automation safety	Automation safetyrefers to the reliance on emergency stop, failsafe design, redundancy, interlocks and data integrity. Standards apply to general plant design and use as well as the 'functional safety of safety-related electrical, electronic and programmable electronic control systems'
Mechatronic hardware	Mechatronic hardware may include: • mechanical, fluid and electric actuators • power transmission devices • pipes, conduits wires, fittings and connectors • controllers • power interfaces • signal conditioning interfaces
Documentation	Documentation includes: • documented calculations • specifications • CAD files • risk analysis • sustainability and life cycle assessments

MEM14088A Apply maintenance engineering techniques to equipment and component repairs and modifications

Modification History

Release 1 (MEM05v9).

Unit Descriptor

This unit of competency covers the skills needed to apply maintenance engineering techniques to equipment or component modification or repair. It includes decision making on the need for repair, replacement or modification and design of any repair or modification. The unit covers maintenance techniques for repair and modification of mechanical, fluid and electrical plant, and facilities in accordance with procedures, work health and safety (WHS) and legislative requirements, and risk management procedures. Documentation of the repair or modification process includes calculations, specifications, computer-aided design (CAD) files, risk analysis, sustainability and life cycle assessments.

Application of the Unit

This unit applies to maintenance-related work where a technical evaluation must occur on whether to repair, replace or modify equipment or components and where engineering design techniques are applied where repair or modification is required. The unit applies across all engineering disciplines and would normally be selected in conjunction with appropriate technical units for the equipment or components being considered for maintenance.

The unit includes reviewing condition analysis and non-destructive test (NDT) reports. However, the conduct of condition analysis and NDT tests is covered by the relevant specialist technical units.

Where an organisation or whole of plant maintenance management systems is being reviewed or considered for change the unit MEM23125A Evaluate maintenance systems, should be selected.

The unit is suitable for people working at a technician level in maintenance-related design drafting or in maintenance-related supervision or management.

Pre-Requisites

MEM14092A Integrate maintenance fundamentals into an engineering task

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element.

Elements and Performance Criteria

1	Investigate requirements of equipment or component maintenance task	1.1	Review the context and parameters of the maintenance task in consultation with stakeholders
		1.2	Review equipment or component original design and any subsequent modifications and repairs
		1.3	Review current performance specifications
		1.4	Determine engineering scientific principles and design techniques required for equipment or component maintenance
2	Investigate alternatives of repair, replacement or modification	2.1	Review preventative maintenance system requirements or defect/failure details to determine if replacement is required
		2.2	Review equipment or component condition analysis reports, including the results of any required NDT
		2.3	Review maintenance repair techniques and processes, standard parts, labour and skill requirements
		2.4	Consider life cycle design and sustainability implications of maintenance design and maintenance

© Commonwealth of Australia, 2024 Public Skills Australia

			activities
		2.5	Determine specification, documentation and graphical techniques required to define designs
		2.6	Confirm WHS and regulatory requirements, codes of practice, standards, risk management and registration requirements relevant to repair and modification design projects
		2.7	Assess the need for technical and professional assistance
		2.8	Consider software options for repair and modification design, such as computer-aided design (CAD), stress analysis and project management software
		2.9	Decide if repair, replacement or modification is appropriate and seek any necessary approvals
3	Apply repair and modification design techniques	3.1	Plan, schedule and coordinate the repair or modification design task
		3.2	Apply the design process and scientific principles to repair and modification design proposals
		3.3	Determine materials, components, maintenance processes, equipment and tools required to implement design
		3.4	Create adequate and accurate calculations, preliminary graphics and maintain design process records, including use of software, as appropriate
		3.5	Assess repair and modification designs against design criteria
		3.6	Apply systems thinking to problem solving and decision making techniques in dealing with contingencies and constraints for continuous improvement and development of design options
		3.7	Incorporate professional and technical assistance, as required
		3.8	Use specification, documentation and graphical techniques, modelling, mock-up or prototyping techniques, as appropriate, to define repair or modification

© Commonwealth of Australia, 2024 Public Skills Australia

4	Report results	4.1	Record results of investigations, application and development of repair and modification design
		4.2	Provide appropriate documentation, such as calculations, specifications, diagrams, CAD files, mock-ups or prototypes

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining or confirming scientific principles and maintenance design techniques, WHS and regulatory requirements, and design specification requirements required to meet maintenance brief
- evaluating multiple solutions, materials and components, maintenance repair processes and techniques, standard parts, skill requirements, equipment and tools
- investigating life cycle design and sustainability, technical and professional assistance alternatives for repair, replacement or improvement, and software options for maintenance planning and design
- planning, scheduling and coordinating the maintenance task
- applying design process and scientific principles to component and hardware selection and design proposals
- solving problems and making decisions with systems thinking for contingencies and constraints, and continuous improvement
- defining designs, specifying and documenting and applying graphical techniques, modelling, mock-up or prototyping techniques
- creating and maintaining adequate and accurate calculations and design process records
- reporting and documenting results of investigations, application of principles and techniques, calculations, specifications, diagrams, CAD files, mock-ups or prototypes of designs

Required knowledge

Required knowledge includes:

- sustainability implications of maintenance processes, materials and products, including consideration of life cycle analysis
- design processes and techniques

© Commonwealth of Australia, 2024 Public Skills Australia

- concurrent engineering techniques, systems thinking, problem solving and decision making, and continuous improvement methods
- WHS Acts and regulations, codes of practice, standards, registration and risk assessment for design, maintenance and prototyping activities
- procedures for planning, scheduling and coordination of maintenance design
- typical maintenance criteria, such as:
  - strength and servicability of repairs compared to original
  - function and aesthetics
  - maintainability and manufacturability
  - preventative maintenance evaluatuion criteria, such as mean time between failure (MBTF) and failure mode effects analysis (FMEA)
  - required quality, cost and sustainability
- design calculations techniques
- typical maintenance design requirements of various industries
- typical repairs, parts, skills and maintenance processes
- hardware specifications and catalogues
- typical maintenance plant, equipment and tools
- plant condition and maintenance assessment techniques
- typical maintenance techniques and technologies for monitoring, preventative maintenance, online and breakdown maintenance, disassembly, repair, reassembly and recommission
- design calculations layout and documentation for design checking and maintenance records
- design process documentation and reports, including specifications and CAD graphics
- software for maintenance planning and repair and modification design, including CAD and stress analysis software
- software and systems, such as system control and data acquisition (SCADA) and distributed control systems (DCS) for maintenance control and information distribution
- developments in repair and modification design
- options for mock-up, modelling and prototyping

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person who demonstrates competency in this unit must be able to apply repair and modification techniques consistent with a

	design brief information, relevant standards and conventions.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently: • communicate, negotiate and review maintenance brief with stakeholders • determine or confirm scientific principles and design techniques, WHS and regulatory requirements, and design specification requirements • evaluate multiple solutions • investigate life cycle design, sustainability, technical and professional assistance required, and maintenance alternatives for repairs and modifications • plan, schedule and coordinate the maintenance task • solve problems and make decisions with systems thinking for contingencies and constraints, and continuous improvement • define designs, specify and document and apply graphical techniques, modelling, mock-up or prototyping techniques • select components and hardware • create and maintain adequate and accurate calculations and design process records • report and document results and processes.
Context of and specific resources for assessment	• This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate.
Method of assessment	• Assessment must satisfy the endorsed Assessment Guidelines of the MEM05 Metal and Engineering Training Package. • Assessment methods must confirm consistency and accuracy of performance (over time and in a range of workplace relevant contexts) together with application of underpinning knowledge. • Assessment methods must be by direct observation of tasks and include questioning on underpinning knowledge to ensure correct interpretation and application. • Assessment may be applied under project-related conditions

© Commonwealth of Australia, 2024 Public Skills Australia

	(real or simulated) and require evidence of process. • Assessment must confirm a reasonable inference that competency is not only able to be satisfied under the particular circumstance, but is able to be transferred to other circumstances. • Assessment may be in conjunction with assessment of other units of competency where required.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Maintenance repair and modification requirements	Maintenance repair and modification requirements may include: • scheduled maintenance required under the maintenance management system • unscheduled maintenance as a result of system/component failure • repairs to restore systems/components to operation • modifications to improve system/component reliability or maintainability • maintenance schedule change or equipment or component modification required because of a change in equipment performance requirements (e.g. changed production or product design) • competitive market pressure and ‘lean maintenance’ • changes in available maintenance technology • resources supply (e.g. materials, labour and skills) • introduction or changes to asset technologies (e.g. mechanical, fluid, electrical, electronic and system control) • sustainability relevant to repair and modification design tasks • WHS, risk and applicable standards and code requirements

© Commonwealth of Australia, 2024 Public Skills Australia

Planning processes	Planning processes may include: • establishing maintenance parameters and design criteria • contributing to the negotiation and advice process • preliminary planning, investigations and costing • identifying design, development, prototyping activities and skills requirements • planning and scheduling design activities • improving, adjusting and rescheduling as required by emergency contingencies and constraints
Design process	Where equipment or component repair or modification design is required the design process includes: • establish design parameters and criteria • research, measurement, experimentation and investigation • generating ideas • synthesis, problem solving and decision making, and addressing constraints • apply scientific principles, calculation and graphics, prototyping and mock-up techniques if required • selection of components and hardware • evaluating solutions against design criteria • consultation, adjustments and agreement • finalise design and sign-off
Design criteria	Design criteria may include: • function and fit for purpose • aesthetics • manufacturability and maintainability • sustainability • cost constraints • ergonomics and anthropometrics and physiology • facilities, plant, services and skills available • WHS and risk
Sustainability	Sustainability is used to mean the entire sustainable performance of the organisation/plant, including: • meeting all regulatory requirements • conforming to all industry covenants, protocols and best practice guides

© Commonwealth of Australia, 2024 Public Skills Australia

	• minimising ecological and environmental footprint of process, plant and product • maximising economic benefit of process plant and product to the organisation and the community • minimising the negative WHS impact on employees, community and customer
Life cycle assessment	Life cycle analysis can be used to improve sustainability of repaired or modified equipment or components. It may be applied to all aspects of the repair or modification process

Appropriate licensed technical and professional assistance	Appropriate licensed technical and professional assistance may include:
	• technical support and advice relating to elements which have intrinsic dangers, such as:
	  • high pressure
	  • energised fluid vessels
	  • high temperatures and heat energy capacity
	  • wiring with high current control voltages above extra low voltage
	• professional support for technologies, such as:
	  • specialist electric motor drives and controllers
	  • specialist materials, plastics, metal alloys and nano materials
	  • special processes, foundry, alloy welding, heat treatment, sealing and fastening

WHS, regulatory requirements and enterprise procedures	WHS, regulatory requirements and enterprise procedures may include: • WHS Acts and regulations • relevant standards • codes of practice from Australian and overseas engineering and technical associations and societies • risk assessments • registration requirements • safe work practices • state and territory regulatory requirements applying to electrical work
Standards and codes	Standards and codes refer to all relevant Australian and international standards and codes applicable to a particular maintenance repair and

© Commonwealth of Australia, 2024 Public Skills Australia

	modification design task
Prototyping	Prototyping may include: • mock-ups, physical and virtual modelling with post-processing for computer numeric control (CNC) and rapid prototyping
Systems thinking	Systems thinking refers to the conduct of engineering work in a manner that demonstrates knowledge of how the interaction of different technical systems on equipment, machinery or structures, as well as the skills and techniques of personnel, combine to perform or support engineering-related operations, processes or projects. It embraces determining or establishing how the function of each technical system or component, as well as the skills and techniques of personnel, effects or potentially may effect, outcomes. Systems should be interpreted broadly within the context of the organisation and depending on the project or operation can include equipment, related facilities, material, software, internal services and personnel, and other organisations in the value chain

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Work within a quality system	1.1. Instructions and procedures are followed and duties are performed in accordance with requirements of quality improvement system. 1.2. Conformance to specifications is ensured. 1.3. Defects are detected and reported according to standard operating procedures. 1.4. Performance of operation or quality of product or service is monitored to ensure customer satisfaction.
2. Engage in quality improvement	2.1. Current performance is assessed. 2.2. Established performance measures are identified. 2.3. Specifications and standard operating procedures are identified. 2.4. Defects are detected and reported according to standard operating procedures. 2.5. Process improvement procedures are participated in. 2.6. The improvement of internal/external customer/supplier relationships is participated in. 2.7. Performance of operation or quality of product or service is monitored to ensure customer satisfaction.

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- reading, interpreting and following information on written job sheets, instructions, standard operating procedures and drawings
- checking and clarifying task-related information
- entering information onto workplace documents
- checking for conformance to specifications
- identifying duties of the individual within the quality improvement system
- identifying customers' requirements with respect to the operation or quality of the product or service
- reporting where appropriate, defects detected
- carrying out work in accordance with the process improvement procedures
- carrying out work in a manner consistent with the improvement of customer/supplier relationships
- performing numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- quality system terminology and concepts, e.g.
  - quality assurance - planning to meet customers' requirements
  - quality control - checks and procedures to ensure customer requirements are met
  - quality inspection - inspecting and testing products and services
  - total quality control - a company-wide approach that combines both quality assurance and quality control so that the customer is always satisfied
- commonly accepted meaning/s of the terms quality and quality system
- the reasons for following the requirements of the quality improvement system
- strategies and approaches for working within a quality system
- procedures to be followed in undertaking the work
- specifications to which the individual's work is to comply
- reasons for ensuring work conforms to specification
- benefits of good quality:

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• quality products • reduced costs • customer confidence, satisfaction and loyalty • good reputation • job satisfaction • solving problems • increased competitiveness • keeping up with technology • costs and consequences of poor quality e.g. • lost customers • accidents • wastage • lost time • low morale • conflict • procedures for reporting defects • examples of common defects • quality improvement procedures • four steps of the quality cycle: plan, do, check, act • reasons for following process improvement procedures • examples of ways in which customer/supplier relationships can be improved • benefits of good customer/supplier relationship • hazards and control measures associated with applying quality procedures, including housekeeping • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to apply quality systems.
Critical aspects for assessment and	Assessors must be satisfied that the candidate can

EVIDENCE GUIDE	
evidence required to demonstrate competency in this unit	competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with applying quality systems or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Liaise with external suppliers	1.1. The exact quality requirements are communicated to suppliers. 1.2. Quality assurance system is negotiated and agreed. 1.3. Verification method and systems and procedures for dispute settlement are established and agreed. 1.4. Recording system of procured products or services which ensures traceability is established.
2. Check for conformance to specifications	2.1. The requirements of all relevant documentation including contract specifications, drawings and purchase orders are obtained and understood. 2.2. The conformance of the procured product or service to all of the documented requirements is established.
3. Assess external suppliers	3.1. Assessment and evaluation of suppliers' capability and/or quality system are conducted. 3.2. Suppliers' goods or services are evaluated.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- communicating quality requirements to the supplier
- negotiating quality assurance system
- implementing system for recording and tracing products or services procured
- obtaining and interpreting relevant drawings, specifications, documentation etc.
- checking products/materials or services provided for conformance to documented requirements/ specifications
- assessing supplier capability to provide the required product/material or service
- evaluating supplier quality systems
- evaluating supplier goods or services
- using communication and conflict resolution

Required knowledge

Look for evidence that confirms knowledge of:

- the exact quality requirements of the product/material to be supplied
- the procedures to be followed to ensure the supplier understands the quality requirements
- the requirements of a quality assurance system to ensure the supplied product/material conforms to the quality requirements
- the procedures for negotiating agreements with suppliers
- the procedures for verifying that the agreed quality assurance system is being utilised by the supplier
- techniques for dispute resolution
- the procedures for recording procured products or services
- the means of tracing procured products or services
- the reasons for tracing procured products or services
- the specifications of the product/material to be supplied or service to be provided
- any variations from documented requirements/ specifications
- the procedures for assessing/evaluating a supplier's capability to supply the required product/material or service
- the procedures for evaluating a supplier's quality system
- the procedures for evaluating a supplier's goods or services
- any equipment and techniques required to carry out the evaluation procedures
- hazards and control measures within the scope of this unit
- use and application of personal protective equipment

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to exercise external quality assurance. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with exercising external quality assurance or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Quality assurance system	ISO 9000 procedures, Six Sigma procedures, sampling plans of all kinds etc.
Traceability	Unique identification of individual product or batches as appropriate
Assessment and evaluation	Vendor rating procedures, design reviews, audit reports, site surveillance reports, failure reports and concession applications etc.

MEM18001C Use hand tools

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers using a range of hand tools for a variety of general engineering applications.

Application of the Unit

Application of the unit	Applications may include hand tools used for adjusting, dismantling, assembling and finishing of items or components, and the finishing, cutting, scraping of metallic and non-metallic material to size and shape. This includes simple tapping and threading and routine maintenance of hand tools. This unit should not be selected if the hand tool is dedicated to a single operation or machine and if only a machine specific/customised tool is used. When using hand held power tools or power tools used for hand held operations, refer to Unit MEM18002B (Use power tools/hand held operations). **Band**: **A** **Unit Weight**: **2**

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Use hand tools	1.1. Hand tools are selected appropriate to the task requirements. 1.2. Hand tools are used to produce desired outcomes to job specifications which may include finish, tension, size or shape. 1.3. All safety requirements are adhered to before, during and after use. 1.4. Unsafe or faulty tools are identified and marked for repair according to designated procedures before, during and after use. 1.5. Routine maintenance of tools, including hand sharpening is undertaken according to standard

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	operational procedures, principles and techniques. 1.6. Hand tools are stored safely in appropriate location according to standard operational procedures and manufacturers' recommendations.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • reading and following information on standard operating procedures • following verbal instructions • selecting hand tools appropriate to the task • using hand tools safely • identifying hand tool defects and marking for repair • maintaining/sharpening hand tools using appropriate techniques • storing hand tools in accordance with manufacturers'/standard operating procedures
Required knowledge
Look for evidence that confirms knowledge of: • applications of different hand tools in a general engineering context • common faults and/or defects in hand tools • procedures for marking unsafe or faulty tools for repair • routine maintenance requirements for a range of hand tools • storage location and procedures for a range of hand tools • hazards and control measures associated with using hand tools • use and application of personal protective equipment • safe work practices and procedures

MEM50009B Safely operate a mechanically powered recreational boat

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers safely handling/operating a powered recreational boat on coastal and inland waters. It includes manoeuvring and handling the boat as well as safe navigation and anchoring. This unit was developed by the National Marine Safety Committee (NMSC).

Application of the Unit

Application of the unit	This unit is one of three core competencies that have been adopted by all government marine safety authorities to contribute to and promote the safe use of waterways and awareness of boating safety. The unit applies specifically to mechanical powered recreational boats including personal watercraft. However, it is recognised that some aspects of this competency apply to any recreational vessel. All work and work practices are undertaken to regulatory and legislative requirements. Unit MEM50008B (Carry out trip preparation and planning) and Unit MEM50010B (Respond to boating emergencies and incidents) are the other two NMSC core units. **Band**: **A** **Unit Weight**: **2**

© Commonwealth of Australia, 2024 Public Skills Australia

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Manoeuvre and handle the boat	1.1. A pre-start check is undertaken. 1.2. Motor is prepared and started. 1.3. Boat is manoeuvred safely according to conditions and in accordance with water traffic regulations. 1.4. Performance of the boat and personnel is monitored at all times. 1.5. Impact of boat use on others and the environment is considered.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	1.6. Safety equipment is used, stowed and, if required, worn in accordance with legislation and recognised regulations and rules.
2. Navigate safely	2.1. Aids to small craft navigation are identified. 2.2. Collision avoidance techniques are applied when required in accordance with relevant legislation, recognised regulations and rules. 2.3. Operation of the boat is carried out at all times in accordance with relevant legislation, recognised regulations and rules. 2.4. Navigational aids and landmarks are used to determine and monitor boat position. 2.5. Hazards and conditions are taken into account in navigating the boat.
3. Anchor the boat	3.1. Anchorage site is selected in accordance with prevailing and forecast conditions and in accordance with legislation. 3.2. Type of anchor used is suitable for location. 3.3. Anchor is lowered, set and monitored according to prevailing conditions. 3.4. Anchor is retrieved and securely stowed.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
Look for evidence that confirms skills in: • adequately preparing and checking • manoeuvring and handling a boat safely and accurately • monitoring performance and being aware • navigating safely and taking hazards into account • anchoring techniques
Required knowledge

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
Look for evidence that confirms knowledge of: • boating and other relevant legislation, rules and regulations • legislative requirements regarding the use of safety equipment • area of activity hazards and prevailing conditions • boating information resources • environmental awareness

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to safely handle/operate a powered recreational boat on coastal and inland waters, including basic navigation and anchoring.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling associated with a marine environment, or other units requiring the exercise of the skills and knowledge covered by this unit.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifi-cations, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Pre-start check	Pre-start check may include: • fuel is connected • battery is charged and connected • kill switch • fumes, petrol • fuel and water leaks • hatches/windows/doors are open • ventilation • sea-cock opening • loose gear is secured • marine radio is turned on and radio aerials raised • bilge water levels checked

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• navigation lights

Manoeuvred safely according to conditions	• Manoeuvring conditions may include:
	  • from or to a ramp, pontoon, wharf, mooring, anchor, confined areas such as narrow channels, marinas, moorings, obstructions
	  • sea-states such as bars, waves, rips, high seas, tidal surges, choppy conditions, wakes
	  • low speed/high speed
	  • poor visibility
	  • effect of wind
	  • large vessels
	• Safe manoeuvring may include:
	  • steer straight line
	  • astern
	  • figure-eight
	  • right of way
	  • port-starboard
	  • throttle control
	  • emergency stop
	  • trim and stability of vessel
	  • towing or being towed
	  • berthing
	  • standing-on/stemming the tide
	  • retrieval of person overboard

Monitored	Monitoring may include: • cooling system • bilge • portholes and hatches • location and welfare of persons on board • oil, fuel and water • radio • position of boat • other water users • battery and electrical systems
Environment	Impact of boat use on others/environment may include: • noise • wake

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• safety of others • disturbance or injury to wildlife • disposal of waste and bilge water • effects of detergent and anti-foul • fuelling arrangements
Aids to small craft navigation	Aids to navigation may include: • IALA Buoyage System 'A' • charts • compasses • GPS • sounder • tide tables • passage plan • marine references • notices to mariners • radio navigational warnings

Relevant legislation, **recognised regulations and rules**	• Collision regulations such as:
	  • navigating in narrow channels
	  • giving way to other vessels
	  • overtaking, proper lookout
	  • sound signals
	  • lights and shapes
	  • responsibilities and duty of care
	  • use of buoyage system
	  • speed
	  • recognition of lights and markers
	  • rules of road
	  • recognition of operation areas
	  • specific activity rules, e.g. PWCs, water skis, equipment requirements
	  • accident/incident reporting
	• Marine regulations such as:
	  • safety regulations
	  • licensing and registration
	  • speed limit restrictions
	  • distance off requirements
	  • port limits/rules
	  • marine incident reporting

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• carrying capacity • drug and alcohol limits/effects • age of operators • Environmental and wildlife regulations as relevant and applicable to the operation of boats
Hazards and conditions	Hazards and conditions may include: • weather • set and drift • effect of wind, tide and currents • submerged objects • other boats and wash • restricted waters • crossing bars
Type of anchor	• Types of anchor may include: • Danforth • Grapnel/Reef • Bruce • Plough • Admiralty • Sarca • sea anchor • Anchoring systems may include: • multiple anchors • bow and stern anchors • mooring buoy

MSACMS401A Ensure process improvements are sustained

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the knowledge and skills needed to ensure that the gains which have been made by using improved methods, processes and equipment are sustained as the new base line/standard to the team's area of work and so prevent regression to former practices, or digression to less efficient practices.

Application of the Unit

Application of the unit	This unit applies to an environment where continuous improvement in a manufacturing enterprise is being undertaken. The team leader or other responsible person then facilitates and implements methods of ensuring that these improvements are sustained. Improvement initiatives can be made by any of any number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known. The unit covers ensuring that team members implement the modified processes to ensure the improvements are sustained and opportunities taken to suggest further improvements. This unit requires the application of skills associated with problem solving, initiative and enterprise, planning and organising in order to check and monitor the impacts of change. It also requires communication and teamwork in order to assess the impact of change in a team's area of work. Self management and learning will be used to continuously monitor change influences and adapt improvements according to new information and

	feedback.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Ensure corrective actions are implemented.	1.1. Liaise with relevant people associated with the anticipated corrective action 1.2. Ensure the supply of resources (equipment, modifications, consumables, people) 1.3. Check occupational health and safety (OHS) impacts of corrective action and take action in accordance with procedures if required 1.4. Ensure workforce has relevant skill level 1.5. Negotiate solutions with relevant people to allow

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	implementation 1.6. Supervise implementation of corrective action 1.7. Monitor implementation of corrective action 1.8. Make required adjustments
2. Verify systems support improvement	2.1. Ensure ***procedures*** reflect improvements 2.2. Ensure training and assessment systems reflect improvements 2.3. Liaise with relevant people to ensure their support of the new modified system/s
3. Audit the change	3.1. Determine an appropriate audit period/cycle 3.2. Agree relevant measures/indicators for the improvement 3.3. ***Measure performance*** at agreed times using agreed measures 3.4. Investigate the cause/s of under performance 3.5. Take appropriate corrective action to improve performance 3.6. Reaudit the improvement on an agreed basis

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills:
• communication/negotiation skills • teamwork • basic mathematics • planning • problem solving • analysing.
Required knowledge:
• existing procedures • modified procedures • overall process of manufacturing relative to improvements being made • appropriate measures of performance • business performance goals sufficient to determine best measures of improved

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
performance.

Evidence Guide

EVIDENCE GUIDE The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.	
Overview of assessment requirements	The person will be able to point to improvements which have been made where they have been active in designing and implementing systems for sustaining the improvement.
What critical aspects of evidence are required to demonstrate competency in this unit?	Evidence of having sustained improvements in the workplace and of reviewing these improvements for their real impact.
In what context should assessment occur?	Assessment will need to occur in a workplace where improvements are occurring, or where specific improvement projects are undertaken for the purpose of providing evidence of competence (among other aims). The unit may also be assessed on a project basis in a simulated environment.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	This unit may be assessed concurrently with appropriate units on continuous improvement. This unit relates to a team leader ensuring that their team sustains improvements. *MSACMS201A Sustain process improvements* is a lower level unit for a person's own area of responsibility.
What method of assessment should apply?	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.
What evidence is required for demonstration of consistent performance?	Evidence should be available from multiple small changes, or from a large change which has had multiple facets implemented over a period of some months.
What are the specific resource requirements for this unit?	Access to a workplace implementing competitive manufacturing strategies, or where improvement projects can be conducted and relevant records is required. No other specific resources are required.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Systems	Systems is used to mean any/all of the equipment, process, procedures and work practices that are used to produce the product. A term often used in this context is: • Kaizen - the philosophy of continual improvement, that every process can and should be continually evaluated and improved in terms of time required, resources used, resultant quality, and other aspects relevant to the process.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Procedures	Procedures include all work instructions, standard operating procedures, formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant. They may be written, verbal, computer based or in some other form. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (e.g. Good Manufacturing Practice (GMP), Responsible Care) and government regulations.
Improvement	Improvement procedures in some enterprises are also known by baka-yoke which is a manufacturing technique of preventing mistakes by designing the manufacturing process, equipment and tools so that an operation literally cannot be performed incorrectly. An attempt to perform incorrectly, as well as being prevented, is usually met with a warning signal of some sort. The term poka-yoke is sometimes referred to as a system where only a warning is provided. Improvements may be sustained by use of technology so that it is impossible to do the job any other way. However, improvements may also be sustained by changes to process or procedures or other changes to the manufacturing system which, if followed, will sustain the change and this unit may be applied to all these situations.
Measuring performance	Measuring performance is not used literally and may mean the personal taking of measurements, or it may mean arranging for measurements to be taken/made by appropriate personnel. The interpretation of the measurements however is to be undertaken personally.

MSACMT270A Use sustainable energy practices

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the skills needed to use and make improvements in sustainable energy practices in production, maintenance and logistics.

Application of the Unit

Application of the unit	In a typical scenario, a team member will be aware of energy use. Some of this energy use is necessary but typically a large part of energy use is ***unnecessary waste*** and so should be eliminated. The team member will observe energy use and ensure it is according to the organisation's plans and will also engage in continuous improvement for energy use. This unit requires the application of skills associated with interpreting workplace information on energy use and using procedures and technology to minimise energy use and waste.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	

© Commonwealth of Australia, 2024 Public Skills Australia

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance Criteria describe the performance needed to demonstrate achievement of the Element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the Range Statement. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify energy use	1.1. Identify energy consuming processes in relation to own work 1.2. Recognise the type/source of ***energy*** consumed
2. Follow energy conservation plans	2.1. Check energy use in accordance with conservation plans 2.2. Identify most efficient or appropriate equipment or procedures to comply with conservation plans 2.3. Identify any uses which do not comply with conservation plans 2.4. Take action in accordance with procedures to bring energy use back in line with conservation plans
3. Improve energy use	3.1. Note any waste of energy use 3.2. Recommend improvements to energy use

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
Required skills
• analysis • basic mathematics • communication • problem solving
Required knowledge
• types and sources of energy relevant to the process • basic principles of energy efficiency • process needs for energy

Evidence Guide

EVIDENCE GUIDE The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, the range statement and the assessment guidelines for this training package.	
Overview of assessment requirements	The team member will be able to identify the energy use of any/all parts of the process and recommend better ways of using it.
What are the specific resource requirements for this unit?	Access to an organisation seeking to improve its energy usage.
What critical aspects of evidence are required to demonstrate competency in this unit?	Evidence of conformance to energy usage plans and suggestions for improvement should be available.
In what context should assessment occur?	Assessment needs to be conducted in an organisation where energy is a significant cost component or by use of a project, simulation or case study.
Are there any other units which could or should be assessed with this unit or which relate directly to this unit?	This unit is related to: • *MSACMT271A Use sustainable environmental practices* - which covers general environmental practices, and • *MSACMT670A Develop and manage sustainable energy practices* - which covers higher level aspects.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
What method of assessment should apply?	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria, skills and knowledge. A holistic approach should be taken to the assessment. Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.
What evidence is required for demonstration of consistent performance?	Evidence should be available from the daily routine of the job to show that there is consistent performance.

Range Statement

RANGE STATEMENT The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Waste	Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within manufacturing, categories of waste include: • excess production and early production • delays • movement and transport

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• poor process design • inventory • inefficient performance of a process • making defective items. Waste for this unit may include activities which do not yield any benefit to the organisation or any benefit to the organisations customers.
Energy	Energy is used to mean all sources of energy used by the process be it electricity, gas or mobile transport fuel. The uses of the energy will also be potentially wide and include heating and cooling, lighting, moving materials (including pumps and conveyors), modifying materials (including cutting, forming, weaving, knitting, reacting, moulding, extruding, mixing), generating pressure/vacuum or providing motive power for equipment and transport.

MSAENV272B Participate in environmentally sustainable work practices

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the outcomes required to effectively measure current resource use and carry out improvements including those reducing negative environmental impacts of work practices. This unit is based on the sustainability guideline standard GCSSUS01A Participate in environmentally sustainable work practices.

Application of the Unit

Application of the unit	This competency applies to operators/team members who are required to follow procedures so as to work in an environmentally sustainable manner. This ensures regulatory compliance and also aims at minimising environmental risks and maximises the environmental performance of the process and the organisation. It includes: • Resources used • Potential environmental hazards • Improving environmental performance (within scope of competency and authority). This competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office, warehouse etc. This unit will need to be appropriately contextualised as it is applied across an

© Commonwealth of Australia, 2024 Public Skills Australia

	organisation and across different industry sectors.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	This unit has **no** prerequisites	

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify current resource use and environmental issues.	1.1. Identify workplace ***environmental and resource efficiency issues***. 1.2. Identify resources used in own work role. 1.3. ***Measure*** and record current usage of resources using ***appropriate techniques***.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	1.4. Identify and report workplace environmental hazards to appropriate personnel.
2. Comply with environmental regulations.	2.1. Follow ***procedures*** to ensure ***compliance***. 2.2. Report environmental **incidents** to appropriate personnel.
3. Seek opportunities to improve environmental practices and resource efficiency.	3.1. Follow ***enterprise plans*** to improve environmental practices and resource efficiency. 3.2. Make ***suggestions*** for improvements to workplace practices in own work area.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include the ability to:

- report as required by procedures
- follow procedures and instructions and respond to change
- ask questions and seek clarifications relating to work requirements

Reading and writing is required in order to interpretrequired procedures and complete required workplace forms/reports.

Numeracy is required to interpret numeric workplace information, readings and measurements, handle data as required and complete numeric components of workplace forms/reports.

Required knowledge

Competency includes sufficient knowledge to:

- have a basic understanding of sustainability
- know the environmental hazards/risks, resource use and inefficiencies associated with own workplace (at an appropriate level)
- know the relevant environmental and resource efficiency systems and procedures for own work area
- know the impact of laws and regulations to a level relevant to the work context

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competence in this unit must be able to provide evidence of the ability to follow workplace procedures according to instructions given and to participate in the improvement of environmental and resource efficient work practices at own level of responsibility. Evidence must be strictly relevant to the particular workplace role.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: • identify and measure resources used in their job • identify situations likely to lead to an environmental incident • follow procedures related to environmental performance. Consistent performance should be demonstrated. For example, look to see that: • work is routinely to procedures • the minimum of resources is used consistent with the job requirements, good practice and the procedures.
Context of and specific resources for assessment	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. Depending on the selected methods of assessment access may be required to: • workplace procedures and plans • documentation in relation to production, waste, overheads, hazard control/management • reports from supervisors/managers • case study/scenarios
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed: • by demonstration in the workplace

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	• using targeted questioning for appropriate portions • by use of a suitable simulation and/or a range of case studies/scenarios • by a combination of these techniques. In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment.
Guidance information for assessment	Assessors need to be aware of any cultural issues that may affect responses to questions. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Procedures	All operations are performed in accordance with procedures including all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.
Environmental and resource efficiency issues	Environmental and resource efficiency issues include minimisation of environmental risks and maximisation of opportunities to improve business environmental performance and to promote more efficient production and consumption of natural resources, for example by: • minimisation of waste, through implementation of the waste management hierarchy

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• efficient and effective use of energy and other resources • seeking alternative sources of energy • efficient use of materials and appropriate disposal of waste • use of controls to minimise the risk of environmental damage from hazardous substances • efficient water use • reducing emissions • life cycle analysis applied to issues such as energy supply, materials, transport, production
Measure	Measure should be interpreted in a manner consistent with the scope of the job and may include things like: • counting the number of items entering/leaving a work area • reading indicators in the work area • obtaining relevant information from support personnel • other simple means
Appropriate techniques	Appropriate techniques include: • material fed to/consumed by plant/equipment • plant meters and gauges • job cards including kanbans • examination of invoices from suppliers • measurements made under different conditions • examination of relevant information and data.
Compliance	Compliance includes meeting relevant federal, state and local government laws, by-laws, regulations and mandated codes of practice. It also includes any codes and standards that the enterprise applies voluntarily.
Incidents	Incidents include: • breaches or potential breaches of regulations • occurrences outside of standard procedure which may lead to lower environmental performance.
Enterprise plans	Enterprise plans include:

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• documented policies and procedures • work plans to minimise waste, increase efficiency of water/energy use, minimise environmental hazards
Suggestions	Suggestions include ideas that help to: • prevent and minimise environmental risks and maximise opportunities • reduce emissions of greenhouse gases • reduce use of non-renewable resources • improve energy efficiency • increase use of renewable, recyclable, reusable and recoverable resources • reduce waste • increasing the reusability/recyclability of wastes/products • reduce water usage and/or water wastage.

MSAPCII295A Operate manufacturing equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the operation of production equipment and the resolving of routine problems in a simulated or trial manufacturing environment where there is a high degree of direct supervision. This competency is intended to be applied to any item of routine production equipment. This competency can be performed by operators working either independently or as part of a work team.

Application of the Unit

Application of the unit	This unit applies to a learning and assessment environment where access to normal production operations is not available . A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of direct supervision exists. The unit covers the making of a product or products to meet established quality standards and workplace requirements using routine manufacturing equipment. It includes: • checking specifications and work requirements • following established OHS and hazard minimisation procedures • monitoring equipment operation and reporting process variations • checking product for quality and conformity to specifications • dealing with non-conforming products/materials in accordance with procedures • identifying and rectifying/reporting on routine process

	problems • completing pro-forma production logs and reports.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Check job requirements.	1.1. Identify ***workplace*** requirements by following established ***procedures*** and practices 1.2. Identify product, materials and ***equipment*** requirements for job(s)

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
2. Control hazards.	2.1. Identify ***hazards*** in the production work area 2.2. Assess the risks arising from those hazards 2.3. Implement measures to control or avoid those risks in line with procedures and duty of care to fellow workers.
3. Prepare equipment for operation as required	3.1. Perform ***pre-start up checks*** 3.2. Suspected unusual or non standard product, materials and equipment are reported to an appropriate person 3.3. If required notify other team members on the intended equipment function and start up 3.4. Check/supply materials to equipment as required 3.5. Start up the item of equipment as required 3.6. Bring to specified conditions and build operating rate steadily, checking expected performance at various stages in accordance with procedures
4. Operate equipment	4.1. Monitor ***equipment operating conditions*** 4.2. Monitor ***product characteristics*** 4.3. Recognise conditions and characteristics which indicate a ***problem or a potential problem*** 4.4. Take ***appropriate action*** in response to problem or potential problem 4.5. Maintain supply of materials and removal of products as required 4.6. Complete required ***records*** 4.7. Keep equipment and work area in a clean, organised and safe condition
5. Prepare equipment for shut down as required	5.1. Perform emergency pause, stop or shutdown as required 5.2. Ensure equipment is free of product or purged as required 5.3. Shut down equipment in accordance with procedures 5.4. Make sure equipment and area is left in a safe condition and ready for ***need***

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.
Required skills
• observation • following procedures for start up, operation and shut down of equipment • analysis • problem solving • communication • documenting
Required knowledge
• all major components of the equipment and describe the function of each • principles of equipment operation • equipment operating parameters • equipment and product variables and their interactions. • apply and/or explain: • impact of materials and properties • start-up and shutdown processes • construction and limitations of the equipment • out of specification situations • distinguish between causes of faults such as: • raw materials • instrument failure/malfunction • electrical failure/malfunction • mechanical failure/malfunction • variations in product parameters (temperature, flows, pressure&levels).

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	The competent person will be able to carry out the day to day operation of a piece of production equipment, meeting the demands of productivity and quality while resolving routine problems.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
What critical aspects of evidence is required to demonstrate competency in this unit?	It is essential that the equipment be understood and that the importance of critical material properties, settings and readings is known. Competence must be demonstrated in the ability to recognise and analyse potential or actual problem situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to avoid problems rather than on recovery from a problem. Consistent performance should be demonstrated. In particular look to see that: • process conditions are maintained within limits • quality is monitored to minimise wastage • start-up and shutdown occurs first time • signals and alarms are responded to immediately • process measurements are continually made or observed • all OHS requirements are followed. • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution • pre-start checks are made to ensure equipment is lined up to the plant in accordance with procedures and/or manufacturers specifications. Besides assessing actual operation of manufacturing equipment many aspects may be also be assessed using a range of scenarios, case studies or what ifs as the assessment method. These assessment activities should include a range of problems, including new, unusual situations that may have been generated from past history
In what context should assessment occur?	Assessment will need to occur on an operating item of production equipment although some aspects especially problem solving may be assessed through simulation.
Are there any other units which could or should be assessed with this unit or which relate directly to this	This unit could be assessed concurrently with other relevant units.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
unit?	
What method of assessment should apply?	Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the elements, performance criteria, skills and knowledge. A holistic approach should be taken to the assessment. The assessee will have access to all techniques, procedures, information, resources and aids which would normally be available in the workplace. The method of assessment should be discussed and agreed with the assessee prior to the commencement of the assessment.
What evidence is required for demonstration of consistent performance?	Assessors should gather sufficient, fair, valid, reliable, authentic and current evidence from a range of sources. Sources of evidence may include direct observation, reports from supervisors, peers and colleagues, project work, samples, organisation records and questioning. Assessment should not require language, literacy or numeracy skills beyond those required for the unit.
What are the specific resource requirements for this unit?	Access to an operating item of production equipment over an extended time.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Workplace	Workplace for this unit covers a manufacturing environment specifically established for learning introductory manufacturing skills. It may be: • a school classroom or workshop equipped to teach manufacturing principles and practices • RTO premises equipped to teach manufacturing principles and practices

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• an enterprise environment where above average supervision exists and training is occurring. The normal production imperatives have been modified to take into account the training being delivered.
Procedures	Procedures includes all work instructions, standard operating procedures, formulas/ recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of equipment and processes. They may be written, verbal, computer based or in some other form. For the purposes of this Training Package, ' procedures' also includes good operating practice as may be defined by industry codes of practice (eg Good Manufacturing Practice (GMP), Responsible Care) and government regulations.
Equipment	Equipment for the purposes of this unit covers routine or common manufacturing equipment suitable for students operating in a simulated or trial manufacturing environment where there is a high degree of direct supervision. examples include but are not limited to: • guillotines • bending and folding machines • non CNC lathes, especially bench and training lathes • soldering equipment • pedestal drills • bench grinders
Hazards	Workplace hazards include: • hazardous materials • gases and liquids under pressure • moving machinery • cutting edges • electrical equipment • materials handling • environments subject to heat, noise, dusts or vapours.
Pre-start up checks	Pre-start up checks include: • visual checks

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• completing checklists • checking that safety guards, gates etc are in position and are operational • other checks required by standard operating procedures and manufacturer's instructions
Equipment operating conditions	Equipment operating conditions will be monitored using a range of techniques including: • monitoring of measured or indicated data as shown by gauges, charts etc., (eg. speed, hours on line, pressure, temperature, flow, vibration) • the senses of smell, sight, sound and feel as appropriate.
Product characteristics	Product characteristics includes: • product quality • production rate • defect rate
Problem/potential problem	Problem/potential problem includes: • changes to operating conditions • adverse changes to product characteristics • adverse changes to waste
Appropriate action	Appropriate action includes: • making adjustments in accordance with procedures • stopping the equipment in accordance with procedures • reporting to appropriate person.
Records	Records include: • log sheets/books • job/work sheets • electronic/paper records • verbal/voicemail/email reports
Need	Need includes: • leaving the equipment ready for restart • leaving it safe for maintenance • preparing for a medium/long term shut down

MSAPCII297A Make an object from cloth using an existing pattern

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency has been primarily developed for use in a simulated or trial manufacturing environment where there is a high degree of direct supervision. It covers the skills required to make an object from cloth (such as basic decorative items or clothing) following the requirements of an identified pattern. It may or may not require machinery. The elements of this unit should always be assessed in conjunction with other units that relate to the requirements of a specified work or job function Training and assessment against this competency unit must incorporate all relevant OHS and related legislative requirements.

Application of the Unit

Application of the unit	This unit applies to a learning and assessment environment where access to normal production operations is not available . A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of supervision exists. The unit applies to the construction of a cloth item that does not require complex sewing or finishing or the development of a pattern. Typical items include tablecloths, hats, towels, cushions, BBQ covers, place mats, cloth bags, scarves, wall hangings, external awnings, and cloth pencil or tool cases. The unit should be regarded as an integrating unit which

© Commonwealth of Australia, 2024 Public Skills Australia

	has application in Certificate I and II qualifications that act as general introductory qualifications to manufacturing industry. It should be applied to a specific 'project' or task which has a defined beginning, middle and end, occurs over an extended period of time, and is reflective of clothing manufacturing industry and/or organisation. When delivered and assessed as part of a qualification the unit should be customised to ensure its relevance to a real or simulated work activity and related workplaces and must be delivered and assessed over a period of time.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify job requirements	1.1. Job requirements for making the ***object from cloth*** are identified from ***work instructions*** 1.2. Instructions for designing and sequencing of work are considered 1.3. Particular measurements or adjustments are interpreted and mapped out 1.4. ***OH&S requirements*** are considered, planned for and observed
2. Prepare for work	2.1. ***Suitable work area*** is selected for the task 2.2. Appropriate ***tools***, ***equipment and materials*** are selected 2.3. ***Potential hazards*** are identified from observation of the tools, equipment, materials 2.4. Required tools and materials are laid out in sequence according to job requirements and work instructions 2.5. Equipment, if required, is checked and adjusted in accordance with workplace procedure
3. Create work	3.1. Fabric is measured, cut and laid out according to specifications 3.2. Fabric is secured or sewed according to quality requirements 3.3. Work is checked against patterns and work sheets at the identified checkpoints 3.4. Non-conformity with the required pattern or quality standard is rectified.
4. Complete work	4.1. Completed work is checked against required quality standards 4.2. Documentation is completed following workplace ***reporting procedures*** 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures

Required Skills and Knowledge

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE This section describes the skills and knowledge required for this unit.
Required skills
• collect, organize and understand information related to basic plans and safety procedures • coordinate work • plan and organise activities • work with others • the ability to ask for limitations and ask for help where needed; and • use mathematical ideas and techniques to correctly complete measurements and calculate areas and estimated materials requirement
Required knowledge
• workplace procedures and work instructions • organisational structure • evaluation and review procedures; • creative thinking techniques.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
What critical aspects of evidence are required to demonstrate competency in this unit?	• identify appropriate materials for use in making cloth items, and any special sewing or handling requirements for those materials. • apply safe operating and handling practices for equipment, products and materials. • interpret work order and locate and apply relevant information. • use patterns select and use tools and equipment appropriate to the task. • follow work instructions, operating procedures and inspection practices to: • prevent damage to goods, equipment or products • maintain required production output and product

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	quality • minimise the risk of injury to self or others. • work effectively with others. • modify activities to cater for variations in workplace contexts and environment. • report process or materials faults, damaged products or equipment. Assessment must confirm appropriate knowledge and skills to: • follow workplace procedures for hazard identification and risk control • use relevant personal protective clothing and equipment • communicate effectively with others as required when following safety procedures Performance is demonstrated consistently over a period of time and in a suitable range of contexts Consistently applies required knowledge and skills when completing workplace hazard prevention tasks and following relevant procedures: Consistently shows evidence of application of relevant workplace procedures, policies, instructions and regulations, including: • OHS regulations and hazard prevention policies and procedures • relevant manufacturer's guidelines relating to the operation and use of equipment Action is taken promptly to report and/or rectify any safety incidents in accordance with workplace procedures Recognises and adapts appropriately to cultural differences in the workplace, including modes of behaviour and interactions among staff and others Work is completed systematically with required attention to detail without damage to goods, equipment or personnel
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, and work instructions and specifications. Assessment of this unit must be carried out or managed

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	by a registered training organisation: Assessment of knowledge must be conducted through appropriate written/oral examinations Appropriate practical assessment must occur: • in suitable simulations of a work environment organised by the registered training organisation, and/or • in an appropriate workplace
Specific resources required for assessment	Access is required to opportunities and appropriate resources to either: • carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to work safely (usually as part of a holistic assessment involving other competency units), and/or • participate in actual workplace activities that demonstrate the skills and knowledge to work safely

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
What does an object from cloth include?	An object from cloth is a cloth item that does not require sewing of complex shapes or finishing or the development of a pattern and may include: • basic cushions • soft tableware such as placemats or serviettes • basic clothing such as a scarf, simple cloth hat not requiring blocking or a circle skirt, • a basic carry bag • handkerchief • tea towel • wall hanging

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• pencil case
What are the work instructions?	Work instructions may include: • job sheets including number and type of objects to be produced • patterns for making an object from cloth • plans • drawings and sketches • operating instructions for equipment including safety procedures • designer instructions • quality requirements • verbal directions from a supervisor or instructor
What do OH&S requirements include?	OH&S requirements may include: • legislation • regulations • material handling instructions including hazardous and dangerous goods codes • local safe operating procedures • specific workplace rules and regulations regarding personal protective wear and equipment
What is a suitable work area?	A suitable work area may include: • a bench top or desk • a sewing or layout table • a sewing table with a sewing machine
What are tools, **equipment and materials**?	Tools and equipment may include: • measuring equipment such as tapes and rulers • calculating equipment such as calculators and computers • general cutting and sewing tools including scissors, drills, sewing machines, hemming machines, glue guns • personal protection equipment Materials may include: • plain and patterned fabric • velvet • threads

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• wadding • foam • tape • fasteners including buttons and hooks
What are potential hazards?	Potential hazards may include broken or faulty equipment, damaged needles, a lack of lighting, untidy working conditions, wet or slippery floors, improperly secured sewing machines, damaged or frayed electrical cables and connections,
What are reporting procedures?	Workplace reporting procedures may include: • completing necessary paperwork • communicating with a supervisor or key person that you are completed with the task • reporting, accidents, injuries and faulty equipment or materials • filing necessary paperwork

MSAPCII298A Make an object from metal

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency standard covers the skills required to make an object from metal in accordance with the requirements of an established design and in a simulated or trial manufacturing environment where there is a high degree of direct supervision. . The elements of this unit should always be assessed in conjunction with other units that relate to the requirements of a specified work or job function.

Application of the Unit

Application of the unit	This unit applies to a learning and assessment environment where access to normal production operations is not available. A typical environment will be for application in a VET in Schools delivery environment or other simulated or trial manufacturing environment where a high degree of supervision exists. This unit applies to the manufacture of a simple metal object such as: small decorative box, with or without a lid; desk pencil holder; metallic photo album; cabinet; shelving; CD rack; metallic picture frame etc. Training and assessment against this competency unit must incorporate all relevant OHS and related legislative requirements. The unit should be regarded as an integrating unit which has application in Certificate I and II qualifications that act as general introductory qualifications to manufacturing industry. It should be applied to a specific 'project' or task which has a defined beginning, middle and end, occurs over an extended period of time, and is reflective of the particular sector of the Manufacturing industry and/or

	organisation.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Identify job requirements	1.1. Specifications for ***metal*** item are identified from ***work instructions*** 1.2. Design is interpreted to determine process, tool, equipment and materials requirements 1.3. ***OH&S requirements*** are considered and observed

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	throughout the ***workplace***
2. Prepare for work	2.1. ***Suitable work area*** is selected for the task 2.2. Work area is prepared according to OH&S and ergonomic requirements 2.3. ***Appropriate tools***, ***equipment*** and ***materials*** are selected in accordance with the specifications determined for the work 2.4. Equipment and machinery is cleaned, checked, and prepared for operation in accordance with OH&S requirements and workplace procedure 2.5. ***Potential hazards*** associated with the use of tools, equipment, materials and the workplace are identified and steps taken to eliminate them in accordance with OH&S legislative requirements and established workplace procedures. 2.6. Where required , ***records*** are kept in accordance with workplace requirements
3. Produce work	3.1. Dimensions are transferred from job specifications and/or drawings or sketches and material is marked out to conform to ***specifications*** and templates are ***formed*** using appropriate machinery or tools 3.2. Edges and surfaces are ***prepared*** according to specifications. 3.3. Components are ***joined*** according to project requirements 3.4. Work is checked for conformance with specifications. 3.5. Non-conformity with specifications or quality standard is ***rectified*** 3.6. Work is ***finished*** according to specifications and quality standards
4. Complete work	4.1. Completed work is checked against required quality standards 4.2. Unused materials are returned to storage and waste and scrap are dealt with following workplace procedures 4.3. Work area is cleaned, tools and equipment are returned to storage 4.4. Where required, documentation and records are completed and maintained following workplace procedures

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

- apply occupational health and safety standards
- observe relevant statutory requirements and codes of practice
- use, update and where appropriate produce sketches and basic drawings
- select materials and resources
- use and apply basic quality standards
- apply quality procedures
- communicate effectively
- communicate ideas and information to obtain confirmation of work requirements and specifications, coordination with other workers and the reporting of work outcomes and problems.
- collect, organise and understand information related to work orders, basic plans and safety procedures.
- plan and organise activities, including preparation for work and obtaining equipment and materials.
- work with others and in a team to optimise efficient workflow and productivity.
- apply pre-checking and quality techniques to anticipate construction problems, avoid reworking and avoid wastage.
- use of routine workplace tools, equipment, materials and measuring devices.

Depending on the object to be made required skills may also include:

- use cutting and heating equipment
- use of mechanical cutting equipment
- use of workshop plant and equipment
- use of hand and portable power tools

Required knowledge

- the interpretation of a plan representing the product to be made
- the concept of workflow and its relation to manufacture of objects
- identification of appropriate hand and power tools, materials, equipment, processes and procedures.
- occupational health and safety standards and practices.
- relevant statutory requirements and codes of practice
- hand and portable power tools and their application
- mechanical cutting techniques

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• paints, sealants and glues • jigs and templates • workshop plant and equipment • manufacture and assembly techniques • common materials used in the manufacture of metal objects • mathematical techniques • communication principles

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Knowledge and application of relevant sections of: • occupational, health and safety legislation; statutory legislation; • enterprise/site safety procedures; • enterprise/site emergency procedures • preparation and planning of work • lay out, marking off/out and developing techniques and procedures • fabrication techniques • shaping techniques • cutting techniques • perform normal operator maintenance of work area to enable work to be conducted safely and efficiently • relevant standards and procedures • completion of work procedures
Context of assessment	Assessment may occur on the job or in a workplace simulated facility with relevant equipment, materials, work instructions and deadlines.
Specific resources required for assessment	Access to plans, hand and/or power tools, equipment, materials and a work area. Access is required to opportunities and appropriate

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	resources to either: • carry out a range of suitably simulated practical and knowledge assessments that demonstrate the skills and knowledge to work safely (usually as part of a holistic assessment involving other competency units; and/or • participate in actual workplace activities that demonstrate the skills and knowledge to work safely

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
What can metal include?	Metal ***may include***: • mild steel • galvanised steel • stainless steel • aluminium • brass
What can object from metal include?	***An*** *object from metal* ***can include***: • a small decorative box, with or without a lid • desk pencil holder • metallic photo album • cabinet • shelving • CD rack • metallic picture frame.
What are the work instructions?	***Work instructions*** may include: • job sheets • patterns • plans • drawings and sketches

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• verbal or illustrated directions from supervisor • number and type of objects to be produced • quality requirements. • OH&S requirements • environmental requirements
What can OH&S requirements include?	***OH&S requirements*** *may include*: • legislative requirements • hazardous and dangerous goods codes • safe operating procedures • specific workplace rules regarding personal protective wear and equipment such as disposable overalls, dust mask, eye and ear protection and gloves.
Workplace	Workplace for this unit means a manufacturing environment specifically established for learning introductory manufacturing skills. It may be: • a school classroom or workshop equipped to teach manufacturing principles and practices • RTO premises equipped to teach manufacturing principles and practices • an enterprise environment where above average supervision exists and training is occurring. The normal production imperatives have been modified to take into account the training being delivered.
What can a suitable work area include?	*A suitable work area* may include: • workbench • desk or table • workshop • shed • durable space
What can appropriate tools, equipment and materials include?	*Appropriate tools* will vary according to the project, but may include: • measuring tapes or rulers • hammers • mallets • squares • bevels • chisels

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• files • planes • hand saws • cordless drills/ screwdrivers • fixing and joining devices • jigs • clamping devices • pincers *Appropriate equipment* could include: • power saws • power drills • band saws • vertical drill presses • protective eye ware • protective gloves • dust masks • overalls or protective clothing *Appropriate materials* could include: • metal • adhesives • screws • nuts • bolts • hinges and metal fasteners • pencils and markers • paints.
What potential hazards include?	*Potential hazards* may include: • broken or faulty equipment • unnoticed sharp objects • poor lighting • inadequate ventilation • inadequate attention to the activities of others • electrical shortages and power overload • disorganised or cluttered workspace (poor housekeeping) • poor attention when dealing with tools and equipment. • environmental chemicals, heat, dust, noise, gas and oil.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
What could records include?	***Records*** could include: • plant and maintenance records • job cards • check sheets • reporting requirements • documenting equipment and/or material defects • workplace procedures relating to the use of tools and equipment.
What could specifications include and what does it mean for materials to be formed?	***Specifications*** could include: • measurements and dimensions • forming methods could include cutting, bending, rolling, beading.
What is involved in making sure edges and surfaces are prepared?	*Preparing edges and surfaces* could include: • filing • sanding • cleaning • grinding • polishing
What is involved in making sure metal pieces are joined?	*Joining metal pieces* could include attaching pieces together with: • screws, rivets, nuts and bolts • hinging • soldering
What is involved in making sure non-conformities are rectified?	*Rectifying non-conformities* could involve: • deconstructing the assembled pieces • reshaping /resizing or re-cutting elements • reassembling elements.
What is involved in making sure work is finished?	*Finishing work* can include: • filing • polishing • grinding • painting and decorating.

