Assessment Requirements for FBPOPR2062 Work in a clean room environment

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has worked in a clean room environment on at least one occasion, including:

- accessing workplace information to determine clean room work requirements
- confirming that protective clothing and footwear are appropriate for use
- following procedures to fit and inspect protective clothing and footwear
- following procedures to enter a clean room environment, including following appropriate hand washing and disinfecting procedures, and fitting gloves as required
- conducting work to minimise risk of contamination
- exiting the clean room environment according to workplace procedures
- removing protective clothing and footwear in correct sequence and depositing for laundering according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of and conditions required in a clean room environment, including how the clean room maintains a clean environment and related air flow systems
- preparation and handling requirements for garments and footwear worn in a clean room environment, including:
  - garment features appropriate to a clean room environment
  - inspection procedures to confirm clothing and footwear are fit for use prior to fitting
- inspection points to confirm that clothing and footwear are correctly fitted according to workplace procedures
- procedures to follow if garments are not fit for use

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- clean room control measures and related monitoring requirements, including:
  - pressure differences between the clean room and change room and knowledge of location of pressure gauges
  - checking operating conditions of ventilation systems where required
- entry procedures
- requirements for conducting work in a clean room and consequences of not complying with these requirements (typically work is conducted slowly to minimise disturbance of particulates)
- procedures to follow to minimise risk of contamination, including cleaning, sanitation, sterilisation and disinfecting of equipment and surfaces
- conditions that can cause contamination, and control measures to avoid this occurring
- work health and safety hazards and controls, including the limitations of protective clothing and equipment relevant to the work process
- procedures for exiting and de-gowning
- laundering requirements and procedures
- housekeeping requirements for work area
- recording requirements and procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a clean room environment
- resources, equipment and materials:
  - protective clothing, footwear and equipment appropriate to a clean room
- specifications:
  - work procedures relevant to working in a clean room environment, including those specific to entering and exiting the clean room and to carrying out the relevant work function.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2065 Conduct routine maintenance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to inspect equipment and carry out routine maintenance and adjustment using a limited range of hand tools.

This unit applies to individuals who perform routine maintenance in a food and beverage environment. It typically targets the production worker responsible for conducting simple and routine maintenance tasks to support the operation of machines or equipment.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Conduct routine inspection of plant and equipment	1.1 Read or listen to work instructions from supervisor and clarify where needed 1.2 Identify health and safety hazards in the workplace and tell supervisor 1.3 Wear appropriate personal protective equipment and ensure correct fit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Inspect equipment to identify signs of wear 1.5 Assess the nature of maintenance requirement
2. Prepare to conduct routine maintenance	2.1 Assess the maintenance task to determine tools and services required 2.2 Prepare equipment for maintenance 2.3 Select hand tools according to task requirements 2.4 Check tools before use and report unsafe and faulty items 2.5 Plan and schedule maintenance in consultation with affected work areas to minimise disruption to production
3. Carry out routine maintenance	3.1 Carry out routine maintenance on equipment 3.2 Report maintenance activities in line with workplace procedures
4. Complete maintenance tasks	4.1 Return equipment to operating order when maintenance is complete 4.2 Store tools and materials 4.3 Notify the relevant personnel of maintenance completion 4.4 Maintain a clean and tidy workplace

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	• Interact effectively with staff members
Get the work done	• Make routine decisions to correct simple and familiar problems • Apply routine fault finding methods to trace and identify equipment faults and implement standard and familiar solutions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for FBPOPR2065 Conduct routine maintenance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively conducted routine maintenance on a minimum of two different items of plant and/or equipment, including:

- identifying routine maintenance tasks for machine or equipment
- monitoring operation and identifying need for maintenance tasks
- carrying out routine maintenance tasks according to workplace procedures
- on completion of maintenance tasks, returning equipment to operational order, including confirming that all equipment parts, nuts and bolts are accounted for and correctly tightened
- scheduling maintenance tasks that are beyond one's own job role and communicating requirements with affected personnel
- selecting and using appropriate tools to undertake routine maintenance within scope of own job role
- assessing readiness for returning machine or equipment to operation or referring for further attention
- completing maintenance documentation
- applying safe work practices and identifying health and safety hazards and controls in the workplace.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- systems and programs in place to manage routine maintenance of plant and equipment in the workplace
- responsibilities for participating in the maintenance program, including operator role and the role of others
- procedures for raising maintenance orders where requirements are outside operator role

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- basic operating principles of equipment to be maintained
- signs and symptoms of faulty equipment and early warning signs of potential problems
- basic checks used to confirm the nature of maintenance requirements, including distinguishing between mechanical and electrical faults and identifying probable causes or conditions that may increase maintenance requirements of equipment used
- procedures for issuing, maintaining and storing tools used
- safe use of hand tools and measuring instrumentation relevant to maintenance responsibilities
- lubrication requirements, including requirements to use food grade lubricants as required, and consequences of using incorrect type or amount of lubricants
- safe work procedures, including appropriate signage of maintenance activities, use of appropriate personal protective equipment, and awareness of safety hazards and controls relating to maintenance tasks
- methods used to render equipment safe to work on or clean including lock out/tag out and isolation procedures (in some cases this may involve liaising with other maintenance operators)
- procedures and inspections to be carried out to confirm that equipment is in operating order and all parts are accounted for
- food safety risks arising from poor personal hygiene, cleaning and housekeeping practices and procedures associated with routine maintenance
- maintenance planning, scheduling and recording procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - maintenance tools and equipment
  - operational machinery and equipment
  - safety equipment
  - spares and consumables
- specifications:
  - operation procedures
  - service equipment and maintenance instructions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2066 Apply sampling procedures

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to interpret sampling plans, and to collect and transfer samples to retain sample integrity.

This unit applies to individuals who would typically be required to follow specific sampling procedures under general supervision.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for sampling	1.1 Read or listen to work instructions from supervisor and clarify where needed 1.2 Identify health and safety hazards in the workplace and inform supervisor 1.3 Wear appropriate personal protective equipment and ensure correct fit 1.4 Identify sampling requirements in the sampling plan

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.5 Prepare sampling equipment, containers and labels
2. Collect samples	2.1 Collect samples as specified in the sampling plan 2.2 Handle and prepare samples to preserve sample and source integrity 2.3 Identify and report defects or abnormalities in source material and sample 2.4 Record sample information in line with workplace requirements 2.5 Maintain a clean and tidy workplace

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	• Record sample information accurately
Get the work done	• Solve familiar and generally predictable problems within workplace guidelines

Assessment Requirements for FBPOPR2066 Apply sampling procedures

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively taken 10 samples, in line with the sampling plan, including:

- accessing and interpreting sampling plan to identify requirements
- selecting, fitting and using personal protective equipment
- preparing for sampling to ensure required tools, containers and labels are available
- following sampling procedures and the sampling plan to collect samples from the designated points, in the quantities and at the times specified
- identifying atypical source materials and/or samples and take corrective action, such as reporting abnormalities, repeating sample collection and/or following intensive sampling schedules
- completing sample records according to workplace requirements, such as labelling samples as required
- transferring samples for testing
- maintaining work area to meet housekeeping standards.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace, including the purpose and limitations of personal protective equipment
- basic sampling principles, including the importance of following the sampling plan to obtain representative sampling reflecting characteristics of source material, the sample characteristics and related preservation, handling and storage requirements, and the labelling system purpose and requirements
- tests to be conducted on samples, and related handling and preparation requirements and responsibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- characteristics of materials sampled, and common contaminants and related conditions under which contamination is likely to occur
- sampling techniques relevant to samples collected, such as sterilisation methods and procedures
- the relationship between sampling, testing and production processes, including different sampling regimes that may apply in response to non-standard conditions or after corrective action is taken to adjust production outputs
- procedures and responsibility for reporting and recording sampling information, including legislative requirements
- procedures for preparing samples.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - sampling plan
  - recording and reporting system
  - sampling equipment and containers as required
  - product/source material to be sampled.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2067 Work in a food handling area for non-food handlers

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to conduct work in a food handling area where the work does not involve direct food contact.

This unit applies to individuals who typically work in stores, warehousing, cleaning and maintenance roles. This unit is not appropriate for a person who has direct contact with food or raw materials or ingredients. Where this is a requirement, refer to relevant food safety units.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Maintain food safety while working in a food handling area	1.1 Read or listen to work instructions from supervisor and clarify where needed 1.2 Identify health and safety hazards in the workplace and inform supervisor

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Wear appropriate personal protective equipment and ensure correct fit 1.4 Identify and follow food safety requirements related to work tasks 1.5 Carry out work responsibilities so that the safety of food is maintained 1.6 Identify and report procedures or practices which are inconsistent with requirements of the workplace food safety program
2. Maintain food handling area in clean and orderly state	2.1 Confirm that equipment and the food handling area meet the cleaning and sanitation requirements of workplace food safety program 2.2 Collect and dispose of waste according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Oral communication	• Ask questions to clarify understanding or seek further information
Get the work done	• Maintain a clean and hazard-free work area

Assessment Requirements for FBPOPR2067 Work in a food handling area for non-food handlers

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has worked safely and effectively in a food handling area, in a non-food handling role, to effectively maintain food safety standards on at least two different occasions, including:

- accessing and applying workplace information on food safety policies and procedures relevant to own work
- fitting and using appropriate personal protective clothing and equipment as required by work tasks to meet food business requirements
- checking own work area to identify food safety hazards
- carrying out work responsibilities to ensure that food safety is not compromised
- taking necessary precautions when moving between or around the workplace and/or from one task to another to minimise the risk of contamination
- recognising and reporting situations or procedures that could compromise food safety
- sorting and disposing of waste according to workplace procedure
- maintain workplace standards in work area.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace, including the purpose and limitations of protective clothing and equipment
- food safety requirements related to own work as determined by the workplace
- sources of advice on food safety issues and responsibilities in the workplace
- personal hygiene practices and clothing and footwear requirements associated with working in and moving in and between food handling areas and moving between food handling and non-food handling areas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- suitable standard for materials and equipment used in the food handling area, including materials that are unsuitable for use
- methods and procedures to be followed when carrying out work responsibilities in a food handling area to ensure that food safety is not compromised
- the types of contamination that can occur as a result of work activities, and procedures used to prevent these types of contamination from occurring
- cleaning and sanitation requirements and responsibilities, including cleaning methods appropriate to a food handling environment and those used in the specific food handling area
- waste collection, recycling and handling procedures
- workplace standards to be maintained in the work area.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - work area and related equipment to undertake work function
  - waste collection, treatment, recycling and/or disposal equipment
- specifications:
  - food safety policies and procedures relevant to work role
  - work procedures, including procedures for entering and exiting food handling areas.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2068 Operate a process control interface

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to operate a computer-based interface to modify and/or interrogate a control system.

This unit applies to individuals who work under general supervision. This includes identifying and providing solutions to a limited range of predictable problems.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Navigate the process control interface	1.1 Confirm the readiness of the control interface and related components for operation 1.2 Use the hardware provided to operate the interface 1.3 Use page links to move between screens 1.4 Acknowledge messages and alarms 1.5 Access required information from screen displays

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.6 Record interface system malfunctions and report to supervisor
2. Use interface system to operate and maintain a process within required parameters	2.1 Start, monitor and shut down individual items of equipment and processes using the control interface 2.2 Select equipment, alter status and enter settings to meet operating requirements 2.3 Activate sequences to initiate process operation 2.4 Recognise equipment giving a bad signal or bad measurements and take responsive action
3. Analyse data to predict and control performance	3.1 Select and analyse trends to identify performance patterns 3.2 Identify causes of abnormal or unacceptable performance and take corrective action 3.3 Record information in workplace format

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Access and interpret process control panels and system
Numeracy	• Monitor and interpret production and process control indicators and data • Monitor supply and flow of materials and product
Navigate the world of work	• Ask questions to clarify understanding or seek further information

Assessment Requirements for FBPOPR2068 Operate a process control interface

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively operated a process control interface on at least two occasions, including:

- recognising and responding to error messages and alarms
- accessing relevant performance data using the control system, including locating and interpreting performance trend information
- recording log information using the interface system according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- processes and equipment being controlled, including required processing sequences
- operating principles of process control and interface system, including the relationship between control panels, systems and the physical equipment, and where relevant, operating conditions required for accurate information input from sensors and related instrumentation
- action required to respond to error messages and alarms
- typical faults that can occur when operating a process control interface and corrective action required
- performance data collected by the control interface system and its application to troubleshoot performance, including the ability to identify and investigate related trend data to track cause and effect
- recording requirements and responsibilities.

Assessment Conditions

Assessment of skills must take place under the following conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - process control interface hardware and software
  - work station or equipment to be controlled
  - process to be controlled
  - communication systems and equipment
  - workplace information recording systems, requirements and procedures
- specifications:
  - operating procedures and related advice on equipment operation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPOPR2069 Use numerical applications in the workplace

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively used numerical applications for work purposes, on at least two different occasions, including:

- identifying whether a calculation or estimation is required to meet workplace requirements
- performing calculations involving basic addition, subtraction, division and multiplication to support work role (this may involve use of a calculator and conversion tables)
- using estimation techniques to check quantities, ratios, speed and other required data estimates
- using estimation techniques to check calculated results and workplace data
- recording calculations and measurement information accurately, according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- mathematical processes, including addition, subtraction, multiplication and division
- application of calculation and estimation techniques to meet work requirements
- units of measurement used in the workplace, including whole numbers, fractions and decimals to one decimal point (this may include use of conversion charts)
- representation of numerical information relevant to work requirements, including charts, graphs and tables
- recording requirements and responsibilities relevant to work role.

Assessment Conditions

Assessment of skills must take place under the following conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - real or simulated work tasks requiring simple estimation and calculation
  - conversion tables, calculators and measuring instruments.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPOPR2070 Apply quality systems and procedures

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied quality systems and procedures on at least two separate occasions, including:

- identifying control points or inspection points for own work, and related methods used to monitor quality
- maintaining quality of own work, including relevant checks and inspections where required in order to monitor control points and check and inspect equipment, materials, product, packaging consumables, processing conditions and service standards relevant to own work
- determining when and how to make adjustments to maintain output within specified parameters
- identifying and responding to out-of-specification or unacceptable inputs and/or outputs
- recording quality data in required format.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- quality policy, procedures and responsibilities
- quality system used in the workplace, sources of information on quality requirements, the role of internal and external auditors, as appropriate, and performance improvement processes
- traceability requirements
- recall procedures for products that do not meet safety standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- basic concepts of quality assurance, including hazards, risk assessment and control methods
- requirements of internal and external customers
- control points for own work, including the purpose of the control point, the risk if not controlled, and the method of control used
- monitoring, testing and inspection procedures relating to process control requirements
- scope to correct/control variation within equipment and process capacity parameters
- evidence of out-of-specification or unacceptable performance
- procedures for responding to out-of-specification or unacceptable performance/outcomes, including procedures for identifying or isolating materials or product of unacceptable quality
- systems used to trace product ingredients as relevant to own work
- requirements to report and record quality information.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - sampling and test procedures and related equipment
  - systems for recording quality information
- specifications:
  - work instructions
  - quality policy, system and procedures, including company codes of practice/good manufacturing practices (GMP).

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2071 Provide and apply workplace information

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to provide and apply workplace information in a processing context.

This unit applies to individuals who work under general supervision and exercise limited autonomy.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, environmental regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively provided and applied workplace information on at least one occasion, including:

- identifying and accessing information to undertake work responsibilities
- ascertaining or clarifying information requirements by asking questions
- preparing and presenting simple written or verbal presentations that structure and present information in a logical sequence
- working effectively with others to achieve work outcomes
- respecting and, where appropriate, representing the views of others
- recording information in required format.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- communication channels, including consultative arrangements established in the workplace
- common colloquial and technical terms relating to work function
- sources of information and advice relating to work responsibilities
- methods and technologies used to access, record and store workplace information, including print, and screen-based systems as relevant to the workplace
- presentation techniques to convey information on a range of typical workplace subjects appropriate to the audience
- recognition of different personal communication styles and appropriate communication options

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- recognition of cultural diversity as appropriate in the workplace
- reporting roles and responsibilities
- traceability and recall information and requirements
- interpersonal skills, including active listening, questioning, seeking and responding to feedback
- basic meeting procedures to identify and achieve meeting/discussion outcomes.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - advice on work roles and responsibilities
  - typical workplace information
  - standard forms and equipment for recording workplace information, as required.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR2072 Work in confined spaces in the food and beverage industries

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to work in confined spaces in the food and beverage industries.

This unit applies to individuals who work under general supervision and exercise limited autonomy in a food or beverage processing environment.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace. Confined space entry work permits may be required.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare for entering and working in confined spaces	1.1 Access, interpret and apply compliance documentation relevant to entering and working in confined spaces 1.2 Obtain, confirm and apply work instructions and safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	requirements 1.3 Obtain authorisation (entry permit) to enter the confined space 1.4 Select, fit and use personal protective equipment according to job requirements 1.5 Confirm emergency response procedure with the stand-by person 1.6 Identify, obtain and position signage, barriers and rescue equipment according to workplace requirements 1.7 Select tools and equipment to carry out tasks, check for serviceability and rectify or report faults 1.8 Identify, confirm and apply environmental protection requirements
2. Enter and work in the confined space	2.1 Gain access to the confined space 2.2 Test and monitor the atmosphere for harmful elements 2.3 Apply tagging and lock-out procedures 2.4 Enter confined space 2.5 Maintain communication with the stand-by person 2.6 Comply with entry permit requirements 2.7 Monitor and adhere to allocated entry time
3. Exit confined space	3.1 Exit confined space 3.2 Recover tools, equipment and materials 3.3 Conduct inspection of the confined space to ensure it is left safe and fit for purpose 3.4 Secure access 3.5 Remove tagging and lock-out 3.6 Complete confined space entry log
4. Clean-up work area	4.1 Clear work area and dispose of or recycle materials 4.2 Clean, check, maintain and store tools and equipment 4.3 Remove, clean and store barriers and signs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret basic directions and instructions
Oral communication	• Ask questions to clarify understanding or seek further information
Numeracy	• Interpret data related to air quality
Navigate the world of work	• Apply workplace procedures to own role and responsibilities • Understand tasks and responsibilities required for work in confined spaces

Assessment Requirements for FBPOPR2072 Work in confined spaces in the food and beverage industries

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively prepared for, entered and exited at least two confined spaces in the food and beverage industry. For each of the confined spaces there must be evidence that the individual has:

- applied work instructions, compliance and safety requirements
- obtained required authorisation to enter
- obtained and used signage, barriers, equipment and tools
- obtained and used appropriate personal protective equipment (PPE)
- conducted atmospheric testing and monitoring
- completed working in confined space within specified entry time
- applied tagging and lock-out requirements
- after exiting, ensured that confined space and general work area is left clean and fit for use.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- areas that constitute confined spaces
- site and equipment safety requirements
- entry and exit procedures, risks and regulations
- types of air contaminants and toxic gases
- limitations of breathing apparatus
- equipment types, characteristics, technical capabilities and limitations
- site isolation and site control responsibilities and authorities
- locations of safety data sheets information and application
- confined space and Industry terminology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- risks, hazards and control measures associated with confined spaces.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - PPE
  - equipment related to work task
- specifications:
  - work procedures, entry permits, including advice on company practices, safe work practices, quality and environmental requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPOPR3004 Set up a production or packaging line for operation

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively set up a production or packaging line on at least one occasion, in line with production schedule, including:

- conducting pre-start checks on machinery used for production to determine cleaning, maintenance and operation readiness
- determining production parameters and requirements
- setting up line according to production requirements
- taking corrective action in response to typical faults and inconsistencies
- completing workplace records and communicate line status with other personnel as required
- applying safe work practices and identifying hazards and controls.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- operating principles of equipment and related accessories, including equipment adjustment points, range and location/alignment requirements of sensors and related feedback instruments, and status and purpose of guards
- operating capacities of equipment used in the work area, including different types of equipment and/or components by processing operations
- nature of set-up/changeover requirements, including product compatibility and related cleaning requirements, impact of variation in materials or product on set-up requirements, and equipment and/or attachment changeovers related to given products
- typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
- pre-start checks required by set-up/changeover

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- related processes and personnel dependent on line set-up, and communication responsibilities
- isolation, lock-out and tag out procedures and responsibilities
- health and safety hazards and controls in the workplace
- procedures and responsibility for reporting equipment performance information
- operating principles of process control, including the relationship between control panels and systems and the physical equipment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - personal protective equipment
  - production/packaging schedule and related advice on setup/changeover requirements
  - process/packaging equipment and related accessories and services
  - materials/consumables required of the process
  - hand tools
- specifications:
  - information on equipment capacity and operating parameters.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPOPR4001 Apply principles of statistical process control

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to collect statistical information and interpret data in order to inform work processes.

This unit applies to individuals who are required to collect, interpret and record data to inform work. This typically includes plotting data on run charts and statistical process control (SPC) charts; and identifying trends and variations according to given limits.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Operational (OPR)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Collect statistical information	1.1 Identify data collection requirements and confirm with supervisor 1.2 Gather data using available collection equipment 1.3 Accurately record data to meet data collection requirements
2. Interpret data	2.1 Analyse data to identify variations and trends 2.2 Carry out calculations to determine unknown values

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	2.3 Determine corrective action requirements based on data 2.4 Document and store data according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	• Use statistical analysis techniques to calculate, compare and manipulate data
Writing	• Record data and present information in required format
Get the work done	• Make decisions based on analysis of available data • Use manual and computer-based methods to interpret data and identify trends

Assessment Requirements for FBPOPR4001 Apply principles of statistical process control

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has applied the principles of statistical process control to at least two different sets of data, including:

- identifying data needed for collection
- gathering and accurately recording required data
- applying statistical analysis techniques and identifying variations, trends and any necessary corrective actions
- presenting a range of statistical data in appropriate workplace format.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- data sampling methods, including the nature of the sample on which data is based, and the reasons for different sampling requirements that may apply in a given situation
- concept of variation, including the difference between common and special causes of variation, and consequent options for reducing variation and remaining within a given range
- the purpose and process of establishing targets and limits
- the concept of standard distribution/standard deviation
- methods used to interpret statistical data, including methods to determine the average, median and mean, and what these measures indicate
- a variety of calculations to determine unknown values
- using binomial theorem
- using variability and probability to estimate and interpret outcomes in both numerical and qualitative terms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- situations in which corrective action is required.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - statistical process control data
  - related data collection and analysis systems
  - calculator.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM2001 Follow work procedures to maintain Good Manufacturing Practice requirements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to comply with relevant Good Manufacturing Practice (GMP) requirements and workplace quality standards in a pharmaceutical manufacturing facility.

The unit applies to individuals who follow GMP requirements to undertake routine pharmaceutical manufacture work, under supervision.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify requirements of GMP related to own work	1.1 Locate sources of information on GMP requirements in the workplace 1.2 Identify GMP requirements for pharmaceutical manufacture tasks 1.3 Confirm specific GMP requirements for own work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Prepare for work	2.1 Ensure personal hygiene meets GMP requirements 2.2 Prepare, use, store and dispose of personal protective equipment and contamination prevention clothing according to GMP requirements and workplace procedures 2.3 Comply with area entry and exit procedures when moving around the workplace
3. Follow GMP requirements when carrying out work activities	3.1 Routinely monitor work area, materials and equipment to ensure compliance with GMP requirements 3.2 Handle raw materials, product and packaging components according to GMP requirements and workplace procedures 3.3 Identify contamination and follow appropriate control measures relating to work responsibilities and GMP requirements 3.4 Identify processes, practices or conditions which are inconsistent with GMP requirements and report according to workplace procedures 3.5 Maintain workplace cleanliness and tidiness to meet GMP requirements 3.6 Conduct work according to workplace environmental procedures 3.7 Complete documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify and comprehend information about GMP requirements
Writing	• Record workplace information using appropriate language and in required format
Navigate the world of work	• Apply workplace procedures to own role and responsibilities • Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Report operational and safety information to relevant personnel using required communication method

Assessment Requirements for FBPPHM2001 Follow work procedures to maintain Good Manufacturing Practice requirements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has followed work procedures to maintain Good Manufacturing Practice (GMP) and demonstrated each of the following points at least once:

- located and followed workplace information relating to GMP responsibilities
- maintained good personal hygiene consistent with GMP requirements, including:
  - making team leader or supervisor aware of reportable illness
  - removal of jewellery
  - removal of makeup
- used personal protective equipment and contamination prevention clothing according to workplace procedures
- used and stored personal clothing and footwear consistent with GMP requirements and workplace procedures
- followed workplace procedures when moving around the workplace to maintain GMP
- followed GMP requirements when carrying out work functions
- identified and responded to performance that fails to meet GMP requirements, including:
  - making adjustments
  - reporting to relevant personnel
- handled and disposed of materials that are contaminated or non-conforming
- identified and reported a situation that could compromise GMP requirements
- maintained work area in a clean and tidy state
- followed workplace procedures for documentation and recording.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- sources of advice on GMP requirements in relation to own work
- the role of GMP in preventing contamination and potential implications of non-compliance
- the relationship between GMP and the quality system, including:
  - personnel responsible for designing and managing GMP
  - personal role to maintain GMP
  - the role of internal and external auditors
- personal protective equipment and contamination prevention clothing requirements
- personal clothing and footwear use, storage and disposal requirements
- storage and handling requirements for raw materials, product and packaging components relevant to work role
- common types and sources of contamination in the work area including pest infestation
- control methods and procedures used in the work area to maintain GMP, including:
  - the purpose of control
  - the consequences of lack of control
  - control monitoring
- performance that is unacceptable or fails to meet specifications
- actions required in response to non-conformance
- workplace environmental procedures
- workplace procedures for reporting and recording information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - commercial pharmaceutical production and packaging equipment
- specifications:
  - GMP information relating to the workplace
  - reporting and monitoring systems
  - workplace instructions and procedures
- relationships:
  - supervisor.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Identify requirements of GMP related to own work	2.1 Locate sources of information on GMP requirements in the workplace 2.2 Identify GMP requirements for pharmaceutical manufacture tasks 2.3 Confirm specific GMP requirements for own work 2.4 Identify GMP non-compliant situations and risks to product quality 2.5 Alert relevant personnel and take appropriate action according to GMP requirements and workplace procedures
3. Complete workplace documentation to support GMP	3.1 Use workplace procedures to identify GMP requirements for documentation 3.2 Record information, including calculations and test results according to workplace reporting procedures and GMP requirements 3.3 Certify records, including electronic records, according to GMP requirements
4. Identify and follow biosecurity requirements	4.1 Identify information appropriate to work role relating to biosecurity requirements 4.2 Follow workplace biosecurity requirements and responsibilities related to work role
5. Apply GMP requirements when carrying out work activities	5.1 Identify common forms of contamination 5.2 Conduct work according to workplace environmental procedures 5.3 Maintain workplace cleanliness and tidiness to meet GMP requirements 5.4 Identify and report signs of unacceptable plant or equipment condition, including calibration status 5.5 Identify GMP requirements for routinely monitoring work area, materials, equipment and product 5.6 Complete documentation according to workplace procedures
6. Ensure personal hygiene and conduct meet GMP requirements	6.1 Maintain personal hygiene to meet GMP requirements 6.2 Carry out hand washing according to best practice hygiene standards 6.3 Prepare, use, store and dispose of personal protective equipment and contamination prevention clothing according to GMP requirements and workplace procedures 6.4 Comply with area entry and exit procedures when moving around

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	the workplace
7. Participate in improving GMP	7.1 Identify processes, practices or conditions which are inconsistent with GMP requirements and report according to workplace procedures 7.2 Identify elements of GMP that help improve products and processes 7.3 Implement corrective action within level of responsibility

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret information about GMP compliance requirements in workplace documentation
Writing	• Record workplace information using appropriate language and in required format
Navigate the world of work	• Apply workplace procedures to own role and responsibilities • Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Report operational and safety information to relevant personnel using required communication method
Get the work done	• Use problem-solving techniques to address routine issues within level of responsibility

Assessment Requirements for FBPPHM3001 Apply Good Manufacturing Practice requirements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has applied Good Manufacturing Practice (GMP) requirements, and demonstrated each of the following points at least once:

- read and interpreted relevant instructions and labels applicable to GMP operations, including pictorial and written signs and instructions
- followed workplace information relating to GMP responsibilities
- completed forms and reports according to GMP requirements and workplace procedures
- recorded calculations and test results
- identified and responded to:
  - out-of-calibration equipment
  - out-of-specification or unacceptable raw materials, packaging components, final or part processed product
- maintained workplace cleanliness and tidiness to meet GMP requirements
- maintained personal hygiene consistent with GMP requirements, including:
  - making team leader or supervisor aware of reportable illness
  - removal of jewellery
  - removal of makeup
- cleaned and sanitised hands using recognised procedures for:
  - washing with soap and water
  - rubbing with an alcohol-based formulation
- used personal protective clothing and equipment and contamination prevention clothing according to GMP requirements
- provided accurate verbal and written descriptions of incidents or situations that did or could have:
  - compromised GMP compliance or product quality

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- provided the potential for product contamination.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- GMP as a regulatory concept, including regulatory obligations of employees, and the potential implications of non-compliance
- sections of Australian and other applicable regulatory frameworks relevant to pharmaceutical manufacturing:
  - National Medicines Policy
  - Therapeutic Goods Act (TGA)
  - Therapeutic Goods Regulations
  - Manufacturing Principles
  - Therapeutic Goods Orders
  - GMP code of practice
  - other TGA guidelines relevant to product and market
  - state or territory regulations or legislation relating to environmental manufacturing and health and safety in the workplace
  - United States Food, Drug and Cosmetic Act and associated Codes of Federal Regulations and guidance
  - European directives and legislation of European Union member states applicable to pharmaceutical manufacturing.
- drivers of global harmonisation initiatives, including risks in the supply chain when operating in a global environment, including the following:
  - Pharmaceutical Inspection Co-operation Scheme (PIC/S) background and guidance
  - The International Conference on Harmonisation of Technical Requirements for Registration of Pharmaceuticals for Human Use (ICH) background and guidance
  - World Health Organization (WHO) background and guidance
- the relationship between GMP and the quality system, including:
  - personnel responsible for designing and managing GMP
  - personal role to maintain GMP
  - the role of internal and external auditors
  - quality procedures
  - quality assurance
  - quality control
  - risk management procedures
- personal clothing use, storage and disposal requirements and hygiene requirements, including:
  - informing team leader or supervisor of reportable illness
  - removal of jewellery
  - removal of makeup

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- personal clothing and footwear requirements for working in and moving between work areas
- workplace cleaning standards and responsibilities relating to own work, including:
  - waste collection
  - recycling, safe handling and disposal for different types of waste
  - safe handling and disposal of hazardous waste
- sections of the following Acts and Regulations related to biosecurity requirements of pharmaceutical manufacturing:
  - the Gene Technology Act 2000
  - Biosecurity Act 2015
  - Export Control Act 1982
  - Imported Food Control Act 1992
  - regulatory requirements which apply to the supply of materials which are genetically modified organisms
  - regulatory requirements relating to quarantining and use of materials and products
- awareness of common contaminants relevant to the work process, including:
  - microbiological, from materials, equipment, environment and personnel
  - physical, from equipment, environment and personnel
  - chemical, from other products or materials, including cleaning agents
- quality control methods and procedures, including the purpose of control and the consequence if not controlled
- properties, handling and storage requirements of raw materials, packaging components and final product
- GMP requirements for maintaining plant and process equipment
- GMP requirements for transferring of equipment and material between areas
- GMP requirements for equipment status labelling
- documentation systems and procedures, including:
  - recordkeeping to meet both workplace and legal requirements
  - responsibilities for reporting and recording information
  - batch documentation
  - cleaning records
  - training records
  - product and materials traceability procedures
  - controls and methods for ensuring electronic data integrity and paper data integrity
  - significance of certifying and verifying GMP records
- procedures for responding to out-of-specification or unacceptable process performance or outcomes
- awareness of controls to protect personnel and the environment from contamination by products and materials.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - alcohol based hand cleanser
  - soap and water
  - commercial pharmaceutical production and packaging equipment
- specifications:
  - GMP requirements
  - workplace reporting procedures
  - workplace procedures related to GMP
  - workplace biosecurity requirements
  - workplace environmental procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM3002 Operate a pharmaceutical production process

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 4.1.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to setup, operate monitor, adjust and shut down a production process in a pharmaceutical manufacturing facility.

The unit applies to individuals who apply operating principles to the production process. Individuals work under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Receipt materials and components	1.1 Confirm incoming goods correspond to workplace documentation 1.2 Clean and label containers with prescribed data, according to workplace procedures 1.3 Quarantine incoming goods including release and reject status

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	according to Good Manufacturing Practice (GMP) requirements and workplace procedures 1.4 Identify and report deviations, unusual events and non-conformances according to GMP and workplace procedures
2. Set up the production process for operation	2.1 Confirm equipment and materials meet production requirements 2.2 Confirm cleaning requirements and equipment status 2.3 Select and fit personal protective equipment and contamination prevention clothing according to workplace procedures 2.4 Enter processing and operating parameters according to safety and production requirements 2.5 Check and adjust equipment performance 2.6 Conduct pre-start checks according to workplace procedures
3. Dispense materials	3.1 Deliver materials in required quantities and sequence according to batch and production requirements 3.2 Record dispensed material, including weight or volume according to batch and production requirements 3.3 Label dispensed materials for each batch and stage according to production requirements
4. Operate and monitor the production process	4.1 Start up, monitor and control production process to maintain process within required limits 4.2 Identify and report out of limit products or processes according to workplace procedures 4.3 Maintain work area according to workplace cleaning standards 4.4 Conduct production process according to safety and environmental requirements 4.5 Complete documentation according to workplace procedures
5. Hand over the production process	5.1 Perform handover according to workplace procedures 5.2 Inform handover production team of process and related equipment status at completion of handover
6. Shut down the process	6.1 Confirm the workplace procedures for shutting down the process 6.2 Complete end-of-batch procedures according to batch instructions and workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	6.3 Safely shut down the process 6.4 Complete records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify relevant information from workplace documentation and interpret requirements for the pharmaceutical production process
Writing	• Complete workplace documentation using appropriate language and in required format
Numeracy	• Interpret material and product specifications

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Cleaning requirements must include:	• area or line clearance • full or partial clean • automated or semi-automated or manual cleaning of equipment • sanitation or sterilisation.
Equipment status must include:	• calibrated • clean • clean/dirty hold time • in use • ready to use.
Pre-start checks must	• carrying out required area or line clearances • inspecting equipment condition to identify signs of wear

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

include:	• confirming all safety equipment is in place and operational • confirming that equipment is clean or sanitised • confirming that equipment is correctly configured for processing requirements
Items to monitor must include:	• environment • product appearance • volume or weight.

Assessment Requirements for FBPPHM3002 Operate a pharmaceutical production process

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 4.1.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely operated at least one pharmaceutical production process, including:

- accessed workplace information to confirm production requirements
- confirmed supply of necessary equipment and materials
- handled and stored materials and products in a manner that prevents contamination and mix-ups
- selected, fitted and used personal protective equipment and contamination prevention clothing
- conducted pre-start checks, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment is in place and operational
  - confirming that equipment is clean or sanitised
  - confirming that equipment is correctly configured for processing requirements
- started, operated, monitored and adjusted equipment to achieve required outcomes, including:
  - adding and loading materials in correct quantities and sequences
  - supply and flow of materials to and from the process
- checked process control points and conducted inspections to confirm process remains within limits, including:
  - product sampling
  - process control testing
  - adjusting process according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- followed end-of-batch procedures, including three of the following:
  - product sampling
  - environmental sampling
  - line clearances and cleaning (full or partial)
  - yield calculation
  - materials reconciliation
  - change equipment status (sterile/clean to dirty/clean)
- safely shut down the process according to workplace procedures
- cleaned and maintained work area to meet workplace cleaning standards and environmental requirements
- completed records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- stages of the pharmaceutical manufacturing process, including:
  - the purpose, methods and outcomes of each stage
  - control points
  - checking materials are suitable for use including release status
  - flow of materials, people and waste
  - flow of the manufacturing process and the effect of outputs on downstream processes
- basic operating principles of equipment, requirements and parameters of pharmaceutical manufacturing equipment, including:
  - main equipment components, operating capacities and applications
  - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
  - status and purpose of guards
  - the purpose and location of sensors and related feedback instrumentation
- processing equipment and utility systems and how product quality and Good Manufacturing Practice (GMP) compliance can be impacted by:
  - performance
  - functionality
  - construction
  - instrumentation
- common GMP non-conformances and unusual events found in a pharmaceutical production environment, including:
  - missing, illegible or inaccurate records
  - failure to follow workplace procedures
  - failure of cleaning regime

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - damaged goods, including; starting materials, components, intermediates and finished products
  - product diverted from normal course of process
  - loss of sterility or pressure
  - spills
  - out of limit situations including; yields, reconciliations, in process controls and in process checks
  - damage or poor maintenance of plant or equipment
  - signs of inadequate cleaning or pest infestation
- terminology associated with control of GMP processes, including:
  - process variation
  - critical quality attribute
  - critical process parameter
- functions and limitations of personal protective equipment and contamination prevention clothing relevant to the work process
- pre-start checks requirements, including:
  - carrying out required area or line clearances
  - carrying out differential pressure checks or room status checks
  - inspecting equipment condition to identify any signs of wear
  - confirming that equipment is clean or sanitised
  - confirming appropriate settings and/or related parameters
  - confirming product details and ingredients
- methods used to monitor the production process, including:
  - inspecting
  - measuring
  - testing
- items to monitor during the production process, including:
  - environment
  - product appearance
  - pH
  - volume or weight
  - temperature
- product and process changeover procedures and responsibilities
- end-of-batch procedures, including:
  - product sampling
  - environmental sampling
  - line clearances and cleaning (full or partial)
  - yield calculation
  - materials reconciliation
  - change equipment status (sterile/clean to dirty/clean)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- requirements of different shutdowns, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- isolation, lock out and tag out procedures and responsibilities
- operating principles of process control, including the relationship between control panels and systems and the physical equipment
- GMP requirements for production and process controls, including:
  - identification and traceability
  - yields and reconciliation
  - segregation and storage
  - status labels (physical and electronic)
- environmental issues and controls relevant to the production environment, including waste collection and handling procedures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - manufacturing process equipment
  - materials required for the manufacturing process
  - cleaning materials and equipment associated with the manufacturing process
  - record keeping system
- specifications:
  - batch instructions including product specifications, control points and processing parameters
  - recording requirements and procedures
  - workplace documentation relating to manufacturing process and procedures that comply with GMP requirements
  - information and documentation relating to handover
  - cleaning procedures associated with manufacturing process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM3003 Work in a controlled environment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to prepare to enter, work and exit a controlled environment in a pharmaceutical manufacturing facility.

The unit applies to individuals who apply Good Manufacturing Practice (GMP) requirements and operating principles to working in a controlled environment. Individuals work under broad direction and take responsibility for their own work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to enter a controlled environment	1.1 Obtain workplace information, including workplace procedures related to working in a controlled environment 1.2 Remove jewellery and makeup according to workplace procedures 1.3 Wash hands according to workplace procedures 1.4 Source and fit personal protective equipment (PPE) and contamination prevention clothing prior to entering controlled

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	environment 1.5 Check controlled environment operating conditions prior to entry
2. Work in a controlled environment	2.1 Enter controlled environment according to workplace procedures 2.2 Take commodity items into the controlled environment according to workplace procedures 2.3 Conduct work activities to minimise risk of contamination
3. Maintain a controlled environment	3.1 Identify controlled environment contamination risks 3.2 Control environmental contamination according to GMP requirements and workplace procedures 3.3 Maintain controlled environment work area according to workplace cleaning standards and environmental requirements 3.4 Report practices inconsistent with GMP according to workplace procedures
4. Exit a controlled environment	4.1 Follow workplace procedures to exit a controlled environment 4.2 Remove PPE and contamination prevention clothing according to workplace procedures 4.3 De-gown according to workplace procedures 4.4 Check, store and dispose of PPE according to manufacturer specifications, environmental and work health and safety requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret signs, symbols, checklists, production schedules, cleaning schedules and other technical information relevant to working in controlled environments • Access and interpret GMP information relevant to working in controlled environments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Writing	• Complete workplace documentation using appropriate language and in required format
Interact with others	• Report GMP concerns to relevant personnel using required communication method
Navigate the world of work	• Recognise and follow workplace requirements, including safety requirements and GMP, associated with own role and area of responsibility

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Controlled environment must include at least one of the following:	• controlled, non-classified environment • cleanrooms that are controlled environments that have been certified as meeting an internationally recognised standard.
Contamination prevention clothing must include at least one of the following:	• facility suits for controlled, non-classified environment • disposable and reusable garments for controlled, classified cleanroom environments.

