

# Assessment Requirements for FBPBPG2012 Operate a packaging process

Release: 1

# Assessment Requirements for FBPBPG2012 Operate a packaging process

### **Modification History**

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

#### **Performance Evidence**

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a packaging process to package at least one batch of products to specification, including:

- starting, operating, monitoring and adjusting packaging equipment to achieve required outcomes, including:
  - packaging components/consumables and/or product
  - monitoring control points as required to confirm process remains within specification
- following safe work procedures
- addressing routine processing issues.

## **Knowledge Evidence**

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and basic principles of the packaging process, including:
  - the purpose and characteristics required of packaging materials used
  - the principles of the packaging process used (where methods involve vacuum or map packaging, this includes an understanding of the effect of modified atmosphere on product shelf-life)
- product and packaging coding requirements and related legal requirements, including product weight
- basic operating principles of equipment, including:
  - main equipment components
  - status and purpose of guards
  - equipment operating capacities and applications
  - the purpose and location of sensors and related feedback instrumentation
- services required and action to take if services are not available

Approved Page 2 of 4

- the flow of processes supplying the packaging process, and the effect of outputs on downstream processes
- quality characteristics required of the packaging process, including seal integrity requirements
- effect of variation in inputs, including packaging components/consumables, materials and/or services, on process performance
- operating requirements and parameters, and corrective action required where operation is outside specified operating parameters, including restart procedures following a crash or jam-up
- typical equipment faults and related causes, including signs and symptoms of faulty equipment, and early warning signs of potential problems
- methods used to monitor the packaging process, including visual inspecting, and measuring and testing as required by the process
- inspection or test points (control points) in the process and the related procedures and recording requirements (including weights, codes, placement, glue temperatures, alignment and appearance, configuration and seal integrity)
- contamination/cross-contamination and safety risks related to stages in the packaging process, and related control measures
- common causes of variation, and corrective action required
- health and safety hazards and controls relevant to the packaging process
- requirements of different shutdowns as appropriate to the packaging process, including:
  - emergency and routine shutdowns and procedures to follow in the event of a power outage
  - conducting basic equipment referencing where required
- isolation, lock-out and tag-out procedures and responsibilities
- procedures and responsibility for reporting production and performance information
- environmental issues and controls relevant to the process, including waste/rework collection and handling procedures related to the process
- basic operating principles of process control, including the relationship between control panels and systems and the physical equipment
- cleaning and sanitisation procedures for packaging equipment
- recording requirements for traceability of product.

#### Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a packaging workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - packaging equipment and related services
  - personal protective equipment
  - materials to be packaged, and packaging components/consumables

Approved Page 3 of 4

- cleaning materials and equipment
- specifications:
  - work procedures, including advice on safe work practices, quality and environmental requirements
  - information on equipment capacity and operating parameters
  - · specifications, control points and operating parameters
  - recording requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.