MSAPMOHS210B Undertake first response to non-fire incidents

Modification History

Not applicable.

Unit Descriptor

Unit Descriptor	This unit deals with recognising and responding to an emerging incident (except for fire) to provide an appropriate first response

Application of the Unit

Application of the unit	This competency applies to operators who are required to respond to an incident such as a leak, spill or other incident. The worker is not expected to deal with the emerging incident, but to provide an initial first response in order to contain the incident and/or secure the immediate area in order to minimise resultant damages and loss. In this unit it is assumed that the worker is acting according to established workplace procedures.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Pre-requisite Units		

© Commonwealth of Australia, 2024 Public Skills Australia

Employability Skills Information

Employability Skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Assess level of severity.	1.1. Recognise an incident has occurred or is about to occur. 1.2. Access hazard information as appropriate. 1.3. Assess frequency, duration, actual and potential outcome. 1.4. Evaluate and communicate in a timely and appropriate manner the location, nature and extent of the incident.
2. Undertake routine response to minimise affect of the incident.	2.1. Determine first response requirements to contain the incident or evacuate the affected areas. 2.2. Select the appropriate response from the incident procedures and equipment. 2.3. Apply incident procedures as appropriate. 2.4. Clear and secure the incident area. 2.5. Safely locate, access and operate incident response equipment.
3. Notify responsible authorities.	3.1. Follow incident reporting procedures. 3.2. Identify appropriate authorities and notify. 3.3. Clearly and unambiguously communicate information concerning the incident in a timely manner.
4. Undertake safe evacuation.	4.1. Evacuate the area in a safe and controlled manner when first response has failed to control the incident or has proven inappropriate. 4.2. Secure the immediate area of the incident to ensure no further loss occurs to people, equipment, materials, process and environment.

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills:
Competence includes the ability to apply and explain procedures for: • identifying hazard and emergency signs and labels • evacuation of different areas • operating various pieces of incident response equipment • communicating details of an incident situation clearly. Language, literacy and numeracy requirements • This unit requires the ability to respond to data and information indicating an incident. • Writing is required to the level of completing required workplace forms and reports. • Numeracy is required to the level of interpreting and reporting relevant data.
Required knowledge:

• Knowledge and understanding of the incident response procedures and equipment, sufficient to recognise standard and non-standard situations and then determine the appropriate action which is consistent with operating guidelines.
• Knowledge of the relevant OHS and environmental requirements, and organisation standard operating procedures is required along with an ability to implement them in a manner that is relevant to incident response practices.
• Evidence of knowledge of all relevant workplace procedures will include:
  • principles of operation of the incident response equipment
  • hazards policies and procedures
  • incident, fire and accident procedures
  • procedures for the use of personal protective clothing and equipment
  • organisation standard operating procedures (SOPs).

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	The unit will be assessed in as holistic a manner as is

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Assessment will occur with simulated industrial incidents and will be undertaken in a work-like environment.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to: • recognise and analyse potential situations requiring action • implement the appropriate corrective action. The reasoning process behind the problem analysis and determining the required actions should be assessed. The emphasis should be on the ability to minimise the affect of an incident situation. Consistent performance should be demonstrated. For example, look to see that: • incident situations are recognised and communicated promptly • action is taken to ensure that the effects of the incident situation are controlled promptly • potential to involve others in the incident is recognised and appropriately communicated • incident procedures are understood and followed. These aspects may be best assessed using a range of scenarios/case studies and 'what ifs' as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the workplace, incidents on similar plants around the world, hazard analysis activities (eg HAZOP) and similar sources.
Context of and specific resources for assessment	Assessment for this unit will be on a processing plant or in a manufacturing environment. Assessment will require access to an operating plant or manufacturing environment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	situations. A bank of scenarios/case studies/what ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions. This unit requires a body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both in the workplace (during demonstration of normal operations and walk throughs of abnormal operations) and off the job. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *PMPOHS200 Participate in workplace safety procedures* • *PMASUP220 Monitor and control environmental hazards*.
Method of assessment	Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual workplace and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency covers all emerging incidents except for fire.
Procedures	All operations are performed in accordance with procedures. Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Tools and equipment	This competency includes use of equipment and tools as required for the situation such as:
	• personal protective equipment such as breathing apparatus
	• incident response equipment such as hand held extinguishers, hose reels, fire blankets
	• evacuation equipment
	• survival equipment
	• standard operating procedures (SOPs)
	• external personnel such as:
	  • police
	  • fire brigade
	  • ambulance.

Hazards	Typical hazards include: • chemicals and hazardous materials • gases and liquids under pressure • moving machinery • materials handling • working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours.
Problems	'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include: • accidents • chemical or oil spills

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• gas leak or vapour emission • utilities failure • bomb scares.
Personnel	Appropriate personnel for OHS referrals may include: • employer • supervisor • employees elected as incident team leader • other personnel with incident team leader responsibilities.
OHS issues	OHS issues which may need to be raised by workers with designated personnel may include: • recognition of different types of emergencies • problems encountered in control measures and implementation • observation on injury and/or incident occurred in the workplace.
Required functions	Required functions include: • containment of incident, eg chemical/oil spill or gas/vapour leak • communication with internal and external personnel.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

MSAPMOHS300A Facilitate the implementation of OHS for a work group

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

On completion of this unit, the worker will be able to implement and monitor defined OHS policies and procedures for a work group or area, within their scope of responsibilities.

Application of the Unit

Application of this unit

This competency applies to operators who are capable of coaching the team in participating and contributing to OHS management issues. The worker will be able to perform duties that are required of a safety committee member or safety representative in an organisation. Typically this worker might be a team leader or on the OHS committee.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisites

This unit has the prerequisite of *MSAOHS200A Work safely*.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Communicate OHS information for co-workers in team.	1.1 Accurately and clearly explain to the work group basic OHS rights, responsibilities and requirements. 1.2 Provide, in a readily accessible manner, information on the relevant organisation OHS policies, procedures and programs, and accurately and clearly explain them to the work group. 1.3 Regularly provide relevant information about identified hazards and the outcomes of risk assessment and risk control procedures, and accurately and clearly explain them to the work group.
2. Coach co-workers in team.	2.1 Establish mutual support groups, eg buddy system, to encourage effective development of individual and group competencies in OHS. 2.2 Provide personal encouragement and assistance to team members to contribute to the management of OHS at the workplace.
3. Facilitate the consultative process.	3.1 Deal with, and promptly resolve, issues raised through consultation or refer to the appropriate personnel for resolution in accordance with workplace procedures. 3.2 Seek input from work group on OHS issues and proposed changes to process, procedures or work place. 3.3 Encourage and use feedback from individuals and teams to identify and implement improvements in the

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	management of OHS. 3.4 Promptly inform the work group of the outcomes of consultation over OHS issues.
4. Implement and monitor organisation procedures for identifying hazards, and assessing and controlling risk.	4.1 Implement and monitor adherence to work procedures to identify hazards and assess and control risk. 4.2 Monitor existing risk control measures and report results regularly. 4.3 Access internal and external sources of relevant OHS information. 4.4 Evaluate and identify inadequacies in existing risk control measures in accordance with the hierarchy of control, and report to designated personnel. 4.5 Identify inadequacies in resource allocation for implementation of risk control measures and report to designated personnel. 4.6 Identify actual/potential inadequacies in procedures and report to designated personnel. 4.7 Identify actual/potential inadequacies in individual or team competency and report to designated personnel.
5. Maintain and use OHS records.	5.1 Accurately and legibly complete OHS records for work area, in accordance with workplace requirements for OHS records and legal requirements for the maintenance of records of occupational injury and disease. 5.2 Use aggregated information from the area OHS records to identify hazards and monitor risk control procedures within work area according to procedures and within scope of responsibilities and competencies.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge and understanding of the workplace OHS system and State OHS legislative requirements, codes of practice and relevant industry standards sufficient to implement and monitor OHS activities for a work group or area within the scope of their responsibilities and competencies.

In these industries which are characterised by high potential hazard, employees need to exercise their duty of care responsibilities not only within the general OHS Acts and regulations, but also within those State and national standards applying to hazardous substances, dangerous goods and major hazards.

Competence includes the ability to apply and describe the:

- identification of hazards in the workplace and standard controls
- assessment of risk and implementation of risk control measures
- rights and responsibilities of employees under OHS legislation
- obligations of employers under the OHS legislation
- legislative requirements for information and consultation
- arrangements for consultation within the workplace
- management systems and procedures for OHS
- the hierarchy of control
- hazard policies and procedures
- safety procedures
- emergency, fire and accident procedures.

Competence also requires the ability to:

- locate, understand and follow workplace OHS procedures
- identify and communicate with all key personnel in the organisation
- identify and access relevant sources of information
- interpret OHS data such as tables of numbers and graphs
- select, recommend and use personal protective clothing and equipment.

Language, **literacy and numeracy requirements**

This unit requires the ability to communicate with members of the work team/area and also management. It also requires the ability to interpret and apply OHS procedures and explain them to work team members.

Writing is required to the level of being able to keep records as required and also keep notes from meetings.

Numeracy is required to interpret incident statistics and hazard data.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

© Commonwealth of Australia, 2024 Public Skills Australia

Overview of assessment

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations that will include disruptions to normal, smooth operation.

Where the assessee does not currently possess evidence of competency in *MSAOHS200A Work safely*, it may be co-assessed with this unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- communicate effectively with the work group(s)
- proactively promote consultation and participation in the OHS processes
- participate in decisions which impact on OHS for their workgroup.

Consistent performance should be demonstrated. In particular look for knowledge and understanding of:

- specific hazard policies and the use of hazard procedures (eg identify, assess, control)
- the consultation processes, either general or specific to OHS
- OHS information
- OHS record keeping
- counselling, disciplinary and issue resolution processes.

These aspects may be best assessed using a range of scenarios/case studies/what ifs as the stimulus with a walk through forming part of the response. These assessment activities should cover a range of problems, including new, unusual and extreme situations that may have been generated from the past incident history of the workplace, incidents on similar plants around the world, hazard analysis activities and similar sources.

Assessment method and context

Assessment for this unit of competency will be on a processing plant or in a manufacturing environment.

Simulation may be required to allow for timely assessment of parts of this unit of competency. Simulation should be based on the actual workplace and will include walk throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both in the workplace (during demonstration of normal operations and walk throughs of abnormal operations) and off the job.

It is expected that this competency may be applicable in combination with other industry, occupation or workplace-specific competencies. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Specific resources for assessment

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment will require access to an operating plant or manufacturing environment over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what ifs will be required as will a bank of questions that will be used to probe the reasoning behind the observable actions.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit describes OHS requirements applicable for all workers who are responsible for the organisation of OHS arrangements for a work group or area, including coaching.

It is expected that workers will be provided with clear directions, information, instruction, training and appropriate supervision regarding the relevant State/Territory OHS legislation, codes of practice, relevant industry standards, workplace procedures and work instructions.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards include:

- handling chemicals and hazardous materials
- chemical and or hazardous materials spillage
- gases and liquids under pressure
- moving machinery
- materials handling
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion.

Personnel

Appropriate personnel for OHS referrals may include:

- employer
- supervisor
- employees elected as OHS representatives

© Commonwealth of Australia, 2024 Public Skills Australia

- other personnel with OHS responsibilities.

Participative arrangements

Participative arrangements for OHS management may involve:

- making safety suggestions
- information sessions on existing or new issues
- meetings between employer and employees or representatives
- access to relevant workplace information
- use of clear and understandable language.

OHS Issues

OHS issues which may need to be raised by workers with designated personnel may include:

- recognition of hazards
- problems encountered in controlling risks associated with hazards
- clarification of understanding of OHS policies and procedures.

OHS Records

OHS records include:

- hazard and incident reports
- logs/logs sheets
- inspection/start up/shut down checklists
- injury reports
- maintenance records.

OHS Information Sources

Relevant sources of OHS information include:

- OHS legislation and codes of practice
- industry standards for materials, process, equipment etc
- SA/ISO standards
- OHS authorities
- unions and industry associations
- internet, journals, magazines
- manufacturer/supplier manuals/specifications
- policies and procedures
- JSA, risk assessments, HAZOPs
- hazard, incident and injury records
- training resources
- employee information brochures, newsletters etc
- OHS reports such as inspections, technical reports.

MSAPMOPS400A Optimise process/plant area

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the ability to optimise the process performance of a complete plant area. It includes ensuring that production systems comply with Health, Safety and Environment (HSE) requirements, that process, plant and equipment utilisation is planned and carried out, and that problems are solved to fully meet operational needs and ensure that production of finished goods meets customer requirements.

Application of the Unit

Application of this unit

This competency requires the application of detailed operational and process knowledge, including the principles of operation of equipment, and the chemistry and/or physics and/or biology/biochemistry of changes to materials occurring during processing. It embodies a significant breadth and depth of technical knowledge and process understanding.

Assessment of this competency should ensure that the applicant can apply this knowledge to a process, and should typically rely on the applicant undertaking, or leading, a significant process improvement project.

This competency is typically performed by a senior operator, team leader or frontline manager.

Licensing/Regulatory Information

Not applicable.

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Analyse and evaluate current plant, equipment and processes.	1.1 Compare actual process, plant and equipment performance with requirements and/or historical data/records and/or design performance. 1.2 Identify abnormal or sub-optimal process, plant and equipment performance. 1.3 Identify hazards associated with the plant and equipment. 1.4 Collect and evaluate product, materials and/or process records to determine possible causes for sub-optimal performance. 1.5 Use appropriate techniques to rank possible causes from most to least probable cause.
2. Develop plan for corrective and/or optimisation action.	2.1 Analyse cause(s) to determine appropriate corrective action. 2.2 Predict the impact of a change in one unit/area on other related plant units/areas. 2.3 Predict the impact of a change on health, safety and environmental performance 2.4 Develop measurable objectives and evaluate alternatives.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT ELEMENT	**PERFORMANCE CRITERIA** Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	2.5 Identify requirements to implement change. 2.6 Consult with stakeholders regarding planned changes and impacts. 2.7 Develop optimisation plan taking account of hazards identified and HSE implications and communicate to appropriate personnel. 2.8 Evaluate optimisation action to determine measures of effectiveness.
3. Coordinate corrective and/ or optimisation action plan	3.1 Coordinate all appropriate unit areas and operations in order to rectify problem causes in process, plant and equipment performance. 3.2 Initiate and/or implement all required corrective/ optimisation actions. 3.3 Communicate corrective/optimisation outcomes to all relevant personnel. 3.4 Implement procedures/systems to eliminate possible future causes. 3.5 Record and maintain log of all relevant information.
4. Develop continuous improvement strategies.	4.1 Review sources of information to identify possible factors causing sub-optimal performance. 4.2 Identify options for removing or controlling the risk of sub-optimal performance. 4.3 Assess the adequacy of existing control and quality methods and systems. 4.4 Identify opportunities to continuously improve performance. 4.5 Develop recommendations for continual improvement of process, plant and equipment effectiveness. 4.6 Consult with appropriate personnel and implement continuous improvement strategies. 4.7 Document implementation of continuous improvement strategies.

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of the:

- equipment,
- processes
- systems

sufficient to

- identify hazards associated with the process
- recognise opportunities to improve and/or enhance the quality of performance of the plant.

This knowledge needs to include:

- the relevant technical theory of the plant area
- an in depth understanding across the entire plant area
- the organisation standard procedures and work instructions
- relevant regulatory requirements, including those related to OHS risk control as appropriate to process/plant area optimisation.

Competence includes the ability to:

- apply analytical skills which enable corrective or optimal conditions to prevail
- identify and control hazards by applying the hierarchy of control as part of the optimisation process
- interpret information and make appropriate process control decisions.

Competence includes the ability to distinguish between:

- optimum and marginal performance of the plant
- effective and marginal performance corrections and actions.

as is relevant to the practical operation of all major equipment/process/systems within the area.

Optimising process systems requires application of detailed operational and process knowledge to address issues such as:

- starting material quality
- yield maximisation
- throughput maximisation
- energy efficiency
- use of utilities
- labour utilisation
- overall cost
- efficient use of equipment
- reducing downtime
- minimisation of waste and rework
- improved workplace layout and workflow.

© Commonwealth of Australia, 2024 Public Skills Australia

Language, literacy and numeracy requirements

This unit requires the ability to communicate at all levels about what may be complex technical matters. It also requires the ability to evaluate complex information and sort often conflicting information into *useful* and *distracting* and to rank/prioritise information.

Writing is required to the level of reading and interpreting technical information, developing and modifying plans and procedures and interpreting relevant regulatory requirements.

Numeracy is required to the level of analysing product/process performance data, interpreting process condition information and deriving useful information from technical brochures, papers and similar. Calculation will be required to assist this and to determine priorities for optimisation plans (ie benefit/cost or other quantitative criteria)

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Competence must be demonstrated in the ability to analyse and evaluate current production performance, and develop and implement plans to optimise process systems.

While the technician is expected to take a lead technical role, and to demonstrate competence as defined above, optimisation is rarely undertaken by an individual alone and liaison with all relevant stakeholders is an expected part of this competency.

Where the assessee does not currently possess evidence of competency in *MSASUP390A Use structured problem solving tools*, it may be coassessed with this unit.

Criticalaspects for assessment and evidence required to demonstrate competency in this unit

It is essential that the equipment/process/system be understood in depth and that the importance of critical material properties/settings/readings is known. Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action.

Consistent performance should be demonstrated. For example, look to see that:

- non-routine problems are recognised and defined
- hazards are identified and controlled by applying the hierarchy of control

© Commonwealth of Australia, 2024 Public Skills Australia

- possible causes of complex problems are identified based on experience and the use of analytical techniques in solving the problem, including identifying variations and cause, separating single problems from multiple problems and the recognition of recurring problems
- fundamental cause of process or equipment faults is determined
- corrective/preventative actions are developed to avoid recurrence of the problem and optimise the condition of the process, plant and equipment
- product quality and uniformity are maintained.

Competence must be demonstrated in the operation of all ancillary equipment to the level required for this competency unit.

Competence also includes the ability to implement improvements within appropriate time constraints and in a manner relevant to the operation of the equipment, processes and systems.

Context of assessment

Competence in this unit may be assessed by:

- observation over time in a processing plant allowing for adequate assessment of operation under all normal and a range of abnormal conditions. Where this is not practical, additional assessment techniques must be used.
- using a suitable simulation and/or a range of case studies/scenarios
- undertaking a specific project based in the plant
- a combination of these techniques.

Method of assessment

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

© Commonwealth of Australia, 2024 Public Skills Australia

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit describes the work conducted by senior operators, team leaders or front line managers who optimise process systems as part of their work function. It includes all items of equipment and unit operations which form part of the production process of a complete area.

Typical problems will require the application of detailed operational and process knowledge over the entire production/manufacturing area, including the principles of operation of the equipment and the chemistry, physics, biology and/or biochemistry of the changes to materials occurring within that area.

All operations are performed in accordance with organisation procedures, licensing requirements, legislative requirements and industrial awards and agreements.

Procedures

All operations are performed in accordance with procedures. Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards. These may include or have been prepared from/to comply with:

- industry codes of practice
- materials safety data sheets
- equipment manuals
- equipment start up, operation and shut down procedures
- calibration and maintenance schedules
- quality manuals and procedures
- organisation recording and reporting procedures
- production and laboratory schedules
- material, production and product specifications.

Data/records

Historical data/records may include:

- hazard logs
- incident reports
- maintenance records
- product non-conformance reports
- production records.

Implementing change

Requirements to implement change may include:

- changes to procedures

© Commonwealth of Australia, 2024 Public Skills Australia

- training of operators
- equipment modifications
- ensuring all HSE requirements are addressed.

Relevant/appropriate personnel

Relevant/appropriate personnel may include:

- managers
- OHS representatives and OHS committee.

Relevant information

Relevant information logged to include:

- modifications to plant or equipment
- modifications to procedures or practices.

Sources of information

Sources of information may include:

- hazard logs
- incident reports
- maintenance records
- work practices
- procedures
- industry journals
- equipment supplier information
- industry best practice information.

Health, **Safety and Environment** (**HSE**)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Unit Sector(s)

MSAPMOPS401A Trial new process or product

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency typically applies to a technician in a plant who is taking a lead technical role in the trialling of a new product or the trialling of a new or significantly altered process. This competency does not apply to minor modifications to existing products or processes. Similarly it does not apply to a technician or operator taking part in such trials, and/or who is following directions set by the technician, chemist, engineer, supervisor or manager.

The technician is expected to be a technical expert in that part of the plant/process where the trial is being conducted.

Application of the Unit

Application of this unit

The technician would be expected to operate and control all equipment required for the trial. Generally the technician would be part of a team during the trial, and would usually be working in conjunction with a process/product development expert such as a chemist or engineer. The technician is often the most technically competent member of an operational team. As such they may not have the 'hands on' role of operating items of equipment, but they are expected to have the competence to direct the operation of equipment as appropriate throughout the trial. At all times they would be liaising and cooperating with other members of the team.

Trialling refers to the scale-up and other development steps required to take a new product or process from its design/laboratory trials to full commercial operation on a plant. Trialling may be done on a pilot plant where available and/or on a full scale plant.

The technician would:

- identify and rectify operational problems within their scope
- analyse the trial, both while it is occurring and after completion, and suggest improvements
- be alert for indications of developing problems and take required action to ensure the trial remains safe to people, the environment and the plant.
-

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
1. Contribute to the selection of equipment/process conditions.	1.1 Liaise with appropriate technical expert(s). 1.2 Interpret properties of materials and desired product characteristics. 1.3 Interpret technical specifications/drawings of plant requirements. 1.4 Recommend equipment/ancillary equipment appropriate for the materials, products and conditions. 1.5 Recommend process conditions appropriate for the

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
	equipment, materials and product characteristics. 1.6 Recommend feed rates/order/condition appropriate to the process conditions, equipment, materials and product characteristics. 1.7 Ensure hazard identification and analysis procedures are completed, including consultation with stakeholders, and findings included in plan. 1.8 Ensure recommendations meet the identified need.
2. Prepare for trials.	2.1 Determine the availability of resources required such as materials, equipment, people and skills. 2.2 Estimate time required for trial. 2.3 Liaise with relevant stakeholders. 2.4 Schedule trial at a convenient time. 2.5 Develop documentation for the trial. 2.6 Identify potential hazards and required hazard control procedures by applying the hierarchy of control. 2.7 Determine clearance requirements and special safety and storage requirements. 2.8 Verify decisions with appropriate experts/stakeholders. 2.9 Ensure people with adequate skills are available for the trial.
3. Conduct test runs/trials	3.1 Ensure hazard controls are implemented prior to commencement. 3.2 Run trials. 3.3 Maintain communication with all relevant people. 3.4 Closely monitor critical parameters. 3.5 Recognise actual and potential problems. 3.6 Make adjustments to process conditions as required during trial. 3.7 Sample and test product as required. 3.8 Record and report performance data. 3.9 Ensure all materials, products and waste are handled correctly. 3.10 Leave plant in a condition suitable for routine production to recommence.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the element. Assessment of performance is to be consistent with the evidence guide.
4. Evaluate results and identify modifications.	4.1 Interpret data from trial. 4.2 Identify factors which might be related to low rates or low charge amounts. 4.3 Recommend modifications and improvements required. 4.4 Develop and check standard operating procedure. 4.5 Complete documentation and report to appropriate personnel. 4.6 Ensure all relevant staff have required skill levels for the introduction of the new process.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes an understanding of the plant systems and all integral equipment involved in the trial to the level needed to control the system and recognise and resolve problems. In particular it includes the ability to:

- identify all items on a schematic of the plant and describe the function of each
- describe the nature/condition of materials entering and leaving each stage of the process, the changes which have occurred in that stage and why they have occurred
- state the major design features of plant equipment, plant conditions and variables and the impact of these on the properties of materials passing through them
- describe the causes and remedies of common problems such as those selected in the Range Statement
- apply the hierarchy of control to minimise the risk of hazards identified
- describe methods of changing rate and the advantages and disadvantages of each
- describe methods of controlling other process variables and the advantages and disadvantages of each.

Competence also includes the ability to isolate the causes of problems to an item of equipment within the plant system and to be able to distinguish between causes of problems/alarm/fault indications such as:

- process material variations
- instrument failure/wrong reading
- electrical failure

© Commonwealth of Australia, 2024 Public Skills Australia

- mechanical failure
- operational problem.

Language, literacy and numeracy requirements

This unit requires the ability to communicate and liaise with people at a range of levels about technical matters.

Reading is required to the level of interpreting technical specifications, manuals and procedures; and writing technical documentation such as specifications and procedures required for the trial.

Numeracy is required to the level of interpreting technical specifications and test results, analysing process data and determining required variations in process variables.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency.

Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.

Critical aspects

It is essential that competence is demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster.

Consistent performance should be demonstrated. For example, look to see that:

- hazards are identified and controlled
- early warning signs of equipment/processes needing attention or with potential problems are recognised
- the range of possible causes can be identified and analysed and the most likely cause determined
- appropriate and timely action is taken to ensure the safety and success of the trial
- obvious problems in related plant areas are recognised and an appropriate contribution made to their solution.

Context and method of assessment

© Commonwealth of Australia, 2024 Public Skills Australia

This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of 'what if' scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant.

Competence in this unit may be assessed:

- using a pilot plant or a production plant as appropriate
- using a range of scenarios/case studies and 'what ifs' as the stimulus with a walk-through forming part of the response
- using a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources
- using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge; and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This unit includes all items of equipment and unit operations which form part of the trial.

Liaison

© Commonwealth of Australia, 2024 Public Skills Australia

Liaison with technical experts may (depending on trial requirements and company protocols) include one or more of:

- manufacturers
- chemists
- engineering personnel
- designers
- OHS advisors
- maintenance personnel
- potential customers.

Hazard analysis

Hazard analysis procedures may include:

- JSA/JHA (Job Safety Analysis/Job Hazard Analysis)
- hazard and operability (HAZOP) studies
- hazard analysis (HAZAN) studies
- other company specified procedures.

It is not expected that the candidate will be able to conduct technical hazard analysis procedures (such as HAZOP or HAZAN) but they should be able to interpret and use the outcomes of such analyses where relevant.

Hazards

Hazards may be determined from:

- materials safety data sheets (MSDSs)
- other relevant documentation such as hazard logs, incident reports
- company hazard identification procedures
- hazard analysis results
- standard operating procedures.

Waste handling

Waste handling may include:

- collection for re-use
- recycling
- disposal in accordance with health and environmental regulations.

Problems

Typical problems for the trial might include:

- mixing is poor
- materials do not behave as expected
- process/reaction does not proceed /proceeds too slowly
- process/reaction proceeds too quickly/runs away
- yield is low
- quality is out of specification
- process is unstable

© Commonwealth of Australia, 2024 Public Skills Australia

- instrumentation is not sufficiently sensitive/too sensitive
- variable catalyst activity
- surging flow/pressure.

Health, **Safety and Environment** (**HSE**)

All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations are performed in accordance with procedures.

Procedures means all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Receive and relay messages	1.1 Confirm understanding of the message is correct. 1.2 Accurately record the message. 1.3 Relay message accurately to appropriate person or section within designated timelines.
2. Interpret messages.	2.1 Clarify message if necessary. 2.2 Take appropriate action.
3. Respond to information.	3.1 Acknowledge and understand the request for information. 3.2 Access information from appropriate sources. 3.3 Relay information to appropriate person or section.
4. Complete workplace forms.	4.1 Select appropriate form. 4.2 Assemble information required for form. 4.3 Complete form as required. 4.4 Submit form as required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge and ability to implement organisation policies and procedures on workplace communication, including:

- types, purpose and importance of workplace documentation
- workplace codes, including numbers, symbols, signs, colours and other codes.

Competence also includes the ability to:

- listen attentively
- formulate questions to clarify work requirements or instructions
- establish effective workplace relationship with colleagues
- adapt communication to a range of social, cultural and ethnic backgrounds.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and understand information contained in typical workplace documents such as standard operating procedures, material safety data sheets, job cards, maintenance logs. Everyday workplace language is used, including some technical termsand mathematical language.

Writing is required to the level of completing workplace forms and records. Types of text may include short sentences, symbols, codes, signs, sketches and may be conveyed in printed form or screen based.

Basic numeracy is needed to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

In all cases it may be appropriate to assess this unit concurrently with relevant team work and communication units.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- provide and assess all required information and that the information provided both verbally and in writing is completed in a clear and concise manner that is easily understood by others and in accordance with workplace requirements.
- apply approved procedures.

© Commonwealth of Australia, 2024 Public Skills Australia

Consistent performance should be demonstrated. For example, look to see that:

- all information is provided in an efficient, effective, courteous and timely manner.

Assessment method and context

Assessment will occur on-the-job or in a simulated workplace.

Competence in this unit may be assessed:

- by observation and questioning to indicate understanding
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Reasonable adjustment of assessment tasks will be undertaken as required.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments.

Procedures

© Commonwealth of Australia, 2024 Public Skills Australia

All operations are performed in accordance with procedures. Procedures include:

- all relevant workplace procedures
- work instructions
- temporary instructions
- relevant industry and government codes and standards
- telephone protocol , including industry timelines in answering calls.

Messages

Messages includes the following as appropriate to workplace requirements:

- written
- oral
- electronic.

Tools and equipment

This competency includes use of equipment and tools such as:

- two way radio
- computer
- telephone.

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical problems may include:

- missing/lost messages
- required information not available
- required equipment not available
- conflict of work priorities.

Appropriate action for non-routine problems may be reporting to designated person or other action specified in the procedures.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Access information.	1.1 Identify the need for information. 1.2 Request appropriate information. 1.3 Access information in accordance with procedures. 1.4 Comply with security procedures in accessing appropriate information.
2. Provide appropriate information.	2.1 Deal with enquiries promptly and courteously. 2.2 Establish details of enquiry by questioning and summarising. 2.3 Provide appropriate information relevant to enquirer's request. 2.4 Organise information clearly, concisely and logically. 2.5 Provide information in a form that is readily understood by others. 2.6 Provide information in a timely manner. 2.7 Redirect enquiries to relevant personnel for resolution where outside the operator's area of responsibility.
3. Give and follow routine instructions.	3.1 Give accurate, clear and concise instructions that are consistent with the skills of the receiver. 3.2 Ensure that interaction with others is efficient, effective, responsive, courteous and supportive. 3.3 Confirm that instructions are understood.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.4 Follow prescribed and routine work related sequences.
4. Provide reports.	4.1 Complete all workplace reports clearly and accurately in accordance with procedures. 4.2 Report all relevant information clearly and concisely.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes the ability to:

- describe importance of workplace documentation in relation to job role
- apply organization, operational, quality and safety policies and procedures
- apply workplace codes such as numbers, symbols, signs, colour and other codes.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret work instructions, procedures, operating manuals, job card and other documents provided to operators.

Writing is required to the level of completing workplace forms.

Basic numeracy is required to the extent required by work instructions and procedures.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

Assessment will occur on the job or in a simulated workplace. In all cases it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

© Commonwealth of Australia, 2024 Public Skills Australia

Competence must be demonstrated in the ability to provide and assess all required information and that the information provided both verbally and in writing is completed in a clear and concise manner, that is easily understood by others and in accordance with workplace requirements

Consistent performance should be demonstrated. For example, look to see that:

- reports and records are completed accurately, concisely and in accordance with procedures
- all information is provided in an efficient, effective, courteous and timely manner
- completion of shift handover, log books and company production records conveys all relevant information
- information sharing demonstrates effective communication processes such as turn-taking, participating in discussions and tolerating views of others in a way that contributes to the overall discussion
- notes of discussion are prepared so that they can be clearly interpreted by the receiver
- communication distinguishes between relevant and peripheral issues.

Assessment method and context

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge. A holistic approach should be taken to the assessment.

Competence in this unit may be assessed:

- by observation and questioning to indicate understanding
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- by a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Reasonable adjustment of assessment tasks will be undertaken as required.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

© Commonwealth of Australia, 2024 Public Skills Australia

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the industry.

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Tools and equipment

This competency includes items of equipment such as:

- telephone
- two way radio
- computer equipment.

Information sources and plant documentation may include:

- operating procedures
- work instructions
- incident procedures
- operating manuals
- quality procedures
- training program contents/materials
- safety data sheets
- job cards
- maintenance logs
- non compliance reports
- incidence and accident reports
- permits
- schematics/process flows/engineering drawings.

Reports

Reports includes the following as appropriate to workplace requirements:

- oral

© Commonwealth of Australia, 2024 Public Skills Australia

- written
- electronic
- handovers (giving/receiving).

Problems

Respond to routine problems means 'apply known solutions to a limited range of predictable problems'. Typical process and product problems may include:

- difficulty in quickly locating information required
- missing forms, logbooks etc.
- conflicting work priorities
- delays in reporting of information
- information is inaccessible
- absence of approver/ other signatories
- breakdown of communication equipment.

Appropriate action for non-routine problems may be reported to designated person

or other action identified in the procedures.

Unit Sector(s)

Not applicable.

MSAPMSUP240A Undertake minor maintenance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This unit applies to operators who are involved in providing basic maintenance and the resolving of routine problems to procedures. It does not cover activities normally requiring traditional trade training.

Application of the Unit

Application of this unit

In a typical scenario a plant operator does minor maintenance activities on the plant and equipment being operated. For instance the pressure drop across a filter unit may be high, indicating the filter cartridge needs changing. The operator takes the filter unit out of operation, cleans the unit, uses the correct spanner to open the lid, installs a fresh cartridge, closes the unit using the spanner again, then cleans up the area and disposes of the spent cartridge. Typically this sort of maintenance will be done on the plant and will not require workshop type facilities.

The operator will:

- be aware of and contribute to a safe working environment
- identify and check equipment for faults
- perform basic maintenance to procedures
- complete logs and reports.
-

Employability Skills Information

Employability Skills

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify maintenance requirements.	1.1 Identify equipment variations/irregularities using observed data and plant records. 1.2 Assess the urgency/priority of the situation. 1.3 Identify appropriate corrective action. 1.4 Identify correct tools and materials. 1.5 Assess the impact of the maintenance activity and communicate to appropriate personnel. 1.6 Identify hazards and risk controls. 1.7 Identify work permit requirements.
2. Prepare for maintenance activity.	2.1 Ensure equipment is turned off and isolated as required. 2.2 Clear the area of obstructions and hazardous materials. 2.3 Obtain appropriate tools, parts, materials and procedures. 2.4 Obtain the appropriate work permits and adhere to the requirements. 2.5 Communicate the impending maintenance activity to the appropriate personnel.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
3. Perform maintenance activity.	3.1 Access all relevant information. 3.2 Undertake maintenance activity according to procedures. 3.3 Use tools and maintenance techniques correctly. 3.4 Restore equipment to normal working condition. 3.5 Leave the work area in a clean and safe condition. 3.6 Ensure permits are signed off as appropriate.
4. Test equipment.	4.1 Test equipment according to procedures. 4.2 Return equipment to service. 4.3 Ensure equipment meets normal operating requirements.
5 Record maintenance activity.	5.1 Complete maintenance logs/plant history records. 5.2 Report maintenance activity to relevant personnel. 5.3 Identify and report outstanding maintenance requirements to relevant personnel.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Knowledge and understanding of equipment operation and maintenance practices sufficient to recognise fault and no-fault conditions in standard and non-standard situations and then determine appropriate action which is consistent with operational guidelines is required.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Application of the knowledge of managing risks using the hierarchy of controls applied to the process. Application of approved hazard control, safety procedures, use of PPE in relation to handling materials, equipment operation and clean up.

Knowledge as a basis for solving maintenance problems, including:

- principles of operation of the equipment to be maintained
- function and troubleshooting of major internal components and their problems
- appropriate testing procedures and use of equipment for a range of equipment faults

© Commonwealth of Australia, 2024 Public Skills Australia

- typical causes of equipment failures and the service conditions which may increase maintenance
- types and nature of maintenance (preventative, predictive, corrective) uses, benefits and limitations
- urgency and timeliness factors in maintenance
- maintenance planning/scheduling/records systems
- identification of tools, materials and spare parts
- basic techniques for using and handling tools
- physical measurement, alignment and clearance principles.

Competence also includes the ability to:

- plan own work, including predicting consequences and identifying improvements
- identify factors which may affect product quality or production output and appropriate remedies
- identify when the operator is able to rectify faults and when assistance is required.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical equipment specifications schematics and diagrams.

Writing is required to the level of completing workplace forms and production reports.

Basic numeracy is required, to interpret plant data and maintenance schedules.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Where the completion of this unit requires working under a permit/clearance, then competency must also be established in *PMAPER200C Work in accordance with an issued permit*, or other appropriate unit.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- understand the procedures and know the importance of critical operational systems
- recognise potential situations requiring action and then implement appropriate action.

© Commonwealth of Australia, 2024 Public Skills Australia

Consistent performance should be demonstrated. For example, look to see that:

- early warning signs of equipment in need of attention/with potential problems are recognised
- appropriate equipment tests are undertaken and analysed appropriately
- proposals for equipment repair are based upon the most appropriate and cost effective method to return equipment to full performance in a timely manner
- maintenance activities are completed safely and to procedures.

Assessment method and context

Assessment will occur on industrial equipment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- on a processing plant, allowing for operation under all normal and a range of abnormal conditions
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2024 Public Skills Australia

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency applies to all work environments and sectors within the industry. It does not include maintenance that would require trade level skills. It is not intended that this competency would cover maintenance that is carried out in a workshop.

Procedures

All operations are performed in accordance with procedures.

Procedures mean all relevant workplace procedures, work instructions, temporary instructions, standard operating procedures, plant description manuals, manufacturer instructions, specifications, service manuals, machine circuit diagrams for hydraulic/pneumatic and electrical/electronic circuits and relevant industry and government codes and standards.

Maintenance activities

This competency unit includes minor maintenance such as the following:

- operational maintenance (eg connection-disconnection of hoses, greasing, lubrication and lubricant systems, adjusting sealing glands, cleaning and changing filters, 'nipping up' flanges)
- general cleaning
- removal and replacement (eg gland packing, changing blades or cutters, replacing gaskets, replacing /maintaining seals, changing filter elements, servicing strainers).

Tools and equipment

This competency includes use of equipment and tools such as:

- hand tools
- specialised tools
- measuring and aligning equipment.

Hazards

Typical hazards include:

- rotating and moving machinery
- process materials, solids, liquids and gases under pressure or flowing
- hot surfaces or materials
- temporary connections or by-passes
- electrical, hydraulic or pneumatic energy sources
- out of specification operation.

Problems

Respond to/rectify 'non-routine problems' means 'apply known solutions to a variety of predictable problems'. Typical process and product problems may include:

- out-of-specification product or variations
- response of equipment to materials variations

© Commonwealth of Australia, 2024 Public Skills Australia

- equipment in need of maintenance.

Variables

Key variables to be monitored include:

- equipment performance (eg speed, output, variations)
- equipment component performance
- sequences and timing of operations
- materials changes (desired and not desired).

Data and Records

Typical information sources, observed data and plant records may include:

- plant data
- log sheets
- operational and performance reports
- physical aspects such as noise, smell, feel and pressure condition monitoring information
- planned maintenance schedules
- procedures
- manufacturer specifications, instructions, service manuals and other information.
-

MSAPMSUP292A Sample and test materials and product

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the taking of routine samples and the conducting of simple tests.

Application of the Unit

Application of this unit

This competency applies to operators who are required to undertake the routine sampling and testing in the workplace. Testing will typically also be done in the workplace or in a 'factory laboratory' (or bench) adjacent to/in the factory. Tests will be simple, routine tests to procedure. This competency is typically performed by operators working either independently or as part of a work team. The operator:

- takes the sample
- performs the test
- makes a simple interpretation of the test results
- takes actions specified based on the test results
- completes logs and reports.

More advanced sampling and testing should use the relevant units from *PML04 Laboratory Operations Training Package*.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Take sample.	1.1 Determine type of sample and sampling equipment required. 1.2 Check sampling equipment is clean and in good order. 1.3 Take sample(s) of required type(s), from the required place(s) and at the required time(s) and place in required container(s). 1.4 Label sample(s) to procedure. 1.5 Carry sample(s) to required place.
2. Complete test.	2.1 Check test required from procedures/work instruction. 2.2 Check sample identification and integrity. 2.3 Check test equipment is clean, in good order and within calibration. 2.4 Complete test(s) required as per standard procedures/ instructions.
3. Interpret results and take action.	3.1 Note anything about sample, equipment or the test itself which may have caused it to give a bad result. 3.2 Compare results to specification.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	3.3 Take action appropriate to the test results and any other observations.
4. Complete sample and test cycle.	4.1 Complete required records. 4.2 Store and/or dispose of sample as required. 4.3 Clean all equipment and leave ready for next sample/test.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Application of knowledge of the sampling and testing techniques used sufficient to recognise a suspicious test result cause by a fault in these areas.

Knowledge of organisation procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards.

Knowledge and skills in sampling and testing sufficient for consistent and meaningful test results including:

- basic principles of taking the particular sample
- basic principles of the particular test
- sample techniques and requirements
- test methods used and critical factors leading to good/poor test results.

Language, **literacy and numeracy requirements**

This unit requires the ability to read and interpret typical sampling and testing methods/procedures and to read and interpret numbers or other test result data.

Writing is required to the level of completing workplace forms and labelling samples.

Basic numeracy is required to read and interpret test results and undertake minor data manipulation such as might be required for the test, test interpretation or reporting.

Evidence Guide

© Commonwealth of Australia, 2024 Public Skills Australia

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to:

- take a sample correctly
- undertake tests with adequate reproducibility
- select and use the appropriate procedures.

Assessment method and context

Assessment will occur in a factory testing environment and will be undertaken in a work-like environment.

Competence in this unit may be assessed:

- by using appropriate, industrial testing regimes
- in a situation allowing the generation of evidence of the ability to respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that will affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

This competency unit includes the range of sampling and testing which may be carried out in a plant/factory, or in a manufacturing laboratory. It typically applies to operators who carry out a narrow range of tests as part of their job.

It does NOT include testing which would normally be conducted in a laboratory, nor operators carrying out a wide range of testing which is a significant part of their job role. These competencies are more properly covered by *PMLTEST300A Perform basic tests* or other units from the Laboratory Operations Training Package.

The tasks covered by this competency include:

- receiving, handling and storing samples
- preparing for sample collection
- performing sample collection
- performing sample preparation
- performing tests
- recording results.

Problems

'Respond to routine problems' means 'apply known solutions to a limited range of predictable problems'. Typical problems include:

- correct sampling technique
- test equipment condition/calibration
- consistent test technique according to standard procedure
- correct recording of result
- interpretation of result and the initiation of appropriate action
- correct retention/disposal of sample/test materials.
-

Unit Sector(s)

MSAPMSUP390A Use structured problem solving tools

Modification History

Not applicable.

Unit Descriptor

Unit descriptor

This competency covers the solving of process and other problems, beyond those associated directly with the process unit/equipment, using structured process improvement tools to identify improvements and/or solve problems.

Application of the Unit

Application of this unit

The competency is typically performed by an experienced operator, team leader or supervisor.

Generally the person would be part of a team during the solving of complex or systemic problems and would be expected to perform all parts of this unit and at all times would be liaising and cooperating with other members of the team. This includes:

- using a range of formal problem solving techniques
- identifying and clarifying the nature of the problem
- devising the best solution
- evaluating the solution
- developing an implementation plan to rectify the problem.

This unit does not cover the solving of problems undertaken as part of the operator's normal role which is covered in the relevant operation competency unit.

Licensing/Regulatory Information

Not applicable.

Elements and Performance Criteria Pre-Content

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes of a unit of competency	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
ELEMENT	Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
1. Identify the problem.	1.1 Identify variances from normal operating parameters and product quality. 1.2 Define the extent, cause and nature of the problem by observation and investigation. 1.3 State and specify the problem clearly.
2. Determine fundamental cause of problem.	2.1 Identify possible causes based on experience and the use of problem solving tools/analytical techniques. 2.2 Develop possible cause statements. 2.3 Identify fundamental cause.
3. Determine corrective action.	3.1 Consider all possible options for resolution of the problem. 3.2 Consider strengths and weaknesses of possible options. 3.3 Determine corrective action to remove the problem and possible future causes. 3.4 Develop implementation plans identifying measurable objectives, resource needs and timelines in accordance with safety and operating procedures. 3.5 Develop recommendations for ongoing monitoring

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT ELEMENT	PERFORMANCE CRITERIA Performance Criteria describe the required performance needed to demonstrate achievement of the Element. Assessment of performance is to be consistent with the Evidence Guide.
	and testing.
4. Communicate recommendations.	4.1 Prepare report on recommendations. 4.2 Present recommendations to appropriate personnel. 4.3 Follow up recommendations if required.

Required Skills and Knowledge

This describes the essential skills and knowledge and their level required for this unit.

Competence includes a thorough knowledge and understanding of the process, normal operating parameters, and product quality to recognise non-standard situations.

This unit of competency includes use of analytical techniques in problem solving such as:

- brainstorming
- fishbone diagrams/cause and effect diagrams
- process logic/process requirements
- logic tree
- similarity/difference analysis
- Pareto analysis
- force field/SWOT analysis
- flow charts
- control charts, runcharts and graphs
- scattergrams.

Action plans to solve problems are prepared including:

- priority requirements
- measurable objectives
- resource requirements
- methods for reaching objectives
- timelines
- coordination and feedback requirements
- safety requirements
- risk assessment
- environmental requirements.

Language, **literacy and numeracy requirements**

© Commonwealth of Australia, 2024 Public Skills Australia

This unit requires the ability to read and interpret typical product specifications, job sheets and material labels as provided to operators.

Writing is required to the level of report writing and completing workplace forms.

Basic numeracy is also required, eg to interpret quality data and graphs.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, required skills and knowledge, the Range Statement and the Assessment Guidelines for this Training Package.

Overview of assessment

A holistic approach should be taken to the assessment.

Assessors must be satisfied that the person can consistently perform the unit as a whole, as defined by the Elements, Performance Criteria and skills and knowledge.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

It is essential that competence is demonstrated in the knowledge and skills defined in this unit. These may include the ability to apply and explain:

- relevant equipment and operational processes
- enterprise policies and procedures
- enterprise goals, targets and measures
- enterprise quality, OHS and environmental requirements
- principles of decision-making strategies and techniques
- enterprise information systems and data collation
- industry codes and standards.

Consistent performance should be demonstrated. For example, look to see that:

- problems are recognised and clarified
- possible causes are identified, based on experience and use of analytical techniques in solving the problem, including:
  - identifying variations
  - identifying cause and effect
  - separating single problems from multiple problems
  - recognising recurring problems.
- fundamental cause of process or equipment faults is determined
- corrective/preventative implementation plans are developed to avoid recurrence of the problem
- implementation plan is presented to relevant personnel.

Assessment method and context

© Commonwealth of Australia, 2024 Public Skills Australia

Assessment will occur on the job or in a simulated workplace.

Competence in this unit may be assessed:

- in a situation allowing the generation of evidence of the ability to recognise and respond to problems
- by using a suitable simulation and/or a range of case studies/scenarios
- through a combination of these techniques.

In all cases it is expected that practical assessment will be combined with targeted questioning to assess the underpinning knowledge and theoretical assessment will be combined with appropriate practical/simulation or similar assessment. Assessors need to be aware of any cultural issues that may affect responses to questions.

Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Specific resources for assessment

This section should be read in conjunction with the Range Statement for this unit of competency. Resources required include suitable access to an operating plant or equipment that allows for appropriate and realistic simulation. A bank of case studies/scenarios and questions will also be required to the extent that they form part of the assessment method. Questioning may take place either in the workplace, or in an adjacent, quiet facility such as an office or lunchroom. No other special resources are required.

Access must be provided to appropriate learning and/or assessment support when required. Where applicable, physical resources should include equipment modified for people with disabilities.

Range Statement

RANGE STATEMENT

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.

Context

The competency unit applies to a wide range of processes and equipment. The process manufacturing technical units of competency include a problem solving element where problems specific to that competency unit are to be resolved. This competency unit is where structured problem solving techniques are to be applied more broadly, or with greater depth/rigour than is implied by the problem solving element of the technical units.

In large plants or manufacturing organisations with multiple processes, it may apply to more than one process if those processes interact with each other. It applies to all operators across all functions.

© Commonwealth of Australia, 2024 Public Skills Australia

Procedures

All operations are performed in accordance with procedures.

Procedures include all relevant workplace procedures, work instructions, temporary instructions and relevant industry and government codes and standards.

Hazards

Typical hazards include leaks, spillages and equipment hazards that can occur during the walk-through of a plant.

Problems

'Anticipate and solve problems' means resolve a wide range of routine and non-routine problems, using product and process knowledge to develop solutions to problems which do not have a known solution/a solution recorded in the procedures.

Typical process and product problems may include:

- non- routine process and quality problems
- equipment selection, availability and failure
- teamwork and work allocation problems
- safety and emergency situations and incidents.
-

MSL974003A Perform chemical tests and procedures

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to interpret chemical test requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine chemical tests/procedures. These tests will involve several measurement steps. The unit includes data processing and interpretation of results and tracking of obvious test malfunctions where the procedure is standardised. However, personnel are not required to analyse data, optimise tests/procedures for specific samples or troubleshoot equipment problems where the solution is not apparent.