Assessment Requirements for FBPPHM3003 Work in a controlled environment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has worked in at least one controlled environment, and demonstrated that they have:

- accessed workplace information to identify controlled environment work requirements
- read and interpreted workplace procedures, including pictorial and written signs/instructions applicable to working in a controlled environment
- checked operating conditions of the controlled environment according to workplace and Good Manufacturing Practice (GMP) requirements
- maintained good personal hygiene and cleanliness appropriate to working in a controlled environment, consistent with GMP requirements, including:
  - making team leader or supervisor aware of reportable illness
  - removal of jewellery
  - removal of makeup
  - following changing procedures
- cleaned and sanitised hands using recognised procedures for:
  - washing with soap and water
  - rubbing with an alcohol-based formulation
- used facility suits and personal protective equipment appropriate for the grade of controlled environment or cleanroom in a manner that does not generate additional contaminants
- entered and exited a controlled environment in a manner to minimise contamination
- identified and reported any condition that may cause shedding of abnormal numbers or types of contaminants
- identified contamination hazards typically encountered in pharmaceutical manufacturing environments and took steps to prevent identified hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cleaned and maintained work area to meet workplace cleaning standards and environmental requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- international nomenclature and classification of controlled environments and cleanrooms
- GMP grades of cleanrooms and their relationship to the International Organization for Standardization (ISO) classification system
- GMP requirements for the qualification of cleanrooms
- key design requirements for controlled environments and cleanroom for product protection:
  - layout and architecture
  - product and process requirements for clean air
  - filtration, including High Efficiency Particulate Air (HEPA) filters and the theory of particle filtration
  - airlocks for materials, equipment and people
  - turbulent and laminar air flows
  - pressure differentials
  - box-within-a-box principle
  - cleanability and maintainability
- how controlled environments operate to control contamination, including:
  - clean rooms, including how they are certified
  - controlled, non-classified environments
  - clean zones
  - monitor and test systems
  - isolator technology
  - at rest and in operation
  - gowning and cleaning
- GMP requirements and workplace procedures for working in controlled environments and cleanrooms, including:
  - requirements for approving and taking commodity items into the cleanroom
  - restrictions on movement of personnel to minimise cross-contamination
  - cleanroom garments, including types, materials, processing and reprocessing
  - personal hygiene requirements
  - clothing and footwear requirements for working in and moving between work areas
  - personal clothing use, storage and disposal requirements
  - workplace cleaning standards and environmental requirements relating to own work
  - responsibilities of general cleaning staff and how to work with a cleaning team

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the role of cleaning and sanitising in preventing contamination of materials and products and protection of personnel, including:
  - how improper cleaning of a controlled environment or cleanroom can lead to product contamination
  - the need for proper selection of equipment and materials for proper cleaning
- controlled environment operating conditions, including:
  - differentials pressures
  - particle counts
  - microbial sampling
  - laminar air flow
  - humidity
  - temperature
  - room status
  - cleanliness status
- hygiene and basic elements of microbiology
- sources of contamination, including:
  - product
  - people
  - tools
  - facilities
  - equipment
- risks associated with controlled environment and cleanroom operators:
  - physical behaviour, including how to walk and stand in a cleanroom
  - personal hygiene
  - psychological
  - workplace attitudes and habits
  - communications between workers
  - electrostatic discharge
- contamination risks associated with controlled environment and clean room operations, including:
  - number of personnel in the controlled environment
  - activities being undertaken
  - leaks
  - malfunctioning equipment
  - low differential pressures
  - high particle counts
  - incorrect air flow and velocity
  - humidity
  - temperature
  - room status inactive or in alarm

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - lack of cleanliness
- common practices inconsistent with GMP found in controlled environment and clean room operations, including:
    - damage to plant or equipment
    - failure of cleaning regime
    - signs of pest infestation
    - missing or inaccurate records
    - failure to follow workplace procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment and contamination prevention clothing
    - cleaning materials and equipment associated with working in a controlled environment
- specifications:
    - workplace procedures related to working in a controlled environment including gowning/de-gowning procedures that comply with GMP requirements
    - workplace cleaning standards and environmental requirements related to working in a controlled environment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	acceptance criteria and take appropriate action to rectify non-conformances 4.4 Confirm relevant sampling or testing methods including sampling or testing points, types of samples and measurements requirements 4.5 Take, collect, store and transport samples according to sampling plan, relevant methods and standards 4.6 Return equipment to operating order 4.7 Record and certify data and information about equipment cleaning and sanitising, including cleaning status, sampling and testing according to workplace procedures and GMP requirements
5. Return plant to operating condition	5.1 Remove signs and barricades according to workplace procedures and work health and safety 5.2 Clean, check and store cleaning equipment and PPE according to manufacturers' specifications, environmental and workplace health and safety requirements 5.3 Store and dispose of unused chemicals according to manufacturers' specifications, and workplace health and safety requirements 5.4 Order and replenish cleaning consumables 5.5 Document tasks completed according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify and follow signs, symbols, checklists, production schedules, cleaning schedules and other technical information relevant to cleaning and sanitising facilities and equipment • Identify and follow workplace information, specifications and safety data sheets (SDS) • Identify and interpret GMP information relevant to cleaning and sanitising facilities and equipment
Writing	• Complete checklists, standard forms and reports relating to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	practices inconsistent with GMP
Oral communication	• Use clear language to report contamination risks and practices inconsistent with GMP • Participate in verbal exchanges to respond to questions and clarify information
Numeracy	• Interpret measurements and numerical symbols in SDSs • Record data and information using mathematical symbols and conventions
Navigate the world of work	• Recognise and follow workplace requirements, including safety requirements and GMP, associated with own role and area of responsibility

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

PPE must include:	• one of the following:
	  • protective gown
	  • scrubs
	  • smock
	  • statcoat
	  • cleanroom coverall
	  • disposable coverall
	• plus all of the following:
	  • disposable overshoes or cleanroom boots
	  • hair net
	  • goggles or safety glasses.

Waste must include:	• cleaning material or product waste • hazardous waste • general processing and laboratory waste.
Monitoring of the cleaning process must include:	• chemical strength • cycle time(s) • temperature • contact time • rinse water quality.
Sampling or testing	• visual inspection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

methods must include:	• pH tests of final rinse water • swabbing of equipment surfaces for presence of contamination.

Assessment Requirements for FBPPHM3004 Clean and sanitise facilities and equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that, the individual has cleaned and sanitised facility surfaces and equipment of at least one manufacturing environment, including:

- accessed cleaning schedules or other workplace information to identify cleaning requirements
- interpreted workplace procedures applicable to cleaning operations, including pictorial and written signs/instructions
- identified soil types present in the following work surfaces, and selected cleaning equipment and agents required to clean the surfaces:
  - floors
  - walls
  - ceilings
  - benches
  - outer surfaces of equipment
  - door handles and door frames
  - light switches
  - vents
  - grills
  - pass-through cabinets
- identified hazards and controlled risks, including contamination hazards encountered in pharmaceutical manufacturing environments
- confirmed supply of necessary cleaning and sanitising equipment and services
- replenished different types of consumables used in cleaning processes SEP
- selected and prepared cleaners and sanitisers according to workplace procedures
- selected, fitted and used personal protective equipment (PPE) required for tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- prepared equipment for cleaning according to manufacturers' instructions, including:
  - rendered equipment safe to clean
  - cleared product and waste materials
  - covered motors and instrumentation where steam or water hoses are used
  - dismantled and reassembled equipment parts for cleaning according to operation and maintenance manual
- applied correct cleaning and sanitising procedures to equipment and surfaces
- taken samples and conducted tests according to workplace procedures
- inspected equipment to identify equipment condition and cleanliness
- stored cleaners, sanitisers and related equipment according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- responsibilities of cleaning staff and procedures for cleaning teams
- common types of microbiological, physical and chemical contaminants in pharmaceutical processing facilities
- Good Manufacturing Practice (GMP) requirements and role of cleaning and sanitising in preventing contamination of materials and products, and in the protection of personnel and external contractors
- risks associated with cleaning and sanitising operations and cross contamination prevention
- personal hygiene, clothing and footwear requirements,
- clothing storage and disposal for working in and moving between work areas
- terminology relating to chemical cleaning and decontamination, including:
  - cleaners
  - disinfectants
  - sanitisers
  - sterilants
  - fogging
  - fumigation
- services used in a pharmaceutical manufacturing process, including:
  - potable and purified water
  - steam
  - compressed and instrumentation air
- types of cleaning equipment suitable for use in a pharmaceutical processing environment, including their use and storage,
- different cleaning methods:
  - clean-in-place (CIP)
  - clean-out-of place (COP)
  - manual cleaning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose and basic principles of CIP, including the use and functions of caustic and acid solutions, and cleaning sequence and stages
- advantages and disadvantage of automated and semi-automated CIP systems
- types of cleaning equipment include:
  - CIP spray balls
  - bottle brushes
  - disinfecting solutions
  - non-shedding wipes
- hygienic vs unhygienic design features of facilities and equipment, including inserts and dead legs
- the differences between:
  - cleaning
  - disinfecting
  - sanitising
  - sterilising
- properties and functions of different cleaning and sanitising agents for pharmaceutical industry
- different levels of cleaning requirements depending on the reason for cleaning, and whether equipment is dedicated or shared
- the influence of the time between manufacture and cleaning (dirty hold time), and the time between cleaning and use (clean hold time) on a cleaning process
- acceptance criteria used to evaluate cleaning quality, including:
  - how cleaning is measured
  - commonly used sampling and testing
- considerations when choosing and using cleaning chemicals including:
  - the correct selection of chemicals for the surface being cleaned
  - the chemical and physical properties of the soils or residues to be removed
  - the interactions between cleaning chemicals and the surfaces they may adhere to
  - the solubility of the soil/residue in the cleaning solution
  - the need to rotate sanitisers
  - the frequency of cleaning and sanitising
- manual, semi-automated and fully automated cleaning methods
- the variable factors that influence cleaning effectiveness and performance
- critical parameters in a cleaning and sanitising process including:
  - time
  - temperature
  - concentration
  - GMP requirements for the validation of cleaning processes
- waste related to pharmaceutical manufacturing processes, including:
  - cleaning material
  - product waste

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - hazardous waste
    - general processing and laboratory waste
- waste collection, recycling and handling procedures relevant to own work responsibilities
- procedures for responding to out-of-limits or unacceptable performance or outcomes
- common practices inconsistent with GMP found in cleaning and sanitising operations, including:
    - damage to plant or equipment
    - failure of cleaning regime
    - signs of pest infestation
    - missing or inaccurate records
    - failure to follow workplace procedures
- purpose of keeping records and the recording requirements of GMP, including the legal significance of certifying and verifying GMP records.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - skills must be demonstrated in a commercial pharmaceutical or complementary medicine manufacturing workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment
    - equipment and surfaces to be cleaned
    - chemicals and/or automated chemical addition system services and their related safety data sheets
    - data collection forms and information recording systems
- specifications:
    - cleaning procedures and related advice on equipment operation that comply with GMP requirements
    - workplace health and safety procedures related to cleaning and sanitising pharmaceutical manufacturing equipment
    - cleaning schedule
    - data collection and information recording requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM3005 Operate a concentration process

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, monitor, adjust and shut down a concentration process in a pharmaceutical manufacturing facility.

The unit applies to individuals who apply Good Manufacturing Practice (GMP) and operating principles to the concentration process. Individuals work under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely operated at least one concentration process, including:

- confirmed production requirements and related facilities, storage and equipment
- correctly gown using Standard Operating Procedures (SOP) for the operations performed batch and product changeovers, including line clearance procedures
- conducted pre-start checks required for safe operation of the concentration process, including:
  - carried out required area or line clearances
  - inspected equipment condition to identify signs of wear
  - checked all safety equipment in place and operational
  - checked equipment clean or sanitised
  - checked equipment correctly configured for processing requirements
- started, operated, monitored and adjusted a concentration process to achieve required outcomes
- conducted in-process control checks to confirm the process remains within limits
- calculated yields and determined the process parameters required to ensure concentration is within specification
- taken samples for product testing in accordance with SOP
- taken corrective action in response to a non-conformance according to SOP
- safely shut down the process according to workplace procedures
- cleaned and maintained work area to meet workplace cleaning standards and environmental requirements
- completed records according to workplace procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of pharmaceutical concentration processes
- stages of a concentration process, including:
  - the purpose, methods and outcomes of each stage
  - the effect of process parameters on each stage
- basic operating principles, requirements and parameters of concentration process equipment, including:
  - main equipment components, operating capacities and applications
  - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
  - corrective actions required where operation is outside specified operating parameters
- services used in a concentration process, including:
  - potable and purified water
  - steam
  - compressed and instrumentation air
  - vacuum
- line clearance procedures, including procedures for clearing feed lines
- workplace health and safety hazards, risks and controls relevant to a concentration process, including:
  - use of solvents
  - functions and limitations of personal protective equipment and contamination prevention clothing
- pre-start check requirements including:
  - required area or line clearances
  - equipment condition to identify signs of wear
  - safety equipment in place and operational
  - equipment clean or sanitised
  - equipment correctly configured for processing requirements
- methods used to monitor concentration process, including inspecting, measuring and testing
- product and process specifications, procedures and operating parameters for different products and materials
- quality requirements of materials and the effect of variations on the concentration process
- contamination risks associated with the concentration process including microbiological and cross contamination
- common causes of out-of-specification product or process and corrective actions required
- concentration process shutdown procedures and responsibilities
- Good Manufacturing Practice (GMP) requirements associated with a concentration process and related control measures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- environmental issues and controls relevant to the concentration process, including waste collection, restriction of movement and handling procedures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - liquid extracts to be concentrated
  - concentration equipment, materials and services
  - cleaning materials and equipment associated with a concentration process
  - record keeping system
- specifications:
  - product and intermediate product specifications, control points and processing parameters
  - recording requirements and procedures in accordance with GMP requirements
  - workplace documentation relating to concentration process and procedures that comply with GMP requirements
  - cleaning procedures associated with a concentration process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPPHM3008 Operate an aseptic fill and seal process

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated at least one aseptic fill and seal process, including:

- accessed workplace information to confirm production requirements for the aseptic fill and seal process
- confirmed supply of necessary materials, packaging components and consumables for the aseptic fill and seal process
- prepared for and completed sterile gowning via operator gowning validation
- selected, fitted and used cleanroom garments and personal protective equipment including gowning and de-gowning
- maintained the sterile quality of the gown after performance of gowning procedures and aseptic process by microbiological surface sampling of several locations on gown
- followed required work area entry and exit procedures and moved around the work area in a manner that does not generate additional contaminants
- conducted pre-start checks required for the safe operation of the aseptic fill and seal process, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment including environmental monitoring equipment is in place and operational
  - confirming that equipment is clean or sanitised and aseptic components installed
  - confirming that equipment is correctly configured for processing requirements
- started, operated, monitored and adjusted aseptic fill and seal process equipment to achieve required outcomes, including:
  - supply and flow of materials to and from process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - flow rates
  - weights and volumes
  - fill levels
  - temperature, including materials and sealing temperatures
  - supply of packaging components and consumables
  - container closure integrity
- conducted in-process control checks to confirm the process remains within limits
- conducted an environmental operating procedure, including taking samples of air and surfaces using air sampling and settle plates and contact plates
- inspected units for defects
- taken corrective action in response to a non-conformance
- maintained consistent aseptic techniques
- followed end-of-batch procedures, including:
  - line clearance and cleaning
  - yield calculation
  - materials reconciliation
  - product labelling
- safely shut down the process according to workplace procedures
- cleaned and maintained work area to meet workplace cleaning standards and environmental requirements
- completed records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- stages of the aseptic fill and seal process, including:
  - the purpose, methods and outcomes of each stage
  - control points
- how the flow of an aseptic fill and seal process affects outputs on downstream processes
- quality characteristics to be achieved by the aseptic fill and seal process, including:
  - quality requirements of packaging components and consumables
  - sterilisation requirements and procedures
  - fill volume by levels and weights
  - requirements of seal formation and integrity
  - importance of maintaining sterile product
  - integrity testing procedures
- principles of filling and sealing, including properties of packaging materials used
- depyrogenation and presterilisation components
- aseptic container preparation, handling and loading

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- functions and limitations of cleanroom garments and personal protective clothing and equipment
- gowning and de-gowning techniques
- cleanroom behaviour and hygiene
- aseptic techniques
- microbiology applicable to aseptic fill and seal process
- basic operating principles, requirements and parameters of aseptic filling and sealing equipment, including:
  - main equipment components, operating capacities and applications
  - typical faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
  - status and purpose of guards
  - the purpose and location of sensors and related feedback instrumentation
  - corrective actions taken where operation is outside specified operating parameters
- operating principles of process control, including the relationship between control panels, systems and physical equipment
- pre-start checks requirements, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment is in place and operational
  - confirming that equipment is clean or sanitised
  - confirming that equipment is correctly configured for processing requirements
- methods used to monitor an aseptic fill and seal process, including:
  - inspecting
  - measuring
  - testing
  - product, packaging and process changeover procedures and responsibilities
- common causes of out-of-specification product or process and corrective actions required, including the effect of variations in both product and packaging components or consumables on filling and sealing performance
- end-of-batch procedures, including:
  - calculating yield
  - materials reconciliation
  - product labelling
  - actions required if yield or reconciliation is not within prescribed limits
- requirements of different shutdowns, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- line clearance procedures, including cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Good Manufacturing Practice (GMP) requirements associated with aseptic fill and seal process and related control measures
- environmental issues and controls relevant to the aseptic fill and seal process, including waste collection and handling procedures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a pharmaceutical workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - cleanroom garments and personal protective equipment
  - aseptic fill and seal process equipment
  - materials, packaging components and consumables for an aseptic fill and seal process
  - microbiological surface sampling tools (touch plates)
  - microbiological growth medium for process simulation (media fill)
  - environmental monitoring equipment
  - cleaning materials and equipment associated with aseptic fill and seal process
  - record keeping system
- specifications:
  - product and intermediate product specifications, control points and processing parameters
  - specifications, control points and processing parameters
  - workplace documentation relating to aseptic fill and seal process and procedures that comply with GMP requirements information on equipment capacity and operating parameters
  - microbiological surface sampling limits for gown locations
  - cleaning and environmental monitoring procedures associated with aseptic fill and seal process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM3009 Operate an aseptic form, fill and seal process

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down an aseptic form, fill and seal process within a graded cleanroom environment in a pharmaceutical manufacturing facility.

The unit applies to individuals who use Good Manufacturing Practice (GMP) requirements and operation principles in the aseptic form, fill and seal process. Individuals work under broad direction and take responsibility for their own work.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Set up form, fill and seal process	1.1 Identify production requirements from workplace documentation 1.2 Confirm materials, packaging components and consumables are available to meet batch and production requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Confirm required facilities and equipment are available 1.4 Source and fit cleanroom garments and personal protective equipment according to workplace gowning Standard Operating Procedures (SOP) 1.5 Maintain contamination free gloves and gown according to workplace gowning SOP 1.6 Fit and adjust machine components and attachments according to production requirements and equipment operation and maintenance manual 1.7 Enter processing and operating parameters according to safety and production requirements 1.8 Check and adjust equipment performance according to equipment operating procedures 1.9 Conduct pre-start checks according to workplace procedures
2. Operate and monitor a form, fill and seal process	2.1 Start up and monitor aseptic form, fill and seal process to confirm products are within required limits 2.2 Monitor packaging quality and seal integrity to confirm that specifications are met 2.3 Identify and report out of limit products or processes according to workplace procedures 2.4 Maintain work area according to workplace cleaning standards 2.5 Maintain consistent aseptic techniques 2.6 Conduct process and sampling according to safety requirements and environmental monitoring procedures 2.7 Contain, remove and report spillages according to SOP 2.8 Complete documentation according to workplace requirements
3. Shut down a form, fill and seal process	3.1 Confirm the workplace procedures for shutting down the process 3.2 Complete end-of-batch procedures according to batch instructions 3.3 Safely shut down the process 3.4 Clean sealing equipment according to workplace procedures 3.5 De-gown according to workplace gowning SOP 3.6 Complete records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify relevant information from workplace documentation, SOP and batch instructions and interpret requirements for the aseptic form, fill and seal process
Writing	• Complete workplace documentation using appropriate language and in required format
Numeracy	• Confirm process specifications for flow rates, temperature, fill levels, weights, volumes, pressure and wall thickness

Assessment Requirements for FBPPHM3009 Operate an aseptic form, fill and seal process

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated at least one aseptic form, fill and seal process, including:

- accessed workplace information to confirm production requirements for the aseptic form, fill and seal process
- confirmed supply of necessary materials, packaging components and consumables for the aseptic form, fill and seal process
- selected, fitted and used cleanroom garments and personal protective equipment including gowning and de-gowning
- maintained the sterile quality of the gown after performance of gowning procedures and aseptic process by microbiological surface sampling of several locations on gown
- followed required work area entry and exit procedures and moved around the work area in a manner that does not generate additional contaminants
- conducted pre-start checks required for the safe operation of the aseptic form, fill and seal process, including:
  - carried out required area or line clearances
  - inspected equipment condition to identify signs of wear
  - checked all safety equipment in place and operational
  - confirmed equipment clean or sanitised
  - confirmed equipment correctly configured for processing requirements
- started, operated, monitored and adjusted aseptic form, fill and seal process equipment to achieve required outcomes, including:
  - container formation and appearance
  - supply and flow of materials to and from process and pressure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - flow rates
  - weights and volumes
  - fill levels
  - temperature, including materials and sealing temperatures
  - supply of packaging components and consumables
  - container closure integrity
- conducted in-process control checks to confirm the process remains within limits
- inspected units for defects
- taken corrective action in response to a non conformance
- maintained consistent aseptic techniques
- followed end-of-batch procedures, including:
  - line clearance and cleaning
  - loss of sterility
  - filler integrity testing
  - yield calculation
  - materials reconciliation
  - environmental monitoring
  - product labelling
  - actions required if yield or reconciliation is not within prescribed limits
- safely shut down the process according to workplace procedures
- cleaned and maintained work area to meet workplace cleaning standards and environmental requirements
- completed records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- stages of the aseptic form, fill and seal process, including:
  - the purpose, methods and outcomes of each stage
  - control points
  - principles of filling and sealing, including properties of packaging materials used
  - the form process
  - principles of heat sterilisation
  - the effect of heat sterilisation on microbiological characteristics of product and packaging materials, and a filling process
  - flow of an aseptic form, fill and seal process and the effect of outputs on downstream processes
- quality characteristics to be achieved by the aseptic form, fill and seal process, including:
  - quality requirements of packaging components and consumables
  - sterilisation requirements and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - fill volume by levels and weights
  - internal and external leakers
  - appearance, including; legibility of embossing, burnt polymer and streaking
  - requirements of seal formation and integrity
  - importance of maintaining sterile product
  - integrity testing procedures
- aseptic container preparation and forming, filling and sealing requirements
- basic operating principles, requirements and parameters of aseptic form, filling and sealing equipment, including:
  - main components, operating capacities and applications
  - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
  - status and purpose of guards
  - the purpose and location of sensors and related feedback instrumentation
  - corrective actions taken where operation is outside specified operating parameters
- common causes of out-of-specification product or process and corrective actions required, including the effect of variations in both product and packaging components or consumables on form, filling and sealing performance
- functions and limitations of cleanroom garments and personal protective clothing and equipment, including:
  - sterile gowns
  - surgical or elastic gloves
  - face masks
  - hair nets or sterile hoods
  - beard/moustache covers
  - protective goggles or glasses
  - sterile disposable overshoes, cleanroom boots and shoe covers
- gowning and de-gowning techniques
- cleanroom behaviour and hygiene
- aseptic technique
- microbiology applicable to aseptic form, fill and seal process
- pre-start checks requirements, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment are in place and operational
  - confirming that equipment is clean or sanitised
  - confirming that equipment is correctly configured for processing requirements
- methods used to monitor an aseptic form, fill and seal process, including:
  - inspecting
  - measuring
  - testing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product, packaging and process changeover procedures and responsibilities
- end-of-batch procedures, including:
  - line clearance and cleaning
  - loss of sterility
  - filler integrity testing
  - calculating yield
  - materials reconciliation
  - environmental monitoring
  - product labelling
  - actions required if yield or reconciliation is not within prescribed limits
- requirements of different shutdowns, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- line clearance procedures, including cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- operating principles of process control, including the relationship between control panels, systems and physical equipment
- Good Manufacturing Practice (GMP) requirements associated with aseptic form, fill and seal process and related control measures
- environmental issues and controls relevant to the aseptic form, fill and seal process, including;
  - particle count specification
  - waste collection and handling procedures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a pharmaceutical workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - cleanroom garments and personal protective equipment
  - aseptic form, fill and seal process equipment
  - materials, packaging components and consumables for an aseptic form, fill and seal process
  - microbiological surface sampling tools (touch plates)
  - microbiological growth medium for process simulation (media fill)
  - environmental monitoring equipment
  - cleaning materials and equipment associated with aseptic form, fill and seal process

	and maintenance manual 1.4 Enter processing and operating parameters according to safety and production requirements 1.5 Conduct pre-start checks according to workplace requirements
2. Operate and monitor the compressing process	2.1 Start up and monitor compressing process to confirm specifications are within required limits 2.2 Identify and report out of limit tablet products or processes according to workplace procedures 2.3 Maintain work area according to workplace cleaning standards 2.4 Conduct process according to safety and environmental requirements 2.5 Contain, remove and report spillages according to workplace procedures 2.6 Complete documentation according to workplace requirements
3. Shut down the compressing process	3.1 Confirm the workplace procedures for shutting down the process 3.2 Complete end-of-batch procedures according to batch instructions and workplace procedures 3.3 Safely shut down the process 3.4 Complete records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify relevant information from workplace documentation and interpret requirements for the compressing process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Writing	• Complete workplace documentation using appropriate language and in required format
Numeracy	• Interpret production requirements for type and number of tablets to be compressed
Navigate the world of work	• Identify workplace procedures relevant to own role
Interact with others	• Report operational and safety information to relevant personnel using required communication method
Get the work done	• Plan, organise and implement tasks required to achieve production outcomes • Use problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Pre-start must include:	• carrying out required area or line clearances • inspecting equipment condition to identify signs of wear • confirming all safety equipment is in place and operational • confirming that equipment is clean or sanitised • confirming that equipment is correctly configured for processing requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- stages of the tablet compressing process, including:
  - the purpose, methods and outcomes of each stage
  - stages and changes that occur during compression of tablets
  - the purpose and characteristics of ingredients and raw materials used in tablet production
  - types of raw materials used in the compressing process, and related handling and segregation requirements, including handling of hazardous goods
- basic operating principles, requirements and parameters of compressing equipment, including:
  - main equipment components, operating capacities and applications
  - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
  - status and purpose of guards
  - the purpose and location of sensors and related feedback instrumentation
  - flow of the compressing process and the effect of outputs on downstream pharmaceutical processes
  - corrective actions required where operation is outside specified operating parameters
- operating principles of process control, including the relationship between control panels and systems and physical equipment
- functions and limitations of personal protective clothing and equipment, including:
  - protective gowns, scrubs, smocks, statcoats or disposable coveralls
  - surgical masks
  - surgical gloves
  - disposable overshoes
  - hair nets
- pre-start checks requirements, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment is in place and operational
  - confirming that equipment is clean or sanitised
  - confirming that equipment is correctly configured for processing requirements
- methods used to monitor compressing process, including inspecting measuring and testing
- product and process changeover procedures and responsibilities
- end-of-batch procedures, including:
  - calculating yield
  - materials reconciliation
- product labelling responsibilities and procedures
- requirements of different shutdowns, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- line clearance procedures, including cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- Good Manufacturing Practice (GMP) requirements associated with the compressing process and related control measures
- environmental issues and controls relevant to the compressing process, including waste collection and handling procedures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing compressing process equipment
  - sampling and testing equipment
  - materials required for the compressing process
  - cleaning materials and equipment associated with compressing process
  - record keeping system
- specifications:
  - batch instructions including product specifications, control points and processing parameters
  - recording requirements and procedures
  - workplace documentation relating to a tablet compressing process and procedures that comply with GMP requirements
  - information on equipment capacity and operating parameters
  - sampling schedules and test procedures
  - cleaning procedures associated with compressing process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all the elements and performance criteria of this unit.

There must be evidence that the individual has safely dispensed pharmaceutical raw materials at least once, including:

- accessed workplace information to confirm dispensing requirements
- checked supply of necessary raw materials, including:
  - raw material labels and codes for status and type
  - quantities
  - quality clearances
- selected, fitted and used personal protective equipment and contamination prevention clothing
- conducted pre-start checks on dispensing equipment, including:
  - condition and cleanliness of equipment and shared or dedicated utensils
  - confirmed equipment correctly configured for dispensing requirements
- measured materials and additives within a specified accuracy range to meet batch requirements
- calculated assay or potency adjustment
- verified accuracy of raw materials dispensed with raw materials records
- taken corrective action in response to a non-conformance
- applied segregation and cross contamination prevention procedures
- paced dispensing to meet production requirements
- packed and labelled dispensed materials, according to batch requirements and labelling procedures
- reconciled and recorded materials dispensed against materials released and returned unused materials to storage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- stacked dispensed materials for transfer to designated location, ensuring required material segregation
- handled containers and maintained integrity of materials according to workplace procedures
- safely cleared the process area according to workplace procedures
- cleaned and maintained dispensing equipment, utensils and work area to meet workplace cleaning standards and environmental requirements
- completed records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- stages of the dispensing process, including:
  - purpose, methods and outcomes of each stage
  - control points
  - types of raw materials and related handling requirements including handling of hazardous goods
- basic operating principles, requirements and parameters of dispensing equipment, including:
  - measuring, and accuracy capacity of instrumentation and related equipment
  - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
  - corrective actions required where operation is outside specified operating parameters
- functions and limitations of personal protective equipment and contamination prevention clothing
- pre-start checks requirements, including:
  - condition and cleanliness of equipment and shared or dedicated utensils
  - confirming that equipment is correctly configured for dispensing requirements
- operational considerations that impact on the quality of the dispensing process, including:
  - product accuracy
  - equipment tolerances
  - consequences of errors and variations
- workplace procedures for:
  - calculating assay and adjusting potency
  - reconciliation of raw materials, including Schedule 8 materials
  - requisitioning, receiving and returning ingredients from stores
- Good Manufacturing Practice (GMP) requirements associated with dispensing pharmaceutical raw materials
- environmental issues and controls relevant to the dispensing process, including waste and rework collection, and handling procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace systems for recording information about dispensed pharmaceutical materials, including coding and labelling systems
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - dispensing process equipment and utensils
  - materials required for the dispensing process
  - containers or bags, labelling and storage facilities
  - test equipment
  - cleaning materials and equipment associated with dispensing pharmaceutical raw materials
  - record keeping system
- specifications:
  - product and intermediate product specifications, control points and processing parameters
  - specifications, control points and processing parameters
  - recording requirements and procedures
  - workplace documentation relating to the dispensing process and procedures that comply with GMP requirements
  - sampling schedules and test procedures
  - cleaning procedures associated with dispensing pharmaceutical raw materials.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Skill	Description
Reading	• Identify relevant information from workplace documentation and interpret requirements for the encapsulation process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Writing	• Complete workplace documentation using appropriate language and in required format
Numeracy	• Interpret specifications for flow rates and product quantity
Navigate the world of work	• Identify workplace procedures relevant to own role
Interact with others	• Report operational and safety information to relevant personnel using required communication method
Get the work done	• Plan, organise and implement tasks required to achieve production outcomes • Use problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Pre-start checks must include:	• carrying out required area or line clearances • inspecting equipment condition to identify signs of wear • confirming all safety equipment are in place and operational • confirming that equipment is clean or sanitised • confirming that equipment is correctly configured for processing requirements.

Assessment Requirements for FBPPHM3012 Operate an encapsulation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all the elements and performance criteria of this unit.

There must be evidence that the individual has safely operated at least one encapsulation process, including:

- accessed workplace information to confirm production requirements for the encapsulation process
- confirmed supply of necessary materials and services for the encapsulation process, including checking raw materials meet batch requirements
- selected, fitted and used personal protective equipment and contamination prevention clothing
- conducted pre-start checks required for the safe operation of the encapsulation process, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment are in place and operational
  - confirming that equipment is clean or sanitised
  - confirming that equipment is correctly configured for processing requirements
- started, operated, monitored and adjusted an encapsulation process to achieve required outcomes
- conducted in-process control checks to confirm the process remains within limits
- sampled and inspected capsules for conformance to specifications, including appearance and weight
- taken corrective action in response to a non-conformance
- followed end-of-batch procedures, including:
  - line clearance and cleaning
  - yield calculation
  - materials reconciliation
  - product labelling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- safely shut down the process according to workplace procedures
- cleaned and maintained work area to meet workplace cleaning standards and environmental requirements
- completed records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- stages of the encapsulation process, including:
  - the purpose, methods and outcomes of each stage
  - control points
  - quality characteristics to be met by the encapsulation process
  - stages and changes which occur during encapsulation
  - types of raw materials used in the encapsulation process and related handling and segregation requirements, including handling hazardous goods
- basic operating principles, requirements and parameters of encapsulating equipment, including:
  - main equipment components, operating capacities and applications
  - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
  - status and purpose of guards
  - the purpose and location of sensors and related feedback instrumentation
  - flow of the encapsulation process and the effect of outputs on downstream pharmaceutical processes
  - corrective actions required where operation is outside specified operating parameters
- functions and limitations of personal protective equipment and contamination prevention clothing
- pre-start checks requirements, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment are in place and operational
  - confirming that equipment is clean or sanitised
  - confirming that equipment is correctly configured for processing requirements
- methods used to monitor the encapsulation process, including:
  - inspecting
  - measuring
  - testing
- product and process changeover procedures and responsibilities
- end-of-batch procedures, including:
  - calculating yield

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - materials reconciliation
- product labelling responsibilities and procedures
- requirements of different shutdowns, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- line clearance procedures, including cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- operating principles of process control, including the relationship between control panels and systems and physical equipment
- Good Manufacturing Practice (GMP) requirements associated with an encapsulation process and related control measures
- environmental issues and controls relevant to the encapsulation process, including waste collection and handling procedures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - encapsulation process equipment
  - materials required for the encapsulation process
  - test equipment
  - cleaning materials and equipment associated with encapsulation process
  - record keeping system
- specifications:
  - batch instructions including product specifications, control points and processing parameters
  - recording requirements and procedures
  - workplace documentation relating to encapsulation process and procedures that comply with GMP requirements
  - sampling schedules and test procedures
  - cleaning procedures associated with encapsulation process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM3013 Operate a granulation process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to set up, operate, adjust and shut down a granulation process in a pharmaceutical manufacturing facility.

The unit applies to individuals who apply Good Manufacturing Practice (GMP) and operating principles to the granulation process. Individuals work under broad direction and take responsibility for their own work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare granulation process for operation	1.1 Confirm materials and equipment are available and meet production requirements 1.2 Select and fit personal protective equipment and contamination prevention clothing according to workplace procedures 1.3 Fit and adjust machine components and attachments according to production requirements and equipment operation and

2. Operate and monitor the tablet coating process	2.1 Start up and monitor tablet coating process to confirm specifications are within required limits 2.2 Identify and report out of limit coated tablet products or processes according to workplace procedures 2.3 Maintain work area according to workplace cleaning standards 2.4 Conduct process according to safety and environmental requirements 2.5 Contain, remove and report spillages according to workplace procedures 2.6 Complete documentation according to workplace procedures
3. Shut down the tablet coating process	3.1 Confirm the workplace procedures for shutting down the process 3.2 Complete end-of-batch procedures according to batch instructions and workplace procedures 3.3 Safely shut down the process 3.4 Complete records according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Identify relevant information from workplace documentation and interpret requirements for the tablet coating process
Writing	• Complete workplace documentation using appropriate language and in required format
Numeracy	• Confirm type and number of tablets to be coated meet batch

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	requirements • Interpret specifications for coating addition rate and drying air temperature and flow
Navigate the world of work	• Identify workplace procedures relevant to own role
Interact with others	• Report operational and safety information to relevant personnel using required communication method
Get the work done	• Plan, organise and implement tasks required to achieve production outcomes • Use problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Pre-start checks must include:	• carrying out required area or line clearances • inspecting equipment condition to identify signs of wear • confirming all safety equipment is in place and operational • confirming that equipment is clean or sanitised • confirming that equipment is correctly configured for processing requirements.

Assessment Requirements for FBPPHM3015 Operate a tablet coating process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all the elements and performance criteria of this unit.

There must be evidence that the individual has safely operated at least one tablet coating process, including:

- accessed workplace information to confirm production requirements for the tablet coating process
- confirmed supply of necessary tablets, coating materials and services for the tablet coating process
- selected, fitted and correctly used personal protective equipment and contamination prevention clothing
- conducted pre-start checks required for the safe operation of the tablet coating process equipment, including:
  - carrying out required area or line clearances
  - inspecting equipment condition to identify signs of wear
  - confirming all safety equipment is in place and operational
  - confirming that equipment is clean or sanitised
  - confirming that equipment is correctly configured for processing requirements
- started, operated, monitored and adjusted the tablet coating process to achieve required outcomes
- conducted in-process control checks to confirm the process remains within limits
- sampled and inspected tablets for conformance to specifications
- taken corrective action in response to a non-conformance
- followed end-of-batch procedures, including:
  - line clearance and cleaning
  - yield calculation
  - materials reconciliation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - product labelling
- safely shut down the process according to workplace procedures
- cleaned and maintained work area to meet workplace cleaning standards and environmental requirements
- completed records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- stages of the tablet coating process, including:
    - the purpose, methods and outcomes of each stage
    - control points
    - quality characteristics to be met by the tablet coating process
    - stages and changes which occur during tablet coating
    - effects of tablet coating process on the end product
    - types of materials used in preparation of coatings and related handling and segregation requirements
    - flow of the tablet coating process and the effect of outputs on downstream pharmaceutical processes
- basic operating principles of equipment, requirements and parameters of tablet coating equipment, including:
    - main equipment components, operating capacities and applications
    - typical equipment faults and related causes, including signs and symptoms of faulty equipment and early warning signs of potential problems
    - status and purpose of guards
    - the purpose and location of sensors and related feedback instrumentation
    - corrective actions required where operation is outside of specified parameters
- functions and the limitations of personal protective equipment and contamination prevention clothing
- pre-start checks requirements, including:
    - carrying out required area or line clearances
    - inspecting equipment condition to identify signs of wear
    - confirming all safety equipment is in place and operational
    - confirming that equipment is clean or sanitised
    - confirming that equipment is correctly configured for processing requirements
- methods used to monitor the tablet coating process, including:
    - inspecting
    - measuring
    - testing
- product and process changeover procedures and responsibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- end-of-batch procedures, including:
  - calculating yield
  - material reconciliation
- product labelling responsibilities and procedures
- requirements of different shutdowns, including:
  - emergency and routine shutdowns
  - procedures to follow in the event of a power outage
- line clearance procedures, including cleaning and sanitation procedures
- isolation, lock out and tag out procedures and responsibilities
- operating principles of process control, including the relationship between control panels and systems and the physical equipment
- Good Manufacturing Practice (GMP) requirements associated with a tablet coating process and related control measures
- environmental issues and controls relevant to the tablet coating process, including waste collection and handling procedures
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - tablet coating process equipment
  - materials required for the tablet coating process, including tablets, coating materials and labels
  - test equipment
  - cleaning materials and equipment associated with tablet coating process
  - record keeping system
- specifications:
  - batch instructions including product specifications, control points and processing parameters
  - recording requirements and procedures
  - workplace documentation relating to tablet coating process and procedures that comply with GMP requirements
  - sampling schedules and test procedures
  - cleaning procedures associated with tablet coating process.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM3017 Coordinate a label store

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to receive, issue and reconcile labels for pharmaceutical products in a pharmaceutical manufacturing facility.