Application of the Unit

Application of the unit	This unit of competency is applicable to laboratory or technical assistants and instrument operators in all industry sectors. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Interpret and schedule test requirements	1.1. Review test request to identify samples to be tested, test method and equipment/instruments involved 1.2. Identify hazards and enterprise control measures associated with the sample, preparation/test methods, reagents and/or equipment 1.3. Plan work sequences to optimise throughput of multiple samples, if appropriate
2. Receive and prepare samples	2.1. Log samples using standard operating procedures (SOPs) 2.2. Record sample description, compare with specification and note and report discrepancies 2.3. Prepare samples and standards in accordance with chemical testing requirements 2.4. Ensure traceability of samples from receipt to

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	reporting of results
3. Check equipment before use	3.1. Set up equipment/instruments in accordance with test method requirements 3.2. Perform pre-use and safety checks in accordance with relevant enterprise and operating procedures 3.3. Identify faulty or unsafe components and equipment and report to appropriate personnel 3.4. Check equipment calibration using specified standards and procedures, if applicable 3.5. Quarantine out of calibration equipment/instruments 3.6. Ensure reagents required for the test are available and meet quality requirements
4. Test samples to determine chemical species or properties	4.1. Operate equipment/instruments in accordance with test method requirements 4.2. Perform tests/procedures on all samples and standards, if appropriate, in accordance with specified methods 4.3. Shut down equipment/instruments in accordance with operating procedures
5. Process and interpret data	5.1. Record test data noting atypical observations 5.2. Construct calibration graphs, if appropriate, and compute results for all samples from these graphs 5.3. Ensure calculated values are consistent with expectations 5.4. Record and report results in accordance with enterprise procedures 5.5. Estimate and document uncertainty of measurement in accordance with enterprise procedures, if required 5.6. Interpret trends in data and/or results and report out of specification or atypical results promptly to appropriate personnel 5.7. Determine if obvious procedure or equipment problems have led to atypical data or results
6. Maintain a safe work environment	6.1. Use established safe work practices and personal protective equipment to ensure personal safety and that of other laboratory personnel 6.2. Minimise the generation of wastes and environmental impacts 6.3. Ensure the safe collection of laboratory and hazardous waste for subsequent disposal 6.4. Care for and store equipment and reagents as

ELEMENT	PERFORMANCE CRITERIA
	required
7. Maintain laboratory records	7.1. Enter approved data into laboratory information management system 7.2. Maintain confidentiality and security of enterprise information and laboratory data 7.3. Maintain equipment and calibration logs in accordance with enterprise procedures

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting test methods and procedures
- sample preparation procedures
- performing calibration checks
- using instruments for qualitative and/or quantitative analysis
- maintaining and evaluating reagents
- troubleshooting basic equipment/method
- using calculation methods, including appropriate units, uncertainties, balancing equations, and the concentration of the solution given the chemical reaction for the titration
- preparing calibration graphs and calculating results using appropriate units and precision
- applying theoretical knowledge to interpret gross features of data and make relevant conclusions such as identifying atypical results as out of normal range or an artefact
- tracing and sourcing obvious causes of an artefact
- recording and communicating results in accordance with enterprise procedures
- maintaining security, integrity, traceability of samples, sub-samples, test data, results and documentation

Required knowledge

Required knowledge includes:

- chemical principles and concepts underpinning test/procedure
- purpose of the tests

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• concepts of metrology • principles and concepts related to equipment/instrument operation and testing • function of key components of the equipment/instrument and/or reagents • effects of modifying equipment/instrument variables • use of calibration procedures • enterprise and/or legal traceability requirements • relevant health, safety and environment requirements

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • interpret test methods/procedures accurately • prepare and test samples using procedures appropriate to the nature of sample • perform calibration checks (if required) • safely operate test equipment/instruments to enterprise standards and/or manufacturer's specification • prepare calibration graphs and calculate results using appropriate units and precision • apply basic theoretical knowledge to interpret gross features of data and make relevant conclusions • identify atypical results as out of normal range or an artefact • traces and source obvious causes of an artefact • communicate problems to a supervisor or outside service technician • record and communicate results in accordance with enterprise procedures • maintain security, integrity, traceability of samples, sub-samples, test data and results and documentation.
Context of and specific resources for	This unit of competency is to be assessed in the

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
assessment	workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL924001A Process and interpret data* • *MSL974001A Prepare, standardise and use solutions*. Resources may include: • standard laboratory equipped with appropriate test equipment/instruments, standards and reagents • enterprise procedures and standard methods.
Method of assessment	The following assessment methods are suggested: • review of test data/results obtained by the candidate over a period of time to check accuracy, consistency and timeliness of results • review of test records and workplace documentation completed by the candidate • observation of candidate conducting a range of chemical tests and procedures and sample preparation • feedback from peers and supervisors • oral or written questioning of chemical principles and concepts, test methods and enterprise procedures. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case studies below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. **Manufacturing**

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	Ultraviolet spectroscopy is a suitable method for determining the concentration of sulphanilamide in pharmaceutical preparations. The ultraviolet absorption spectrum is pH dependent, with the wavelength maximum different in acid and alkaline solutions. Example: a technician was conducting an analysis and noted that the wavelength maxima had moved from approximately 250nm to below 230nm. After reviewing the procedure being used and checking for possible errors, the technician found that an incorrect solvent had been used for the analysis. The hydrochloric acid solvent was replaced with sodium hydroxide, as per the standard method, and the correct absorption spectrum was obtained. **Environmental** A technician was asked to test water samples from a local lake over several days to determine the lake's nutrient levels following reports of algal blooms in the lake over the preceding weeks. He/she used a field colorimeter kit to determine both nitrates and orthophosphates using SOPs. Because the same colorimetric cells were used for the nitrate and orthophosphate tests, they were carefully washed and rinsed with distilled water between all tests (as specified in the SOP). After reviewing the results from the first three days, the technician noted that the first orthophosphate result, which was done immediately after all the nitrate tests, was much higher than subsequent orthophosphate tests which were all consistently low. The technician argued that the 'high' results for the first orthophosphate test may be due to cross-contamination from trace amounts of reagents used in previous nitrate tests despite having closely followed the cleaning/rinsing SOPs. After discussion with his/her supervisor, the technician modified the field procedures by using totally different colorimetric cells for the nitrate and orthophosphate tests. For all subsequent tests no 'high' orthophosphate results were obtained for the first sample. As a result, the laboratory supervisor amended the SOPs to incorporate this new requirement. **Food processing** Regular checks are conducted on the percentage of salt in cheese at a dairy company's laboratory. A technician checks the results from the airomatic salt-titration

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	equipment and, if the results are abnormal, notifies the supervisor before taking appropriate action. After obtaining a high result, for example, the assistant notified the supervisor and then began checking the machine to identify a possible reason for the high reading. He/she found that the supply bottle of silver nitrate used in the test was almost empty. This had resulted in less solution being pumped through the equipment than required, leading to graph readings that indicated a high percentage of salt. After replacing the silver nitrate bottle and recalibrating the equipment, the assistant retested the cheese samples and found that they contained the expected 1-2% salt.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used

Standards, **codes**, **procedures and/or enterprise requirements**	Standards, codes, procedures and/or enterprise requirements may include:
	• Australian and international standards, such as:
	  • AS 2134.1-1999 Recommended practice for chemical analysis by atomic absorption spectrometry - Flame atomic absorption spectrometry
	  • AS 2162.1-1996 Verification and use of volumetric apparatus - General - Volumetric glassware
	  • AS 3753-2001 Recommended practice for chemical analysis by ultraviolet/visible spectrophotometry

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• AS ISO 1000-1998 The international system of units (SI) and its application • AS ISO 17025-2005 General requirements for the competence of testing and calibration laboratories • AS/NZS 2243 Set:2006 Safety in laboratories set • AS/NZS ISO 9000 Set:2008 Quality management systems set • Australian code of good manufacturing practice for medicinal products (GMP) • calibration and maintenance schedules • enterprise recording and reporting procedures • equipment manuals • equipment startup, operation and shutdown procedures • industry methods, such as Royal Australian Chemical Institute (RACI) and/or American Association of Cereal Chemists (AACC) methods for inorganic constituents • material safety data sheets (MSDS) and safety procedures • material, production and product specifications • national measurement regulations and guidelines • principles of good laboratory practice (GLP) • production and laboratory schedules • quality manuals and equipment and procedure manuals • SOPs • waste minimisation and safe disposal procedures
Sample preparation processes	Sample preparation processes may include: • grinding • mulling • preparation of discs • digestion • dissolving • ashing • refluxing • tracting

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• filtration • evaporation • flocculation • precipitation • washing • drying • centrifugation

Non-instrumental test/procedures	Non-instrumental test/procedures may include:
	• gravimetric analysis:
	  • loss on drying
	  • suspended solids
	  • ashes, such as sulphated and gravimetric assays (e.g. sulphates and nitrogen in fertilisers)
	  • Ni by dimethylglyoxime
	  • bitumen content of asphaltic concrete
	• titrimetric analysis:
	  • acid/base determinations
	  • complexiometric, such as water hardness, Fe by dichromate and binder content analysis
	  • redox, such as precipitation of chlorides in water
	  • dissolved oxygen (DO), chemical oxygen demand (COD) and biochemical oxygen demand (BOD)
	• filtration, separation and solvent extraction techniques
	• corrosion testing, cement content and accelerated weathering

Instrumental tests	Instrumental tests may include: • spectrometry • chromatography • electrochemistry
Types of instrumentation and instrumental techniques	Types of instrumentation and instrumental techniques may include: • colorimetric techniques, such as enzyme activity, chlorine in water, specific cations and anions

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	

	• infrared, ultraviolet-visible (UV-VIS) spectrophotometry
	• other spectrometric techniques:
	  • fluorimetric analysis, flame atomic emission and flame atomic absorption spectrometry
	  • fourier transform infrared
	• chromatographic techniques:
	  • column and thin layer analytical and preparative chromatography
	  • gas or liquid chromatography for purity, raw material and formulation checks
	  • ion chromatography for detection of nitrates, phosphates, sulphates, chlorides and bromides
	  • gel filtration chromatography for purification of proteins
	• electrochemical techniques, such as pH, eH, conductivity and ion-selective electrodes
	• electrophoretic techniques for DNA patterns and determination of protein purity
	• soil testing:
	  • moisture content
	  • organic matter content
	  • specific anions and cations
	• auto-analysers for determination of total P, total Kjeldahl N, orthophosphate, nitrite/nitrate and ammonia

Chemical principles and concepts	Chemical principles and concepts may include: • ions, atoms, molecules, bonding and links to chemical properties • chemical reactions involving acid/base, redox, complex ion formation, solubility and equilibrium • energy levels and absorption/emission spectra
Chemical tests methods	Chemical tests methods may include: • control of starting materials, in-process materials and finished products • environmental monitoring • basic troubleshooting and/or problem solving

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	within the scope of SOPs and enterprise processes

Hazards	Hazards may include:
	• chemicals:
	  • acids (e.g. sulphuric, perchloric and hydrofluoric)
	  • heavy metals and pesticides
	  • anions (e.g. fluoride)
	  • hydrocarbons (e.g. mono-aromatics)
	• aerosols from broken centrifuge tubes, pipetting
	• sharps and broken glassware
	• flammable liquids and gases
	• cryogenics, such as dry ice and liquid nitrogen
	• fluids under pressure, such as hydrogen in gas liquid chromatography, acetylene in atomic absorption spectrometry
	• sources of ignition
	• high-temperature ashing processes
	• disturbance or interruption of services

Hazard control measures:	Hazard control measures may include: • ensuring access to service shut-off points • recognising and observing hazard warnings and safety signs • labelling of samples, reagents, aliquoted samples and hazardous materials • handling and storage of hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions • identifying and reporting operating problems or equipment malfunctions • cleaning and decontaminating equipment and work areas regularly using enterprise procedures • using personal protective clothing and equipment, such as gloves, safety glasses and coveralls • using containment facilities (PCII, PCIII and PCIV physical containment laboratories), containment equipment (biohazard containers, laminar flow cabinets, Class I, II and III

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	biohazard cabinets) and containment procedures • reporting abnormal emissions, discharges and airborne contaminants, such as noise, light, solids, liquids, water/waste water, gases, smoke, vapour, fumes, odour and particulates to appropriate personnel
Records	Records may include: • test and calibration results • equipment use, maintenance and servicing history • faulty or unsafe equipment
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

MSL974008A Capture and manage scientific images

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit of competency covers the ability to capture accurate and reproducible images of scientific (environmental, medical and technical) subjects using a scientific approach and enterprise procedures/protocols to ensure the integrity of the image. It also includes the ability to generate and maintain pre- and post-image capture records to ensure that images can be reproduced.

Application of the Unit

Application of the unit	This unit of competency is applicable to laboratory technicians in all industry sectors. Personnel who capture images as a substantial part of their job role, should consider accessing the following units of competency from the *CUV40403 Certificate IV in Photoimaging* from CUV03 *Visual Arts, Crafts and Design Training Package*: • *CUVPHI04B Apply photoimaging lighting techniques* • *CUVPHI05B Use a 35mm SLR camera or digital equivalent* • *CUVPHI06B Plan and carry out image capture in response to a brief* • *CUVPHI07B Process photoimages to work print/file stage* • *CUVPHI511A Produce technical photoimages*. Industry representatives have provided case studies to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. These are found at the end of this unit of competency under the section 'This competency in practice'.

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Establish requirements for image capture	1.1. Define requirements and purpose of the work and create a brief 1.2. Choose an imaging technique that maintains the integrity and veracity of the subject and fulfils the work requirements 1.3. Plan the work using technical knowledge to ensure an effective and efficient result
2. Plan and set up the	2.1. Select and assemble the required equipment

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
shoot	2.2. Follow ethical and legal work practices at all times 2.3. Assess risks or hazards and implement safety procedures 2.4. Prepare the subject to achieve the brief
3. Capture and reproduce the required image	3.1. Expose media or film and accurately document the work in progress 3.2. Review the image against the work requirements and repeat if necessary 3.3. Reproduce the image to specification
4. Keep records and deliver images	4.1. Accurately and retrievably record the request, technical specifications and images so that they are retrievable 4.2. Store records safely and securely to archival standards 4.3. Follow copyright and crediting policies and procedures 4.4. Make the images available to the client, discuss the results and ensure that requirements have been met

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- creating and interpreting a brief
- applying an imaging technique that best meets the specifications and purpose of the job
- using a back-up system of image capture when shooting images
- producing consistent high quality, cost effective outcomes for clients
- keeping accurate records that allow future replication of images
- working safely and in an ethical manner

Required knowledge

Required knowledge includes:

- repercussions of manipulation of images and differences between adjustment and

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
manipulation • scientific approach and protocols to ensure integrity of images • veracity of different types of storage media • relevant copyright, moral rights and intellectual property issues and legislation • relevant health, safety and environment requirements • enterprise policies and procedures for capturing and managing scientific images

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors should ensure that candidates can: • create and interpret a brief • apply an imaging technique that best meets the specifications and purpose of the job, consistent with enterprise procedures • provide a back-up system of image capture when shooting images • produce consistent high quality, cost effective outcomes for clients • keep accurate records that allow future replication of images • work safely and in an ethical manner consistent with legislation, regulations and codes of practice.
Context of and specific resources for assessment	This unit of competency is to be assessed in the workplace or simulated workplace environment. This unit of competency may be assessed with: • *MSL975015A Prepare animal and plant material for display*. Resources may include: • appropriate facilities, equipment and materials for image capture • enterprise procedures, equipment manuals, industry

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	catalogues and journals.
Method of assessment	The following assessment methods are suggested: • review of portfolio of work completed by the candidate • feedback from clients and supervisor • oral or written questions to assess underpinning knowledge • case studies to assess the candidate's approach to different subjects and use of a variety of imaging techniques. In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. Access must be provided to appropriate learning and/or assessment support when required. The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work like environment.
This competency in practice	Industry representatives have provided the case study below to illustrate the practical application of this unit of competency and to show its relevance in a workplace setting. **Biomedical**, **biotechnology**, **environmental** It's Friday afternoon and a technical officer in a university biology faculty is asked, at short notice, to assist a postgraduate student to obtain images to support a presentation of her work at an international conference. She's flying out of the country to the conference on Sunday. The officer discusses the requirements with the student and determines that the images are needed for a poster presentation to show the differences between sizes of fungal spores. It is agreed that colour prints of four different sized spores are to be produced using a camera coupled to a stereomicroscope. Given the time constraints, a decision is made to use a digital image that

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	can be reproduced on-site. The images are produced on Friday evening and the student produces her poster on Saturday. The details of the subject, conditions and the images themselves are carefully stored for later use in the student's thesis.

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Codes of practice	Where reference is made to industry codes of practice, and/or Australian/international standards, it is expected the latest version will be used
Scientific images	Scientific images may include the following types of imaging techniques: • photographic • digital • X-ray • video • prints • transparencies • direct transformation from images to data, such as reading of DNA sequencing gels • auto-radiations • micrographs • other non-visible light sources, such as ultraviolet (UV) light, fluorescence and phosphorescence • electron micrographs
Scientific subjects	Scientific subjects may include: • building sites, environmental survey and monitoring sites

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• accident or incident sites, and injuries • forensic evidence • biological specimens • histological sections • live animals • chromatography gels
Job requirements and brief	Job requirements and brief may include: • description and specification of work, including constraints and due date • purpose of the image • specifications, such as size, purpose, audience, medium and style • interviewing and collecting information from the client • keeping records, request forms and notes
Purposes of the image	Purposes of the image may include: • publication as a thesis, presentation or on the web • temporal serial recording of changes over time • display as a poster, diorama, print or projection • preview, snapshot or proof of an image for production at a later stage • records of data for inclusion in databases • use in forensic investigation or court proceedings
Planning of the job	Planning of the job may include: • choice of type of image, media, site and conditions • preparation of the subject, such as make-up, choice of whole or part, staining, dissection, mounting, animal handling, setting up a light path for a microscope and appropriate magnification • technical requirements, such as resolution, film type, tripods, shutter speed, lens type and colour differential • back-up method and equipment for image capture • specification of final product, size, delivery, number and cost

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• position of subject
Equipment	Equipment may include: • lighting • backdrops • camera systems and accessories
Hazards	Hazards may include: • microbiological organisms and agents associated with soil, air, water, blood and blood products, and human or animal tissue and fluids • solar radiation, dust and noise • chemicals and radioisotopes • X-rays and other sources of electromagnetic radiation (laser and UV) • manual handling of heavy objects • slips, trips and falls, falling objects and moving machinery (e.g. on building sites) • pedestrian and vehicular traffic
Safety procedures	Safety procedures may include: • recognising and observing hazard warnings and safety signs • use of personal protective equipment, such as hard hats, hearing protection, gloves, safety glasses, goggles, face guards, coveralls, gowns, body suits, respirators and safety boots • following required containment procedures through the use of appropriate equipment, such as biohazard containers, laminar flow cabinets, Class I, II and III biohazard cabinets and Class PCII, PCIII, and PCIV physical containment facilities • use of material safety data sheets (MSDS) • handling and storage of all hazardous materials and equipment in accordance with labelling, MSDS and manufacturer's instructions • following established manual handling procedures
Ethical and legal work practices	Ethical and legal work practices may include consideration of: • industry codes of practice, contracts, permits,

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	intellectual property, crediting, plagiarism and copyright • moral rights, model release, etiquette, decorum and sensitivity towards the subject, use of a chaperone and confidentiality
Production of images	Production of images may include: • sending images for processing • processing the images • use of commercial software
Storage of records	Storage of records may include: • the brief, technical specifications and images • file management (back-ups, data retrieval and storage) • paper-based, electronic or digital
Occupational health and safety (OHS) and environmental management requirements	OHS and environmental management requirements: • all operations must comply with enterprise OHS and environmental management requirements, which may be imposed through state/territory or federal legislation - these requirements must not be compromised at any time • all operations assume the potentially hazardous nature of samples and require standard precautions to be applied • where relevant, users should access and apply current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health

MSS015002A Develop strategies for more sustainable use of resources

Modification History

Not applicable.

Unit Descriptor

This unit of competency covers identifying strategies for more sustainable uses of resources. The unit includes the identification of waste as defined in lean manufacturing (muda) as part of a strategy for achieving better sustainability outcomes in a process as well as quantifying theoretical and actual resource (including energy) consumption.

Application of the Unit

This unit applies inside organisations and their value chains and specifically applies to the use of resources as part of an overall response to improving sustainability. The unit has been developed with manufacturing operations as a focus. However, because of the range of organisations in a typical manufacturing value chain it may also be applied to other types of organisations.

The unit assumes that a decision to attempt to achieve more sustainable use of resources has already been made. The unit covers the skills needed for developing a strategic approach to resource use at the organisation or value chain level.

The unit does not cover the technical skills required to implement specific initiatives that may be identified as part of the strategic plan. However, there is a requirement to present and organise data. The complexity of this requirement will vary according to the type and scale of the organisation's processes. Where required, appropriate mathematics and statistics units should be selected from the MEM05 Metal and Engineering Training Package or other appropriate Training Package.

Where the carbon footprint (or water footprint or similar) of an enterprise or value chain is known, the unit can be applied to developing strategies for the reduction of that footprint.

It would typically be undertaken by a manager or technical specialist who had a major responsibility for sustainability as part of a broader work role, or sustainability may be their primary work responsibility.

For specific techniques covering the auditing of water, energy, emissions and transport, refer to relevant sustainability audit units.

Licensing/Regulatory Information

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills

Elements and Performance Criteria Pre-Content

Not applicable.

Elements and Performance Criteria

1 Quantify resource consumption	1.1 Identify all significant resources used by process
	1.2 Identify consumption measurements available for each resource
	1.3 Determine consumption for each resource
2 Quantify resource loss	2.1 Determine theoretical consumption of each resource
	2.2 Compare theoretical consumption with actual consumption
	2.3 Determine loss (emission) for each resource
3 Recommend strategies for reducing waste	3.1 Short-list high emission process steps
	3.2 Analyse process to identify emission steps or locations
	3.3 Determine root cause of emission
	3.4 Investigate methods for reducing emission
	3.5 Develop strategies and recommendations for improvement
4 Prepare resources use audit report	4.1 Identify purpose of report and key stakeholders
	4.2 Compile data, implications and recommendations
	4.3 Consult with stakeholders as appropriate
	4.4 Draft and present report

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

Required knowledge includes:

- the concept of muda. Muda is usually summarised under the headings of the ‘seven wastes’ which include:
  - overproduction
  - delay/waiting
  - transportation
  - over processing
  - excess inventory
  - unnecessary motion
  - defects and rework
- methods of material balancing
- methods of energy balancing
- methods of comparing theoretical with actual resource consumption
- methods for mapping manufacturing processes and resources consumed
- methods of measuring actual resource usage
- concept of muda and muda categories
- muda reduction methods and strategies
- AS/NZS ISO 14000 Environmental Management Standards

Required skills include:

- calculating, manipulating and interpreting numerical data, including establishing series, means and averages, absolute and proportional material and energy usage per product or process, correlations and rates of change
- analysing and conducting root cause analysis
- calculating theoretical consumption of resources as the minimum amount of resources per product or process step as defined by the customer multiplied by the rate of production or process
- calculating actual consumption of resources per unit (e.g. per product, operation, site or value chain)
- writing technical reports
- consulting with technical experts and internal and external stakeholders

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

Overview of assessment	A person who demonstrates competency in this unit must be able to identify and quantify resources and waste in a process, recommend strategies to reduce waste and prepare a report with recommendations.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently apply the skills covered in this unit of competency in new and different situations and contexts. Critical aspects of assessment and evidence include: • quantifying significant resource consumption and emission using materials balancing • identifying and consulting with stakeholders • developing strategies for reducing emissions • preparing and presenting a resources use report.
Context of and specific resources for assessment	• This unit of competency is to be assessed in the workplace or a simulated workplace environment. • Assessment should emphasise a workplace context and procedures found in the candidate's workplace. • This unit of competency may be assessed with other relevant units addressing sustainability at the enterprise level or other units requiring the exercise of the skills and knowledge covered by this unit. • The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team.
Method of assessment	• In all cases, practical assessment should be supported by questions to assess underpinning knowledge and those aspects of competency which are difficult to assess directly. • Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability. • The language, literacy and numeracy demands of assessment should not be greater than those required to undertake the unit of competency in a work-like environment.
Guidance information for assessment	

© Commonwealth of Australia, 2024 Public Skills Australia

Range Statement

Waste	Waste in this unit is used in the broader sense of 'muda' as used in lean manufacturing and the competitive manufacturing units of competency developed by Manufacturing Skills Australia (MSA)

Emissions	Emissions means all materials which enter the process/site but which do not leave as part of the product and so includes:
	• known or able to be physically measured emissions of:
	  • gases, vapours and fumes
	  • liquids
	  • solids
	• assumed emissions through material balancing
	• assumed emissions through energy loss, including heat, friction and other energy conversion yield losses

Theoretical consumption	Theoretical consumption of resources is the minimum amount of resources per product as defined by the customer multiplied by the rate of production
Actual consumption	Actual consumption is the amount of a resource entering the value chain
Significant resources	Significant resources includes resources which are deemed to be significant because they are: • high volume • high value • high environmental significance • important to the product or process • covered by legislation or regulation • important to the enterprise It need not include resources which are incidental to the activity and which are not otherwise significant

MSS402001A Apply competitive systems and practices

Modification History

New unit, superceding MSACMS200A Apply competitive manufacturing practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to implement basic improvement practices within an organisation using competitive systems and practices. The unit focuses on bringing together the basic concepts and the holistic application of these basic concepts and processes to operations. It would typically be carried out working as part of a team.

Application of the Unit

This unit applies to an individual in an organisation that has embarked on competitive systems and practices. The unit covers the skills and knowledge required to contribute to the competitive systems and practices processes and assumes that they are to be used within the scope of the individual's job and authority.

This unit requires the application of skills associated with planning and organising an individual's own role within the competitive systems and practices framework.

© Commonwealth of Australia, 2024 Public Skills Australia

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify own place in the value chain	1.1	Identify customers relevant to own work and their needs/requirements
		1.2	Identify suppliers for own work
		1.3	Identify value contributions along the chain
		1.4	Identify and recommend methods of increasing own contribution to the value chain
2	Improve the product and process value	2.1	Identify customer features/benefits in the product and process
		2.2	Identify aspects of product and process which contribute to customer features/benefits
		2.3	Identify aspects of product and process which do not contribute to customer benefits/features
		2.4	Recommend methods of reducing waste and increasing features/benefits
3	Use competitive systems and practices	3.1	Identify competitive systems and practices used in organisation and own work area
		3.2	Apply practices appropriate for the job or process
		3.3	Monitor the job/process and make adjustments to improve it in accordance with procedures
		3.4	Identify own skill requirements and seek skill development, if required

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope of competitive systems and practices implementation and contributing suggestions for improvement
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning own tasks to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)

Required knowledge

Required knowledge includes:

- internal and external customers and the value they derive from operations
- suppliers, their capabilities and contribution to value (this may be obtained from an existing value stream map or other enterprise documentation)
- waste (muda)
- relevant competitive systems and practices for own job and how to apply them
- factors impacting on product, operations and waste, particularly those wholly or partially under their control (and how to control them)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person being assessed against this unit will work effectively in a competitive systems and practices environment, making continual positive contributions to the improvement of the business within the scope of their job.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the scope of competitive systems and

© Commonwealth of Australia, 2024 Public Skills Australia

	practices implemented in their work area • identify services and/or functions supplied by suppliers and to customers • identify own tasks and responsibilities and relate them to organisation and customer requirements • identify aspects of products and process which add to or detract from customer benefit • contribute suggestions for improvement.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads, and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

© Commonwealth of Australia, 2024 Public Skills Australia

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control And Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted

© Commonwealth of Australia, 2024 Public Skills Australia

	so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Customers	Customers may include: • internal or external customers and should be sufficiently close to the individual's work as to be easily identifiable • final customers used as the basis for the identification of value and waste The individual does not need to interface directly with the external customer, but should be provided with sufficient information to enable them to identify customer benefits and customer features
Suppliers	Suppliers may be: • internal or external suppliers and should be sufficiently close to the individual's work as to be easily identifiable The operator does not need to interface directly with external suppliers, but should be provided with sufficient information to enable them to identify supplier contribution to their own work and to customer benefit
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the organisation • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations Procedures may be: • written, verbal, computer-based or in some other format

MSS402002A Sustain process improvements

Modification History

New unit, superseding MSACMS201A Sustain process improvements - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to prevent process improvements in their own work from slipping back to former practices or digressing to less efficient practices.

Application of the Unit

This unit applies to organisations implementing competitive systems and practices and continuous improvement. It covers the skills needed to ensure that process improvements are sustained and opportunities taken to suggest further improvements.

Improvement initiatives can be made by any of a number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known to employees.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

This unit requires the application of skills associated with problem solving, initiative and enterprise and self-management in order to understand implement and monitor improvement practices. It also requires the ability to identify and address personal skill gaps in order to manage own ability to implement change.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the Performance criteria describe the performance needed to

essential outcomes of a unit of competency.	demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Examine previous improvements	1.1	Identify impact of previous process improvements to equipment, operations, services or products in own work area
		1.2	Identify improvements where objectives have not been met
2	Implement corrective actions	2.1	Identify corrective actions that can be taken by self on process improvements that have not met objectives
		2.2	Obtain any required approvals
		2.3	Identify any additional, personal skill gaps and seek skill development
		2.4	Adopt improved processes
3	Check changes	3.1	Identify claimed improvements
		3.2	Identify methods of observing and measuring claimed improvements in own work area
		3.3	Check if claimed improvements are occurring and report problems in accordance with procedures
4	Check for further improvements	4.1	Look for areas of possible further improvement
		4.2	Discuss further improvements with peers and supervisors
		4.3	Take action to implement improvements in accordance with procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope and stage of implementation of competitive systems and practices and contribute suggestions for further improvements in implementation
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning own tasks to support competitive systems and practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)
- monitoring competitive systems and practices performance indicators in own work and work area

Required knowledge

Required knowledge includes:

- internal and external customers and the value they derive from own work area operations
- suppliers to own work area, their capabilities and contribution to customer benefit
- waste (muda)
- relevant competitive systems and practices for own job and how to apply and monitor the outcomes
- factors impacting on product, operations and waste, particularly those wholly or partially under their control (and how to control them)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	A person being assessed against this unit will be able to demonstrate their willing adoption of new equipment, processes, procedures and practices as well as their

MSS402010A Manage the impact of change on own work

Modification History

New unit, superseding MSACMC210A Manage the impact of change on own work - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an employee to effectively manage the changes in their own work resulting from their organisation's implementation of competitive systems and practices.

Application of the Unit

This unit applies to an employee in an organisation implementing competitive systems and practices that affect the employee's own work. The unit includes the skills required to positively participate in ongoing and continuous change as it affects their work. The employee will be expected to deal with these changes as part of a team and to give feedback from their own perspective.

This unit requires the application of skills associated with problem solving, planning and organising and self-management for assessing and managing the impact of change on own work. This unit also requires the ability to seek information and feedback from team members on the impact of changes and suggested improvements.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of

© Commonwealth of Australia, 2024 Public Skills Australia

performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Examine the impact of change on own work practices	1.1	Identify competitive systems and practices relevant to changes in own work
		1.2	Examine changes to work flow
		1.3	Examine changes to equipment/process/physical environment
		1.4	Examine changes to work relationship with team members and other teams
		1.5	Examine changes to data collection needs
		1.6	Examine changed work for impacts on health, safety and environment (HSE)
		1.7	Examine changes to quality requirements
		1.8	Identify any additional individual skill needs
		1.9	Identify other areas requiring assistance
2	Implement change	2.1	Review changes which may have an adverse impact with team leader
		2.2	Adopt changes to individual work practice
		2.3	Seek assistance in gathering/processing data, as required
		2.4	Implement the data collection/processing and take actions on resulting information in accordance with procedures
		2.5	Seek assistance/training to meet needs caused by change
3	Implement continuous	3.1	Critically examine all changes
		3.2	Identify impacts of changes both up and down the

© Commonwealth of Australia, 2024 Public Skills Australia

improvement		immediate value stream
	3.3	Identify areas for improvement
	3.4	Make recommendations for improvement in accordance with procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying the competitive systems and practices being implemented in the organisation that are relevant to own work, including, if implemented:
  - Just in Time (JIT) and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (e.g. kaizen)
  - waste (muda) elimination
  - formal problem solving procedures (e.g. root cause analysis (RCA))
- analysing own work procedures
- communicating with others in work area, team leaders and other employees relevant to changes in own work
- solving problems relevant to changes in own work
- identifying sources of assistance in organisation if difficulty is experienced with changes
- interpreting relevant procedures and instructions
- working as part of a team

Required knowledge

Required knowledge includes:

- features of common competitive systems and practices sufficient for identification, including:
  - JIT and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (e.g. kaizen)

© Commonwealth of Australia, 2024 Public Skills Australia

  - waste (muda) elimination
  - formal problem solving procedures (e.g. RCA)
- current processes and principles of operation
- sources of data on the process/plant and possible applications to information
- methods of determining own skill needs and developing skills, if required
- HSE principles as relevant to own job
- change implementation contacts and procedures relevant to work area
- employee assistance mechanisms in the organisation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the competitive systems and practices used in their own work • identify changes to their own work flowing from the implementation of the relevant competitive systems and practices • implement changes • know when and how to seek assistance with work changes • make suggestions for improvements.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess response to

© Commonwealth of Australia, 2024 Public Skills Australia

	contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on. • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems such as Systems Control and Data Acquisition (SCADA)

© Commonwealth of Australia, 2024 Public Skills Australia

	software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Managing impact of change	Managing impact of change may include: • elements being undertaken individually or as part of a team • seeking assistance from team leaders for areas outside the employee's range of responsibility and authority
Procedures	Procedures may include: • all work instructions • standard operating procedures • formulas/recipes • batch sheet • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing

© Commonwealth of Australia, 2024 Public Skills Australia

	practice (GMP) and responsible care) and government regulations Procedures may be: • written, verbal, computer-based or in some other format
Gathering and monitoring performance data	The gathering and monitoring of performance data may be: • undertaken manually by individual employees through charts, tally sheets or keypad/board entry • collected automatically through software, such as SCADA software, ERP systems, MRP and proprietary systems
Continuous improvement	Continuous improvement in competitive systems and practices (often referred to as kaizen) includes: • the continual evaluation and improvement of all process in terms of time required, resources used, resultant quality, and other aspects relevant to the process
Value stream	The value stream begins with the customer and includes all actions (both value adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS402020A Apply quick changeover procedures

Modification History

New unit, superseding MSACMT220A Apply quick changeover procedures - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply quick changeover procedures in an organisation implementing competitive systems and practices.

Application of the Unit

This unit applies to individuals in an organisation which is implementing competitive systems and practices and is pursuing quick changeover as one of its competitive operations tools. The unit can apply to quick changeovers of equipment, processes, batches or product type.

This unit covers the carrying out of these quick changeovers and also recommending improvements within the scope and authority of the individual's job.

Particular technical skills may also be required in some operations sectors and for some jobs. These skills should be gained from the Training Package relevant to the individual's industry and occupation.

This unit requires the application of skills associated with applying quick changeover procedures, including the planning and organising of own work, identifying problems and making suggestions for improvement of procedures.

This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. The unit is also not applicable to a maintenance/PVI shutdown as experienced by the continuous process manufacturers. However, where there is continuous operation on a campaign basis, it may be applied to the changeover between campaigns or similar changeovers.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Prepare for changeover	1.1	Determine when changeover will be required
		1.2	Review plans and instructions for quick changeover
		1.3	Identify role of others in quick changeover
		1.4	Obtain all required tools/parts/materials for changeover
		1.5	Organise process and tools/parts/materials ready for changeover
2	Make quick changeover	2.1	Plan changeover according to quick changeover principles
		2.2	Liaise and work with relevant people in quick changeover
		2.3	Complete changeover according to procedures
		2.4	Check output meets specification
		2.5	Debrief with all relevant stakeholders
		2.6	Note any steps which cause a problem
		2.7	Recommend changes to problematic steps
3	Improve occupational health and safety	3.1	Identify hazards to self or others in all steps/actions
		3.2	Determine risks from each hazard

© Commonwealth of Australia, 2024 Public Skills Australia

(OHS)	3.3	Identify actions which may be performed in a more ergonomic manner
	3.4	Recommend changes to improve OHS

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- determining/predicting when a changeover will occur through knowledge of products and processes in own work area
- communicating with others to clarify scope and procedures for quick changeover and contributing suggestions for improvement
- planning own tasks in quick changeover
- identifying and working to target changeover time
- working as part of a team
- setting up quick changeover using appropriate tools, process skills and procedures
- following OHS procedures and regulatory requirements and notifying risks

Required knowledge

Required knowledge includes:

- principles of quick changeover, including:
  - setting of target time for changeover
  - conversion of internal set-up time to external set-up time, where appropriate
  - simplification of changeover steps
  - monitoring and continuous improvement of changeovers
- relevant operational procedures
- target time for changeover
- relevant OHS regulations and requirements
- purposes/requirements of changeover
- methods of recommending changes
- quality requirements for products and processes
- minimisation of changeover waste (e.g. scrap and energy)

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the scope and equipment to be used in a quick changeover implemented in their work area • identify the target time • understand the difference between internal and external changeover steps • identify own tasks and responsibilities in a quick changeover • identify problems in quick changeovers • contribute suggestions for improvement.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess response to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on)

© Commonwealth of Australia, 2024 Public Skills Australia

	• targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S

© Commonwealth of Australia, 2024 Public Skills Australia

	• continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Changeover	Changeover may refer to: • an exchange of equipment (often dies or tools (traditional)) • a change between products/batches or between campaigns or processes. It may be any quantum change to produce a different product or undertake a different process In competitive systems and practices equipment-based quick changeover techniques in manufacturing can often be referred to under different names, for example: • single minute exchange of die (SMED) – The term originated with die changeovers but now often refers to the ability to perform any set-up activity in a minute or less of machine or process downtime • single-digit set-up – performing a set-up activity in a single-digit number of minutes (i.e. fewer than ten) • one touch exchange of die (OTED) – literally, changing a die with one physical motion, such as pushing a button; broadly, an extremely simple procedure for performing a set-up activity
Set-up	Set-up can be divided into two types: • internal set-up (work that can be done only when the machine or process is not actively engaged in production) • external set-up (work that can be done concurrently

© Commonwealth of Australia, 2024 Public Skills Australia

	with the machine or process performing production duties) The same distinction can be applied to non-production equipment-based work areas where changeovers of processes or operations can be: • internal (requires work to stop, be reset, computers restarted, and so on) • external (where work can continue during the changeover)
Set-up time	Set-up time includes: • the work time required to change over a machine or process from one item or operation to the next item or operation
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of operations, processes, plant and equipment • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations Procedures may be: • written, verbal, computer-based or in some other format

New unit, superseding MSACMT221A Apply Just in Time (JIT) procedures - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to work in an organisation implementing Just in Time (JIT) procedures.

Application of the Unit

This unit applies to an individual working in an organisation following JIT who will need to follow procedures which are specific to JIT, such as the controlled flow of material (e.g. the use of kanban and elimination of waste). This will involve the individual in the application of the pull system to their job and the authorisation of product/material flows in accordance with procedures and their level of authority.

This unit requires the application of skills associated with planning and organising and self-management to deliver product on demand using necessary tools, equipment and processes to meet production requirements. The unit also requires an ability to recognise and act on problems that may interfere with meeting production demands.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria

1	Respond to indicator of demand	1.1	Identify pull of product through work role
		1.2	Recognise indicator of flow authorisation
		1.3	Identify production or service required
2	Make products or deliver service to demand	2.1	Make product or deliver service as required by ticket
		2.2	Identify any factors likely to prevent demand being satisfied in own work or work of the team
		2.3	Take action in accordance with procedures
3	Update demand information as required	3.1	Record information on ticket to procedures, as required
		3.2	Facilitate operation of flow authorisation as part of work
4	Recommend improvements	4.1	Examine the operation of the JIT system as it relates to own work
		4.2	Identify areas for improvement
		4.3	Identify any additional personal skill requirements to implement JIT procedures
		4.4	Recommend improvements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

© Commonwealth of Australia, 2024 Public Skills Australia

- receiving ticket, kanban, order or other indicator of demand and interpreting correctly for own work function, including quantity, quality, time and delivery requirements
- ensuring that all production and movement of parts/material or delivery of a service for which the individual is responsible for takes place only as required by a downstream operation
- recognising and taking appropriate action on faults and other issues that may threaten the JIT delivery of own product or service
- reading and recording information on tickets or other indicators of demand
- suggest improvements to JIT system, as appropriate
- performing technical functions to meet indicators of demand from downstream and to issue indicators of demand upstream

Required knowledge

Required knowledge includes:

- relevant indicator of demands for own job
- own role in flow authorisation
- JIT methods relevant to job
- procedures for recommending improvements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the indicators of demand and the flow authorisation system in their work area • relate products and services supplied by suppliers and customers to the flow authorisation system • identify own tasks and responsibilities and relate them to the flow authorisation system • interpret received indicators of demand correctly for quantity, quality and time of delivery • contribute suggestions for improvement.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.

© Commonwealth of Australia, 2024 Public Skills Australia

	Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess response to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using some combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work

© Commonwealth of Australia, 2024 Public Skills Australia

environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
JIT	JIT is a scheduling concept that calls for any item or service needed for an operation, whether a service, raw material, finished item, or anything in between to be available:

© Commonwealth of Australia, 2024 Public Skills Australia

	• precisely when the service, product or operation is to be produced or undertaken • in the right quantity and at the right quality
Product	Product may include: • a physical product • a supporting utility service, such as water, gas, power • some other service (e.g. cranes and forklifts)
Flow authorisation	Flow authorisation refers to: • a system which authorises the worker to make a product without reference to another authority
Indicator of demand	An indicator of demand may include: • kanban bin, ticket or similar • some other indicator of demand pull which authorises production or movement of an item (in some plants, this may also include authorisation using SCADA software) In continuous operations organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket, order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar
Ticket	A ticket may include: • kanban or some other record, paper or electronic, which constitutes the whole or part of the flow authorising system (where kanban bins are used, there may be no other record)
Kanban	Kanban refers to: • a card or sheet used to authorise production or movement of an item and may vary in format or content between organisations and departments
SCADA	SCADA refers to: • a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action
Pull system	A pull system refers to:

© Commonwealth of Australia, 2024 Public Skills Australia

	• an operations planning system based on making on demand, as opposed to a push system based on making for stock using a sales forecast
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes, batch sheets, temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations Procedures may be: • written, verbal, computer-based or in some other format

MSS402030A Apply cost factors to work practices

Modification History

New unit, superseding MSACMT230A Apply cost factors to work practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to identify cost components in their work and to be able to determine, in general terms, the cost impacts of alternative actions.

Application of the Unit

This unit applies to an individual who is required to contribute to, and be involved in, the assessment of cost factors in their work. This may be done individually or in a team environment.

The unit covers the skills to be able to assess the relative costs of the alternatives and use this as one of the key factors in making decisions. Decisions are made within the scope of the employee's authority and according to procedures. Typical decisions include those that contribute to the efficient organisation of own work and the improvement of production time and cycle times.

This unit requires the application of skills associated with problem solving to identify cost factors and cost implications of own work and self-management to apply cost-effective practices.

Licensing/Regulatory Information

unit of competency.	text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify the major cost components of product or process in own work area	1.1	Identify cost components in the product or process in own work area
		1.2	Recognise the impact of current or alternative actions on costs
2	Identify constraints to cost-efficiency	2.1	Identify required production/process rate and major costs
		2.2	Identify costs factors under individual or team control
		2.3	Relate identified costs factors to impact on overall cost of production/process
		2.4	Identify cost factors that are a constraint to cost-efficiency in own work area
3	Apply cost-efficient work practices	3.1	Identify and explain to relevant people the implications of possible actions/changes to improve cost-efficiency in simple financial terms
		3.2	Identify non-financial implications of proposed changes in discussion with relevant people
		3.3	Select actions which minimise overall costs
		3.4	Monitor actions to ensure cost-efficiency in own work area is maintained

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify cost factors and contribute suggestions for improvement
- visualising normal operational procedures in terms of flow
- distinguishing between fixed and variable costs
- identifying fixed and variable cost components relevant to own work, including where applicable:
  - power/energy
  - materials, plant and equipment
  - production or process time, including impact on salary and wages
  - office expenses
  - government taxes and charges

Required knowledge

Required knowledge includes:

- cost components of products made
- costs concepts, such as expense and income
- major cost contributors to product (e.g. energy)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the scope of their own and their teams work and relate it to the overall flow of work in the organisation • express cost factors in specific terms (e.g. cost per

© Commonwealth of Australia, 2024 Public Skills Australia

	item, process and task) and not just in a general manner • identify and express costs factors in simple financial terms • use cost factors to select lower cost alternatives when making decisions.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and

MSS402031A Interpret product costs in terms of customer requirements

Modification History

New unit, superseding MSACMT231A Interpret product costs in terms of customer requirements - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to be able to identify the major cost components of either products or processes, the basic relationship of these to customer benefit, and use this to help minimise waste (defined as anything not delivering value as defined by the customer). It has a different focus to MSS402030A Apply cost factors to work practices, which focuses on costs in isolation, whereas this unit regards all costs not directly leading to customer benefit as waste.

Application of the Unit

This unit applies to an individual who uses their understanding of the customer's requirements of the product or process being undertaken as the basis for investigating work processes to identify waste sources and then takes action relevant to their level of competency and authority to reduce this waste. It requires an understanding of both the cost factors in the products they make and also the benefits which the customer derives from the product.

This competency may be performed individually or in a team-based environment.

This unit requires the application of skills associated with analysis and problem solving to identify waste and determine ways to minimise waste. This unit requires initiative and enterprise and application of learning in concepts of waste and waste minimisation.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify cost components deriving from customer benefit and other costs	1.1	Identify customer features/benefits in product or process being undertaken
		1.2	Identify cost components which deliver customer features/benefits and those which do not
2	Compare required performance of product or process steps with actual performance	2.1	Identify performance required to meet customer needs in own work and that of team
		2.2	Identify actual performance
		2.3	Compare cost components of products or process with current customer-related targets
		2.4	Separate costs components into those that contribute to customer features/benefits and those that do not
		2.5	Determine non-contributing cost components which are under control of the individual or team
3	Minimise waste	3.1	Recommend changes to eliminate or reduce waste
		3.2	Adopt changes which minimises waste
		3.3	Monitor effect of changes to ensure gains are made against customer features/benefits

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying customer benefit in own work and that of the individual's team
- identifying financial and other performance indicators for own work and of team, including where appropriate, takt time
- communicating with others to clarify cost factors and contribute suggestions for improvement
- visualising normal operational procedures in terms of flow
- distinguishing between fixed and variable costs
- classifying fixed and variable cost components in terms of relevancy to customer benefit, including where applicable:
  - power/energy
  - materials, plant and equipment
  - production or process time, including impact on salary and wages
  - required and unnecessary downtime
  - office expenses
  - government taxes and charges

Required knowledge

Required knowledge includes:

- value as defined by the customer and the relevancy to own and team's work
- ability to access company information about:
  - customer features/benefits
  - cost components of products made
  - costs concepts, such as expense and income
  - major cost contributors to product (e.g. energy)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just In Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving

© Commonwealth of Australia, 2024 Public Skills Australia

	• run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Customer features/benefits	Customer features/benefits include: • characteristics of the product or service which add value to the customer, this value may be assessed in financial or features terms The customer may be: • internal or external
Performance	Performance may include: • the rate of output of the plant compared to the rate required to meet demand • takt, where takt time is the allowable time to produce one product at the rate and quality customers are demanding it (this is NOT the same as cycle time, which is the normal time to complete an operation on a product – which should be less than or equal to takt time)
Customer-related targets	Customer-related targets include: • internally set financial and operational targets that contribute to meeting customer features/benefits
Contributing and non-contributing cost components	Contributing costs include: • costs that make a direct contribution to customer features/benefits. These costs continue to need to be incurred (although they may be minimised) in order to gain the customer feature/benefit Non-contributing costs include: • other costs that do not contribute to customer features/benefits. These may be costs that must be maintained, such as regulatory compliance and occupational health and safety (OHS) costs and other costs which are not required and do not contribute to customer features and so should be eliminated if possible (this is also defined in terms of ***waste*** – see

© Commonwealth of Australia, 2024 Public Skills Australia

	below)
Waste	Waste (also known as muda in the Toyota Production System and its derivatives) includes: • any activity which does not contribute to customer or organisation benefit/features in the product Categories of waste include: • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items Waste for this unit may include activities which do not yield any benefit to the organisation or any benefit to the organisations customers

MSS402040A Apply 5S procedures

Modification History

New unit, superseding MSACMT240A Apply 5S procedures in a manufacturing environment - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an employee to apply 5S procedures to their own job and work area. The unit assumes the employee has a particular job and an allocated work area and that processes in the work area are known by the individual.

Application of the Unit

This unit applies to an individual in an organisation who works in an operational position as part of production, maintenance, logistics, and so on. The unit can also apply to individuals in other organisations who have a discrete role and responsibility for individually managed processes. For employees in an office, the specific office-related unit *MSS402041A Apply 5S* in an office should be selected.

This unit applies where an organisation has decided to embark on a competitive systems and practices strategy and as part of this has adopted the philosophy of 5S as one of the tools to improve performance. The employee needs to apply 5S to their job and work area and maintain the housekeeping and other standards set by 5S.

This unit requires the application of skills associated with planning and organising, problem solving and self-management, in order to identify and implement 5S housekeeping practices.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Sort needed items from unneeded	1.1	Identify all items in the work area
		1.2	Sort items to achieve deliverables and value expected by downstream and final customers
		1.3	Sort items required for regulatory or other required purposes
		1.4	Place any non-essential item in a appropriate place other than the workplace
		1.5	Regularly check that only essential items are in the work area
2	Set the workplace in order	2.1	Identify the best location for each essential item
		2.2	Place each essential item in its assigned location
		2.3	After use immediately return each essential item to its assigned location
		2.4	Regularly check that each essential item is in its assigned location
3	Shine the work area	3.1	Keep the work area clean and tidy at all times
		3.2	Conduct regular housekeeping activities during shift
		3.3	Ensure the work area is neat, clean and tidy at both beginning and end of shift

© Commonwealth of Australia, 2024 Public Skills Australia

4	Standardise activities	4.1	Follow procedures
		4.2	Follow checklists for activities, where available
		4.3	Keep the work area to specified standard
5	Sustain the 5S system	5.1	Clean up after completion of job and before commencing next job or end of shift
		5.2	Identify situations where compliance to standards is unlikely and take actions specified in procedures
		5.3	Inspect work area regularly for compliance to specified standard
		5.4	Recommend improvements to lift the level of compliance in the workplace

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify issues during 5S implementation, communicate results and contribute suggestions for improvement
- visualising operations in terms of flow and contribution to customer outcomes
- planning own tasks in implementation of 5S
- implementing 5S in own work area according to instructions
- identifying waste (muda)
- prioritising activities and items
- reading and interpreting documents describing procedures
- recording activities and results against templates and other prescribed formats
- working with others
- solving problems

Required knowledge

Required knowledge includes:

© Commonwealth of Australia, 2024 Public Skills Australia

- operations and processes relevant to own job
- meaning and application of 5S steps to own job and work area
- principles of efficient workplace organisation
- purposes of 5S
- methods of making/recommending improvements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify own tasks and responsibilities and relate them to organisation and customer requirements • identify and explain the stages of 5S • implement 5S in own work area • identify waste (muda) in the work area.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects

© Commonwealth of Australia, 2024 Public Skills Australia

	• suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems

© Commonwealth of Australia, 2024 Public Skills Australia

	• supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
5S	5S is a system of work organisation originally developed in Japan based around housekeeping principles. A close translation of the five stages in the housekeeping approach is: • sort • set in order • shine • standardise • sustain
Sort	Sort involves keeping only what is absolutely necessary for the processes in the work area. Sort includes: • clearing the work area of all non-essential equipment and materials Non-essential items are those not required to either produce product, conduct process or operations, or make required adjustments to equipment during process or operations
Set in order	Set in order includes: • assigning required equipment and materials appropriate locations in the work area

© Commonwealth of Australia, 2024 Public Skills Australia

Shine	Shine includes: • keeping the work area clean at all times. This should be carried out to a regular daily schedule against allowed time and, on most occasions, at the end of a job
Standardise	Standardising includes: • activities that help maintain the order and the housekeeping standards • using procedures and checklists developed from a procedure

Sustain	Sustain includes:
	• making sure that daily activities are completed every day regardless of circumstance
	• cleaning up after a job
	• undertaking inspections, including:
	  • informal inspections carried out often, at least weekly
	  • formal inspections carried out at least monthly
	• generating continuous improvement actions from daily activities
	• following up specific actions to generate continuous improvement

Items in work area	Items in work area may include: • tools • jigs/fixtures • materials/components • plant and equipment • manuals • personal items (e.g. bags, lunch boxes and posters) • safety equipment and personal protective equipment • other items which happen to be in the work area
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the operation of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing

MSS402050A Monitor process capability

Modification History

New unit, MSACMT250A Monitor process capability - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required for gathering of data and the interpretation of simple information to determine the compliance of the process and the taking of action as defined by the procedures where the information reveals the process is out of control parameters.

Application of the Unit

This unit applies to an individual in an organisation adopting specific competitive systems and practices, usually either six sigma or statistical process control/three sigma, as a means of determining and improving the capability of their process to customer requirements. The individual is involved in collecting specified data and performing specified manipulations to the data (typically by plotting on a chart or by entering into a nominated computer program). The information is typically presented to team members in terms of graphs/charts which they are expected to interpret at a basic level and then take action in accordance with procedures to restore the process to being under control parameters.

This unit requires the application of skills associated with entering and monitoring operational data and information and requires initiative, enterprise and problem solving in identifying production variations and making improvement recommendations.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

© Commonwealth of Australia, 2024 Public Skills Australia

1	Collect and process data	1.1	Take specified measurements/readings, as required
		1.2	Enter data in log, computer or other record
		1.3	Manipulate and/or chart data as required by procedures
2	Identify variations that are not random and take action	2.1	Examine chart and/or reliability information
		2.2	Distinguish between random variations and those with an identifiable cause
		2.3	Take action specified in procedures when a variation with an identifiable cause occurs
3	Assist in process improvement	3.1	Collect data for process capability improvement trials
		3.2	Make recommendations for improvement
		3.3	Implement revised capability monitoring procedures

Elements and Performance Criteria

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting electronic and hard copy operating instructions and documents, including where used:
  - work instructions

© Commonwealth of Australia, 2024 Public Skills Australia

  - standard operating procedures
  - formulas/recipes
  - production and batch sheets
  - temporary instructions
  - other provided operating instructions
- monitoring performance data against specifications and control parameters
- examining equipment procedures, products and processes for possible causes of variations
- identifying when corrective action is required by reference to procedures

Required knowledge

Required knowledge includes:

- data collection methods for operations in work area
- data processing techniques required
- basic variability and normal distribution
- recognition of identifiable causes in accordance with procedures
- causes of different types of identifiable causes as defined by procedures
- actions to be taken for the different causes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	Evidence should be available of data collected and processed. There may also be evidence of assignable causes recognised and action taken. There should not be evidence of assignable causes being ignored. A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the scope of operations, including required performance parameters in their work area • collect, enter and process data, including normal performance and variations • read and interpret data, including identifying variation to set parameters • determine where assignable causes can be allocated to variations and take appropriate action • participate in data collection, when required, for

© Commonwealth of Australia, 2024 Public Skills Australia

	process capability trials • contribute suggestions for improvement.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

© Commonwealth of Australia, 2024 Public Skills Australia

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems. • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector

© Commonwealth of Australia, 2024 Public Skills Australia

Six sigma	Six sigma is a process improvement methodology based on statistical process control with six sigma limits which equates to 3.4 defects per million opportunities for each product or service transaction Six sigma is also often used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package
Three sigma	Three sigma includes: • statistical process control with three sigma limits which equates to 3 defects per thousand opportunities for each product or service transaction
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other form
Random variation	Random variation is the term used in statistical control to refer to those variations for which no cause can be found
Identifiable cause	Identifiable cause (also referred to as assignable cause or special cause) refers to: • those variations for which a cause can be found and so the cause of the variation eliminated
Process capability	Process capability means the capability of the process to deliver to customer defined requirements. Process capability includes process stability against standardised practices and documentation to eliminate variation against customer requirements

MSS402051A Apply quality standards

Modification History

New unit, superseding MSACMT251A Apply quality standards - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply quality standards to work operations in an organisation. The unit is designed to complement competitive systems and practices units.

Application of the Unit

This unit applies to an individual who is expected to take responsibility for the quality of their own work, and to take actions specified in the procedures and within the scope of their job and authority to ensure that quality standards are met.

This unit requires the application of skills associated with interpreting and applying workplace standards and identifying and addressing problems that interfere with quality outcomes. The unit requires initiative, enterprise and self-management to ensure quality standards are achieved.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria

1	Assess own work	1.1	Continuously check completed work against workplace standards relevant to the operation being undertaken
		1.2	Demonstrate an understanding of how the work activities and completed work relate to the next production process or processes and to the final products or services concerned
		1.3	Identify and isolate faulty components, products or processes
		1.4	Record and/or report faults and any identified causes to the supervisor concerned, where required, in accordance with workplace procedures
2	Assess quality of received components, parts or materials	2.1	Continuously check received components, parts, materials, information, service or final products against workplace standards and specifications for conformance
		2.2	Demonstrate an understanding of how the received components, parts or materials, information or service relate to the current operation and how they contribute to the final quality of the product or service
		2.3	Identify and isolate faulty components, parts, materials or information that relate to the operator's work
		2.4	Record and/or report faults and any identified causes in accordance with workplace procedures
		2.5	Identify causes of any identified faults and take corrective action as specified in workplace procedures
3	Measure components, parts or materials	3.1	Measure materials, component parts, information, service or products, as required, using the appropriate measuring instruments in accordance with workplace procedures

© Commonwealth of Australia, 2024 Public Skills Australia

4	Record information on production indicator	4.1	Record basic information on quality and other indicators of process performance in accordance with workplace procedures
5	Investigate causes of quality deviations	5.1	Investigate and report causes of deviations from specified quality standards for components
		5.2	Recommend suitable preventative action based on workplace quality standards and the identified causes of deviations from specified quality standards of materials

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- interpreting work instructions, specifications, standards and patterns appropriate to own work
- carrying out relevant visual inspections of materials, component parts and final products
- carrying out relevant physical/chemical measurements or tests
- maintaining accurate work records in accordance with procedures
- carrying out work in accordance with occupational health and safety (OHS) policies and procedures
- meeting work specifications
- communicating effectively within defined workplace procedures
- interpreting and applying defined procedures

Required knowledge

Required knowledge includes:

- relevant quality standards, policies and procedures
- relevant production processes, materials and products
- basic characteristics of materials used in the relevant production processes
- safety and environmental aspects of relevant production processes
- relevant measurement techniques and quality checking procedures
- workplace procedures
- reporting procedures

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • interpret, relevant work instructions, standards and specifications appropriate to own work • check and measure relevant quality parameters • interpret results of quality checks in terms of specifications, patterns and work standards • take required action where standards of materials, component parts, final product or work processes are found to be unacceptable • maintain accurate records.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of

© Commonwealth of Australia, 2024 Public Skills Australia

	contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis

© Commonwealth of Australia, 2024 Public Skills Australia

	• 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Quality parameters	Quality parameters may include: • finish • size • durability • product or process variations • materials • alignment • colour • damage and imperfections • time
Quality checks	Quality checks are against set parameters for the process or product. Examples include: • visual inspection • physical measurements • chemical tests • checks against patterns, templates and guides • processing time
Materials	Materials may include: • physical raw materials • orders, forms and other documentation • services required for undertaking an operation (e.g. power, water, compressed air and fuel)

© Commonwealth of Australia, 2024 Public Skills Australia

Measure	Measure includes: • those measurements which may be taken by the employee in the workplace/at their work station
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the operation of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format
Indicators of production performance	Indicators of production performance may include: • number of items/production rate • delays and causes of delays (where known) • other information as specified in the procedures
Data entry/recording	Data entry/recording may include: • keyboard • written (including ticks or signs) • verbal
Sources of information/ documents	Sources of information/documents may include: • quality and Australian standards and procedures • work instructions, patterns, designs and recipes • organisation work procedures • manufacturer instructions for materials and equipment • organisational or external personnel • customer requirements
Investigate and report	Investigate and report includes: • following set procedures defined for such investigations Set procedures may include: • verbal instructions

© Commonwealth of Australia, 2024 Public Skills Australia

	• documented procedures • other quality procedures as implemented within an organisation or work environment

Workplace context	Workplace context includes:
	• work organisation procedures and practices relating to the manufacture and quality outcomes for products
	• conditions of service, legislation and industrial agreements, including:
	  • workplace agreements and awards
	  • federal or state/territory legislation
	  • standard work practice

Reporting/communication	Reporting/communication may include: • verbal and written communication in accordance with organisational policies and procedures • oral, written or visual communication and may include simple data
Being responsible for the maintenance of own work quality	Being responsible for the maintenance of own work quality may include: • contributing to the quality improvement of team or section output, where necessary, in accordance with workplace procedures • following safety, environmental, housekeeping and quality procedures as specified by materials/machine/equipment manufacturers, regulatory authorities and the organisation
Applicable regulations and legislation	Applicable regulations and legislation may include: • OHS legislation relevant to workplace activities • workers compensation legislation

MSS402060A Use planning software systems in operations

Modification History

New unit, superseding MSACMT260A Use planning software systems in manufacturing - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to access planning software (often known as Enterprise resource Planning (ERP), Materials Resource Planning (MRP and MRPII), and often by a proprietary name, to make routine business decisions required of the person as a regular part of their job.