The unit applies to individuals who apply Good Manufacturing Practice (GMP) and operating principles to the coordination of a label store. Individuals work under broad direction and take responsibility for their own work.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Receive labels	1.1 Locate label details required for type of pharmaceutical product 1.2 Confirm the quantity of labels received and reconcile against receival documentation 1.3 Identify and report discrepancies to supervisor
2. Issue and reconcile	2.1 Create labels to meet batch requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
labels	2.2 Issue labels in correct quantities to meet batch requirements 2.3 Receive, reconcile and record labels returned to store according to workplace verification and reconciliation procedures 2.4 Maintain records to meet workplace and legislative requirements 2.5 Coordinate the issue and reconciliation of labels according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Read and identify label information
Writing	• Record workplace information using appropriate language and in required format
Numeracy	• Verify that label information meets batch type • Use label counting equipment
Navigate the world of work	• Apply workplace procedures to own role and responsibilities • Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Report operational and safety information to relevant personnel using required communication method
Get the work done	• Issue labels according to batch requirements • Solve routine problems according to workplace guidelines and using experience of past solutions

Assessment Requirements for FBPPHM3017 Coordinate a label store

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all the elements and performance criteria of this unit.

There must be evidence that the individual has coordinated at least one label store, including:

- followed receival procedures to receive, count and store labels
- accessed the production schedule to identify label requirements
- tested accuracy of label counting machines and recorded results
- verified that label information meets batch type, including setting up and using label counting equipment
- removed and accounted for damaged labels, or other non-conforming labels
- selected and issued labels to meet batch and documentation requirements
- received labels that have been issued and returned from production
- conducted reconciliations of labels received and issued including back-up verification
- maintained security of label store
- maintained a clean and hazard free work area
- operated label coding and printing equipment according to workplace procedures
- completed records according to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- system of label control, including purposes and procedures for receiving, issuing and reconciling labels and verifying label management
- Good Manufacturing Practice (GMP) requirements and workplace procedures relating to label management
- purposes and requirements of security procedures and responsibilities
- types of labels received and issued and the significance of codes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- consequences of issuing incorrect labels
- procedures for setting up, testing and operating label store equipment, including label counting equipment
- corrective action required if a discrepancy is identified
- workplace procedures and responsibility for recording and reporting information
- workplace procedures for label coding and printing equipment.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - label management system and procedures
  - labels and label counting equipment
  - label printing equipment and consumables
  - record keeping systems
- specifications:
  - batch instructions
  - documentation and workplace procedures about recording requirements
  - workplace procedures relating to coordinating a label store and label management that comply with GMP requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM4001 Monitor and maintain Good Manufacturing Practice requirements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to provide a leadership role in the day-to-day monitoring and maintenance of Good Manufacturing Practice (GMP) in a pharmaceutical manufacturing facility.

The unit applies to individuals with specialised skills and knowledge of GMP requirements who communicate workplace policies and procedures relevant to pharmaceutical manufacturing operations and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Empower team members to identify GMP requirements	1.1 Ensure personal protective equipment and contamination prevention clothing used by team members is serviceable and fitted correctly according to work health and safety requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Ensure GMP requirements and workplace procedures are available 1.3 Identify and address training needs according to team member's level of responsibility 1.4 Provide training and coaching to support individuals and groups to implement GMP requirements and related workplace procedures 1.5 Demonstrate personal hygiene to others to support implementation of GMP requirements and workplace procedures 1.6 Monitor and control resource allocation according to workplace procedures and GMP requirements 1.7 Ensure GMP control measures used in the work area are identifiable by workers
2. Monitor personal hygiene and conduct of team members	2.1 Ensure personal hygiene of work team meets GMP requirements 2.2 Prepare, use, store and dispose of personal protective equipment and contamination prevention clothing according to GMP requirements and workplace procedures 2.3 Ensure personal movements within workplace comply with area entry and exit procedures
3. Monitor implementation of GMP requirements	3.1 Clearly define, document and follow GMP requirements in work area 3.2 Conduct a root cause analysis (RCA) as part of a cross-functional team and report non-compliance(s) from workplace procedures 3.3 Identify and report GMP non-conformance(s) and signs of unacceptable plant or equipment condition 3.4 Put in place quality approved corrective action or preventative action (CAPA) 3.5 Record information according to workplace reporting procedures and to meet GMP requirements 3.6 Ensure team members maintain work area according to workplace cleaning standards
4. Maintain and facilitate continuous improvement	4.1 Identify, report and correct processes or conditions which could result in GMP non-conformance according to individual

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
of GMP	level of responsibility 4.2 Promptly resolve matters relating to GMP or refer them to appropriate personnel 4.3 Monitor effectiveness of CAPA and control measures according to level of responsibility 4.4 Advise others in the work area of GMP matters relevant to their work role 4.5 Maintain workplace records and documents according to workplace procedures and GMP requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret key information about GMP requirements in workplace procedures
Writing	• Prepare GMP training documentation using structure, technical language and format appropriate for purpose and audience
Numeracy	• Analyse and interpret numerical performance indicators for workplace reporting related to GMP requirements
Oral Communication	• Demonstrate two-way communication including active listening and confirming instructions when explaining GMP requirements to team members
Interact with others	• Use appropriate vocabulary, including technical language directly relevant to role • Report GMP performance to relevant personnel using required communication method
Get the work done	• Access and use electronic document management systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Personal hygiene must include:	• informing team leader or supervisor of any reportable illnesses
	• removal of jewellery, including:
	  • rings
	  • watches
	  • bracelets
	• removal of makeup.

Assessment Requirements for FBPPHM4001 Monitor and maintain Good Manufacturing Practice requirements

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored and maintained Good Manufacturing Practice (GMP) requirements of at least one work team, including:

- communicated information on GMP requirements to others in the work area, including demonstrating:
  - two-way communication
  - active listening
  - constructive responses to feedback
- accessed and used document management systems
- demonstrated personal hygiene according to GMP requirements and workplace procedures
- monitored recorded data to meet GMP recording requirements according to workplace procedures
- documented GMP requirements for a specific work area
- provided training and support to others in the work area to implement responsibilities according to GMP requirements and to workplace procedures
- determined actions required to respond to GMP non-compliance according to workplace procedures
- participated in improvement processes, including investigating actual and potential GMP non-compliance
- participated in, or reviewed, practices and procedures to prevent or minimise the likelihood of unacceptable performance.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the role of GMP in preventing contamination, including:
  - its relationship to legal requirements of pharmaceutical manufacturers
  - potential implications of non-compliance
- GMP requirements, including:
  - relevant GMP codes of practice
  - related workplace procedures
  - organisational structures for implementing these requirements
  - quality assurance
- principles and process of effective communication and consultation
- workplace training and coaching system and responsibilities
- personal clothing use, storage and disposal requirements and hygiene requirements, including:
  - making team leader or supervisor aware of reportable illness
  - removal of jewellery
  - removal of makeup
- personal clothing and footwear requirements for working in and moving between work areas
- current technical and process knowledge required to monitor and maintain GMP and participate in investigating GMP non-compliance including:
  - common microbiological, physical and chemical contaminants
  - conditions under which types of contamination, including cross-contamination are likely to occur
  - purpose of equipment calibration
  - control methods and procedures, including the purpose of control and the consequences if not controlled
- recall and traceability procedures relevant to the work area, including:
  - reconciliation
  - line clearance
  - stored versus dedicated
- procedures followed to investigate contamination events and performance improvement processes, including:
  - root cause analysis (RCA)
  - corrective action or preventive action (CAPA)
- documentation systems and procedures, including:
  - record keeping to meet both company and legal requirements
  - responding to out-of-specification, or unacceptable, performance and outcomes
  - procedures for identifying and isolating, or quarantining, materials or products of unacceptable quality
  - processes for developing or reviewing workplace procedures
  - document control systems used in the workplace
  - responsibilities for reporting and recording information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace cleaning standards and responsibilities relating to own work, including:
  - waste collection
  - recycling, safe handling and disposal for different types of waste
  - safe handling and disposal of hazardous waste.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment and contamination prevention clothing
  - document management system
- specifications:
  - GMP requirements
  - workplace cleaning standards
  - workplace reporting procedures
  - workplace procedures related to GMP
- relationships:
  - team members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has reviewed and developed workplace documentation to support the Good Manufacturing Practice (GMP) requirement of at least one workplace, including:

- identified workplace documentation requiring development or review using workplace documentation management process
- reviewed and developed workplace documentation, suitable for purpose and audience, including:
  - ensuring compliance with workplace procedures and GMP requirements
  - reporting improvements
  - reviewing and updating existing documentation
  - developing new documentation
  - applying documentation control procedures when submitting or amending documents
- accessed and used document management systems
- consulted with relevant stakeholders in the preparation and review process and ensured changes are effectively communicated
- communicated information on documentation requirements to others in the work area, including demonstrating:
  - two-way communication
  - active listening
  - constructive responses to feedback.

Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace procedures and GMP requirements
- types of documentation requiring development or review, including:
  - procedures
  - instructions
  - records
- situations requiring documentation development or review, including:
  - general review
  - process change
  - inspection findings
  - deviations
- procedures and responsibilities for developing and altering documents, including:
  - version control
  - good documentation design and the use of templates
  - an understanding of system security and access levels
  - controls systems, including individual roles and responsibilities
  - document authorisation requirements and responsibilities of signatories
  - systems for recording and storing data and authorised levels of access to electronic systems
- use of documentation, including documents that can be used as evidence during audit processes
- requirements for completion of workplace documentation.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - document management system
- specifications:
  - information about GMP requirements
  - workplace procedures related to GMP.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPPHM4003 Facilitate contamination control

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 5.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has facilitated contamination control in at least one process, including:

- identified and investigated occurrences that could present contamination hazards and risks by:
  - type
  - origin
  - product association
- confirmed contamination control measures, including:
  - critical limits
  - monitoring and recording requirements
- interpreted Good Manufacturing Practice (GMP) requirements and workplace procedures related to contamination control
- used document management systems to:
  - access and review documents including the Contamination Control Strategy
  - monitor and record data according to GMP requirements
  - ensure procedures are understood and implemented
- reviewed workplace documents to determine contamination control measures, including:
  - equipment drawings
  - piping and instrumentation diagrams
  - process flow charting
- monitored gowning, cleaning, access and refresher training according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- provided training and support to others in work area to implement contamination control according to GMP requirements and workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- types of contamination, including:
  - microbiological
  - chemical
  - physical
  - product cross-contamination
- microbiological limits as per GMP Guide, monitoring methods and reporting and recording formats and requirements
- non-viable particle limits as per GMP Guide, monitoring methods and reporting and recording formats and requirements
- line clearance procedures, roles and responsibilities
- personal hygiene and clothing requirements, including:
  - informing team leader or supervisor of reportable illness
  - removal of jewellery
  - removal of makeup
  - personal clothing use, storage and disposal
  - personal clothing and footwear requirements for working in and moving between work areas
  - decontamination
  - laundering requirements
- GMP requirements and workplace procedures relevant to contamination control
- environmental issues and workplace controls relevant to contamination control, including:
  - the principles of workflow design to minimise risk of contamination
  - ventilation system requirements
  - production facility segregation requirements
  - storage requirements of raw materials prior to their use in manufacture
  - time limits and conditions for storing finished products prior to packaging
  - requirements relevant to product range
- workplace cleaning standards and responsibilities, including:
  - types of cleaning agents and what they do
  - waste collection
  - recycling, safe handling and disposal of different types of waste
  - safe handling and disposal of hazardous waste
- requirements for completion of workplace documentation
- active air samplers and particle counters used in environmental monitoring cleanrooms.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - document management system
  - equipment drawings, piping and instrumentation diagrams and process flow charts
- specifications:
  - recording requirements and procedures
  - workplace procedures related to contamination control
  - GMP requirements related to contamination control
  - workplace cleaning procedures
- relationships:
  - team members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPPHM4004 Participate in change control procedures

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all the elements and performance criteria of this unit.

There must be evidence that the individual has participated in change control procedures in at least one pharmaceutical manufacturing facility, including:

- identified situations requiring change control according to change proposal
- participated in developing a change management plan
- led the implementation of change in a work area
- communicated information on change requirements to others in the work area, including demonstrating:
  - two-way communication
  - active listening
  - responses to feedback
- accessed and used document management systems
- implemented training to support others in the work area to implement responsibilities according to change management plan
- interpreted Good Manufacturing Practice (GMP) requirements and workplace procedures related to change control
- documented change according to GMP requirements and workplace change control procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of risk management and related procedures
- documentary evidence required to support change requests
- workplace change control procedures, including:
  - evaluation criteria

FBPPHM4005 Participate in validation of pharmaceutical manufacturing processes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to use qualification and validation processes to meet Good Manufacturing Practice (GMP) requirements in a pharmaceutical manufacturing facility.

The unit applies to individuals with specialised skills and knowledge of GMP requirements who participate in validation process relevant to pharmaceutical manufacturing operations as part of a multi-disciplinary team and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Pharmaceutical (PHM)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Participate in qualification processes for facilities, systems or equipment	1.1 Identify procedures for developing and implementing qualification processes 1.2 Develop and review qualification processes and

	documentation according to workplace procedures 1.3 Implement qualification process training needs
2. Participate in validation processes for facilities, systems or equipment	2.1 Identify validation requirements according to workplace procedures and GMP requirements 2.2 Follow validation protocol to support validation activities in the work area 2.3 Evaluate and document deviations and exceptions from protocol 2.4 Maintain workplace records and documents according to workplace procedures and GMP requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret key information in GMP requirements and workplace procedures relevant to qualification and validation processes
Writing	• Create qualification procedures and validation reports using relevant technical terminology and format to suit regulatory requirements
Oral Communication	• Demonstrate two-way communication, including active listening and confirming instructions, when explaining qualification processes to team members • Use appropriate vocabulary, including technical language to explain processes
Get the work done	• Access and use electronic document management systems

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all the elements and performance criteria of this unit.

There must be evidence that the individual has participated in the validation processes of at least one workplace, including:

- identified procedures for developing and implementing qualification processes for a:
  - design qualification
  - installation qualification
  - operational qualification, and
  - performance qualification
- applied principles of risk management to identify critical facilities, systems and equipment
- communicated information on qualification process requirements to others in the work area, including demonstrating:
  - two-way communication
  - active listening
  - constructive responses to feedback
- implemented training to support others in the work area to implement responsibilities according to qualification process requirements
- interpreted Good Manufacturing Practice (GMP) requirements and workplace procedures related to qualification and validation requirements
- managed the impact of qualification and validation procedures on:
  - related processes
  - work areas
  - personnel
- developed workplace procedures to support qualification and validation according to GMP requirements and workplace procedures
- documented qualification and validation processes according to GMP requirements and workplace procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the procedures for developing and implementing qualification processes
- types of qualification processes, including:
  - design
  - installation
  - operational
  - performance
- validation objectives and procedures, including:
  - prospective validation
  - concurrent validation
  - re-validation
  - circumstances that justify not undertaking a validation process prior to commencing production
  - procedure updates and sampling requirements
- workplace training systems and responsibilities
- GMP requirements and workplace procedures relevant to qualification and validation processes
- documentation systems and procedures, including:
  - record keeping to meet both company and legal requirements
  - processes for developing or reviewing workplace procedures
  - document control systems used in the workplace
  - responsibilities for reporting and recording information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a pharmaceutical manufacturing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - qualification and validation process documentation
- specifications:
  - workplace procedures relating to validation
  - GMP requirements related to validation
- relationships:
  - team members.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPHM4006 Respond to non-conformance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to identify and respond to non-conformance and review processes to minimise risk of recurrence to meet Good Manufacturing Practice (GMP) requirements in a pharmaceutical manufacturing facility.

The unit applies to individuals with specialised skills and knowledge of GMP requirements who respond to non-conformance relevant to pharmaceutical manufacturing operations and have responsibility for the output of others. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPPHM4006 Respond to non-conformance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all the elements and performance criteria of this unit.

There must be evidence that the individual has responded to at least one non-conformance, including:

- identified workplace procedures and documentation relating to non-conformance
- interpreted Good Manufacturing Practice (GMP) requirements and workplace procedures related to non-conformance
- identified workplace non-conformance change management procedures and responsibilities, including:
  - corrective and preventive actions (CAPA)
  - investigating possible causes of non-conformance
  - root cause analysis (RCA)
  - risk assessment
  - repeat incident
  - isolated incident
  - impact assessment
  - recording requirements
- reviewed responses to previous incidents to assess effectiveness and developed recommendations on appropriate workplace procedures
- communicated implementation plan requirements to others in the work area, including demonstrating:
  - two-way communication
  - active listening
  - constructive responses to feedback.

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively participated in work teams or groups of at least three people, on a minimum of two different occasions, including:

- actively participating in discussion about identifying team goals and expectations
- planning work to maximise outcomes for team
- applying communication skills to engage with other participants
- participating in and supporting the achievement of team goals.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how to plan work to maximise outcomes for team
- appropriate communication skills to engage with other participants
- procedures for establishing team goals and performance standards
- methods used to measure achievement of personal and team goals
- team goals and personal role to achieving work outcomes
- common group communication processes, including:
  - basic negotiation skills
  - conflict resolution
  - giving and receiving feedback
- importance of team goals and expectations and personal role within the team
- oral communication skills and language, including:
  - questioning
  - active listening

FBPPPL3005 Participate in an audit process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required for individuals to participate in auditing, where it occurs in an area that the person is not directly responsible for and where they are required to follow a formal, structured process. It is designed to support participation in auditing a range of programs designed to identify hazards, assess risk and implement control measures.

At this level, the person would typically work under direction and may be required to operate within established audit procedures. Participation implies that the person can participate in all stages of an audit but is not responsible for negotiating audit scope, allocating audit tasks to others or reporting on audit outcomes.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPPPL3005 Participate in an audit process

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has participated in an audit process on at least one occasion, including:

- collecting, assessing and providing information as required by the audit process
- acting on risk identified in the audit process
- following up on audit outcomes by developing action plans
- communicating outcomes to work personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- requirements and procedures for participating in an audit
- the purpose and scope of an audit, including the stages involved in the audit process
- roles and responsibilities of individuals involved in an audit process
- types of information required for a range of audit situations, including:
  - health and safety in the workplace
  - quality
  - environmental
- techniques for collecting information, including options, relevance and strengths and weaknesses of each method to ensure data is adequate and representative
- data analysis methods relevant to the audit process
- communication skills and techniques appropriate to the workplace to inform other personnel of audit outcomes and modified work practices
- technical knowledge relevant to the program being audited in order to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - verify compliance
    - assess adequacy of control measures
    - relevance to industry standards
- purpose and responsibilities for maintaining records
- process to transition audit deficiencies into corrective action plans.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace to collect data and observe compliance
- resources, equipment and materials:
    - workplace program documentation
    - information systems and data collection technology
- specifications:
    - audit procedures and standards as applied in the workplace
    - relevant legislation, industry standards and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL3006 Report on workplace performance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to collate and maintain workplace records to enable the monitoring and reporting of workplace performance.

The unit applies to individuals who work as team leaders with responsibility for monitoring and reporting on performance of a work area or section. This includes working in a range of known contexts and completing routine activities.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Establish recording and reporting requirements	1.1 Identify the purpose of recording performance-related information 1.2 Confirm recording and reporting responsibilities with supervisor 1.3 Identify recording and reporting systems and formats
2. Maintain workplace information	2.1 Ensure records are complete, timely and accurate 2.2 Record performance information in required format to meet

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	workplace reporting requirements 2.3 Identify and correct or notify errors or discrepancies in recording to appropriate personnel 2.4 Identify, investigate and report variances according to workplace procedure 2.5 Assess, prioritise and address requests for information to meet required timelines
3. Maintain security of workplace information	3.1 Confirm levels of access and authority according to workplace security requirements 3.2 Maintain security of workplace records and reports in accordance with security access level 3.3 Identify and report security breaches to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Writing	• Accurately record and complete organisational documentation using clear language, correct spelling, grammar and terminology
Oral communication	• Effectively participate in verbal exchanges using collaborative and inclusive techniques including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information
Get the work done	• Understand roles and responsibilities for tasks and make basic decisions on work completion parameters

Assessment Requirements for FBPPPL3006 Report on workplace performance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has reported on workplace performance on at least one occasion, including:

- confirming the reporting and recording systems and procedures for a specific work area
- recording information on work performance in accordance with reporting procedures
- reporting variances and inconsistencies
- maintaining security of work documentation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose and responsibilities for the information records and reports to be maintained or produced, including accuracy levels and timelines
- types of information to be recorded, including but not limited to:
  - timesheets
  - log sheets
  - recipes/specifications
  - operating procedures
  - production statistics
  - downtime
  - labour
  - materials usage levels
- techniques used to collate and assess information, including typical recording outcomes to identify unusual or incorrectly recorded information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- likely causes of variation and related reporting responsibilities
- information system access levels and codes, such as levels within software
- effective communication strategies relevant to reporting role
- relevant regulatory and licensing, legislative requirements, industrial awards and agreements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - performance data
  - recording/reporting formats and systems
- specifications:
  - workplace policies, codes of practice and procedures
  - relevant information on licensing, legislation and industrial awards and agreements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL4001 Manage people in the work area

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to manage performance issues of people in the work area.

This unit applies to individuals with managerial responsibility for other people in a work area. It includes an understanding of different levels of response to performance issues, including formal procedures.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

FBPPPL3001 Support and mentor individuals and groups

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Provide information on performance expectations	1.1 Ensure workplace policies and procedures are current, accessible and in formats appropriate to the audience 1.2 Ensure performance-related information is current, accessible and in formats appropriate to the audience 1.3 Communicate work expectations, plans and objectives to team members

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Provide coaching and support	2.1 Demonstrate appropriate work behaviours and procedures to individuals and groups 2.2 Identify skill development needs of individuals or groups according to workplace procedures according to workplace training need analysis practices 2.3 Provide targeted skill development support to improve individual or group performance 2.4 Encourage, value and reward positive performance according to workplace procedures
3. Manage performance issues	3.1 Identify signs of performance variation outside of that expected according to workplace objectives and targets 3.2 Investigate reasons for performance variance according to workplace procedures 3.3 Identify and implement appropriate responsive action to variances in performance 3.4 Establish process for monitoring performance improvement according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Analyses complex documentation from a variety of sources and consolidates information relating to performance policies and measures to determine requirements
Writing	• Documents outcomes and discussions using industry relevant terminology • Accurately records and completes performance-related organisational documents using clear language, correct spelling, grammar and terminology
Numeracy	• Performs mathematical calculations to analyse performance data to inform performance outcomes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Oral communication	• Effectively participates in verbal exchanges using collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information on performance
Get the work done	• Contributes to continuous improvement of current work practices by applying basic principles of analytical and lateral thinking • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes • Applies systematic and analytical decision-making processes for complex and non-routine situations • Responds to problems requiring resolution, drawing on past experiences of performance measures
Interact with others	• Recognises when personal values and beliefs impact on work group activities and performance, and implements strategies to moderate the effect • Collaborates with others sharing information to build strong work groups, and manages behaviours that are not conducive to a productive environment

Assessment Requirements for FBPPPL4001 Manage people in the work area

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed performance issues of people in the work area on at least two separate occasions, including:

- determining performance expectations and communicating effectively with individuals in the workplace
- identifying performance variances and collecting relevant information
- providing coaching and support to team members according to needs determined by performance outcomes
- monitoring performance and addressing performance issues according to organisational guidelines.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- negotiation and problem-solving skills for managing people in the workplace
- workplace feedback and performance management systems and responsibilities, including:
  - personal levels of authority
  - performance counselling
  - disciplinary procedures
- company policies, procedures and related communication systems
- effect of personal style and behaviour on others in the work area and the importance of establishing effective relationships with people in the work area
- performance expectations and related communication systems/processes
- signs of different levels of performance, including:
  - performance indicators and measures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - assessment strategies for performance
    - patterns and behaviour that lead to poor performance
    - patterns and behaviour that leads to exceptional performance
- options and strategies to address performance issues, including:
    - rewards
    - disciplinary actions
- systematic approaches for structuring a discussion on poor performance, including:
    - clear statement of the problem
    - explanation of why it is a problem
    - action or change required
    - follow up action
- workplace and legal requirements to document performance and behavioural issues, including:
    - legal processes
    - how reported information may be used
- industrial awards and workplace agreements on employee rights and responsibilities related to work performance and the relationship between the award and site agreements
- communication skills to consult and communicate with relevant personnel
- records and recording systems and requirements for managing people in the workplace
- principles of motivation and effective teamwork.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - workplace information recording systems, requirements and procedures
- specifications:
    - workplace policies and procedures
    - relevant industrial awards and agreements
- relationships (internal and/or external):
    - opportunities to interact with others using typical workplace communication processes

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL4002 Plan and coordinate production equipment maintenance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to plan and coordinate maintenance activities for production equipment.

This unit applies to individuals who take responsibility for their own work and coordinate and oversee employees responsible for the maintenance of production equipment.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety legislation that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify maintenance requirements according	1.1 Determine the approach for maintaining production equipment 1.2 Source and assess advice on equipment maintenance requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Reads and interprets manuals, specifications, and other documentation from a variety of sources and consolidates information to determine maintenance requirements • Analyses and consolidates test results and data from a range of sources, against defined criteria and requirements
Writing	• Develops procedural material for a specific audience using clear and industry relevant language in order to convey explicit information, requirements and recommendations
Numeracy	• Performs mathematical calculations to analyse maintenance data and scheduling statistics to inform maintenance activities
Oral communication	• Uses collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information
Interacts with others	• Uses a range of strategies to establish a sense of connection and build rapport co workers • Elicits feedback from others in order to improve workgroup behaviours and processes
Get the work done	• Contributes to continuous improvement of current work practices by applying principles of analytical and lateral thinking • Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes • Applies systematic and analytical decision-making processes for complex and non-routine situations • Addresses problems and initiates procedures in response, applying problem-solving processes to determine solutions

Assessment Requirements for FBPPPL4002 Plan and coordinate production equipment maintenance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planned and coordinated maintenance for production equipment, on at least two separate occasions, including:

- obtaining information and planning maintenance requirements for production equipment
- establishing and documenting a maintenance schedule
- coordinating the implementation and maintenance schedule with appropriate personnel
- managing unplanned maintenance issues
- assessing equipment reliability and contributing to improved maintenance schedules and procedures
- managed work health and safety, environmental and food safety requirements and responsibilities associated with maintenance activities.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- maintenance approaches and differences between reactive, preventative and proactive maintenance models, including:
  - reliability centred maintenance (RCM)
  - total productive maintenance (TCM)
- company systems, processes and responsibilities for:
  - collecting equipment condition information
  - analysing information
  - carrying out required servicing and maintenance
- sources of data on equipment performance and maintenance requirements, related recording systems and data analysis tools, including:
  - manufacturer specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - equipment capability data
    - condition monitoring data
    - equipment operation/performance reports and log sheets
    - workplace environmental guidelines
- maintenance requirements and scheduling processes, including:
    - production process
    - impact of scheduling on production
    - maintenance activities
    - maintenance priorities
    - effect on related activities, including purchasing and contract management
- factors that influence the reliability of equipment, including:
    - equipment capability
    - equipment/process design
    - operating conditions and practices
- methods used to measure effectiveness of maintenance, including:
    - plant availability
    - cost of maintenance
    - downtime
    - alternate resource utilisation
- work health and safety, environmental and food safety requirements and responsibilities associated with maintenance activities
- relevant personnel and departments to be consulted/notified of maintenance schedule and related amendments, including the information relevant to each group/person
- conditions that can affect achievement of the maintenance schedule, including:
    - unusual or unplanned conditions
    - related options for response to equipment breakdowns/emergencies
- communication skills to consult and communicate with relevant personnel
- recording systems and requirements, including relevant software packages
- process improvement procedures for production equipment
- capacity of maintenance service suppliers to provide required services.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - production equipment
- specifications:
    - maintenance scheduling system and associated information and communication systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relevant standard operating procedures (SOPs)
- workplace information recording systems, requirements and procedures
- access to Work Health and Safety Acts or Occupational Health and Safety Acts, regulations and related industry standards and codes of practice
- workplace environmental requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL4003 Schedule and manage production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to plan, monitor and adjust schedules to meet operational requirements for production activities.

The unit applies to individuals who take responsibility for their own work and provide and communicate solutions to others with some responsibility for planning and scheduling production.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1 Identify production requirements	1.1 Use forecast and sales information to identify production requirements according to workplace procedures 1.2 Identify production priorities to satisfy demand
2 Confirm resource requirements for production requirements	2.1 Check stock levels of raw materials, ingredients, packaging components and consumables are available and can fulfil production requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	2.2 Check equipment capacity and status are ready and available for production activities according to workplace procedures 2.3 Ensure human resources are available against production requirements
3 Develop and communicate the production schedule	3.1 Develop the production schedule to meet demand and delivery timelines within production capacity and budget 3.2 Ensure the production schedule takes account of stock levels, storage capacity, equipment capacity and product mix to minimise stock and product holdings and maximise production efficiency 3.3 Record the production schedule in the appropriate workplace format 3.4 Make available the production schedule to relevant personnel in a timely manner
4 Monitor production schedule	4.1 Monitor production to identify actual and potential barriers to achieving the schedule 4.2 Monitor resource usage rates to identify potential shortages 4.3 Identify, assess and address unplanned events that could affect the schedule
5 Adjust production schedules	5.1 Adjust production schedules to take account of identified changed conditions 5.2 Negotiate and communicate changes to the production schedule to relevant personnel in a timely manner 5.3 Identify resource implications of amended schedules and access resources to meet requirements 5.4 Identify and communicate potential failure to meet delivery deadlines to relevant personnel in a timely manner 5.5 Amend schedule documentation as required to meet workplace reporting requirements
6 Review production schedule development process	6.1 Review the production scheduling process to identify opportunities for improvement 6.2 Identify, investigate and report variances in production against schedule to appropriate personnel 6.3 Consult personnel responsible for implementing the schedule to identify improvement opportunities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	6.4 Revise the scheduling process to reflect improvements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Analyses and consolidates test results and data from a range of sources, against defined criteria and requirements
Writing	• Writes, edits and proofreads documents to ensure clarity of meaning, and accuracy and consistency of information
Numeracy	• Performs mathematical calculations to analyse labour, costs and quantities to accurately produce schedules and manage resources and budget
Oral communication	• Uses collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information and to confirm understanding
Navigate the world of work	• Accepts responsibility and ownership for the task and makes decisions on completion parameters and the need of coordination with others
Interact with others	• Selects and uses appropriate conventions and protocols when communicating with clients and co-workers in a range of work contexts • Elicits feedback and provides feedback to others in order to improve workgroup behaviours
Get the work done	• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes • Applies systematic and analytical decision-making processes for complex and non-routine situations • Investigates new and innovative ideas as a means to continuously improve, work practices and processes • Monitors progress of plans and schedules, and reviews and changes them to meet new demands and priorities

Assessment Requirements for FBPPPL4003 Schedule and manage production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has scheduled and managed production on at least one occasion, including:

- confirming production requirements and resource implications
- establishing and documenting a production schedule
- coordinating implementation of production schedule
- ensuring production schedule is communicated and reported to all appropriate personnel
- identifying and managing unplanned production issues and amending the process
- reviewing and assessing production outcomes against schedule and making required adjustments to plans.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- role and scope of the scheduling function, including:
  - flow of information to and from the scheduling process
  - impact of scheduling for related planning, purchasing, production and despatch processes
- factors to be taken into account in planning the schedule, including the inter-relationships between factors, including:
  - customer requirements
  - stock levels and supply options
  - use-by codes
  - production capacity and availability
  - labour requirements and availability
  - product compatibility

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - capacity of related processes and/or storage facilities
    - transport capacity
- consequences of failing to meet delivery timelines, including:
    - customer expectations
    - stock-out fines
    - effects on customer relationship
- company's preferred approach to managing customer relations
- planning process and efficiencies to meet production requirements, including:
    - stock shelf-life of product and consumables
    - product compatibility characteristics of raw materials/ingredients
    - packaging components
    - availability of consumables
- equipment capacity to ensure that production quantities and timelines are achievable
- methods used to monitor actual-to-planned production and key performance indicators (KPIs)
- communication strategies used when consulting relevant personnel and departments for production schedule and related amendments
- conditions that can affect achievement of schedule, including conditions that are unusual or unplanned and related options for response
- options for maximising resource utilisation and minimising waste, including options for alternate resource allocation in response to unplanned events
- recording systems and requirements required for planning and scheduling production
- process improvement procedures for production activities
- competencies required by the work process and competencies required by the work team.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - production area and related functions and resources
- specifications:
    - relevant standard operating procedures (SOPs)
    - scheduling systems and associated information and communication systems
    - workplace information recording systems, requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL4005 Manage supplier agreements and contracts

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to manage internal and external agreements for the supply of goods and/or services.

The unit applies to individuals with an understanding of supply chain relationships and arrangements who are responsible for the evaluation and management of new and existing contractual arrangements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Establish contractual arrangements	1.1 Document and agree specifications for the delivery of goods and/or services according to workplace procedures 1.2 Develop and document criteria for selection of suppliers according to workplace procedures 1.3 Identify and assess potential suppliers against selection criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Select preferred supplier according to the selection criteria and workplace procedures 1.5 Negotiate, agree and document supply contracts with parties 1.6 Develop contingency plans in the event of supplier failure to deliver
2. Administer and evaluate delivery of goods and/or services against agreements	2.1 Assess the quality of goods and services supplied against specifications 2.2 Determine and document non-compliance and implement corrective action within the terms of contractual arrangements 2.3 Manage relationships with suppliers to support effective delivery according to workplace procedures 2.4 Review and renegotiate vendor agreements as required to ensure timely delivery and cost-effective supply of quality goods and services

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**
Reading	• Analyses and consolidates information and data from a range of sources, against defined criteria and requirements, and checks for accuracy and completeness
Writing	• Accurately records information, prepares contracts and correspondence using clear language and organisational formats and protocols
Numeracy	• Applies modelling skills to identify, analyse and evaluate costings, production scheduling, time durations and human resource allocations for contract development and monitoring
Oral communication	• Uses collaborative and inclusive techniques including active listening, questioning and verbal and non-verbal signals to convey and clarify information and to confirm understanding during negotiations
Navigate the world of	• Takes responsibility for following explicit and implicit policies, procedures and legislative requirements for contract development

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
work	
Interact with others	• Implements strategies for a diverse range of colleagues and clients in order to build rapport and foster strong relationships
Get the work done	• Monitors progress of production plans and schedules, and reviews and manages them to meet new demands and priorities • Applies systematic and analytical decision-making processes for complex and non-routine situations • Investigates new and innovative ideas as a means to develop contacts through negotiation and analytical thinking

Assessment Requirements for FBPPPL4005 Manage supplier agreements and contracts

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed internal and external agreements for the supply of goods and/or services on at least two separate occasions, including:

- determining resource requirements for work area
- establishing contractual conditions and determining most suitable supplier
- monitoring supply against agreements and contracts, and promptly identifying and acting on variances
- establishing supply contingencies
- maintaining relationships with suppliers to support service.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- approaches to supply chain management, including:
  - customer-led models and efficient consumer response (ECR)
  - contrast between independent company operations versus chain partnership arrangements
  - the implications of a supply chain approach for the nature of the relationships between the company and its suppliers, including level of information sharing and cooperation
- the company's approach to supply chain management, and related systems and documentation in place to support internal management and supplier relationship management, including levels of authority
- appropriate technical knowledge to determine capacity of a supplier to deliver and to assess quality of goods/service supplied
- legal rights and responsibilities of both the company and the supplier

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the role of benchmarking in determining appropriate criteria for supplier selection and contract management
- appropriate measures of contract delivery and relative importance/weighting given by the company
- induction and duty of care responsibilities for contractors working on-site where relevant.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - sample agreements and documents
  - technical support and advice as appropriate
- specifications:
  - workplace procurement policies and related documentation and systems
  - relevant legislation, codes of practice and agreements
  - information management systems, including planning, recording and reporting systems
- relationships (internal and/or external):
  - access to suppliers of goods and services.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL4006 Manage a work area within budget

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to plan, allocate and monitor work to achieve required outcomes within budget allocations.

The unit applies to individuals who are team leaders and are typically required to reach decisions on resource utilisation within budget constraints, and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify and plan within budget parameters	1.1 Determine budget requirements and parameters for work area 1.2 Determine, confirm and allocate resources to achieve production schedule within budget and according to workplace policy
2. Monitor resource utilisation against budget	2.1 Monitor performance to identify actual or potential variance to budget

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	2.2 Identify, investigate and report variances to budget according to workplace reporting requirements 2.3 Determine and communicate potential failure to achieve targets within budget to appropriate personnel in a timely manner 2.4 Take action to minimise negative impact of variance
3. Communicate budget information	3.1 Make budget information available to relevant personnel in a timely manner 3.2 Report budget information in the appropriate format and timelines according to workplace reporting requirements 3.3 Make contributions to the development of workplace budgets

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Analyses and consolidates information and data from a range of sources, against defined criteria and requirements and checks for accuracy and completeness
Writing	• Prepares and produces documents and reports that convey complex relationships between performance data and budget for further analysis
Numeracy	• Performs mathematical calculations to analyse financial information, costs and values to accurately determine performance
Oral communication	• Presents complex financial information in formal situations using clear and convincing language, tone and pace appropriate for the audience and purpose
Navigate the world of work	• Takes responsibility for following explicit and implicit policies, procedures and legislative requirements
Interact with others	• Selects and uses appropriate conventions and protocols when communicating budget outcomes with co-workers
Get the work done	• Makes routine decisions and implements standard procedures for routine tasks, using formal decision-making processes for more

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	complex and non-routine situations • Contributes to continuous improvement of budget and work practices by applying principles of analytical thinking

Assessment Requirements for FBPPPL4006 Manage a work area within budget

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has managed a work area within budget, on at least one occasion, including:

- determining resource requirements for work area
- establishing budget and allocations for work area
- monitoring performance against budget targets and promptly identifying and acting on variances to minimise impact
- ensuring budget is communicated and reported to all appropriate personnel.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the basis on which budgets developed for the work area are constructed, including:
  - what information is provided to budget planners
  - how to read and interpret budget information
  - how to apply budget information
  - monitoring/reviewing work performance
- basic accounting concepts, including:
  - fixed and variable costs
  - rate of return
  - methods of allocating indirect costs
  - methods of measuring investment value
- accounting models, including:
  - the difference between traditional accounting approaches and more recent developments

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - accounting implications of value added management
  - life-cycle costing
  - triple bottom line
- company approach to cost management so that decisions on resource allocation are within both budget allocations and company philosophy/preferred approach
- resource requirements to meet production and related costs
- process knowledge to identify factors likely to impact on achieving budget
- relevant personnel and departments to be consulted/advised of budget information, including:
  - information relevant to each group/person
  - the importance of providing accurate and timely information to each of the stakeholders
- options for maximising resource utilisation and minimising costs
- budget recording and reporting systems and requirements
- process improvement procedures for managing budgets.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - resource and budget allocations
  - work performance information
- specifications:
  - cost management specifications and requirements
- relationships:
  - opportunities to interact with others using typical workplace communication processes

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL4007 Manage internal audits

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency covers the skills and knowledge required to support the management of internal audit processes across a range of programs.

This unit applies to individuals who conduct internal audit processes to support externally audited programs. In this context, auditing must occur in an area that the person is not directly responsible for and where they are required to follow a formal, structured process. In addition to this standard, an auditor would typically work within the audit procedures as outlined in the relevant International Organization for Standardization (ISO) standard.

When conducting a food safety audit, *FBPAUD4003 Conduct food safety audits* should be used.

No occupational licensing or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

People, Planning and Logistics (PPL)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan an audit	1.1 Negotiate and agree on the purpose and scope of the audit 1.2 Identify and secure information and resources required to conduct

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	the audit 1.3 Develop and negotiate an audit schedule to meet audit scope and timelines
2. Prepare for an audit	2.1 Determine audit information sample and collection tools 2.2 Identify and communicate roles, responsibilities and authority levels of the audit team to audit team members as appropriate 2.3 Inform affected work areas and personnel of schedule, and advise of their role in the process
3. Monitor the audit process	3.1 Ensure information collected is adequate, representative and meets audit requirements 3.2 Analyse information to assess adequacy of performance against program objectives 3.3 Review records to confirm compliance with the program 3.4 Observe compliance with the program in the workplace 3.5 Identify issues requiring corrective action 3.6 Address obstacles to achieving audit within agreed timelines
4. Report and follow up audit outcomes	4.1 Report situations presenting an imminent and serious risk to the program objectives in accordance with reporting requirements and workplace procedures 4.2 Prepare audit reports to address audit scope requirements 4.3 Communicate the results of the audit to appropriate personnel according to audit purpose and requirements and workplace procedures 4.4 Develop and negotiate a corrective action plan within level of responsibility 4.5 Monitor and confirm implementation of corrective action as set out in the corrective action plan 4.6 Ensure that breaches in corrective action plan are followed up, and action is taken or reported according to level of responsibility and audit purpose

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Analyse documentation from a variety of sources to determine and compare audit requirements
Writing	• Prepare and produce documentation using clear and detailed language in order to convey explicit information, requirements and recommendations for audits

Assessment Requirements for FBPPPL4007 Manage internal audits

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has managed at least one internal audit, including:

- determining scope of and purpose of audit
- scheduling audit and making required arrangements
- establishing information collection parameters
- selecting information collection techniques
- collecting and analysing information
- ensuring compliance with workplace procedures
- developing and communicating required corrective action plan
- completing workplace records as required.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose and intent of the program being audited, including the requirements of relevant national, state and local government legislation relating to program purpose and requirements
- auditor roles, responsibilities and legal obligations as relevant to the audit purpose, including:
  - responsibilities of both internal and external auditors
  - different types of auditors and of authorised officers who may be involved in the audit program
- legal responsibilities for reporting imminent and serious non-conformities
- audit requirements relating to work health and safety and quality environmental management audits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- requirements and procedures for certification/registration of auditors and authorised officers according to audit type
- frequency and scope of audit requirements to meet legal obligations
- appropriate ethical conduct of auditors as set out in codes of ethics of auditors, and additional requirements as may be determined by the workplace
- the purpose and stages involved in the audit process, including compliance with International Organization for Standardization (ISO) audit standards as appropriate to audit requirements
- workplace information and related information management systems
- techniques for collecting information, including:
  - appropriate sampling techniques
  - information collection methods
  - the strengths and weaknesses of each method to ensure data is adequate and representative
  - an understanding of techniques identified in the relevant ISO standard.
- data analysis methods relevant to the audit process
- communication skills and techniques, including appropriate questioning, observation and related communication skills to support information collection, appropriate to the workplace
- technical knowledge relevant to the program being audited in order to verify the adequacy of:
  - workplace safety processes and standards
  - control methods, including industry standards/practice
  - monitoring and recordkeeping
  - validation processes
  - corrective action/process improvement procedures
- where program control methods or limits vary from industry standards or where there are no industry standards, technical knowledge required to assess data used by the business to validate acceptable limits (this may be addressed by identifying and involving appropriate technical expertise)
- information management and communication systems to document and communicate audit outcomes in appropriate formats.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - workplace program and related documentation
- specifications:
  - relevant legislation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- audit procedures and standards, including any external standards relevant to the audit, including ISO standards
- advice on related technical industry standards and codes of practice
- information systems and data collection technology.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPPPL5001 Design and maintain programs to support legal compliance

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to design, review and maintain programs to support policy implementation and regulatory compliance.

This unit applies to individuals who work in areas such as health and safety in the workplace, environmental management, food safety, quality and Good Manufacturing Practice (GMP). In workplaces where workplace programs are already in place, the outcomes of this unit can apply to the assessment and review of such programs. Programs involve hazard identification, risk assessment and control.

No licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPPPL5001 Design and maintain programs to support legal compliance

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has designed (or reviewed) and maintained programs to support legal compliance on at least one occasion, including:

- identifying the legal and regulatory framework for the program
- defining the parameters of the program
- determining compliance requirements for the program and conducting risk analysis
- identifying and engaging relevant personnel through consultative mechanisms
- designing and/or developing program procedures to ensure compliance
- completing detailed reporting to support the maintenance of compliance
- providing support to personnel to ensure compliance
- reviewing and monitoring program to ensure compliance is maintained.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- objectives of legislation, regulations and relevant codes of practice relating to the program area, including the roles of relevant regulatory bodies
- existence of International Organization for Standardization (ISO) 22000:2005 Food safety management systems, ISO 22003:2013 Food safety management systems, and ISO 10393:2013 Consumer product recall
- company policy objectives, related legal requirements and workplace context, including:
  - resource capacity
  - authority levels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - existing systems and processes, including consultation processes, development/training systems, process improvement, document control and recording requirements
- workplace program objectives, their relationship to policy objectives and to related programs, including the benefits of the program for the company, employees and the wider community as appropriate
- the concept of a management system as it applies to the program area
- the advantages and disadvantages of stand-alone and integrated programs, including:
    - variations in legal obligations and compliance systems
    - objectives and structure of related policies and programs, as well as consideration of audit trails, as appropriate
- principles and processes for hazard identification, risk assessment and control
- the program area and/or internal and external experts and resources to support design and implementation
- the circumstances, conditions or practices likely to result in program non-compliance, and related control options
- technical knowledge and/or access to technical expertise to ensure adequacy of risk control methods and response to non-compliance/emergencies
- problem-solving and process improvement techniques and processes
- program review methods and responsibilities, including internal audit arrangements, as well as external audit arrangements, and where the program supports legal compliance obligations, requirements and frequency of audits.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
    - technical support and advice as appropriate to the program area
- specifications:
    - workplace policies, business and performance plans and budgets
    - relevant legislation, codes of practice and agreements
    - workplace procedures and related management systems relevant to the program area.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has finished baked products, including:

- finishing at least one of the following three products:
  - simple sponge cakes
  - simple breads
  - simple non laminated pastries
- preparing and using at least three of the following nine finishing mediums:
  - seeds
  - savoury topping
  - egg wash
  - cream
  - icing
  - glaze
  - icing sugar
  - coconut or nuts
  - fruits
- using at least four of the following finishing techniques:
  - piping or spreading icing
  - simple piping using piping bags and nozzles for cream or icing
  - applying seeds to bread products
  - pre-prove scoring bread products
  - pre-bake finishing non laminated pastry products
  - post-bake finishing non laminated pastry products
  - post-bake finishing sponge cake products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- applying savoury toppings to bread products
- post-bake finishing products with coconut or nuts
- glazing
- dusting
- dipping.

The applied finishing must meet the supervisor instructions.

The finished product must be stored in food safe conditions.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment (PPE), applicable to finishing products
- food safe conditions applicable to using and storing finishing mediums, including:
  - temperature
  - containers
  - date labelling
  - sanitary cleanliness
- types and storage conditions of finishing mediums, including:
  - seeds
  - savoury toppings
  - egg wash
  - creams
  - icings
  - glazes
  - icing sugar
  - coconut or nuts
  - dried fruits
- finishing techniques used to finish baked products, including:
  - simple sponge cakes
  - simple breads
  - simple non laminated pastries
- basic functions, safe use and cleaning methods of finishing equipment
- techniques for measuring ingredient quantities, including:
  - by weight
  - by volume
  - by count
  - by estimation
- basic principles of portioning products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- product storage requirements, including refrigeration and room temperature storage
- basic product finishing terminology.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a food preparation or processing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - bowls
  - piping bags and nozzles
  - scrapers
  - knives
  - products required to be decorated in the Performance Evidence
  - ingredients that meet finishing mediums required in the Performance Evidence
  - cleaning products and tools
- specifications:
  - simple recipe specifications for preparation of finishing mediums and finishing instructions required in the Performance Evidence
  - simple end-product quality requirements to meet the product and finishing types required in the Performance Evidence
- relationships:
  - supervisor.

FBPRBK2001 Assist non laminated pastry production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to assist in the production of non laminated pastry products in a food preparation environment.

The unit applies to individuals who undertake routine work, including identifying and solving predictable problems under supervision.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication

Pre-requisite Unit

Nil

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work	1.1 Confirm work requirements for non laminated pastry production with supervisor 1.2 Identify and report work health and safety hazards to supervisor

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Select and wear personal protective equipment according to safety requirements 1.4 Check work area and personal hygiene meet food safe conditions 1.5 Select equipment and check readiness for use 1.6 Select ingredients and check quality and quantity 1.7 Prepare foils and trays for use
2. Mix and form pastry doughs	2.1 Measure ingredient quantities to meet recipe specification 2.2 Load, operate and monitor equipment to mix non laminated pastry dough 2.3 Roll and form dough to meet product type, and form into foils or place on trays 2.4 Check non laminated pastry dough to identify routine pastry problems, and report to supervisor
3. Bake pastry products	3.1 Confirm dough readiness and baking settings with supervisor 3.2 Set and warm oven to prepare for baking 3.3 Fill unbaked non laminated pastry products as required to meet product type 3.4 Load oven and monitor baking to achieve even bake 3.5 Unload and cool baked products to meet product type 3.6 Fill baked non laminated pastry product as required to meet product type 3.7 Check baked products to identify routine baked non laminated pastry product faults, and report to supervisor
4. Complete work	4.1 Clean equipment and work area to meet food safe conditions 4.2 Dispose of waste according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interprets key information from recipe specifications, ingredient labels and end-product specifications
Numeracy	• Identifies and comprehends measurements, including ingredient quantities in recipe specifications, dates on ingredient labels, mixing times and speeds, baking temperatures and times, and dough and baked product dimensions • Estimates approximate quantities, and uses equipment to measure weights, volumes and dimensions • Uses understanding of three-dimensional shapes to form dough and check non laminated pastry product shapes
Oral communication	• Uses listening and questioning techniques to communicate and obtain specific information and confirm understanding
Navigate the world of work	• Follows explicit procedures immediately relevant to own role
Interact with others	• Follows clearly defined instructions, seeking assistance when necessary
Get the work done	• With assistance, sequences and implements the steps involved in assisting non laminated pastry production • Uses digital technologies to set process parameters

Assessment Requirements for FBPRBK2001 Assist non laminated pastry production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has assisted non laminated pastry production, including:

- assisting production of the following three non laminated pastry products:
  - unfilled non laminated pastry product
  - filled non laminated pastry product with sweet pastry and sweet filling
  - filled non laminated pastry product with savoury pastry and savoury filling
- incorporating the following two filling techniques:
  - pre-bake filling
  - post-bake filling
- incorporating the following six production processes and techniques:
  - filling using a sweet filling
  - filling using a savoury filling
  - forming pastry products
  - cutting non laminated pastry
  - rolling non laminated pastry
  - baking non laminated pastry products
- baking using the following two pastry equipment types:
  - pastry foils or tins
  - baking trays
- checking the bake of the non laminated pastry by baked colour.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment applicable to assisting in pastry production
- food safe conditions applicable to assisting in pastry production
- types and storage requirements for:
  - flour
  - eggs
  - fats
- types of ingredient checks, including:
  - type
  - quantity
  - use-by date
  - damaged packaging
- pastry production processes, including:
  - mixing ingredients
  - shaping pastry doughs
  - pre-bake filling
  - post-bake filling
  - baking pastries
- techniques for measuring ingredients, including:
  - by weight
  - by volume
  - by count
  - by estimation
- typical baking parameters, including oven temperatures
- required characteristics of non laminated pastry doughs, including softness and feel
- required characteristics of baked pastry products, including:
  - baked colour
  - baking shrinkage
- techniques for cleaning the work area used in pastry production
- techniques for disposing of waste from pastry production
- basic pastry product and process terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a food preparation environment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- resources, equipment and materials:
  - personal protective equipment (PPE)
  - sink and wash area
  - mixing equipment
  - rolling pin
  - pastry foils or tins
  - baking trays
  - electronic or analogue scales
  - oven suitable to bake products specified in the performance evidence
  - ingredients to create the pastry products specified in the performance evidence
- specifications:
  - supervisor instructions
  - end-product specifications for the pastry products specified in the performance evidence
  - a production schedule for non laminated pastry that includes product quality requirements, scheduling, recipes to suit output requirements, sequence and mixing processes and baked parameters
- relationships (internal and/or external):
  - supervisor
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK2002 Use food preparation equipment to prepare fillings

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to prepare fillings for use in bread, cake or pastry products using food preparation equipment in a commercial baking environment.

The unit applies to individuals who undertake routine work under supervision. This includes identifying and providing solutions to a limited range of predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FBPRBK2002 Use food preparation equipment to prepare fillings

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has used food preparation techniques to prepare fillings, including:

- preparing and using the following ingredients in fillings:
  - fruit
  - meat and vegetables or poultry and vegetables
  - dairy
- preparing the following three types of fillings:
  - cold fruit filling
  - hot meat and vegetables or hot poultry and vegetables filling
  - hot custard filling
- checking condition of ingredients used, including:
  - any indicators of food spoilage
  - quality
  - use-by date
  - damaged packaging
- using the following nine items of food preparation equipment:
  - knife sharpening steels or stones
  - cook’s knife
  - paring knife
  - scales
  - peelers, corers or slicers
  - thermometers
  - whisks: fine or coarse stainless steel wire
  - cutting boards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - cooking pots
- preparing and cutting fruits and vegetables
- using the following three cooking activities:
  - boiling
  - shallow frying (pan-fry, sauté or stir-fry)
  - microwaving.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment (PPE), applicable to using food preparation equipment to prepare fillings
- food safety conditions applicable to using food preparation equipment to prepare fillings
- types and storage requirements of ingredients, including:
  - fruit and vegetables
  - dairy products
  - meat and poultry
  - custard
- cookery methods, including:
  - boiling
  - shallow frying, including pan-fry, sauté or stir-fry
  - microwaving
- meaning and role of mise en place in the process of preparing and cooking fillings
- procedures for storing fillings, including refrigeration, freezing and shelf-life
- techniques for preparing and cutting fruit and vegetables, including:
  - cleaning
  - peeling
  - slicing
  - dicing
- time and temperature requirements for:
  - thawing
  - conditioning
  - reheating
  - cooking
  - cooling of cooked food
- safe use and functions of food preparation equipment, including:
  - knife sharpening steels and stones
  - cook’s knife
  - paring knife
  - scales

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - peelers, corers and slicers
    - thermometers
    - fine and coarse stainless steel wire whisks
    - cutting boards
    - cooking pots
- techniques for measuring ingredients, including:
    - by weight
    - by volume
    - by count
    - by estimation
- typical cooking parameters, including:
    - cooking temperatures
    - cooking times
- required characteristics of fillings, including:
    - texture
    - consistency
    - flavour
- typical filling preparation faults, including:
    - undercooked and overcooked
    - incorrect ingredients
    - incorrect ingredient quantities
- contamination and cross-contamination risks associated with ingredients and processes
- techniques for cleaning equipment for food preparation
- techniques for cleaning the work area used for food preparation
- techniques for disposing of waste from food preparation
- filling and filling preparation terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - refrigeration unit with shelving
    - storage facilities
    - microwave
    - hot plates or cook tops
    - knife sharpening steels and stones
    - cook’s knife

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - paring knife
  - scales
  - peelers, corers or slicers
  - thermometers
  - whisks: fine or coarse stainless steel wire
  - cutting boards
  - cooking pots
  - cleaning cloths
  - dustpans and brooms
  - garbage bins and bags
  - hand towel dispenser and hand towels
  - mops and buckets
  - separate hand basin for hand washing
  - sponges, brushes and scourers
  - tea towels
  - commercial cleaning and sanitising agents and suitable chemicals for cleaning bakeries, equipment and food storage areas
  - personal protective equipment (PPE)
  - ingredients that meet filling types required in the performance evidence
- specifications:
  - supervisor instructions
  - recipes that meet filling types required in the performance evidence
  - end-product specifications to meet filling types required in the performance evidence
- relationships (internal and/or external):
  - workplace supervisor
- timeframes:
  - according to work requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has assisted sponge cake production, including:

- assisting production of the following four types of sponge cake products:
  - simple decorated sponge
  - sponge roll
  - individual portioned sponge product
  - cupcake
- mixing a premix sponge batter
- using the following two processes:
  - piping
  - hand depositing
- baking using sponge tins and baking trays
- testing the bake of sponges using the following two techniques:
  - skewer testing
  - physical pressing for baked quality
- applying the following five decorating techniques to sponges:
  - dipping
  - dusting
  - creaming
  - icing
  - jamming.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace health and safety requirements, including personal protective equipment (PPE), applicable to assisting in cake production
- food safe conditions applicable to assisting sponge cake production
- types and storage requirements of ingredients, including:
  - premixes
  - eggs
  - sugar
- types of ingredient checks, including:
  - type
  - quantity
  - use-by date
  - damaged packaging
- types and purpose of cake production processes, including:
  - mixing sponge ingredients
  - hand depositing sponge batters
  - piping sponge batters
  - baking basic sponges
- techniques for preparing sponge tins and trays, including:
  - greasing
  - papering
- techniques for measuring ingredient quantities, including:
  - by weight
  - by volume
  - by count
  - by estimation
- typical baking parameters, including oven temperatures
- required characteristics of baked sponge products, including:
  - baked aeration
  - baked colour
- purpose and techniques for cleaning equipment, including:
  - round sponge tins
  - baking trays
  - small sponge tins or cupcake tins
- decorating techniques, including:
  - dipping
  - dusting
  - creaming
  - icing
  - jamming
- techniques for testing the bake, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - skewer testing
    - physical pressing for baked quality
- techniques for cleaning the work area for cake production
- techniques for disposing of waste from cake production
- sponge cake product and process terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a food preparation environment
- resources, equipment and materials:
    - personal protective equipment
    - sink and wash area
    - mixing equipment
    - baking trays and sponge tins
    - small sponge tins or cupcake tins
    - electronic or analogue scales
    - oven suitable to bake the sponge cakes specified in the performance evidence
    - ingredients to create the sponge cake products specified in the performance evidence
- specifications:
    - supervisor instructions
    - a schedule to support the production of basic cake, including product quality, sponge cake scheduling, recipes to suit output and batter requirements, sequence and mixing processes for sponge mixes, and baking parameters for sponge cake production
- relationships (internal and/or external):
    - supervisor
- timeframes:
    - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has assisted in the production of white bread products, including:

- preparing and mixing the following two dough types:
  - premix dough
  - instant dough/no time dough/scratch mix dough
- producing the following five bread product types:
  - round bread roll variety
  - long bread roll variety
  - bread loaf variety
  - basic plaited bread
  - savoury bread variety
- applying the following three techniques for moulding dough:
  - rounding
  - batons
  - plaiting
- baking basic bread using the following bread baking equipment:
  - bread tins
  - bread baking trays
- applying the following three finishing techniques:
  - pre-prove scoring
  - seeding
  - dusting.

FBPRBK2005 Maintain ingredient stores

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to maintain ingredient stores in a commercial baking environment.

The unit applies to individuals who undertake routine work under supervision. This includes identifying and providing solutions to a limited range of predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Maintain stock quality	1.1 Confirm required stock food safe storage conditions with supervisor 1.2 Check date codes to identify out-of-date stock

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Inspect stock to identify damage and spoilage 1.4 Protect stock from cross-contamination to maximise use 1.5 Check stock to identify stock quality problems for supervisor
2. Maintain perishables quality	2.1 Identify perishables and confirm required food safe storage conditions with supervisor 2.2 Measure, record and check perishables temperatures meet food safe storage conditions 2.3 Rotate perishables to maximise use 2.4 Check perishables to identify stock quality problems for supervisor
3. Maintain stock levels	3.1 Confirm required stock levels with supervisor 3.2 Use safe manual handling techniques to handle ingredient stores 3.3 Check ingredient levels and replenish as needed to maintain required levels 3.4 Clean ingredient storage equipment to meet food safe conditions 3.5 Complete store records according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from stock labels
Writing	• Completes stores records using required format and language
Numeracy	• Identifies and comprehends measurements, including stock volumes • Interprets safe food condition temperature range requirements for perishables and stores
Oral communication	• Uses listening and questioning techniques to communicate and obtain specific information and confirm understanding
Navigate the world of	• Follows explicit procedures immediately relevant to own role

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
work	
Interact with others	• Follows clearly defined instructions, seeking assistance when necessary

Assessment Requirements for FBPRBK2005 Maintain ingredient stores

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has maintained ingredient stores, including:

- maintaining the following six types of bakery stock:
  - dairy ingredients
  - frozen ingredients
  - tinned ingredients
  - raw ingredients
  - refrigerated goods
  - dry goods
- checking stock temperatures and storage temperatures for perishables
- undertaking rotation of stock
- identifying and reporting out-of-date stock during the rotation of stock
- cleaning the following six types of storage equipment:
  - dry storage tubs or bins
  - dry storage area
  - frozen storage area
  - small plastic containers with lids
  - refrigerated storage area
  - spray bottles.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace health and safety requirements, including safe manual handling techniques, applicable to maintaining ingredient stores
- food safety conditions applicable to maintaining ingredient stores
- types, safe handling and storage requirements of bakery stock, including:
  - dairy ingredients
  - frozen ingredients
  - tinned ingredients
  - raw ingredients
  - refrigerated goods
  - dry goods
- types of ingredient containers and signs of damage and spoilage, including:
  - dry storage tubs and bins
  - small plastic containers
  - dry storage bags
  - refrigerated storage
  - canned goods
  - sealed bags
  - perishable items
  - spray bottles
- techniques for protecting ingredients from cross-contamination
- types of ingredient quality checks, including:
  - type
  - quantity
  - use-by date
  - damaged packaging
  - odour
  - colour
- stock rotation methods
- techniques for measuring and recording temperatures of:
  - perishables
  - frozen goods storage
  - refrigerated goods storage
  - dry goods storage
- techniques for checking date codes
- techniques for disposing of waste stock
- bakery stores terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - thermometer
  - dry store area
  - temperature recording sheets
  - dry storage tubs or bins
  - small plastic containers with lids
  - dry storage bags
  - refrigerated storage
  - frozen storage
  - spray bottles
  - stock that meets ingredient types specified in the performance evidence
- specifications:
  - supervisor instructions
  - food safe conditions for ingredient stores
- relationships (internal and/or external):
  - supervisor
- timeframes:
  - according to work requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
4. Form and fill laminated pastry products	4.1 Roll laminated pastry to thickness required for product type 4.2 Cut, slice and portion pastry as required for product type 4.3 Form pastry in shapes for filling as required for product type 4.4 Add fillings as required for product type 4.5 Load tins and trays to prepare for baking 4.6 Check laminated pastry products to identify faults and rectify
5. Pre-bake finish laminated pastry products	5.1 Prepare pre-bake finishing mediums to meet recipe specification 5.2 Pre-bake finish laminated pastry products to meet product type 5.3 Check pre-bake finished laminated pastry products to identify faults and rectify
6. Bake laminated pastry products	6.1 Set baking temperatures and times to prepare for baking 6.2 Load oven and monitor baking to achieve required bake for product type 6.3 Unload and transfer laminated pastry products to cool 6.4 Check laminated pastry product bake to identify faults and rectify
7. Finish laminated pastry products	7.1 Prepare finishing mediums to meet recipe specifications 7.2 Finish baked laminated pastry products to meet product type 7.3 Check finished laminated pastry products to identify faults and rectify 7.4 Prepare and transfer finished laminated pastry products for presentation and storage in accordance with packaging and food safety requirements
8. Complete work	8.1 Clean equipment and work area to meet housekeeping standards 8.2 Dispose of waste according to workplace requirements 8.3 Complete workplace records according to workplace requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions, and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, temperature and timer settings and product dimensions • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes, and pastry dimensions • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to shape and portion products and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Laminated pastry equipment must include:	• equipment, including:
	  • mechanical pastry sheeter or pastry break
	  • cool room

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• equipment accessories, including:
	  • cool room shelving
	  • mechanical pastry sheeter attachments or pastry break attachments
	• tools and utensils, including:
	  • piping bags
	  • pastry cutters
	  • flour brushes
	  • egg wash brushes
	  • rolling pin.

Pastry filling must include:	• sweet and savoury thickened and blended fillings.

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 2.0
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced laminated pastry products according to a production schedule, including:

- producing laminated puff or flaky pastry from scratch ingredients using the following two lamination styles and fat incorporation methods:
  - Scotch method
  - English method
- producing the following five laminated pastry products:
  - sweet filled laminated pastry slice
  - vegetable filled product
  - meat filled product
  - cream or custard filled product
  - fruit filled product
- using the following two ratios of fat to flour:
  - 50% half puff
  - 75% three quarter puff
- using the following two folding techniques:
  - three fold
  - book fold
- using the following four finishing techniques:
  - pre-bake finishing
  - post-bake finishing
  - cream finishing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - icing or fondant finishing
- producing the following four ingredients for filling laminated pastry products:
    - meat
    - vegetables
    - cream or custard
    - fruits
- incorporating the following seven processes:
    - folding
    - sheeting
    - laminating
    - filling
    - glazing
    - baking
    - finishing/decorating
- using the following two types of equipment for folding:
    - pastry sheeter or dough break to laminate
    - rolling pin to finish and transfer pastry
- selecting, using and cleaning the pastry cooking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- documenting the production schedule, including the following seven considerations:
    - timings
    - volume requirements
    - product processing requirements
    - filling requirements for laminated pastry
    - finishing requirements for laminated pastry
    - recipe reformulation to minimise waste
    - bake parameters for laminated pastry.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment (PPE), applicable to producing laminated pastry products
- safe use and cleaning of pastry cooking equipment listed in the range of conditions, including electrical hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- regulatory requirements for food safety applicable to producing laminated pastry products, including temperature control and prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products
- considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - filling requirements for laminated pastry
  - recipe reformulation to minimise waste
  - finishing requirements for laminated pastry
  - bake parameters for laminated pastry
- characteristics and storage requirements of ingredients used in laminated pastry production, including:
  - fats and margarines
  - meat fillings
  - vegetable fillings
  - fruit fillings
  - custard fillings
  - glazes
- mixing methods for laminated pastry, including:
  - Scotch method
  - English method
  - fat ratios and incorporation into laminated pastry
  - development of protein
- methods for folding pastry, including:
  - book fold
  - three fold
  - number of turns
- purpose, techniques and requirements for finishing, including:
  - pre-bake glazing
  - post-bake glazing
  - caramelisation of sugars
  - decorating with creams
- settings for baking for pastry product types, including:
  - oven temperatures
  - baking times
- techniques to identify and rectify causes of shrinkage and its effect on the end product, including:
  - overworking pastry
  - use of too much dusting flour

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - baking too hot
  - not resting pastry prior to processing
- cause of steam generation in laminated pastry during baking
- techniques for retrieval of scrap, blending with unworked pastry and disposing of waste
- laminated pastry production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment specified in the range of conditions
  - industrial mixer and attachments
  - industrial oven
  - sink and wash area
  - electronic or analogue scales
  - ingredients that meet the laminated pastry product types in the performance evidence
- specifications:
  - recipes that meet the laminated pastry product types required in the performance evidence
  - end-product quality specifications to meet the laminated product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing laminated pastry products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, temperature and timer settings and product dimensions • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes and pastry dimensions • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to shape and portion products and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Non laminated pastry cooking equipment must include:	• equipment, including:
	  • industrial mixer and attachments
	  • freezer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• industrial cook tops
	• equipment accessories, including:
	  • dough hook
	  • dough beater
	  • cook pots used to cook fillings
	• ancillary equipment, including:
	  • pie tins or foils used to bake pastry
	• tools and utensils, including:
	  • cutting boards
	  • food preparation knives.

Non laminated pastry filling must include:	• sweet thickened or unthickened filling • savoury thickened or unthickened filling.

Assessment Requirements for FBPRBK3002 Produce non laminated pastry products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced non laminated pastry products according to a production schedule, including:

- preparing the following three non laminated pastry types from scratch:
  - sweet short pastry
  - savoury short pastry
  - choux pastry
- producing the following five non laminated pastry products:
  - filled sweet non laminated pies or tarts
  - sweet non laminated biscuit product
  - filled savoury non laminated pie or tart product
  - decorated and filled choux pastry
  - sweet non laminated pastry slice
- applying the following four finishes to non laminated pastry products:
  - non laminated product pre-bake finished
  - non laminated product post-bake decorated
  - decorated choux pastry products
  - chocolate finishing
- using the following five fillings:
  - meat filling
  - vegetable filling
  - fruit filling
  - custard filling
  - cream filling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- using the following three mixing methods:
  - crumbing
  - sugar batter method
  - roux
- using the following seven production processes:
  - sheeting or rolling
  - cutting or portioning
  - forming pastry products
  - filling
  - baking
  - blind baking
  - finishing and decorating
- selecting, using and cleaning the pastry cooking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- documenting the production schedule, including the following six considerations:
- timings
- volume requirements
- product processing requirements
- finishing requirements for non laminated pastry
- recipe reformulation to minimise waste
- bake parameters for non laminated pastry.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment (PPE), applicable to producing non laminated pastry products
- safe use and cleaning of pastry cooking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing non laminated pastry products, including temperature control and prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products
- considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - finishing requirements for non laminated pastry

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - recipe reformulation to minimise waste
  - bake parameters for non laminated pastry
- storage and serving temperatures of finished non laminated products used, including:
  - hot savoury product
  - cold sweet products
  - products that are reheated for service
- characteristics and storage requirements of ingredients used in non laminated pastry production, including:
  - flour
  - fats/margarines for sweet non laminated pastries
  - fats/margarines for savoury non laminated pastries
  - meats
  - vegetables
  - fruits
  - chocolate
  - thickening starches
- types, functions, settings, safety features, safe use and cleaning of pastry cooking equipment listed in the range of conditions, including electrical hazards and risk controls applicable to cleaning
- preparing and storing fillings, including:
  - cold fillings, including the effect of pregeletanised starches
  - meat fillings
  - vegetable fillings
  - custard fillings
- mixing methods for producing non laminated pastry products, including:
  - crumbing
  - sugar batter method
  - choux pastry method
- processes and techniques for producing non laminated pastry products, including:
  - rolling to match pastry product type thickness requirements and rolling faults
  - processing using manual and mechanical pins, breaks and sheeters
  - ratios of fats to flour in sweet and savoury non laminated pastries
  - development of protein during pastry processing
  - forming pastry into foils or tins
  - depositing, filling and piping fillings
  - finishing and decorating
  - cutting, slicing and portioning
  - baking, including blind baking
  - cause of aeration in non laminated pastry during baking

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- causes and corrective action for predictable and sometimes unpredictable non laminated pastry production problems, including:
  - temperature and heat in baking
  - shrinkage of pastry
- techniques for retrieval of scrap, blending with virgin and disposing of waste
- non laminated pastry production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment specified in the range of conditions
  - industrial oven
  - electronic or analogue scales
  - pastry foils or tins
  - pastry sheeter or break
  - rolling pins
  - pastry cutters
  - ingredients that meet the non laminated pastry product types required in the performance evidence
- specifications:
  - recipes that meet the non laminated pastry product types required in the performance evidence
  - end-product quality specifications to meet the non laminated pastry product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing non laminated pastry products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK3003 Produce specialist pastry products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to produce specialist pastry products using butter in a commercial baking environment.

This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work	1.1 Confirm product types and volumes to schedule production 1.2 Calculate yield and adjust recipe to meet required production volumes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Confirm work area and work practices meet food safety and workplace health and safety requirements 1.4 Select and wear personal protective equipment according to safety requirements 1.5 Select specialist pastry equipment and check to confirm readiness for use 1.6 Select ingredients and check to confirm quality and quantity 1.7 Clean and condition fruits to prepare for use 1.8 Prepare tins and trays to meet work requirements
2. Prepare fillings for specialist pastry products	2.1 Select and handle perishables according to food safety requirements 2.2 Measure specialist pastry filling ingredient quantities to meet recipe specification and prepare for use 2.3 Blend and combine filling ingredients to meet product type 2.4 Check fillings to identify faults and rectify 2.5 Store fillings according to food safety requirements
3. Mix specialist pastry dough	3.1 Measure specialist pastry ingredient quantities to meet recipe specifications 3.2 Load ingredients into mixer in required sequence 3.3 Operate and monitor mixer to mix specialist pastry dough 3.4 Incorporate butter into sugar for sweet short pastry sugar batter method 3.5 Incorporate butter into finished mixed dough for English and French method laminated pastry 3.6 Mix extensible pastry dough and rest for processing 3.7 Fold and laminate laminated pastry dough with number of folds required for product type 3.8 Check specialist pastry dough to identify faults and rectify 3.9 Prepare and transfer specialist pastry dough for storage as required in accordance with food safety requirements
4. Form and fill laminated and non laminated pastry	4.1 Roll laminated and non laminated pastry to thickness required for product type

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
products	4.2 Cut, slice and portion specialist pastry as required for product type 4.3 Stretch extensible dough for filling as required for product type 4.4 Add fillings as required for product type 4.5 Load tins and trays to prepare for baking 4.6 Check pre-bake formed and filled specialist pastry products to identify faults and rectify
5. Pre-bake finish non laminated pastry products	5.1 Prepare pre-bake finishing mediums to meet recipe specifications 5.2 Pre-bake finish specialist pastry products to meet end-product specification 5.3 Check pre-bake finished specialist pastry products to identify faults and rectify
6. Bake specialist pastry products	6.1 Set baking temperatures and times to prepare for baking 6.2 Blind bake specialist pastry with blind baking medium as required for product type 6.3 Load oven and monitor baking to achieve bake and stability required for product type 6.4 Unload and transfer specialist pastry products to cool 6.5 Check specialist pastry product bake to identify faults and rectify
7. Post-bake fill and finish specialist pastry products	7.1 Prepare post-bake fillings and finishing mediums to meet recipe specifications 7.2 Finish baked specialist pastry products to meet end-product specifications 7.3 Fill baked specialist pastry products to meet end-product specifications 7.4 Check finished specialist pastry products to identify faults and rectify 7.5 Prepare and transfer specialist pastry products for presentation and storage in accordance with packaging and food safety requirements
8. Complete work	8.1 Clean equipment and work area to meet housekeeping standards 8.2 Dispose of waste according to workplace requirements 8.3 Complete workplace records according to workplace requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions, and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, temperature and timer settings and product dimensions • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes and pastry dimensions • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to shape and portion products and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Specialist pastry equipment must include:	• equipment, including: • microwave

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• refrigerator • pastry sheeter or pastry break • equipment accessories, including: • refrigerator shelving • ancillary equipment, including: • pie tins or foils • hand wash areas • cooling wires used for pastry • trays used for pastry baking • tools and utensils, including: • pastry brushes • measuring jugs • mixing spoons used for cooking • containers used for storing fillings.
Specialist pastry filling must include:	• blended cold filling • unthickened cold filling • thickened cooked filling • unthickened cooked filling.

Assessment Requirements for FBPRBK3003 Produce specialist pastry products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced specialist pastry products according to a production schedule, including:

- producing the following five types of specialist pastry products:
  - savoury filled laminated pastries
  - laminated pastry slice
  - filled sweet non laminated pastries
  - decorated non laminated pastry biscuits
  - sweet filled extensible dough
- using the following four specialist pastries made from scratch ingredients using butter or oil:
  - laminated puff or flaky pastry
  - sweet short pastry
  - savoury short pastry
  - extensible pastry dough
- using the following four fillings:
  - savoury filling
  - sweet filling
  - custard filling
  - fresh fruit prepared for filling
- applying finishing and decorating using the following two methods:
  - pre-bake glazing and finishing
  - post-bake finishing and decorating
- using the following three butter incorporation methods:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - English method
  - French method
  - sugar batter or crumbing method
- using a butter-to-flour laminated pastry ratio of minimum 50% half puff
- using the following nine production processes:
  - folding
  - sheeting
  - laminating
  - glazing
  - finishing and decorating
  - filling
  - baking
  - rolling
  - stretching extensible pastry
- selecting, using and cleaning the pastry cooking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- using the following two types of pastry equipment:
  - pastry sheeter or dough break to laminate
  - rolling pin to roll, finish and transfer pastry
- documenting the production schedule including the following six considerations:
  - timings
  - volume requirements
  - product processing requirements
  - finishing and decorating requirements for specialist pastry products
  - recipe reformulation to minimise waste
  - bake parameters for specialist pastry products.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing specialist pastry products
- safe use and cleaning of pastry cooking equipment listed in the range of conditions, including electrical hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- regulatory requirements for food safety applicable to producing specialist pastry products, including temperature control and prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products
- considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - finishing and decorating requirements for specialist pastry products
  - recipe reformulation to minimise waste
  - bake parameters for specialist pastry products
- characteristics and storage requirements of ingredients used in specialist pastry production, including:
  - pastry flour
  - unsalted butter
  - meat fillings
  - fruit fillings
  - glazes
  - fresh cream
- methods and processes for using butter in specialist pastries, including:
  - English method
  - French method
  - the ratio of butter to flour
  - handling and storage of butter
  - consistency of dough to butter for laminating
  - handling and storage of pastry during processing
  - development of protein and gluten during lamination
- processing and finishing of specialist pastry products, including:
  - folding
  - sheeting
  - laminating
  - clarifying butter
  - stretching extensible pastry dough
  - glazing
  - finishing and decorating
  - filling
  - pre-bake glazing
  - post-bake glazing
- identifying and rectifying factors that affect lift, including:
  - number of turns
  - amount of roll in butter

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - heat energy in baking specialist pastry
- baking processes of specialist pastry production, including:
    - oven temperatures
    - baking times
- techniques for calculating yields, adjusting recipes and measuring ingredients
- causes and corrective action for predictable and sometimes unpredictable specialist pastry production problems, including:
    - temperature and heat in baking
    - shrinkage of pastry
- techniques for retrieval of scrap, blending with virgin and disposing of waste
- specialist pastry production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment (PPE)
    - equipment specified in the range of conditions
    - industrial mixer and attachments
    - industrial oven
    - industrial cook tops
    - sink and wash area
    - electronic or analogue scales
    - ingredients that meet the specialist pastry product types required in the performance evidence
- specifications:
    - recipes that meet the specialist pastry product types required in the performance evidence
    - end-product quality specifications to meet the speciality pastry product types required in the performance evidence
    - food safety code regulatory requirements applicable to producing specialist pastry products
- timeframes:
    - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced basic bread products according to a production schedule, including:

- mixing and using the following three dough types:
  - premix dough
  - instant dough/no time dough/scratch mix dough
  - chemical leavened dough
- producing the following two basic bread types:
  - white bread
  - brown bread
- producing the following six bread product varieties and shapes:
  - condensed/sandwich loaves
  - high top loaves, either married or single
  - soft/enriched bread roll variety
  - crusty/lean bread roll variety
  - crusty/lean loaf – plaited, Vienna, French stick or cob
  - chemical leavened dough
- retarding one of the following three product types produced:
  - soft/enriched bread roll variety
  - crusty/lean bread roll variety
  - crusty/lean loaf – plaited, Vienna, French stick or cob
- selecting and using tins and trays appropriate for dough piece scale weight, volume and size
- using the following eight moulding techniques:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - rounding
  - batons
  - knots
  - 4 piecing
  - degassing
  - curling/rolling
  - sealing
  - cutting/portioning
- using the following four bread dough finishing techniques:
  - pre-prove scoring
  - post-prove scoring
  - seeding
  - dusting
- using the following five baking techniques:
  - steaming
  - testing bake by sight and baked colour
  - de-panning basic breads
  - cooling basic bread products on cooling wires
  - using lids to condense loaves
- selecting, using and cleaning the bread baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- documenting the production schedule, including the following six considerations:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - finishing parameters for basic bread products
  - bake parameters for basic bread products

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing basic bread products
- safe use and cleaning of bread baking equipment listed in the range of conditions, including electrical hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- regulatory requirements applicable to producing basic bread products
- techniques and considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - finishing parameters for basic bread products
  - bake parameters for basic bread products
- functions and characteristics of ingredients used in basic bread production, including:
  - premixes
  - baker's or strong flour
  - whole meal flour
  - baking powder
  - salt
  - sugar
  - yeast, including principles of fermentation
  - water
  - shortening, fats and oils
  - bread improvers
- mixing processes and gluten development for basic bread doughs, including:
  - premix doughs
  - scratch/no time/instant doughs
  - chemical leavened doughs
- sequencing of the rapid or no time basic bread production processes
- purpose and techniques for pre-bake finishing basic breads
- characteristics and techniques for moulding basic bread doughs
- impacts of factors on production of different retarded basic bread products, including:
  - finished dough temperature (FDT)
  - dough size
  - dough shape
  - yeast activity
  - processing retard in cool phase
  - processing retard in warm phase
- techniques for calculating yields, adjusting recipes, converting units of measurement and measuring ingredients
- techniques for selecting tins and trays appropriate for dough piece scale weight, volume and size
- required baked characteristics of basic bread products, including:
  - volume
  - grain

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - texture
  - crumb colour
  - crust formation
  - crust colour
- the effects of common bread faults in basic bread production, including:
  - lack of salt
  - too much salt
  - no improver
  - too much improver
  - no yeast
  - too much yeast
  - weak flour instead of strong flour
- techniques for disposing of waste from bread production
- basic bread production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment specified in the range of conditions
  - bread slicer
  - ingredients that meet the basic bread product types required in the performance evidence
- specifications:
  - recipes that meet the basic bread product types required in the performance evidence
  - end-product quality specifications to meet the basic bread product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing basic bread products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to produce savoury bread products in a commercial baking environment.