Application of the Unit

This unit applies to an individual in an organisation using a planning software system and who must interface with that system. The unit applies to both accessing information from the planning software system and using it as an aid to decision making. This unit requires the application of communication, planning, and problem solving associated with using planning software in own work.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria

1	Use interface	1.1	Identify terminals relevant to own work station and functions
		1.2	Use keyboards, track ball/mouse and monitor and/or other peripherals to access system
		1.3	Navigate through system and screens to find program menu and data relevant to own work
		1.4	Identify and input information on own work processes at required frequency and to required detail
		1.5	Access message section and acknowledge messages
		1.6	Identify problems and make suggestions for improvements to relevance of planning software to own work
2	Access information	2.1	Identify work processes that require information from planning software system
		2.2	Obtain relevant data and information on current operations from the planning software system
		2.3	Identify the status of items in the value stream
		2.4	Access historical data and information
		2.5	Interpret information and identify and prioritise any actions required in response to information
3	Take appropriate actions in accordance with procedures	3.1	Take actions in response to information obtained from planning software
		3.2	Follow up as appropriate to ensure anticipated results have occurred
		3.3	Record adjustments and variations according to procedures

© Commonwealth of Australia, 2024 Public Skills Australia

3.4 Identify any learning needs to use planning software and seek appropriate support

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting electronic and hard copy operating instructions and documents, including where used:
  - work instructions
  - standard operating procedures
  - formulas/recipes
  - production and batch sheets
  - temporary instructions
  - other provided operating instructions
- working within access control requirements of the planning software system
- identifying modules, screens, files, and so on, of software relevant to own work
- logging in and using terminals and planning software at a level of access appropriate to own work
- accurately inputting data
- searching and retrieving data
- accessing nominated assistance with planning software

Required knowledge

Required knowledge includes:

- technical knowledge needed to operate own work processes
- planning software system and operation, including:
  - terminal locations and types
  - security and access arrangements
  - range of information held in planning software relevant to own work
  - data collection methods for operations in work area
  - assistance arrangements for users of planning software
  - business activities exercised by/through the planning software system
- value created by operations for customers

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the scope and relevance of planning software system to their own work • enter and retrieve data, including normal performance and variations • use planning software system to assist in own work • contribute suggestions for improvement to performance and relevance of planning software to own work area.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues

© Commonwealth of Australia, 2024 Public Skills Australia

	(third-party reports) • portfolio of evidence In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz)

© Commonwealth of Australia, 2024 Public Skills Australia

	• cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Planning software	Planning software includes: • software systems which integrate a range of business information, such as finance, logistics maintenance and production (frequently referred to as ERP, MRP, MRPII or a range of proprietary names)
Relevant data and information	Relevant data and information may include: • technical and other drawings • standard operating procedures and other work instructions • production schedules including historical data • orders and order tracking information • stock control • contact lists • occupational health and safety (OHS) information
Value stream	The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement, stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing

© Commonwealth of Australia, 2024 Public Skills Australia

	• final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support
Items in the value stream	Items in the value stream refer to information held within the planning software system that contributes to creating value as determined by the customer. Depending on the organisation it may include: • physical elements of the production system, such as sites, work stations, equipment, material, including stock, work in progress and finished products • information needed to meet customer requirements, such as designs, drawings, work instructions, standard operating procedures, standards, material lists and pricing • information not directly related to current customer requirements but required by the organisation
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format

MSS402061A Use SCADA systems in operations

Modification History

New unit, superseding MSACMT261A Use SCADA systems in manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by an individual to interact with a System Control and Data Acquisition (SCADA) system as part of their job.

Application of the Unit

This unit applies to an individual in an organisation using a SCADA system and the individual must interface with that system. The individual will need to access this system as part of their routine and take actions based on the information they obtain from the SCADA system in accordance with procedures.

This unit requires the application of skills associated with using communication tools and technology for management of own work, planning and problem solving.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria

1	Use operator interface	1.1	Identify SCADA terminals relevant to own work station and functions
		1.2	Use keyboards, track ball, monitor and/or stand alone controllers to access/interrogate system
		1.3	Use correct level of access and find all relevant screens and information
		1.4	Access message section and acknowledge messages
		1.5	Input and output information correctly according to program and organisation requirements
2	Use information	2.1	Obtain data and information from SCADA, as required, including process, supply and product chain data
		2.2	Interpret data and information as required by own job
		2.3	Find and use relevant historical data and information
		2.4	Use manufacturer manuals or specifications, as required, to expand knowledge of SCADA system relevant to own work
		2.5	Determine and prioritise required actions
3	Make required changes in accordance with procedures	3.1	Adjust production/process in response to SCADA information
		3.2	Record adjustments and variations to specifications/schedules and report to appropriate personnel
		3.3	Seek feedback and information on adjustments to further improve procedures, where required

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using SCADA terminals and other input devices
- reading and interpreting electronic and hard copy SCADA operating instructions and documents, including where used:
  - work instructions
  - standard operating procedures
  - temporary instructions
  - other provided operating instructions
- working within security and access control requirements of the SCADA system
- identifying modules, screens, and so on, of SCADA system relevant to own work
- accurately inputting and outputting data
- searching and retrieving data
- accessing SCADA system nominated assistance, when required

Required knowledge

Required knowledge includes:

- technical knowledge needed to operate own work processes
- hierarchy of SCADA system and operation
- information available from and controls exercised by/through the SCADA system

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the scope and relevance of the SCADA system to their own work • access correct levels of the SCADA system • enter and retrieve data, including normal performance and variations

© Commonwealth of Australia, 2024 Public Skills Australia

	• use SCADA system to assist in own work.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented ,or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
SCADA	SCADA refers to: • a number of systems which automatically collect

© Commonwealth of Australia, 2024 Public Skills Australia

	critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information to personnel for action In some industry sectors, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as Distributed Control System (DCS). These sectors may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system). SCADA systems may provide information from outside of the process, such as stock/material levels in a customer plant and/or available supply, supply rates and pricing from a supplier plant. This information may all be accessed by the SCADA system and the employee using it in order to make production rate and other control decisions (either automatically or human assisted) about their own operations and work processes
Supply and product chains	The supply chain Includes: • all suppliers in the chain from the initial raw material up to the current step in the operations process The product chain includes: • all steps after the current step up to the final customer Competitive systems and practices organisations encompass the entire production system, beginning with the customer, and includes: • the product sale • outlet • the final assembler • product design • raw material mining and processing • all tiers of the value stream (sometimes called the supply chain) Any truly 'competitive' system is highly dependent on the demands of its customers and the reliability of its suppliers. No implementation of competitive systems and practices can reach its full potential without including the entire 'organisation' in its planning
Procedures	Procedures may include: • work instructions • standard operating procedures

© Commonwealth of Australia, 2024 Public Skills Australia

	• formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format

MSS402080A Undertake root cause analysis

Modification History

New unit, superseding MSACMT280A Undertake root cause analysis - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to undertake root cause analysis (RCA) by any person. This will often be undertaken by people working in a team. This unit also covers the competencies needed by operators to contribute to an advanced maintenance strategy using RCA coupled with diagrams and charts.

Application of the Unit

This unit applies to individuals working in an organisation which is applying competitive systems and practices strategies. The unit applies to the formal problem solving to root cause that the individual must undertake in their own work area or where the individual contributes to problem solving to root cause as part of a team.

This unit requires an ability to seek and apply information from a variety of sources in order to inform RCAs. Initiative and enterprise is also required to identify quick fix and permanent solutions to problems.

Where training in a wider range of problem solving techniques and tools is required the unit MSAPMSUP390A Use structured problem solving tools should be selected.

Licensing/Regulatory Information

essential outcomes of a unit of competency.	demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Recognise problems	1.1	Identify features or occurrences indicative of a problem
		1.2	Use appropriate tools, techniques and charts to define the problem
2	Implement quick fix	2.1	Recommend a quick fix within the scope of competency and authority
		2.2	Use technology or processes relevant to the problem to implement quick fix
3	Determine root cause	3.1	Identify a range of possible causes
		3.2	Gather data and other information to eliminate or confirm possible causes
		3.3	Use available data and information to link causes and effects
		3.4	Seek assistance, as required
		3.5	Identify root cause
4	Develop permanent solution	4.1	Identify a range of methods to eliminate the root cause or break the cause tree
		4.2	Select the most appropriate solution
		4.3	Liaise with relevant people
		4.4	Recommend or implement solution within the limits of competency and authority

© Commonwealth of Australia, 2024 Public Skills Australia

4.5 Monitor impact of solution and make further recommendations, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- cooperating and working with others on problem solving
- assessing and recording information from a variety of sources
- defining potential problems factually, including:
  - location and extent of problem or incident
  - sequence of events where relevant
  - extent of deviation from normal operation or performance
- analysing potential problems across a range of varied activities and knowledge applications
- reading and constructing simple charts, such as cause and effect diagrams

Required knowledge

Required knowledge includes:

- RCA methodology, including difference between quick fixes and root cause elimination or breaking of causal tree
- principles and normal operation of equipment, plant and processes in own work area sufficient to undertake a RCA and propose solutions
- common variances to normal performance that are indicators of a problem
- use of relevant analysis tools (e.g. cause/effect diagrams, Pareto charts and 5 Whys)
- operations in own work area

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and	A person who demonstrates competency in this unit must

© Commonwealth of Australia, 2024 Public Skills Australia

evidence required to demonstrate competency in this unit	be able to provide evidence of the ability to: • undertake problem identification • use appropriate processes to achieve root cause identification • prioritise solutions • recommend solutions and implementation procedures to problems within own area and range of technical skills and knowledge • evaluate implementation of solutions.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess response to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and

© Commonwealth of Australia, 2024 Public Skills Australia

	disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree

© Commonwealth of Australia, 2024 Public Skills Australia

	Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Features or occurrences indicative of a problem	Examples of features or occurrences indicating problems include: • variation to normal plant or equipment operation • unplanned or non-conforming process or operations outcomes • out of specification products • excess scrap • accidents and emergencies • regulatory breaches • customer returns and complaints • reduction or loss of sales
Root cause	There are many possible causes of any problem. The root cause contrasts with other possible causes of a problem which when eliminated have no impact or only ameliorate the problem. Elimination of the root cause permanently eliminates the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found.
Cause tree	The series of causes is referred to as the cause tree. Not all root causes are accessible and able to be eliminated. Breaking the cause tree is such a way that the problem cannot recur is an acceptable alternative. Not all situations can wait for the RCA and eventual elimination of the root cause as there may be serious current impacts. The quick fix will control these immediate impacts, but does not eliminate the root cause.
Quick fix	A quick fix is not a short cut or side step for a permanent solution to the root cause. It is a necessary step designed to control the immediate impacts of a problem, for example, to prevent ongoing errors or to ameliorate damage.
Appropriate techniques/charts	Appropriate techniques/charts may include: • control charts • Pareto charts

© Commonwealth of Australia, 2024 Public Skills Australia

	• run charts • flow charts • cause and effect diagrams • tree diagrams • 5 Whys analysis

MSS402081A Contribute to the application of a proactive maintenance strategy

Modification History

New unit, superseding MSACMT281A Contribute to the application of a proactive maintenance strategy - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to make a positive contribution to proactive maintenance strategies, including actions that contribute to equipment uptime and overall equipment effectiveness (OEE).

Application of the Unit

This unit applies to an individual in an organisation which is following a predictive, preventative or reliability-centred maintenance strategy and which requires commitment from all employees. The employee should 'own' their equipment/plant and take an active part in the implementation of the strategy within the scope of their authority.

This unit requires the application of skills associated with accessing and maintaining equipment/plant documentation, It also requires problem solving, initiative and enterprise to continually monitor and maintain operational performance of equipment/plant used in work role.

Licensing/Regulatory Information

unit of competency.	text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Maintain equipment/plant	1.1	Keep equipment/plant within area of responsibility clean
		1.2	Ensure equipment/plant is serviced and adjusted, as required, in accordance with procedures and own level of responsibility
		1.3	Access manufacturer manuals and specifications, where required, to expand knowledge on the maintenance of equipment/plant
		1.4	Access and update documentation on equipment/plant operation and maintenance as appropriate to workplace procedures
2	Monitor operation of equipment/plant	2.1	Regularly check key conditions of the equipment/plant as defined in workplace procedures
		2.2	Regularly check equipment/plant OEE
		2.3	Note any deviation from conditions specified in procedures
		2.4	Identify any previous occurrences of this deviation
3	Identify deviations and patterns	3.1	Identify any previous occurrences of a deviation
		3.2	Identify any related deviations which have occurred
		3.3	Identify any unusual occurrence which may be related to a deviation
4	Take action appropriate to	4.1	Liaise with relevant people regarding the deviation and the solution

© Commonwealth of Australia, 2024 Public Skills Australia

competency and authority on deviation	4.2	Implement solution and/or assist with the implementation of the solution, as appropriate

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting electronic and hard copy plant, equipment, and process instructions and documents, including where used:
  - work instructions
  - standard operating procedures
  - workshop manuals and instructions from equipment manufacturers in regards to plant or equipment operation, regular maintenance, troubleshooting, and record of use or production
  - production and batch sheets
  - temporary instructions
  - other provided operating instructions
- examining equipment procedures, products and processes for possible causes of deviations from patterns of normal use
- interpreting OEE rates
- servicing and maintaining plant and equipment consistent with area of responsibility and own technical skills

Required knowledge

Required knowledge includes:

- normal behaviour of the equipment/plant
- indicators of abnormal performance
- principles of operation of plant and equipment sufficient to recognise problems and propose solutions
- appropriate cleaning and adjusting for the equipment/plant/area as required by procedures
- concept of OEE as: *availability x performance x quality rate*

where:

- availability takes into account losses due to breakdown, set up and adjustments
- performance takes into account losses due to minor stoppages, reduced speed and idling

© Commonwealth of Australia, 2024 Public Skills Australia

- quality rate takes into account t losses due to rejects, re-works and start-up waste

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • recognise deviations from normal performance patterns and deal with them appropriately • undertake operational service and maintenance on plant and equipment according to instructions.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports)

© Commonwealth of Australia, 2024 Public Skills Australia

	• portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams

© Commonwealth of Australia, 2024 Public Skills Australia

	• OEE • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Uptime	Uptime refers to: • the overall availability of the plant – it is the inverse of downtime or the unavailability of the plant. Ideal uptime is 100%
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format

MSS403001A Implement competitive systems and practices

Modification History

New unit, superseding MSACMS400A Implement a competitive manufacturing system - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to implement and review competitive systems and practices in a person's own work within a team or work area, including the consideration of the impact on the work of others. The unit focuses on the holistic application of competitive systems and practices to achieve improved performance in own work and in activities with others in the team or work area that contribute to improving customer benefit.

Application of the Unit

This unit applies to individuals who are applying competitive systems and practices to their own work in a way that integrates with others in the team or work area who are also implementing competitive systems and practices. Depending on the operations or processes in the team or work area the unit may also include interaction with other teams and work areas.

The unit is suitable for individuals who have formal responsibility for the work of others, such as team leaders. It is also suitable for individuals, such as technicians and tradespeople, who must integrate the application of their technical skills with the implementation of competitive systems and practices in an organisation.

The unit applies to the areas of cost, quality, delivery, safety/environment, and employee capability including continuous reviewing of performance against these five areas in liaison with other relevant people. Improvement initiatives in these five areas are usually developed and implemented with the support of technical support staff. Whereas other units may emphasise the competence to use one or more competitive practices, this unit emphasises the ability to advance on all five key areas over a moderate time period.

This unit requires the application of skills associated with problem solving and initiative and enterprise in order to identify opportunities to make improvements and maximise performance. Communication, the ability to work in a team and planning and organising skills are required to implement improvements and address any conflicts that arise. This unit also requires an ability to identify appropriate technology, and to consider and integrate feedback on how personal performance can be improved.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Contribute to the improvement of the operations system in team or work area	1.1	Identify key performance indicators for area of operations
		1.2	Implement and review competitive systems and practices to improve health, safety and environment (HSE) performance of self and others
		1.3	Implement and review competitive systems and practices to maximise quality consistency
		1.4	Implement and review competitive systems and practices and identify any skill and training issues that need to be addressed to improve capability of self and others
		1.5	Implement and review competitive systems and practices to maximise customer benefit/cost ratio
		1.6	Implement and review competitive systems and practices to reduce lead time to delivery within the scope of authority and responsibility
		1.7	Work with relevant stakeholders to resolve conflicts

© Commonwealth of Australia, 2024 Public Skills Australia

			which arise from implementation of competitive systems and practices
		1.8	Select improvements which will deliver the greatest overall benefit for the resources required/available without reducing current performance on individual factors
2	Implement improvements	2.1	Implement the chosen improvement/s
		2.2	Check the selected improvements improve the system as a whole and do not result in unintended consequences
		2.3	Monitor implementation and make adjustments, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope of implementation of competitive systems and practices, including:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing
  - process mapping
  - establishing customer pull
  - kaizen and kaizen blitz
  - setting of key performance indicators/metrics
  - identification and elimination of waste (muda)
- monitoring performance in key areas, including:
  - HSE performance
  - quality consistency
  - capability and performance by team members
  - customer benefit/cost ratio
  - reduce lead time to delivery

© Commonwealth of Australia, 2024 Public Skills Australia

- contributing suggestions for improvement
- analysing operational procedures in terms of flow and contribution to customer outcomes
- planning tasks to support competitive systems and practices implementation
- identifying and implementing appropriate data gathering and analysis techniques within area of responsibility to identify change over time in indicators relating to:
  - cost
  - quality
  - delivery
  - safety/environment
  - employee capability and support for competitive systems and practices
- solving problems to root causes

Required knowledge

Required knowledge includes:

- customers and the value they derive from products and processes of the organisation or area
- cost components and their relationship to customer benefits/features
- suppliers and their capabilities
- waste (muda)
- factors causing variability in a product and how to control them
- factors that promote standardisation
- relevant competitive systems and practices tools for area and how to apply them
- factors impacting on the product, process and waste, particularly those wholly or partially under own and other immediate area employees control (and how to control them)
- good HSE practice and factors impacting on HSE performance
- own capability and how to improve it
- optimisation techniques appropriate to the organisation and the job
- application of quality standards and processes

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • identify key performance indicators appropriate to their own work area

© Commonwealth of Australia, 2024 Public Skills Australia

	• implement and review competitive systems and practices in own work, including interaction with others in the work area in the areas of:
	  • HSE performance
	  • quality consistency
	  • capability and performance by team members
	  • customer benefit/cost ratio
	  • reduce lead time to delivery
	• select improvements that deliver the greatest overall benefit
	• monitor the implementation of improvements and make appropriate adjustments.

Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning for appropriate portions • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence In all cases it is expected that practical assessment will be combined with targeted questioning to assess

© Commonwealth of Australia, 2024 Public Skills Australia

	underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping

© Commonwealth of Australia, 2024 Public Skills Australia

	• problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Competitive systems and practices tools	Competitive systems and practices tools include: • 5S • 6 sigma • continuous improvement • cause effect diagrams
Customer	Competitive systems and practices organisations encompass the entire production system, beginning with the customer, and includes: • the product sales outlet • the final assembler • product design • raw material mining and processing • all tiers of the value stream (sometimes called the supply chain) Customer may include: • internal or external customers, and should also include the final customer as the basis for the identification of waste The unit does not require interfacing directly with the external customer, but there should be sufficient information to identify customer benefits and features
Supplier	Supplier may include: • an internal supplier • an external supplier The unit does not require interfacing directly with external suppliers, but there should be sufficient information to enable identification of supplier abilities
Waste	Waste (also known as muda in the Toyota Production

© Commonwealth of Australia, 2024 Public Skills Australia

	System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Categories of waste include: • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • other activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Operations	Operations indicate: • the holistic combination of the process, plant and equipment, procedures and practices, including the skills and work organisation of the workforce, which make up the productive organisation
Implement improvements	Implementation of improvements may be undertaken: • within own job role • as part of processes and operations in the work area or team

MSS403002A Ensure process improvements are sustained

Modification History

New unit, superseding MSACMS401A Ensure process improvements are sustained - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to ensure that the gains which have been made by using improved methods, processes and equipment are sustained as the new baseline/standard for an area of work and so prevent regression to former practices, or digression to less efficient practices.

Application of the Unit

This unit applies to individuals working in a team or work area who have already implemented competitive systems and practices related improvements in their own work and who must work effectively with others implementing competitive systems and practices to ensure that performance improvement gains are sustained.

The unit is also suitable for individuals who have formal or informal responsibility for the work of others, such as team leaders; individuals, such as senior operators, who must mentor others; or individuals, such as technicians and tradespeople, who must integrate the application of their technical skills with the implementation of competitive systems and practices in an organisation.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

The unit covers the implementation of practices to ensure that process improvements are sustained and opportunities taken to suggest further improvements. If mistake proofing is used as one of the methods for ensuring that process improvements are sustained, the unit MSS403051A Mistake proof a production process should be selected.

Improvement initiatives can be made by any of any number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known.

This unit requires the application of skills associated with problem solving, initiative and enterprise, and planning and organising in order to check and monitor the impacts of change. It also requires communication and the ability to work with others to assess the impact of change in own work and on other’s work, as well as self-management and learning to adapt improvements according to new information and feedback.

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Examine previous improvements	1.1	Identify impact of previous process improvements to systems, equipment, operations or products in work area
		1.2	Identify improvements that have not met objectives
2	Ensure corrective actions are implemented	2.1	Identify corrective actions that can be taken on process improvements that have not met objectives
		2.2	Liaise with relevant people associated with the anticipated corrective action
		2.3	Obtain any required approvals
		2.4	Ensure the supply of resources
		2.5	Check impacts of corrective action on occupational health and safety (OHS), quality and environmental systems in work area and take action in accordance with procedures, if required

© Commonwealth of Australia, 2024 Public Skills Australia

		2.6	Check that self and others in team or work area have required skills for corrective actions
		2.7	Monitor implementation of corrective action
		2.8	Make required adjustments
3	Verify systems support improvement	3.1	Ensure procedures reflect improvements
		3.2	Check that training and assessment activities in team or work area reflect improvements
		3.3	Liaise with relevant people to ensure their support of the new or modified system/s
4	Audit the change	4.1	Determine an appropriate audit period/cycle
		4.2	Agree relevant measures/indicators for the improvement
		4.3	Measure performance at agreed times using agreed measures
		4.4	Investigate causes of under-performance
		4.5	Take appropriate corrective action to improve performance
		4.6	Re-audit the improvement on an agreed basis

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others to clarify scope and stage of implementation of competitive systems and practices and contribute suggestions for further improvements in implementation
- examining normal operational procedures in terms of flow and contribution to customer benefit
- planning own tasks, including the impact on others to support competitive systems and

© Commonwealth of Australia, 2024 Public Skills Australia

practices implementation
- implementing competitive systems and practices in own work area according to instructions
- identifying waste (muda)
- monitoring competitive systems and practices performance indicators for own work and work area

Required knowledge

Required knowledge includes:

- overall procedures for and process of operations relative to improvements being made
- appropriate measures of performance
- business performance goals sufficient to determine best measures of improved performance

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify process and operational changes as a result of implementation of competitive systems and practices • identify and assess impact of performance improvements in a work area against objectives • identify actions and resources required for further improvements • communicate and negotiate with others on improvements • apply procedures for seeking approvals and reporting non-conformances • determine appropriate period and procedures for monitoring implemented changes.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned,

© Commonwealth of Australia, 2024 Public Skills Australia

	currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using some combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of

© Commonwealth of Australia, 2024 Public Skills Australia

the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Improvement	Improvement may be any change aimed at reducing waste (muda). This unit is not about making the improvements, but ensuring beneficial changes remain in place
Customers	Customers may include: • internal or external customers, including final

© Commonwealth of Australia, 2024 Public Skills Australia

	customers, as these should be used as the basis for the identification of value and waste The individual does not need to interface directly with the external customer, but should be able to sufficiently identify customer benefit and customer features in processes and operations of their team and their work area
Suppliers	Suppliers may be: • internal or external suppliers and should be sufficiently close to the individual's work as to be easily identifiable The operator does not need to interface directly with external suppliers, but should be provided with sufficient information to enable them to identify supplier contribution to their own work and to customer benefit
Systems	Systems are used to mean any/all of the equipment, processes, procedures and work practices that are used to produce the product. A term often used in this context includes: • kaizen - the philosophy of continual improvement that every process can and should be continually evaluated and improved in terms of time required, resources used, resultant quality and other aspects relevant to the process
Resources	Resources for corrective actions may include: • equipment • modifications • consumables • people • suitable work area
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the organisation • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) and government regulations

© Commonwealth of Australia, 2024 Public Skills Australia

	Procedures may be: • written, verbal, computer-based or in some other format
Improvements	Improvements include: • techniques for preventing mistakes by designing the operations process, equipment and tools so that an operation literally cannot be performed incorrectly (e.g. baka-yoke) • techniques that generate warning signals were a mistake is about to be performed (poka-yoke) Improvements may be sustained by: • use of technology so that it is impossible to do the job any other way • changes to process or procedures or other changes to the operations system which, if followed, will sustain the change and this unit may be applied to all these situations
Measuring performance	Measuring improvements may include: • personally taking measurements • arranging for measurements to be taken/made by appropriate personnel

MSS403005A Facilitate use of a Balanced Scorecard for performance improvement

Modification History

New unit, superseding MSACMS405A Lead a manufacturing team using a balanced score card approach - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to encourage and facilitate others in using a Balanced Scorecard approach to assist in performance improvement.

Application of the Unit

This unit applies in organisations using a Balanced Scorecard approach to performance improvement. In these organisations the unit applies to individuals in a team or workgroup who facilitate the use of the Balanced Scorecard through leading, assisting and/or motivating others in using the Balance Scorecard approach.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative, enterprise, and planning and organising in order to provide leadership in the interpretation, review and strategic response to Balanced Scorecard results. This unit has a strong emphasis on identifying and reviewing required performance measures and requires an ability to use new information to improve performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the Performance criteria describe the performance needed to

essential outcomes of a unit of competency.	demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Interpret Balanced Scorecard results	1.1	Identify patterns of performance shown on strategy map
		1.2	Identify actions indicated by Balanced Scorecard results
		1.3	Discuss results with fellow employees and other relevant stakeholders
		1.4	Facilitate the selection of required actions with employees and other stakeholders
		1.5	Facilitate he development of implementation plans for team or individuals
		1.6	Facilitate the implementation of required actions from developed plans
		1.7	Follow up on implementation to ensure it occurs as planned
2	Review key performance indicators (KPIs) in the Balanced Scorecard for the organisation and work area	2.1	Relate area and other KPIs to strategy map/strategic objective
		2.2	Review the actions required by self and others to meet each KPI
		2.3	Compare current actions to the optimal actions to achieve strategy
		2.4	Discuss with employees and other stakeholders any modifications to KPIs which will better meet strategy
		2.5	Recommend amendments to KPIs to relevant personnel
3	Review reporting systems for	3.1	Review reporting systems to ensure information needed by self, other employees in area and organisation is

© Commonwealth of Australia, 2024 Public Skills Australia

	Balanced Scorecard information		available
		3.2	Review the mix of operational and strategic information to ensure it is appropriate for work area
		3.3	Review information provided for relevance and currency, and that it is meaningful and not excessive
		3.4	Recommend improvements to reports and reporting system, as appropriate
4	Lead improvement to work area total performance	4.1	Compare actual performance of teams, work areas or individuals with desired total performance using KPIs and other Balanced Scorecard information
		4.2	Discuss with team ways of improving total performance
		4.3	Lead processes for improvement in total performance

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying KPIs and their application to own work and the work of other employees
- analysing Balanced Scorecard results and determining implications for a work area
- solving problems associated with use or interpretation of Balanced Scorecard
- planning strategies for use of Balanced Scorecard, including:
  - required communication with others
  - negotiations if any required with internal and external suppliers, customers and delegates
  - analysis of any skill gaps in self and others
  - required training
  - data collection
  - work organisation and procedure changes
  - risk identification and contingency measures
- communicating effectively in informal and formal meetings, and with personnel at all levels
- providing effective feedback

© Commonwealth of Australia, 2024 Public Skills Australia

Required knowledge

Required knowledge includes:

- components of the Balanced Scorecard, including perspectives, feedback loops, targets and metrics, and reporting systems
- responsibilities of self and others in a Balanced Scorecard strategy
- health, safety and environment (HSE) principles and requirements for area of responsibility
- change implementation contacts and procedures relevant to work area
- employee assistance mechanisms in the organisation

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • interpret Balanced Scorecard results • review KPIs in the Balanced Scorecard • review related reporting systems • lead improvement to team performance.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case study and scenarios to assess responses to contingencies
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a

© Commonwealth of Australia, 2024 Public Skills Australia

	combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems

© Commonwealth of Australia, 2024 Public Skills Australia

	• statistical process control systems ,including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Team	Team includes: • all individuals in the target work area who are involved in the implementation and use of the Balanced Scorecard The team may or may not be a formally designated team working to a team leader
Balanced Scorecard	The Balanced Scorecard refers to: • an approach to competitive systems and practices that sets out an organisations vision and strategy by establishing and measuring enterprise activity in a number of different perspectives in addition to the normal financial perspective Perspective areas include: • customer • environmental • internal business process • learning and growth

© Commonwealth of Australia, 2024 Public Skills Australia

	For each perspective area the Balanced Scorecard emphasises establishing and measuring performance (metrics)
KPIs	KPIs may include: • financial and non-financial performance measures against targets within the Balanced Scorecard • other performance indicators not contained with the Balanced Scorecard for the team but relevant for informing the teams activities (e.g. performance indicators for other areas or sections, suppliers or customers)
Actions indicated	Actions indicated may include: • corrective action for poor results • confirming action for acceptable results • taking steps to ensure actions for good results are consistently maintained • changes to performance indicators or performance measurement

MSS403010A Facilitate change in an organisation implementing competitive systems and practices

Modification History

New unit superseding MSACMC410A Lead change in a manufacturing environment - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by individuals responsible for facilitating change processes in an organisation implementing competitive operational practices.

Application of the Unit

This unit applies to people who facilitate the change process resulting from implementing one or more competitive systems or practices. This implementation may also be associated with other changes, such as the introduction of new products, processes or equipment. The unit will usually apply to people whose responsibility is at the team, area or section level rather than the whole organisation. The responsibility may be formally designated or be informal, as in mentoring and assisting fellow employees.

This unit assumes that consultation and agreement on the implementation of the competitive systems and practices and other associated changes has already occurred and the nature and extent of the change has been agreed.

This unit does not cover the negotiation of change in a formal industrial relations sense but does cover the skills needed to identify real or potential change implementation issues, including those that may need to be referred to formal consultation and/or dispute settlement procedures.

This unit has a strong emphasis on planning, encouraging and facilitating in a changing environment within the organisation, including using appropriate communication, teamwork, problem solving, initiative and self-management.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Define nature and impact of change for designated area and processes	1.1	Identify the organisation’s aims and objectives for the competitive systems and practices techniques related to the change process
		1.2	Identify opportunities for implementation of change within work area
		1.3	Determine impacts of change for work area, including potential benefits and impacts on own work and work of fellow employees
2	Identify key performance indicators (KPIs)	2.1	Liaise, where required, with managers, engineers and other staff responsible for designing and/or implementing change
		2.2	Identify KPIs for own work responsibility and that of the work area
		2.3	Communicate KPIs to fellow employees
		2.4	Check that data collection and processing are appropriate for KPIs
		2.5	Raise and resolve issues related to KPIs with relevant personnel

© Commonwealth of Australia, 2024 Public Skills Australia

3	Liaise with key stakeholders	3.1	Identify key stakeholders impacted by the change
		3.2	Communicate with key stakeholders within scope of authority
		3.3	Identify and address issues and concerns of each stakeholder if within scope of authority
		3.4	Develop and/or locate information required to address key concerns
		3.5	Refer issues and concerns outside of scope of authority to appropriate personnel
4	Develop a strategy to help implement change	4.1	Identify or develop a work plan for implementing change
		4.2	Make information required to support change available to team members
		4.3	Communicate/circulate draft work plan to other employees in work area, supervisors, technical experts and other appropriate personnel for comment
		4.4	Assess suggested changes and incorporate into work plan, where appropriate
5	Implement change	5.1	Obtain authorisation to commence change implementation in accordance with organisation procedures
		5.2	Implement change in accordance with work plan and organisational occupational health and safety (OHS) and consultation procedures
6	Monitor implementation of change	6.1	Maintain open communication channels with all stakeholders during implementation
		6.2	Monitor KPIs during implementation
		6.3	Encourage and facilitate improvement suggestions of team members
		6.4	Identify areas requiring improvement in change

© Commonwealth of Australia, 2024 Public Skills Australia

implementation

6.5 Make improvements to implementation according to organisation procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying the competitive operational practices being implemented in the organisation, including:
  - Just in Time (JIT) and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (e.g. kaizen)
  - waste (muda) elimination
  - formal problem solving procedures (e.g. root cause analysis (RCA))
- identifying other products, processes or equipment changes being implemented within area of responsibility
- identifying the work and culture changes required for effective implementation of the competitive systems and practices being implemented and other products, processes or equipment changes
- identifying organisation KPIs and contextualise for area of responsibility to determine successful change implementation
- planning strategies for change implementation, including:
  - required communication with others
  - negotiations if any required with internal and external suppliers, customers and delegates
  - analysis of any skill gaps in self and others
  - required training
  - data collection
  - work organisation and procedure changes
  - risk identification and contingency measures
- monitoring performance against KPIs and taking appropriate corrective action in the event of a non-conformance
- identifying and communicating with sources of assistance if difficulty is experienced with changes

© Commonwealth of Australia, 2024 Public Skills Australia

Required knowledge

Required knowledge includes:

- features of common competitive operational practices, including:
  - JIT and kanban systems
  - preventative maintenance
  - 5S housekeeping
  - continuous improvement processes (e.g. kaizen)
  - waste (muda) elimination
  - formal problem solving procedures (e.g. RCA)
- health, safety and environment (HSE) principles and requirements for area of responsibility
- change implementation contacts and procedures relevant to work area
- employee assistance mechanisms in the organisation
- processes to develop work plans, including consideration of timetable, KPIs, training needs, OHS implications, contingency plans and responsibilities (the work plan must be capable of being coherently communicated to others)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the competitive systems and practices used in their own work • identify changes to their own work flowing from the implementation of the relevant competitive systems and practices • implement changes • know when and how to seek assistance with work changes • make suggestions for improvements.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned,

© Commonwealth of Australia, 2024 Public Skills Australia

	currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using some combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of

© Commonwealth of Australia, 2024 Public Skills Australia

the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Team	Team may include: • work teams from all sections of an organisation, including production or other operational areas, maintenance, technical, administration/finance, and sales/marketing
Change	The philosophy of continual improvement is that every

© Commonwealth of Australia, 2024 Public Skills Australia

	process can and should be continually evaluated and improved in terms of time required, resources used, resultant quality, and other aspects relevant to the process. Superimposed on this is the concept of breakthrough change when a large change/improvement is made which can shift the direction or operation of the organisation. Once such breakthrough change is the introduction of competitive operational practices.
Work plan for change	The work plan for change covers the designated work area and may include, depending on the organisation and work area processes: • timetable • KPIs • training needs • OHS implications • contingency plans • responsibilities with team members and senior managers, engineers and other staff responsible for designing and/or implementing change
Issues and concerns	Issues and concerns may be communicated formally and informally and may include: • individual and group concerns • those expressed by and through industrial processes
Gathering and monitoring performance data	Performance data may be gathered and monitored: • manually by individual employees through charts, tally sheets or keypad/board entry • automatically through software, such as SCADA software, ERP systems, MRP and proprietary systems

MSS403021A Facilitate a Just in Time system

Modification History

New unit, superseding MSACMT421A Facilitate a Just in Time (JIT) system - Equivalent

Unit Descriptor

This unit of competency covers skills and knowledge required to facilitate the implementation/operation of a Just in Time (JIT)/kanban system in a team or work area.

Application of the Unit

This unit applies to a person who needs to monitor the operation of a JIT system and facilitate its working in a team or work area. This will involve liaison with stakeholders as well as examining the data generated. They will need to be alert to potential problems and areas for improvement.

This unit requires the application of skills associated with gathering, analysing and communicating information to facilitate implementation of the JIT system. It requires planning and organising skills and has a strong emphasis on communication and teamwork skills to ensure the JIT system is being effectively implemented. This unit also requires the ability to problem solve and take the initiative to consider performance issues and learn from experience to improve future performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills

© Commonwealth of Australia, 2024 Public Skills Australia

unit of competency.	and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Monitor the operation of the JIT system	1.1	Track value of key measures
		1.2	Recognise indicators of poor performance
		1.3	Take appropriate quick fix action
2	Liaise with relevant stakeholders	2.1	Regularly communicate with team or work group members regarding the operation of the JIT system
		2.2	Review JIT key performance indicators (KPIs) with team or work group members
		2.3	Communicate with relevant personnel up and down the value stream regarding the operation of the JIT system
		2.4	Identify issues with stakeholders and take appropriate quick fix action
3	Improve the JIT system	3.1	Identify areas requiring improvement in the JIT system
		3.2	Identify root cause of JIT-related problems
		3.3	Review value of key measures
		3.4	Recognise skill gaps in team members and other stakeholders
		3.5	Determine any other issues in team or work group, other stakeholders and JIT system leading to poor performance indicators
		3.6	Develop appropriate improvement solutions
		3.7	Liaise with relevant people regarding improvement solutions

© Commonwealth of Australia, 2024 Public Skills Australia

3.8 Implement and/or assist with the implementation of the solutions

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying KPIs for JIT system in team or area of responsibility
- analysing the JIT/kanban implementation in the team or area and the relevant sections of the internal and external value stream, including identifying people-related needs and issues
- identifying and implementing quick fix to JIT problems
- using formal problem solving procedures (e.g. root cause analysis (RCA))
- developing formal and informal communication procedures with others in work area, team leaders, other employees and value stream members relevant to JIT implementation
- establishing sources of assistance in the organisation for people experiencing difficulty with competitive systems and practices changes
- interpreting procedures and instructions relevant to own expertise for others
- establishing KPIs for own work

Required knowledge

Required knowledge includes:

- JIT principles relevant to operations and processes in own area or team and in the organisation generally
- procedures for making/recommending improvements
- typical reasons for delays/storages/inventories in the team or area of responsibility and methods of reducing/eliminating them
- skill gap analysis and methods of filling skill gaps
- principles of the operations process relevant to the section/team
- production data generated by the process and its application to JIT

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

© Commonwealth of Australia, 2024 Public Skills Australia

Overview of assessment	Evidence should be available of the person's facilitation of the operation of the JIT system and their making of recommendations for/making improvements.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the JIT system and practices used in their team or area of responsibility • identify and monitor JIT key measures • solve JIT-related problems to root cause • implement and monitor JIT-related changes to operations and practices.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge.

© Commonwealth of Australia, 2024 Public Skills Australia

	Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving

© Commonwealth of Australia, 2024 Public Skills Australia

	• run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
JIT	JIT refers to: • a production scheduling concept that calls for any item needed at a production operation (whether raw material, finished item, or anything in between) to be produced and available precisely when needed, neither a moment earlier nor a moment later
Kanban	Kanban is a card or sheet used to authorise production or movement of an item; when fully implemented, kanban operates according to the following rules: • all production and movement of parts and material take place only as required by a downstream operation (i.e. all operations and procurement are ultimately driven by the requirements of final assembly or the equivalent) • the specific tool which authorises production or movement is called a kanban. The word literally means card or sign, but it can legitimately refer to a container or other authorising device. Kanban have various formats and content as appropriate for their usage (e.g. a kanban for a vendor is different than a kanban for an internal machining operation) Kanban is typically applied to batch type operation and the production is measured in units produced. In continuous processing organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket, order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar
SCADA	SCADA refers to: • a number of systems which automatically collect critical process data, perform required mathematical

© Commonwealth of Australia, 2024 Public Skills Australia

	manipulations on it and then make control decisions and/or give required information to personnel for action
Key measures	Key measures may include: • inventory levels • lead time • In Full, On Time and In Specification (IFOTIS) delivery • productivity/production rate • other measures of pull through the value stream • quality
Quick fix	Quick fix refers to: • action taken to immediately and cheaply control a problem, prevent it getting worse and/or ameliorate its impact, but which does not necessarily solve it long term
Pull system	Pull refers to: • a system of making to demand rather than for stock or to a forecast
Value stream	The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement, stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS403030A Improve cost factors in work practices

Modification History

New unit, superseding MSACMT430A Improve cost factors in work practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to evaluate the product or process outcomes of a team in terms of their cost components and to be able to determine, in general terms, the cost impacts of alternative actions.

Application of the Unit

This unit applies to a person who is required to assess the relative costs of alternatives and use this as one of the key factors in decision making. Typical decisions include the efficient organisation of own work and that of others in a work area or within a team and the improvement of throughput and cycle times.

Decisions are made within the scope of the authority of the individual and other employees in the area or team and according to procedures.

This unit primarily requires the application of skills associated with communication and information gathering, teamwork and problem solving to analyse the cost components of work processes. Initiative and enterprise, and planning and organising are also required to identify opportunities for improved cost-efficiency. This unit also requires a degree of self-management and learning to effectively operate and maintain skills and performance.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse cost components of work area or team function	1.1	Identify cost components in the product or process
		1.2	Identify costs factors under control of area or employees in the team
		1.3	Identify causes of variability in costs
		1.4	Analyse impact of costs on production or process activities undertaken
2	Improve cost-efficiency of processes and procedures	2.1	Identify methods of improving productivity and/or reducing costs within area or team’s responsibility
		2.2	Determine cost/benefit ratio of alternative methods of improving productivity and/or reducing costs
		2.3	Consult with all relevant stakeholders regarding possible changes
		2.4	Recommend changes which will increase productivity and reduce cost and variability
		2.5	Implement recommended changes in consultation with relevant stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2024 Public Skills Australia

Required skills

Required skills include:

- identifying fixed and variable costs in products or processes
- analysing costs and determining those that can be controlled by the individuals in an area or team
- analysing costs over time and identifying variability in cost components
- determining cost/benefit ratios
- communicating and negotiating with others on changes using a variety of mediums

Required knowledge

Required knowledge includes:

- cost components of products made
- costs concepts, such as expense, income and cost/benefit
- major cost contributors to product (e.g. energy, materials, labour and distribution, and so on) depending on the product and process)
- the difference between internally and externally controlled costs
- difference between overhead, labour and consumables

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the scope of their own work and the team or area work and relate it to the overall flow of work in the organisation • express cost factors in specific terms (e.g. cost per item, process and task) • identify and express cost factors in basic financial terms • analyse variability in costs and recommend improvements • use cost/benefit to select preferred improvement strategies.
Context of and specific resources	Assessment of performance must be undertaken in a

© Commonwealth of Australia, 2024 Public Skills Australia

for assessment	workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace project(• suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

© Commonwealth of Australia, 2024 Public Skills Australia

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices, • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Cost components	Cost components may include:

© Commonwealth of Australia, 2024 Public Skills Australia

	• fixed and variable costs, such as power/energy, materials, plant and equipment, salary and wages, and office expenses (e.g. telephone) • government taxes and charges
Variability in costs	Variability in costs should be assessed over a suitable time. The time should be sufficient to identify: • fluctuations in variable costs related to different volumes of sales, production or operations • abnormal cost fluctuations due to poor design of product or process, poor scheduling, faults, breakdowns and other waste
Process	Process includes all functions that go to meet customer requirements as well as other required functions (e.g. regulatory related functions). Examples include: • design • production • maintenance • logistics • office processes
Procedures	Procedures may include: • work instructions • standard operating procedures • drawings and specifications • manuals • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the organisation • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer based or in some other format
Benefits	Benefits should include: • positive benefits as well as negative benefits, such as quality, safety, reliability and similar issues which may be impacted by a cost saving

MSS403032A Analyse manual handling processes

Modification History

New unit, superseding MSACMT432A Analyse manual handling processes - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to analyse manual handling in terms of its efficiency and safety.

Application of the Unit

This unit applies to an individual who is required to examine the manual handling component of a job and improve it in terms of safety, effort required and efficiency. This may be conducted for a job performed by others or it may be for the person's own job.

This unit primarily requires the application of skills associated with problem solving, initiative and enterprise to identify safe and efficient manual handling, and planning and organising to ensure processes are implemented. This unit also requires communication with, and involvement of, others to ensure they understand the approach and to facilitate training.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria

1	Assess manual handling risks	1.1	Identify manual handling hazards in work area
		1.2	Assess risks arising from manual handling hazards
2	Analyse physical effort requirements of job	2.1	Determine basic manual handling requirements of job
		2.2	Analyse requirements in terms of components, such as lift, move, place and hold
		2.3	Analyse items to be handled in terms such as weight, size, shape or other hazards
3	Determine time/effort components of physical effort	3.1	Break required movement pattern down into movement components
		3.2	Determine time and effort requirements for movements
		3.3	Develop alternative movement patterns
		3.4	Determine time and effort requirements for alternative movements
		3.5	Determine handling aids required to assist movement
		3.6	Determine preferred movement pattern
4	Analyse the ergonomics of physical effort	4.1	Analyse the ergonomics of the preferred movement pattern
		4.2	Develop substitute movements for any movement which is not ergonomically sound
		4.3	Determine handling aids required to improve ergonomics of required movements
5	Optimise	5.1	Select movement patterns which are ergonomically

© Commonwealth of Australia, 2024 Public Skills Australia

application of physical effort		sound and time and effort efficient
	5.2	Ensure all relevant people are trained to use these methods
	5.3	Ensure procedures and practices reflect the optimum methods
	5.4	Communicate with team members and involve them in development of alternatives to ensure awareness and facilitate learning

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others about work processes and jobs
- identifying ergonomically sound and unsound movements both at a general level and related to individual capability
- analysing manual handling processes
- working cooperatively with others
- demonstrating or arranging to have demonstrated ergonomically correct movements
- applying basic mathematics
- solving problems

Required knowledge

Required knowledge includes:

- relevant occupational health and safety (OHS) Acts and regulations as applied to manual handling
- principles of job and work method design as applied to efficient and safe movement
- principles of work analysis
- principles of ergonomics/safe movement
- aids than can assist with or substitute for manual handling

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • analyse manual handling requirements and risks in jobs • distinguish between ergonomically sound and unsound movement • analyse manual handling movements and risks for an individual • relate manual handling requirements to job efficiency.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using some combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence.

© Commonwealth of Australia, 2024 Public Skills Australia

	In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE)

© Commonwealth of Australia, 2024 Public Skills Australia

	• takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and Responsible Care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format
Manual handling hazards	Manual handling hazards may include: • loads that pose a risk of injury • ergonomically unsound movements • hazard requirements as defined by relevant OHS Acts and regulations, industry standards and best practice
Ergonomically unsound movements	Ergonomically unsound movements may include: • awkward and repetitive movements • carrying, pushing, pulling or lifting of heavy loads • carrying or movement against hard, sharp, slippery or other difficult to grasp loads Ergonomically unsound movements should be assessed against the capabilities of individual workers as what is a sound movement for one worker may be unsound for

© Commonwealth of Australia, 2024 Public Skills Australia

	others depending on physique and individual condition
Ergonomically sound movements	Ergonomically sound movements are movements which decrease the risk of injury. Sound movements will vary according to the load and individual. Examples include: • keeping loads close to the body and near the person's centre of gravity • using diagonal foot positions for lifting • moving loads at waist height rather than directly from the floor

MSS403040A Facilitate and improve implementation of 5S

Modification History

New unit, superseding MSACMT440A Lead 5S in a manufacturing environment - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to facilitate the implementation and improvement of the 5S by self and others in a team or work area.

Application of the Unit

This unit applies to individuals who facilitate 5S in a team or work area, including implementation, monitoring and improvement. The facilitation may be undertaken by formally designated supervisory staff, such as team leaders or other individuals in a competitive systems and practices implementation role, who need to provide support and encouragement to others to facilitate the achievement of 5S outcomes in the workplace.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management in order to provide leadership in a 5S environment. This unit has a strong emphasis on planning and change management, but also requires an ability to learn from experience and feed new information back into strategies to improve performance.

For planning, implementing and leading the application of 5S in an office environment see unit *MSS403039A Facilitate and improve 5S in an office*.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Facilitate the set-up of 5S	1.1	Assist others to determine what are necessary and unnecessary items in the work area
		1.2	Assist others to determine optimum assigned location for all necessary items
		1.3	Liaise with relevant production and occupational health and safety (OHS) personnel in determining optimum locations
		1.4	Assist others to determine optimum location for unnecessary items
		1.5	Assist others to determine 5S schedule
		1.6	Ensure procedures reflect 5S practices
		1.7	Assist others to achieve the required level of skill
2	Facilitate the implementation of 5S	2.1	Ensure procedures reflect 5S practices
		2.2	Assess skill base of team or work group members in 5S and arrange for any required training
		2.3	Ensure that any damage and/or safety risks reported by the team or work group are addressed through correct mechanisms
3	Monitor 5S	3.1	Check work area for 5S implementation as part of normal routine

© Commonwealth of Australia, 2024 Public Skills Australia

		3.2	Identify non-conformances
		3.3	Negotiate solutions to non-conformances
4	Improve 5S	4.1	Work with others to find areas for improvement
		4.2	Assist others to develop improvement solutions
		4.3	Facilitate the availability of resources required for the improvement solution
		4.4	Facilitate the implementation of the improvement solution

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with other employees and managers to engender commitment to achieving 5S outcomes, conduct formal and informal meetings and to explain 5S and related concepts
- facilitating team or work area goals, activities and communications and accessing resources
- visualising normal operational procedures in terms of flow and contribution to customer outcomes
- planning and prioritising activities
- problem solving to determine potential improvements to the 5S system
- reading and interpreting the application of operating procedures for jobs within team or target work area
- analysing work practices, procedures and 5S principles to facilitate setting up the 5S system and to identify improvements
- identifying gaps in skills and/or knowledge and options to address them

Required knowledge

© Commonwealth of Australia, 2024 Public Skills Australia

Required knowledge includes:

- principles and purpose of 5S
- methods of identifying waste in the work area, such as:
  - waste walk
  - document tagging
  - tracking/log sheets
  - spaghetti diagrams
  - existing information technology and enterprise resource systems (e.g. Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems
- organisational policies, plans and procedures
- processes for identifying and addressing skill gaps
- ways of encouraging team members to find and suggest areas for improvement
- methods of identifying and evaluating options and making/recommending improvements
- methods of accessing required resources
- OHS requirements relevant to team and work area

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify the scope of the services and/or functions supplied to and by the team or work area and the deliverables expected by customers, including the ultimate customer • facilitate a systematic approach to implementing 5S • lead and motivate others in achieving 5S outcomes and making improvements to the 5S systems • set up systems for monitoring and improving 5S implementation • manage non-conformances in implementation of 5S.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to:

© Commonwealth of Australia, 2024 Public Skills Australia

	• workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with

© Commonwealth of Australia, 2024 Public Skills Australia

training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, ERP systems MRP and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant

© Commonwealth of Australia, 2024 Public Skills Australia

	• good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and Responsible Care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format
5S	5S is a system of work organisation originally developed in Japan based around a close translation of the five stages in the housekeeping approach is: • sort • set in order • shine • standardise • sustain
Sort	Sort involves keeping only what is absolutely necessary for the work processes that comprise the job and includes: • clearing the work area of all non-essential items Non-essential items are items not required to either produce product, conduct process or operations or make required adjustments to equipment during process or operations
Set in order	Set in order includes: • assigning required equipment and materials appropriate locations in the work area
Shine	Shine includes: • keeping the work area clean at all times. This should be carried out to a regular daily schedule against allowed time, usually at the end of the day or of a particular process Cleaning includes: • noting any signs of wear, damage, leakage, safety risks or other issues that require immediate attention
Standardise	Standardising includes: • activities that help maintain the order and the housekeeping standards • using procedures and checklists developed from a procedure

© Commonwealth of Australia, 2024 Public Skills Australia

Sustain	Sustain includes: • making sure that daily activities are completed every day regardless of circumstance • undertaking inspections, including: • informal inspections that should be carried often, at least weekly • generating continuous improvement actions from daily activities • formal inspections that should be carried out at least monthly
Items in work area	Items in work area may include: • tools • jigs/fixtures • materials/components • plant and equipment • manuals • personal items (e.g. bags, lunch boxes and posters) • safety equipment and personal protective equipment • other items which happen to be in the work area
Team	The term team is used to apply to all individuals in the target work area who are involved in the implementation of 5S. The team may or may not be a formally designated team working to a team leader
Work area	The work area includes: • all areas where aspects of the job are performed and that are under the direct control of the employee. In a team environment 5S should be applied to all work areas under the control of the team
Target work area	The target work area may be identified as a physical and/or virtual work space: • used by a person, a team or a cross-functional group • common to part/s of a process or value stream (already defined) • shared by people who undertake a defined procedure or set of procedures • needed to support a particular function
Appropriate place	Appropriate places may include areas designated for: • recycling • rubbish removal

© Commonwealth of Australia, 2024 Public Skills Australia

	• staff room/lunch room/kitchen • storage • holding area until status is confirmed
Optimum assigned location	The optimum assigned location may include: • making changes to the layout of furniture, equipment and personnel in order to facilitate the smooth and continuous flow of work through process steps taking into account OHS considerations
Non-conformance	Non-conformance includes: • incorrect or incomplete application of 5S procedures, including any daily tasks, scheduled inspections and continuous improvement procedures

MSS403051A Mistake proof an operational process

Modification History

New unit, superseding MSACMT451A Mistake proof a production process - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to make changes to own and others work in a work area which prevents errors and/or backsliding to a pre-improvement level of practice.