This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	requirements and required production volumes 1.3 Confirm work area and work practices meet food safety and workplace health and safety requirements 1.4 Select and wear personal protective equipment according to safety requirements 1.5 Select savoury bread baking equipment and check to confirm readiness for use 1.6 Select ingredients and check to confirm quality and quantity
2. Prepare savoury fillings	2.1 Select and handle perishables according to food safety requirements 2.2 Measure ingredient quantities to meet recipe specifications and prepare for use 2.3 Blend and combine ingredients to meet savoury product type 2.4 Check savoury filling to identify faults and rectify 2.5 Store savoury fillings according to food safety requirements
3. Mix savoury bread dough	3.1 Measure ingredient quantities to meet recipe specifications 3.2 Load ingredients into mixer in required ingredient placement 3.3 Operate and monitor mixer to achieve savoury dough development for product type 3.4 Add savoury fillings to dough during mixing to meet product type 3.5 Check savoury dough to identify faults and rectify
4. Process savoury bread dough	4.1 Divide, scale, mould and intermediate prove dough to meet required end-product shape and baked weight 4.2 Final mould and shape savoury dough in preparation for applying fillings and toppings 4.3 Retard savoury dough as required for product type 4.4 Final prove savoury dough as required for product type 4.5 Check processed savoury dough to identify faults and rectify
5. Apply toppings and fillings to savoury bread dough	5.1 Select savoury ingredients from storage to meet recipe specifications 5.2 Prepare and apply sauces to savoury doughs according to product type

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	5.3 Fill and top savoury doughs as required according to product type 5.4 Identify savoury ingredients for reuse, and store according to food safety requirements 5.5 Check topped and filled savoury bread doughs to identify faults and rectify
6. Bake savoury bread products	6.1 Set baking temperatures and times to prepare for baking 6.2 Visually check dough size to confirm readiness for baking 6.3 Monitor baking to achieve baked colour and stability required for savoury bread product type 6.4 Unload savoury products to cool according to food safety requirements 6.5 Check savoury bread bake to identify faults and rectify 6.6 Prepare and transfer baked savoury products for presentation and storage according to packaging and food safety requirements
7. Steam savoury bread products	7.1 Set steaming settings to prepare for steaming 7.2 Visually check dough size to confirm readiness for steaming 7.3 Load steaming equipment and monitor steaming to achieve steam levels for product type 7.4 Unload steamed products to cool according to food safety requirements 7.5 Check steamed savoury bread product to identify faults and rectify 7.6 Prepare and transfer steamed products for presentation and storage according to packaging and food safety requirements
8. Complete work	8.1 Clean equipment and work area to meet housekeeping standards 8.2 Dispose of waste according to workplace requirements 8.3 Complete workplace records according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, and temperature, humidity and timer settings • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes, and water and dough temperatures • Divides dough into equal portions by estimated and scaled weights • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to mould dough shapes and check end-product shapes • Interprets safe food condition temperature range requirements for perishables • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Savoury bread baking equipment must include:	• equipment, including:
	  • industrial oven
	  • industrial mixer and attachments
	  • industrial cook tops
	  • cool room or refrigeration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• dish washing sinks
	• equipment accessories, including:
	  • cool room or refrigerator shelving
	  • dish washing sink taps and attachments
	• ancillary equipment, including:
	  • pizza trays
	  • cook pots used for preparing savoury fillings
	  • storage containers used for storing savoury fillings
	  • containers used for storing savoury sauces
	  • baking trays and pans used for baking savoury products
	  • cooling wires used for cooling savoury products
	  • cutting boards used for savoury fillings
	  • equipment used to steam savoury bread
	• tools and utensils, including:
	  • scrapers
	  • ladles and cooking spoons
	  • serrated bread knives
	  • food preparation knives.

Assessment Requirements for FBPRBK3006 Produce savoury bread products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced savoury bread products according to a production schedule, including:

- producing the following six types of savoury bread products:
  - savoury flat bread
  - savoury bread loaf
  - savoury bread roll
  - savoury filled bread
  - savoury steamed bread
  - savoury unleavened product
- processing one of the above savoury bread products as a retarded product
- meeting one of the following two ingredient-specific special dietary requirements in one of the above savoury bread products:
  - vegetarian
  - vegan
- meeting one of the following four religious special dietary needs in one of the above savoury bread products:
  - Buddhism
  - Hinduism
  - Islam
  - Judaism
- mixing and using the following three types of dough mixes:
  - instant/scratch mix/no time dough
  - bulk ferment dough
  - unleavened dough
- meeting the following two food safety requirements:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - identifying temperature control points of savoury ingredients used
  - handling and storing savoury ingredients and products
- preparing and adding the following five types of filling and topping ingredients:
  - dairy products
  - meat products
  - vegetables
  - herbs
  - sauce with a savoury base
- adding the savoury fillings and toppings to savoury bread doughs using the following three methods:
  - incorporating into dough during mixing
  - incorporating on top of savoury dough prior to baking
  - using the savoury filling as a filling inside savoury bread
- selecting, using and cleaning the savoury bread baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- selecting and using tins and trays appropriate for dough piece scale, weight, volume and size
- documenting a production schedule, including the following seven considerations:
  - timings
  - volume requirements
  - savoury filling requirements for product types
  - bake parameters for savoury products
  - product processing requirements
  - storage requirements for savoury products
  - recipe reformulation to minimise waste.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing savoury bread
- safe use and cleaning of bread baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing savoury bread products, including temperature control and prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- nature of special dietary requirements suitable for savoury bread products
- nature of religious special dietary needs as they relate to savoury products, including:
  - Buddhism
  - Hinduism
  - Islam
  - Judaism
- nature of ingredient-specific special dietary needs as they relate to savoury products, including:
  - vegetarian
  - vegan
- techniques and considerations for production scheduling, including:
  - timings
  - volume requirements
  - savoury filling requirements for product types
  - bake parameters for savoury products
  - product processing requirements
  - storage requirements for savoury products
  - recipe reformulation to minimise waste
- safe handling, shelf life and storage requirements of ingredients used in savoury bread production, including:
  - savoury sauces
  - meat ingredients
  - dairy ingredients
  - vegetable ingredients
  - herb ingredients
- effects of seasonal changes on dairy products
- storage requirements for:
  - cooked savoury fillings
  - cold savoury fillings
- principles of the production processes, including:
  - preparing fillings
  - mixing, including incorporating savoury ingredients into dough
  - baking toppings
  - rolling dough
  - steaming dough
  - packaging savoury bread
- purpose and principles of the bulk fermentation process
- techniques for retarding savoury bread products, including:
  - retarding savoury bread in the cool phase
  - recovery of retarded savoury bread in the warm phase

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- impacts on production of the following:
  - salted ingredients
  - stability of breads using savoury products
- required characteristics of savoury bread products, including:
  - visual appeal
  - flavour
- techniques for disposing of waste from bread production
- savoury bread production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment as specified in the range of conditions
  - rolling pins
  - ingredients that meet the savoury bread product types required in the performance evidence
- specifications:
  - recipes that meet the savoury bread product types required in the performance evidence
  - end-product quality specifications that meet the savoury bread product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing savoury bread products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Application

This unit of competency describes the skills and knowledge required to produce specialty flour bread products in a commercial baking environment. Specialty flour bread products include organic flour breads, non-wheat flour breads, gluten-free breads, rye breads, whole grain flour breads and wholemeal breads.

This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced specialty flour bread products according to a production schedule, including:

- producing the following six types of specialty flour bread products:
  - organic breads
  - non-wheat breads
  - gluten-free breads
  - rye breads
  - whole grain breads
  - wholemeal breads
- mixing and using the following three doughs:
  - scratch mix/no time/instant dough
  - bulk ferment sour doughs
  - all in mix
- using the following five product shapes:
  - baton/Vienna
  - boule/cob
  - loaf
  - rolls
  - specialty shape
- using one of the following five sours for rye bread:
  - lactic sour
  - acetic sour

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - natural sour
  - powdered sour
  - liquor sour
- incorporating pre-soaked grain into grain bread
- finishing bread using the following four finishing methods:
  - post-prove scoring
  - seeding
  - dusting
  - steaming
- selecting, using and cleaning the bread baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- selecting and using bread shaping equipment, tins and trays appropriate for dough piece scale, weight, volume and size
- documenting the production schedule, including the following six considerations:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - finishing requirements for specialty flour products
  - bake parameters for specialty flour products.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing specialty flour bread products
- safe use and cleaning of bread baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food applicable to producing specialty flour bread products
- considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - finishing requirements for specialty flour products
  - bake parameters for specialty flour products

- types, characteristics and storage requirements of ingredients used in specialty flour bread production, including:
  - organic flour
  - non-wheat flour
  - rye flour
  - gluten-free flour
  - grains
  - wholemeal flour
- hydration rates for grain breads and wholemeal breads, and purpose and techniques for the soaking of grains
- benefits of organics in flours
- nature of special dietary requirements and gluten intolerance as they relate to dietary-suitable flours and specialty flour bread products
- reformulation of grain and fibre breads
- mixing processes and mixing outcomes for:
  - scratch mix/no time/instant dough
  - bulk ferment sour doughs
  - all in mix
  - specialty flour doughs
  - rye breads
- principles of processing and hearth baking specialty flour breads
- techniques for producing rye breads, including:
  - rye flour varieties for different rye breads
  - using lactic, acetic and natural sour doughs for rye breads
  - using powder and liquor sours for rye breads
  - using baskets for proving when baking rye breads
- processing and baking techniques required for using specialty flours, including:
  - rye breads
  - organic breads
  - non-wheat flour breads
  - gluten-free breads
  - wholemeal flour breads
- impacts on production, including:
  - soaking of grains
  - processing gluten-free flour
- techniques for selecting tins and trays appropriate for dough piece scale weight, volume and size
- causes and corrective action for predictable and sometimes unpredictable specialty flour bread production problems, including:
  - machinery failure
  - environmental factors, including heat, humidity and cold

	4.7 Prepare paper piping bags to decorate with chocolate 4.8 Prepare piping bags to pipe finishing decorations 4.9 Check finishing mediums to identify faults and rectify
5. Finish sponge cake products	5.1 Cut sponge cake product into portions as required for product type 5.2 Split and fill sponge products as required for product type, and transfer to cake boards as required for product type 5.3 Apply creams and icings to mask and finish sponge cake products as required for product type 5.4 Apply garnishes and decorations to decorate sponge products as required for product type 5.5 Apply simple written inscriptions to decorate sponge products as required for product type 5.6 Check sponge cake product finishing to identify faults and rectify 5.7 Prepare and transfer products for presentation and storage according to packaging and food safety requirements
6. Complete work	6.1 Clean equipment and work area to meet housekeeping standards 6.2 Dispose of waste according to workplace requirements 6.3 Complete workplace records according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, and temperature and timer settings • Estimates approximate quantities, and uses equipment to measure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	ingredient weights and volumes • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to shape and portion products and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Sponge cake baking equipment must include:	• equipment, including:
	  • industrial oven
	  • hand washing sinks
	  • industrial mixer and attachments
	• equipment accessories, including:
	  • cake whisk
	  • sink taps and accessories
	  • industrial oven decks and accessories
	• ancillary equipment, including:
	  • sponge baking trays
	  • sponge tins
	  • cupcake tins
	  • ingredient storage containers
	• tools and utensils, including:
	  • pallet knives

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• piping bags • piping nozzles • plastic scrapers • icing sieves • measuring jugs • mixing bowls.

Assessment Requirements for FBPRBK3008 Produce sponge cake products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced sponge cake products according to a production schedule, including:

- producing the following four types of sponge products:
  - decorated sponge cake (round or square), minimum 7-inch or 18-centimetre diameter in size
  - sponge roll
  - individual portioned sponge product
  - sponge layer cake
- mixing and using the following two sponge cake batters:
  - mixing scratch mix sponge with or without emulsifier
  - mixing premix sponge
- incorporating the following four sponge cake processing techniques:
  - spreading
  - rolling
  - layering
  - depositing
- selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- finishing and decorating using the following four methods:
  - masking and combing
  - splitting and filling
  - applying piped finishes with cream or icing
  - garnishing
- adding the following two creams and icings:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - fresh cream or imitation cream
  - icing or basic butter cream
- applying two of the following four piped finishing types:
  - rosettes
  - scrolls
  - rope
  - swirls
- preparing and using the following three chocolate decorations:
  - writing simple celebration inscription
  - chocolate shavings
  - chocolate filigrees
- documenting the production schedule, including the following six considerations:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - finishing requirements for sponge cake products
  - bake parameters for sponge cake products.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing sponge products
- safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing sponge cake products
- techniques and considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - finishing requirements for sponge cake products
  - bake parameters for sponge cake products
- characteristics and storage requirements of ingredients used in sponge products production, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - sponge premixes
  - eggs
  - sugar
  - cake fats and shortenings
  - cake flour
  - sponge emulsifiers
  - colouring and flavouring additives
  - fresh cream
  - imitation cream
  - compound chocolate
  - jams, conserves and spreads
- determining the correct quantity of colourings and flavourings to match sponge batter size
- selecting and preparing tins and trays to match sponge cake types, including:
  - greasing
  - spraying
  - papering
- recipe formulations for sponge cake, including:
  - genoise
  - traditional
  - premix
  - emulsified
- processes required for producing sponge cake batters, including:
  - mixing, including combination aerated and physically aerated
  - depositing
  - baking, including time and temperatures for sponge batter type and volume
  - de-panning without damage
  - cooling
  - packaging
- preparation and applications of finishes, including:
  - aerating fresh creams
  - mixing icings
  - masking and combing sponges
  - piping decorations
  - melting compound chocolate
  - piping simple inscriptions for special occasion decorating
  - splitting and filling sponges
- storage requirements for finished sponge cake products
- techniques for testing bake of sponge by feel and sight
- causes and corrective action for predictable and sometimes unpredictable sponge cake production problems, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - machinery failure
  - environmental factors, including heat, humidity and cold
  - poor quality ingredients
- techniques for disposing of waste
- sponge products production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment specified in the range of conditions
  - ingredients that meet the sponge cake product types required in the performance evidence
- specifications:
  - recipes that meet the sponge cake products product types required in the performance evidence
  - end-product quality specifications that meet the sponge cake product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing sponge cake products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK3009 Produce biscuit and cookie products

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceuticals Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to produce and finish biscuit and cookie products in a commercial baking environment.

This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems.

Food safety legislation applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users are advised to check with their food safety authority for specific requirements.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceuticals Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced biscuit and cookie products, including:

- producing the following four types of biscuit and cookie products:
  - deposited cookie
  - piped shortbread
  - cut or portioned rolled biscuit
  - moulded and portioned biscuit
- using the following three biscuit and cookie mixing methods:
  - creamed method
  - whisked method
  - melted method
- applying the following nine production processes:
  - piping shortbread
  - depositing
  - conditioning fruit
  - roasting nuts
  - cutting biscuits with cutters
  - rolling biscuit dough
  - moulding biscuit dough
  - portioning biscuit doughs
  - inclusion of glace fruits or nuts into biscuit and cookie doughs
- selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- applying the following five finishing and decorating methods:
  - using piped decorations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - sandwiching
    - dusting
    - dipping
    - applying glazes or icings
- using the following three finishing ingredients:
    - fondant icing
    - melted chocolate
    - icing sugar
- documenting the production schedule, including the following six considerations:
    - timings
    - volume requirements
    - product processing requirements
    - recipe reformulation to minimise waste
    - finishing requirements for biscuit and cookie product types
    - bake parameters of biscuit and cookie product types.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing biscuit and cookie products
- safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced basic cake and pudding products according to the production schedule, including:

- producing and decorating the following six cake and pudding product varieties:
  - fruit cake decorated with fondant or plastic icing
  - steamed pudding
  - flavoured bar cake decorated with icing
  - cake slice decorated with icing or glaze
  - flavoured cupcake or muffin
  - special dietary cake
- producing specialty dietary cake to one of the following two dietary requirements:
  - vegan
  - gluten-free
- using the following three cake and pudding mixing methods:
  - all in mixing method
  - mixing sugar batter method
  - mixing flour batter method
- using the following five production processes and techniques:
  - depositing cake and pudding batter
  - steaming of puddings
  - baking of cakes
  - conditioning of dried fruit
  - portioning and slicing of cakes and slices
- using the following two decorating and finishing techniques:
  - covering and garnishing with RTR, fondant or plastic icing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - spreading with icing or glaze
- conditioning of dried fruit for use in batter for one of the following two products:
    - cake
    - pudding
- selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning.
- documenting the production schedule, including the following six considerations:
    - timings
    - volume requirements
    - product processing requirements
    - decorating and finishing requirements for cakes
    - recipe reformulation to minimise waste
    - bake and steam parameters of cakes and puddings.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing cake and pudding products
- safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing cake and pudding products
- considerations for production scheduling, including:
    - timings
    - volume requirements
    - product processing requirements
    - recipe reformulation to minimise waste
    - decorating and finishing requirements for cakes
    - bake and steam parameters of cakes and puddings
- types, functions and storage requirements of ingredients as used in cake and pudding products production, including:
    - eggs
    - sugar
    - cake fats
    - cake flours
    - baking powder

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - bicarbonate soda
    - dried fruit
    - ready to roll (RTR)/fondant/plastic icing
    - icings and glazes
- special dietary requirements for cakes, including both vegan and gluten-free
- techniques for preparing tins and trays to match cake and pudding types, including:
    - greasing
    - spraying
    - insulating baking tins and pans to match richness of cakes
- ingredient ratios and mixing processes:
    - fruit cake and puddings
    - pound cake
    - hi-ratio cake
- processes for producing cake and pudding products, including:
    - insulating
    - baking, including radiant and conductive heat
    - steaming and boiling
    - de-panning without damage
    - cooling
    - finishing
    - packaging
- types of finishing mediums, including:
    - icings
    - glazes
    - RTR icing, fondant and plastic icing
- techniques for portioning cakes and cake slices to suit end-product and finishing requirements
- shelf life of cakes and puddings
- techniques for selecting tins and trays appropriate for cake and pudding product size and shape
- purpose and functions of production settings, including:
    - oven temperatures to match richness of cakes
    - baking times to match richness of cakes
    - steaming times and temperatures for pudding batter type and volume
- techniques for testing bake of cakes and puddings by feel, sight and skewer
- causes and corrective action for predictable and sometimes unpredictable cake and pudding production problems, including:
    - machinery failure
    - poor quality ingredients
- techniques for disposing of waste from cake and pudding production
- cake and pudding products production terminology.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment specified in the range of conditions
  - industrial oven
  - ingredients that meet the cake and pudding product types required in the performance evidence
- specifications:
  - recipes that meet the cake and pudding product types required in the performance evidence
  - end-product quality specifications that meet the cake and pudding product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing cake and pudding products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK3011 Produce frozen dough products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to produce frozen dough products in a commercial baking environment.

This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

FBPRBK3005 Produce basic bread products.

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work	1.1 Confirm product types and volumes to schedule production 1.2 Calculate yield and adjust recipe to meet required production volume

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Confirm work area and work practices meet food safety and workplace health and safety requirements 1.4 Select and wear personal protective equipment according to safety requirements 1.5 Select frozen and par baked dough baking equipment and check to confirm readiness for use 1.6 Select ingredients and check to confirm quality and quantity
2. Mix frozen dough	2.1 Measure ingredient quantities to meet recipe specification 2.2 Load ingredients into mixer in required ingredient placement 2.3 Operate and monitor mixer to achieve frozen dough development for product type 2.4 Check frozen and par baked dough to identify dough faults and rectify
3. Process frozen and par baked doughs	3.1 Divide, scale, mould and intermediate prove frozen and par baked dough to meet required end-product shape and baked weight 3.2 Final mould frozen and par baked dough and place on freezing or baking surfaces 3.3 Laminate and finish frozen and par baked dough as required prior to freezing or par baking 3.4 Check processed frozen and par baked dough to identify faults and rectify 3.5 Package and freeze frozen and par baked dough to meet food safety requirements
4. Par bake bread products	4.1 Final prove par baked dough to prepare for baking 4.2 Set baking temperatures and times to prepare for par baking 4.3 Visually check dough size to confirm readiness for baking 4.4 Load oven and steam as required for product type 4.5 Monitor baking to achieve internal par bake temperature for par bake 4.6 Unload and de-pan par baked product to cool 4.7 Check par baked bread products to identify faults and rectify 4.8 Package and freeze par baked bread product to meet food safety requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
5. Recover frozen doughs and par baked breads	5.1 Transfer frozen doughs and par baked breads from frozen storage to trays and pans, to recover and thaw according to food safety requirements 5.2 Final prove frozen doughs as required for product type 5.3 Check recovered doughs and par baked breads to identify faults and rectify
6. Finish frozen dough products	6.1 Prepare pre-bake finishing mediums to meet recipe specifications 6.2 Prepare simple fillings to meet recipe specifications 6.3 Pre-bake finish frozen and par baked products to meet end-product specifications 6.4 Check pre-bake finished products to identify faults and rectify
7. Bake frozen dough products	7.1 Set baking temperatures and times to prepare for baking 7.2 Visually check frozen dough size to confirm readiness for baking 7.3 Load oven and steam frozen bread as required for product type 7.4 Monitor baking to achieve baked colour and stability required for frozen dough product type 7.5 Unload and de-pan baked products to cool 7.6 Check product bake to identify faults and rectify
8. Finish frozen and par baked dough products	8.1 Prepare post-bake finishing mediums to meet recipe specifications 8.2 Post-bake finish products to meet end-product specifications 8.3 Check post-bake finished products to identify faults and rectify
9. Complete work	9.1 Clean equipment and work area to meet housekeeping standards 9.2 Dispose of waste according to workplace requirements 9.3 Complete workplace records according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions, and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, and temperature, humidity and timer settings • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes, and water and dough temperatures • Divides dough into equal portions by estimated weight • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to mould dough shapes and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Frozen and par baked dough baking equipment must include:	• equipment, including:
	  • industrial oven
	  • industrial prover
	  • industrial mixer and attachments
	  • pastry sheeter/dough break or rolling pin
	  • freezer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• equipment accessories, including:
	  • oven baking trays
	  • freezing trays
	  • freezing racks
	• ancillary equipment, including:
	  • rolling pin
	  • cooling wires
	  • dough and pastry benches
	• tools and utensils, including:
	  • rolling pins
	  • cake knives
	  • bread knives
	  • processing knives
	  • dough scrapers.

Assessment Requirements for FBPRBK3011 Produce frozen dough products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced frozen dough products according to a production schedule, including:

- producing the following five frozen dough baked products:
  - laminated frozen dough product
  - basic bread frozen dough product
  - sweet yeast bread frozen dough product
  - specialty flour bread frozen dough product
  - chemical leavened frozen dough
- incorporating the following four frozen dough processes:
  - ready-to-prove frozen dough
  - ready-to-bake frozen dough
  - par baked frozen dough
  - finishing frozen dough
- using one of the following two simple fillings:
  - simple sweet filling
  - simple savoury filling
- producing the following four product shapes:
  - baguette
  - round or long roll
  - croissant or danish
  - cut or portioned
- producing the following three product styles:
  - decorated frozen dough

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - undecorated frozen dough
  - undecorated par baked dough
- finishing the products using the following four techniques:
  - dusting
  - glazing
  - piping
  - scoring
- selecting tins and trays appropriate for dough piece scale weight, volume and size
- selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- documenting the production schedule, including the following seven considerations:
  - timings for freezing frozen and par baked dough
  - timings for thawing frozen and par baked dough
  - product processing requirements for frozen and par baked dough
  - volume requirements
  - recipe reformulation to minimise waste
  - freezing and thawing times
  - bake parameters for frozen product.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing frozen dough products
- safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing frozen dough products, including temperature control
- techniques and considerations for production scheduling, including:
  - timings for freezing frozen and par baked dough
  - timings for thawing frozen and par baked dough
  - product processing requirements for frozen and par baked dough
  - volume requirements
  - recipe reformulation to minimise waste
  - freezing and thawing times
  - bake parameters for frozen product
- characteristics and storage requirements of frozen dough types, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - ready-to-prove frozen dough
  - ready-to-bake frozen dough
  - par baked frozen dough
  - chemically leavened frozen dough
- functions and characteristics for frozen and par baked dough ingredients, including:
  - yeast levels
  - sugar inclusion
  - water and temperature of water
  - effects of salt
- principles and techniques of freezing doughs, including:
  - snap freezing
  - storage stages, including freeze down and recovery
  - maintaining freezer temperatures
  - freezing times for dough types and sizes
  - optimal storage times
  - internal bake temperatures of par baked breads
  - storage patterns for frozen dough, including making efficient use of storage space, stock rotation and minimising temperature fluctuations
- principles of thawing frozen and par baked doughs, including:
  - thawing times for dough types and sizes
  - consequences of slow or fast thawing
  - thawing rate for yeast doughs
- types, functions, safe use, cleaning and freezing capacity of dough freezing equipment, including:
  - conventional freezers
  - blast freezers
- handling requirements for made-up and proved doughs to preserve dough structure
- impacts of factors on production of different frozen dough products, including:
  - finished dough temperature (FDT)
  - dough size
  - dough shape
  - yeast activity
  - processing frozen dough in cool phase
  - processing frozen dough in warm phase
- techniques for calculating yields, adjusting recipes and measuring ingredients
- causes and corrective action for predictable and sometimes unpredictable frozen dough product production problems, including:
  - frozen dough inconsistent temperature
  - frozen dough inconsistent moisture control
  - machinery failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - environmental factors, including heat, humidity and cold
  - poor quality ingredients
- techniques for disposing of waste from frozen dough product production
- frozen dough product production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment specified in the range of conditions
  - ingredients that meet the frozen dough product types required in the performance evidence
- specifications:
  - recipes that meet the frozen dough product types required in the performance evidence
  - end-product quality specifications that meet the product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing frozen dough products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPRBK3012 Schedule and produce bread production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has scheduled production for and produced 19 bread products over a period of four shifts (Note: The scheduling of production is to be done prior to the production of the bread products), including:

- producing the following five bread product types:
  - condensed/sandwich loaves
  - iced decorated sweet yeast buns
  - savoury bread rolls
  - laminated yeast dough as croissant product
  - whole grain flour breads
- producing 14 of the following 17 bread product types:
  - crusty loaf with no more than 2% enriching agents that is plaited, Vienna, French stick or cob
  - soft/enriched bread roll variety
  - crusty/lean bread roll varieties
  - high top loaves, either married or single
  - fruited sweet yeast product
  - filled sweet yeast product
  - cream decorated sweet yeast bun
  - spiced sweet yeast bun or loaf
  - savoury flat bread
  - savoury steamed bread
  - savoury unleavened product
  - fried basic artisan product as decorated donuts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - sweet laminated yeast dough as danish product
  - highly enriched basic artisan product
  - wholemeal breads
  - gluten-free breads
  - rye breads
- using at least two of the following four mixing methods per shift:
  - instant/no time/rapid dough process
  - chemical leavened dough
  - bulk ferment
  - ferment
- monitoring operations and addressing variations to the production schedule, ensuring end-product specifications and production targets are met
- documenting and implementing four daily production schedules, including the following production scheduling considerations:
  - production timings
  - product quality
  - reformulation of recipes to suit products
  - finished dough or batter temperatures
  - mixing, processing, baking and finishing requirements for products
  - special equipment or resources required for production
  - scheduling for each stage of the bakery production process, including labour requirements
  - equipment types
- documenting a production report for each of the four shifts that includes the following considerations:
  - scheduling efficiencies for use of equipment and labour in relation to items produced
  - wastage efficiencies of products produced
  - improvements on the scheduling to meet performance
  - product quantities produced in relation to products scheduled
  - completion times of product
  - product quality outcomes.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements applicable to scheduling and producing bread products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- regulatory requirements for food safety applicable to scheduling and producing bread products, including temperature control and the prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products
- techniques relevant to planning bread production, including:
  - production timings
  - product quality
  - reformulation of recipes to suit products
  - finished dough or batter temperatures
  - mixing, processing, baking and finishing requirements for products
  - special equipment or resources required for production
  - scheduling for each stage of the bakery production process
  - equipment types
- considerations relevant to reporting on production outcomes, including:
  - scheduling efficiencies and whether completion times were met
  - wastage efficiencies of products produced
  - improvements on the scheduling to meet performance
  - product quantities produced in relation to products scheduled
  - completion times of product
  - product quality outcomes
- techniques used to regulate dough maturation and proving, including:
  - formulation
  - temperature control
  - time
- predictable causes of production variation and their likely impact on production targets, including:
  - machine failure
  - product failure
  - calculation errors
  - estimation errors
- production processes for different product ranges, including:
  - use of specific equipment
  - use of specialised ingredients
  - additional preparation requirements
- baking industry terminology relevant to bread production planning.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- resources, equipment and materials:
  - personal protective equipment
  - commercial bakery equipment and information on capacity
  - industrial oven
  - industrial mixer and attachments
  - pastry sheeter or dough break
  - refrigeration
  - ingredients to meet the product types required in the performance evidence
- specifications:
  - production schedule template that includes a level of detail that accurately represents workplace conditions
  - recipe specifications for the product types required in the performance evidence
  - formulae to calculate batch weight to finished product weight
  - end-product quality specifications to meet the product types required in the performance evidence
- timeframes:
  - over five shifts that can be continuous or staggered, consisting of one shift for upfront scheduling of production for the bread products specified in the performance evidence, and four daily shifts for the production of the baked products specified in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has scheduled production for and produced 15 cake and pastry products over a period of four shifts (Note: The scheduling of production is to be done prior to the production of the cake and pastry products), including:

- producing the following seven cake, pastry and bread product types:
  - laminated yeast dough as croissant product
  - decorated round or square sponge cake that has a minimum diameter of 18 centimetres
  - fruit cake decorated with ready to roll (RTR), fondant or plastic icing
  - deposited cookie
  - cream or custard filled laminated product
  - decorated and filled choux pastry
  - lean basic artisan rolls or loaves with no more than 2% enriching agents
- producing eight of the following 16 cake and pastry product types:
  - fried basic artisan product as decorated donuts
  - highly enriched basic artisan product
  - sponge roll
  - individual portioned sponge product
  - sponge layer cake
  - flavoured bar cake decorated with icing
  - cake slice decorated with icing or glaze
  - flavoured steam pudding
  - moulded and portioned biscuit
  - piped shortbread

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - whisked biscuit or cookie
  - sweet filled pastry slice
  - vegetable filled laminated product
  - meat filled laminated product
  - filled sweet non laminated pies or tarts
  - filled savoury non laminated pie or tart product
- mixing, processing, baking and finishing each of the four of the following types of baked products per shift:
  - bread or yeast product
  - cake or sponge
  - cookie or biscuit
  - laminated or non laminated pastry
- monitoring operations and addressing variations to the production schedule, ensuring end-product specifications and cake and pastry production targets are met
- documenting and implementing four daily production schedules, including the following production scheduling considerations:
  - production timings
  - product quality
  - reformulation of recipes to suit products
  - finished dough or batter temperatures
  - mixing, processing, baking and finishing requirements for products
  - special equipment or resources required for production
  - scheduling for each stage of the bakery production process, including labour requirements
  - equipment types
- documenting production reports for each of the four shifts that include the following considerations:
  - scheduling efficiencies for use of equipment and labour in relation to items produced
  - wastage efficiencies of products produced
  - improvements on the scheduling to meet performance
  - product quantities produced in relation to products scheduled
  - completion times of product
  - product quality outcomes.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace health and safety requirements applicable to scheduling and producing cake and pastry production
- requirements for food safety applicable to scheduling and producing cake and pastry products, including temperature control and the prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products

  - product quantities produced in relation to products scheduled
  - completion times of product
  - product quality outcomes
- techniques used to regulate dough and batter maturation and proving, including:
  - formulation
  - temperature control
  - time
- predictable causes of production variation and their likely impact on production targets, including:
  - machine failure
  - product failure
  - calculation errors
  - estimation errors
- production processes for different product ranges, including:
  - use of specific equipment
  - use of specialised ingredients
  - additional preparation requirements
- baking industry terminology relevant to production planning.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment
    - commercial bakery equipment and information on capacity
    - industrial oven
    - industrial mixer and attachments
    - pastry sheeter or dough break
    - refrigeration
    - ingredients to meet the product types required in the performance evidence
- specifications:
    - production schedule template that includes a level of detail that accurately represents workplace conditions
    - recipe specifications for the product types required in the performance evidence
    - formulae to calculate batch weight to finished product weight
    - end-product quality specifications to meet the product types required in the performance evidence
- timeframes:
    - five shifts that can be continuous or staggered, consisting of one shift for upfront scheduling of production for the cake and pasty products specified in the performance evidence, and four daily shifts for the production of the cake and pasty products specified in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK3014 Produce sweet yeast products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to produce sweet yeast products in a commercial baking environment. Sweet yeast products include enriched breads and fruited enriched breads.

This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work	1.1 Confirm product types and volumes to schedule production 1.2 Calculate yield and adjust recipe to meet required production

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	volumes 1.3 Confirm work area and work practices meet food safety and workplace health and safety requirements 1.4 Select and wear personal protective equipment according to safety requirements 1.5 Select sweet yeast baking equipment and check to confirm readiness for use 1.6 Select and prepare ingredients and check to confirm quality and quantity 1.7 Clean and condition fruits to prepare for use 1.8 Prepare sweet fillings as required for product type
2. Mix sweet yeast dough	2.1 Measure ingredient quantities to meet recipe specifications 2.2 Load ingredients into mixer in required placement 2.3 Operate and monitor mixer to achieve sweet yeast dough development for product type 2.4 Check mixed sweet yeast dough to identify faults and rectify
3. Process sweet yeast dough	3.1 Divide, scale, mould and intermediate prove sweet yeast dough to meet end-product shape and baked weight 3.2 Apply sweet fillings to sweet yeast doughs to meet product type 3.3 Final mould sweet yeast dough to meet product requirements, and place on baking surfaces for final prove 3.4 Retard sweet yeast dough as required for product type 3.5 Final prove sweet yeast dough as required for product type 3.6 Check processed sweet yeast dough to identify faults and rectify
4. Bake sweet yeast products	4.1 Set baking temperatures and times to prepare for baking 4.2 Visually check dough size to confirm readiness for baking 4.3 Monitor baking to achieve baked colour and stability required for sweet yeast product type 4.4 Unload and de-pan sweet yeast products to cool 4.5 Glaze products after baking as required for product type 4.6 Check sweet yeast products to identify faults and rectify

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
5. Finish sweet yeast products	5.1 Prepare finishing mediums to meet recipe specifications 5.2 Finish baked products to meet end-product specifications 5.3 Check finished products to identify faults and rectify 5.4 Prepare and transfer products for presentation and storage according to packaging and food safety requirements
6. Complete work	6.1 Clean equipment and work area to meet housekeeping standards 6.2 Dispose of waste according to workplace requirements 6.3 Complete workplace records according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, and temperature, humidity and timer settings • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes, and water and dough temperatures • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Divides dough into equal portions by estimated weight • Uses understanding of three-dimensional shapes to mould dough shapes and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of	• Complies with workplace health and safety and food safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
work	regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Sweet yeast baking equipment must include:	• equipment, including:
	  • industrial oven
	  • industrial mixer and attachments
	• ancillary equipment, including:
	  • dried fruit storage containers
	  • jugs used for storing glazes
	  • dry ingredient storage containers
	  • baking trays used for sweet yeast
	  • cooling wires used for sweet yeast
	• tools and utensils, including:
	  • piping bags used for decorating
	  • piping nozzles used for decorating
	  • brushes used for glazing products
	  • knives used for decorating and cutting.