Application of the Unit

This unit applies to a person who needs to analyse a process that a team is responsible for and determine methods of mistake proofing it (e.g. ensuring it only produces product within an acceptable range or error-free transport and storage of goods). The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to mistake proof the production process in their area. After improvement activities have been undertaken these improvements need to be sustained.

This unit requires the application of skills associated information gathering and analysis. Initiative, enterprise and problem solving are also required to identify mistakes and determine strategies for eliminating them. This unit also requires communication and teamwork skills to ensure mistake proofing strategies are implemented and self-management and learning skills to continually reflect on and integrate feedback about the effectiveness of strategies.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse process	1.1	Identify sources of variability/non-conformance in the process
		1.2	Identify critical control points in process
		1.3	Analyse causes of variability/non-conformance
2	Develop preventative techniques/systems	2.1	Liaise with team members and other people to develop mistake proof options for performing operation
		2.2	Test and validate mistake proofing options
3	Implement permanent fix	3.1	Liaise with relevant people to have systems/procedures changed to implement solution
		3.2	Liaise with relevant people to implement the solution
		3.3	Liaise with relevant people to ensure self and others in the team or work area have an appropriate skills set
		3.4	Follow through to ensure implementation occurs
4	Monitor implementation	4.1	Critically observe the implementation
		4.2	Compare the results of the implementation against the expected outcomes
		4.3	Modify solution to improve outcomes

© Commonwealth of Australia, 2024 Public Skills Australia

		4.4	Ensure procedures reflect change
		4.5	Ensure training/assessment reflects change
		4.6	Audit change at agreed period/cycle
		4.7	Take action on any observed deviation
5	Seek improvements	5.1	Observe changes
		5.2	Analyse process again, if required, to ensure improvements are sustained

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with team or work group members, technical support personnel and other relevant staff
- explaining mistake proofing and related concepts
- facilitating input of others and encouraging acceptance of changes
- analysing and visualising operations in terms of flow and contribution to customer outcomes
- solving problems to determine root cause of errors and possible solutions
- analysing and interpreting information about errors and mistake proofing options in terms of cost, feasibility, regulations and value to the customer
- suggesting design changes to operations and products that eliminate the potential for errors
- suggesting mechanisms or procedures that warn of errors where operations cannot be designed to eliminate errors,

Required knowledge

Required knowledge includes:

- mistake proofing concepts, including, in priority order:
  - eliminate the possibility of the error via changes to the process
  - prevent the error from occurring via physical or virtual barriers
  - reduce likelihood of the error by encouraging correct action

© Commonwealth of Australia, 2024 Public Skills Australia

  - mitigate the impact of the error if it does occur
- understanding of processes undertaken by team
- factors in the processes which may cause variability
- methods of controlling the variability in the process
- mistake proofing methods relevant to the process/product

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • analyse variability and non-conformances • identify, analyse and evaluate information from a variety of sources to identify errors and options for mistake proofing • facilitate implementation of mistake proofing activities that reduce waste • facilitate sustaining the mistake proofing activities.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace

© Commonwealth of Australia, 2024 Public Skills Australia

	• workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related

© Commonwealth of Australia, 2024 Public Skills Australia

	operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Mistake proofing	Mistake proofing is based on the concept of zero defects. The first priority is to eliminate the possibility of an error occurring. However, where this is not feasible mistake proofing can be used to reduce the occurrence of errors and/or to minimise their impact. Mistake proofing should target an error in the following priority order: • eliminate the possibility of the error via changes to the process • prevent the error from occurring via physical or virtual barriers, • reduce likelihood of the error by encouraging correct action (e.g. through warning systems) • mitigate the impact of the error if it does occur Mistake proofing is also called error proofing or baka-yoke or poka-yoke
Options for mistake proofing	Factors to consider when prioritising options for mistake proofing will vary according to the process and may include: • success rate in eliminating errors

© Commonwealth of Australia, 2024 Public Skills Australia

	• feasibility • skills required by employees • cost • capacity to reduce waste
Procedures	Procedures may include: • all work instructions • standard operating procedures • formulas/recipes • batch sheet • temporary instructions and similar instructions provided for the operation of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format

MSS404050A Undertake process capability improvements

Modification History

New unit, superseding MSACMT450A Undertake process capability improvements* - Equivalent

* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

Unit Descriptor

This unit of competency covers the skills and knowledge required to make process capability improvements, including analysing data from the process, developing improvements to eliminate variation due to assignable causes, and then implementing actions.

Application of the Unit

This unit applies to a person who reviews a range of process capability data and information, makes/arranges for changes to be made to procedures, equipment or process and then recalculates the process capability and monitors resulting improvement actions. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to suggest and justify process capability improvements.

Process capability may have been determined using either a six sigma or three sigma processes. This unit applies to the application of statistical methods and the determination of capability based on those methods. Other related units may be *MSS404052A Apply statistics to operational processes* and *MSS404053A Use six sigma techniques*

This unit primarily requires the application of skills associated with communication, information gathering and analysis. Initiative, enterprise and problem solving are also required to identify opportunities to improve process capacity. This unit also requires aspects of self-management and learning to validate own analysis.

For a qualitative approach to improvement (one not using statistics) see *MSS403051A Mistake proof an operational process.*

MSS404052A Apply statistics to operational processes

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Obtain required data	1.1	Identify process for study
		1.2	Obtain/organise process to obtain required data/information
2	Analyse information	2.1	Analyse data and determine assignable causes
		2.2	Develop possible improvements to eliminate assignable causes
		2.3	Incorporate own experience and learning into proposed process improvement proposals
		2.4	Develop process improvement proposals
3	Improve process capability	3.1	Obtain required authorities to implement improvements
		3.2	Liaise with relevant people to implement improvements
		3.3	Obtain/organise required data for improved process

© Commonwealth of Australia, 2024 Public Skills Australia

3.4 Recalculate process capability

3.5 Implement revised data collection/processing and new capability information

3.6 Monitor improvement actions and make adjustments, as necessary

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- performing relevant mathematical operations
- identifying and using relevant statistical methods
- communicating and explaining data- related changes and procedures to individuals and groups
- negotiating with other employees and managers on proposed improvement actions
- analysing procedures and data to establish variation
- solving problems to root cause where assignable cause of variation is not obvious
- working in a team
- using computer software relevant to required analyses and process

Required knowledge

Required knowledge includes:

- data collection methods
- data processing techniques required
- variability and normal distribution
- three sigma or six sigma processes, as relevant
- random and non-random results (recognition of assignable causes)
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • analyse process information • calculate process capability/trial limits • improve process capability (or organise for it to be improved) • analyse revised process information and recalculate process capability.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence In all cases it is expected that practical assessment will

© Commonwealth of Australia, 2024 Public Skills Australia

	be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time

© Commonwealth of Australia, 2024 Public Skills Australia

	• process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Process capability	Process capability is: • the measurable ability of a process to reliably produce within calculated limits (the limits depend on the variation of the process)
Variation	All processes have variation. The approach in this unit is to separate random variation (no assignable cause) from non-random variation (which has an assignable cause). By finding and eliminating assignable causes, total variation is reduced and process capability will be improved
Six sigma	Six sigma refers to: • a statistical tool for recording defects and determining capability. Six sigma limits equate to 3.4 defects per million opportunities for each product or service transaction. Six sigma is also used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package
Three sigma	Three sigma refers to: • a traditional statistical process control. Three sigma limits equate to 3 defects per thousand opportunities for each product or service transaction
Required data	The calculation of three sigma or six sigma limits requires process data. The data required depends on the nature of the limits being calculated
Assignable cause	Any non-random variation is said to have an ‘assignable cause’. The methods of data analysis common to statistical capability analysis as well as other methods of

© Commonwealth of Australia, 2024 Public Skills Australia

	root cause analysis should be used to determine the cause of this non-random variation
Improved process capability	Improvements to process capability result from eliminating the causes of non-random variation. The improvements made may be: • as a result of continuous improvement with the process capability being recalculated periodically • as a result of an improvement project with the process capability recalculated as part of that project
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format

MSS404052A Apply statistics to operational processes

Modification History

New unit, superseding MSACMT452A Apply statistics to processes in manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to apply statistical theory and principles to the analysis and control of processes and operations.

Application of the Unit

This unit applies to a person working in an organisation applying statistical process control on processes or operations. The statistical process control will usually be used to monitor the processes or operations and determine when action needs to be taken. The appropriate action will then be taken in accordance with standard procedures.

The unit includes applying knowledge of frequency distribution and variation to the data/chart to distinguish between random and non-random variation and assumes understanding of the process and/or equipment to help interpret those results.

This unit primarily requires the application of skills associated with gathering and analysing data and communicating statistical information to others. This unit also has a strong emphasis on problem solving, initiative and enterprise, planning and organising, and self-management to solve problems and manage processes.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Collect process data	1.1	Interpret sampling scheme
		1.2	Obtain measurements in accordance with standard procedures
		1.3	Handle data, as required
2	Interpret data	2.1	Plot data on appropriate control chart
		2.2	Distinguish between random and non-random patterns of results
		2.3	Identify results outside the control limits
		2.4	Recognise situations requiring action
		2.5	Take appropriate action in accordance with standard procedures
		2.6	Determine cost of non-conformance
3	Calculate control limits	3.1	Consult relevant stakeholders to determine appropriate limits
		3.2	Use relevant methods to calculate/revise control limits
		3.3	Plot limits on control chart
		3.4	Explain impact of limit to relevant stakeholders

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- applying a range of sampling procedures
- analysing samples and data for variation, relevance, reliability and representativeness
- problem solving the causes of variation in a process
- communicating with other employees to obtain samples/data and to explain results and limits
- plotting or documenting results
- undertaking calculations, including:
  - basic arithmetic functions
  - mean, range, mean of means, standard deviation (using appropriate calculation aids)
- using statistics to support process and operations control

Required knowledge

Required knowledge includes:

- sampling techniques
- purpose of sampling and measurement
- random, systematic and stratified sampling
- purpose of replication of data for statistical control
- samples, populations, finite and infinite populations and the differences
- methods of calculating means, standard deviations and the like and their purpose in statistical control
- the meaning of broad/narrow frequency distributions/range/standard deviations and skewed distributions in process terms
- concept of limits, including:
  - 1 sigma warning limits
  - 2 sigma warning limits
  - 3 sigma control limits
  - 6 sigma limits
- types of control charts and their applications to different types of process/product and for different purposes
- process causes of variation and typical cause types of non-random variation
- non-process (e.g. measurement) causes of variation
- recognition of stable and unstable processes
- causes of stability/instability in the process

© Commonwealth of Australia, 2024 Public Skills Australia

- calculation of control limits/process capability and the applications of different control limits
- the standard distribution curve and confidence limits

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • follow sampling procedures • apply basic statistical processes • analyse data to identify variations and non-conformances • plot or document results.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning

© Commonwealth of Australia, 2024 Public Skills Australia

	• reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen)

© Commonwealth of Australia, 2024 Public Skills Australia

	• breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Sampling scheme	Sampling scheme may include: • sampling for attributes or sampling for variables • batch, continuous or custom made products • number of items/samples • size of sample • timing of sampling • location of sampling points • type of sample • number/type of measurements to be done on each sample • sampling equipment • measurement/testing equipment/methods
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/ recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other

© Commonwealth of Australia, 2024 Public Skills Australia

	format
Handle data	Handle data may include: • calculating means, ranges, mean of means and standard deviations (using appropriate calculation aids) • entering data into a software package • recording data either in writing or electronically • other required manipulations of the data
Control chart	Control charts may include: • run • tally • mean/range • attributes • other relevant charts
Random	Random variation is the term used in statistical control to refer to those variations for which no cause can be found
Non-random	Non-random (also called identifiable cause, assignable cause or special cause) are those variations for which a cause can be found and so the cause of the variation eliminated. Non-random variation may also be used to predict possible breaches of the control limits
Control limits	Control limits (also referred to as process capability) are those limits within which the process will operate if it is 'under control'
Cost of non-conformance	Cost of non-conformance includes: • reprocessing/rework • expediting • unplanned service • excess inventory • complaint handline • downtime • returns • scrap • labour costs • material costs • infrastructure costs/overhead • utility costs
Appropriate limits	Appropriate limits may include:

© Commonwealth of Australia, 2024 Public Skills Australia

	• 1 sigma warning limits • 2 sigma warning limits • 3 sigma control limits • 6 sigma limits

MSS404060A Facilitate the use of planning software systems in a work area or team

Modification History

New unit, superseding MSACMT460A Facilitate the use of planning software systems in manufacturing* - Not equivalent

* Prerequisite *MSACMT260A Use planning software systems in manufacturing* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to facilitate the use of planning software in an organisation in a person's work area or team. These systems are known by various generic names, such as Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII, MRP III etc.) or by proprietary names.

Application of the Unit

This unit applies to a person who will access the planning software system for their own work, but will also need to provide support and organise skill development programs for their team or work group members. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to facilitate the use of the planning software system.

The planning software system will be used routinely in the work of the team or work group.

This unit primarily requires the application of skills associated with using communication technology and supporting team use of planning software. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure that planning software is used efficiently. This requires aspects of learning and self-management to ensure own performance and that of the team.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify scope of planning software	1.1	Identify categories of information held by planning software
		1.2	Identify information categories relevant to team and area processes
		1.3	Identify range of information able to be provided to planning software by team or work group
		1.4	Identify range of information able to be provided to team or work group by planning software
2	Communicate using the planning software system	2.1	Send and receive information using planning software
		2.2	Send and receive messages using planning software
3	Make decisions using planning software	3.1	Interrogate the planning software system to find required current, historical or predicted information
		3.2	Take actions appropriate to the information in accordance with procedures
4	Monitor the use of	4.1	Routinely monitor planning software information

© Commonwealth of Australia, 2024 Public Skills Australia

	planning software	4.2	Review performance and use of planning software with team
5	Support others to use planning software	5.1	Regularly communicate with team or other work group members, both using planning software and face to face
		5.2	Identify improvements required
		5.3	Take appropriate actions to implement improvements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- entering and receiving information via planning software terminals
- communicating with team and organisation planning software support personnel
- engaging and motivating team in use of planning software
- identifying team or work group area information requirements
- identifying scope of information relevant to team and area available in planning software by categories
- planning and organising improvements in team's use of planning software

Required knowledge

Required knowledge includes:

- hierarchy of planning software system and operation
- information available from/through the planning software system
- query facilities and information analysis capabilities offered by planning software
- support/training/skill development mechanisms available for access by team members

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the

© Commonwealth of Australia, 2024 Public Skills Australia

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify team or work group area information requirements and relate to planning software categories • lead and motivate others in using planning software • ensure information sent to planning software is accurate and appropriate • obtain regular and one-off information from planning software • make decisions using planning software generated information.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence.

© Commonwealth of Australia, 2024 Public Skills Australia

	In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, ERP systems, MRP and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time

© Commonwealth of Australia, 2024 Public Skills Australia

	• process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Planning software	Planning software is a general term applied to a number of software systems which integrate a range of business information, such as: • sales/order taking • finance/accounting • logistics • maintenance • human resources • production It is frequently referred to by names such as ERP or MRP/MRPII. In some cases it can be integrated with engineering applications, such as SCADA systems. In such cases the unit MSS402061A Use SCADA systems in operations may also be required
Information and messages	Information and messages able to be sent and received via the planning software will vary between programs and organisations. This unit assumes that a range of discretion is available to the team leader over the information and messages that can be sent or received. Examples of information and message categories include: • orders • production/operations processes • scheduling (e.g. daily/weekly) • finance and accounting • human resources (e.g. rosters, reserves, training completed and scheduled) • quality requirements • customers • suppliers

© Commonwealth of Australia, 2024 Public Skills Australia

Value stream	The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS404061A Facilitate the use of SCADA systems in a team or work area

Modification History

New unit, superseding MSACMT461A Facilitate SCADA systems in a manufacturing team or work area* - Not equivalent

* Prerequisite *MSACMT261A Use SCADA systems in manufacturing* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required by a team leader or technical expert to personally use and facilitate the use of System Control and Data Acquisition (SCADA), or other similar systems, and support the team in their use of SCADA.

Application of the Unit

This unit applies to team leaders and others who are providing guidance and support to assist employees to use SCADA. The person will access the SCADA system for their own work, but will also need to provide support and organise skill development programs for their team members.

This competency is also relevant to maintenance personnel using a SCADA system to coordinate maintenance activities.

This unit primarily requires the application of skills associated with using communication technology and supporting team use of SCADA systems. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure that system is used efficiently. This requires aspects of learning and self-management to ensure own performance and that of the team.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify scope of SCADA system	1.1	Identify categories of information held in and control options of SCADA system relevant to team or area
		1.2	Identify range of information able to be provided to SCADA system by team
		1.3	Identify range of information able to be provided to team by SCADA system
		1.4	Identify team or area functions impacted by SCADA system
2	Communicate using SCADA system	2.1	Send and receive information using SCADA
		2.2	Send and receive messages using SCADA
3	Make decisions using SCADA	3.1	Interrogate the SCADA system to find required current, historical or predicted information
		3.2	Take actions appropriate to the information
4	Monitor the use of SCADA	4.1	Routinely monitor SCADA information
		4.2	Identify poor uses of SCADA system within team and system inadequacies
		4.3	Identify system improvements required

© Commonwealth of Australia, 2024 Public Skills Australia

		4.4	Take appropriate action to improve SCADA system and its use
5	Support team use of SCADA	5.1	Regularly communicate with team, both using SCADA-based communication and face to face
		5.2	Identify skill improvement needs
		5.3	Identify team members who require additional support
		5.4	Take appropriate action to provide support

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- entering and receiving information via SCADA terminals
- communicating with team and organisation SCADA support personnel
- engaging and motivating team in use of SCADA system
- identifying team or work area information requirements
- identifying scope of team or area processes controlled by SCADA system
- planning and organising improvements in team's use of SCADA

Required knowledge

Required knowledge includes:

- hierarchy of SCADA system and operation
- information available from and controls exercised by/through the SCADA system
- query, control and other facilities and information offered by SCADA
- support/training/skill development mechanisms available for access by team member

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify team or area information and operations requirements and relate to SCADA system • lead and motivate others in using SCADA system • obtain regular and one-off information from SCADA system • make decisions using SCADA generated information.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will

© Commonwealth of Australia, 2024 Public Skills Australia

	be combined with targeted questioning to assess the underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time

© Commonwealth of Australia, 2024 Public Skills Australia

	• process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
SCADA	SCADA is a general term applied to a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information personnel for action. SCADA systems are often used in manufacturing but can also be used in other industries. In the continuous sector, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as Distributed Control System (DCS) and these systems do merge in advanced systems. These organisations may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system)
Value stream	The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/ collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS404081A Undertake proactive maintenance analyses

Modification History

New unit,superseding MSACMT481A Undertake proactive maintenance analyses - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to undertake the most common forms of analyses associated with predictive/preventative/reliability centred maintenance strategies.

Application of the Unit

This unit applies to a technical expert (usually an engineer, technician or tradesperson) who is required to undertake analyses for the purpose of predictive/preventative/reliability centred maintenance as part of a competitive systems and practices strategy.

This unit primarily requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, and planning and organising in order to undertake maintenance analyses. This is normally done in the context of using computer technology, and requires aspects of learning and self-management to ensure team involvement and facilitation of learning.

Licensing/Regulatory Information

unit of competency.	text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Liaise with operator	1.1	Establish a relationship with the operator of equipment/plant
		1.2	Ensure the operator has the required skills and resources to keep the equipment/plant clean
		1.3	Ensure the operator is able to effectively monitor the operation of the equipment/plant
		1.4	Regularly communicate with operator about the overall equipment effectiveness (OEE) of their equipment/plant
		1.5	Involve operator, team leader and other key personnel in identification of skill needs and means of skill acquisition to fill any identified gaps
2	Analyse history	2.1	Analyse mean time between failures (MTBF) from maintenance records
		2.2	Analyse performance data of the equipment/plant
		2.3	Identify causes of changes to historic trends/status
		2.4	Determine methods of ensuring causes of improvements and resolution of deterioration are locked in
3	Undertake failure mode effects analysis (FMEA) or similar failure effects analysis	3.1	Undertake analysis
		3.2	Record results of analysis
		3.3	Investigate methods of eliminating possibility of failure and/or minimising the impact of the failure
		3.4	Liaise with operator, team leader and other key personnel regarding possible solutions

© Commonwealth of Australia, 2024 Public Skills Australia

		3.5	Select most appropriate solution
		3.6	Implement selected solutions
4	Undertake condition monitoring analysis	4.1	Obtain data for condition monitoring analysis
		4.2	Interpret condition monitoring data
		4.3	Predict required maintenance type and timing from condition monitoring data
		4.4	Liaise with operator, team leader and other key personnel regarding implications of condition monitoring report
		4.5	Involve team members in development of changes to maintenance strategy to ensure awareness, learning and commitment

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with operators and team leaders in a variety of situations and with different media
- adapting personal communication strategy to different levels of operator and team leader literacy and numeracy
- working in formal and ad-hoc teams to undertake proactive maintenance related analyses
- analyse data to determine trends, variations, equipment history and to prioritise methods of eliminating or minimising equipment failure
- solving problems to root cause
- applying basic arithmetic and statistical methods
- planning for effective data collection
- reading and interpreting engineering specifications/drawings
- reading and interpreting charts and diagrams
- using information system terminals and computer
- recording data in hard or soft formats

© Commonwealth of Australia, 2024 Public Skills Australia

Required knowledge

Required knowledge includes:

- cleaning needs, techniques and principles of equipment in area of responsibility
- methods of assessing operator and maintenance skill gaps and filling them
- techniques for determining MTBF or similar
- techniques for undertaking FMEA or similar
- underpinning principles of competitive systems and practices strategies being implemented and how to adapt them to maintenance
- root cause analysis
- techniques to analyse condition monitoring data

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • identify and analyse data and other information on the historical performance of equipment • involve operators, maintenance and other stakeholders in decisions on proactive maintenance strategies • identify root cause of failure and deterioration in equipment performance • select and implement failure elimination or minimisation solutions.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to

© Commonwealth of Australia, 2024 Public Skills Australia

	production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations

© Commonwealth of Australia, 2024 Public Skills Australia

	• agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • OEE • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
OEE	OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is: *OEE = availability x performance x quality rate* where: • availability takes into account losses due to breakdown, set up and adjustments • performance takes into account losses due to minor stoppages, reduced speed and idling • quality rate takes into account t losses due to rejects, reworks and start-up waste

© Commonwealth of Australia, 2024 Public Skills Australia

MTBF	MTBF is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing. There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem. Depending on the equipment, operations and procedures of the organisation, alternative statistical records of maintenance and maintenance related events may be substituted for MTBF providing they relate strategies for improving OEE.
FMEA	FMEA is a systematic approach that identifies potential failure modes in a system, product, or operations/assembly operation caused by either design or operations/assembly process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring. Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification. HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.
Condition monitoring	In this unit condition monitoring is used to describe the process of analysing the implications of condition monitoring data for proactive maintenance, whether it be obtained from non-destructive testing (NDT) reports, visual assessment by experts, diagnostic reports obtained from SCADA or other enterprise or equipment software and product or process quality analyses. It does not require the actual undertaking of the NDT or condition monitoring assessment or test. If this is required appropriate units from other Training Packages will be

MSS404082A Assist in implementing a proactive maintenance strategy

Modification History

New unit, superseding MSACMT482A Assist in implementing a proactive maintenance strategy - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required by a maintenance person to assist in the implementation of a proactive maintenance strategy in an organisation. This unit includes the interaction between a maintenance worker and operators, as appropriate.

Application of the Unit

This unit applies to a maintenance person in an organisation that has adopted or is implementing total preventative/productive maintenance (TPM), reliability centred maintenance (RCM) or similar strategies. As part of this, the maintenance person is expected to assist in the implementation by determining appropriate maintenance related schedules and also by providing maintenance related assistance to non-maintenance personnel, such as assisting production personnel to fulfil their role in the TPM/RCM strategy.

This unit requires the application of skills associated with problem solving and initiative and enterprise in order to analyse maintenance requirements. Communication, teamwork and planning and organising skills will be required to implement reliability strategies. This requires aspects of self-management to ensure improvement of own performance and learning.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Develop components of reliability strategy for a work/plant area	1.1	Determine manufacturer's recommended inspection, servicing and related schedules for relevant plant
		1.2	Consult with relevant people with regard to appropriate inspections, services and schedules
		1.3	Discuss any conflicts with relevant people and seek resolution of conflicts
		1.4	Develop schedules in liaison with relevant people
		1.5	Identify inspections and servicing which may be done by operations personnel in liaison with relevant stakeholders
2	Assess current practice for maintenance implications	2.1	Identify the overall equipment effectiveness (OEE) or other organisation targets for equipment/plant
		2.2	Evaluate procedures for plant/equipment reliability implications
		2.3	Discuss current practices with relevant people to determine any plant/equipment reliability implications
		2.4	Recommend changes to improve plant/equipment reliability in accordance with procedures
3	Assist in implementing the reliability strategy	3.1	Arrange for schedules to be incorporated in relevant work plans
		3.2	Identify training needs in discussion with relevant

© Commonwealth of Australia, 2024 Public Skills Australia

personnel

3.3 Assist personnel to develop required skills for inspections/servicing within scope of authority

3.4 Collect data/information as required by own work plan

3.5 Compare data/information with performance indicators

3.6 Recommend improvements to reliability strategy in accordance with procedures

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- explaining concepts and processes of chosen proactive maintenance strategy used by the organisation and distinguishing from traditional (breakdown) maintenance strategies
- communicating with operators, other maintenance personnel, team leaders and technical experts in a variety of situations and using different media
- adapting personal communication strategy to different levels of operator and team leader literacy and numeracy
- working in formal and ad-hoc teams to implement proactive maintenance
- solving problems to root cause
- planning proactive maintenance tasks to fit in with maintenance and production schedules and the needs of other staff
- assessing the ability of operations personnel with regard to inspections and servicing of equipment
- reading and interpreting charts and diagrams, manufacturer manuals and specifications and operating procedures

Required knowledge

Required knowledge includes:

- requirements of the proactive maintenance strategy being implemented
- operating principles and procedures for equipment/plant subject to proactive maintenance strategy
- purpose and processes for data collection in proactive maintenance strategies
- procedures relevant to own job and organisation implementation of proactive maintenance

© Commonwealth of Australia, 2024 Public Skills Australia

- methods of making/recommending improvements

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • source information from manuals and other technical documentation or software • effectively communicate with users on equipment operational and maintenance history • develop schedules for maintenance activities including seeking technical assistance, where appropriate • differentiate between proactive and traditional maintenance strategies.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation

© Commonwealth of Australia, 2024 Public Skills Australia

	• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and

© Commonwealth of Australia, 2024 Public Skills Australia

	analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • OEE • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise, the work organisation, culture • regulatory environment and the industry sector
TPM	TPM is an application of total quality management to maintenance with the intention of increasing reliability, getting it right first time and increasing OEE
RCM	RCM moves maintenance from reactive, or even planned/programmed, towards a focus on uptime and OEE
Similar strategies	Similar strategies may include: • mean time between failure (MTBF) which is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing • failure mode and effects analysis (FMEA) which is a systematic approach that identifies potential failure modes in a system, product, or equipment based operations caused by either design or operation/process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring • industry sectors have highly adapted forms of FMEA

© Commonwealth of Australia, 2024 Public Skills Australia

	and which may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification. HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability • condition monitoring which often involves quite sophisticated monitoring of equipment, including such things as vibration monitoring, instrumental analysis of lubricating oil, and so on, to determine the current state of the equipment, monitor the change in this condition and predict when it needs servicing/maintenance to maintain reliability.
OEE	OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is: *OEE = availability x performance x quality rate* where: • availability takes into account losses due to breakdown, set-up and adjustments • performance takes into account losses due to minor stoppages, reduced speed and idling • quality rate takes into account the losses due to rejects, reworks and start-up waste
Uptime	Uptime refers to the overall availability of the plant (it is the inverse of downtime) or the unavailability of the plant. Ideal uptime is 100%
Inspection	Inspection may include: • reading dials, gauges and meters • observations, including those using sight, hearing, smell and feel • observations of product quality/faults/rejects
Servicing	Servicing may include: • cleaning • lubricating • topping up • adjusting
Procedures	Procedures may include: • work instructions • standard operating procedures

© Commonwealth of Australia, 2024 Public Skills Australia

	• formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer based or in some other format

MSS405001A Develop competitive systems and practices for an organisation

Modification History

New unit, superseding MSACMS600A Develop a competitive manufacturing system - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop new strategies for competitive systems and practices or make improvements to existing systems and practices.

Application of the Unit

This unit applies to a manager, technical specialist or similar in an organisation implementing competitive systems and practices, or in an organisation wishing to embark on the competitive systems and practices path. The person needs to be able to analyse the needs of the organisation and develop strategies and systems for effective implementation and continuous improvement of competitive systems and practices in the organisation.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to determine effective competitive systems and practices strategies for the organisation. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices strategies.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine appropriate analytical techniques	1.1	Liaise with key stakeholders to determine objectives of operations strategy
		1.2	Examine current operations to determine major areas requiring improvement
		1.3	Compare possible strategies, techniques and tools against organisation needs
		1.4	Select possible strategies, techniques and tools
		1.5	Consult with key stakeholders to confirm selected strategies, techniques and tools
2	Develop competitive systems and practices strategies	2.1	Estimate benefit/cost ratio for major stakeholders and the value stream overall
		2.2	Determine preferred operations strategy
		2.3	Examine and adapt strategy to organisation needs and priorities
		2.4	Examine and adapt competitive systems and practices techniques and tools required to implement strategy
		2.5	Negotiate with key stakeholders to develop an implementation plan
		2.6	Determine key information and performance indicators required

© Commonwealth of Australia, 2024 Public Skills Australia

3	Implement strategy	3.1	Determine data collection required
		3.2	Identify and evaluate methods of collecting and processing required data
		3.3	Determine hardware and other resources required
		3.4	Evaluate skill needs required
		3.5	Ensure all resources/training are available and completed
		3.6	Implement strategy
4	Monitor implementation of strategy	4.1	Compare information/performance indicators with desired levels
		4.2	Liaise with key stakeholders regarding strategy issues
		4.3	Identify areas requiring adjustment
		4.4	Make required adjustments

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing current state/situation of the organisation and value stream, including appropriateness of strategy, operations and internal and external relationships, including value stream members
- determining appropriate key performance indicators (KPIs) and overseeing data collection
- selecting appropriate competitive systems and practices tools and techniques, such as:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing
  - process mapping

© Commonwealth of Australia, 2024 Public Skills Australia

  - establishing customer pull
  - kaizen and kaizen blitz
  - setting of KPIs/metrics
  - identification and elimination of waste
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- prioritising situations and actions based on:
  - customer benefit
  - cost/benefit analysis
- reviewing and modifying strategies and KPIs, as required

Required knowledge

Required knowledge includes:

- competitive systems and practices principles and tools, including:
  - value stream mapping
  - 5S
  - JIT
  - mistake proofing
  - process mapping
  - establishing customer pull
  - kaizen and kaizen blitz
  - setting of key performance indicators/metrics
  - identification and elimination of waste
- methods of estimating costs/benefits
- acceptable benefit/cost ratios
- continuous improvement principles
- principles of motivation and leadership
- characteristics and strengths of different types of strategies, techniques and tools, such as 5S, JIT, six sigma, lean operations and agile operations
- business goals sufficient to match the strategy to the business needs
- strategic thinking
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the

© Commonwealth of Australia, 2024 Public Skills Australia

performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • determine appropriate analytical techniques • develop strategies that deliver the greatest overall benefit • implement the strategies • monitor the implementation of the strategy.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to

© Commonwealth of Australia, 2024 Public Skills Australia

	accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures

© Commonwealth of Australia, 2024 Public Skills Australia

	• current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Competitive systems and practices techniques and tools	Competitive systems and practices techniques and tools may include: • value stream mapping • 5S • JIT • mistake proofing • process mapping • establishing customer pull • kaizen and kaizen blitz • setting of KPIs/metrics • identification and elimination of waste (muda) • standardisation
Value stream	The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS405002A Analyse and map a value stream

Modification History

New unit, superseding MSACMS601A Analyse and map a value chain* - Not equivalent

* Prerequisite *MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to analyse and map a value stream, including the clear identification of the place of an organisation in the value stream and its contribution to the value stream. The unit includes the identification of an organisation in a value stream, their relationships and the activities undertaken by value stream organisations. The identification skills include identification at the virtual or information level, the technical or process level, and at the physical or logistic level.

The unit includes the analysis of value-adding and non-value adding activities and the information needs for successful value stream mapping, including information technology (IT) needs.

This unit covers the analysis of the supply chain, the demand chain as well as the overall value stream.

Application of the Unit

This unit applies to a person in a senior role in an organisation, such as an operations manager, purchasing manager, senior technical officer performing planning or scheduling or similar who needs to analyse and map a value stream, a supply chain, or a demand chain in order to understand the interactions between all members and determine the value added/potential value added by each member. The value stream is represented visually according to organisation format requirements.

This information is the basis for the design of Just in Time (JIT) and for the determination of waste. Value stream analysis is not a one-off activity but rather an ongoing activity of re-analysis as the value stream changes and its members progress towards excellence in competitive systems and practices.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Map the value stream	1.1	Select a product/product group for analysis
		1.2	Identify ultimate customer
		1.3	Identify ultimate supplier
		1.4	Identify all organisations between ultimate supplier and ultimate customer
		1.5	Identify all steps in own organisation
		1.6	Map value stream
2	Define customer need	2.1	Determine the features/benefits obtained by customers from product
		2.2	Determine methods of measuring the contribution to each features/benefits
		2.3	Identify possible data sources for required measures
		2.4	Implement measurement of contribution to features/benefits

© Commonwealth of Australia, 2024 Public Skills Australia

3	Assess the value added at each step	3.1	Identify value contributed by each external organisation
		3.2	Determine value added by each internal step
		3.3	Determine method of measuring value added
4	Reduce waste	4.1	Compare value added to customer benefit/feature
		4.2	Identify activities on value stream map which do not add to customer benefit/features
		4.3	Liaise with external value stream members to determine methods to reduce overall waste
		4.4	Take required actions to reduce waste

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- identifying for an individual organisation its place in the value stream, including immediate upstream and downstream organisations
- determining flow of materials and information along the value stream, including:
  - output quantities and qualities
  - variability in quality and quantity
  - uptime
  - other key performance indicators (KPIs) indicators appropriate to the organisation and customer requirements
- classifying steps and processes into value adding and non-value adding, including determining appropriate methods for measuring value added
- mapping value stream showing flow of information and materials in either hard copy or using software
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy

© Commonwealth of Australia, 2024 Public Skills Australia

Required knowledge

Required knowledge includes:

- purpose of value stream analysis
- methods of value stream analysis and mapping
- concept of waste and value in terms of customer benefit
- types of waste and methods of reducing it
- processes, and operations used in own organisation to make products or deliver services to internal and external customers
- processes employed by other members of the value stream sufficient to have meaningful dialogue with them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to:
	• review activities of organisations to determine:
	  • their place in value stream
	  • value added by each organisation
	  • non-value added steps within each organisation
	• determine methods of measuring value added
	• prepare a map of a value stream that includes all value creating and non value adding steps.

Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers

© Commonwealth of Australia, 2024 Public Skills Australia

	• case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as

© Commonwealth of Australia, 2024 Public Skills Australia

	Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Value stream	The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal)

© Commonwealth of Australia, 2024 Public Skills Australia

	• storage and delivery to customer • after market support
Value-added	Value-added is measured against its contribution to the customer benefits/features and may be in the form of: • technical benefits/features • location benefits/features • aesthetic benefits/features • information benefits/features
Map value stream	The map of the value stream can be completed using: • hard copy (e.g. paper or whiteboard) • appropriate software tools The map should show all participants and stages of materials and information flow and the value creating and non-value adding steps and processes
JIT	JIT refers to: • a production scheduling concept that calls for any item needed at a production operation (whether raw material, finished item, or anything in between) to be produced and available precisely when needed, neither a moment earlier nor a moment later
Waste	Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within operations, categories of waste include: • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers

MSS405003A Manage a value stream

Modification History

New unit, superseding MSACMS602A Manage a value chain* - Not equivalent

* Prerequites MSACMS601A Analyse and map a value chain and MSACMT631A Undertake value analysis of product costs in terms of customer requirements - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to manage a value stream, a supply chain or a demand chain, including close liaison with suppliers and customers.

This unit covers the managing of the supply chain, the demand chain as well as the overall value stream and may be applied to the managing of the chain internally/externally within an organisation.

Application of the Unit

This unit applies to a person in a senior role in an organisation, such as a manager, technical specialist or similar, who needs to manage the value/supply/demand chain on an ongoing basis to achieve the best overall contribution of valued added to their product in terms of customer benefit/features. The unit can be applied to value streams of large or small organisations and to internal and external value streams or a combination value stream.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Evaluate the value stream	1.1	Identify all members in the value stream for products in area of responsibility
		1.2	Identify value added by each member of the chain
		1.3	Identify non-value adding steps in the value stream
		1.4	Identify acute and chronic issues which impact on the value stream
		1.5	Develop priority list of items for improvement
2	Liaise regularly with chain members	2.1	Establish and maintain regular liaison with all chain members
		2.2	Identify current and forecast issues with each member
		2.3	Work with members to help them address their issues
		2.4	Build trust and confidence in the relationship
		2.5	Develop with each chain member a priority list of items for improvement
		2.6	Negotiate with all chain members to ensure improvements benefit chain members and improve the benefits/features perceived by the ultimate customer
3	Monitor the value added at each step	3.1	Identify changes in value added by each chain member
		3.2	Identify areas where changes to value added are required

© Commonwealth of Australia, 2024 Public Skills Australia

		3.3	Develop a priority list of required value-added changes
		3.4	Work with chain member to bring about improvements to value added
4	Continue to reduce waste	4.1	Identify waste in value stream
		4.2	Work with chain members to continually reduce waste

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reading and interpreting a value stream map
- identifying, monitoring and managing flow of materials, information and services in the value stream, including:
  - output quantities and qualities
  - variability
  - uptime
  - other key performance indicators (KPIs) indicators appropriate to the value stream organisations and customer benefit/requirements
- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- identifying steps and processes as value adding and non-value adding
- using appropriate methods for measure value added at steps in the value stream

Required knowledge

Required knowledge includes:

- purpose of value stream analysis
- methods of value stream analysis and mapping
- concept of waste and value in terms of customer benefit
- types of waste and methods of reducing it
- processes, and operations used in own organisation to make products or deliver services to internal and external customers

© Commonwealth of Australia, 2024 Public Skills Australia

- processes employed by other members of the value stream sufficient to have meaningful dialogue with them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • review activities of organisations to determine: • their place in value stream • value added by each organisation • non-value added steps within each organisation • determine priorities for improvement in own organisation • negotiate with value stream members on improvements • monitor improvements to determine value added.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects

MSS405004A Develop business plans in an organisation implementing competitive systems and practices

Modification History

New unit, superseding MSACMS603A Develop manufacturing related business plans - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop business plans in an organisation implementing competitive systems and practices.

Application of the Unit

This unit applies to a person in an organisation implementing competitive systems and practices (e.g. a production/plant manager, purchasing/technical officer or similar) who is required to develop a section business plan to meet the requirements of the overall strategic plan of the organisation. The plan includes the impact on the value stream and other critical competitive systems and practices factors. Due to competitive pressures this may be a reasonably frequent activity and can occur at any time over the business cycle. The plan may be in response to a specific change, or it may be a plan for the next period.

This unit assumes that up-to-date information about the organisation's role in the value stream is available. For detailed mapping and analysis of the value stream refer to MSS405002A Analyse and map a value stream.

This unit primarily requires the application of skills associated with gathering, analysing and applying information and consulting with stakeholders. Problem solving, initiative and enterprise, and planning and organising are required to develop an effective and measurable business plan. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices strategies.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine purpose of plan	1.1	Confirm reason for developing plan and expected outcomes from plan
		1.2	Confirm purpose of plan with all relevant stakeholders
		1.3	Check expected outcomes from plan with overall strategic plan for organisation
		1.4	Identify any potential areas for conflict between proposed plan and strategic directions
		1.5	Negotiate with relevant stakeholders to resolve issues
2	Develop objectives and strategies	2.1	Draft objectives for business plan
		2.2	Draft strategies to achieve these objectives
		2.3	Determine implications for value stream
		2.4	Determine capital or workplace layout/organisation implications for objectives and strategies
3	Develop plans to meet objectives	3.1	Negotiate with relevant stakeholders over implications for objectives and strategies

© Commonwealth of Australia, 2024 Public Skills Australia

	and strategies	3.2	In liaison with relevant stakeholders, develop plans to meet objectives
		3.3	Determine relevant key performance indicators (KPIs) for plan
		3.4	Check KPIs are appropriate for purpose of plan
		3.5	Check plan will deliver planned purpose
		3.6	Map plan to changed value stream
		3.7	Adjust plan to optimise value stream
		3.8	Validate plan with relevant stakeholders
4	Monitor the implementation of the plan	4.1	Release plan for implementation
		4.2	Check the key progress points against the key stages of the plan
		4.3	Note any discrepancies
		4.4	Take appropriate action to ensure correct implementation of plan

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing organisation overall strategic plan for implications relevant to competitive systems and practices implementation
- determining appropriate KPIs and methods of data collection
- determining best means of gathering data, including data from monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary

© Commonwealth of Australia, 2024 Public Skills Australia

systems
- identifying value stream members and performance
- determining implications of business plan for value stream
- analysing data, including competitive systems and practices indicators and verifying results with stakeholders
- determining key parameters for business plan, including:
  - scope
  - period
  - objectives in terms of customer benefit
  - relationship to overall organisation objectives
  - targets
  - KPIs
  - implementation strategy
  - risk management
  - monitoring and adjustment strategy
  - approval process

Required knowledge

Required knowledge includes:

- organisation strategic directions
- business planning methods and types of plans
- contingency planning and other risk mitigating planning tools
- the organisation's value stream
- analysis of value stream
- competitive systems and practices
- application of quality principles
- human resources and industrial relations
- occupational health and safety (OHS)

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • develop a business plan that conforms to organisation

© Commonwealth of Australia, 2024 Public Skills Australia

	overall strategic directions • determine implications of business plan for competitive systems and practices practice in organisation • determine KPIs appropriate for business plan • monitor the implementation of a business plan and make adjustments as necessary.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.

© Commonwealth of Australia, 2024 Public Skills Australia

Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, ERP systems, MRP and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account:

© Commonwealth of Australia, 2024 Public Skills Australia

	• the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Plan	Plan may include: • any sort of business plan and may emphasise any of the areas for sub-plans over the others
Objectives	Objectives may include performance in terms of: • sales • profit • quality • OHS • environment • competitive systems and practices • human, physical, financial and environmental/resource use
Objectives and strategies	Objectives and strategies may include: • human and industrial relations practice • material/component and resources use • sustainable environmental practices • sales and marketing • financial • regulatory compliance
Relevant stakeholders	Relevant stakeholders may include: • other team members • other workers • management • technical specialists • other members of the value stream
Value stream	The value stream begins with the customer and includes all actions (both value adding and non value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research

© Commonwealth of Australia, 2024 Public Skills Australia

	• product design • raw material sourcing • intermediate processing • final assembler/ collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS405020A Develop quick changeover procedures

Modification History

New unit, superseding MSACMT620A Develop quick changeover procedures - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop/improve changeovers for equipment, processes or operations. It includes critically analysing existing changeovers, applying quick changeover principles, and developing improved changeover procedures.

Application of the Unit

This unit applies to managers, technical specialists or similar in an organisation that has adopted or is adopting a quick changeover approach to its changeovers. The changeovers may be to equipment, processes or operations. This unit applies to the structured development and/or improvement of the changeover procedures.

This unit requires the application of skills associated with communication, problem solving, initiative, enterprise, planning and organising in order to analyse and determine changeover procedures. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of procedures.

Licensing/Regulatory Information

unit of competency.	text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse changeover	1.1	Critically observe changeover process
		1.2	Identify steps in changeover
		1.3	Identify start situation and required finish situation for changeover
2	Apply quick changeover principles	2.1	Identify changes to the start situation and required finish situation which are possible
		2.2	Identify internal and external changeover activities
		2.3	Identify activities which could be improved/eliminated
		2.4	Eliminate/reduce adjustments required after changeover
		2.5	Develop improved changeover process and recommendations for implementation procedure
		2.6	Liaise with relevant people to validate recommendations
3	Assess and minimise risks in changeover	3.1	Analyse hazards and risks from all steps in changeover
		3.2	Apply ergonomic principles and hierarchy of control to each equipment and manual hazard
		3.3	Assess any regulatory risk in changeover
		3.4	Minimise hazards during changeover ensuring final risk profile is acceptable
4	Implement	4.1	Acquire any required resources and approvals

improved changeover	4.2	Organise trials of improved changeover
	4.3	Monitor trial
	4.4	Make adjustments to changeover process
	4.5	Implement improved changeover process

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- critically analysing an existing changeover, including a detailed examination of all actions and delays and the times taken
- determining key steps in changeover
- identifying regulatory implications and other risks changes to procedures
- differentiating between habitual practice and necessary activity
- identifying opportunities to maximise external set up work
- communicating with others to explain and supervise changed procedures

Required knowledge

Required knowledge includes:

- principles of quick changeover
- equipment and operating environment of activities subject to quick changeover
- regulatory and commercial obligations and risk environment for operations subject to quick changeover analysis
- safe movement and other relevant occupational health and safety (OHS) principles
- relevant procedures
- purposes/requirements of changeover
- sourcing of resources
- trialling procedures

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • observe and analyse steps in an existing changeover • manage risks in adjusting changeover procedures • develop changeover adjustments that deliver the greatest overall benefit • supervise changeover procedure trials.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.

Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenario, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess

© Commonwealth of Australia, 2024 Public Skills Australia

	underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping

© Commonwealth of Australia, 2024 Public Skills Australia

	• problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Changeover	Changeover may refer to: • equipment exchanges, such as an exchange of dies/tools (traditional) • change between batches • change between campaigns (process manufacturing) • quantum equipment/process change to produce a different product
Quick changeover	Quick changeovers may be known by a number of alternative titles depending on the industry sector. In manufacturing quick changeovers may be referred to as: • single minute exchange of die (SMED) • single-digit set-up – performing a set-up activity in a single-digit number of minutes (i.e. fewer than ten) • one touch exchange of die (OTED) – literally, changing a die with one physical motion, such as pushing a button – broadly, an extremely simple procedure for performing a set-up activity While the term die is the traditional term, organisations that require changeovers using other equipment are also covered by this unit. This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. This is not applicable to a maintenance/pressure vessel inspection (PVI) shutdown as experienced by the continuous process manufacturers. However, where there are continuous operations on a campaign basis, it may be applied to the development of changeover procedures between campaigns or similar changeovers
Set-up work	Set-up time is the work required to change over a machine or process from one item or operation to the

© Commonwealth of Australia, 2024 Public Skills Australia

	next item or operation. It can be divided into two types: • internal set-up work that can be done only when the machine or process is not actively engaged • external set-up work that can be done concurrently with the machine or process performing productive duties
Principles	The principles of quick changeover include: • the principles of efficient movement as well as an understanding of equipment features and aids, including jigs, fixtures, locating devices and mechanical aids which will reduce human effort and time required
Improved/eliminated	Activities which should be improved/eliminated include: • those which take time or are unreliable in terms of outcome • those which are difficult to do or have adverse OHS implications (e.g. repetitive strain injury, back injury and finger injuries)
Hazards and risks	Hazards and risks include those related to: • OHS • regulatory compliance • environment • commercial and contractual obligations An acceptable risk profile for changeovers is one which, at the minimum, meets regulatory and organisation requirements and does not increase the current risk profile
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plan • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other

MSS405021A Develop a Just in Time system

Modification History

New unit, superseding MSACMT621A Develop a Just in Time (JIT) system* - Not equivalent

* Prerequisite MSACMC410A Lead change in a manufacturing environment - removed

Unit Descriptor

Not applicable.

Application of the Unit

This unit applies to a person responsible for planning and implementing a JIT system. It includes consulting with employees, suppliers and customers regarding the change. This may require identification of training and other employee support as well as identifying possible logistical support.

The unit includes kanban-based JIT systems but also applies to other sectors and systems where a traditional kanban-type JIT may not be suitable through the unit's coverage of JIT principles.

This unit requires the application of skills associated with communication in gathering, analysing and applying information, consulting with stakeholders, problem solving, and demonstrating initiative and enterprise. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the JIT design.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Design the JIT system/system improvements	1.1	Identify value chain members
		1.2	Consult with internal and external value chain members
		1.3	Identify current storage/inventory in value chain
		1.4	Determine flow authorisation indicators
		1.5	Determine minimum and maximum operations rate
		1.6	Determine lead time for product or service
		1.7	Determine number of units per kanban
		1.8	Draft workable procedures to implement JIT
2	Implement the JIT system/improvements	2.1	Consult with key internal stakeholders to develop solutions to JIT issues
		2.2	Ensure all stakeholders have required JIT-related skills and related issues have been resolved
		2.3	Liaise with key external members of the value chain to develop solutions to JIT issues
		2.4	Develop implementation plan for JIT
		2.5	Determine key measures of JIT
3	Monitor the JIT	3.1	Monitor key measures of JIT

© Commonwealth of Australia, 2024 Public Skills Australia

system	3.2	Regularly liaise with key stakeholders seeking areas for improvement
	3.3	Identify areas in need of improvement

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- analysing equipment, operations and value stream and determining best flow authorisation strategy, including:
  - form of kanban or flow authorisation indicator
  - integration with operations and other competitive systems and practices tools and techniques
  - key measures and monitoring strategy for JIT system
  - procedures to be adopted in the event of a non-conformance
- problem solving JIT issues and non-conformances to root cause

Required knowledge

Required knowledge includes:

- needs of internal and external value chain members
- principles of JIT, including:
  - demand pull
  - flow authorisation
  - kanban
  - capability rate
  - monitoring
  - non-conformance procedures
- reasons for delays/storages/inventories in the value stream and methods of reducing/eliminating them
- methods of identifying skill gaps and methods of filling skill gaps

© Commonwealth of Australia, 2024 Public Skills Australia

- key business objectives associated with implementing JIT
- principles of the operational processes relevant to the JIT implementation
- production data generated by the process and its application to JIT

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to:
	• develop a complete JIT system, including:
	  • implementation strategy
	  • key measures
	  • training and support strategy for employees and value chain members
	  • procedures in the event of a non-conformance
	• communicate and negotiate complex issues to a wide variety of individuals
	• supervise JIT implementation and suggest improvements.

Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a

© Commonwealth of Australia, 2024 Public Skills Australia

	combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	This unit may be assessed concurrently with: • MSS405002A Analyse and map a value stream, and/or • MSS405050A Determine and improve process capability. This unit is related to: • MSS402021A Apply Just in Time procedures • MSS403021A Facilitate a Just in Time system which cover the lowest and intermediate skill levels in competitive systems and practices respectively. Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of

© Commonwealth of Australia, 2024 Public Skills Australia

the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
JIT	JIT is a production scheduling concept that calls for any item or service needed at a production operation, whether raw material, components, fuel, power, finished item, or anything else in between raw material and delivery to the final customer, to be produced and available precisely when needed, neither a moment earlier nor a moment later. JIT principles may also be applied to non-product based manufacturing operations (e.g. where services

© Commonwealth of Australia, 2024 Public Skills Australia

	must be delivered on demand, such as transport)
Kanban	Kanban is a signal to authorise production or movement of an item to the next stage of production or operations. It is often a physical item for example a card, bin or sheet. When fully implemented, kanban operates according to the following rules: • all production and movement of parts, material or other necessary items takes place only as required by a downstream operation • the specific tool which authorises production or movement is called a kanban Kanban is typically applied to batch type operations and the production is measured in units produced. In continuous operations organisations, production is measured in terms of production rate (e.g. kg/h, tonne/day) and rate is increased/decreased according to the flow authorisation which may be a kanban (e.g. ticket or order from a supplier) or may be a SCADA signal from a remote facility (e.g. customer tank) saying that resupply is required or similar. In service operations a physical kanban may not be used – see flow authorisation indicator
SCADA	SCADA refers to: • a number of systems which automatically collect critical process data, perform required mathematical manipulations on it and then make control decisions and/or give required information personnel for action
Value stream	The value stream begins with the customer and includes all actions (both value-adding and non-value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/ collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer

© Commonwealth of Australia, 2024 Public Skills Australia

	• after market support
Flow authorisation indicator	Flow authorisation indicator may include: • kanban bin, ticket or similar • other indicator of demand pull
Pull system	Pull system includes: • an operations planning system which makes to demand, rather than for stock or to a forecast
Cards/bins	Cards/bins include: • the indicators used for production authorisation and may be physical cards or bins or some other suitable indicator
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format
Key measures	Key measures may include: • inventory levels • lead time • in full, on time and in specification (IFOTIS) delivery • productivity/production rate • other measures of pull through the value chain • quality

MSS405030A Optimise cost of a product or service

Modification History

New unit, superseding MSACMT630A Optimise cost of product* - Not equivalent

* Prerequisite *MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required to examine the costs of a product or service and determine methods of reducing costs.

Application of the Unit

This unit applies to an individual a who is required to undertake a detailed study of a product or service's costs, including analysing it by its cost components to determining the best method of lowering the cost overall. This unit differs from *MSS405031A Undertake value analysis of a product or process costs in terms of customer requirements*, in that it looks at all costs, including overheads and takes a wider and more traditional approach to the cost of the product. Information and cost reduction strategies gained from the application of this unit may support other cost approaches in the enterprise, including value stream costing.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to calculate cost components and determine cost optimisation strategies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse total cost components of a product or service	1.1	Identify all cost components of product or service
		1.2	Allocate cost components to major categories, such as overhead, depreciation, energy, consumables and labour
		1.3	Distinguish between costs which directly deliver customer features/benefits and waste
2	Optimise costs	2.1	Analyse causes of costs which lead to customer features/benefit
		2.2	Determine methods of increasing the customer benefit/cost ratio
		2.3	Analyse causes of waste costs
		2.4	Determine methods of reducing/eliminating waste costs
		2.5	Analyse interactions between cost components
		2.6	Check that one method of reducing costs does not cause an increase in another cost/reduction in consumer benefit
		2.7	Check that cost reduction plans do not reduce required levels of regulatory compliance or occupational health and safety (OHS)
3	Implement cost optimisation	3.1	Develop cost optimisation plans
		3.2	Negotiate with relevant people to agree on implementation plans

© Commonwealth of Australia, 2024 Public Skills Australia

3.3 Take actions to implement the cost optimisation

3.4 Monitor the implementation of the cost optimisation

3.5 Make adjustments to the plan, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- communicating at all levels in the organisation and value chain and to audiences of different levels of literacy and numeracy
- identifying relevant cost component categories for organisation, product and process
- identifying customers, including final customer and features/benefits as valued by customers
- expressing customer features/benefits in cost terms
- determining application scope of cost reduction plan, including product/s, areas, employees and suppliers included in plan

Required knowledge

Required knowledge includes:

- cost components of product
- major costs which are controllable (and how to control them)
- concept and types of waste (muda)
- interrelationship of cost components and costs and benefits, including:
  - methods of estimating costs/benefits
  - acceptable benefit/cost ratios

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

© Commonwealth of Australia, 2024 Public Skills Australia

Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • determine relevant cost categories for a product or service • determine which costs are waste • develop a cost optimisation plan • implement and monitor the plan .
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads, hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace project(s) • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and

© Commonwealth of Australia, 2024 Public Skills Australia

	disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree

© Commonwealth of Australia, 2024 Public Skills Australia

	Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Waste	Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within operations, categories of waste include: • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Cost	Cost includes: • the monetary value of expenditures able to be directly identified for supplies, services, direct labour, materials, components, cost of inventory, faults and reworks, rejects/scrap, equipment and other items used in the production of the product • allocations and estimates for indirect costs (e.g. indirect labour, rent, energy, water and cost of capital) where a direct monetary value cannot be identified
Cost optimisation plans	Cost optimisation plans should include: • application scope (e.g. product/s, services, areas, employees and suppliers included in plan) • target costs and target cost reductions • implementation period • method of monitoring • method of communicating progress to stakeholders

MSS405031A Undertake value analysis of product or process costs in terms of customer requirements

Modification History

New unit, superseding MSACMT631A Undertake value analysis of product costs in terms of customer requirements* - Not equivalent

* Prerequisite *MSACMT230A Apply cost factors to work practices* - removed

Unit Descriptor

This unit of competency covers the skills and knowledge required by an employee who is required to analyse products and processes to determine the value-adding factors, including design and processing costs that most impact on meeting customer requirements and which may also include competitor benchmarking. The unit also includes implementing identified changes that increase cost-efficiency. The unit may be applied individually or in a team environment.

In this unit an employee uses an analysis of the benefits/features which a customer perceives to be in a product or service as a basis for determining appropriate or unnecessary cost and so identifying and reducing waste.

Application of the Unit

This unit applies to an individual who undertakes the value analysis of a product or service, establishing the features/benefits obtained by customers from the cost components relating to those benefits. From this appropriate or waste cost will be determined and actions taken to either reduce waste or improve saleability.

This unit differs from *MSS405030A Optimise cost of a product or service*, in that it requires costs to be measured against customer features/benefits and is designed to contribute to value stream costing. *MSS405030A Optimise cost of a product or service* complements this unit by allowing detailed analysis of all costs, including overheads.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information. Problem solving, initiative and enterprise, and planning and organising are required to determine cost-efficiencies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into costing methods.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse customer benefits to determine appropriate or waste costs	1.1	Analyse product or service to determine features/benefits perceived by customer in product
		1.2	Analyse cost components of product or service and determine those which deliver customer features/benefits and those which are either appropriate or waste
		1.3	Determine any additional features that may be added to improve saleability
		1.4	Analyse waste cost components and allocate to direct and indirect cost categories
		1.5	Determine options for reducing direct and indirect waste costs
		1.6	Select cost-related actions which maximise customer benefits and minimise costs
		1.7	Where required, undertake competitor benchmarking to provide reference points

© Commonwealth of Australia, 2024 Public Skills Australia

2	Analyse performance variance	2.1	Identify waste processing or operational steps for product or service following completion of customer benefit analysis
		2.2	Analyse all costs and determine methods of reducing costs/waste
		2.3	Develop plan and recommendations for actions required to achieve cost improvement or added customer benefits to improve saleability
		2.4	Submit plan and recommendations to stakeholders

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- communicating at all levels in the organisation and value chain and to audiences of different levels of literacy and numeracy
- determining customer features/benefits added to products at each operational step
- relating cost components to customer features/benefits
- distinguishing between direct and indirect costs
- identifying relevant cost component categories for product
- determining application scope of cost reduction plan, including products, areas, employees and suppliers included in plan
- undertaking competitor benchmarking for reference in cost analysis

Required knowledge

Required knowledge includes:

- customer features/benefits from products
- impact of customer features/benefits on sales, market share and firms profitability
- performance and cycle times for products made or service provided
- major costs which are controllable (and how to control them)
- types of waste (muda)
- methods of reducing waste

© Commonwealth of Australia, 2024 Public Skills Australia

- methods of reducing cycle time
- desirability of improving performance and methods of reducing cycle time

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • identify customer features/benefits for a product and their impact on market share or saleability of the product • determine direct/indirect costs in a product • determine which costs are waste • analyse cycle times and make suggestions for reduction in cycle time • develop a cost/waste reduction plan.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented. or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation

© Commonwealth of Australia, 2024 Public Skills Australia

	• case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and

© Commonwealth of Australia, 2024 Public Skills Australia

	analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Waste	Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within operations, categories of waste include: • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Cost	Cost includes: • the monetary value of expenditures able to be directly identified for supplies, services, direct labour, components, cost of inventory, faults and reworks, rejects/scrap, equipment and other items used in the production of the product • allocations and estimates for indirect costs (e.g. indirect labour, rent, power and water) where a direct

© Commonwealth of Australia, 2024 Public Skills Australia

	monetary value cannot be identified
Determine customer feature/benefits	This unit does not require that customer features/benefits must be obtained by the person undertaking the unit directly contacting customers. The features/benefits may have already been determined by sales and marketing personnel and passed on to operations. However, the unit requires that the product or process must be analysed to determine how the product or process supplies the features/benefits and by which step/feature of the product or process
Performance	Performance is may be thought of as the rate of output or delivery of the performance or service compared to the rate required to meet demand for the product or service
Cycle time	Cycle time includes: • the normal time to complete an operation on a product
Pull	Pull is the concept of producing to demand, rather than for stock or some forecast

MSS405040A Manage 5S system in an organisation

Modification History

New unit, superseding MSACMT640A Manage 5S system in a manufacturing environment - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required for the overall management of the 5S system in an organisation.

Application of the Unit

This unit applies to an individual who is responsible for ensuring the smooth operation and continuous improvement of the 5S system in an organisation. This may be for an initial introduction of, or for the ongoing implementation and continuous improvement resulting from, 5S.

This unit requires the application of skills associated with problem solving, planning, communication and teamwork.

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

© Commonwealth of Australia, 2024 Public Skills Australia

Elements and Performance Criteria

1	Organise an appropriate environment for 5S	1.1	Ensure managers and other key stakeholders support and understand 5S
		1.2	Arrange for team leaders to develop/maintain skills required for 5S
		1.3	Ensure team leaders are developing/maintaining skills required in their team members
		1.4	Ensure procedures and work practices reflect 5S needs and regulatory requirements
		1.5	Practise 5S in own work
		1.6	Eliminate roadblocks to 5S
2	Audit 5S implementation	2.1	Undertake spot checks of compliance
		2.2	Review workplace and records for indicators of compliance/non-compliance
		2.3	Encourage all levels of the workforce to routinely suggest areas for improvement
		2.4	Discuss 5S routinely with team leaders to seek ideas for implementation of improvement suggestions and encourage identification of non-conformance
3	Improve 5S	3.1	Negotiate solutions to non-conformances
		3.2	Implement agreed solutions
		3.3	Work with team leaders to develop opportunities for improvements
		3.4	Provide necessary resources for improvements
		3.5	Ensure procedures and practices change to reflect

improvements

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with stakeholders on aims and objectives of 5S program in the organisation
- mentoring and monitoring team leaders in their skills and knowledge of 5S and the organisations objectives for 5S
- conducting formal and informal meetings and explaining 5S and related concepts
- reviewing regulatory requirements for implications for 5S implementation
- facilitating team goals, activities and communications and accessing resources
- problem solving 5S poor performance and problems to root cause
- identifying requirements and negotiating resources for 5S implementation across the organisation
- planning and prioritising activities of teams
- identifying problems in 5S implementation caused by gaps in skills and/or knowledge and developing options to address them

Required knowledge

Required knowledge includes:

- organisation operations and structure
- principles of efficient workplace organisation
- purposes and methodology of 5S
- operation procedures relevant to jobs in the organisation
- relevant regulatory requirements
- processes for identification of skill gaps
- methods of addressing skill gaps
- ways of encouraging team leaders and operators to find and suggest areas for improvement
- methods of making/recommending improvements
- methods of accessing required resources
- non-conformance, what they are, assessment of severity and action to be taken

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • encourage and monitor a systematic approach to implementing 5S • analyse areas and records for evidence of 5S conformance/non-conformances • manage non-conformances in implementation of 5S • lead and motivate others in achieving 5S outcomes and making improvements to the 5S systems.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads, hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence.

© Commonwealth of Australia, 2024 Public Skills Australia

	In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE)

© Commonwealth of Australia, 2024 Public Skills Australia

	• takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Procedures	Procedures may include: • work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format
Roadblocks	Roadblocks include: • all factors which are inhibiting the smooth implementation of 5S
5S	5S is a system of work organisation originally developed in Japan based around housekeeping principles. A close translation of the five stages in the housekeeping approach is: • sort • set in order • shine • standardise • sustain
Sort	Sort involves keeping only what is absolutely necessary

© Commonwealth of Australia, 2024 Public Skills Australia

	for the processes in the work area. Sort includes: • clearing the work area of all non-essential equipment and materials Non-essential items include: • those not required to either produce product, conduct process or operations or make required adjustments to equipment during process or operations
Set in order	Set in order includes: • assigning required equipment and materials appropriate locations in the work area (locations should be clearly marked and labelled to show the item and proper location)
Shine	Shine includes: • keeping the work area clean at all times. This should be carried out to a regular daily schedule against allowed time and, on most occasions, at the end of a job
Standardise	Standardising includes: • activities that help maintain the order and the housekeeping standards • using procedures and checklists developed from a procedure

Sustain	Sustain includes:
	• making sure that daily activities are completed every day regardless of circumstance
	• undertaking inspections, including:
	  • informal inspections carried out often, at least weekly
	  • formal inspections carried out at least monthly
	Specific actions should be followed up to generate continuous improvement

Items in work area	Items in work area may include: • tools • jigs/fixtures • materials/components • plant and equipment • manuals • personal items (e.g., lunch boxes and posters) • safety equipment and personal protective equipment

© Commonwealth of Australia, 2024 Public Skills Australia

	• other items which happens to be in the work area

MSS405050A Determine and improve process capability

Modification History

New unit, superseding MSACMT650A Determine and improve process capability* - Equivalent

* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

Unit Descriptor

This unit of competency covers the skills and knowledge required to determine the actual (as distinct from design) capability of a process and then to analyse that process to remove assignable causes and reduce random causes. This would typically be done by a manager or technical expert support person either working in a team, or in close liaison with key stakeholders. Process capability is typically calculated using standard deviations.

Application of the Unit

This unit applies to an individual (who may be a production manager, plant/process engineer, technical specialist or similar) who is responsible for developing plans to stabilise and then improve process capability and following agreement the implementation of the plans to improve process capability. The organisation may use either a six sigma or three sigma process.

This unit primarily requires the application of skills associated with communication in gathering and analysing data and consulting with relevant personnel. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to determine causes to variations and implement solutions. This is done in an environment using computer technology and also requires aspects of self-management and learning to ensure feedback and new learning is integrated into process improvements and operations management control systems.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Obtain data for process capability study	1.1	Identify the process requiring capability analysis including relevant procedures
		1.2	Identify customer specifications for product or service
		1.3	Obtain process capability data
2	Analyse data	2.1	Identify assignable causes of variation in liaison with relevant personnel
		2.2	Develop solutions to eliminate variation due to assignable causes in liaison with relevant personnel
		2.3	Analyse random variations for possible causes in liaison with relevant personnel
		2.4	Confirm causes of random variation
		2.5	Develop solutions to reduce random variations in liaison with relevant personnel
3	Take action to improve process	3.1	Develop plans to implement solutions
		3.2	Liaise with relevant personnel to implement solutions

© Commonwealth of Australia, 2024 Public Skills Australia

capability	3.3	Gain necessary approvals, as required
	3.4	Monitor implementation and make adjustments, as required
	3.5	Determine new/revised process capability
	3.6	Implement revised process capability regime

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using a variety of statistical methods and calculations
- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- negotiating with employees, suppliers and customers, where necessary, to achieve access to, or collection of, data
- planning process and data collection changes required for process improvement, including:
  - objectives
  - performance indicators to be monitored to indicate success of change
  - resources required
  - training required
  - communication and liaison required with employees, suppliers and customers
  - implementation period required
- analysing variations and categorising into assignable and random cause
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- working in and leading teams for data collection and process improvement
- using software computers and terminals, as required, to collect and analyse data

Required knowledge

Required knowledge includes:

- data collection methods
- data processing techniques required to establish variability and normal distribution
- calculate three sigma or six sigma processes, as relevant

© Commonwealth of Australia, 2024 Public Skills Australia

- random and non-random results and processes for recognition of assignable causes
- causes of different types of non-random results
- causes of random variation
- process understanding sufficient to translate the data into variations in the process and determine methods of controlling them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • collect or obtain data relevant process capability data from a variety of sources data • work with people and analyse data to determine assignable causes • plan and prepare improvement proposals • monitor implementation of improvement proposals.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects

© Commonwealth of Australia, 2024 Public Skills Australia

	• suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems

© Commonwealth of Australia, 2024 Public Skills Australia

	• supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Six sigma	Six sigma refers to: • a statistical tool for recording defects and determining capability which equates to only 3.4 defects per million opportunities for each product or service transaction Six sigma is also used as a general term covering a competitive systems and practices approach. Six sigma training typically covers several units of competency in this Training Package
Three sigma	Three sigma refers to: • a traditional statistical process control uses three sigma limits which equates to 3 defects per thousand opportunities for each product or service transaction
Process capability data	Process capability data includes: • customer requirements for product or service • process stability (control chart) performance • other charts and data
Procedures	Procedures may include: • work instructions • standard operating procedures

© Commonwealth of Australia, 2024 Public Skills Australia

	• formulas/recipes • batch sheets • temporary instructions and similar instructions provided for the smooth running of the plant • good operating practice as may be defined by industry codes of practice (e.g. good manufacturing practice (GMP) and responsible care) • government regulations Procedures may be: • written, verbal, computer-based or in some other format

MSS405060A Develop the application of enterprise control systems in an organisation

Modification History

New unit, superseding MSACMT660A Develop the application of enterprise systems in manufacturing - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to continuously modify and improve or develop new enterprise-wide information technology (IT) based control systems, such as Supervisory Control and Data Acquisition (SCADA), Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII) and similar. Typically the development of such a system will be in liaison with an appropriate technical expert who may be an internal expert or an external consultant.

Application of the Unit

This unit applies to an individual responsible for the development and implementation of new systems or modifications/changes to the current system. While the individual might generate the ideas for change themselves and also undertake a significant part of the final implementation, they may also be working closely with an appropriate technical expert (such as the software system supplier) who may actually make the modifications.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising skills are required to determine and implement effective enterprise systems and modifications. This unit also requires computer skills and aspects of self-management and learning to ensure feedback and new learning is integrated into system planning.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Monitor information and control needs of organisation	1.1	Check the use of current information
		1.2	Check the operation of current control systems
		1.3	Communicate regularly with key information users regarding any new or changed information control needs, including information needs from and to value stream
		1.4	Identify short comings in information and control provision
		1.5	Take appropriate action on information and control needs to meet organisational needs
2	Check the current system against organisation needs	2.1	Check the routine use of the system
		2.2	Check any system alarm or non-conformance notification and control operation
		2.3	Communicate regularly with key stakeholders about current system use and application
		2.4	Determine effect of non-conformance on enterprise system

© Commonwealth of Australia, 2024 Public Skills Australia

		2.5	Identify problems/issues
		2.6	Take appropriate action on problems and issues
3	Determine developments needed in a new or significantly modified system	3.1	Identify needs requiring a new system or development of modifications to the current system
		3.2	Draft scope, specifications and outcomes required
		3.3	Liaise with key stakeholders and relevant technical experts to refine scope, specifications and outcomes needed in new or modified system
		3.4	Agree final scope, specifications and outcomes
4	Develop system	4.1	Develop project plan
		4.2	Ensure ongoing consultation with all relevant stakeholders
		4.3	Manage development project
		4.4	Manage trialling of modified system
		4.5	Ensure modified system meets organisational requirements
5	Implement modified system	5.1	Liaise with all affected personnel
		5.2	Develop and agree an implementation strategy
		5.3	Ensure all personnel have required skills
		5.4	Implement modified system
		5.5	Monitor implementation and modify, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2024 Public Skills Australia

Required skills

Required skills include:

- identifying organisation needs from enterprise control system, including:
  - critical features (e.g. occupational health and safety (OHS), regulatory compliance and emergency shutdown)
  - essential features and operation controls
  - access levels and access security
  - cost of installation and operation
  - interfaces (e.g. human-machine, machine-machine, and system-system, e.g. SCADA with financial control systems)
- correctly accessing and inputting information
- communicating with stakeholders on information and control requirements
- matching monitoring, control and reporting capability of system to organisation requirements
- analysing features of enterprise system and determining training needs
- solving problems to root cause
- monitoring trials and initial implementation of enterprise control system

Required knowledge

Required knowledge includes:

- capability of resource planning/SCADA systems, as appropriate
- information and control needs of organisation/process
- project management
- support/training/skill development mechanisms available for access by personnel

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • analyse organisation needs and match to enterprise control system features • determine critical features required in enterprise control system • modify system as a result of trials or changing needs.

© Commonwealth of Australia, 2024 Public Skills Australia

Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

© Commonwealth of Australia, 2024 Public Skills Australia

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as SCADA software, ERP systems, MRP and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
SCADA	SCADA refers to: • a number of systems which automatically collect critical process data, perform required mathematical

© Commonwealth of Australia, 2024 Public Skills Australia

	manipulations on it and then make control decisions and/or give required information personnel for action In the continuous operations sector, the SCADA system is sometimes integrated into other sophisticated computer control systems, such as distributed control system (DCS) and indeed these systems do merge in advanced systems. These organisations may simply refer to their SCADA as the DCS or other similar term (such as the proprietary name of the computer system)
Resource planning	Planning software is a general term applied to a number of software systems which integrate a range of business information, such as: • finance • logistics maintenance and production It is frequently referred to by names, such as ERP and MRP/MRPII
Value stream	The value stream begins with the customer and includes all actions (both value adding and non value added) by both internal sections/departments and external organisations to meet a customer requirement. Depending on the operations and the customer requirement stages where value stream actions may occur include: • sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support

MSS405061A Determine and establish information collection requirements and processes

Modification History

New unit, superseding MSACMT661A Determine and establish information collection requirements and processes - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to determine what information is needed to support decision-making in a competitive systems and practices environment and then to set about establishing required information collection systems. This would usually be done as part of a team and would require consultation with all key stakeholders.

Application of the Unit

This unit covers the determination of data needs and collection methods for an organisation or specific plant or process. This will typically be done in liaison with a wide range of people, each of whom will have their own specific information requirements. There will need to be balanced and interpreted into a workable set of data to be collected.

This unit is primarily focused on those decisions which are non-routine and so need specific collection of data, or for those decisions which are routine, the establishment of a routine data collection protocol to allow for the decisions to be made based on appropriate, reliable data.

This unit primarily requires the application of communication and problem solving skills associated with determining information requirements and processes of information collection. Initiative and enterprise, and planning and organising are also required to ensure information targets specific factors. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of processes.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse decisions to be made	1.1	Identify personnel to be included in the analysis process
		1.2	Determine the consequences of the decisions in liaison with relevant personnel
		1.3	Determine the variables which can be controlled
		1.4	Determine the variables which cannot be controlled
		1.5	Determine the consequences of a change in these variables in liaison with affected personnel
2	Define factors which cause variables to change	2.1	Identify factors which are able to be controlled
		2.2	Identify factors which are not able to be controlled
		2.3	Identify means of measuring these factors, or indicators for the values of these factors
		2.4	Compile a list of measurements/indicators required.
		2.5	Communicate with team members and involve them in development of factors and changes to ensure awareness and facilitate learning

© Commonwealth of Australia, 2024 Public Skills Australia

3	Develop data collection protocols	3.1	Determine methods of making measurements
		3.2	Determine methods of quantifying indicators
		3.3	Determine the benefit/cost of automated (or other) collection of data
4	Develop systems to produce required information	4.1	Identify user of information and their needs and abilities
		4.2	Determine data processing needs to produce required information
		4.3	Determine information distribution channels
		4.4	Determine skill development need for recipients of information
		4.5	Implement systems to produce information
		4.6	Monitor implementation and make adjustments, as required

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating and negotiating at all levels in the organisation and value stream and with individuals of different levels of literacy and numeracy
- negotiating with employees, suppliers and customers, where necessary, to achieve access to, or collection of, data
- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in a wide variety of contexts
- developing or sourcing indicators for factors not easily measured
- liaising with stakeholders on acceptable limits for benefits and costs in data collection procedures

Required knowledge

© Commonwealth of Australia, 2024 Public Skills Australia

Required knowledge includes:

- business needs of the organisation/section
- information needs of individuals within the organisation
- possible data available/potentially available to the organisation
- methods of collecting available data
- relationship between data available and information required
- methods of converting data into useful information
- methods of developing indicators for factors resistant to measurement

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • determine relevant data, including variables for decisions • determine factors and variables subject to control • develop strategies for data collection that deliver the greatest overall benefit • implement data collection systems.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment.

© Commonwealth of Australia, 2024 Public Skills Australia

	Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and

© Commonwealth of Australia, 2024 Public Skills Australia

	proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Variables	Variables for this unit are: • measurable inputs, outputs or characteristic of processes or operations that have no fixed quantitative value.
Factors	Factors include: • any variable that is a part of, contributes to, or leads to the quantum of another variable. Ideally factors themselves should be able to be measured. However, in some operations there may be factors that are resistant to objective measurement (e.g. creativity in design, customer colour preferences and life cycles for new products). In these cases indicators for the value of these factors may need to be developed (e.g. through surveys, approximations or experiments)
Decision	A decision may include: • a change, improvement, new/altered process or system which requires data in order to monitor it or

MSS405070A Develop and manage sustainable energy practices

Modification History

New unit, superseding MSACMT670A Develop and manage sustainable energy practices - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to identify opportunities for, and make improvements in, sustainable energy practices in an organisation. Areas covered include efficient use of raw materials, management of waste, electricity conservation, heat conservation and management, water management, environment protection and environment obligations of enterprises.

Application of the Unit

This unit applies to an individual who is required to establish systems for improved energy practices in an organisation. The unit involves analysis of energy used in processes and operations and categorising the energy use according to lean principles. The unit covers categorising energy into necessary use and waste with the waste being further categorised into necessary waste and unnecessary waste. Strategies for eliminating or minimising energy waste are covered with benefit/cost analyses being required for strategies.

This unit primarily requires the application of communication and problem solving skills associated with collecting and analysing information. An ability to analyse energy use of technology or processes will be applied. Initiative and enterprise, and planning and organising are also required to develop plans for efficient energy use. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into the development of processes.

Where the quantum of energy used is not easily available or a formal calculation of energy use is required through an energy balancing calculation (e.g. for regulatory purposes) the unit *MSS015011A Conduct a sustainability energy audit* may also be required.

Licensing/Regulatory Information

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse energy use	1.1	Identify all energy consuming processes
		1.2	Determine quantity and nature of energy consumed
		1.3	Analyse energy consumed and generated in different parts of the process
		1.4	Determine source of energy consumed in process
2	Develop energy conservation plans	2.1	Determine the efficiency of use of energy by all energy consuming processes
		2.2	Determine causes of low efficiency of use
		2.3	Develop plans for increasing the efficiency of energy use
		2.4	Determine benefit/cost of plans
3	Develop energy trading plans	3.1	Compare energy generating activities with energy consuming activities
		3.2	Determine feasibility of energy consuming activities using energy generated by other activities

© Commonwealth of Australia, 2024 Public Skills Australia

		3.3	Develop plans for energy trading
		3.4	Determine benefit/cost of plans
4	Investigate alternative sources of energy	4.1	Develop a specification for energy required
		4.2	Identify a range of sources for that energy
		4.3	Determine benefit/cost for alternative energy sources
5	Develop plans for more efficient energy use	5.1	Compare benefit/costs for different alternatives developed
		5.2	Rank proposals based on benefit/cost compare to limited resources
		5.3	Check proposals meet regulatory requirements
		5.4	Recommend proposals for improving energy efficiency
6	Implement selected plans	6.1	Liaise with relevant people to implement energy efficiency plans
		6.2	Follow through to ensure implementation occurs
		6.3	Monitor implementation and make adjustments, as required
		6.4	Check new energy usage to ensure improvements have occurred

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- using common units, symbols and formulae common in energy-related calculations
- applying mathematics

© Commonwealth of Australia, 2024 Public Skills Australia

- communicating with a variety of groups and individuals using different media
- solving complex problems individually and as part of a team
- reviewing range of existing data for suitability and determining where new data gathering is required
- planning and organising complex whole of organisation activities relating to energy use, including objectives, timelines, implementation procedures and monitoring strategy
- determining where energy balancing techniques are required
- accessing manufacturers' data and other sources of energy consumption for individual equipment and processes
- mapping processes and energy flows
- calculating, manipulating and interpreting numerical data
- ranking energy consumption and waste for area, sites or processes
- calculating the efficiency of use of energy by equipment and processes
- consulting with technical and operative staff on possible non-obvious energy wastes
- consulting and negotiating with stakeholders on implementation process for sustainability improvement

Required knowledge

Required knowledge includes:

- types and sources of energy
- methods of analysing energy efficiency for different types of energy
- methods of converting energy values from one form to another
- alternative sources of energy
- principles of energy efficiency
- relevant regulatory/legislative requirements
- energy trading schemes and procedures
- organisation and process needs for energy

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • gather appropriate data to allow energy analyses • categorise energy use into necessary use and waste • develop options for energy reduction including

© Commonwealth of Australia, 2024 Public Skills Australia

	presenting of alternatives and benefit/cost analyses • develop strategies and plans for energy use and monitor implementation.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

© Commonwealth of Australia, 2024 Public Skills Australia

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise

© Commonwealth of Australia, 2024 Public Skills Australia

	• the work organisation, culture, regulatory environment and the industry sector
Waste	Waste (also known as muda in the Toyota Production System and its derivatives) is any activity which does not contribute to customer benefit/features in the product. Within operations, categories of waste include: • excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers
Necessary waste	Necessary waste is: • any activity or cost which does not contribute directly to customer benefit/feature in the product, and which cannot be avoided (e.g. regulatory compliance and fixed costs). Necessary waste cannot be eliminated but should be managed
Unnecessary waste	Unnecessary waste is: • any activity or cost which does not contribute directly to customer benefit/features in the product and can be avoided. Unnecessary waste should be eliminated as quickly as practical
Energy	Energy includes: • all sources of energy used by the process be it electricity, gas or mobile transport fuel The uses of the energy will also be potentially wide and include: • heating and cooling • moving materials (e.g. pumps and conveyors) • modifying materials (e.g. cutting, forming, weaving, knitting, reacting, moulding, extruding and mixing) • generating pressure/vacuum or providing motive power for equipment and transport
Energy trading	Energy trading means both formal trading where the organisation investigates alternatives to:

© Commonwealth of Australia, 2024 Public Skills Australia

	• the buying of energy through alternative suppliers and tender processes • selling of excess energy produced by the organisation to energy companies or other producers and • internal trading of excess energy from one area to an energy consuming area elsewhere in the organisation

MSS405075A Facilitate the development of a new product

Modification History

Release 2 - Content error in Range and Evidence Guide corrected. Prerequisite unit code corrected - MSS404052A

Release 1 - New unit, superseding MSACMT675A Facilitate the development of a new product* - Equivalent

* New prerequisite *MSS404052A Apply statistics to operational processes* superseding MSACMT452A Apply statistics to processes in manufacturing

Unit Descriptor

This unit of competency covers the skills and knowledge required to facilitate the development of a new or evolutionary product within an existing range of products and encompasses design for manufacture, determining the process capability and the facilitation of its initial production.

Application of the Unit

This competency applies to an individual responsible for the development of a new product. The unit assumes an initial product design has been prepared by a designer and also assumes a working knowledge of all main processes and materials so that an informed choice can be made between them. The person will normally be a manager or technical expert and be required to work closely with a range of other management and operations personnel.

The unit requires balancing the business and technical sides of the new product and would typically be done as part of a cross-functional team. This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to facilitate the development of a new product. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into competitive systems and practices.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Confirm design brief of new product in consultation with relevant people	1.1	Review product design with customer and other key stakeholders and agree on technical specification, aesthetic requirements, timelines, cost and other market requirements
		1.2	Determine any regulatory, industry code/intellectual property requirements for product
		1.3	Identify any required tooling, process or equipment needs
		1.4	Confirm design brief, including relevant drawings, to meet needs
		1.5	Determine design brief conforms to organisation objectives and capability
		1.6	Obtain approval on total design brief from all relevant personnel
2	Determine material requirements for product	2.1	Select appropriate materials or combination of materials/ components in liaison with key stakeholders
		2.2	Determine material/component testing and evaluation regime required to meet product end use requirements,

© Commonwealth of Australia, 2024 Public Skills Australia

			including regulatory/industry code requirements
		2.3	Arrange for testing and evaluation of trial materials/ components
		2.4	Guide material trial process and interpret material trial results
		2.5	Determine final materials/components specifications and details of value chain
3	Determine process requirements for product	3.1	Select appropriate process to make product in liaison with key stakeholders and based on relevant factors
		3.2	Determine any special process/equipment requirements for this product
		3.3	Communicate with production personnel to determine any concerns and/or training or other needs
		3.4	Adjust the design, as required, to satisfy customer and production needs
4	Ensure process needs for new product have been met	4.1	Liaise with equipment design/procurement personnel
		4.2	Interpret hardware specifications and ensure they are appropriate for the job required
		4.3	Liaise with process personnel to ensure appropriate draft procedures for new product have been developed
		4.4	Validate product cost and design meets organisation requirements and capability
5	Trial new product through the process	5.1	Design trialing procedure to deliver required information
		5.2	Liaise with relevant stakeholders
		5.3	Ensure health safety and environment (HSE) requirements are observed
		5.4	Coordinate the trialling of the new product
		5.5	Interpret product trial results and guide product trial

© Commonwealth of Australia, 2024 Public Skills Australia

			process
		5.6	Tune process to optimise production of new product
6	Determine process capability	6.1	Plot appropriate statistical process control charts
		6.2	Determine confidence limits
		6.3	Compare confidence limits with product specification
7	Coordinate product trials	7.1	Determine product testing and evaluation regime required to meet end use requirements, including regulatory/industry code requirements
		7.2	Arrange for testing and evaluation of trial product/prototype
		7.3	Interpret product trial results and guide product trial process
		7.4	Determine final product specification in liaison with key stakeholders
		7.5	Make required changes to materials, process and equipment
8	Implement standard procedures for new product	8.1	Monitor initial production and, in liaison with appropriate team members, adjust process, conditions and materials to ensure the product and process outcomes conform to customer, regulatory and organisation requirements
		8.2	Ensure process specifications are updated and reflect the optimised operation developed
		8.3	Ensure standard operating procedures are correct for the new product
		8.4	Ensure equipment and other hardware records are updated to reflect additions/changes
		8.5	Ensure project records are complete and all required reports have been completed and submitted

© Commonwealth of Australia, 2024 Public Skills Australia

8.6 Archive records according to company procedure

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- selecting and justifying the selection of:
  - type of material/material specification
  - appropriate process for a range of product/market applications
  - material and product testing procedures
- applying theoretical principles to predict:
  - properties of product based on materials selected
- identifying effects of processes and processing on the final properties of the product mathematically determine:
  - product cost estimates
  - process time
  - cost/benefit to organisation of new product
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- interpreting and making recommendations based on:
  - field test results
  - market analysis data
  - trialling data
  - organisation objectives and business plan
  - equipment and operations capacity

Required knowledge

Required knowledge includes:

- materials, equipment and process sufficient to choose an appropriate combination of materials and process to achieve the end use function of the product
- enterprise procedures and relevant regulatory requirements along with the ability to implement them within appropriate time constraints and work standards

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of their ability to: • ensure the development of a new product meets general organisation guidelines and objectives • liaise with the required people • optimise the process for the new product at the completion of the development phase • assess materials and components characteristics required in a design including material grades and properties and the effects of processing on materials and components • use trial outcomes to determine standard procedures for manufacture and/or operation of new product.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of

© Commonwealth of Australia, 2024 Public Skills Australia

	contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S

© Commonwealth of Australia, 2024 Public Skills Australia

	• continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector

Organisation objectives and requirements	Organisation objectives and requirements may include:
	• Board or management guidelines on:
	  • cost/profit requirements for new products (e.g. minimum return and capital expenditure limits)
	  • encouragement/discouragement of different types of products (e.g. on sustainability, ethical or other non-individual customer related criteria)
	• potential or actual capacity conflicts with other customers or product/process activities
	• activities that require/may require community consultation (e.g. on noise or other environmental grounds)

Tools and equipment	Tools and equipment may include: • understanding of use of all standard processing equipment • relevant personal protective equipment
Typical regulatory requirements	Typical regulatory requirements may include: • occupational health and safety (OHS) • environmental regulations • structural codes • product/industry specific requirements
Typical problems	Typical problems may include: • defining product end-use requirements in terms

© Commonwealth of Australia, 2024 Public Skills Australia

	meaningful to the product design and manufacture • matching suitable materials and processes to the product needs and company expertise and facilities • matching (and improving) process capability to product tolerances
Relevant factors	Relevant factors may include: • type of material • dimensional precision of product • length of run/number of products • required aesthetics • size and complexity of product • available capital funding • process equipment available • HSE factors

MSS405081A Develop a proactive maintenance strategy

Modification History

New unit, superseding MSACMT681A Develop a proactive maintenance strategy - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop and implement a proactive maintenance strategy for an organisation. The unit recognises that there are a number of predictive or proactive maintenance strategies, such as total productive maintenance (TPM) and reliability centred maintenance (RCM).

Application of the Unit

This unit applies to an individual responsible for developing a proactive maintenance strategy for an organisation. Typically the organisation will also be implementing other competitive systems and practices. The unit applies to the selection of appropriate strategies, initial development and implementation as well as application of the strategies to new areas and the improvement of operation in existing areas. This would typically be done in a team environment and in consultation with all key stakeholders.

This unit primarily requires the application of skills associated with communication in gathering, analysing and applying information and consulting with stakeholders. Teamwork, problem solving, initiative and enterprise, and planning and organising are required to develop and implement a predictive maintenance strategy. Strategies will incorporate the maintenance requirements of relevant technologies. This unit also requires aspects of self-management and learning to ensure feedback and new learning is integrated into maintenance strategies.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Determine appropriate analytical techniques	1.1	Liaise with key stakeholders to determine objectives of maintenance strategy
		1.2	Examine current maintenance situation to determine major areas requiring improvement
		1.3	Compare possible strategies, techniques and tools against organisation needs
		1.4	Select possible strategies, techniques and tools
		1.5	Confirm selected strategies, techniques and tools with key stakeholders
2	Develop reliability strategies	2.1	Select preferred maintenance strategy
		2.2	Examine and adapt strategy to organisation needs and priorities
		2.3	Examine and adapt techniques and tools required to implement strategy
		2.4	Liaise with key stakeholders to develop an implementation plan
		2.5	Identify key information and performance indicators required
3	Implement strategy	3.1	Identify data collection required
		3.2	Identify hardware and other resources required

© Commonwealth of Australia, 2024 Public Skills Australia

		3.3	Identify skill needs required in consultation with key stakeholders
		3.4	Ensure all resources/training are available
		3.5	Implement strategy
4	Monitor implementation of strategy	4.1	Compare information/performance indicators with desired levels
		4.2	Liaise with key stakeholders regarding strategy issues
		4.3	Identify areas requiring adjustment
		4.4	Make required adjustments

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- communicating with others using a variety of media and techniques
- adapting personal communication strategy to different levels of literacy and numeracy in target individuals and groups
- working in a team
- analysing quantitative and qualitative information to determine proactive maintenance strategy options
- solving problems to root cause
- applying basic arithmetic and statistical techniques
- planning complex strategies, including consideration of timelines, resources, benefit/cost, implementation requirements, and monitoring and adjustment considerations
- reading and interpreting engineering specifications, drawings and charts
- using information system terminals and computers
- prioritising options, including reasons and recommendations
- recording data

Required knowledge

© Commonwealth of Australia, 2024 Public Skills Australia

Required knowledge includes:

- characteristics and strengths of different types of strategies, techniques and tools, such as:
  - TPM
  - RCM
  - mean time between failure (MBTF)
  - failure mode effects analysis (FMEA)
  - condition monitoring
  - root cause analysis (RCA)
- holistic costs of different strategies combining cost of maintenance with costs of lost production, sales, and so on, as relevant to the organisation
- business goals sufficient to match the strategy to the business needs
- strategic thinking and its application to proactive maintenance
- principles of process equipment and how to improve its reliability
- resources required and how to obtain them

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • consider a variety of proactive maintenance strategies for suitability to an organisation • consult operators, maintenance, management and other stakeholders in decisions on proactive maintenance strategies • implement selected strategies • monitor performance to selected indicators and make improvements to selected proactive maintenance strategies.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented

© Commonwealth of Australia, 2024 Public Skills Australia

	changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning for appropriate portions • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

© Commonwealth of Australia, 2024 Public Skills Australia

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
OEE	OEE is the combination of the main factors causing loss of productive capacity from equipment/plant and is: *OEE = availability x performance x quality rate* where: • availability takes into account losses due to breakdown, set-up and adjustments • performance takes into account losses due to minor

© Commonwealth of Australia, 2024 Public Skills Australia

	stoppages, reduced speed and idling • quality rate takes into account losses due to rejects, reworks and start-up waste
MTBF	MTBF is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is failing. There are many possible causes of any problem. Eliminating some will have no impact, others will ameliorate the problem. However, elimination of the root cause will eliminate the problem. There should only be one root cause for any problem and so the analysis should continue until this one cause is found. Elimination of the root cause permanently eliminates the problem. Depending on the equipment, operations and procedures of the organisation, alternative statistical records of maintenance and maintenance-related events may be substituted for MTBF providing they relate strategies for improving OEE.
FMEA	FMEA is a systematic approach that identifies potential failure modes in a system, product, or operations/assembly operation caused by either design or operations/assembly process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring. Some industry sectors have highly adapted forms of FMEA and may practice traditional FMEA in say their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification. HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability.
Condition monitoring	Condition monitoring is used to describe the process of analysing the implications of condition monitoring data for proactive maintenance whether it be obtained from non destructive testing (NDT) reports, visual assessment by experts, diagnostic reports obtained from SCADA or other enterprise or equipment software and product or process quality analyses. It does not require the actual

© Commonwealth of Australia, 2024 Public Skills Australia

	undertaking of the NDT or condition monitoring assessment or test. If this is required appropriate units from other Training Packages will be required.

MSS407003A Analyse process changes

Modification History

New unit, superseding MSACMG703A Analyse process changes - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to quantitatively analyse past changes made in an organisation's the operations, systems, process or environment to ensure the quantum of expected change has been achieved and that gains are maintained and are used as a basis for further gains.

The unit includes statistical and other mathematical analysis of data, methods for capturing data on implemented changes (quantitative and qualitative) and producing useful information from this data. It includes consultation with stakeholders both for data validation and consensus decision-making for future improvements.

Application of the Unit

This unit applies to team leaders, technical experts and people with a similar sphere of influence/scope of authority and responsibility who are already have a knowledge of statistics used in managing operations and of process capability improvement and some knowledge of factorial design, the selection and analysis of appropriate metrics, and the discrimination between valid and invalid interpretations of data. Where this is not the case *MSS404050A Undertake process capability improvements* and *MSS404052A Apply statistics to operational processes* may be completed to supply the necessary statistical skills.

If this unit is being applied to a complex change process or a complex operations process, it may be an advantage to have completed *MSS405052A Design an experiment* before completing this unit. Where this unit is being applied in a six sigma environment then knowledge and skill in six sigma techniques may also be an advantage. *MSS405053A Manage application of six sigma for process control and improvement* can be completed to supply these skills.

The unit applies to reviews of both intended and unintended consequences of change and the effectiveness of the implementation of the change. This unit is not intended to be applied to a technical or engineering review of a major capital expenditure or similar.

This unit takes a largely quantitative approach to the review. For skills associated with a more qualitative review refer to *MSS407005A Undertake a qualitative review of a process change*.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Analyse a change	1.1	Identify changes which have occurred
		1.2	Select a change or group of related changes to analyse
		1.3	Determine the initiation of the selected change
		1.4	Identify relevant metrics and predicted values for these metrics
		1.5	Gather data for these metrics prior to the change
		1.6	Gather data and information on the implementation of the change
		1.7	Gather data for these metrics after the change
		1.8	Survey all key metrics and identify any where variations may correlate with the change being analysed
		1.9	Discuss results of change with key stakeholders and

© Commonwealth of Australia, 2024 Public Skills Australia

			identify other possible (qualitative or quantitative) results of the change
		1.10	Analyse this data to determine the results of the change
2	Review results of change with stakeholders	2.1	Identify trends over time in all relevant metrics
		2.2	Analyse correlated metrics to determine causal relationship
		2.3	Audit health, safety and environment (HSE) impacts as a result of the change
		2.4	Present information in a form understandable by stakeholders
		2.5	Discuss analysed information with relevant stakeholders
		2.6	Modify information based on stakeholder input, as required
		2.7	Develop a consensus view of the result of the change which is supported by the information available
		2.8	Validate the consensus view with stakeholders
3	Identify future improvements	3.1	Discuss lessons learned from the change with stakeholders
		3.2	Capture key knowledge in accordance with systems and procedures
		3.3	Identify future improvements in collaboration with team members
		3.4	Validate identified changes with stakeholders
		3.5	Obtain sign off from process/system owner
		3.6	Start the process for implementing future improvements
		3.7	Check that the planned improvements are occurring
		3.8	Take action to sustain improvement by standardising

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- researching past performance of plant, operations, products and procedures, including metrics used
- identifying trends, causal relationships and correlations in metrics
- communicating and explaining quantitative data with others across a range of numeracy and literacy levels
- analysing views and reasons put forward by others on past performance and relating to evidence
- analysing views and reasons put forward by others for future changes and improvements and form recommendations
- identifying key HSE strategies and risks for area of responsibility and identifying sources of expert assistance
- preparing submissions and presenting case for future changes

Required knowledge

Required knowledge includes:

- competitive systems and practices principles, processes and techniques
- organisational goals, products and processes
- processes and procedures for continuous improvement in the workplace
- statistical process control (SPC) and principles
- methods of determining the impact of a change using quantitative analysis of process data, including advanced statistical/mathematical analysis and basic qualitative techniques
- organisation metrics
- sources of data (actual and possible) within the organisation and the value stream
- range of typical metrics, their applications and limitations

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment

© Commonwealth of Australia, 2024 Public Skills Australia

Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • analyse process changes • identify changes • gather data and information over a period and range that will provide a valid basis for analysis • select and use appropriate data analysis tools • present information in a suitable form • obtain a consensus view of the results of the change • determine the lessons to be learned and future improvements to be undertaken.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess

© Commonwealth of Australia, 2024 Public Skills Australia

	underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving

© Commonwealth of Australia, 2024 Public Skills Australia

	• run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where changes include areas covered by industry codes of practice, and/or Australian/international standards, the latest version must be used
Gather prior data	Where all suitable data was not collected prior to the change a suitable proxy for the data will be needed
HSE	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Change	Changes may: • be to plant, operations, products, procedures or practice • arise from continuous improvement (or an improvement event/project) or implementing new products, technology or systems • may have been intended to make an improvement or to implement new products, technology or systems • include the implementation of a change Changes do not include an engineering review of a major capital expenditure or similar review
Initiation of change	Changes need to be identified as either deliberately or not deliberately initiated. Where a change was not deliberately initiated then the causal factors for the change need to be identified
Correlated metrics	Correlated metrics include: • any metric which appears to show a chronological correlation with the change being analysed. These metrics need to be examined to determine if the change has a causal relationship or is simply coincidental
Presentation of information	Information may be presented:

© Commonwealth of Australia, 2024 Public Skills Australia

	• in appropriate visual forms (e.g. graphs, charts and noticeboards • verbally or other forms able to be understood and used by stakeholders
Stakeholders	Stakeholders may include: • work team members • value stream members • managers
Results of change	The change results may include: • an initial improvement followed by a return to previous performance • continued improvement • continued detriment or other variations over time
Improvements	Improvements may: • be to operations, process, plant, procedures or practice • include changes to ensure positive benefits are maintained
Sustaining improvement	Improvement may be sustained by including it in: • standard procedures and work instructions • standard practice • other relevant documents and practices
Team leader	Team leader may include: • any person who may have either a permanent or an ad hoc role in facilitating the function of a team in a workplace

MSS407012A Lead a problem solving process to determine and solve root cause

Modification History

New unit, superseding MSACMG712A Lead a problem solving process to determine and solve root cause - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to guide or lead a problem solving process to solve complex and/or unusual problems. The problem solving process will usually involve the use of either real or nominal groups to determine the root cause and propose the solution.

Application of the Unit

This unit will typically be undertaken by managers and/or technical experts who are confronted by a complex problem to which they need to develop a solution. The problem may be related to any area or process within the organisation or in the value stream and may have been formally presented to the individual for consideration or arise as part of other work.

The person may or may not have the required technical expertise for the particular problem, although the problem will require technical expertise to be solved. The problem may be capable of being adequately defined at the beginning of the problem solving activity, or may be progressively defined through continued iterations of the problem solving activity.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Recognise complex problem	1.1	Identify a complex issue which needs to be addressed
		1.2	Undertake an initial investigation of the issue
		1.3	Determine initial areas of expertise and data which may be required to analyse the problem
		1.4	Develop an initial definition of the problem
2	Develop problem solving methodology	2.1	Draft a problem solving methodology
		2.2	Develop required approaches and protocols for obtaining required data and information
		2.3	Establish group to assist with problem solving
		2.4	Allocate tasks, responsibilities and reporting arrangements to group
		2.5	Develop arrangements for consultation with required people outside of group
3	Analyse problem	3.1	Apply methodology
		3.2	Obtain data/information
		3.3	Review problem definition
		3.4	Review methodology
		3.5	Obtain additional data/information as required

© Commonwealth of Australia, 2024 Public Skills Australia

4	Identify root cause	4.1	Map causal links for the problem
		4.2	Determine indicators of the problem or the problem precursors
		4.3	Identify causes which can be controlled/brought under control
5	Develop a solution	5.1	Develop solutions for controllable causes
		5.2	Determine benefit/cost for proposed solutions
		5.3	Investigate proposed solutions for efficacy
		5.4	Select the best available solution
		5.5	Obtain necessary support and authorisations for proposed solution
6	Check problem is solved and standardised	6.1	Monitor indicators of problem/problem precursor
		6.2	Review problem solution/implementation as required
		6.3	Ensure appropriate solution is standardised

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- cooperating and working with others, both internally and externally to the work group
- researching and collating information from a variety of sources, including non-obvious sources
- analysing and planning in highly varied and/or highly specialised contexts
- quantitative and qualitative data interpretation and application skills
- communicating effectively (both receiving and sending communications)
- applying problem solving methodology, including:

© Commonwealth of Australia, 2024 Public Skills Australia

  - cross-functional problem solving team
  - cross-functional nominal group (virtual team)
  - consulting and or brainstorming with members from outside the organisation on some basis
  - input from other members of the value stream
  - the use of known/proprietary problem solving approaches or some synthesis of methods
  - own or commissioned research either in whole or in part
- prioritising possible solutions on benefit/cost basis and value to the customer
- selecting solution and checking efficacy, including checking:
  - the solution breaks the causal tree
  - other causes are not able to cause the problem
  - benefit/cost ratio is acceptable
  - solution can be implemented
  - permanence of solution
- standardising solutions by:
  - checking that implemented solution solves the problem
  - solution can be applied to all relevant standards within the organisation, including:
    - standard operating procedures/work instructions
    - actual work practice
    - maintenance manuals and similar
    - product and/or process specifications

Required knowledge

Required knowledge includes:

- organisational goals, products and processes
- sources of data (actual and possible) within the organisation and the value stream
- understanding of the techniques and methodologies of formal problem solving
- data required for problem solving and alternative/proxy data sources
- benefit/cost analysis

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and	A person who demonstrates competency in this unit must

© Commonwealth of Australia, 2024 Public Skills Australia

evidence required to demonstrate competency in this unit	be able to provide evidence of the ability to: • undertake complex problem identification • establish appropriate methodologies, including establishing team responsibilities, to achieve root cause identification • prioritise solutions • recommend solutions and implementation procedures within the organisation and the value stream • evaluate implementation of solutions • standardise solutions.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to

© Commonwealth of Australia, 2024 Public Skills Australia

	accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull- related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree

© Commonwealth of Australia, 2024 Public Skills Australia

	Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector

Complex problem	A complex problem may be described as one which has several of the following characteristics:
	• requires going into the value stream for data/information
	• is wider than just applying to a single job
	• applies to less common solutions or problems
	• requires a higher level of knowledge and skill (which may or may not be possessed directly by the person solving the problem), such as:
	  • significant specialist knowledge
	  • significant specialist skill
	  • more theory/understanding of technology or process
	• data is not easily available and may need particular strategies to obtain, such as:
	  • overcoming resistance from people including employees, customers or suppliers
	  • extracting data not regularly reported from SCADA or similar systems
	  • the problem and/or proposed solutions require reporting or authorisations from a Board or external authorities, such as licensing or regulatory bodies

• **Problem recognition**	The problem recognition may include: • an obvious and current complex problem • an intractable problem which has been known about and 'lived with' for some time • a complex problem which has not been previously recognised The problem may, or may not be capable of complete definition at the start of the problem solving process (so requiring an iterative process)
Group	Problem will be such that it is beyond the scope of an individual to solve and so a group is required. The group

© Commonwealth of Australia, 2024 Public Skills Australia

	may be: • real (i.e. physical or face to face) • nominal (i.e. never meets and may not know who each other is) • or any combination in between

MSS408005A Develop the learning processes of the operations organisation

Modification History

New unit, superseding MSACMG805A Develop the learning processes of the manufacturing organisation - Equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to ensure that knowledge relevant to performance improvement and the meeting of customer requirements is gathered, applied and retained by the organisation and individuals. This unit focuses on the processes in an organisation for extracting learning as it appears, capturing it in a manner which makes it available for future use and applying it to work.

Application of the Unit

The unit is intended for managers and people with a similar sphere of influence and scope of authority and responsibility who are familiar with competitive systems and practices and workplace learning. Where this is not the case *MSS405012A Manage workplace learning* may be completed to supply the necessary skills.

The equivalent team leader unit is *MSS407008A Capture learning from daily activities in a organisation*.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.

Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Identify processes generating new knowledge	1.1	Identify any existing systems for organisational learning
		1.2	Encourage the open discussion of current performance and problems
		1.3	Facilitate consensus problem solving
		1.4	Ensure both qualitative and quantitative knowledge are captured
		1.5	Validate findings with relevant managers
2	Develop knowledge capture and retrieval systems	2.1	Obtain required approvals
		2.2	Provide useable systems for recording of problems, causes and solutions
		2.3	Facilitate the extraction of knowledge from records
		2.4	Ensure all project work captures generated knowledge
		2.5	Ensure knowledge is in a form able to be applied by the organisation and its personnel
		2.6	Develop knowledge storage and retrieval systems
		2.7	Monitor knowledge capture system use and suitability
3	Improve the application of	3.1	Ensure knowledge is distributed to and available where needed

© Commonwealth of Australia, 2024 Public Skills Australia

	organisational knowledge	3.2	Ensure knowledge system is part of standard procedures and practices
		3.3	Encourage the routine use of the knowledge system
		3.4	Facilitate open discussion of knowledge and knowledge system
		3.5	Identify inhibitors to greater use of knowledge
		3.6	Take actions to improve application of organisational knowledge
4	Evaluate and improve learning processes	4.1	Review use of knowledge system
		4.2	Evaluate benefits obtained from knowledge system
		4.3	Identify areas where the knowledge system is not being fully utilised
		4.4	Identify areas where greater benefits could be obtained from the knowledge system
		4.5	Discuss areas of possible improvements with relevant managers and other stakeholders
		4.6	Develop consensus improvement plans for the knowledge system
		4.7	Obtain required approvals
		4.8	Train personnel, as required, to improve use
		4.9	Implement improvement plans

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making

© Commonwealth of Australia, 2024 Public Skills Australia

- communicating across all levels in an organisation
- preparing reports and recommendations
- implementing knowledge capture systems that cover:
  - existing plant and equipment modifications
  - changes to procedures and operations for information technology (IT) related systems and equipment
  - operations procedure and practice changes
  - new plant, equipment and processes
  - daily problem solving and continuous improvement activities
  - specific improvement events (e.g. kaizen blitz)
  - incident reports
  - reliability/maintenance reports
  - customer feedback
  - feedback from value stream members
- accessing and analysing current performance, including:
  - output indicators
  - input indicators
  - health, safety and environment (HSE) indicators
  - reliability/maintenance indicators
  - continuous improvement indicators
- implementing, monitoring and adjusting improvements to the knowledge system, including:
  - improving integration of knowledge system with other organisation and value stream development processes
  - improving identification of new knowledge
  - improving capture ease and efficiency
  - improving search and application functionality
- analysing performance outside the normal range (good or bad) and assignable cause

Required knowledge

Required knowledge includes:

- competitive systems and practices principles and tools, including:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing
  - process mapping
  - establishing customer pull
  - incremental and breakthrough improvement

© Commonwealth of Australia, 2024 Public Skills Australia

  - setting of key performance indicators (KPIs)/metrics
  - identification and elimination of waste (muda)
- organisational goals strategies, operations and processes
- approval processes within organisation
- cost/benefit analysis methods
- methods of determining the impact of a change
- communication methods and media for a range of audiences
- customer perception of value
- reward systems
- learning and knowledge management systems

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • review learning process across the organisation • relate learning processes to implementation of competitive systems and practices • identify components of current system that require improvement • develop improvements to current learning system, including setting of system metrics • manage implementation of improvements.
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers

© Commonwealth of Australia, 2024 Public Skills Australia

	• case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA)

© Commonwealth of Australia, 2024 Public Skills Australia

	software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
HSE	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Problems	Problems may include: • non-conformances and other opportunities for improvement
Develop	Develop includes: • establishing and improving
Organisational learning	Organisational learning refers to learning intended to be applied across the whole organisation or by specific teams, work areas or individuals

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge forms	Knowledge may be: • quantified or otherwise modified to make its outcomes measurable or observable as appropriate to the knowledge and its application
Improvements	Improvements may: • be to process, plant, service, procedures or practice • include changes to ensure positive benefits are maintained
Manager	Manager may include: • any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408006A Develop and refine systems for continuous improvement in operations

Modification History

New unit, superseding MSACMG806A Develop and refine systems for continuous improvement in manufacturing organisations - Equivalent

Unit Descriptor

This unit of competency covers the skills, knowledge and processes required to ensure that continuous improvement systems do not stultify and continue to improve along with other operational systems in an organisation.