Assessment Requirements for FBPRBK3014 Produce sweet yeast products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced sweet yeast products according to a production schedule, including:

- producing the following five enriched sweet yeast products:
  - filled sweet yeast product
  - fruited sweet yeast product
  - spiced sweet yeast bun or loaf
  - cream decorated sweet yeast bun
  - iced decorated sweet yeast bun
- mixing and using the following three enriched doughs:
  - premix dough
  - instant dough/no time dough/scratch mix dough
  - bulk ferment dough
- using retarding for one of the sweet yeast doughs listed above
- using the following six moulding techniques:
  - rounding
  - batons
  - degassing
  - curling/rolling
  - sealing
  - scrolls
- using the following three finishing and decorating techniques:
  - using cream to decorate sweet yeast product
  - using icing to decorate sweet yeast product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - using fondant to decorate sweet yeast product
- selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- selecting tins and trays appropriate for dough piece scale, weight, volume and size
- documenting the production schedule, including the following six considerations:
    - timings
    - volume requirements
    - product processing requirements
    - recipe reformulation to minimise waste
    - finishing requirements of sweet yeast products
    - baked parameters of sweet yeast products.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing sweet yeast products
- safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing sweet yeast products
- considerations for production scheduling, including:
    - timings
    - volume requirements
    - product processing requirements
    - recipe reformulation to minimise waste
    - finishing requirements of sweet yeast products
    - baked parameters of sweet yeast products
- recipe ratios and limits for enriched doughs
- types, functions, characteristics, and storage requirements of ingredients, including:
    - sugars
    - crumb softening agents
    - conditioned fruit
    - cream
    - icing
    - spices
- purpose and techniques for the cleaning, conditioning and use of fruits
- ingredient interactions for sweet yeast products, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - yeast and sugar ratios
    - reduced salt levels
    - reduced water levels
- characteristics of sweet yeast products, including:
    - filled sweet yeast product
    - fruited sweet yeast product
    - spiced sweet yeast bun or loaf
    - decorated sweet yeast product
- mixing processes and gluten development for enriched doughs
- principles of the sweet yeast production processes, including:
    - preparing fillings
    - inclusion of fruit and spices in sweet dough
    - decorating sweet yeast
    - cool phase retarding
    - warm phase retarding
    - baking
    - cooling
    - packaging
- techniques and requirements for finishing sweet yeast products
- impacts on production of different sweet yeast products, including:
    - dough temperature
    - mixing time and gluten development
    - water addition and consistency of dough
    - yeast activity
- techniques for calculating yields, adjusting recipes and measuring ingredients
- techniques for selecting tins and trays appropriate for dough piece scale weight, volume and size
- purpose and functions of sweet yeast settings, including:
    - baking times and temperatures
    - proving humidity and temperature
- required characteristics of sweet yeast products, including:
    - crumb softness
    - shelf life
    - flavour
    - visual appearance
- causes and corrective action for predictable and sometimes unpredictable sweet yeast problems, including:
    - machinery failure
    - environmental factors, including heat, humidity and cold
    - poor quality ingredients

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- techniques for disposing of waste
- sweet yeast production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment specified in the range of conditions
  - refrigeration
  - mechanical moulding equipment
  - mixing bowls
  - tins
  - ingredients that meet the sweet yeast product types required in the performance evidence
- specifications:
  - recipes that meet the sweet yeast product types required in the performance evidence
  - end-product quality specifications that meet the sweet yeast product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing sweet yeast products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPRBK3015 Schedule and produce bakery production

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has scheduled production for and produced 17 baked products over four shifts (Note: The scheduling of production is to be done prior to the production of the baked items), including:

- producing the following ten baked product types:
  - condensed or sandwich loaves
  - iced decorated sweet yeast bun
  - savoury bread rolls
  - laminated yeast dough as croissant product
  - whole grain flour breads
  - decorated round or square sponge cake that has a minimum diameter of 18 centimetres
  - flavoured bar cake decorated with icing
  - deposited cookie
  - cream or custard filled laminated product
  - decorated and filled choux pastry
- producing seven of the following 12 baked product types:
  - crusty loaf with no more than 2% enriching agents that is plaited, Vienna, French stick or cob
  - soft/enriched bread roll variety
  - crusty/lean bread rolls varieties
  - fruited sweet yeast product
  - savoury flat breads
  - fried basic artisan product as decorated donuts
  - wholemeal breads
  - sponge roll
  - cake slice decorated with icing or glaze

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - moulded and portioned biscuit
    - sweet filled pastry slice
    - filled sweet non laminated pies or tarts
- mixing, processing, baking and finishing each of the following four types of baked products per shift:
    - bread
    - cake or sponge
    - cookie or biscuit
    - laminated or non laminated pastry
- monitoring operations and addressing variations to the production schedule, ensuring end-product specifications and production targets are met
- documenting and implementing four daily production schedules, including the following production scheduling considerations:
    - production timings
    - product quality
    - reformulation of recipes to suit products
    - finished dough or batter temperatures
    - mixing, processing, baking and finishing requirements for products
    - special equipment or resources required for production
    - scheduling for each stage of the bakery production process, including labour requirements
    - equipment types
- documenting production reports for each of the four shifts that include:
    - scheduling efficiencies for use of equipment and labour in relation to items produced
    - wastage efficiencies of products produced
    - improvements on the scheduling to meet performance
    - product quantities produced in relation to products scheduled
    - completion times of product
    - product quality outcomes.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements applicable to scheduling and producing bakery products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- regulatory requirements for food safety applicable to producing bakery products, including temperature control and the prevention of cross-contamination in the use of dairy, meat, poultry, fish and vegetable products
- considerations relevant to scheduling bakery production, including:
  - production timings
  - product quality
  - reformulation of recipes to suit products
  - finished dough or batter temperatures
  - mixing, processing, baking and finishing requirements for products
  - special equipment or resources required for production
  - scheduling for each stage of the bakery production process
  - equipment types
- considerations relevant to reporting on production outcomes, including:
  - scheduling efficiencies, and whether completion times were met
  - wastage efficiencies of products produced
  - improvements on the scheduling to meet performance
  - product quantities produced in relation to products scheduled
  - completion times of product
  - product quality outcomes
- techniques used to regulate dough and batter maturation and proving, including:
  - temperature control
  - time
- predictable causes of production variation and their likely impact on production targets, including:
  - machine failure
  - product failure
  - calculation errors
  - estimation errors
- production processes for different product ranges, including:
  - use of specific equipment
  - use of specialised ingredients
  - additional preparation requirements
- baking industry terminology relevant to production scheduling.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - personal protective equipment
  - commercial bakery equipment and information on capacity
  - industrial oven
  - industrial mixer and attachments
  - pastry sheeter or dough break
  - refrigeration
  - ingredients to meet the product types required in the performance evidence
- specifications:
  - production schedule template that includes a level of detail that accurately represents workplace conditions
  - recipe specifications for product types required in the performance evidence
  - formulae to calculate batch weight to finished product weight
  - end product quality specifications to meet the product types required in the performance evidence
- timeframes:
  - five shifts that can be continuous or staggered, consisting of one shift for upfront scheduling of production of the baked products specified in the performance evidence, and four daily shifts for the production of the baked products specified in the performance evidence.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPRBK3016 Control and order bakery stock

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has controlled and ordered bakery stock, including:

- controlling and ordering three types of bakery stock, including:
  - refrigerated goods
  - frozen goods
  - dry store goods
- checking stock re-order levels
- completing stock order forms
- checking the following five requirements during receiving of stock:
  - incoming stock against order specifications
  - packaging condition
  - date codes of perishable items
  - temperature of perishables
  - ordered stock against supply arrangements, including time and delivery arrangements
- adhering to the following three requirements during storage of stock:
  - applying date labels to stock with limited shelf life
  - checking the condition of storage containers for damage
  - using safe manual handling procedures for lifting and moving ingredients
- meeting the following five requirements while maintaining the storage of stock:
  - cleaning dry goods storage areas
  - cleaning refrigerated goods storage areas
  - cleaning frozen goods storage areas
  - checking storage areas for pest contamination and identifying pest infestation indicators
  - rotating stock according to date codes on ingredients, and recording out-of-date stock

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- identifying and recording the following information in the process of ordering, receiving, storing and maintaining stores:
  - spoilt stock
  - stock losses
  - the cause of stock losses.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment (PPE), applicable to controlling and ordering bakery stock
- food safety procedures applicable to controlling and ordering bakery stock, including:
  - using storage containers
  - labelling and coding stock
  - humidity
  - temperature
  - ventilation
  - protection from common pests
  - protection from heat
  - protection from air conditioning
  - protection from accidental damage by people
  - protection from environmental heat
  - protection from environmental light
  - sanitary cleanliness
- types of bakery stock, including:
  - refrigerated goods
  - frozen goods
  - dry store goods
- principles of stock control, including:
  - rotation and replenishment
  - supplier lead times
  - safety stock
  - stock re-order levels
  - product life cycle and maximising the use of all stock
  - checking for usage rates of stock
  - segregating non-food items from food items that have the potential to cause contamination
- storage areas and the cleaning requirements to maintain hygienic conditions, including:
  - dry stores
  - cool rooms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - freezers
  - refrigerators
- types of contamination, including:
  - microbiological
  - chemical
  - physical
- types of stock quality checks, including:
  - type
  - quantity
  - use-by date
  - damaged packaging
  - odour
  - colour
- techniques for measuring and recording temperature in bakery stores
- bakery stores terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a retail bakery or an environment that accurately represents workplace conditions
  - designated delivery area
  - designated storage area for the bakery stock types required in the performance evidence
- resources, equipment and materials:
  - personal protective equipment
  - thermometer
  - refrigerated storage
  - frozen storage
  - dry storage
  - ingredients that meet the bakery stock types required in the performance evidence
  - temperature recording charts
- specifications:
  - food safe temperature tolerances
- relationships (internal and/or external):
  - bakery suppliers
- timeframes:
  - according to work requirements.

FBPRBK3017 Operate plant baking processes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to operate interrelated bread plant baking processes in a commercial baking environment.

This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

FBPRBK3005 Produce basic bread products.

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work	1.1 Confirm product types and volumes to schedule production 1.2 Calculate yield and adjust recipe to meet required production volumes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Confirm work area and work practices meet food safety and workplace health and safety requirements 1.4 Select and wear personal protective equipment according to safety requirements 1.5 Select plant baking equipment, and load and position materials, ingredients and products to meet production requirements
2. Mix bread plant dough	2.1 Measure ingredient quantities to meet recipe specification 2.2 Load ingredients into mixer in required placement 2.3 Operate and monitor mixer to achieve bread plant dough development for product type 2.4 Monitor bread plant dough mixing process to identify faults and rectify
3. Operate bread plant divider	3.1 Check condition and operation of dividing plates to prepare for operation 3.2 Check bread plant hopper and divider plates are oiled for use 3.3 Adjust bread plant divider settings for dough weight 3.4 Load dough into hopper and operate bread plant divider to divide dough 3.5 Measure dough weights to confirm divided dough meets weight specifications 3.6 Monitor bread plant dividing process to identify faults and rectify
4. Operate bread plant rounder moulder	4.1 Check condition and operation of bread plant rounder moulder to prepare for operation 4.2 Adjust bread plant rounder moulder settings for dough weight 4.3 Use bread plant rounder moulder to mould dough 4.4 Check dough tightness and smoothness of dough to identify faults and rectify 4.5 Check dough positioning for depositing into intermediate prover pockets to identify faults and rectify 4.6 Monitor bread plant moulding process to identify faults and rectify
5. Operate bread plant intermediate prover	5.1 Check condition, rotation and operation of bread plant intermediate prover to prepare for operation 5.2 Adjust bread plant intermediate prover settings to match speed of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	production 5.3 Check dough pockets to identify faults and rectify 5.4 Dust as required for product type 5.5 Monitor bread plant intermediate proving process to identify faults and rectify
6. Operate bread plant final moulder	6.1 Check condition and operation of bread plant final moulder to prepare for operation 6.2 Adjust bread plant final moulder settings for dough volume 6.3 Adjust bread plant final moulder plates and blades for dough type 6.4 Monitor 4-piecing unit and adjust to achieve optimum formation in tins 6.5 Monitor bread plant final moulding process to identify faults and rectify
7. Complete bread plant dough final prove	7.1 Locate and position bread pans and oiling equipment for final moulded dough 7.2 Place final moulded dough in oiled pans to prepare for final prove 7.3 Complete final prove of bread plant bread according to product type 7.4 Monitor bread plant final proving process to identify faults and rectify
8. Bake bread plant dough	8.1 Set baking temperatures and times to prepare for baking 8.2 Visually check dough size to confirm readiness for baking 8.3 Load oven and steam as required for product type 8.4 Monitor baking to achieve baked colour and stability required for bread plant product type 8.5 Unload and de-pan bread plant products to cool 8.6 Monitor bread plant baking process to identify faults and rectify 8.7 Check bread plant products bake to identify faults and rectify
9. Complete work	9.1 Clean equipment and work area to meet housekeeping standards 9.2 Dispose of waste according to workplace requirements 9.3 Complete workplace records according to workplace requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, and temperature, humidity and timer settings • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes, and water and dough temperatures • Divides dough into equal portions by estimated weight • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to set and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Plant baking equipment must include:	• equipment, including:
	  • industrial oven
	  • industrial mixer and attachments
	  • bread plant dough divider
	  • bread plant dough rounder moulder
	  • bread plant intermediate prover
	  • bread plant final moulder
	  • mechanical bread slicer
	• equipment accessories, including:
	  • divider blades
	  • intermediate prover pockets
	  • moulder plates
	• ancillary equipment, including:
	  • dry ingredients storage containers
	  • strapped baking tins
	  • strapped baking tin lids
	  • ingredient storage bins
	• tools and utensils, including:
	  • thermometer
	  • timer
	  • dough knives
	  • dough scrapers.

Assessment Requirements for FBPRBK3017 Operate plant baking processes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has operated plant baking processes to produce bread plant products, including:

- producing the following four bread plant dough types:
  - white bread
  - brown or wholemeal bread
  - grain bread
  - enriched sweet yeast bread
- producing the following five bread products:
  - crusty/lean loaf – plaited, Vienna, cob or stick
  - enriched sweet yeast bread loaf as high top or condensed loaves
  - enriched bread loaves as condensed or high top
  - brown or wholemeal bread loaves as high tops, condensed, cobs or Viennas
  - grain bread loaves as high tops, condensed, cobs or Viennas
- using the following two mixing processes:
  - mixing instant/no time doughs
  - mixing ferment
- using the following four bread plant processes:
  - bread plant dough divider
  - bread plant dough rounder moulder
  - bread plant intermediate prover
  - bread plant final moulder
- using the following three finishing techniques:
  - seeding
  - steaming

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - scoring
- using lids to condense loaves
- adjusting bread plant equipment settings to meet process output requirements
- inspecting equipment condition to identify and confirm that equipment is clean and configured for processing requirements
- positioning sensors or controls
- ensuring safety guards are in place and operational
- loading and positioning materials in bread plant equipment
- monitoring material flow and work-in-progress through the system
- selecting tins, bread boards, baskets or trays appropriate for dough piece scale weight, volume and size
- selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- documenting the production schedule, including the following nine considerations:
    - timings
    - volume requirements
    - product processing requirements
    - recipe reformulation to minimise waste
    - bread plant dough divider setting for product requirement
    - bread plant dough rounder moulder setting for product requirement
    - bread plant intermediate prover setting for product requirement
    - bread plant final moulder setting for product requirement
    - bake parameters for required products.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment (PPE), applicable to operating plant baking processes
- safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards
- food safety requirements applicable to operating plant baking processes
- considerations for production scheduling of plant baking processes, including:
    - timings
    - volume requirements
    - product processing requirements
    - recipe reformulation to minimise waste

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - bread plant dough divider setting for product requirement
    - bread plant dough rounder moulder setting for product requirement
    - bread plant intermediate prover setting for product requirement
    - bread plant final moulder setting for product requirement
    - bake parameters for required products
    - functions and characteristics of ingredients used in bread plant production, including food grade equipment oils in plant bread baking
- purpose and basic principles of the production system, including the flow of product from plant divider to plant rounder moulder to plant intermediate prover to plant final moulder
- basic operating principles of equipment and related accessories, including:
    - equipment adjustment points
    - purpose and status of guards
    - range, location and alignment requirements of sensors and related feedback instruments
    - single and multi-pocket dividers
    - spray panning units
    - de-panner units
    - conveyors
- operating capacities of equipment used in the system, including:
    - output capacity of mixer
    - output capacity of divider
    - total time through bread plant process from mixer to final plant moulder
    - principles of the bread plant baking production processes, including:
    - mixing
    - bread plant divider
    - bread plant rounder moulder
    - bread plant intermediate prover
    - bread plant final moulder
- techniques for calculating yields, adjusting recipes and measuring ingredients
- causes and corrective action for predictable and sometimes unpredictable bread plant problems, including:
    - machinery failure
    - environmental factors, including heat, humidity and cold
    - poor quality ingredients
- techniques for disposing of waste after bread plant production
- bread plant production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment
    - equipment specified in the range of conditions, and related accessories and services
    - ingredients that meet the bread plant products types required in the performance evidence
- specifications:
    - recipes that meet the bread plant product types required in the performance evidence
    - end-product quality specifications that meet the bread plant product types required in the performance evidence
- timeframes:
    - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK3018 Produce basic artisan products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to produce basic artisan products in a commercial baking environment. Basic artisan products include European basic artisan products, cultural basic artisan products, laminated basic artisan products, fried basic artisan products, highly enriched basic artisan products and festive occasion basic artisan products.

This unit applies to individuals who apply a broad range of specialised knowledge and skills with responsibility for their own work. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work	1.1 Confirm product types and volumes to schedule production 1.2 Calculate yield and adjust recipe to meet required production volumes 1.3 Confirm work area and work practices meet food safety and workplace health and safety requirements 1.4 Select and wear personal protective equipment according to safety requirements 1.5 Select basic artisan baking equipment and check to confirm readiness for use 1.6 Select ingredients and check to confirm quality and quantity
2. Mix basic artisan doughs	2.1 Measure ingredient quantities to meet recipe specifications 2.2 Load ingredients into mixer in required ingredient placement 2.3 Operate and monitor mixer to achieve basic artisan dough development for product type 2.4 Check mixed basic artisan dough to identify faults and rectify
3. Process basic artisan dough	3.1 Divide, scale, mould and intermediate prove basic artisan dough to meet required end-product shape and baked weight 3.2 Final mould and place on baking surfaces for final prove 3.3 Laminate basic artisan dough with laminating fat as required for product type 3.4 Retard basic artisan dough as required for product type 3.5 Final prove basic artisan dough as required for product type 3.6 Check processed basic artisan dough to identify faults and rectify
4. Pre-bake finish basic artisan products	4.1 Prepare pre-bake finishing mediums to recipe specification 4.2 Pre-bake finish basic artisan products to meet end-product specification 4.3 Check pre-bake finished basic artisan products to identify faults and rectify
5. Fry basic artisan products	5.1 Set frying temperatures and times to prepare for frying 5.2 Visually check basic artisan dough size to confirm readiness for frying

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	5.3 Load fryer and monitor frying to maintain fryer temperatures 5.4 Unload basic artisan fried products to cool 5.5 Check fried basic artisan products to identify faults and rectify
6. Bake basic artisan products	6.1 Set baking temperatures and times to prepare for baking 6.2 Visually check dough size to confirm readiness for baking, and load oven as required for product type 6.3 Monitor baking to achieve baked colour and stability required for basic artisan product type 6.4 Unload, de-pan and cool to meet basic artisan product type 6.5 Check basic artisan product to identify faults and rectify
7. Post-bake/fry finish basic artisan products	7.1 Prepare post-bake finishing mediums to meet recipe specifications 7.2 Post-bake finish baked and fried basic artisan products to meet end-product specification 7.3 Check post-baked finished basic artisan products to identify faults and rectify 7.4 Prepare and transfer basic artisan products for presentation and storage according to packaging and food safety requirements
8. Complete work	8.1 Clean equipment and work area to meet housekeeping standards 8.2 Dispose of waste according to workplace requirements 8.3 Complete workplace records according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, and temperature, humidity and timer settings • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes, water and dough temperatures, and dough and product dimensions • Divides dough into equal portions by estimated weight • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to mould dough shapes and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Basic artisan baking equipment must include:	• equipment, including:
	  • industrial oven
	  • industrial mixer and attachments
	  • pastry sheeter, dough break or rolling pin
	• ancillary equipment, including:
	  • oven baking trays
	  • cooling wires
	  • dough and pastry benches
	• tools and utensils, including:
	  • rolling pins

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• oven gloves • plastic and metal scrapers • containers used to store fillings • bowls and measuring jugs.

Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced basic artisan products according to a production schedule, including:

- producing the following seven basic artisan products:
  - laminated yeast dough as a croissant product
  - sweet laminated yeast dough as a danish product
  - basic artisan product as a display plaque
  - festive basic artisan product
  - lean basic artisan product as rolls or loaves
  - fried basic artisan product as decorated donuts
  - highly enriched basic artisan product
- processing one of the above basic artisan bread products as a retarded product
- mixing and using the following three doughs:
  - instant dough/scratch mix/no time dough
  - ferment
  - salted/dead display dough
- using the following three moulding techniques:
  - hand moulding
  - machine moulding
  - laminating yeast dough
- using the following two finishing techniques:
  - pre-bake finishing using pastes, washes or glazes
  - using creams, icings, chocolate or fondant to finish baked or fried product
- selecting, using and cleaning the basic artisan baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- selecting and using tins and trays appropriate for dough piece scale, weight, volume and size
- documenting the production schedule, including the following six considerations:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - finishing requirements for basic artisan product
  - baked parameters for basic artisan product.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing basic artisan products
- safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing basic artisan products
- considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - finishing requirements for basic artisan product
  - baked parameters for basic artisan product
- functions and characteristics of ingredients used in basic artisan production, including:
  - flour types
  - salt
  - yeast
  - fats
  - flavours and spices
  - fondant
  - chocolate
  - icing and glazes
- processes for making:
  - instant dough/scratch mix/no time dough

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - ferments
    - display doughs
- principles of retarding basic artisan products, including:
    - mixing
    - dough temperatures
    - cooling retarded products
    - warm phase with retarded products
- mixing processes and gluten development for:
    - highly enriched doughs
    - laminated doughs
    - display doughs
- types and use of pre-baked finishing for basic artisan products
- types and use of post-baked finishing for basic artisan products
- techniques for shaping basic artisan products, including:
    - crescent
    - plaque
    - rolls
    - loaf
- storage and shelf life of basic artisan products, including:
    - croissants – laminated
    - danish – laminated
    - lean crusty doughs
    - basic artisan display plaques
    - enriched basic artisan products
    - fried basic artisan products
- processing techniques for laminated doughs, including:
    - English method laminating
    - French method laminating
    - using lean and enriched doughs for laminating
    - selecting and using fats in lean and enriched laminated doughs
    - mixing of laminated doughs
    - proving and baking of laminated doughs
- processing of dough for display purposes, including:
    - using display dough
    - baking of display doughs
    - colouring of display doughs
- techniques for calculating yields, adjusting recipes and measuring ingredients
- purpose and functions of basic artisan baking and frying processes, including:
    - oven temperatures
    - baking times

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - proving times and temperatures
  - dry proving
  - frying temperatures
- causes of and corrective action for predictable and sometimes unpredictable basic artisan production problems, including:
  - machinery failure
  - environmental factors, including heat, humidity and cold
  - poor quality ingredients
  - poor oil quality in frying
- techniques for disposing of waste from basic artisan product production
- basic artisan product production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment specified in the range of conditions
  - deep fryer
  - tins
  - trays
  - ingredients that meet the basic artisan product types required in the performance evidence
- specifications:
  - recipes that meet the basic artisan product types required in the performance evidence
  - end-product quality specifications to meet the basic artisan product types required in the performance evidence
  - food safety code regulatory requirements applicable to producing basic artisan products
- timeframes:
  - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPRBK4001 Produce artisan bread products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced artisan bread products according to a production schedule, including:

- producing the following four artisan bread dough types:
  - sour dough pre-ferment dough
  - non sour pre-ferment dough
  - bulk ferment dough
  - sponge and dough
- using the following two sour types to produce the sour dough:
  - soft levain sour/poolish
  - stiff levain sour/biga
- using the following three mixing techniques:
  - low dough development
  - medium dough development
  - intensive dough development
- producing the following seven product shapes:
  - batard (Vienna)
  - bolais (round)
  - freeform
  - baguette
  - pan bread
  - flat bread
  - bread roll
- preparing and adding the following two filling types:
  - fruit filling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - savoury filling
- incorporating fillings using the following two methods:
  - including filling in artisan dough during mixing process
  - folding filling into artisan dough during folding process
- using the following three finishing techniques:
  - decorative dusting
  - decorative scoring
  - glazing
- selecting, using and cleaning the bread baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- documenting the production schedule, including the following five considerations:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - baked parameters for artisan bread products.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing artisan bread products
- safe use and cleaning of bread baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing artisan bread products, including temperature control and prevention of cross-contamination in the use of dairy products, meat, poultry, fish products and vegetable products
- techniques and considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - recipe reformulation to minimise waste
  - baked parameters for artisan bread products
- functions and characteristics of ingredients used in artisan bread production, including:
  - artisan flour varieties
  - yeast used in artisan bread products
- preparing sours, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - source and characteristics of sours
    - techniques for developing sours
    - techniques for using sour
    - techniques for feeding sours
    - matching of sours to artisan bread product types
- artisan production processes, including:
    - mixing of artisan ferments
    - types of artisan ferments
    - artisan folding processes
    - artisan proving processes
    - artisan baking processes
- artisan mixing techniques and mixing outcome requirements for:
    - low dough development
    - medium dough development
    - intensive dough development
- product types, processes and characteristics of artisan product types, including:
    - batard (Vienna)
    - bolais (round)
    - freeform
    - baguette
    - flat bread
- types of fillings used in artisan breads:
    - fruit filling
    - savoury filling
- methods of incorporating fillings, including:
    - including filling in artisan dough during mixing
    - folding filling into artisan dough during folding process
- techniques and requirements for finishing, including:
    - decorative dusting
    - decorative scoring
    - glazing
- impacts on production of different artisan bread products, including:
    - length and duration of ferments
    - refrigeration space for processing artisan doughs
    - oven capacity and length of bake
    - scheduling different artisan ferment varieties to match production timing
- required characteristics of artisan bread products, including:
    - aroma
    - flavour
    - crumb structure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - strength and tenacity
- causes and corrective action for predictable and sometimes unpredictable bread production problems, including:
    - machinery failure
    - environmental factors, including heat, humidity and cold
    - poor quality ingredients
- techniques for disposing of waste from artisan bread production
- artisan bread production terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment
    - equipment specified in the range of conditions
    - trays
    - ingredients that meet the artisan bread product types required in the performance evidence
- specifications:
    - recipes that meet the artisan bread product types required in the performance evidence
    - end-product quality specifications to meet the artisan bread product types required in the performance evidence
    - food safety code regulatory requirements applicable to producing artisan bread products
- timeframes:
    - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK4002 Develop advanced artisan bread methods

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to develop advanced artisan bread methods in a commercial baking environment.

This unit applies to individuals who apply a broad range of specialised knowledge and skills with responsibility for their own work. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

FBPRBK4001 Produce artisan bread products.

Note the following chain of prerequisites that also applies to this unit.

Unit of competency	Prerequisite requirement
FBPRBK4001 Produce artisan bread products	FBPRBK3005 Produce basic bread products

Unit Sector

Retail baking (RBK)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Conduct advanced artisan bread product experiments	1.1 Research and analyse local and international advanced artisan bread making trends to extend knowledge of artisan dough rheology 1.2 Apply knowledge of advanced artisan bread making to inform advanced artisan bread making ideas 1.3 Adapt recipes and processes based on advanced artisan bread making ideas 1.4 Use experimentation to trial and refine advanced artisan bread ideas and achieve desired advanced artisan bread product outcomes 1.5 Produce advanced artisan bread products using recipes and baking processes based on research and experimentation 1.6 Document trial outcomes, recipes and process and product specifications according to workplace procedures
2. Apply advanced finishing methods to bread	2.1 Research and analyse advanced finishing trends to extend knowledge of advanced finishing methods 2.2 Apply knowledge of advanced finishing methods to inform advanced finishing design ideas 2.3 Finish advanced artisan bread products using advanced design methods of moulding and scoring
3. Apply sensory analysis to assess advanced bread products	3.1 Prepare advanced bread product evaluation samples for sensory analysis testing 3.2 Undertake sensory analysis of bread samples to evaluate bread properties 3.3 Document sensory analysis findings for advanced bread product according to workplace requirements
4. Provide advice on food and beverage compatibility	4.1 Assess the compatibility of advanced artisan breads with food items and beverages 4.2 Develop informed opinions to support the selection of compatible food and beverage items with flavour profiles of advanced artisan bread products 4.3 Document food and beverage matching to support advanced artisan bread products according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Undertakes independent research and experimentation, and reflects on performance to build own knowledge and skills of advanced artisan bread making methods
Reading	• Sources, interprets and analyses advanced artisan bread making information from a range of technical baking industry texts
Writing	• Prepares recipes, trial records, process and product specifications, sensory analysis outcomes and compatibility documentation using structure, technical language and format appropriate to purpose
Numeracy	• Extracts and interprets mathematical information embedded in technical baking industry texts • Performs calculations and uses baking product formulas to interpret, adapt and adjust artisan bread recipes • Uses mathematical symbols and conventions relevant to the baking industry to document trial outcomes, recipes, and process and product specifications
Navigate the world of work	• Works independently to keep abreast of advanced artisan bread making trends
Interact with others	• Recognises the importance of consulting with others when formulating advice on food and beverage pairing
Get the work done	• Uses problem-solving skills to analyse and evaluate advanced artisan bread making ideas and trial outcomes and decide on appropriate action • Takes responsibility for planning, organising and implementing tasks required to achieve required outcomes

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Advanced finishing methods must include:	• advanced stencilling using speciality stencils • oiled dough skins • advanced scoring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• advanced moulding.
Bread properties must include:	• flavour profiles • crumb and crust textures • internal and external appearance • aromas • baked condition.

Assessment Requirements for FBPRBK4002 Develop advanced artisan bread methods

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has developed advanced artisan bread making methods to produce three different artisan bread varieties, where the advanced methods include:

- using the following three flours, including:
  - rye flour
  - whole wheat flour
  - speciality flour
- producing one of the artisan bread varieties with a total hydration of 80–90% on total flour weight
- producing the following three types of advanced artisan bread products incorporating an extended fermentation period, a pre-ferment dough and excluding bread improvers:
  - Italian loaf
  - French loaf
  - German loaf
- preparing and developing the following three flavours in the doughs:
  - a perpetual sour
  - a creative gourmet fruit
  - a creative gourmet savoury
- creating and using two advanced specialty artisan bread stencils:
  - logo stencil
  - artistic stencil
- applying oiled dough skins to advanced artisan bread doughs as an advanced baked finishing method
- applying advanced decorative cutting and scoring.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The assessment of the advanced artisan bread products listed above must include:

- conducting a sensory analysis of the following:
  - flavour profiles
  - crumb and crust textures
  - internal and external appearance
  - aromas
  - baked condition
- preparing a report on sensory analysis documenting:
  - sour flavours in advanced artisan breads
  - prepared creative gourmet flavoured advanced artisan breads.

The advice provided on food and beverage compatibility of the products listed above must include:

- the following advanced artisan bread products:
  - prepared perpetual sour bread
  - prepared creative gourmet sweet bread
  - prepared creative gourmet savoury bread
- food matching against two of the following four food groups:
  - meat
  - dairy
  - fruit or jams or jellies
  - pates or dips or spreads
- food matching against two of the following three beverage groups:
  - white or red wine
  - beer or cider
  - non-alcoholic beverage.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- advanced artisan bread product types, including extended fermentation periods and pre-ferments for:
  - Italian loaf
  - French loaf
  - German loaf
- techniques for preparing and developing the flavours into the artisan doughs, including:
  - perpetual sour
  - creative gourmet sweet flavour
  - creative gourmet savoury flavour

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- changes in advanced artisan bread products when there are high hydration rates of 80–90% based on total flour weight
- types of specialty bread stencils
- techniques for designing, cutting and using specialty bread stencils on advanced artisan bread products
- techniques for producing oiled dough skins
- advanced decorative scoring on advanced artisan breads, including scoring to control direction of tear and scoring to create decorative designs
- types and varieties of advanced moulding relevant to advanced artisan breads
- factors affecting sensory analysis when applying the five senses to baked products, including:
  - sight, including lighting effect, crumb colour and baked colour
  - smell, including effect of fermentation time and sours on aroma and acidic aromas
  - taste, including effect of temperature, sour quality, hydration level and fermentation time on flavour profile
  - touch, including effect of processing methods, recipes and baking on softness in crumb and crust
  - hearing, including effect of baking time and dehydration on tapped sound
- factors affecting sour variations in advanced artisan breads
- principles of food and beverage pairing, including:
  - texture
  - flavour profiles, including acidity, sweetness and bitterness
  - weight of food
  - body of wine
  - complement and contrast
- how the flavours and textures of the following complementary food products can affect the flavours and textures of advanced artisan breads:
  - meat
  - dairy
  - fruit or jams or jellies
  - pates or dips or spreads
- how the characteristics and flavours of the following beverages can affect the flavours and texture of advanced artisan breads:
  - white or red wine
  - beer or cider
  - non-alcoholic beverage
- advanced artisan bread making terminology
- advanced finishing terminology
- food and beverage pairing terminology.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - industrial mixer and attachments
  - industrial oven
  - personal protective equipment
  - ingredients that meet advanced artisan bread product requirements
- specifications:
  - artisan bread recipes to adapt
- timeframes:
  - according to work requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK4003 Produce gateaux, tortes and entremets

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to produce and finish gateaux, tortes and entremets in a commercial baking or hospitality environment.

This unit applies to individuals who apply a broad range of knowledge and skills with responsibility for their own work. This includes applying and communicating known solutions to predictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

FBPRBK3010 Produce cake and pudding products.

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for work	1.1 Confirm product types and volumes to schedule production 1.2 Calculate yield and adjust recipe to meet production volumes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Confirm work area and work practices meet food safety and workplace health and safety requirements 1.4 Select and wear personal protective equipment according to safety requirements 1.5 Select baking equipment for gateaux, tortes and entremets and check to confirm readiness for use 1.6 Select ingredients and check to confirm quality and quantity 1.7 Prepare tins, trays and pans to match type of gateaux, tortes or entremets
2. Prepare bases for gateaux, tortes and entremets	2.1 Measure ingredient quantities to meet recipe specifications 2.2 Process ingredients to mix bases for gateaux, tortes and entremets 2.3 Set and load oven and monitor baking to bake bases 2.4 Check base bake to identify faults and rectify 2.5 Prepare and transfer bases for storage in accordance with food safety requirements
3. Prepare fillings and finishes for gateaux, tortes and entremets	3.1 Measure filling and finishing ingredient quantities to meet recipe specifications 3.2 Process ingredients to make fillings and finishes for gateaux, tortes and entremets 3.3 Check fillings and finishes for gateaux, tortes and entremets to identify faults and rectify 3.4 Prepare and transfer fillings and finishes for storage according to food safety requirements
4. Assemble gateaux, tortes and entremets	4.1 Prepare bases for assembly to meet product type 4.2 Combine fillings and bases to assemble gateaux, tortes and entremets as required for product type 4.3 Check assembly for gateaux, tortes and entremets to identify faults and rectify
5. Finish gateaux, tortes and entremets	5.1 Apply finishes to gateaux, tortes and entremets as required for product type 5.2 Apply garnishes to finish gateaux, tortes and entremets as required for product type 5.3 Check finishing for gateaux, tortes and entremets to identify faults

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	and rectify 5.4 Prepare and transfer finished gateaux, tortes and entremets for presentation and storage according to packaging and food safety requirements
6. Complete work	6.1 Clean equipment and work area to meet housekeeping standards 6.2 Dispose of waste according to workplace requirements 6.3 Complete workplace records according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interprets key information from recipes, ingredient labels, baking equipment operating instructions and end-product specifications
Writing	• Prepares production schedules and completes production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, temperature and timer settings and product dimensions • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes and product dimensions • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses understanding of three-dimensional shapes to shape and portion products and check end-product shapes • Interprets measurement information to set, monitor and adjust process parameters • Completes production records using mathematical symbols and conventions
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults and decide on appropriate action

Range of Conditions

This section specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Baking equipment for gateaux, tortes and entremets must include:	• equipment, including:
	  • industrial mixer and attachments
	  • freezer
	  • cool room or refrigerator
	  • industrial cook tops
	• equipment accessories, including:
	  • dough hook attachment
	  • cake beater attachment
	  • cake whisk attachment
	• ancillary equipment, including:
	  • rolling pin
	  • cake hoops or tins
	  • equipment to temper chocolate
	  • plateware for entremets
	• tools and utensils, including:
	  • pallet knives
	  • ladles or spoons
	  • scrapers
	  • cake knives.

Bases must include:	• cake • laminated or short pastry.
Fillings and finishes must include:	• sabayon or custard • aerated creams • chocolate-based glazes or sauces • tempered couverture chocolate • fruit fillings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• bavarois or mousse • meringue or butter cream • chocolate or sugar garnishes.

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has produced gateaux, tortes and entremets according to a production schedule, including:

- producing the following three products:
  - gateaux
  - torte
  - small entremets
- presenting entremets on plateware appropriate for the entremets type, with the following three finishes:
  - using a sauce or coulis to present entremets
  - using a garnish of sugar or chocolate to present entremets
  - using an ice cream or sorbet to present with entremets
- producing gateaux and tortes using the following two bases made from scratch ingredients:
  - non laminated or laminated pastry
  - cake
- using the following three processes for producing gateaux, tortes and entremets:
  - chilling
  - freezing
  - baking
- using the following eight fillings and finishes prepared from scratch ingredients:
  - sabayon or custard
  - aerated creams
  - chocolate-based glazes or sauces
  - tempered couverture chocolate
  - fruit fillings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - bavarois or mousse
  - meringue or butter cream
  - chocolate or sugar garnishes
- using the following three decorating techniques for gateaux and tortes:
  - couverture chocolate
  - glazing
  - prepared garnishes
- using the following three garnishes:
  - chocolate garnishes
  - sugar garnishes
  - baked garnish
- selecting, using and cleaning the baking equipment listed in the range of conditions, including controlling electrical hazards applicable to cleaning
- documenting the production schedule, including the following six considerations:
  - timings
  - volume requirements
  - product processing requirements
  - finishing requirements for gateaux, tortes and entremets
  - presentation of gateaux, tortes and entremets
  - recipe reformulation to minimise waste.

Wastage that cannot be reused in production must be less than 5% of the weight of the original production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to producing gateaux, tortes and entremets
- safe use and cleaning of baking equipment listed in the range of conditions, including electrical hazards
- regulatory requirements for food safety applicable to producing gateaux, tortes and entremets
- considerations for production scheduling, including:
  - timings
  - volume requirements
  - product processing requirements
  - finishing requirements for gateaux, tortes and entremets
  - presentation of gateaux, tortes and entremets
  - recipe reformulation to minimise waste

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- distinguishing characteristics of types of gateaux, tortes and entremets, including:
  - cold-set gateaux
  - multi-layered tortes
  - small entremets
- types of fillings and finishes, including:
  - sabayon
  - aerated creams
  - chocolate-based glazes and sauces
  - tempered couverture chocolate
  - bavarois or mousse
  - meringue
  - butter creams
  - baked garnish
  - custard
  - fruit filling
  - chocolate garnish
  - sugar garnish
- techniques for presenting entremets, including:
  - selecting plateware
  - presenting entremets at the appropriate temperature for the product type
- techniques for finishing, including:
  - using sauces and coulis to present entremets
  - using garnishes of sugar to present entremets
  - using garnishes of chocolate to present entremets
- assembling gateaux, tortes and entremets
- preparing cake tins and hoops
- purpose and functions of production settings, including:
  - oven temperatures
  - baking times
  - chill times
- required characteristics of gateaux, tortes and entremets, including:
  - appearance
  - consistency
  - shape
  - taste
  - texture
  - complementing flavours
- causes and corrective action for predictable and sometimes unpredictable production problems, including:
  - machinery failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - environmental factors, including heat, humidity and cold
    - poor quality ingredients
- techniques for disposing of waste from product production
- requirements for chilling and freezing gateaux, tortes and entremets
- product production terminology for gateaux, tortes and entremets.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - equipment specified in the range of conditions
    - personal protective equipment
    - mixing bowls
    - piping bags and nozzles
    - industrial oven
    - tins and trays
    - measuring cups and spoons
    - ingredients that meet the product types required in the performance evidence
    - pre-made flavoured ice cream or sorbet
    - prepared garnishes
- specifications:
    - recipes that meet the types of gateaux, tortes and entremets required in the performance evidence
    - end-product quality specifications to meet the product types required in the performance evidence
    - food safety code regulatory requirements applicable to producing gateaux, tortes and entremets
- timeframes:
    - according to the production schedule.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

	4.7 Record production trial variables and results according to workplace procedures
5. Confirm product development	5.1 Schedule and reproduce product to confirm recipe and process specification 5.2 Assess suitability of existing packaging supplies for final product packaging 5.3 Evaluate final product to verify product specifications and food safety requirements are met 5.4 Calculate final product cost using final recipes and process specifications 5.5 Determine product pricing and confirm commercial viability

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Builds on knowledge of baking products and processes based on production trial outcomes
Reading	• Sources and interprets a range of technical baking industry texts to determine relevance and usefulness for product development
Writing	• Prepares recipes, production trial records and process and product specifications using structure, technical language and format appropriate to purpose
Numeracy	• Extracts and interprets mathematical information embedded in technical baking industry texts • Interprets financial information, including fixed and variable costs, profit margins and sale price ranges • Performs calculations to develop and adjust recipes using baking formulas • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes and determine size of packaging for product • Interprets measurement information to set, monitor and adjust

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	process parameters • Uses mathematical symbols and conventions to document recipes, production trial records, and process and product specifications
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Uses problem-solving skills to evaluate production trial outcomes and decide on appropriate action • Takes responsibility for planning, organising and implementing tasks required to achieve required outcomes • Uses digital technologies to set process parameters

Assessment Requirements for FBPRBK4004 Develop baked products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has developed one of the following baked products, using a minimum of eight ingredients and applying a pre- or post-baked finish component:

- a specialty bread
- a cake based product
- a pastry-based product.

The activities to develop the baked product must include:

- researching product and process development opportunities
- meeting one of the following six purposes:
  - identified market opportunity
  - cost saving for current product
  - healthy eating improvement for current product
  - time and labour improvement for current product
  - product quality improvement for current product
  - a special dietary, cultural or religious need
- preparing trial recipes
- conducting at least one production trial
- evaluating the final product to verify the following seven technical qualities of the product:
  - flavour style
  - moisture
  - structure
  - taste

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - symmetry
  - appearance
  - aroma
- assessing the potential commercial viability of the product, including the following four considerations:
  - cost price versus final sales price
  - local market suitability
  - suitability of packaging and transport
  - compliance with food safety code regulatory requirements for the product and its ingredients.

The individual must prepare a final report that includes the following information:

- product development purpose and concept
- description of the special dietary, cultural or religious need
- production trial variables and results
- final product specification, including product assembly and presentation
- final product recipe
- final process specification
- final production work flow
- final product costing
- final product price.

The individual must reproduce the final product within operational constraints where the maximum waste is less than 5% of the weight of the production schedule.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements, including personal protective equipment, applicable to developing baked products and operating baking equipment
- regulatory requirements for food applicable to developing baked products
- identifying and evaluating product development opportunities
- purposes of product development, including:
  - meeting identified market opportunity
  - cost saving to current product
  - healthy eating improvement to a current product
  - time and labour improvement to a current product
  - product quality improvement to a current product
  - a special dietary, cultural or religious need

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- commercial viability considerations used in product development, including:
  - addressing market or business opportunity
  - producing within operational constraints
  - cost price versus final sales price
  - local market suitability
  - suitability of packaging and transport
- types of production trial problems, including:
  - increased ingredient costs
  - non-availability of ingredients
  - equipment breakdown
  - labour shortages
- nature of special dietary requirements and gluten intolerance as it relates to developing baked products, including:
  - eggs
  - fish
  - milk
  - peanut
  - sesame
  - shellfish
  - soy
  - tree nuts
  - wheat
  - food allergy or food intolerance
- nature of cultural needs as they relate to developing baked products, including:
  - Australian
  - Asian
  - Indian
  - Middle Eastern
  - South European
  - African
- nature of religious needs as they relate to developing baked products, including:
  - Buddhism
  - Hinduism
  - Islam
  - Judaism
  - Christianity
- purpose and content of product development documentation, including:
  - product development purpose and concept
  - description of the special dietary, cultural or religious need
  - production trial variables and results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - final product specification, including product assembly and presentation
  - final product recipe
  - final process specification
  - final production work flow
  - final product costing
  - final product price
- interaction of ingredients and processing variables and their effect on the quality of the final product, including:
  - product formulas
  - process parameters
- product evaluation, including:
  - flavours
  - moisture
  - structure
  - taste
  - symmetry
  - appearance
  - aroma
- techniques for determining product packaging and presentation for baked product development
- using industry standard terminology relevant to baked product development.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or an environment that accurately represents workplace conditions
  - local market for which product is to be developed
  - commercial bakery resources, equipment and materials suitable for the development of baked products
  - ingredients that meet baked product requirements
- specifications:
  - food standard code regulatory requirements applicable to developing baked products
- timeframes:
  - according to work requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK4005 Apply advanced finishing techniques for specialty cakes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to research and apply a range of finishing and decorating techniques for specialty cakes in a commercial baking or professional decorating environment.

This unit applies to individuals who apply a broad range of specialised knowledge and skills with responsibility for their own work. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Conduct research into	1.1 Identify and access information resources to inform the technical

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	according to organisational requirements 6.3 Identify and rectify storage and presentation problems in accordance with food safety requirements
7. Complete work	7.1 Clean equipment and work area to meet housekeeping standards 7.2 Dispose of waste according to workplace requirements 7.3 Complete workplace records according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**
Reading	• Interprets client briefs, recipes and ingredient labels • Interprets equipment operating instructions • Interprets textual information obtained from a range of sources, and determines how content may be applied to advanced finishing
Writing	• Maintains production records using required format, language and structure
Numeracy	• Identifies and comprehends ingredient quantities in recipes, dates on ingredient labels, temperature and timer settings and product dimensions • Estimates approximate quantities, and uses equipment to measure ingredient weights and volumes and product dimensions • Uses understanding of three-dimensional shapes to shape and portion products and check end-product shapes
Oral communication	• Uses questioning techniques and active listening to confirm details, clarify responses and seek advice on finishing designs
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Plans, organises and implements tasks required to achieve production outcomes • Uses problem-solving skills to analyse product and process faults

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has designed and applied advanced finishing and decoration to two speciality cakes to reflect different client designs. One of the specialty cakes must be tiered. The cakes must include two of the following shapes:

- square or oblong
- oval or circle
- novelty shape.

The advanced finishing and decorating of the specialty cakes must:

- include two of the following decorations:
  - figurine
  - floral
  - specialty shapes
- use two of the following decorating mediums:
  - fondant icing
  - marzipan
  - chocolate paste, icing or glaze
  - butter cream
- incorporate the following processes:
  - masking
  - enrobing
  - piping
  - modelling.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The individual must produce a written report that demonstrates a design plan has been incorporated into one of the specialty cakes, including:

- product finishing requirements
- special decoration ingredients
- special equipment and process requirements
- design parameters, including colours, flavours, servings and quantity
- filling and decoration recipe specifications
- storage requirements
- shelf life specifications
- packaging and presentation instructions
- product costing and pricing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- information resources to guide selection and implementation of cake decorating design and techniques
- ingredient characteristics, purpose and preparation requirements, including:
  - scope to substitute or vary ingredients in a recipe
  - the effect of ingredients on shelf life and food safety
  - the role, preparation requirements and uses of additives, including colours and flavours
- types and handling of bases, including:
  - fruit cake
  - mud cake
  - torte
  - sponges
- use and storage of decorating ingredients and materials, including:
  - fondant icing
  - marzipan
  - chocolate paste, icing or glaze
  - butter cream
  - syrups
  - flavoured sauces and toppings
  - cream
- finishing and decorating tools and techniques used to create decorative pieces and garnishes, including:
  - sugar flowers
  - cut shapes
  - moulded shapes
  - sculptures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - cake toppers
- content for design plans, including:
    - product finishing and decoration ingredient, equipment and process requirements
    - design parameters, including colours, flavours, servings and quantity
    - filling and decoration recipe specifications
    - storage requirements
    - shelf life specifications
    - packaging and presentation instructions
    - product costing and pricing
- optimum related sequencing and preparation requirements for cake decorations
- optimum conditions for use of finishings, including temperature and moisture content
- optimum storage conditions and the effect of refrigeration and freezing on finished product
- information to be provided to consumers as appropriate to product type and consistent with food safety requirements
- methods of estimating fixed and variable costs, and profit margin to determine sale price range
- work health and safety hazards and controls relating to work processes
- industry standard terminology applicable to advanced finishing.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a commercial bakery or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - cake mixer and attachments
    - mixing bowls
    - piping bags and nozzles
    - measuring cups and spoons
    - cake decorating tools and equipment
    - personal protective clothing and equipment
    - documentation or technology for recording information
    - cleaning procedures, materials and equipment
    - ingredients that meet the product types required in the performance evidence
    - production costing information
    - cleaning procedures, materials and equipment
- specifications:
    - recipes that meet the product types required in the performance evidence
    - product design briefs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relationships (internal and/or external):
  - supervisor
- timeframes:
  - according to work requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK4006 Coordinate baking operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to coordinate baking operations in a commercial baking environment.

This unit applies to individuals who apply a broad range of specialised knowledge and skills with responsibility for their own work and limited responsibility for the output of others in a team. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	produce baked product types and production volumes 1.3 Select and collate master recipes to meet baked product types, and adjust to meet production volumes 1.4 Prepare preparation lists to specify pre-production requirements 1.5 Prepare production schedules to meet production volumes 1.6 Calculate and check availability of bakery supplies needed to meet baked product types and volumes, and order additional stock as required to meet bakery production supply needs
2. Monitor and control bakery production	2.1 Provide production schedules to bakery production staff for implementation 2.2 Confirm recipes used meet required baked product types 2.3 Monitor and address food safety risks to meet food safety standards 2.4 Monitor and address workplace health and safety risks to meet safety requirements 2.5 Monitor and control bakery work flow to maximise productivity 2.6 Monitor and control product and process parameters to meet end-product specifications, including the baked weight
3. Complete bakery production	3.1 Confirm bakery production, including customer special orders, meets scheduled product types, volumes and times 3.2 Confirm final product evaluations meet end-product specifications prior to product release for storage or sale 3.3 Confirm safe storage of baked products according to food safety standards and workplace procedures 3.4 Complete baking operations documentation according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Interprets key information in customer special orders, master recipes, stock control documents and end-product specifications
Writing	• Prepares comprehensive and accessible baking operations documentation using structure, technical language and format appropriate for purpose and audience
Oral communication	• Uses vocabulary relevant to role and context to convey and clarify information with suppliers and special order information with customers or bakery staff
Numeracy	• Extracts and interprets mathematical information embedded in baking operations texts, including customer special orders, master recipes, stock control documents and end-product specifications • Performs calculations to adjust recipes using baking formulas, and allows for wastage • Uses estimation to inform sequencing and timing of bakery production processes and products • Interprets measurement information to monitor and control bakery operations • Uses mathematical symbols and conventions to complete bakery operations documentation
Interact with others	• Selects and uses appropriate communication techniques with bakery production staff to delegate work, discuss work requirements, implement process improvements and debrief on products and recipes
Navigate the world of work	• Complies with workplace health and safety and food safety regulatory requirements relevant to a commercial baking operation • Follows organisational policies and procedures relevant to own work role
Get the work done	• Takes responsibility for identifying and addressing production work flow and product quality problems to optimise production efficiencies

Assessment Requirements for FBPRBK4006 Coordinate baking operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has coordinated baking operations, including:

- coordinating at least one of the following four baking operations:
  - bread production process
  - cake production process
  - pastry production process
  - combination of any of the above three bakery production processes
- coordinating at least two of the following seven baked product ranges:
  - decorated products
  - post-bake decorated products
  - retarded yeast goods
  - frozen bakery goods
  - fresh baked bakery goods
  - packaged bakery goods
  - unpackaged bakery goods
- developing and documenting a production schedule that includes:
  - a logical sequence of bakery production processes
  - an accurate estimation of required ingredient and equipment resources to satisfy production volumes, allowing for 5% maximum product wastage
  - specification of the plant, labour and material inputs
  - specification of the finished products outputs
  - matching the required volume of production to the existing resources
- developing and documenting a preparation list, including consideration of:
  - pre-preparation of ingredients
  - pre-preparation of fillings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - pre-preparation of finishings
  - pre-preparation of equipment
- calculating and ordering bakery supplies, including consideration of:
  - stock levels required for production
  - special agreements with suppliers of stock
  - stock delivery constraints
- preparing recipes for production, including:
  - master recipes adjusted for volume
  - processing requirements of the products
  - special considerations for time, temperature and special dietary needs
  - equipment required
- monitoring operations and addressing variations to ensure product specifications and production volumes are met.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety requirements applicable to coordinating bakery operations
- regulatory requirements for food safety applicable to coordinating bakery operations
- the stages and work flow requirements of bakery production processes for:
  - decorated products
  - post-bake decorated products
  - retarded yeast products
  - frozen bakery products
  - fresh baked bakery products
  - packaged bakery products
  - unpackaged bakery products
- principles of production scheduling, including:
  - logical sequence of work
  - time constraints of products and processes
  - specification of the plant, labour and material inputs
  - specification of the finished products outputs
  - allowing for wastage
  - estimating ingredient requirements for production
  - equipment output volumes
  - labour requirements for production
  - scheduling production to finish products after cooling in time for delivery and sale
  - matching the required volume of production to the existing resources
- pre-production requirements for baking operations, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - types of fillings that need to be prepared prior to production
    - types of finishings required for a bakery production
- content and layout of master recipes and how to adjust for volume
- production reporting methods used in bakeries
- indicators of the quality baked products, including:
    - baked colour
    - crumb and internal textures
    - consistency
    - moisture content
    - mouth feel and eating properties
    - shape
    - taste
    - texture
    - baked weight
- bakery operations standard terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a commercial bakery or an environment that accurately represents workplace conditions
    - commercial resources, equipment and materials suitable for the production of the bakery products required in the performance evidence
- specifications:
    - master recipes that meet the product types required in the performance evidence
    - end-product specifications that meet the product types required in the performance evidence
- relationships (internal and/or external):
    - suppliers
    - bakery production staff
- timeframes:
    - according to work requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK4007 Assess and evaluate bread products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to evaluate the quality of baked bread products.

This unit is applicable to a commercial baking environment, particularly during product testing, confirming the quality of developed products and judging products for a baking competition or for commercial positioning. It can be applied to a specific bakery product range and should be customised to the quality standards of that product range.

This unit applies to individuals who apply a broad range of specialised knowledge and skills with responsibility for their own work. This includes applying and communicating non-routine technical solutions to predictable and unpredictable problems.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements	Performance Criteria

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Determine methodology for evaluating bread product quality	1.1 Define product and identify product class 1.2 Research and identify standards relevant to product class 1.3 Review product class standards and select product quality criteria 1.4 Select evaluation methodology to ensure standardised evaluation approach
2. Assess bread product	2.1 Assess product volume and appearance against standards 2.2 Assess product characteristics, including texture, aroma, colour and taste against standards 2.3 Assess technical difficulty and originality of product against standards 2.4 Document assessment findings according to workplace procedures
3. Complete bread evaluation	3.1 Use assessment findings to rate product characteristics against product quality criteria 3.2 Identify common product problems and determine their causes 3.3 Review ratings to determine product strengths and weaknesses against the standards 3.4 Document evaluation according to workplace procedures
4. Make bread product comparisons and recommendations	4.1 Compare product with other products of its class 4.2 Interpret findings to make recommendations for quality rating and commercial positioning of product 4.3 Make recommendations for product improvement according to findings

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**
Reading	• Interprets textual information obtained from a range of sources and determines how content may be applied to product evaluation
Writing	• Integrates information from a number of sources to develop evaluation criteria and methodology

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	• Prepares assessment reports using technical baking terminology and clear, logical language
Oral communication	• Uses questioning techniques and active listening to confirm details, clarify responses and seek advice
Navigate the world of work	• Independently keeps up-to-date with baking product knowledge and quality standards
Get the work done	• Plans, organises and implements tasks required to achieve required outcomes

Assessment Requirements for FBPRBK4007 Assess and evaluate bread products

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has assessed and evaluated three of the following bread products:

- sweet product
- fibre product
- rye product
- meal product
- savoury product
- basic bread product
- sour bread product
- specialty bread product
- decorative bread product.

The evaluation and assessment of the three product varieties must be benchmarked against at least three other products of the same variety to produce comparative findings and qualitative judgements. The individual must also have researched two different baking industry sources and selected suitable product quality criteria to make the assessment and evaluations.

The bread products to be assessed and evaluated must include:

- three of the following product finishes:
  - baked finished product
  - post-baked finished product
  - dusted product
  - seed product
  - decorative finished product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - glaze finished product
    - cream or iced finished product
    - sweet finished product
- at least two of the following shapes:
    - condensed
    - roll
    - baton
    - sandwich
    - loaf/Vienna
    - high top
    - parcel
    - baguette
    - novelty shape.

In assessing and evaluating one bread product, the individual must create a written report that includes each of the following categories:

- appearance, including:
    - symmetry, uniformity and volume
    - presentation and cleanliness
    - crumb character
    - baked or fried colour
    - general character
- texture, including:
    - crumb cell size
    - gas cell structure
    - feel and softness
    - crumb stability
    - moisture of product
- aroma, including:
    - freshness
    - fermentation aromas as required by product
    - aroma suitability to product type
- flavour, including:
    - suitability of product variety
    - freshness
    - sweetness according to flavour variety required
    - levels of salt according to flavour variety required
    - quality of ingredients.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The evaluation and assessment report must also include the following considerations:

- storage stability and shelf life
- product cost compared to product quality
- suitability of packaging against the product variety
- technical difficulty
- product originality
- appearance
- volume
- problems or faults with the product and their causes
- an overall numerical score and descriptive rating of the product
- a recommendation on the commercial positioning of the product compared to competitor products.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- techniques used to assess and evaluate bread products, including:
  - sweet product
  - fibre product
  - rye product
  - meal product
  - savoury product
  - basic bread product
  - sour bread product
  - specialty bread product
  - decorative bread product
- fermented bread product finishes, including:
  - baked finishes
  - seeding and dusting product
  - decorative finishes
  - glazed finishes
  - cream or iced finishes
  - sweet finishes
- fermented product characteristics, including:
  - internal and external appearances
  - internal and external textures
  - internal and external aromas
  - internal and external flavours
- other bread product features and considerations, including:
  - storage stability and shelf life

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - product cost compared to product quality
  - packaging against the product variety
  - technical difficulty
  - product originality
  - volume
  - common problems or faults and their causes
- technical bakery science terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a commercial bakery or a food evaluation venue, or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - bakery products for evaluation
  - bakery products from the same class for comparison
  - equipment for conducting tests
  - documentation or technology for recording information
  - workplace procedures for evaluating and assessing products
- specifications:
  - industry recognised bakery product standards
- relationships (internal and/or external):
  - bakery representatives
- timeframes:
  - according to work requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPRBK4008 Apply bread baking science

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Application

This unit of competency describes the skills and knowledge required to apply technical knowledge and principles of bread processing and ingredient sciences in the production of bread products in a commercial bakery. It includes the reactions of baking ingredients during mixing, processing and baking.

This unit applies to individuals who apply a broad range of specialised knowledge and skills to their own work. They take responsibility for bakery production, testing and problem-solving.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory food safety, and work health and safety, regulations and legislation that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Retail baking (RBK)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Analyse aspects of	1.1 Read and interpret a Certificate of Analysis for breadmaking flour

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Learning	• Undertakes independent research and experimentation and reflects on performance to build own knowledge and skills of food and bread baking science making methods
Reading	• Sources, interprets and analyses baking science information from a range of technical food industry texts
Writing	• Prepares reports on baking experiments, process and product specifications, using food scientific and technical language and formats appropriate to purpose
Numeracy	• Extracts and interprets mathematical information embedded in technical baking industry texts • Performs calculations and uses baking product formulas to interpret, adapt and adjust baking product processes • Uses mathematical symbols and conventions relevant to the baking industry to document experiment outcomes, recipes, and process and product specifications
Get the work done	• Uses problem-solving skills to analyse and evaluate bakery production ideas, processes and experiments, and decide on appropriate action • Takes responsibility for planning, organising and implementing tasks required to achieve required outcomes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has explored baking science through processing two of the following bread product varieties:

- white/bakers flour product
- low protein flour product
- rye flour product
- meal flour product
- grain flour product.

For each the two bakery product varieties, the individual must have explored:

- the chemical and physical changes during the processing and mixing, including:
  - undermixing protein development using low intensity mixing
  - overmixing protein development using high intensity mixing
  - baking of undermixed dough to record volume and baked colour against a uniform standard dough
  - baking of overmixed dough to record volume, pan flow and baked colour against a uniform standard dough
  - recording the change in extension of gluten or window testing of fermentation doughs between undermixed dough and overmixed dough against a uniform standard dough
- liquid washing of bread doughs, including:
  - baking of protein balls to record volume and baked colour against protein level
  - measuring baked and cut protein balls to record crumb strength and texture
- adjusting the salt levels lower in a bread dough product to record the acceptable levels of both dough maturity and bread flavour, including:
  - mixing tolerance changes in reduced salt doughs
  - flavour tolerance changes in reduced salt doughs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - mixing time changes in delayed salt method doughs
  - liquid hydration of reduced salt doughs
- adjusting and recording yeast levels in bread doughs to counteract the effect of sugar on fermentation doughs, including:
  - raising the percentage of yeast to percentage of sugar in the dough between 5% up until 15% sugar
  - comparing the rises in yeast levels against the processing times of a uniform standard bread dough based on 2% sugar
  - recording the change in hydration levels against the change in sugar levels
  - recording the change in salt levels against the change in sugar and yeast levels.

The individual must record the changes in the overall processing times of production of the two different bread dough types, including different protein and sugar levels. The individual must record the changes in processing times using two different varieties of bread improver, including the:

- overall processing time changes in fermented product
- finished baked product internal characteristics
- external baked product characteristics
- volume differences against a uniform standard product.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the chemical and physical changes during the processing and mixing of bread dough products
- mixing bread doughs, including:
  - energy inputs of different mixing systems, including high energy and low energy mixing
  - the effects of energy on mixing fermented dough, and how it affects gluten development
  - the effects of energy on mixing fermented dough, and how it affects baked qualities
- liquid washing of bread doughs, including how the protein level affects:
  - the baked quality of protein balls
  - the internal structure of baked protein balls
- the effects of altering the salt levels in bread doughs, including changes in:
  - dough tolerance during mixing
  - fermentation and flavour
  - mixing times
  - processing and fermentation times
- the effects of altering the yeast levels in doughs to counteract the effect of sugar or fat on bread doughs, including changes in:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - yeast levels to counter-affect the quantity of sugar and fat levels
    - hydration levels to counter-affect the quantity of sugar or fat levels
    - salt levels to counter-affect the quantity of sugar or fat levels
- the characteristics of different varieties of bread improver and their effects, including:
    - processing changes
    - finished baked product internal characteristics
    - external baked product characteristics
    - baked volume differences
- the cause-and-effect relationship on bread production processes of the following:
    - mixing and fermentation changes
    - changes of yeast levels
    - changes of salt levels
    - changes of protein levels
    - changes of sugar levels
    - changes of hydration levels
- dough rheology and bread baking science considerations, including:
    - the basic structures and properties of sugars, proteins and fats
    - common chemical reactions
    - common physical reactions
    - physical dough testing
    - panary aeration
- the content and purpose of a Certificate of Analysis for a commercial grade bread making flour, including the detailed analyses and how these affect bread production, including:
    - protein percentage
    - moisture percentage
    - water absorption percentage
    - extensograph height in Brabender Units (BU)
    - extensograph length in centimetre square (CMS)
    - falling number
    - development time in minutes
- food and bakery science terminology.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a commercial bakery or laboratory, or an environment that accurately represents workplace conditions
    - access to the internet
- resources, equipment and materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - relevant trade magazines and published articles
    - commercial Certificate of Analysis
    - equipment and ingredients relevant to the product and process types specified in the performance evidence
    - bread science measuring equipment to meet the requirements of the performance evidence
- specifications:
    - access to the Food Standards Code
    - bread recipes and specifications
- timeframes:
    - according to work requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPSUG1004 Check a cane sample for extraneous matter

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to undertake a basic visual and physical inspection of cane samples for extraneous matter upon arrival at a sugar mill.

The unit applies to individuals who work under supervision in the sugar milling industry.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sugar milling (SUG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to inspect cane	1.1 Select, fit and use personal protective equipment according to safe work practices 1.2 Identify and report health and safety hazards and maintenance requirements 1.3 Collect cane sample according to specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Prepare weighing equipment for operation, and report faults as required
2. Identify extraneous matter in cane	2.1 Inspect and sort cane sample according to specifications 2.2 Check for extraneous matter in cane according to specifications 2.3 Record results of inspection according to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	• Calibrate and set tare and zero weighing equipment and interpret weight measurements
Navigate the world of work	• Understand main tasks, responsibilities and boundaries of own role
Interact with others	• Apply workplace communication practices relevant to own role
Get the work done	• Completes tasks in required sequence • Apply decision-making processes to control hazards in routine situations

Assessment Requirements for FBPSUG1004 Check a cane sample for extraneous matter

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has checked a cane sample for extraneous matter in line with workplace contexts and demonstrated each of the following points at least once:

- selected, fitted and used personal protective equipment (PPE)
- identified and reported health and safety hazards in the workplace
- identified and reported maintenance requirements
- collected and sorted cane samples
- conducted visual and physical inspection of cane and identified extraneous matter
- used weighing equipment and confirmed calibration
- recorded inspection results according to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- conditions and practices that affect the level of extraneous matter found in cane
- method and purpose of taring or zeroing weighing equipment and confirming calibration using check weights
- nature of extraneous matter typically found in cane
- purpose of extraneous matter test
- methods used to sort and calculate extraneous matter in a sample
- the effect of high levels of extraneous matter on downstream operations
- key health and safety requirements relating to checking cane samples in the workplace
- correct use of PPE when handling cane
- procedures for reporting faulty weighing equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - weighing equipment
  - workplace information recording system
- specifications:
  - workplace procedures for safe work practices
  - extraneous matter/quality specifications
  - operating procedures and related advice on equipment operation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPSUG2022 Operate a waste water treatment system

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has operated a waste water treatment system in line with workplace contexts and demonstrated each of the following points at least once:

- conducted pre-start checks of equipment and services
- selected, fitted and used required personal protective equipment (PPE)
- operated, monitored and adjusted waste water treatment system according to operating procedures
- maintained work area to meet cleaning standards
- handled chemicals safely
- reported health and safety risks and maintenance requirements
- performed shutdown procedures
- conducted shift handover procedure
- taken corrective action in response to typical operating faults, out-of-specification results or non-compliance
- recorded waste water treatment information
- followed waste water system operating procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- equipment purpose and operating principles of waste water treatment equipment and methods
- water cycles for trade waste, storm water and sewerage, including sources and flow patterns
- purpose of chemicals used in waste water treatment systems
- purpose of first flush systems and their relationship with the waste water treatment system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- typical causes of non-conforming water quality, and corrective action required
- key health and safety requirements for operating waste water treatment systems:
  - hazards related to waste water system operation, and associated control measures
  - correct use of PPE
  - lock-out, tag-out and isolation procedures
- procedures for operational and long-term shutdown
- environmental issues and controls for operating waste water treatment systems:
  - company policy relating to environmental performance
  - waste characteristics and treatment methods
  - waste handling requirements and procedures
- procedures and responsibility for reporting problems for operating waste water treatment systems
- recording requirements and procedures for operating waste water treatment systems.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a sugar milling workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - waste water treatment system and related chemicals
  - water testing equipment
  - workplace information recording system
- specifications:
  - operating procedures and related advice on equipment operation
  - water quality sampling and test procedures
  - workplace cleaning standards and procedures
  - workplace information requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPSUG2024 Perform standard tests on cane samples

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to perform standard tests on cane samples for routine factory control. Cane sample tests are typically routine, repetitive procedures based on defined methods, and require interpretation of results within clearly defined guidelines.

The unit applies to individuals who work under supervision in the sugar milling industry.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPSUG2024 Perform standard tests on cane samples

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed standard tests on cane samples in line with workplace contexts and demonstrated each of the following points at least once:

- confirmed availability of test equipment, chemicals and reagents
- prepared required samples
- performed test procedures
- communicated test results
- identified and reported out-of-specification results
- recorded and checked data in the laboratory information system
- cleaned and stored equipment and treated, recycled or disposed of tested materials after testing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of the test procedure on cane testing, including the principles of the test method and of equipment used
- terminology relating to cane testing
- specific test methods and procedures for cane
- typical causes of out-of-specification results, and procedure for repeating the analysis on cane samples
- laboratory information system recording and reporting requirements relevant to cane testing.
- safe work procedures, including hazards associated with specific test procedure requirements, working with chemicals and test equipment
- environmental and waste handling requirements and procedures relevant to cane testing.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a sugar milling workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - test equipment, chemicals and reagents and related equipment
  - materials to be tested
  - laboratory recording and reporting system
- specifications:
  - test methods and procedures
  - sample labelling and recording requirements and procedures
  - workplace procedures including advice on safe work practices and environmental requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPSUG3007 Perform factory control tests

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to perform tests for factory control. These tests are typically complex and/or non-routine and require interpretation of results within broad guidelines.

The unit applies to individuals working in the sugar industry who are required to perform factory control tests and record data in a sugar mill.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sugar milling (SUG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for testing	1.1 Identify testing requirements and methods according to workplace requirements 1.2 Select, fit and use personal protective equipment according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Manage calibration of test equipment according to operating procedures 1.4 Prepare standard graphs according to workplace procedures 1.5 Prepare and label test chemicals and reagents according to workplace procedures 1.6 Prepare samples as required by test method 1.7 Conduct and record pre-test checks according to workplace procedures
2. Conduct test	2.1 Perform test according to test method and test schedule 2.2 Identify and report atypical test results 2.3 Record and communicate test results according to recordkeeping requirements 2.4 Follow procedures to repeat or validate results 2.5 Clean, care for and store equipment according to workplace procedures 2.6 Dispose of waste materials according to workplace procedures
3. Record test data in laboratory information system	3.1 Enter results into laboratory information systems according to workplace procedures 3.2 Correct data entry errors as required 3.3 Store and retrieve data in the laboratory information system according to workplace procedures 3.4 Produce standard and non-standard reports from laboratory information system

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Numeracy	• Calculate and confirm calibration of equipment • Review and validate numerical test data and results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	• Produce graphical information
Navigate the world of work	• Apply workplace procedures relevant to own role • Understand own role and associated responsibilities
Get the work done	• Complete tasks in logical order • Use workplace digital system to record and store data • Organise and filter system information to produce required reports

Assessment Requirements for FBPSUG3007 Perform factory control tests

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has performed factory control tests in line with workplace contexts and demonstrated each of the following points at least once:

- identified test requirements and methods
- selected, fitted and used personal protective equipment (PPE)
- prepared test equipment, chemicals and reagents for testing
- safely prepared required samples
- managed calibration of test equipment
- conducted tests and recorded results
- communicated test results
- identified and reported non-conformances
- recorded information in the laboratory information system
- cleaned and stored equipment and treated, recycled or disposed of tested materials after testing.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- laboratory information system recordkeeping requirements
- methods used to plot, analyse and present test data, including production of both standard and non-standard reports
- purpose of the test procedure, including a basic knowledge of chemistry and physics principles relating to the tests performed, and operating principles of equipment used
- specific test methods and procedures
- terminology relating to the types of tests and related methods used
- typical causes of out-of-specification results, and procedure for repeating the analysis

FBPSUG3008 Analyse and convey workplace information

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to analyse, interpret and present information. It involves preparing and presenting information to others, including aspects of workplace training.

The unit applies to individuals working in the sugar industry who have responsibility for collecting, analysing and communicating information.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Sugar milling (SUG)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Manage information	1.1 Identify information requirements for specific activities 1.2 Use information systems to store, retrieve and update information 1.3 Use consultative processes to collect and convey information 1.4 Review and improve methods used to collect, store, retrieve and convey information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Collect and analyse information	2.1 Store and collect information in a format suitable for analysis and interpretation 2.2 Analyse and interpret information data and information 2.3 Ensure information collection is timely and relevant to the needs of individuals and teams
3. Present information	3.1 Communicate information effectively to individuals and groups 3.2 Ensure communication takes into account social and cultural differences 3.3 Follow appropriate meeting protocols to workplace requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Comprehend information in various sources of workplace documents
Writing	• Record and present information in required format
Oral communication	• Participate in conversations relevant to role by asking questions and providing explanations, as required
Navigate the world of work	• Apply workplace procedures and protocols relevant to own role
Interact with others	• Use communication style and language to suit the needs of others
Get the work done	• Reflect on, develop and support ideas for improvement of information management

Assessment Requirements for FBPSUG3008 Analyse and convey workplace information

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has analysed and conveyed workplace information in line with workplace contexts and demonstrated each of the following points at least once:

- identified and collected information from a range of sources for a specific purpose
- collected information by consulting with other people
- analysed and interpreted data and information
- selected appropriate presentation methods to convey information to others
- used an information storage and retrieval system to access, retrieve, store and update information
- identified and recommended an improvement to information management practices.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- data collection and analysis techniques
- requirements for use of information recording, storage and retrieval systems
- meeting procedures used in the workplace
- methods and techniques for presenting information to individuals and groups.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a sugar milling workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- standard forms for recording workplace information
- information storage and retrieval system

- relationships (internal and/or external):
  - opportunities to interact with others using typical workplace communication processes.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC3001 Apply raw materials, ingredient and process knowledge to production problems

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to apply an understanding of ingredients and processes to solve problems that typically occur during the preparation, processing or packaging of products.

The unit applies to operators who work under broad supervision and are responsible for the efficient operation of production equipment and processes, and are required to problem-solve issues relating to non-conforming raw materials, ingredients and processes.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Nil

Unit Sector

Technical (TEC)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify and respond to non-conforming ingredients or raw	1.1 Identify raw materials and ingredients that do not conform with quality standards 1.2 Identify and report non-conformance in raw materials and

Assessment Requirements for FBPTEC3001 Apply raw materials, ingredient and process knowledge to production problems

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has effectively applied knowledge of raw materials, ingredient and process knowledge on at least one occasion, including:

- recognising quality characteristics of raw materials and ingredients in one production process
- identifying non-conforming raw materials and ingredients, and reasons why they exist in the production process
- identifying non-conformance as a result of processing and storage
- determining and undertaking corrective action for non-conformances
- completing workplace documentation and reporting non-conformances.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the composition and function of each main raw material and ingredient used, including an awareness of ingredient grades or types
- common causes of contamination and unacceptable quality in raw materials and ingredients
- methods used to confirm quality standard
- the effects of variation in raw materials and ingredients on processing stages and final product outcomes, including:
  - factors likely to cause variation
  - scope to adjust or correct for variation at each processing stage
- appropriate handling and storage requirements for raw materials, ingredients and final products, and the effects of poor storage conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- changes and reactions that occur through processing stages, including the signs and symptoms of poor and unacceptable processing or equipment operation
- factors affecting the shelf-life of products
- the interrelationships between processing stages and the effect of variations in processing parameters on process outcomes and on final products, including:
  - factors likely to cause variations
  - scope to adjust or correct for variations at subsequent process stages
- procedures for identifying and isolating non-conforming products
- troubleshooting information and techniques
- procedures and related documentation required to amend or to introduce a new method or procedure
- reporting requirements and responsibilities
- test methods for confirming quality characteristics.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - ingredients and raw materials
  - final product, and related processing equipment and stores areas
- specifications:
  - ingredient/raw materials specifications
  - troubleshooting procedures relevant to workplace processes
  - sampling and test equipment and procedures as required.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC3002 Implement the pest prevention program

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to implement an existing pest prevention program in a food processing environment.

The unit applies to individuals who typically have responsibility for inspecting food products and implementing control procedures while working under broad direction and take responsibility for their own work, with limited responsibility for the work of others.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Technical (TEC)

Elements and Performance Criteria

Assessment Requirements for FBPTEC3002 Implement the pest prevention program

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has implemented a pest prevention program to effectively control pests in two different areas, including:

- conducting pest inspections
- identifying pest infestations and selecting suitable control measures
- implementing pest control measures in accordance with workplace procedures
- monitoring effectiveness of control measures
- assessing pest control methods and contributing to improvement of pest control
- completing records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic principles of integrated pest management including:
  - identification of pest hazards
  - establishment of pest elimination methods
  - monitoring of the effectiveness of these measures
- methods used to prevent pest invasion in the workplace
- housekeeping and cleaning standards to minimise conditions that attract pests
- food safety issues relating to the use of pesticides in a food handling area
- characteristics and behaviours of common pests in own workplace
- conditions required by common pests to survive and breed
- methods and procedures used to minimise pest resistance to elimination methods
- safety data sheets (SDS) for pesticides used in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- legislation, codes of practice and procedures relating to the purchase, transport, storage, use and disposal of pesticides
- safe procedures for handling, using and storing pesticides
- the purpose, application and limitations of personal protective equipment (PPE).

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - access to work areas where pests are common
  - pesticide labels and SDS
  - PPE
  - pest control equipment
- specifications:
  - pest prevention program.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4001 Determine handling processes for perishable food items

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to determine process and equipment requirements for handling and storing perishable food items, such as fresh fruit and vegetables.

The unit applies to individuals who apply the principles of modified atmosphere packing processes and who manage the handling, packing and storage processes used for perishable food items.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Nil

Assessment Requirements for FBPTEC4001 Determine handling processes for perishable food items

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has determined effective food handling processes for at least two different types of perishable food, including:

- analysing packing, handling and storage requirements for perishable food product
- specifying processes and equipment to achieve quality outcomes that comply with relevant food standards regulations
- analysing and confirming safety aspects of food handling processes and handling and storage equipment
- analysing non-conformances, problems and determined probable cause
- proposing improvements to handling and/or storage.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the properties of packing processes designed to protect perishable products and extend their shelf-life
- regulations, codes of practice and legislative requirements, including local and international regulations, relevant to handling and storing perishable food products
- Food Standards Code
- work health and safety (WHS) and environmental protection procedures and regulations
- workplace procedures for planning and managing the handling and storage of perishable food products
- problems that may occur while planning and managing the handling and storage of perishable food products, and action that can be taken to resolve or report the problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- risks and hazards related to handling and storing perishable food products, and methods for controlling them
- costs of equipment and facilities for handling and storing perishable food products
- pathogens and spoilage that can occur in perishable foods and the conditions required for these to occur
- features intrinsic to food type, including pH, water activity, nutrient content, presence of microbiological compounds, respiration rate and biological structure
- the impact of extrinsic factors on perishable food products, including:
  - temperature
  - water loss
  - humidity
  - maturity (applies to maturity of fruit and vegetables when harvested)
  - handling
  - cleaning
  - sanitation
  - personal hygiene practices
  - gaseous composition of the storage atmosphere
- food spoilage indicators, including:
  - microbial contamination
  - enzymic browning
  - sensory degradation of characteristics, including flavour, aroma, colour and texture
- factors that influence selection of packing and storage processes, including:
  - suitability for use with food products to be packaged
  - compatibility with packing technology
  - costs
  - environmental features
  - consumer safety
  - tamper evidence
- characteristics of products and their behaviour when packed, handled and stored over the shelf-life of the product
- typical problems that occur, likely causes and appropriate response options.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - handling, packaging and storage equipment
  - perishable product, packaging components and consumables

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- specifications:
  - packaging specifications
  - workplace operating procedures for packaging, handling and storage.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4002 Apply principles of food packaging

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to oversee packaging operations in a food and beverage processing environment and to assess the nature, and likely causes, of packaging problems.