This unit is about improving the process yield/unit of effort or cost, reducing process variation and increasing process reliability, upgrading, enhancing or refining process outputs, and includes developing a culture of reviewing and sustaining change ensuring improvements are maintained and built on.

Application of the Unit

This unit applies to managers and people with a similar sphere of influence and scope of authority and responsibility and who are familiar with competitive systems and practices, continuous improvement and locking in improvements. Where this is not the case the following units may be completed to supply the necessary skills:

MSS405001A Develop competitive systems and practices for an organisation

MSS405013A Facilitate holistic culture improvement in a operations organisation.

The equivalent team leader level unit is MSS407013A Review continuous improvement processes.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Establish parameters of current internal improvement systems	1.1	Describe organisation systems that impact on continuous improvement
		1.2	Identify current relevant metrics and their values
		1.3	Check that metrics are collected for all improvements
		1.4	Determine yield of current improvement processes
		1.5	Review results of improvements
2	Distinguish breakthrough improvement processes	2.1	Identify all improvements which have occurred over an agreed period of time
		2.2	Distinguish between breakthrough improvements and continuous improvements
		2.3	Determine the timing of breakthrough improvement processes
		2.4	Analyse factors controlling the timing and selection of breakthrough improvements
		2.5	Analyse continuous improvements to identify cases where breakthrough improvements were required
		2.6	Validate findings with process/system owners and obtain

© Commonwealth of Australia, 2024 Public Skills Australia

			required approvals
		2.7	Improve timing/selection of breakthrough improvements
		2.8	Improve other factors limiting the gains from breakthrough improvements
3	Develop continuous improvement practice	3.1	Check that levels of delegated authority and responsibility are appropriate for continuous improvement from the shop floor
		3.2	Ensure all personnel have appropriate capabilities for continuous improvement processes
		3.3	Ensure personnel and systems recognise potential breakthrough improvement projects
		3.4	Ensure sufficient resources are available for the operation of continuous and breakthrough improvement processes
		3.5	Check that relevant information flows from improvement changes to all required areas and stakeholders
		3.6	Check data collection and metrics analysis capture changes which result from improvement actions
		3.7	Check that improvement changes are standardised and sustained
		3.8	Check review processes for routine continuous improvements
		3.9	Remove or change factors limiting gains from improvements
		3.10	Modify systems to ensure appropriate possible changes are referred to other improvement processes
		3.11	Institutionalise breakthrough
4	Establish parameters of current external improvement	4.1	Review value stream systems that impact on improvement
		4.2	Review procedures for deciding improvement

© Commonwealth of Australia, 2024 Public Skills Australia

	systems		methodologies
		4.3	Identify current relevant metrics and their values, as appropriate
		4.4	Determine yield of current improvement processes
		4.5	Review results of improvements
5	Explore opportunities for further development of value stream improvement processes	5.1	Review mechanisms for consultation with value stream members
		5.2	Develop mechanisms for further improving joint problem solving
		5.3	Develop mechanisms for increased sharing of organisational knowledge
		5.4	Obtain support and necessary authorisations from process/system owners
		5.5	Capture and standardise improvements
		5.6	Improve factors limiting gains from continuous improvements
6	Review systems for compatibility with improvement strategy	6.1	Review all systems which impact or are impacted on improvements and the improvement system
		6.2	Analyse relationships between improvement systems and other relevant systems
		6.3	Analyse practices caused by and results from the systems
		6.4	Negotiate changes to the systems to improve the outcomes from improvement systems
		6.5	Obtain necessary approvals to implement changes
		6.6	Monitor the implementation of the changes

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- undertaking self-directed problem solving and decision-making on issues of a broad and/or highly specialised nature and in highly varied and/or highly specialised contexts
- communicating at all levels in the organisation and value stream and to audiences of different levels of literacy and numeracy
- analysing current state/situation of the organisation and value stream
- determining and implementing the most appropriate method for capturing value stream improvements
- collecting and interpreting data and qualitative information from a variety of sources
- analysing individually and collectively the implementation of competitive systems and practices tools in the organisation and determining strategies for improved implementation
- relating implementation and use of competitive systems and practices and continuous improvement to customer benefit
- solving highly varied and highly specialised problems related to competitive systems and practices implementation and continuous improvement to root cause
- negotiating with stakeholders, where required, to obtain information required for implementation and refinement of continuous improvements, including management, unions, value stream members, employees and members of the community
- reviewing relevant metrics, including all those measures which might be used to determine the performance of the improvement system, including:
  - key performance indicators (KPIs) for existing processes
  - quality statistics
  - delivery timing and quantity statistics
  - process/equipment reliability (‘uptime’)
  - incident and non-conformance reports
- implementing continuous improvement to support systems and areas, including maintenance, office, training and human resources

Required knowledge

Required knowledge includes:

- competitive systems and practices tools, including:
  - value stream mapping
  - 5S
  - Just in Time (JIT)
  - mistake proofing

© Commonwealth of Australia, 2024 Public Skills Australia

  - process mapping
  - establishing customer pull
  - kaizen and kaizen blitz
  - setting of KPIs/metrics
  - identification and elimination of waste (muda)
- continuous improvement processes including implementation, monitoring and evaluation strategies for a whole organisation and its value stream
- difference between breakthrough improvement and continuous improvement
- organisational goals, processes and structure
- approval processes within organisation
- cost/benefit analysis methods
- methods of determining the impact of a change
- advantages and disadvantages of communication media, methods and formats for different messages and audiences
- customer perception of value
- define, measure, analyse, improve, and control and sustain (DMAIC) process

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • critically review current continuous improvement processes • establish ongoing review of continuous improvement processes • implement improvements in the practice of continuous improvement • better align internal and external systems • gather data through interviews with stakeholders • review existing data • obtain additional data through a variety of techniques • communicate and negotiate at all levels within the organisation
Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices.

© Commonwealth of Australia, 2024 Public Skills Australia

	Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning for appropriate portions • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the

© Commonwealth of Australia, 2024 Public Skills Australia

performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
Health, safety and environment	All changes implemented are expected to be at least

© Commonwealth of Australia, 2024 Public Skills Australia

(HSE)	neutral, or preferably beneficial, in their impact on HSE
Organisation systems	Organisation systems may include: • problem recognition and solving • operational/process improvement • improvement projects • product/process design and development • processes for making incremental improvements
Relevant metrics	Relevant metrics include all those measures which might be used to determine the performance of the improvement system and may include: • hurdle rates for new investments • KPIs for existing processes • quality statistics • delivery timing and quantity statistics • process/equipment reliability (‘uptime’) • incident and non-conformance reports • complaints, returns and rejects
Improvement process yield	Improvement process yield may be regarded as: • the benefit achieved for the effort invested
Breakthrough improvements	Breakthrough improvements include: • those which result from a kaizen blitz or other improvement project or event and are a subset of all improvements
Timing of breakthrough improvements	Timing of breakthrough improvements includes: • frequency (which should be maximised) and duration (which should be minimised) of events/projects
Continuous improvement	Continuous improvement is part of normal work and does not require a special event to occur (although may still require authorisations) and contrasts with breakthrough improvement/kaizen blitz which occurs by way of an event or project
Resources for improvement	Resources for improvements include: • improvement budget • guidelines for trialling of possible improvements • mechanism for approvals for possible improvements • business case guidelines for proposed improvements • indicators of success of proposed improvement • mechanisms for tracking and evaluation of changes

© Commonwealth of Australia, 2024 Public Skills Australia

	• forum for the open discussion of the results of the implementation • mechanisms for the examination of the improvement for additional improvements • organisation systems to sustain beneficial changes
Capturing value stream improvements	Capturing value stream improvements includes: • revised contractual arrangements • revised specifications • signed agreements • other documented arrangements which formalise the raised base line
Systems impacting improvements	Systems which impact/are impacted on improvements and the improvement system include: • office • purchasing • rewards (individual or team at all levels) • sales • marketing • maintenance • process/product • transport and logistics
Organisational knowledge	Organisational knowledge should: • be able to be quantified or otherwise modified to make its outcomes measurable or observable • be able to be expressed in an accessible and distributable form appropriate to the organisation operations and stakeholders
Improvements	Improvements may: • be to process, plant, procedures or practice • include changes to ensure positive benefits to stakeholders are maintained
Manager	Manager may include: • any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

MSS408007A Develop problem solving capability of an organisation

Modification History

New unit, superseding MSACMG807A Develop problem solving capability of a manufacturing organisation - Not equivalent

Unit Descriptor

This unit of competency covers the skills and knowledge required to develop problem solving skills of individuals within an organisation and as a consequence the problem solving capability of the organisation as a whole. The unit does not supply the skills to undertake formal problem solving on individual problems.

Application of the Unit

This unit is intended for organisation leaders/managers and people with a similar sphere of influence and scope of authority and responsibility. It applies where problem solving is already routine in the organisation and improving individual and organisational problem solving capability has been accepted as part of the organisation's improvement processes.

The unit applies to individuals who are already familiar with formal problem solving processes. Where this is not the case the following units may be completed to supply the necessary skills:

- *MSS402080A Undertake root cause analysis*
- *MSAPMSUP390A Use structured problem solving tools.*

For high level complex problem solving skills refer to *MSS407012A Lead a problem solving process to determine and solve root cause*.

This unit may also be applied to service organisations applying competitive systems and practices principles.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable.

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Develop an appropriate organisational framework	1.1	Determine or review available problem finding strategies in the organisation
		1.2	Analyse the current selection and application of problem solving tools and gauge effectiveness
		1.3	Determine preferred problem solving strategies for the organisation
		1.4	Determine or review the desired outcomes from use of selected problem solving strategies
		1.5	Review organisational structure to facilitate improvement in problem solving
		1.6	Develop a training strategy to improve problem solving ability
		1.7	Develop reporting framework and guidelines
		1.8	Develop corrective action identification and tracking systems
		1.9	Obtain support from relevant process/system owners for proposed changes
2	Improve problem	2.1	Implement training strategy

© Commonwealth of Australia, 2024 Public Skills Australia

	solving ability	2.2	Ensure problem solving occurs using groups or teams
		2.3	Provide resources to ensure problem solving occurs
		2.4	Confirm with teams and groups that training and resources deliver capability to solve complex problems
		2.5	Monitor problem solving to determine if improvement in developing problem solving solutions is achieved
		2.6	Provide resources to ensure solutions are implemented
		2.7	Ensure reporting and corrective action tracking occurs
3	Review problem solving effectiveness	3.1	Review corrective action tracking
		3.2	Determine benefit/cost from solutions
		3.3	Analyse interactions of multiple problems with each other and the organisation
		3.4	Review problem solving strategy
		3.5	Make improvements to problem solving strategy and approach

Required Skills and Knowledge

This section describes the skills and knowledge required for this unit.

Required skills

Required skills include:

- reviewing current operations and procedures to determine if problems are being identified as early as possible
- reviewing current operations and procedures to determine if problems are being defined appropriately
- identifying and quantifying desired outcome from improved problem solving capability, such as:
  - improved customer service and delivery
  - defect elimination
  - capacity improvement

© Commonwealth of Australia, 2024 Public Skills Australia

    - cost reduction
    - safety improvement
    - improved complaint resolution
- establishing appropriate reporting arrangements for formal problem solving, including:
    - appropriate metrics (e.g. incident frequency and incident consequences)
    - trigger criteria for conducting problem solving activity
    - problem definition and quantification
    - cause and effect diagrams (or similar)
- solutions identified
- reviewing organisational structure, value stream and customer alignment in order to set performance indicators for organisation problem solving capability

Required knowledge

Required knowledge includes:

- competitive systems and practices principles
- competitive systems and practices at both a strategic and tools level, including:
    - value stream mapping
    - 5S
    - Just in Time (JIT)
    - mistake proofing
    - process mapping
    - establishing customer pull
    - breakthrough improvement and continuous improvement (kaizen and kaizen blitz)
    - setting of key performance indicators (KPIs)/metrics
    - identification and elimination of waste (muda)
    - six sigma and lean six sigma
- a range of problem solving methodologies, including:
    - cross-functional problem solving team
    - cross-functional nominal group (virtual team)
    - consulting and or brainstorming with members from outside the organisation on some basis
    - input from other members of the value stream
    - the use of known/proprietary problem solving approaches or some synthesis of methods
    - own or commissioned research either in whole or in part
- organisation strategy and vision, value stream and value as defined by the organisation’s customers
- corrective action tracking methods

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to:
	• analyse and improve problem finding capabilities of the organisation
	• improve the problem solving capability of the organisation
	• set KPIs for organisation problem solving
	• ongoing review of systems and processes relevant to problem solving
	• increasing problem solving capability through identification of appropriate strategies, including where required, identifying:
	  • training needs in problem finding and solving
	  • changes in organisational structure, decision making and processes
	  • appropriate metrics
	  • need for outside assistance.

Context of and specific resources for assessment	Assessment of performance must be undertaken in a workplace using or implementing one or more competitive systems and practices. Access may be required to: • workplace procedures and plans relevant to work area • specifications and documentation relating to planned, currently being implemented, or implemented changes to work processes and procedures relevant to the assessee • documentation and information in relation to production, waste, overheads and hazard control/management • reports from supervisors/managers • case studies and scenarios to assess responses to contingencies.
Method of assessment	A holistic approach should be taken to the assessment. Competence in this unit may be assessed by using a

© Commonwealth of Australia, 2024 Public Skills Australia

	combination of the following to generate evidence: • demonstration in the workplace • workplace projects • suitable simulation • case studies/scenarios (particularly for assessment of contingencies, improvement scenarios, and so on) • targeted questioning • reports from supervisors, peers and colleagues (third-party reports) • portfolio of evidence. In all cases it is expected that practical assessment will be combined with targeted questioning to assess underpinning knowledge. Where applicable, reasonable adjustment must be made to work environments and training situations to accommodate ethnicity, age, gender, demographics and disability.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the language and literacy capacity of the candidate and the work being performed.

Range Statement

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Competitive systems and practices	Competitive systems and practices may include, but are not limited to: • lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six

© Commonwealth of Australia, 2024 Public Skills Australia

	sigma and three sigma • JIT, kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree Competitive systems and practices should be interpreted so as to take into account: • the stage of implementation of competitive systems and practices • the size of the enterprise • the work organisation, culture, regulatory environment and the industry sector
Codes of practice/standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used
Health, safety and environment (HSE)	All changes implemented are expected to be at least neutral, or preferably beneficial, in their impact on HSE
Organisational structure	A review of organisational structure may include: • operational and support functions and departments • links with value stream members • super-users and facilitators • roles and responsibilities with regard to problem solving • plans to broaden the users of problem solving approach • plans to improve the problem solving performance of personnel
Problem finding strategies	Problem finding strategies are the strategies used to identify:

© Commonwealth of Australia, 2024 Public Skills Australia

	• problems before they become obvious or cause significant non-conformance or risk • situations not initially considered a problem but which may be hindering greater performance • strategies for finding opportunities for improvement

Complex problem	A complex problem may be described as one which has several of the following characteristics:
	• requires going into the extended value stream for data/information
	• is wider than just applying to a single job
	• applies to less common solutions or problems
	• requires a higher level of knowledge and skill (which may or may not be possessed directly by the person solving the problem), such as:
	  • significant specialist knowledge
	  • significant specialist skill
	  • more theory/understanding of technology or process
	• data is not easily available and may need particular strategies to obtain, such as:
	  • overcoming resistance from people, including employees, customers or suppliers
	  • extracting data not regularly reported from SCADA or similar systems
	  • the problem and/or proposed solutions require reporting or authorisations from a Board or external authorities, such as licensing or regulatory bodies

Effective solutions	Effective solutions will: • prevent recurrence • be within the control/ability of the organisation to implement • meet organisation goals and objectives
Required resources	Required resources may include: • plant • data processing equipment • measuring and diagnostic equipment • materials (e.g. raw materials, components, work in progress, other consumables, paper and forms in electronic or hard format) • energy (e.g. heating, cooling, fuel and power) • appropriately skilled people as employees and in the

© Commonwealth of Australia, 2024 Public Skills Australia

	value stream • finances • feedback/visual operations resources • measuring equipment
Manager	Manager may include: • any person who may have either a permanent or an ad hoc role in facilitating the function of multiple teams in a workplace, departments or entire organisations

NWPGEN007 Sample and test drinking water

Modification History

Release	Comments
1	This unit was released in NWP Water Training Package release 1.0 and meets the Standards for Training Packages. • New unit • Created drawing upon information from deleted units NWP208A and NWP218B

Application

This unit describes the skills required to collect and prepare drinking water samples and to perform basic water quality tests. This unit does not include off-site laboratory testing.

This unit applies to those working in field operations in the water industry, but might be relevant to others.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work under supervision, while performing routine tasks in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Competency Field

Elements and Performance Criteria

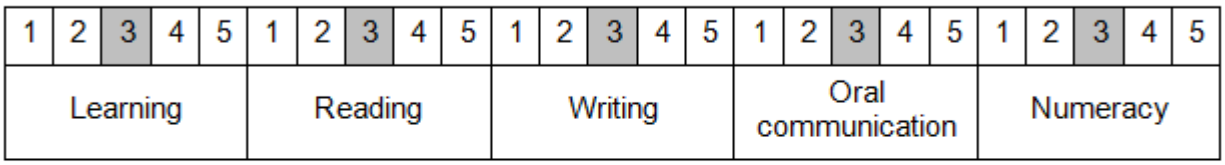
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Prepare for water quality sampling and testing	1.1 Receive instructions for taking samples and conducting basic water quality tests. 1.2 Confirm and record samples and tests to comply with requirements. 1.3 Select, check and prepare equipment and resources. 1.4 Select and apply relevant sample preservation methods. 1.5 Select, fit and use personal protective equipment.
2. Conduct water quality sampling and testing	2.1 Adopt hygienic work practices. 2.2 Collect samples ensuring that types, locations and times comply with requirements. 2.3 Prepare samples for off-site laboratory testing according to requirements. 2.4 Maintain integrity of samples during sampling and on-site testing. 2.5 Conduct basic on-site water quality tests. 2.6 Assess and report abnormal characteristics and apply incident management principles. 2.7 Record samples and results of on-site analysis. 2.8 Limit hazards and contamination to self, work area and environment.
3. Finalise work	3.1 Apply chain of custody principles. 3.2 Report observations or measurements requiring further action. 3.3 Dispose of samples and clean and store test equipment. 3.4 Clear and restore work area.

Foundation Skills

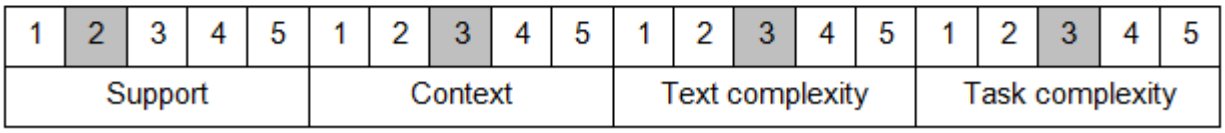
The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:



Performance variables:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Range of Conditions

Types of sampling conditions includes:	• physical • microbial • chemical • radiological
On-site tests include:	• turbidity • pH • dissolved oxygen • electrical conductivity • chlorine • temperature • colour
Types of sampling areas include:	• surface • ground • drinking • seawater

Unit Mapping Information

No equivalent unit.

Assessment Requirements for NWPGEN007 Sample and test drinking water

Modification History

Release	Comments
1	These Assessment Requirements were released in NWP Water Training Package release 1.0 and meet the Standards for Training Packages.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. To be deemed competent the candidate must be assessed in a minimum of three of the types of tests, one of the types of conditions and one of the areas of sampling listed in the Range of Conditions. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- calibrating testing equipment
- interpreting sampling and testing requirements
- preparing, checking and using equipment
- assessing risks
- preparing, collecting, labelling and preserving water samples
- disposing of waste and spent samples
- planning and preparing for water sampling tasks
- recording all required information

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- chain of custody
- range and purpose of basic water quality testing and sampling
- relevant policies and procedures
- blind sampling
- abnormal characteristics of water samples
- atypical test result data
- relevant work-related calculations
- maintenance and storage of reagents
- requirements for maintaining sample integrity

© Commonwealth of Australia, 2024 Public Skills Australia

- relevant legislative and organisational requirements
- water sample preparation
- work planning processes
- effects of weather and conditions on work
- hazards associated with collection of water samples
- incident management principles

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

NWPGEN009 Perform laboratory testing

Modification History

Release	Comments
1	This unit was released in NWP Water Training Package release 1.0 and meets the Standards for Training Packages. Supersedes and is equivalent to NWP364B Perform laboratory testing. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • All elements and PC rewritten with occupational outcome of the unit maintained

Application

This unit describes the skills required to perform laboratory tests using standard methods and procedures and with access to readily available advice.

This unit applies to those working in the water industry, but could be used by other sectors.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work under indirect supervision, while performing complex tasks in a range of contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. *Prepare samples* for testing	1.1 Identify samples to be collected. 1.2 Collect samples ensuring that types, locations and times comply with requirements. 1.3 Maintain integrity of samples during sampling. 1.4 Assess and report abnormal characteristics and apply incident management principles. 1.5 Label, register and record laboratory samples, ensuring that the required information is transcribed accurately and legibly. 1.6 Identify samples to be tested, appropriate test method, equipment and safety requirements.
2. Prepare for laboratory testing	2.1 Set up test equipment and/or reagents in accordance with the specified test method. 2.2 Conduct pre-use and safety checks. 2.3 Identify and report faulty or unsafe equipment to appropriate personnel. 2.4 Check the calibration status of equipment and conduct calibration or report calibration requirements to appropriate personnel.
3. Perform tests on samples	3.1 Preserve the integrity of samples and eliminate the possibility of cross-contamination. 3.2 Identify, prepare, and weigh or measure sample and standards to be tested. 3.3 Follow test methods and perform sequence of tests using safety equipment. 3.4 Perform calculations. 3.5 Shut down equipment. 3.6 Store unused reagents and dispose of wastes as required by relevant regulations and codes. 3.7 Clean and store equipment.
4. Finalise work	4.1 Apply chain of custody principles. 4.2 Record results. 4.3 Identify and report ‘out of specification’ or atypical results. 4.4 Report observations or measurements requiring further action. 4.5 Clear and restore work area.

Assessment Requirements for NWPGEN009 Perform laboratory testing

Modification History

Release	Comments
1	These Assessment Requirements were released in NWP Water Training Package release 1.0 and meet the Standards for Training Packages.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. To be deemed competent the candidate must be assessed in a minimum of one type of sample preparation and minimum of three of the types of complex tests from either the wastewater or drinking water options listed in the Range of Conditions. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- comparing sample description with the specification, record results and report discrepancies
- adopting hygienic work practices
- limiting hazards and contamination to self, work area and environment
- producing laboratory reports and logs
- using laboratory safety equipment and personal protective equipment
- interpreting laboratory test methods
- interpreting policies, procedures and standards
- interpreting and recording test results, including calculation of results from test data where required
- using potentiometric, ion selective, spectrophotometric, volumetric and gravimetric laboratory equipment
- performing sub-sample and testing products
- labelling samples for testing
- registering and preserving samples
- selecting the correct equipment and checking equipment performance
- maintaining a safe work environment

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

© Commonwealth of Australia, 2024 Public Skills Australia

Operational knowledge of:

- purpose of tests
- principles of the standard method
- calibration and/or pre-use equipment checks and their basis
- relevant standards and specifications and their interpretation
- source of uncertainty in measurements and methods for control
- importance and appropriate use of certified reference materials
- procedures for recognition of unexpected or unusual results and likely causes
- WHS for sample and testing
- safety data sheets

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors

NWPSOU012 Monitor, inspect and report catchment operations

Modification History

Release	Comments
1	This unit was released in NWP Water Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to NWP240B Inspect and report catchment and surrounding areas. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • Unit title changed to better reflect unit outcomes • One new Element added • PC 1.3 removed • three new PC added to Element 1 • two new PC added to Element 2

Application

This unit describes the skills required to inspect and monitor catchment areas, monitor flows and coordinate catchment processes. The ability to collect data and samples, monitor and adjust regulatory systems, identify and investigate catchment problems and produce technical reports is essential to performance.

This unit applies to those working as field staff with a specific responsibility for inspecting, monitoring and reporting catchment operations.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to, particularly those related to WHS.

Those undertaking this unit would work under indirect supervision while performing routine tasks ensuring minimum damage to the environment, in a familiar context. The level of responsibility may vary according to the size and complexity of the catchment area.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Inspect and monitor catchment operations	1.1 Identify and apply work requirements for undertaking inspections of catchments and surrounding areas. 1.2 Schedule routine inspections of catchment areas to identify water quality risks. 1.3 Inspect and monitor designated locations according to agreed schedule and procedures. 1.4 Inspect flow regulating systems and determine required adjustments to meet demand. 1.5 Select, fit and use required safety equipment, including personal protective equipment.
2. Operate and report catchment conditions	2.1 Measure and record catchment inflows and outflows or extractions. 2.2 Collect and record water samples according to sampling requirements. 2.3 Identify organisation standards for the condition and maintenance of catchment environment. 2.4 Identify and report changes to environmental conditions. 2.5 Identify and report flows into, and conditions of, catchment areas.
3. Assist in investigating hazards, risks and catchment security	3.1 Identify and report activities within catchment that pose a hazard or risk to the public, water quality or the environment. 3.2 Identify and report activities of external parties within the catchment and surrounding area that breach organisational guidelines. 3.3 Check and confirm public complaints and report to relevant personnel.
4. Complete documentation	4.1 Collect and analyse catchment data. 4.2 Review and action investigation results. 4.3 Compile reports from catchment inspections.

Assessment Requirements for NWPSOU012 Monitor, inspect and report catchment operations

Modification History

Release	Comments
1	These Assessment Requirements were released in NWP Water Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- using safety equipment and personal protective equipment
- using pest eradication equipment
- calculating flow and capacity
- coordinating safety surveillance
- identifying control system faults
- inspecting and monitoring catchment areas
- monitoring flows
- coordinating catchment processes
- inspecting catchment areas and identifying water quality risks
- monitoring catchment and collecting and reporting catchment data
- collecting samples
- inspecting and adjusting flow regulating systems
- identifying and reporting on flows into the catchment area
- assessing and reporting on the condition of the catchment area
- identifying and addressing risks and hazards
- monitoring and integrating catchments processes
- completing documentation
- implementing actions resulting from investigations
- monitoring and/or reporting illegal activities

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- inspection of catchments
- coordination processes
- by-laws and legislation
- catchment layout and processes
- environmental aspects of catchment areas
- policies and standard operating procedures
- Australian Drinking Water Guidelines (ADWG)
- hazardous substances handling
- communication systems
- risk factors and potential hazards involved with catchment area processes, equipment operation, capacity and limitations
- effects of weather and conditions on operation of catchment areas
- pest control specifications

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

NWPTRT001 Operate and control water treatment processes

Modification History

Release	Comments
1	This unit was released in NWP Water Training Package release 1.0 and meets the Standards for Training Packages. • New unit, created drawing upon information from deleted units NWP260A, NWP261A and NWP345B

Application

This unit of competency describes the skills required to operate and control a water treatment plant, to report on water treatment plant system performance and process quality control. The ability to operate water treatment processes in urban and/or rural areas, in compliance with relevant water legislation and regulations and Australian Drinking Water Guidelines, is vital to performance.

This unit applies to those working as operational staff in water treatment plants with responsibility for the practical and safe operation of plant, equipment and processes.

The skills and knowledge described in this unit must be applied within the legislative, statutory, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to.

Those undertaking this unit would work under supervision, while performing routine tasks, within a familiar context.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Assessment Requirements for NWPTRT001 Operate and control water treatment processes

Modification History

Release	Comments
1	These Assessment Requirements were released in NWP Water Training Package release 1.0 and meet the Standards for Training Packages.

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. The candidate must be assessed operating at least two of the processes listed in the Range of Conditions, of which one must be from separation and one from disinfection. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- conducting routine plant inspections
- interpreting safety data sheets (SDS)
- applying basic mathematical formulae
- completing logs
- preparing and applying chemical dosing including at least one of:
  - pH adjustment
  - coagulants
  - polymers
  - flocculants
  - disinfectants
  - fluoride
- interpreting plans, charts and instructions

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- water cycle
- sources of water
- demands and uses of water, both domestic and industrial
- physical, chemical and microbiological characteristics of water within the water treatment process

© Commonwealth of Australia, 2024 Public Skills Australia

- reasons for water treatment
- types of treatment plants and processes
- major chemicals and equipment used
- water treatment plant hazards
- risk factors and potential hazards associated with the operation of water treatment processes
- physical, chemical and microbiological characteristics of water within the water treatment process
- chemical and biological principles that form the basis of water treatment
- types of components
- relevant technologies
- water quality principles
- relevant guidelines and standards
- risk management principles of water treatment (HACCP)
- basic knowledge of types of chemicals and water chemistry

Candidate should demonstrate basic knowledge of all processes listed in Range of Conditions.

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

NWPTRT052 Operate and control hypochlorite disinfection processes

Modification History

Release	Comments
1	This unit was released in NWP Water Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to NWP268B Monitor, operate and report chlorine disinfection systems. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • Unit title changed to better reflect unit outcomes • Elements 2 and 3 reworded • One new PC added to Elements 1 and 3 • PC 2.3 removed • PC 3.1 revised and renumbered • PC 2.4 and 3.3 renumbered • PC 3.2 and 4.1 revised

Application

This unit describes the skills required to monitor and operate hypochlorite disinfection systems and report on process quality control. This includes the skills required to working safely with sodium hypochlorite solutions and calcium hypochlorite solids, including their safe handling, transport and storage and implementation of emergency response procedures.

This unit applies to those working as operational staff with specific responsibility for hypochlorite disinfection systems in water and wastewater treatment plants.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to, particularly those related to WHS and handling of dangerous goods.

© Commonwealth of Australia, 2024 Public Skills Australia

Those undertaking this unit would work under supervision, while performing routine tasks, in a range of familiar contexts.

No licensing, legislative or certification requirements apply to unit at the time of publication.

Assessment Requirements for NWPTRT052 Operate and control hypochlorite disinfection processes

Modification History

Release	Comments
1	These Assessment Requirements were released in NWP Water Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. The candidate must be assessed in at least one type of process, in at least one type of technology and in at least one type of dosing procedure listed in the Range of Conditions. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- applying policies, standard operating procedures and regulatory standards
- performing work-related calculations
- identifying and responding to process faults and control system faults
- identifying hazards
- performing hypochlorite tests and chlorine residual sampling and testing
- interpreting safety data sheets (SDS)
- monitoring, operating and reporting on hypochlorite disinfection systems
- selecting and using appropriate tools and equipment, including personal protective equipment
- collecting and reporting process data
- preparing and applying hypochlorite dosing safely
- performing process calculations, including at least one of:
  - feed rate
  - dosage
  - Ct

© Commonwealth of Australia, 2024 Public Skills Australia

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- properties and chemistry of hypochlorite chemicals
- effects of pH, time, temperature, UV exposure and impurities on hypochlorite breakdown
- microbiological guidelines
- reactions with water to produce hypochlorous acid/hypochlorite ion
- impact of pH
- chlorine demands, including:
  - ammonia
  - natural organic matter (NOM)
  - turbidity
  - iron, manganese and nitrite
- disinfection by-products (DBP)
- breakpoint
- contact time
- hypochlorite dosing system layout for sodium hypochlorite and/or calcium hypochlorite dosing systems
- hazardous substances handling
- risk factors and potential hazards associated with hypo chlorination
- work-related hypochlorite calculations
- hypochlorite dosing processes
- automatic feed rate control systems
- SDS

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Some components of this unit require assessment in a workplace environment therefore the unit is not suitable for fully external or electronic based assessment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

NWPTRT061 Operate and control wastewater processes

Modification History

Release	Comments
1	This unit was released in NWP Water Training Package release 1.0 and meets the Standards for Training Packages. • New unit • Created drawing upon information from deleted units NWP262A, NWP263A and NWP346B

Application

This unit of competency describes the skills required to operate and control a wastewater treatment plant and report on system performance and process quality control. The ability to operate wastewater treatment processes to ensure that wastewater disposal or re use meets state or territory licensing requirements is essential to performance.

This unit applies to those working as operational staff in wastewater treatment plants with responsibility for the practical and safe operation of plant, equipment and processes.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to, particularly those relating to WHS.

Those undertaking this unit would work under supervision, performing routine tasks within a familiar context.

No licensing, legislative or certification requirements apply to unit at the time of publication.

If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- conducting routine plant inspections
- interpreting safety data sheets (SDS)
- applying basic mathematical formulae
- completing logs
- determining chemical dosing requirements

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- sources of wastewater
- water cycle
- basic hydraulics and organic loading in wastewater plants
- basic chemistry and microbiology
- types of components
- relevant technologies
- weather influence on wastewater plants
- odour control
- physical, chemical and microbiological characteristics and operating principles relating to wastewater treatment
- reasons for wastewater treatment
- types of wastewater treatment plant processes

© Commonwealth of Australia, 2024 Public Skills Australia

- major chemicals and equipment used
- risk factors and potential hazards relating to wastewater treatment
- chemical and biological principles that form the basis of wastewater treatment
- chemical dosing processes
- relevant guidelines and standards
-

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

NWPTRT071 Operate and control pre-treatment processes

Modification History

Release	Comments
1	This unit was released in NWP Water Training Package release 1.0 and meets the Standards for Training Packages. This unit supersedes and is equivalent to NWP264B Monitor, operate and report wastewater pre-treatment processes. • Unit code updated • Content and formatting updated to comply with the new standards • All PC transitioned from passive to active voice • Unit title changed to better reflect unit outcomes • Element 4 reworded • PC 3.2 revised • PC 4.1 removed • PC 4.2 reworded

Application

This unit describes the skills required to monitor, operate and report on wastewater pre-treatment processes, including separation processes such as screens and grit removal, used in industrial or domestic wastewater treatment plants prior to biological treatments.

This unit applies to those working as operational staff with specific responsibility for pre-treatment processes.

The skills and knowledge described in this unit must be applied within the legislative, regulatory and policy environment in which they are carried out. Organisational policies and procedures must be consulted and adhered to, particularly those relating to environment, safety, and manufacturers' guidelines.

Those undertaking this unit would work under supervision while performing routine tasks in a range of familiar contexts.

© Commonwealth of Australia, 2024 Public Skills Australia

No licensing, legislative or certification requirements apply to unit at the time of publication.

Treatment

Elements and Performance Criteria

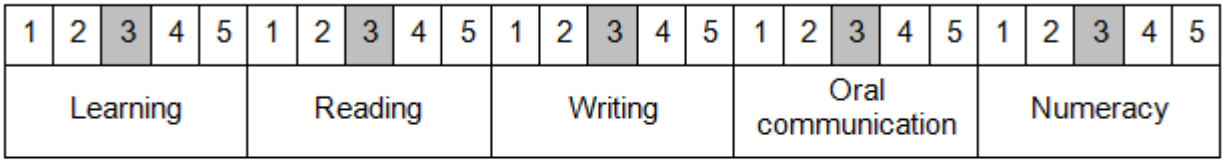
ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the range of conditions section.
1. Plan and prepare for work	1.1 Determine work requirements as outlined in standard operating procedures. 1.2 Identify and report potential risks to self, other employees, public and environment. 1.3 Select and check work site equipment, tools and safety materials as appropriate to meet task and safety specifications. 1.4 Select, fit and use personal protective equipment.
2. Monitor pre-treatment processes	2.1 Carry out routine plant inspections. 2.2 Monitor processes to maintain parameters of operation. 2.3 Collect process samples and conduct standard tests. 2.4 Collect, record and report process data. 2.5 Identify and report process faults and operational condition of plant.
3. Operate pre-treatment processes	3.1 Operate pre-treatment processes. 3.2 Carry out basic adjustments to enhance system performance. 3.3 Determine chemical dosing requirements
4. Complete documentation	4.1 Collect and record process data 4.2 Report observations outside defined parameters for further action.

Foundation Skills

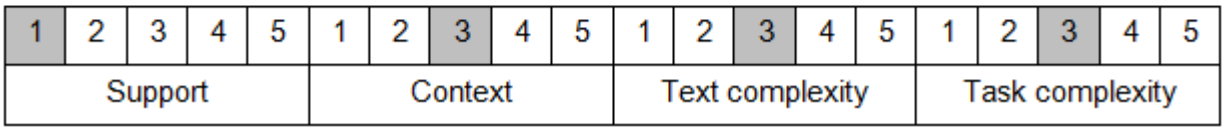
The foundation skills demands of this unit have been mapped for alignment with the Australian Core Skills Framework (ACSF). The following tables outline the performance levels indicated for successful attainment of the unit.

© Commonwealth of Australia, 2024 Public Skills Australia

ACSF levels indicative of performance:



Performance variables:



Further information on ACSF and the foundation skills underpinning this unit can be found in the Foundation Skills Guide on the GSA website.

Unit Mapping Information

This unit supersedes and is equivalent to NWP264B Monitor, operate and report wastewater pre-treatment processes.

Assessment Requirements for NWPTRT071 Operate and control pre-treatment processes

Modification History

Release	Comments
1	These Assessment Requirements were released in NWP Water Training Package release 1.0 and meet the Standards for Training Packages. • Assessment Requirements created drawing upon specified assessment information from superseded unit

Performance Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the candidate must demonstrate evidence of performance of the following on at least one occasion.

- performing calculations including ratios
- reading and applying procedures and standards
- giving and receiving instructions
- identifying control system faults and operational problems
- using verbal and written communication in the workplace
- monitoring, operating and reporting on wastewater pre-treatment processes, including at least one of:
  - screening
  - gravity and aerated grit chambers
  - gross pollution traps
  - removal and disposal of screenings
  - shredding
  - odour removal
  - oily water separators
  - riffle plate separators
- planning and preparing for work
- collecting and labelling samples and performing tests including, at least one of:
  - settling tests
  - pH
  - dissolved oxygen
  - suspended solids

© Commonwealth of Australia, 2024 Public Skills Australia

  - chemical oxygen demand
- inspecting plant and monitoring processes
- collecting and recording data
- operating and adjusting processes, including at least one of:
  - pH correction
  - dissolved oxygen levels
  - flow control
  - screen rotation frequency
  - solids removal
  - chemical additions
  - plant performance data
  - chemical usage
- recording all required information

Knowledge Evidence

Evidence required to demonstrate competence must satisfy all of the requirements of the elements and performance criteria. If not otherwise specified the depth of knowledge demonstrated must be appropriate to the job context of the candidate.

- principles of and need for effective pre-treatment
- system layout
- policies, procedures and legislation applied to wastewater pre-treatment processes
- relevant utilities and service bodies
- communication systems
- work-related calculations
- risk factors and potential hazards relating to wastewater treatment
- equipment operation, capacity and limitations
- pumping and valving systems
- control systems
- impacts of hydraulic loads on processes

Assessment Conditions

Competency should be assessed in an actual workplace or in a simulated environment, with access to equipment and infrastructure appropriate to the outcome. Competency should be demonstrated over time to ensure the candidate is assessed across a variety of situations.

Some components of this unit require assessment in a workplace environment therefore the unit is not suitable for fully external or electronic based assessment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

PMAOHS310B Investigate incidents

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency unit refers to the investigation of incidents that occurred at the workplace. These incidents can vary from large to small, completely internal or partially externally coordinated. They include, but are not limited to, all types of emergencies, fires, OHS and/or environmental incidents.

Application of the Unit

Application of the unit	In a typical scenario, minor incidents which are subject to internal investigation will be conducted by the plant operator/technician, and for a more major investigation, or one subject to external investigation, he/she will assist with the investigation and/or undertake identified parts of the investigation. The exact definition of the scope of responsibility will depend on company policy, as will the level of the person undertaking these investigations. These investigations will be in accordance with company procedures for such investigations which will be consistent with any relevant regulations.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

© Commonwealth of Australia, 2024 Public Skills Australia

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Monitor and review emergency situation	1.1. Undertake site inspections of incident scene 1.2. Communicate with relevant personnel regarding specific aspects of the emergency situation 1.3. Monitor corrective action procedures 1.4. Communicate changes to the situation to appropriate personnel.
2. Record investigation process and results as appropriate	2.1. Establish and secure boundaries of the incident scene to prevent contamination of prospective evidence/exhibits 2.2. Identify and interview persons relevant to the incident 2.3. Identify and record evidence/exhibits at the scene prior to examination to ensure continuity 2.4. Assess relevant information, documentation and evidence/exhibits 2.5. Determine point of origin and most likely cause of incident of the emergency 2.6. Determine risk factors affecting the emergency 2.7. Identify and analyse a range of other possible causes 2.8. Identify and utilise support services to investigate the incident scene 2.9. Process, record and communicate information/evidence/ exhibits, forms and documents to appropriate personnel following enterprise policies and procedures.
3. Make suggestions to	3.1. Identify and assess tactical factors and resulting priorities

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
improve handling of emergency situation	occurring during the emergency 3.2. Formulate appropriate suggestions to improve handling of similar emergency situation based upon information available 3.3. Identify obvious problems in related plant area and make an appropriate contribution to their solution.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.

Required skills

Competence includes the ability to apply and describe or explain:

- factors affecting fire behaviour
- characteristics of fire and fuel types
- security of an incident scene
- examination of an incident scene
- collection of physical evidence
- workplace documentation and recording systems
- use of personal protective equipment
- liaison techniques with third parties
- workplace procedures and work instructions
- company policies regarding health and safety and environment
- hazard identification, assessment and control of risk
- basic risk assessment of workplace jobs/tasks
- environmental impacts likely to arise from activities
- measures for eliminating and/or reducing impacts on the environment.

Required knowledge

Knowledge and underpinning skills are required in:

- communication (listening, questioning) and negotiation in questioning witnesses
- analytical and decision making skills
- problem solving skills in responding to a range of emergency situations
- exhibit handling and preserving continuity of evidence
- witness management, in particular demonstration of ethical behaviour and cultural awareness.

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
Knowledge and understanding of the investigation of incidents sufficient to recognise and assess causes of emergency situations and then to determine improvements to the actual response within the scope and level of the IR responsibilities and competencies. A demonstrated working knowledge and application of the company-specific work organisations and workflow would be highly regarded. An ability to coordinate own work and the work of other team members is also regarded as a component of this unit of competency.

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action within the scope and level of their

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	responsibilities and competencies. Consistent performance should be demonstrated. In particular look to see that wherever possible: • the scene is secure and evidence is preserved • evidence is collected in accordance with legislative requirements • point of origin and most likely cause of incident is determined • a range of other possible causes can be identified and analysed • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution • emergency reporting procedures are understood and followed. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and extreme situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities (eg HAZOP) and similar sources.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

© Commonwealth of Australia, 2024 Public Skills Australia

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	Job safety and environment analysis will be conducted in accordance with required company procedures and policies. This competency covers process manufacturing plants which may involve workplace hazards such as: • chemicals and hazardous materials • gases and liquids under pressure • moving machinery • materials handling • working at heights, in restricted or confined spaces, or environments subjected to heat, noise, dusts or vapours.
Incidents/emergencies	Incidents/emergencies may include, but are not limited to: • accidents • fire • chemical or oil spills • gas leak or vapour emission • utilities failure • bomb scares • OHS incidents • environmental incidents.
Enterprise policies and procedures	Enterprise policies and procedures include those which directly or indirectly cover emergency situations, such as: • emergency, fire and accident procedures • hazard policies and procedures • standard operating procedures (SOPs) • safety procedures • work instructions • personal protective clothing and equipment procedures.
Evidence gained	Evidence gained as a result of investigations may include: • video tapes

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• audio tapes • drawings • photographs • plans • manifests • relevant documents • personal notes • physical evidence/materials • debris • soil.
Support services	Support services may include incident scene specialists: • pathologists • forensic investigators • coroner • government medical officers • interpreters • technical services • legal officers • undertakers • forensic accountants • information technology consultants • document examiners • handwriting experts • financial organisations • external law enforcement agencies.
Interview strategies	Interview strategies may vary but require consideration of: • location • timing • method (direct questioning, empathetic questioning) • strategies for developing rapport • who is being interviewed • exclusion of leading questions • avoidance of cross-examination.
Legal and policy requirements	Legal and policy requirements differ according to the status of the person being interviewed. Such requirements may include: • the presence of a solicitor, independent person, family member or interpreter • special consideration that applies disabled, child, parent, age, gender, ethnicity and race.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Post investigation documentation	Post investigation documentation may include: • statements • proformas • photographs • tape recordings.

Designated personnel	Designated personnel for incident investigation referrals may include:
	• employer
	• personnel directly involved in responding to the incident, including:
	  • first response personnel
	  • emergency response team members
	  • emergency team leader(s)
	  • First Aid officers
	• other personnel with emergency team leader responsibilities.

Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS101C Read dials and indicators

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers making (or taking) readings/measurements in a variety of sites and locations, using common types of plant instrumentation. It also covers recording measurement results in a prescribed format, according to procedures and with the appropriate level of detail included in all reports.

Application of the Unit

Application of the unit	In a typical scenario an operator patrols the plant taking a range of readings to complete logs and check on the operation of the plant. The operator needs to interpret the display on the instrument and record the appropriate reading. As part of this process, they check that the instrument is within calibration (where appropriate) and make a judgement as to whether the reading is 'reasonable' or whether some action needs to be taken.

Licensing/Regulatory Information

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to controlling hazards in work area.	1.1. Identify hazards in work area 1.2. Take appropriate action to control risks according to procedures.
2. Identify appropriate measuring device readings.	2.1. Explain the need for calibration and where appropriate, confirm the calibration of the measuring device 2.2. Select appropriate units on the measuring device 2.3. Select appropriate scale(s) on the measuring device.
3. Perform measurements.	3.1. Identify the range of results that could be obtained 3.2. Identify and take account of relevant external factors 3.3. Perform measurements using appropriate techniques 3.4. Identify measurements outside the range of expected results 3.5. Take action on measurements outside expected range according to procedures.
4. Record results	4.1. Record readings accurately in the appropriate format 4.2. Record the results to the appropriate level of detail.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• efficient and effective operation of plant/equipment

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• hazard analysis • completing plant records • communication • problem solving.
Required knowledge
• basic units of measurement • measuring devices, including gauges, dip-sticks, thermometers and the like • graphs and scales • workplace Standard Operating Procedures (SOPs) related to this competency • typical problems with measuring equipment applicable to this competency • procedures for reporting or dealing with typical equipment problems and threats to safety.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise situations requiring action and then in implementing appropriate corrective action. While it is not expected that the operator will understand the full implications of readings outside the normal range, there should be awareness of the safety implications

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	and the appropriate priority for response for such readings. Consistent performance should be demonstrated. In particular look to see that: • readings which are out of range or unusual/unexpected signs of problems or potential problems with the equipment/processes are recognised • appropriate action is taken in a timely manner • hazards are recognised and appropriate action is taken to control risks arising from such hazards. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus, with a walk-through forming part of the response. The assessment activities should include responding to a range of problems.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. It may be appropriate to assess this unit concurrently with units related to HSE.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in

RANGE STATEMENT	
the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit applies to reading process instrumentation in any plant or related situation. Readings may need to be made at heights, in wet or restricted conditions, or close to hot or moving equipment.

Dials and indicators	Typical dials and indicators include (select relevant items):
	• analogue dials, such as:
	  • pressure gauge
	  • rev counter
	  • temperature dial
	• digital readouts, such as:
	  • pH meter
	  • temperature probe
	  • ammeter
	  • flow meter
	  • weigh scales.

Calibration checks	Calibration checks could include: • checking the date that the next calibration is required, eg weigh scale, pressure gauge • using a calibration button on the instrument, eg zero button on an ammeter, calibration button on an electronic meter.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. PMAOPS105C Select and prepare materials

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the selection and preparation of materials for use in production processes. The focus of this unit is finding and delivering the right materials to the process in the right condition. Along the way, some minor preparation may be required.

Application of the Unit

Application of the unit	A typical application of this competency could be an operator preparing a range of chemicals or other substances for use in a batch process. The operator would visually inspect each item for deterioration or damage, and follow procedures to prepare materials. Once prepared, the operator would then assemble the materials for supply to production areas. This unit only covers those situations where mixing, grinding, testing, etc, are an incidental part of the process of preparing materials for use in production. It does not cover those situations where the primary function is mixing, grinding, testing, etc. Instead see: • *PMAOPS202A Operate fluid mixing equipment* • *PMCOPS203A Operate grinding equipment* The operator requires a knowledge of classes of compatible and incompatible chemicals, as well as an understanding of HAZCHEM symbols and codes, and hazardous substances regulations. This includes the procedures for safe handling and storage of chemicals and hazardous substances. The operator also needs to be able to follow procedures for disposal of chemicals and other hazardous substances, and for dealing with spills or other containment issues.

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and locate materials.	1.1. Identify material requirements correctly from documentation 1.2. Identify type, quantity and quality of materials 1.3. Identify material hazards and handling procedures 1.4. Locate and check materials to procedures 1.5. Confirm availability of required quantity of materials 1.6. Record and report material shortages.
2. Contribute to controlling hazards.	2.1. Identify other hazards in work area 2.2. Take action to control material hazards as per documentation 2.3. Take appropriate action to control other hazards in the workplace.
3. Measure quantity of materials	3.1. Identify types of measuring equipment and their purpose, and select according to requirements 3.2. Measure and assemble required quantities 3.3. Check material quantities against documentation 3.4. Document and label materials

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	3.5. Deliver materials to correct location.
4. Prepare materials as required.	4.1. Check that hoppers, bins and holding tanks are free from contamination 4.2. Identify classes of compatible and incompatible chemicals 4.3. Prepare materials to procedures.
5. Store assembled materials.	5.1. Identify the storage conditions required for the main classes of chemicals 5.2. Identify materials that have special storage requirements 5.3. Store and supply materials.
6. Dispose of waste materials.	6.1. Correctly identify waste materials 6.2. Dispose of materials to procedures and OHS and environmental requirements.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• efficient and effective operation of plant/equipment • hazard analysis • completing plant records • communication • problem solving.
Required knowledge
• classes of compatible and incompatible chemicals • types of materials in plant and their storage requirements • other special storage requirements • basic measurement procedures • routes of entry of chemicals to the body (basic only) • procedures for safe handling and storage of chemicals and hazardous substances • correct selection, use and maintenance of required PPE • labeling requirements (dangerous goods codes, classification numbers, packaging group numbers) • HAZCHEM symbols and codes • hazardous substances regulations

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• spill containment and disposal procedures • workplace Standard Operating Procedures (SOPs) related to this competency • environmental requirements related to waste disposal • workplace processes sufficient to recognise non-standard situations • workplace hazards and methods of controlling hazards according to procedures • procedures for reporting or dealing with non-standard or hazardous situations • materials safety data sheets (MSDSs).

EVIDENCE GUIDE	
for assessment	of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. It may be appropriate to assess this unit concurrently with HSE units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Tasks	This competency is typically performed by operators, weighers, mixers or stores personnel, and includes the following tasks (select relevant items): • handling raw chemicals • storing raw chemicals • pre-production assembling and labelling of materials • pre-production inspection of materials, usually involving visual inspections only for identification of deterioration or damage • pre-production measuring of materials, by weight, volume or density • disposal of waste materials • identifying and reporting hazards, safety and other issues that could

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	affect the operation of the plant.
Materials preparation	Typical examples of preparation required might include (select relevant items): • warming to melt waxy materials • breaking up solid materials into pieces or smaller lumps • passing materials through an in-line delumper • blending a powder or liquid into a solution prior to use in the process • blending powders prior to production • dilution of solutions • preparation of a solution for dosing into a process.
Equipment	Equipment may include: • buckets • stirring paddle • propeller or drum mixers • delumpers • hammers or axes • measuring equipment including scales, flow meters and graduated vessels • personal protective equipment
Documentation	Documentation may include: • materials safety data sheets (MSDSs) • enterprise procedures • labelling requirements (dangerous goods codes, classification numbers, packaging group numbers) • HAZCHEM symbols and codes • spill containment and disposal procedures.
Materials	Materials may include: • raw materials • packaging materials • consumables.
Problems	• Typical problems are restricted to responding in a routine, predetermined manner as specified in the procedures. • All operations are performed to procedures.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
MSDS	An operator is expected to be aware of an MSDS, its general structure and where to find the methods of use, cautions and actions in an emergency. They are not expected to understand the full text of an MSDS.
Material hazards and handling procedures	Material hazards and handling procedures may be identified from label • HAZCHEM symbol • MSDS • other relevant source.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS201B Operate fluid flow equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the operation of the range of pumps and valves typically encountered in the fluid flow system of a processing plant. It includes identifying, operating, monitoring and troubleshooting these items.

Application of the Unit

Application of the unit	In a typical scenario, an operator uses a number of general purpose pumps, piping and valves to move liquids from a storage tank area into the processing plant and products to the finished goods tanks. The operator utilises in-line mixers, strainers and filters, valves, controls and meters to complete this work. The operator would: • identify and report operational problems • be aware of and contribute to a safe working environment • contribute to the safe and productive operation of the equipment • operate, monitor and maintain equipment using relevant procedures. Generally the operator would be part of a team during start up and shut down procedures and would be expected to be capable of demonstrating competence in all parts of this unit. At all times they would be liaising and cooperating with other members of the team. This unit does not require the operation of a central control panel. This competency covers all general duty pumps, their associated drivers (motors) and valves. It does not cover special duty pumps (eg hydrocarbon transmission pumps), drivers which incorporate ancillaries and valves which are used for high pressure/flow situations (see *PMAOPS221 Operate and monitor prime movers, PMAOPS222B Operate and monitor pumping systems and equipment* and *PMAOPS223B Operate and monitor valve systems*). Competence in this unit (*PMAOPS20B1 Operate fluid flow equipment*) would preclude counting *PMAOPS223B Operate and monitor valve systems* towards a qualification.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Operate pumps.	2.1. Identify the type of pump 2.2. Start up and shut down pump as required 2.3. Adjust flow and head/pressure as appropriate to type of pump 2.4. Complete routine checks and reports taking action as required 2.5. Change over pumps as required.
3. Operate pump drivers.	3.1. Monitor critical variables such as amps, temperature and vibration

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	3.2. Keep critical variables in range 3.3. Recognise trends/patterns which indicate a potential or actual problem with the pump driver 3.4. Take action to ensure driver as required.
4. Operate valves.	4.1. Identify the type of valve 4.2. Operate valve in a manner appropriate to the valve type 4.3. Complete routine checks and reports, taking action as required.
5. Respond to fluid system problems.	5.1. Monitor fluid flow system frequently and critically throughout shift using measured/indicated data and senses (sight, hearing, etc) as appropriate 5.2. Recognise issues requiring action 5.3. Take appropriate action.
6. Isolate and de-isolate pump.	6.1. Isolate equipment 6.2. Make safe for required work 6.3. Check plant is ready to be returned to service 6.4. Prepare plant for return to service .

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• efficient and effective operation of plant/equipment • hazard analysis • completing plant records • communication • problem solving.
Required knowledge
Competence includes an understanding of the fluid flow system and its integral equipment to a level needed to control the system, and recognise and resolve operational problems. In particular it includes a knowledge of: • principles of operation of plant/equipment • physics and chemistry relevant to the process unit • process parameters and limits eg temperature, pressure, flow, pH

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• duty of care obligations • hierarchy of control • communication protocols eg radio, phone, computer, paper, permissions/authorities • routine problems, faults and their resolution • relevant alarms and actions • plant process idiosyncrasies • all items on a schematic of the fluid flow system and the function of each • correct methods of starting, stopping, operating and controlling flow • causes of head loss in piping systems (including comparison of fittings using Le/d concept, fluid and pipe material properties, flow geometry, etc) • corrective action appropriate to the problem cause • function and troubleshooting of major internal components and their problems (such as impellors, seals or bearings) • types and causes of fluid flow problems within operator's scope of skill level and responsibility.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	(during demonstration of normal operations and walk throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. Consider co-assessment with units covering: • measurements and readings • housekeeping • communication.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *MSAPMOHS200A Work safely*. The assessment should cover at least one type of centrifugal pump and one type of positive displacement pump, as well as at least two different types of valves for the operator to be regarded as competent.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency is typically performed by all operators. It includes items of equipment such as: • pumps, including various types of centrifugal, positive displacement, acid egg • valves, such as globe, needle, gate, butterfly, plug cock, wedge plug, ball cock, non-return, diaphragm, pneumatic globe, pneumatic butterfly • piping systems and components, including bends and elbows, tee pieces, expansion mechanisms, pipe joints, reducers, nipples, orifices, in-line mixers, filters and strainers, flexible hoses and couplings • shaft seals, such as stuffing boxes, mechanical seals, fluid seals, labyrinth seals. The effect of pipe fittings on pump performance and problems/problem analysis is also included.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	All operations are performed to procedures.
Problems	Typical problems include: • cavitation • seal leaks • head loss/low flow • bearing problems.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Start up shut down as required	Start up shut down as required includes: • start up and shut down to/from normal operating conditions • start up and shut down to/from isolated, cold, empty • all other conditions experienced on the plant. • ie from any condition to any condition experienced on the plant.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS204B Use utilities and services

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the use of a range of utilities and services in the plant. It includes the selection of the appropriate utility/service from those provided to the plant and recognizing and responding to operational problems as required.

Application of the Unit

Application of the unit	In a typical scenario an operator will be able to identify and select utilities and services used on a day to day basis. These will be provided to a process plant and will consist of instrument and plant air, nitrogen, plant water, steam, flushing oil and other utilities/ services required for a particular process. The operator uses these utilities/services as required. The correct use and application of these substances is essential to plant and operator safety and the continued performance of the process. Generally the operations technician would be part of a team during start-up and shutdown procedures and may be expected to be capable of performing all parts of this unit, but only for those utilities/services required by their plant. At all times they would be liaising and cooperating with other members of the team. This unit does not cover the provision or generation of utilities or services which are covered by: • *PMAOPS224B Provide fluids for utilities and support*, ***OR*** • *UTPNEG162A Operate and monitor boiler steam/water cycle*.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Select and use utilities and services.	2.1. Identify utilities and services available in the plant 2.2. Identify key properties, applications and limitations of each utility and service 2.3. Select appropriate utility/service for the required duty 2.4. Use selected utility/service to procedures.
3. Respond to problems.	3.1. Monitor use of utility/service frequently and critically throughout shift using measured/indicated data and senses (sight, hearing, etc) as appropriate. 3.2. Recognise operational problems 3.3. Analyse cause of operational problems within scope of skill level 3.4. Take timely and appropriate action to solve operational problems.

© Commonwealth of Australia, 2024 Public Skills Australia

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

- efficient and effective operation of plant/equipment
- hazard analysis
- completing plant records
- communication
- problem solving.

Ability to isolate the causes of problems to an item of equipment within the production system and to distinguish between causes of problems/alarm/fault indications such as:

- instrument failure/malfunction
- electrical failure/malfunction
- mechanical failure/malfunction
- variations in product parameters (temperature, flows, pressure and levels).

Required knowledge

Understanding of service utilities which form part of the utilities system. In particular it includes a knowledge of:

- names and functions of all items on a schematic of the utilities system
- differences in use and methods between each service and utility
- hazards in operation of services
- differences between grades/types of services, eg grades of steam, air and nitrogen
- physics and chemistry relevant to the utility and its use
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- all items on a schematic of the plant item and the function of each
- correct methods of starting, stopping, operating and controlling utility
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems, such as steam traps, lubricators, moisture pots
- types and causes of futility problems within operator's scope of skill level and responsibility.

RANGE STATEMENT	
the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Service utilities	This unit of competency includes all service utilities which form part of the utility system. For your plant this may include (select relevant items): • steam - saturated, superheated • air - process, instrument, breathable • water - cooling, boiler feed, plant, waste • inert atmosphere - nitrogen, carbon dioxide • flushing oil.
Problems	Typical problems for your plant may include: • non-supply of products and elements • variation in product and element feed rates • variations in temperature, pressure and flow • blockages or leakage.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.

PMAOPS205B Operate heat exchangers

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency is typically performed by an operator and covers the operation of heat exchangers, including heat exchangers that form part of a heating, cooling or refrigeration system, and solving of heat exchanger problems.

Application of the Unit

Application of the unit	In this competency, an operator would typically start up and shut down heat exchangers in accordance with procedures, and make adjustments to flow rate, temperature and pressure, depending on the type of heat exchanger. Generally the operator would be part of a team during start up and shut down procedures and would be expected to be capable of demonstrating competence in all parts of this unit. At all times they would be liaising and cooperating with other members of the team. This competency does not cover super heaters or waste heat boilers, which are treated as part of steam generating equipment.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Operate heat exchangers.	2.1. Identify the type of heat exchanger 2.2. Start up and shut down heat exchanger according to the heat exchanger type and duty 2.3. Adjust flow rates, temperatures and pressure as appropriate to type of heat exchanger 2.4. Complete routine checks, logs and paperwork, taking action on unexpected readings and trends.
3. Isolate and de-isolate plant.	3.1. Isolate plant 3.2. Make safe for required work 3.3. Check plant is ready to be returned to service 3.4. Prepare plant for return to service.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• efficient and effective operation of plant/equipment • hazard analysis • completing plant records

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

- communication
- problem solving.

Operation of heat exchanger and the ability to recognise and resolve operational problems. This could include any of the following remedial actions:

- making adjustments
- carrying out minor maintenance
- identifying and reporting problems outside operator's scope of responsibility
- identifying and controlling hazards related to heat exchangers and their integral equipment, including pressure vessels.

Required knowledge

Comprehensive understanding of heat exchanger principles to a level needed to control the operation. In particular, the operator needs to understand the factors affecting efficient operation of a heat exchanger in order to make appropriate adjustments or recognise when maintenance is required. These also includes a knowledge of:

- all items on a schematic of the heat exchanger system and the function of each
- principles of operation of heat exchangers
- correct methods of starting, operating and shutting down heat exchangers
- issues related to pressure vessels (regulations, requirements)
- physics and chemistry relevant to the process unit
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- causes of head loss and change in heat transfer coefficient/rates
- corrective action appropriate to the problem cause
- function and troubleshooting of major internal components and their problems, such as tubes and baffles.

Evidence Guide

EVIDENCE GUIDE

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. 	scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. For many plants, it might be appropriate for this unit to be assessed with units covering: • fluid flow • utilities and services • communication. In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *MSAPMOHS200A Work safely*.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency includes all types of heat exchangers such as: • plate • Utube • spiral • bayonet • air cooled fin • shell and tube (all variants of design) • scraped surface

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• vessel jackets/coils. This competency does not cover super heaters or waste heat boilers, as these are treated as part of steam generating equipment.
Heat exchanger duties	Heat exchanger duties include: • heating • cooling • cryogenic • reboilers • condensers • gas dryers • gas coolers • refrigeration (evaporators/condensers).
Problems	Typical problems include: • damage to heat exchanger due to overheating and/or under/over pressurising • factors that affect heat exchanger efficiency (scale build-up, fouling, internal leakage, air lock, turbulence, corrosion) • leakage or gasket problems • recognising when maintenance is required.
Start up shut down as required	Start up shut down as required includes: • start up and shut down to/from normal operating conditions • start up and shut down to/from isolated, cold, empty • all other conditions experienced on the plant. ie from any condition to any condition experienced on the plant.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS216B Operate local control system

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the operation of a local control panel. These controllers use simple control algorithms and only a limited number of control loops. Typically it will be located on the plant, but may also be located off plant and include simple panels in a control room which are not part of the main control panel.

Application of the Unit

Application of the unit	In a typical scenario, the operator will use the local control panel to monitor and control process variables such as temperature or pressure and the operation of valves and pumps to add raw materials, additives, and discharge product. Routine start up and shut down of the equipment using the local control system is expected, as is emergency response and shut down. This includes but is not restricted to PLC control. This includes an understanding of the process and all OHS requirements including emergency situations. The unit does not apply to operating a control panel for an integrated plant, where the control is from a separate control room or control system, which is covered by PMAOPS305B Operate process control systems. The plant technician would: • be aware of and contribute to a safe working environment • identify and report operational problems to their supervisor / control room operator • execute all routine activities, including process monitoring, start up, shut down and adjustments, in accordance with position description. Generally the operator would operate independently in the plant. The operator would be expected to be capable of performing all parts of this unit. At all times they would be liaising and cooperating with other members of the team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Interface with the control panel	2.1. Monitor the process using the operator interfaces and keep appropriate personnel informed on developments 2.2. Select appropriate controller modes to ensure the effective control of the process 2.3. Undertake required set point/output changes to optimise plant and process requirements 2.4. Access historical data and information 2.5. Acknowledge messages and alarms.
3. Control the process using the local control system	3.1. Obtain relevant data and information from the control system by applying systems knowledge

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	3.2. Identify the status of individual pieces of equipment from the control panel and use information to identify potential faults 3.3. Interpret alarms and prioritise steps to ensure control of system is maintained 3.4. Minimise fluctuations and variations in process through the interpretation of existing trends and control schematics 3.5. Make required set point/output changes to meet plant and process requirements 3.6. Take other appropriate action as required 3.7. Record process variations/irregularities in accordance with procedures.
4. Facilitate planned and unplanned process start-ups and shutdowns	4.1. Respond to all alarms and take appropriate action 4.2. Maintain coordination with all outside services and operations in order to assist in the correct identification and reporting of faults 4.3. Conduct planned start-up and shutdown processes to procedures 4.4. Conduct unplanned start-up and shutdown processes to procedures 4.5. Communicate with all operational areas and personnel affected by unplanned events to ensure safety is maintained during the process 4.6. Implement all required and stated emergency responses and ensure the outcomes of these responses are communicated to all affected areas 4.7. Log all required information for further action to provide a historical record of all events.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence includes the ability to distinguish between causes of problems/alarms/fault indications such as:

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• instrument failure/malfunction • electrical failure/malfunction • mechanical failure/malfunction • equipment design deficiencies • product parameters (temperature, flows, pressure and levels). • An ability to communicate with other work groups and personnel during the operation and monitoring of this equipment is considered an essential element of this unit of competency.
Required knowledge
Competence includes an understanding of underpinning knowledge. Demonstration of competence in this unit must include knowledge of: • all items on a schematic of the controller and the function of each • principles of operation and location of the process/production equipment • specific plant process operations • product specifications and tolerances • systems operating parameters • basis of control for the process • emergency shutdown procedures • process specific physics, chemistry and mathematics • process drawings, eg P&ID, PFD, cause and effect • instrumentation and control systems, eg relevant primary sensing devices, final control elements, transducers/transmitters • simple control loops, including PID control, set points, controlled variable, indicated variable • effective communication techniques.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment for this unit of competency will be on a local control system. Assessment of this unit should demonstrate competence on actual plant and equipment in a work environment. The unit will be assessed in as

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual process control system and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios, role plays and 3D virtual reality interactive systems. This unit of competency requires a significant body of knowledge, which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate responses. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations, which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	similar sources.
Context of and specific resources for assessment	Assessment will require access to a process control system over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions, which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. Consider co-assessment with appropriate operations competencies for the unit of plant. In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *MSAOHS200A Work safely*
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency includes all such items of equipment and unit operations, which form part of the production/processing system. For your local control system this may include (select relevant items): • plant items requiring only simple control

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• programmable logic controllers (PLCs) • hard wired control and alarm panels • analogue control systems • personal computers • printers • fire and gas detection/protection systems • emergency shutdown systems • communications systems. Typical problems for your plant may include: • variation/loss of feed • unstable control of pressure, temperature level and flows • control equipment failure • process plant trips • change in atmospheric conditions (rain, temperature, wind, lightning) • emergency situations • loss of power/utilities.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS222B Operate and monitor pumping systems and equipment

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	In a typical scenario a prime mover is used to drive a complete pumping system including pumps and ancillary equipment (eg, vibration monitors, lubrication pumps and equipment, gear boxes and barring gear). The pumps covered by this unit typically are used for hydrocarbon transmission lines.

Application of the Unit

Application of the unit	The operations technician would: • identify and report operational problems • be aware of and contribute to a safe working environment • contribute to the safe and productive operation of the pump • monitor, shut down and start up pump and ancillary equipment using relevant procedures. This unit only applies to pumping systems and equipment which are driven by prime movers and does not include systems with close coupled motors (see *PMAOPS201B Operate fluid flow equipment*). This unit includes starting up/shutting down the system and monitoring the performance of the equipment including responding to the requirements of emergency situations Generally the operator would be part of a team during start up and shut down procedures and would be expected to be capable of demonstrating competence in all parts of this unit. At all times they would be liaising and cooperating with other members of the team.

Licensing/Regulatory Information

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Prepare equipment for operation	2.1. Check operation and function of pump and driver by applying principles of operation and procedures 2.2. Check the operational area to ensure that any potential hazards which may affect the operation of the equipment are removed 2.3. Conduct pre-start-up checks on the driver and pump to ensure that all nominated operational valves are correctly sequenced before commencing pumping operations, and that all safety requirements are met.
3. Start up/shut down pump.	3.1. Commission pump protection devices and ancillary equipment in accordance with procedures. 3.2. Start up prime mover to procedures 3.3. Bring pump on line

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	3.4. Shut down pump as required 3.5. Perform emergency shut down when required.
4. Monitor and assess pumping systems and equipment.	4.1. Verify the operational condition of all flanges, gaskets and seals to ensure that the operational integrity of these components is maintained within stated operational tolerances and to avoid any environmental damage 4.2. Monitor pumping installations/equipment to determine if the correct pump pressures, temperatures and flows conform to their required application 4.3. Monitor and regularly check pumping systems/ equipment performance and all components to identify any signs of excessive wear and diminution of performance 4.4. Check operational valves and valve assemblies for possible leakages 4.5. Monitor and identify variations in the operating conditions of the pumping systems/equipment through the interpretation of amperage operating data and equipment 4.6. Periodically check and clean filter systems to remove any potential blockages or impurities entering the pumping system/equipment and causing it to cavitate or malfunction during operation 4.7. Inspect and sample lubrication oil to check that operating levels are correct and to determine if any contamination has taken place which may affect the operational capacity of the pumping system/equipment. 4.8. Take appropriate action resulting from checks and monitoring.
5. Identify maintenance requirements.	5.1. Conduct routine inspections and checks to ensure normal or stated pump operation is maintained 5.2. Identify equipment faults through observation of the operational equipment and periodic sampling and testing 5.3. Take appropriate action 5.4. Record operational data as required by procedures.
6. Isolate and de-isolate plant.	6.1. Isolate plant 6.2. Make safe for required work 6.3. Check plant is ready to be returned to service 6.4. Prepare plant for return to service.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

Competence includes the ability to and be able to distinguish between causes of problems/alarms/fault indications such as:

- instrument failure malfunction
- electrical failure malfunction
- mechanical failure malfunction
- equipment design deficiencies
- product parameters (temperature, viscosity, purity)
- fouling or contamination, eg filters, exchangers, seal system, lubrication
- cavitation
- overheating (bearings, casing etc)
- overload.

Required knowledge

The knowledge referred to in the Evidence Guide for this unit includes:

- all items on a schematic of the pump system and the function of each
- pumping system/equipment operating parameters
- sampling and testing techniques
- equipment terminology
- plant or field layout or geography
- safety systems and procedures
- fault finding and troubleshooting techniques
- job hazard analysis.
- principles of operation of pump, ancillaries and components
- physics and chemistry relevant to the pump, ancillaries and the materials processed
- process parameters and limits, eg temperature, pressure, flow, pH
- duty of care obligations
- hierarchy of control
- communication protocols, eg radio, phone, computer, paper, permissions/authorities
- relevant alarms and actions
- plant process idiosyncrasies
- correct methods of starting, stopping, operating and controlling process
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems
- types and causes of problems within operator's scope of skill level and responsibility.

© Commonwealth of Australia, 2024 Public Skills Australia

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios, role plays and 3D virtual reality interactive systems. In the case of evacuation training or training for competencies practised in life threatening situations, simulation may be used for the bulk of the training. This unit of competency requires an application of the knowledge contained in the use of pumps and their integral equipment, to the level needed to maintain control and recognise and resolve problems. This can be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are

EVIDENCE GUIDE	
	recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations, which may have been generated from the past incident history of pump, incidents on similar pumps around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	As a general rule assessment will require access to an operating an operating pump system over an extended period of time, or a suitable method of gathering evidence of operating competence over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may

RANGE STATEMENT	
be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency includes all such items of equipment and unit operations which form part of the pumping system. For your plant this may include (select relevant items): • beam pumps • electrical submersible pumps • jet pumps • centrifugal pumps • positive displacement pumps, eg reciprocating pumps • various drivers (diesel engine, electric motor, steam turbine etc) • instrumentation • filters.
Typical problems	Typical problems for your plant may include: • variation in feed • vibration • control of level, temperature, pressure and flow • blockages • overheating • overloading.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS300B Operate a production unit

Modification History

Release 2 – Minor clarification to descriptor, minor changes to Skills and Knowledge and Range, and editorial corrections.

Unit Descriptor

This competency covers the operation of an enterprise specific unit of a production plant, which is not otherwise described by other units in this Training Package. The operations technician is expected to demonstrate a significant understanding of the process and the equipment operation. The plant unit includes the operation of other plant items which are integral to the operation of the plant unit.

Application of the Unit

This unit applies where the plant technician operates a unit of plant which is not otherwise described. The other 300 series process competencies should be used as an indicative guide as to the coverage and complexity of the operation.

The operations technician would:

- identify and rectify operational problems
- predict the potential impact of the production unit output on the operation of the whole plant
- facilitate output changes.

Generally the operations technician would operate independently in a plant with local control or in liaison with the control room operator in a plant with Distributed Control System (DCS) type controls. In the case of large complex plant, the operations technician would be part of a team during startup and shutdown procedures. The operations technician would be expected to be capable of performing all parts of this unit. At all times they would be liaising and cooperating with other members of the team.

This unit does not include the operation of any packaged unit (regardless of its engineering complexity) which is covered by *MSAPMOPS100A Use equipment.*

This unit does not require the operation of a central control panel.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Not applicable

Employability Skills Information

This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

1	Prepare for work	1.1	Identify work requirements
		1.2	Identify and control hazards
		1.3	Coordinate with appropriate personnel
2	Start up unit	2.1	Perform pre-start-up checks
		2.2	Start up individual items of equipment and the entire unit
		2.3	Start up normally and after maintenance
		2.4	Build rate steadily
		2.5	Stabilise operation to produce specified rate and quality within minimum time
3	Monitor and control the unit	3.1	Complete routine checks, logs and paperwork
		3.2	Frequently and critically monitor all plant throughout shift
		3.3	Recognise the signs of potential and actual problems

© Commonwealth of Australia, 2024 Public Skills Australia

		3.4	Take appropriate action
		3.5	Trim plant to achieve required output rate and quality while maximising plant efficiency
4	Change unit output rate, grade or specification	4.1	Predict the need to make a change to meet process requirements
		4.2	Trim unit in preparation of changes
		4.3	Make changes as required
		4.4	Manage changes smoothly and in a timely manner
		4.5	Minimise out of specification product/process disruptions as a result of the change
5	Maintain plant effectiveness	5.1	Use measured/indicated data and smell, sight, sound and feel as appropriate to monitor plant
		5.2	Identify critical equipment/processes and tune their performance
		5.3	Identify issues likely to impact on plant performance and take appropriate action
		5.4	Predict impact of a change in one unit/area on other plant units/areas and communicate this to relevant people
		5.5	Test trips and alarms as required
		5.6	Complete minor maintenance according to procedures
6	Shut down unit	6.1	Determine type of shut down required
		6.2	Give advance warning of shut down where possible
		6.3	Change over individual items of equipment
		6.4	Shut down individual items of equipment and the entire unit
		6.5	Shut down to a standby condition if appropriate

© Commonwealth of Australia, 2024 Public Skills Australia

		6.6	Shut down in an emergency and otherwise when required
		6.7	Reset trips and alarms after a shutdown
7	Isolate and de-isolate plant	7.1	Isolate plant
		7.2	Make safe for required work
		7.3	Check plant is ready to be returned to service
		7.4	Prepare plant for return to service

Required Skills and Knowledge

This describes the essential skills and knowledge and their level, required for this unit.

Required skills

For the plant system:

- efficient and effective operation of plant/equipment
- hazard analysis
- completing plant records
- communication
- problem solving

Also ability to:

- identify all items on a schematic of the production unit and describe the function of each
- describe the nature/condition of materials entering and leaving each stage of the process, the changes which have occurred in that stage and why they have occurred
- describe the basis of the process used in the production unit to transform the feed materials into the product, including the basic science of the process (where relevant)
- describe the causes and remedies of common problems, such as those selected in the Range Statement
- describe methods of changing rate/grade/specification or feed and the advantages and disadvantages of each

Ability to isolate the causes of problems to an item of equipment within the production unit and to be able to distinguish between causes of problems/alarm/fault indications, such as:

- process materials variations
- instrument failure/wrong reading
- electrical failure

© Commonwealth of Australia, 2024 Public Skills Australia

- mechanical failure
- operational problem,

as is relevant to the practical operation of equipment at that job level

Required knowledge

An understanding of the production unit/system and its integral equipment, to the level needed to control the system and recognise and resolve problems. In particular it includes:

- principles of operation of plant/equipment
- physics and chemistry relevant to the process unit
- process parameters and limits (e.g. temperature, pressure, flow, pH and amps
- duty of care obligations
- hierarchy of control
- communication protocols (e.g. radio, phone, computer, paper and permissions/authorities)
- routine problems, faults and their resolution
- relevant alarms and actions
- plant process idiosyncrasies
- all items on a schematic of the plant item and the function of each
- correct methods of starting, stopping, operating and controlling
- corrective action appropriate to the problem cause
- function and troubleshooting of major components and their problems
- types and causes of problems within operator's scope of skill level and responsibility

This knowledge is required of all major items of equipment which comprise the production unit/system.

Evidence Guide

The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment

Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation.

Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components.

© Commonwealth of Australia, 2024 Public Skills Australia

	Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *MSAPMOHS200A Work safely*.
Guidance information	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy

© Commonwealth of Australia, 2024 Public Skills Australia

for assessment	capacity of the assessee and the work being performed.

Range Statement

The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.

Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This competency covers the operation of a unit of equipment and includes the operation of equipment ancillary to the main production unit. It includes all items of equipment and unit operations which form part of the operation of the unit.
Problems	Typical problems include: • recognising and acting on unstable/sub-optimal operation • control of critical variables and outputs • variations in feed rates, quality, and so on
Start up shut down as required	Start up shut down as required includes: • start up and shut down to/from normal operating conditions • start up and shut down to/from isolated, cold or empty • all other conditions experienced on the plant (i.e. from any condition to any condition experienced on the plant)
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions

© Commonwealth of Australia, 2024 Public Skills Australia

- standard operating procedures
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (e.g. Responsible Care) and government regulations.

Health, safety and environment (HSE)

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

Product

Product includes anything produced by a process step and so includes intermediate products, such as the product from one process step which then becomes the feed for another'.

PMAOPS305B Operate process control systems

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the operation of a centralised control panel. These controllers use a range of control algorithms and multiple control loops. The panel will control multiple vessels/plant items and or products. It will typically be located off plant in a control room.

Application of the Unit

Application of the unit	In a typical scenario an operations technician uses a centralised process control system to operate and monitor the plant. This control system would typically be a distributed control system (DCS) and may include other local controllers which are integral to its operation (stand alone local controllers are covered by *PMAOPS216B Operate local control system*). This panel technician/central control room operator has an overall responsibility for the operation of all units of equipment covered by the control system. As such they often also take a lead role as part of the operating team. Competencies required by this role other than panel competencies as such are not covered by this unit. The operations technician would: • identify, correct and report operational problems • be aware of and contribute to a safe working environment • contribute to the safe and productive operation of the system • operate, monitor and maintain equipment using relevant procedures • take appropriate action following an alarm or out of specification condition developing Generally the operations technician would be part of a team during start up, shut down and normal operating conditions and would be expected to be capable of demonstrating competence in all parts of this unit. He/she would be taking a leading role in liaising and cooperating with other members of the team. Typically the panel operator will liaise with other 'outside operators', however this unit does not preclude the situation where the panel operator may also undertake 'outside' functions.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Use operator interface.	2.1. Use keyboards, track ball and monitor and/or stand alone controllers to access control system/panel 2.2. Monitor the process using the operator interfaces 2.3. Select appropriate controller modes 2.4. Access historical data and information 2.5. Acknowledge messages and alarms.
3. Access control information.	3.1. Obtain relevant data and information from the control

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	system by applying systems knowledge 3.2. Identify the status of individual pieces of equipment from the control panel and use information to identify potential faults 3.3. Minimise fluctuations and variations in process through the interpretation of existing trends and control schematics 3.4. Record process variations/irregularities to procedures.
4. Control process variations and monitor operations.	4.1. Use historical data to assist the identification of problems 4.2. Process available information to identify potential faults 4.3. Undertake required set point/output changes to meet plant and process requirements 4.4. Optimise plant operating conditions in accordance with guidelines 4.5. Adjust production in response to test results and control panel information 4.6. Monitor key process and environmental variables and take appropriate action 4.7. Adjust controller settings in accordance with procedures 4.8. Use fine tuning software as appropriate 4.9. Coordinate with up stream and downstream units as appropriate 4.10. Record adjustments and variations to specifications/schedules 4.11. Communicate to appropriate personnel as required.
5. Facilitate planned and unplanned process start-ups and shut-downs.	5.1. Select and apply procedures to planned startup and shutdown processes 5.2. Select and apply procedures to unplanned shutdown processes 5.3. Implement all required emergency responses 5.4. Communicate necessary information to all personnel affected by events 5.5. Log all required information.
6. Respond to alarms or out of specification conditions.	6.1. Identify system(s) affected by the alarm or condition 6.2. Interpret alarms and prioritise actions to be taken 6.3. Take appropriate action to respond to the alarm or

ELEMENT	PERFORMANCE CRITERIA
	incident 6.4. Deal with any out of specification material in accordance with procedures 6.5. Communicate the problem/solution to appropriate personnel 6.6. Record the information as required 6.7. Provide details of the alarm and action taken to the next shift at change over

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence includes the ability to distinguish between causes of problems/alarms/fault indications such as: • instrument failure/malfunction • electrical failure/malfunction • mechanical failure/malfunction • equipment design deficiencies • product parameters (temperature, flows, pressure and levels) • process control system malfunction • power/utility failures. An ability to communicate with other work groups and personnel during the operation and monitoring of this panel is considered an essential Element of this unit of competency.
Required knowledge
The knowledge referred to in the Evidence Guide for this unit includes: • the architecture and location of the process/production equipment • specific plant process operations • interactions between plant items/processes • product specifications and tolerances • systems operating parameters • system integrity limits • process control philosophies and strategies • emergency shutdown procedures

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• process specific physics, chemistry and mathematics • basic science of upstream and downstream processes • relevant chemistry of the process to the level of interpreting chemical equations and manipulating factors controlling rate of reaction and yield (or equivalent physics for a physical process/biochemistry for a biochemical process) - chemistry to include both intended products and interfering reactions, eg salts, hydrates • impact of external factors, eg variations in weather, feed etc • process drawings, eg P&ID, PFD • cause and effect • basis of control for the plant/s • instrumentation and control systems, including feed forward, feed back and open control • instrumentation and control system components, eg relevant primary sensing devices, final control elements, transducers/transmitters • control loops, including PID control, set points, controlled variable, indicated variable • interaction between multiple control loops, including cascade control • impacts of changing controller settings and the limits within which changes can be made • effective communication techniques • organisation procedures • UPS and its applications and use.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	also include the use of case studies/scenarios, role plays and 3D virtual reality interactive systems. In the case of evacuation training or of training for competencies practiced in life threatening situations, simulation may be used for the bulk of the training. This unit of competency requires an application of the knowledge contained in the use of the process control system and its integral equipment, to the level needed to maintain control and recognise and resolve problems. This can be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate responses. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations, which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to a process control system over an extended period of time, or a suitable

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork, communication and leadership units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicized wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency includes all such items of equipment and unit operations which form part of the control system. For your control room this may include (select relevant items): • process control systems, eg Distributed Control Systems • personal computers • printers • fire and gas detection/protection systems • emergency shutdown systems • communications systems. Typical problems for your plant may include: • loss of power/utilities • analysing failure modes

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• variation/loss of feed • unstable control of pressure, temperature level and flows • control equipment failure • process plant trips • change in atmospheric conditions (rain, temperature, wind, lightning) • emergency situations.
Alarms or abnormal conditions	Alarms or other abnormal conditions includes: • emergency, including emergency shut down • partial or complete controller failure.
Other problems	Other problems includes: • problem solving control functions
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS307B Transfer bulk fluids into/out of storage facility

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	In a typical scenario involving land based tank farms or tankers at sea, the control room operator, from the main panel, will monitor and control the transfer of product into storage facilities including controlling product levels, flows, temperatures and pressures. The operations technician will also prepare and complete all necessary documentation for the control, transfer and calculation of product volumes.

Application of the Unit

Application of the unit	The storage facility or vessel will be monitored through the use of gas and fire detection equipment. Automatic sprinkler systems or deluges will be activated in the event of fire detection and emergency shutdown systems will operate. The equipment to be used in the transfer of product will be checked and tested before use. In some cases, before transferring, the circulation of product through pipelines, will commence. This is usually for the purpose of pipeline chilldown, and is required to minimise vapour pressure build-up in warm pipework. A comprehensive fire water supply main may encompass the facility and/or be located on the vessel, and a suitable fire pump would be able to provide fire water requirements in emergencies.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units	PMAOPS201B	Operate fluid flow equipment

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Prepare storage/transfer facilities	2.1. Manage products within the tank farm or at the platform in accordance with the site/enterprise's storage types, products and locations 2.2. Inspect storage or docking facilities for leaks or damage 2.3. Check and test safety systems to verify their operational condition and status, and report on all equipment faults 2.4. Conduct critical inspections of storage and tank farms (and ascertain seaworthiness of vessels at sea if required) ensuring areas are safe, clean and equipment can't be compromised by debris 2.5. Identify and report all equipment requiring maintenance, follow up to satisfactory conclusion.
3. Monitor storage facilities.	3.1. Confirm tank mixes, capacities and quality, and determine if these are being maintained within the agreed product requirements prior to transfer 3.2. Monitor gas detection/environmental/safety systems to ensure the storage area is a safe environment and that the safety of the area or vessel is not compromised 3.3. Communicate storage conditions to transfer or other personnel to inform them of the operational condition and status of the storage facilities or vessel.

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
4. Monitor load-out/transfer platform or facility as required.	4.1. Monitor load-out/transfer systems on the platform or in the terminal load-out/transfer area 4.2. Monitor gas detection/environmental/safety systems to ensure the load-out/transfer area is a safe environment 4.3. Inform appropriate personnel of the load-out/transfer area status, and conditions of the storage facilities.
5. Conduct load-out/transfer.	5.1. Communicate operational status to required personnel prior to loading 5.2. Ensure that all start-up permissives have been satisfied and product is ready for transfer 5.3. Set and adjust pump flow rates to keep within agreed capacities 5.4. Monitor loading pump performance to keep within stated operational ranges and vibration is in limits 5.5. Take and record product shipping/transfer samples as required.
6. Isolate and de-isolate plant.	6.1. Isolate plant 6.2. Make safe for required work 6.3. Check plant is ready to be returned to service 6.4. Prepare plant for return to service.
7. Resolve problems	7.1. Identify possible problems in equipment and process. 7.2. Determine problems needing action 7.3. Determine possible fault causes 7.4. Rectify problem using appropriate solution within area of responsibility 7.5. Follow up items until resolved 7.6. Report problems outside area of responsibility to designated person.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
For the plant system/unit:

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• efficient and effective operation of plant/equipment • hazard analysis • completing plant records • communication • problem solving
Required knowledge
Demonstration of competence in this unit must include knowledge of the following: • principles of operation of plant/equipment • physics and chemistry relevant to the process unit • process parameters and limits, eg temperature, pressure, flow, pH • duty of care obligations • hierarchy of control • communication protocols, eg radio, phone, computer, paper, permissions/authorities • routine problems, faults and their resolution • relevant alarms and actions • plant process idiosyncrasies • all items on a schematic of the plant item and the function of each • correct methods of starting, stopping, operating and controlling flow • causes of head loss in piping systems, including comparison of fittings using Le/d concept, fluid and pipe material properties, flow geometry etc • corrective action appropriate to the problem cause • function and troubleshooting of major internal components and their problems, such as impellors, seals or bearings • types and causes of problems within operator's scope of skill level and responsibility. • testing techniques • equipment isolation and purging • use and operation of safety equipment, including breathing apparatus • tank and product mixes • flow rates and measures • tank capacities and percentages • static electricity principles. Sound knowledge of storage and transfer techniques required to transport oil, gas or water is expected.

Evidence Guide

EVIDENCE GUIDE

EVIDENCE GUIDE	
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *MSAPMOHS200A Work safely*.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency includes all items of equipment and unit operations which form part of the load-out and storage system. For your facility this may include (select relevant items): • tanks, such as concrete bunded storage tanks,atmospheric pressure tanks, floating roof tanks, temperature controlled tanks (heated, chilled, refrigerated) • vessels, eg pressure storage vessels • pumps, eg transfer and circulation pumps, stripping pumps • compressors, eg boil-off gas compressors • gauges

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• fire protection and deluge systems, eg flare system • gas detection systems and equipment • tank dipping and measurement equipment. • instrumentation.
Safety equipment	Safety equipment on site may include: • main fire pumps • jockey pumps • fire monitors • deluge systems • sub-surface foam injection • gas detection and reporting systems • fire detection and reporting systems • emergency shutdown systems
Products	Products may include hydrocarbons, oil, gas or bulk liquid chemicals/petrochemicals.
Problems	Typical problems for your facility may include: • insufficient/inappropriate storage for product/material • interruptions to loading through adverse weather conditions • product surging • control of temperature and pressure • variations in feed • vibration • tank capacities and space.
Start up shut down as required	Start up shut down as required includes: • start up and shut down to/from normal operating conditions • start up and shut down to/from isolated, cold, empty • all other conditions experienced on the plant. ie from any condition to any condition experienced on the plant.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS410B Monitor remote production facilities

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	In a typical scenario, a technician in a central location looks after the operation of a remote production facility. This may be achieved by using ground based or satellite communications systems. The competency covers the operation and management of remote plants, treatment stations or satellite locations.

Application of the Unit

Application of the unit	Typically these stations may include: • wellheads • separation facilities • utility systems • remote pumping and compression stations • remote plants • fire and gas safety systems and associated piping and instrumentation. The operations technician would: • identify and rectify operational problems • conduct well testing • conduct critical function testing. Control of a remote production facility may require operation and process monitoring via a remote control system. Generally the operations technician would operate independently and be expected to be capable of performing all parts of this unit. However they may be part of a team during critical inspections or maintenance operations. At all times they would be liaising and cooperating with other members of the team.

Licensing/Regulatory Information

Not applicable.

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Prepare for work.	1.1. Identify work requirements 1.2. Identify and control hazards 1.3. Coordinate with appropriate personnel
2. Conduct product separation.	2.1. Centralise and prepare well products for initial multi-phase separation, storage and distribution as determined by the required production targets and objectives 2.2. Use multi-phase high and low pressure separation, utilising heat and chemical treatments, to effectively separate the product 2.3. Monitor the separation process via control room operation to ensure all product flows, pressures and temperatures are maintained within correct operating parameters 2.4. Operate and monitor all required utility services to assist in the separation process.
3. Recover and measure product.	3.1. Transfer treated waste water from the separation process for further treatment as required prior to re-injection or disposal 3.2. Ensure that all available product is recovered and all waste water

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	is made safe for further use or disposal within environmental limits 3.3. Measure and sample produced gas as required 3.4. Measure collected product to determine the level of available stocks for further transfer and for accounting purposes 3.5. Take appropriate action.
4. Transfer product.	4.1. Check transfer process equipment required to ensure it is working within agreed operating parameters 4.2. Transfer product to a processing facility for further treatment and enhancement 4.3. Monitor transfers and take appropriate action 4.4. Log and record all product transfers and communicate as required 4.5. Distribute data collected to appropriate personnel.
5. Isolate and de-isolate plant.	5.1. Isolate plant 5.2. Make safe for required work 5.3. Check plant is ready to be returned to service 5.4. Prepare plant for return to service.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence includes the ability to isolate the causes of problems to an item of equipment within the compressor system and to be able to distinguish between causes of problems/alarm/fault indications such as: • product contamination • instrument failure/wrong reading • electrical failure • mechanical failure • operational problems • pressure losses and leakage.
Required knowledge

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
The knowledge referred to in the Evidence Guide for this unit includes: • all items on a schematic of the remote system and the function of each • nature/condition of materials entering and leaving each stage of the process • changes which have occurred in that stage and why they have occurred • methods of changing production rates and the advantages and disadvantages of each • effect of specific climatic and environmental factors • water testing and gas break through testing techniques • storage and transfer techniques related to the transport of oil, gas or water. • principles of operation of plant/equipment • physics and chemistry relevant to the process unit and the fluids involved • process parameters and limits, eg temperature, pressure, flow, pH • duty of care obligations • hierarchy of control • communication protocols, eg radio, phone, computer, paper, permissions/authorities • routine problems, faults and their resolution • relevant alarms and actions • plant process idiosyncrasies • correct methods of starting, stopping, operating and controlling plant • corrective action appropriate to the problem cause • function and troubleshooting of major components and their problems • types and causes of problems within operator's scope of skill level and responsibility.

Evidence Guide

EVIDENCE GUIDE
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.

Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations, which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of

EVIDENCE GUIDE	
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	Consider co-assessment with other units relevant to the job.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	This unit of competency includes all such items of equipment and unit operations which form part of the remote facility. For your enterprise this may include (select relevant items): • valves • pumps • prime movers • compressors • separators • instrumentation • storage tanks, ponds and dams • filters • wellheads

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• hydraulic well control panels • fire and gas safety systems.
Typical problems	Typical problems for your plant may include: • contamination of product • control of temperature and pressure • variations in feed • vibration.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMAOPS411B Manage plant shutdown and restart

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the co-ordination of the shutdown and restarting of a production process in a safe and efficient manner due to a planned or an unplanned shutdown or emergency situation. It does not apply to individual plant operators shutting down individual production units or following directions during a shutdown, as this is included in the normal unit of competency for operating that production unit.

Application of the Unit

Application of the unit	In a typical scenario, a complex and integrated plant (usually but not necessarily large and continuous) needs to be shut down for some reason. Shutting down is a complex process and is more than the simple turning off of a switch. This competency would typically be exercised by the leading plant technician on a shift. This unit requires the exercise of discretion as the plant technician's responses are governed by the cause of the shutdown and the plant's responses to that. They are required to adapt normal practice, within the overall guidelines, to the current situation to obtain the best outcome. This competency requires the coordination of all personnel involved in the shutdown to ensure it happens in as orderly a fashion as possible and that the plant is left in the best condition possible for a quick restart. The person exercising this competency needs to balance the varying requirements to ensure the shutdown occurs with maximum safety to personnel, plant, the environment and the business's productivity (in that order).

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Manage shutdown sequence.	1.1. Check and verify safety systems to ensure that the unit has been made safe 1.2. Identify the reason for, or cause of the shutdown by troubleshooting the system and by utilising all available data and information systems 1.3. Obtain confirmation of the identified shutdown from field based operators to verify both the nature and the reliability of the shutdown 1.4. Rectify or initiate procedures to rectify the fault or shutdown cause through either repair of the operational fault or readjustment before returning the system to start-up status.
2. Conduct start-up process.	2.1. Satisfy all start-up permissives prior to start- up process being commenced 2.2. Conduct start-up according to procedures and in a safe and efficient manner, ensuring a return to steady state operation is achieved.
3. Document shutdown and	3.1. Complete all logs and workplace documentation relating to the shutdown/start-up process, ensuring all details, actions and

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
start-up process.	responses are accurately recorded 3.2. Record any further ongoing production problems and report to appropriate persons or authority.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence includes: • efficient and effective planning of shut down/start up • hazard analysis • completing plant records • communication • problem solving
Required knowledge
Demonstration of competence in this unit must include knowledge of the following: • principles of operation of plant/equipment • physics and chemistry relevant to the process unit and the materials processed • process parameters and limits, eg temperature, pressure, flow, pH • duty of care obligations • hierarchy of control • communication protocols, eg radio, phone, computer, paper, permissions/authorities • routine problems, faults and their resolution • relevant alarms and actions • plant process idiosyncrasies • all items on a schematic of the plant item and the function of each • correct methods of starting, stopping, operating and controlling process • corrective action appropriate to the problem cause • function and troubleshooting of major components and their problems • types and causes of problems within operator's scope of skill level and responsibility. • architecture of the process/production systems • the plant • product specifications and tolerances • systems operating parameters

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE
• process control philosophies and strategies • the process • emergency shutdown procedures • physics, chemistry and mathematics relevant to the process • outside process knowledge and equipment operation as is relevant to the practical operation of equipment at that job level.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Simulation may be required to allow for assessment of parts of this unit. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • early warning signs of equipment/processes needing attention or with potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	• appropriate action is taken to ensure a timely return to full performance • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with: • *MSAPMOHS200A Work safely*. The person undertaking this competency is expected to be able to work under and manage situations of high pressure, in order to ensure the safe and efficient management of the control room production process and the safety of plant employees.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Context	Causes of shutdown may be: • planned, eg for maintenance or other planned work • unplanned, eg in response to a plant upset or equipment failure • emergency, eg in response to an automatic shutdown sequence or plant trip. The shutdown may be: • shutdown 'to cold', eg complete plant shutdown and purging of all process materials from equipment • short shutdown to allow minor work 'warm shutdown', eg partial shutdown, with retention of some or all of process materials • managing a plant trip and restart 'hot shutdown', eg short duration shutdown in response to a plant upset or trip This competency also includes: • coordinating the shift team • implementing emergency procedures • using the permit to work system (for repairs required). • This competency may apply to: • panel technicians • outside technicians • technicians seconded to a shut down role • other relevant personnel All operations are performed according to procedures.
Appropriate action	Appropriate action includes: • determining problems needing action • determining possible fault causes • rectifying problem using appropriate solution within area of responsibility • following through items initiated until final resolution has occurred • reporting problems outside area of responsibility to designated person.
Procedures	Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.
Health, **safety and environment** (**HSE**)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.

PMASUP440B Commission/recommission plant

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This unit covers the commissioning of new plant/pipeline or the re-commissioning of significantly modified plant/pipeline. This unit does not cover startup of a plant/ pipeline after a shutdown, unless there have been major changes to the plant during the shutdown. For a normal startup use *PMAOPS411B Manage plant shutdown and restart*.

Application of the Unit

Application of the unit	In a typical scenario, a new plant/pipeline or a major plant/pipeline upgrade is to be commissioned/recommissioned with a leading plant technician taking a significant role. The technician is involved in the design of the plant/plant modifications and the planning of the startup. Being 'involved in' could mean participating in design meetings or HAZOPS or reviewing/checking the design for operability issues or checking the HAZOP outcomes. This does not preclude the inclusion of 'turnkey' type projects, provided the technician has had a role in the plant design, eg checking operability, suitability for local conditions. This competency includes all equipment associated with the new/modified plant. The technician would not normally have a 'hands on' operating role for all items of equipment, but may have a 'hands on' role for major items of equipment. More importantly, the technician will have an overall role and would be expected to have an understanding of the function of all items of equipment in the plant so that detailed directions can be given plant operators who are performing the 'hands on' role during the commissioning/recommissioning. This competency is typically performed by experienced technicians, likely to be the leaders of an operational team. This may include working in conjunction with a design team, or reviewing final design to ensure plant/ pipeline meets operational requirements and for the purpose of commissioning or recommissioning plant/pipelines. As commissioning is usually a team activity, the technician will take a lead technical role, rather than undertake all aspects on an individual basis.

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Contribute to/review the design of plant/ equipment.	1.1. Apply process understanding to the design process 1.2. Identify the role and purpose of the plant and equipment 1.3. Ensure design meets the identified need 1.4. Identify process conditions and apply to hazard and operability studies 1.5. Undertake investigations following hazard studies 1.6. Record and report findings.
2. Take part in commissioning planning.	2.1. Ensure the work is coordinated effectively with others involved on the work site 2.2. Obtain materials necessary to complete the work and check against job requirements

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	2.3. Obtain tools and equipment necessary to carry out the work and check for correct operation and safety 2.4. Prepare plans to ensure that procedures are performed in the correct sequence 2.5. Obtain approvals where necessary from appropriate authorities.
3. Participate in acceptance of plant/ equipment.	3.1. Undertake pre-commissioning activities 3.2. Complete safety acceptance documentation 3.3. Identify, record and report problems or non-conformance 3.4. Conduct trials/test runs 3.5. Record and report performance data.
4. Commission system.	4.1. Bring the plant/plant systems/pipeline on line 4.2. Make and report adjustments 4.3. Prepare reports in accordance with legislative and company requirements to maintain the historical record.
5. Evaluate results and identify modifications.	5.1. Identify modifications and improvements required 5.2. Check specifications, procedures and training material match the final system/procedures 5.3. Complete documentation and report to appropriate personnel.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
• hazard analysis • completing plant records • communication • problem solving.
Required knowledge
Competence to include the ability to apply and explain: • HAZOP (or similar) study process and the interpretation of findings

© Commonwealth of Australia, 2024 Public Skills Australia

REQUIRED SKILLS AND KNOWLEDGE

• results and impact of a HAZAN (or similar) study
• the process of hazard identification, risk assessment and control
• hierarchy of control
• sources of hazard information (such as Material Safety Data Sheets)
• principles of operation of equipment
• interpretation of design drawings, schematics and manuals
• physics and chemistry relevant to the plant and the materials processed or produced
• process parameters and limits, eg temperature, pressure, flow, pH
• duty of care obligations
• expected problems, faults and their resolution
• possible alarms and actions
• any known or expected plant process idiosyncrasies
• all items on a schematic of the plant and the function of each
• correct methods of starting, stopping, operating and controlling process
• corrective action appropriate to the problem cause
• function and troubleshooting of major components and their problems
• types and causes of problems to be expected
• principles of operation of instrumentation
• principles of basic control systems
• distinguish between the following problem sources, and their avoidance:
  • chemical
  • instrument
  • equipment (electrical/mechanical)
  • maintenance.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Simulation may be required to allow for assessment

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	of parts of this unit. It is possible that a simulation will be required to ensure that the technician is competent before taking a significant role in a commissioning activity. Commissioning is an infrequent and often frenetic activity and so it may not be practical or equitable to wait for an actual commissioning to occur to use this as the basis for assessment. Simulation should be based on the actual plant and will include walk-throughs of the relevant competency components. Simulations may also include the use of case studies/ scenarios and role plays. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant (during demonstration of normal operations and walk-throughs of abnormal operations) and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to recognise and analyse potential situations requiring action and then in implementing appropriate corrective action. The emphasis should be on the ability to stay out of trouble rather than on recovery from a disaster. Consistent performance should be demonstrated. In particular look to see that: • potential problems are recognised • the range of possible causes can be identified and analysed and the most likely cause determined • appropriate action is taken to ensure commissioning stays on schedule • obvious problems in related plant areas are recognised and an appropriate contribution made to their solution. These aspects may be best assessed using a range of scenarios/case studies/what-ifs as the stimulus with a walk-through forming part of the response. These assessment activities should include a range of problems, including new, unusual and improbable situations which may have been generated from the past incident history of the plant, incidents on similar plants around the world, hazard analysis activities and similar sources.

EVIDENCE GUIDE	
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of scenarios/case studies/what-ifs will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units. In a major hazard facility, it may be appropriate to assess this unit concurrently with relevant OHS units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT	
The Range Statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the Performance Criteria, is detailed below. Add any essential operating conditions that may be present with training and assessment depending on the work situation, needs if the candidate, accessibility of the item, and local industry and regional contexts.	
Appropriate authorities	Appropriate authorities may include: • local councils • road authority • sewerage and stormwater authorities • providers of services such as electricity, water and telephones.
Codes of practice/ standards	Where reference is made to industry codes of practice, and/or Australian/international standards, the latest version must be used.
Plant	Plant covers on or off shore plant, well heads and also transmission pipelines or similar.

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
Commissioning	Commissioning refers to the start-up of a new plant or plant unit and the associated equipment for the first time.
Commissioning/re-commissioning activities	Commissioning/recommissioning activities may include: • trial running of equipment • use of trial materials in plant • safe introduction of process materials to plant • producing product within specification • bringing plant to design rates • solving operational problems • disposal of waste generated in the start-up.
Documentation	Documentation may include: • operating procedures • OHS and environmental legislative requirements • manufacturer specifications • appropriate authority approvals • quality assurance inspection and test reports.
Health, safety and environment (HSE)	All operations to which this unit applies are subject to stringent health, safety and environment requirements, which may be imposed through State or Federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between Performance Criteria and HSE requirements, the HSE requirements take precedence.
Plant/pipeline systems	Plant/pipeline systems may include: • pipes • valves • operating units • electrical and electronic components • PLCs/DCS control (programmable logic controllers, distributed control systems) or other plant controls • cathodic protection • pressure/flow/temperature etc regulation and meters.
Pre-commissioning	Pre-commissioning activities may include: • checking plant is built to design • ensuring plant is safe to operate

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• ensuring plant area is clean and clear of debris • ensuring the plant internals are clean and clear of debris • functional checking of equipment and ancillaries.
Procedures	All operations are performed in accordance with standard operating procedures. Procedures may be written, verbal, computer-based or in some other form. They include: • all work instructions • standard operating procedures • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant. For the purposes of this Training Package, 'procedures' also includes good operating practice as may be defined by industry codes of practice (eg Responsible Care) and government regulations.

Recommissioning	Recommissioning refers to the start-up of an existing plant following major modifications, rebuild or reconfiguration.
	This competency unit includes functions such as :
	• liaison with relevant personnel such as manufacturers, engineering personnel, designers, contractors and maintenance and other company personnel
	• participation in/reviewing of hazard studies, which may include:
	  • hazard and operability studies (HAZOP)
	  • hazard analysis studies (HAZAN)
	• participation in/reviewing of design or modification plans

Tools, **materials and equipment**	Tools, materials and equipment may include: • hand tools, including power operated • other power operated tools • plant • emergency equipment • electrical and electronic test equipment

© Commonwealth of Australia, 2024 Public Skills Australia

RANGE STATEMENT	
	• gas detectors • air compressor • water pump.

PMASUP540B Analyse equipment performance

Modification History

Not applicable.

Unit Descriptor

Unit descriptor	This competency covers the analysis of the performance, and performance verification, of existing equipment.

Application of the Unit

Application of the unit	In a typical scenario an experienced technician will set up and operate performance verification trials and then analyse the results to determine actual compared to theoretical performance of equipment and equipment components. It includes: • calculating the theoretical performance of an item of equipment • gathering data to determine the actual performance of the item of equipment • calculation of actual versus theoretical performance • making recommendations as to the appropriate action to be taken based on the performance verification results. This competency is typically performed by a senior technician who will take the lead in the data gathering phase and then analyses the data.

Licensing/Regulatory Information

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Determine theoretical performance.	1.1. Identify item of plant or equipment to be analysed 1.2. Locate and interpret design specification 1.3. Identify process materials being processes/to be processed during verification trial 1.4. Determine process material properties under process conditions 1.5. Calculate theoretical performance of component(s) with that material under those conditions.
2. Conduct trial.	2.1. Design verification trial to be compatible with theoretical analysis 2.2. Determine measurements needed from trial to yield required data 2.3. Select equipment suitable to give required measurements 2.4. Arrange for verification trial with relevant process personnel 2.5. Set up required measurement equipment 2.6. Supervise trial and ensure trial conditions are appropriate 2.7. Collect trial data for analysis.
3. Verify performance of plant/equipment.	3.1. Compare theoretical with actual performance 3.2. Determine significance of variation between

© Commonwealth of Australia, 2024 Public Skills Australia

ELEMENT	PERFORMANCE CRITERIA
	theoretical and actual performance 3.3. Investigate any suspicious results and take appropriate action.
4. Recommend required action.	4.1. Determine appropriate action to bring performance to desired level 4.2. Initiate the corrective action in accordance with company procedures. 4.3. Determine measures to increase equipment productivity 4.4. Re-check performance after corrective action is implemented.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This describes the essential skills and knowledge and their level, required for this unit.
Required skills
Competence, for the practical completion of the job, includes the ability to: • calculate equipment and component performance from the design specification • determine equipment and design performance from practical trials • determine the 'limiting component' in the performance of an item of equipment or a process • determine possible performance of an item of equipment/process if practical improvements were made to the 'limiting item'.
Required knowledge
Knowledge and understanding of the materials, equipment and process sufficient to predict their interactions and their impacts on performance. Knowledge of the enterprise procedures and policies along with the ability to implement them within appropriate time constraints and in a manner relevant to the job. Knowledge of: • methods of identifying and calculating theoretical performance • ways of trialling, trial design and implementation • methods of data analysis to determine trial outcomes • methods of interpreting information deduced from trial data.

Evidence Guide

EVIDENCE GUIDE	
The Evidence Guide provides advice on assessment and must be read in conjunction with the Performance Criteria, Required Skills and Knowledge, the Range Statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	Assessment of this unit should include demonstrated competence on actual plant and equipment in a work environment. The unit will be assessed in as holistic a manner as is practical and may be integrated with the assessment of other relevant units of competency. Assessment will occur over a range of situations which will include disruptions to normal, smooth operation. Assessment might typically be by an analysis project. This unit of competency requires a significant body of knowledge which will be assessed through questioning and the use of what-if scenarios both on the plant and off the plant.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Competence must be demonstrated in the ability to carry out the analysis without undue disruption to the process. Consistent performance should be demonstrated. In particular look to see that: • trial design is appropriate • data taken during trial matches that required for the analysis • the analysis is carried out in a structured manner • recommended changes can be justified based on the comparison of trial and theoretical data.
Context of and specific resources for assessment	Assessment will require access to an operating plant over an extended period of time, or a suitable method of gathering evidence of operating ability over a range of situations. A bank of projects will be required as will a bank of questions which will be used to probe the reasoning behind the observable actions.
Method of assessment	In all plants it may be appropriate to assess this unit concurrently with relevant teamwork and communication units.

© Commonwealth of Australia, 2024 Public Skills Australia

EVIDENCE GUIDE	
	In a major hazard facility, it may be appropriate to assess this unit concurrently with relevant OHS units.
Guidance information for assessment	Assessment processes and techniques must be culturally appropriate and appropriate to the oracy, language and literacy capacity of the assessee and the work being performed.

Range Statement

RANGE STATEMENT