The unit applies to senior operators and managers who are responsible for overseeing packaging processes and work within known parameters. They provide and communicate solutions to a range of predictable or unpredictable problems.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist so local requirements must be checked.

use with food products	beverage product 1.3 Determine environmental impact and handling features of packaging materials 1.4 Consider customer and legal requirements of packaging 1.5 Ensure packaging material characteristics meet the safety and quality needs of food or beverage being packaged
2. Evaluate packaging in a production environment and recommend improvements	2.1 Assess packaging material properties for quality and safety 2.2 Determine costs of packaging materials 2.3 Analyse non-conformances to identify probable causes 2.4 Identify and investigate opportunities for improvement to materials, processes or environmental impact 2.5 Establish or review procedures for safely operating a packaging process 2.6 Document evaluation and recommendations and seek approval for implementation

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Critically analyse documentation from a variety of sources and consolidate information relating to packaging materials and production to assist with analysis
Writing	• Prepare proposal expressing ideas and exploring issues using language that is logical, succinct and accurate
Numeracy	• Perform mathematical calculations to assist with analysis of packaging materials and costs

Assessment Requirements for FBPTEC4002 Apply principles of food packaging

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has analysed and evaluated at least two types of food packaging, including (for each):

- analysing packaging system components, including:
  - materials used and interaction with product
  - costs
  - processes
  - legal and customer requirements
  - environmental and handling implications
- analysing and confirming safety aspects of processes and equipment
- analysing non-conformances and packaging problems and determining probable cause
- proposing improvements to the packaging system.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of packaging and the properties of packaging materials designed to protect products and extend shelf-life, including the role of packaging in providing:
  - protection of products from contamination (microbial, pest infestation and physical damage)
  - barriers (atmospheric, moisture, flavour and light)
  - package seal ability and seal integrity
  - easy-to-open access to products
  - information to consumers about products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - market appeal
  - materials and their properties
  - packaging interactions with food products
  - costs
  - features of packaging design that preserve products
- legislative requirements relating to packaged products and food safety
- requirements of products handled in the workplace, including coated packaging products, and active/interactive packaging films
- factors that influence the selection of packaging materials
- corrective actions to prevent packaging non-conformance
- characteristics of products, and their behaviour when packaged, across the shelf-life of the product
- typical problems that occur in the packaging process, and likely causes and appropriate response options including:
  - pathogens and spoilage that occur in packaged food and the conditions required for their occurrence
  - intrinsic features of food type, including pH, water activity, nutrient content, presence of microbiological compounds, respiration rate (fresh fruit and vegetables) and biological structure
  - extrinsic factors, including processing method, temperature, water loss and humidity, maturity (applies to maturity of fruit and vegetables when harvested), handling, cleaning, sanitation and personal hygiene practices, and gaseous composition of storage atmosphere
  - food spoilage indicators, including microbial contamination, enzymic browning and sensory degradation of characteristics, such as flavour, aroma, colour and texture
  - the effect of gas composition for modified atmosphere packaging processes, including knowledge of the role of the most commonly used gases in food packaging (carbon dioxide, oxygen, nitrogen), reactions between gases, packaged products and packaging materials
- quality assurance systems to ensure that packaged products meet customer and legal requirements
- relevant sources of technical expertise and related authority levels to address packaging issues.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - product, packaging components and consumables
  - packaging process equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- specifications:
  - relevant standard operating procedures
  - packaging specifications
  - workplace information recording systems, requirements and procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4004 Apply basic process engineering principles to food processing

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to apply the principles of engineered systems and equipment commonly used in the food processing industry. It includes mapping production processes and measuring outputs, including yields and material variances.

The unit applies to individuals who work with systems and equipment used for heat transfer, refrigeration, pumping, evaporation and drying equipment in the food processing industry. They provide solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Map a production process	1.1 Identify the scope of a production process for mapping

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.2 Select and use appropriate process mapping symbols 1.3 Develop a map that identifies the relationship of each step in the process
2. Calculate yields and efficiencies of a production process	2.1 Identify inputs and outputs of a production processing system 2.2 Collect information required to monitor the performance of a production process 2.3 Calculate yields, efficiencies and material variances
3. Apply principles of fluid flow to a production process	3.1 Identify fluid properties of food that affect flow 3.2 Identify components and related equipment used in a food pumping process 3.3 Identify features of the system design that affect performance of the pumping system 3.4 Identify the effect of pumping on fluid properties 3.5 Establish the operating capacity of pumping systems used in the production process 3.6 Review or establish procedures for the safe use of pumping equipment
4. Apply principles of heat transfer to a production process	4.1 Identify types of heat transfer in a food production process 4.2 Identify methods and related equipment used to transfer heat 4.3 Recognise types of heat transfer media 4.4 Identify and contrast operating principles of cooling, chilling and freezing processes 4.5 Assess effects of heat transfer on product and material properties 4.6 Establish operating capacity of heat transfer equipment used in the production process 4.7 Review or establish procedures for the safe use of heat transfer equipment
5. Apply principles of evaporation to a production process	5.1 Identify methods and related equipment used for controlling evaporation in food processing 5.2 Analyse the effect of evaporation on product and material properties 5.3 Identify tests used to determine the concentration of a liquid

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	5.4 Establish the operating capacity of evaporation equipment used in the production process 5.5 Review or establish procedures for the safe use of evaporation equipment
6. Apply principles of drying to a production process	6.1 Identify methods and related equipment used for drying food 6.2 Assess the effect of drying on product and material properties 6.3 Identify tests used to determine moisture content of materials and products 6.4 Establish operating capacity of drying equipment used in the production process 6.5 Review and establish procedures for the safe use of drying equipment
7. Apply principles of process control to management of production processes	7.1 Locate sensors and instrumentation providing input information to the control system 7.2 Identify consequences of a system malfunction

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret and analyse system specifications and other documentation to determine requirements
Writing	• Produce written and diagrammatic documents that convey information about components of food processing and engineered solutions
Numeracy	• Perform mathematical calculations to interpret and record complex engineering principles for food production processes
Get the work done	• Problem-solve issues as they arise

Assessment Requirements for FBPTEC4004 Apply basic process engineering principles to food processing

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has effectively applied basic process engineering principles in a food processing environment on at least one occasion, including:

- mapping a production process and applying process mapping protocols and symbols used in the workplace to describe a production process and its operating parameters
- applying engineering principles to a food production context, including:
  - fluid transfer
  - heat transfer
  - evaporation
  - drying
- performing calculations for engineering solutions, including performance and yield.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the basic operating features and components of pumps commonly used and typical applications, including:
  - rotodynamic (centrifugal) pumps
  - positive displacement pumps, including reciprocating piston pumps, rotary pumps (including gear and lobe pumps), screw pumps, eccentric rotor pumps (including progressive cavity or mono pumps) and flexible vane pumps
- related components of the pumping system, including valves, taps and pipework and, where required, Australian Standards and workplace protocols for indicating materials carried by pipework

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- features in the pumping system design that affect pumping efficiencies, including length of pipework, number and placement of valves and fittings, height of inlet and discharge points, internal surface and diameter of the pipe
- the following terms and how they are applied in the food processing industry:
  - pressure and pressure drop
  - velocity
  - head
- equipment components of a drying process
- the effects that the drying process has on food
- equipment components of an evaporation process
- the effects the evaporation process has on food
- heat transfer requirements and equipment used in a production process
- typical tests carried out to determine process outcomes on material/product
- operational and safety features of pumps and heat transfer equipment
- inspections required to identify signs of faulty performance and/or wear
- main types of sensors used in food processing to provide input data to control systems, and how these sensors operate.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real food processing workplace
- resources, equipment and materials:
  - production process equipment for fluid transfer, heat transfer, evaporation and drying
  - tests used to report relevant product/process information and recorded results
  - methods and related software systems for collecting data and performing calculations
- specifications:
  - manufacturers' advice and operating procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4005 Apply an understanding of food additives

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to recognise the characteristics and functions of food additives, preservatives, colours and flavours used in food products.

The unit applies to individuals who work with food additives in a food production environment. It is designed to provide an overview of food additives. It is not designed to meet the competency requirements of the person who specifies additives, preservatives, colours or flavours to be used in food. Analysis of the properties of food additives may also be done by a specialist.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Assessment Requirements for FBPTEC4005 Apply an understanding of food additives

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has applied an understanding of food additives on at least one occasion, including:

- researching food additives and their legal and quality implications
- identifying main additives and their groupings used in at least two different processed food items
- using suitable methods to apply food additives and record their usage
- reviewing procedures for safe storage, handling and applying of additives to products to ensure product safety and quality standards are achieved.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how common food additives are grouped according to their function
- range of additives under each grouping, including:
  - texture modifying agents
  - organoleptic and nutritional modifying agents
  - shelf-life enhancing agents
  - technological aid
- range of additives used in workplace products
- coding system(s) for describing additives
- legal requirements relating to additives as established by relevant food safety legislation
- Food Standards Code
- typical quantities of additives used and related units of measurement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- preparation requirements, including forming and breaking emulsions and preparation of solutions
- systems and equipment for applying additives
- work health and safety (WHS) issues related to handling of additives
- consequences of incorrect additive addition, including quality and food safety hazards related to incorrect addition
- handling and processing conditions that affect the characteristics of products
- requirements for recording use of additives.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - product range related to production process
  - additives used in the workplace product range, including preservatives, colours and/or flavours
- specifications:
  - relevant food safety legislation
  - information about current workplace requirements and procedures for additive use.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4006 Apply an understanding of legal requirements of food production

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to ensure that food production operations comply with legal requirements that apply to food processing activities and facilities. It does not include requirements related to environmental management, work health and safety and food safety – those areas are covered by other units.

The unit applies to individuals who may not be directly responsible for designing procedures for compliance with legislation, but who should be aware of the existence of legislation, its intent and the arrangements in place to ensure compliance.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Assessment Requirements for FBPTEC4006 Apply an understanding of legal requirements of food production

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has effectively monitored food production to ensure compliance with legislation, on at least one occasion, including:

- identifying legal requirements that apply to the packing and production of at least one processed food item
- reviewing existing work practices against procedures to ensure compliance
- identifying legal requirements for facilities and equipment used
- reviewing procedures to support ongoing compliance with legal requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the legal responsibilities of a food processing company as they relate to product content and packaging, including:
  - product content (Food Standards Code)
  - product packaging and labelling, including use of nutritional information panels (Food Standards Code)
  - work health and safety (WHS)
  - design requirements of food premises and equipment
  - food safety
  - requirements of storage facilities used for materials, ingredients and final product
  - other requirements as appropriate to the product and/or market (e.g. import and/or export legislation)
  - relevant authorities responsible for administering the legislation, and their roles

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose and intent of relevant legislation
- specifications and procedures to ensure the achievement of legal responsibilities related to product content and packaging
- potential hazards that could be introduced as a result of equipment design and configuration, including:
  - associated risks in handling chemicals and dangerous goods
  - inspecting plant design to identify potential hazards
  - equipment design and configuration
  - applying the hierarchy of control
- review processes and audit procedures required
- rights and responsibilities of related officers to access the production site.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real food processing workplace
- resources, equipment and materials:
  - food processing operations
- specifications:
  - workplace processes and procedures
  - relevant legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPTEC4007 Describe and analyse data using mathematical principles

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has accurately described and analysed food processing data and capability using mathematical principles, including each of the following:

- identifying and using the appropriate International System of Units (SI) of measurement
- applying relevant formulae to measure a specific physical characteristic of a food product or processes
- selecting calculation requirements (such as adjusting a recipe formulation) to:
  - select required formulae
  - express the problem as an equation
  - identify the known and unknown values
  - manipulate equations by transposing values as required
  - convert units into compatible formats (i.e. SI units, multiples and sub-multiples)
  - calculate percentages and ratios
  - conduct the calculation to obtain a solution
- calculating standard deviation for a specified set of data, using the correct formula
- constructing a statistical process control (SPC) chart
- identifying mean, median and mode
- identifying upper and lower control limits for a specific food processing scenario
- recording the result in the appropriate units and level of detail.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- SI units of measurement and related unit symbols relevant to the food industry

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- the principles of transposing values to solve workplace problems
- relevant formulae to measure physical characteristics of food products or processes
- processes for developing charts and graphs
- variety of calculations to determine unknown values, including:
  - percentages and ratios
  - standard deviation
  - conversion of units into compatible formats
  - target (mean value) for the process
  - upper and lower control limits
  - heat transfer rates
  - pressure
- commonly derived units/measurements, related formulae and their application in a food processing context, including:
  - density and specific gravity
  - viscosity
  - temperature
  - volume, weight and mass
  - vector and scalar quantities
  - velocity
  - other measures as appropriate to a production process.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- resources, equipment and materials:
  - production processing information
  - workplace documentation, including sampling plans
- specifications:
  - control chart formats
  - data collection methods and log sheets.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4008 Participate in product recalls

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to identify and prepare for product recall situations and to initiate and participate in recall processes.

The unit applies to individuals with a primary responsibility for initiating and participating in product recall events as part of a broader team. They provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

	program
2. Participate in a product recall	2.1 Identify components of the product recall system in the workplace 2.2 Use workplace systems to trace ingredients, materials and batch information 2.3 Implement product recall procedures 2.4 Review procedures to define roles and levels of authority in the event of a product recall
3. Review processes to minimise the risk of recurrence	3.1 Investigate causes of product recalls 3.2 Review purchasing arrangements and in-house procedures to minimise the risk of recurrence 3.3 Establish and review consultative mechanisms to support continuous improvement 3.4 Communicate information on product recalls and improvement strategies to in-house personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	**Description**
Writing	• Document outcomes and changes to procedures, and develop material to communicate with individuals affected by the recall
Oral Communication	• Use collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information
Get the work done	• Respond intuitively to problems requiring immediate resolution, drawing on past experiences to focus on the cause of a problem

Assessment Requirements for FBPTEC4008 Participate in product recalls

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has demonstrated all steps to prepare for and participate in at least one product recall, including:

- identifying criteria and circumstances for a product recall
- initiating controls to prevent product recall
- determining legal implications of a product recall
- identifying features of the workplace product recall system and procedures
- determining and examining the cause of product fault
- establishing mechanisms to improve operations and minimise the risk of occurrence.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- risks, measures and circumstances that could result in a product recall, and the control measures in place to prevent such incidents from occurring, including:
  - product failure
  - quality systems issues
  - contamination
  - packaging
- legal responsibilities and requirements of a recall program:
  - relevant provisions of food safety legislation
  - related company systems
  - criteria for determining when a recall is required
- components of the recall system required to meet company and legal requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- company's food safety plan and vendor assurance arrangements
- the social, financial and legal consequences of:
  - failing to initiate a recall
  - delaying a recall decision
- communication requirements and procedures:
  - appropriate communication systems
  - channels for consulting with people affected
  - communicating information on improvements
- company policy and procedures for responsive action for a given range of circumstances that could result in the need for a product recall
- procedures for developing the components of a recall system to meet company and legal requirements, including:
  - information recording systems for traceability
  - identification of personnel responsible for assessing information
  - determining appropriate action
  - procedures that define roles and levels of responsibility
- procedures for investigating causes and reviewing arrangements and procedures in the event of an incident, including:
  - reviewing responses to previous incidents
  - developing recommendations on appropriate procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - case study materials of food product recall situations
- specifications:
  - workplace food safety program
  - information relevant to product recall, including contractual arrangements with suppliers, product specifications, process parameters and recall procedures
  - legislation relating to product recall, including relevant food safety legislation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4009 Identify the physical and chemical properties of materials, food and related products

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to identify the physical and chemical properties of materials, foods and related products within a production environment.

The unit applies to individuals who apply knowledge of physical and chemical properties of materials, food and related products, used to inform work in product development, production, testing, communication and problem-solving.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Nil

Unit Sector

Technical (TEC)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Apply common physical phenomena in food ingredients to food	1.1 Apply an understanding of common physical phenomena to explain relevant changes that occur to ingredients and products during the production process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
production processes	1.2 Communicate the changes to others in appropriate format for use in production process
2. Apply the principles of physical states of matter to food production	2.1 Recognise the three states of matter and the atomic changes that occur at each phase 2.2 Determine the behaviour of each state of matter and its relationship to the production process 2.3 Consider the relationship between pressure and temperature in phase transition in food production
3. Apply common food science principles to a production process	3.1 Relate the significance of pH in processing, food safety and cleaning applications 3.2 Track the reactions and properties of carbohydrates, proteins and fats through a given process 3.3 Describe the properties of common emulsions, suspensions and solutions 3.4 Identify commonly occurring chemical reactions, factors required to cause a reaction, and the effects of reactions 3.5 Review safe work procedures for processes that involve chemical reactions or the handling of chemicals
4. Communicate and interpret technical information	4.1 Use appropriate technical terms to communicate information about the properties of commonly used foods and materials 4.2 Interpret and apply test results and reporting formats to communicate information on composition, properties and reactions

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Read and interpret safe work procedures, and consolidate information for review
Numeracy	• Perform mathematical calculations to interpret test results to provide accurate information

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Get the work done	• Apply systematic and analytical decision-making processes for complex and non-routine situations • Investigate innovative ideas as a means to continuously improve work practices and processes through formal and analytical thinking

Assessment Requirements for FBPTEC4009 Identify the physical and chemical properties of materials, food and related products

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has effectively identified the physical and chemical properties of materials, food and related products, including:

- accurately identifying and describing the physical and chemical characteristics of three different foods and the impact that processing has on each
- using common tests and measures to identify the components of three different food items
- identifying the characteristics of acids and bases and their application in food processing
- identifying the basic molecular structures of carbohydrates, proteins and fats
- distinguishing the difference between solutions, suspensions and colloidal systems
- identifying hazards and control methods in managing hazardous materials when working with food
- communicating technical information using correct technical terms, flow charts and sketches.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- characteristics and phenomena that occur during processing; and products and processes where these phenomena are observable, including:
  - shear and strain
  - friction
  - surface tension
  - pressure
  - crystallisation
  - total solids

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - heat and temperature
  - relative humidity
  - work and energy input
  - viscosity
  - particle size
  - melting points, boiling points, freezing points
  - dew and condensation points
  - additional phenomena appropriate to the production process
- common chemical reactions that occur in food processing, including both spontaneous and controlled reactions, including:
  - oxidation
  - enzymic
  - Maillard
  - acid-based
  - the role of enzymes in generating biological reactions
- tests commonly used to measure phenomena, and related units of measurement
- transition phases applicable to a given production process
- the role of temperature and pressure in the transition process
- pH and its impact on food processes, including:
  - differences between a strong acid and a concentrated acid
  - units of measurement
  - classification of commonly used materials, ingredients and indicators according to pH
  - the typical strengths and concentration levels required for commonly used acids and bases
  - the significance of pH for processing, food safety and cleaning applications
- basic molecular structures of carbohydrates, proteins and fats
- molecular changes that occur in states of matter, and common applications, including:
  - refrigerant
  - freeze drying
- effect and compatibility of cleaning agents with equipment surface materials
- processing stages designed to affect the structure of compounds (including hydrogenation or denaturing proteins in cooking processes of oil)
- typical applications of solutions, suspensions and colloidal systems in food processing, including:
  - emulsions (oil in water/water in oil)
  - sols (solid-liquid/solid-solid)
  - gels
  - foams (gas-liquid/gas-solid)
  - differences between dispersed particles and the dispersion medium in colloids
  - factors that affect stability of colloidal systems, including the stages in a production process that can cause changes to colloid structure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- technical information resources
- how to develop explanatory sketches or flow charts to communicate how observed phenomena affect products and the process
- safety hazards and required control methods when handling chemicals and working with processes involving chemical reactions
- basic research skills required for technical information to describe food properties and reactions, including recognising and applying appropriate units of measurement and terms.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - production process and related equipment
  - tests used to report relevant product/process information and recorded results
- specifications:
  - manufacturers' advice and operating procedures for equipment
  - test methods.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4010 Manage water treatment processes

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to manage the usage and treatment of water used in food production stages such as washing and cooling, and the usage and treatment of wastewater.

The unit applies to individuals who work in a food production site, who take responsibility for managing water treatment systems and methods, and provide and communicate solutions to a range of predictable and sometimes unpredictable problems. The unit is not designed to meet the competency requirements of the person who specifies water quality standards and/or treatment methods.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Pre-requisite Unit

Assessment Requirements for FBPTEC4010 Manage water treatment processes

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has effectively managed water treatment processes in food processing on at least one occasion, including:

- identifying and assessing water usage and disposal processes
- determining environmental impacts of water use, treatment and disposal
- identifying non-compliance associated with water quality
- assessing water treatment requirements and methods for water used in production
- evaluating costs associated with use, treatment and disposal of wastewater
- reviewing or developing wastewater procedures to ensure compliance with relevant standards
- researching and implementing at least one opportunity for improving wastewater management.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- terms and concepts used to describe water quality:
  - potable
  - total residual chlorine
  - free residual chlorine
  - available chlorine
- uses of water in production, including:
  - water used in cooling applications
  - washing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - flushing
- quantities and applications of water
- treatment stages in the processing system
- points where water could be more effectively conserved
- wastewater generated by the process
- principles of common methods used to treat trade waste and identifying typical applications, including:
    - primary treatment
    - secondary treatment
- requirements and methods for treatment of water used in production, including:
    - treatment methods currently in place
    - opportunities to improve resource utilisation through conserving water, changing materials and processing methods
    - treating and recycling wastewater more efficiently
- sustainable use of water, including legal, social and environmental consequences of releasing water to the environment
- characteristics that are monitored in wastewater and how these affect the cost of trade waste disposal
- rights of relevant authorities to enter the site and conduct independent sample collection and test procedures
- acceptable limits for water going to stormwater (pH range)
- conditions that could result in failure to comply with legal requirements for stormwater, and relevant control methods
- risks associated with water, including Legionella and related control measures
- characteristics of wastewater and related treatment requirements
- methods for recycling water.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - skills must be demonstrated in a workplace setting or an environment that accurately represents a real food processing workplace
- resources, equipment and materials:
    - site plans, including relevant advice on drainage system
    - monitoring equipment
- specifications:
    - workplace procedures and legislation relevant to water use and treatment.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC4011 Establish process capability

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to study process data to determine process capability using statistical process control techniques.

This unit applies to people responsible for establishing control charts and related sampling plans. It applies to individuals who take responsibility for their own work, and provide and communicate solutions to a range of predictable and sometimes unpredictable problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- FBPTEC4007 Describe and analyse data using mathematical principles.

Unit Sector

Technical (TEC)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to conduct a capability study	1.1 Identify the scope and purpose of the process 1.2 Determine a representative data sample 1.3 Select data collection techniques 1.4 Collect data to meet sampling requirements

Assessment Requirements for FBPTEC4011 Establish process capability

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has established process capability on at least one occasion, including:

- establishing process scope, boundaries and related information on process purpose, including product or process specifications where available
- applying sampling techniques to determine nature and extent of data collection to provide a reliable indication of process performance
- selecting and applying data collection methods
- confirming that data collected is complete and complies with sampling requirements
- identifying characteristics of a normal distribution
- applying appropriate statistical techniques, including standard deviation to analyse data, and techniques to distinguish common and special causes of variation
- establishing process capability, including establishing upper and lower limits and instructions for identifying and responding to trends
- developing a related data sampling plan, including advice on sampling regimes following corrective action.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- data collection requirements and techniques for collection of actual (quantitative) and variable data, including both automated (using software) and manual techniques (carried out by operators and involving communicating requirements and designing appropriate formats for recording data)
- techniques to determine and validate a sampling plan capable of providing reliable information representative of the total population

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- appropriate formats for presenting sampling plan requirements and related communication systems
- statistical process control techniques and conditions for application
- workplace conventions/formats for presenting and monitoring process capability information, including control chart including a target mean, upper and lower limits and advice on how to interpret and confirm trends, and upper and lower warning limits where required
- process knowledge to identify possible causes of special variation
- difference between a stable process and a capable process, and action required to improve process performance in each case.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - data collection requirements and technique
  - communication systems
- specifications:
  - statistical process control techniques and conditions.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC5001 Manage and evaluate new product trials

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to plan, monitor and evaluate new product trials.

The unit applies to individuals who work with a team of specialists to develop and engineer new products, and to manage trials in a production environment. They take personal responsibility and exercise autonomy in undertaking complex work. They analyse information and exercise judgement to complete a range of advanced, skilled activities.

No occupational licensing or certification requirements apply to this unit at the time of publication. However, legislative and regulatory requirements for food processing exist, so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Assessment Requirements for FBPTEC5001 Manage and evaluate new product trials

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has managed and evaluated trials for at least one new product, including:

- establishing parameters, conditions and requirements for product trial
- establishing, documenting and communicating the procedure for the trial to relevant personnel
- monitoring and evaluating trial outcomes against objectives and set conditions
- documenting all aspects of trial to ensure repeatability and collection of evidence.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- structure and processes of developing product trials, including:
  - project parameters
  - constraints
- criteria for evaluating outcomes, including:
  - clarifying reporting requirements
  - reporting formats
- process documentation procedures and requirements to ensure that the process:
  - meets trial outcomes
  - is consistent with legislative requirements
  - is consistent with company policy objectives
- procedures for planning and monitoring a trial process and the factors to be taken into account

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- proposed formulations and preferred processing methods to assess constraints and opportunities for improvement, including:
  - equipment capability
  - typical materials usage
  - rates to achieve a given production outcome
  - area experts
- systems and procedures for managing work health and safety (WHS), environmental issues and food safety through the trial process
- investigation and process improvement techniques and processes, including:
  - techniques to collect data
  - techniques to evaluate trial data
- communication processes and strategies to meet the information requirements of all stakeholders
- procedures for planning production targets and timeframes within equipment and process capability
- resources to meet trial schedule, including:
  - stock levels
  - equipment availability and capacity
  - personnel
  - storage capacity
- procedures for the development of trial schedules to manage the process
- documentation and appropriate formats, including:
  - product specifications
  - recipe formulations
  - process parameters
  - operating procedures
- monitoring procedures for trial progress to identify variances and factors that may need to be adjusted
- problem-solving processes as they relate to conducting product trials
- project planning, scheduling and monitoring procedures
- methods of collecting and evaluating trial information, including the role of an evaluation team
- procedures for reporting trial outcomes and related improvement opportunities.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - trial objectives and parameters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - trial products
- specifications:
  - new product specifications
  - relevant standard operating procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPTEC5002 Manage utilities and energy for a production process

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to assess utility requirements, identify suppliers, and monitor, conserve and control the cost of utility and energy supply for a production process.

The unit applies to individuals who manage utilities and energy for a production process, but who may not have the authority to make final decisions on supply. Those working in this role would analyse information and exercise judgement to complete a range of advanced, skilled activities in recommending improvements and reducing costs associated with energy efficiencies.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	forecasting production volumes
2. Select suppliers of energy and utilities	2.1 Identify existing and potential suppliers of energy and utilities 2.2 Identify and consider environmental costs and benefits associated with supply in supply criteria 2.3 Establish and apply criteria for selection of suppliers 2.4 Select suppliers capable of meeting supply criteria 2.5 Review or develop contingency procedures in the event of failure of supply
3. Monitor energy and utility use against budget	3.1 Measure and record use of energy and utilities 3.2 Analyse usage patterns against performance standards and budget allocations 3.3 Identify, assess and implement cost-effective options for balancing the scheduling requirements for production with containment of energy and utility costs
4. Contribute to the more efficient use of energy and utilities	4.1 Identify energy and utility losses or sources of waste 4.2 Identify, investigate and report opportunities to improve efficient energy or utility application 4.3 Establish and review consultative mechanisms to support continuous improvement 4.4 Communicate information on energy efficiency, utility efficiency and related procedures to relevant personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Organise, evaluate and analyse ideas and information from a wide range of sources to determine energy usage requirements and efficiencies
Writing	• Prepare documentation that explores complex issues for energy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	usage, constructed logically, succinctly and accurately
Numeracy	• Analyse and synthesise highly embedded mathematical information from a broad range of resources to determine energy usage, costs and targets

Assessment Requirements for FBPTEC5002 Manage utilities and energy for a production process

Modification History

Release	Comments
Release 1	This version released with the FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency in this unit must satisfy all of the elements and performance criteria of this unit.

There must be evidence that the individual has managed utilities and energy for at least one production process, including:

- determining utility and energy requirements and assessing current practices
- establishing supply options and conducting analysis to determine most efficient arrangements
- monitoring and evaluating utility and energy usage against targets
- identifying wastage or losses
- identifying, assessing and communicating opportunities for improving energy efficiencies.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- uses of energy and utilities in production, and units of measurement used to quantify energy and utilities
- procedures for mapping the uses of energy and utilities in production, including:
  - analysing historical data
  - sale or production forecasts to project energy and utility requirements
  - identifying patterns of usage, including volume and spread of load
- methods used to measure usage rates, including:
  - physical measurement instruments
  - measurement techniques used to track inputs to and outputs
  - units of measurement used to quantify energy and utilities
- suppliers of energy and criteria used to select them, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - costs and capacity
    - contingency procedures in the event of failure of supplies
    - elements of costs associated with supply, including tariffs, charges and peak demand and cost periods
    - ability to spread load and risk by distribution to other suppliers and co-generation
- factors that affect the efficient use of energy and utilities
- consultative mechanisms to support continuous improvements
- techniques for assessing energy and utility usage rates of a given production facility to identify variances against budget or plans
- methods, equipment and operation for generating utilities for use on-site:
    - steam generation
    - other utilities appropriate to a given production facility
    - licensing and regulation requirements for boiler types
    - maintenance procedures and practices to minimise losses of steam, glycol or ammonia
    - procedures for shutting down plant and equipment
- configuration and design of the process and system to conserve and recycle energy and utilities, including:
    - steam
    - heat
    - water
- scheduling for efficient production, including:
    - existing energy and utility supply arrangements
    - dual objectives of production outcomes and efficient use of energy or utility
- energy conservation techniques, including:
    - lighting
    - air-conditioning
    - equipment standby
- procedures to develop proposals for utility improvement based on:
    - investigations
    - input from relevant technical specialists
- requirements for assessing and developing procedures to support efficient energy and utility utilisation in consideration of:
    - impacts on equipment
    - food safety
    - work health and safety
- communication strategies for changes to workplace systems and procedures to support improvements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - monitoring equipment
- specifications:
  - energy and resource utilisation information, including recording systems, system requirements and procedures
  - details of contractual arrangements with suppliers
  - production scheduling requirements and systems.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT2001 Bench graft vines

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to select appropriate vine material, prepare cuttings, graft and undertake post-graft treatment and storage.

The unit applies to individuals in wine grape nurseries who work under general supervision, with limited autonomy and accountability for their own work.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Viticulture (VIT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to bench graft vines	1.1 Confirm job requirements 1.2 Confirm environmental guidelines and identify potential health and safety hazards and controls according to workplace procedures 1.3 Select, fit and use appropriate personal protective equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Ensure work area meets workplace requirements 1.5 Ensure materials are available to meet grafting requirements 1.6 Select and prepare cuttings for grafting 1.7 Check and set equipment to meet grafting specifications
2. Bench graft vines	2.1 Disbud cuttings according to workplace procedures 2.2 Bench graft cuttings according to workplace procedures 2.3 Treat graft union according to specifications and workplace procedures 2.4 Monitor grafting process and equipment to ensure results are maintained within specifications 2.5 Identify and address non-conformance according to workplace procedures
3. Complete bench grafting activities	3.1 Identify appropriate shutdown procedures 3.2 Pack, label and store grafted vines according to workplace procedures 3.3 Collect, treat and dispose of waste according to workplace waste procedures 3.4 Record workplace information according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Comprehend information from a variety of workplace documents
Numeracy	• Count and record numerical information related to labelling and storage of grafted vines
Navigate the world of work	• Apply workplace procedures to own role and responsibilities

Assessment Requirements for FBPVIT2001 Bench graft vines

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared to bench graft vines, bench grafted vines and completed the bench grafting activities at least once, including:

- identifying health and safety hazards and controls in the workplace
- selecting, fitting and using personal protective equipment according to job requirements
- selecting and preparing appropriate vine material for grafting, including disbudding
- performing bench grafting of vines according to workplace practices
- following workplace requirements for grafting and post-grafting treatment and packing of vines
- monitoring grafted vines by identifying, rectifying or reporting out-of-specification vine grafts
- identify and address non-conformance
- cleaning up and storing equipment according to workplace requirements
- disposing of waste according to environmental policies and workplace procedures
- maintaining records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace
- purpose and principles of grafting and disbudding
- criteria for successful grafting:
  - variety and clone
  - matching cambium
  - matching bevels and sizes
  - wood diameters
  - customer or workplace requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- importance of selection and use of rootstock and vinifera
- advantages of using clonal and registered vine improvement rootstock material
- criteria for selecting parent vines for scion material
- procedures and optimum conditions for the storage of grafting material
- preparing vine material for grafting, including:
  - removal from cold storage
  - soaking
  - heat treatment
  - disbudding
  - hydration
  - grading
- procedures for monitoring the grafting process and equipment operation to identify non-conformance
- purpose and components of grafting equipment and cleaning equipment
- packing, labelling and storing grafted vines relevant to:
  - cold room layout
  - cold room temperature variations
  - customer requirements
  - storage time requirements
  - care of vines to minimise damage by moisture and disease
- procedures and responsibility for reporting problems
- environmental issues and controls, including:
  - identifying, rectifying and reporting environmental non-conformance
  - sorting, collecting, treating, recycling or disposing of waste
- cleaning requirements and procedures for work area and equipment
- reporting and recording required information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a plant nursery workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - appropriate personal protective equipment
  - equipment, services and corresponding information
  - products and materials
  - cleaning procedures, materials and equipment
  - documentation and recording requirements and procedures
- specifications:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work procedures, including advice on company practices, safe work practices, quality and environmental requirements
- workplace grafting specifications
- work instructions and schedules
- legislative and local quarantine regulations and codes of practice.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPVIT2002 Carry out potting operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out at least two potting operations involving potting propagated material and post-potting treatment including:

- using personal protective equipment (PPE), safety data sheets (SDS) and following health and safety requirements in the workplace
- ensuring materials are available and ready for potting process
- selecting and mixing potting media and treatments according to workplace procedures
- cleaning pots and work surfaces according to workplace procedures
- preparing cuttings before potting including waxing or grading methods
- potting cuttings and labelling trays according to workplace procedures
- transferring potted cuttings to a growing environment
- maintaining hydration requirements
- disposing of waste according to workplace procedures
- completing records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace, including:
  - purpose and application of PPE
  - SDS
  - operating equipment according to workplace procedures
  - safe handling and preparation of equipment, potting media and chemicals
- process for preparing cuttings for potting, including:
  - grading

  - waxing
  - dipping in hormones
  - hydrating
- potting process and standards of potting, including:
  - resources and materials used for the potting process
  - selecting, operating, maintaining and storing equipment according to workplace procedures
  - planting cuttings, according to workplace procedures
  - labelling trays according to workplace procedures
  - watering potted cuttings
- process of transferring and placing potted cuttings to growing environment
- report and address non-conformances according to workplace procedures
- principles of nursery hygiene, including:
  - cleaning requirements and techniques for work area and equipment
- maintenance of work area and equipment according to workplace procedures including:
  - report and address environmental non-compliance
  - waste disposal requirements and procedures
- processes for reporting, recording and maintaining workplace records.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - nursery shed or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment, services and corresponding information
  - potting products and materials
  - cleaning procedures, materials and equipment
  - system for recording information
- specifications:
  - work procedures, including advice on company practices, safe work practices, and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPVIT2003 Hand prune vines

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively prepared for hand pruning, hand pruned vines and completed hand pruning operations at least once including:

- identifying health and safety hazards and controls in the workplace
- using personal protective equipment (PPE)
- following pruning equipment safety procedures
- starting and operating hand pruning equipment safely according to workplace procedures
- pruning correctly according to workplace procedures
- identify and address non-conformances
- performing shut down procedures according to workplace procedures
- following environmental procedures
- disposing of cuttings according to workplace procedures
- maintaining records according to workplace guidelines.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic components of and the purpose for pruning vines, including:
  - basic difference between cane and spur pruning
  - pruning requirements
  - different parts of the vine, including vine trunk and permanent framework, canes and cordons, tendrils and buds
- techniques and principles of pruning vines:
  - selecting the best possible spurs and canes
  - positioning spurs or canes
  - cleanly removing sucker shoots
  - leaving the correct quantity of spurs, rods and buds

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - making cuts correctly and cleanly
  - recognising and removing unwanted growth
  - rolling and securing extension canes onto trellis wire
- health and safety hazards and controls in the workplace including purpose and application of PPE
- correct operating procedures for pruning equipment, including:
  - handling pruning equipment safely
  - oiling moving parts and sharpening procedures
  - safe handling of pruning equipment
  - starting up and operating automatic pruning equipment as required
  - monitoring and recognising performance problems with pruning equipment
  - cleaning and storage requirements of pruning equipment
  - using appropriate cleaning techniques
- shut down procedures
- processes for the routine preventive maintenance of equipment
- identifying, rectifying and reporting environmental non-compliance
- processes for maintaining work area:
  - environmental issues and controls
  - disposal requirements of vine cuttings
- procedures and responsibility for reporting problems and anomalies
- recording workplace information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a vineyard workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - pruning equipment, services and corresponding information
  - products and materials
  - cleaning procedures, materials and equipment
  - documentation and recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices, quality and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPVIT2004 Pick grapes by hand

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has manually picked grapes for winemaking on at least two separate occasions including:

- identifying and following health and safety procedures in the workplace
- selecting, fitting and using personal protective equipment
- selecting grapes suitable for picking
- recognising diseased, over-ripe or immature grapes
- cutting grape bunches according to workplace procedures
- completing picking records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic components of the vine
- health and safety hazards and controls in the workplace, including:
  - manual handling
  - heat stress and sunburn
- purpose and application of personal protective clothing and equipment
- maintenance requirements and methods for equipment, including:
  - handling and sharpening procedures
  - oiling moving parts
- picking requirements according to workplace procedures, including:
  - making cuts
  - minimising damage to fruit and vine
  - recognising diseased, over-ripe or immature grapes
  - selecting grape bunches

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - collecting and handling picked grapes
  - cleaning and storage requirements of equipment
- procedures for maintaining workplace records
- identifying and reporting non-conformances according to workplace procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a wine vineyard or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - equipment, services and corresponding information
  - vines with grapes
  - cleaning procedures, materials and equipment
  - a system for recording information
- specifications:
  - work procedures, including advice on company practices, safe work practices, quality and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to maintain a callusing environment in a vineyard.

The unit applies to individuals who are required to follow workplace procedures to complete tasks associated with callusing operations.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Viticulture (VIT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare callusing environment	1.1 Identify and confirm job requirements 1.2 Select, fit and use personal protective equipment according to job requirements 1.3 Ensure materials required are available and ready

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.4 Select and use equipment according to workplace procedures 1.5 Prepare, clean and sanitise work area, equipment and boxes according to workplace procedures 1.6 Prepare pre-mixed callusing media according to workplace procedures
2. Prepare cuttings for callusing	2.1 Prepare cuttings for callusing according to workplace procedures 2.2 Apply pre-callusing treatments according to workplace procedures and safety guidelines 2.3 Count, bundle and label cuttings according to workplace procedures 2.4 Place cuttings into boxes according to workplace procedures
3. Maintain cuttings in callusing room	3.1 Place cuttings into callusing environment according to workplace procedures 3.2 Maintain callusing environment according to workplace procedures 3.3 Monitor cuttings for potential health problems and report or apply treatments according to workplace procedures 3.4 Apply post-callusing treatments to maintain plant health according to workplace procedures
4. Carry out post-callusing operations	4.1 Remove callused cuttings from callusing room 4.2 Collect and dispose of waste according to workplace environmental and workplace procedures 4.3 Clean and sanitise facilities according to workplace procedures 4.4 Undertake work in accordance with workplace environmental guidelines 4.5 Record workplace information according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Comprehend information from a variety of workplace documents
Oral Communication	• Converse clearly using industry-specific language
Numeracy	• Calculate numerical information relating to counting, labelling and storing
Navigate the world of work	• Apply workplace procedures to own role and responsibilities
Get the work done	• Respond to routine problems by referring to workplace procedures

Assessment Requirements for FBPVIT2005 Maintain callusing environment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared cuttings for callusing and maintained the callusing environment on at least two separate occasions including:

- identifying health and safety hazards and controls in the workplace
- selecting, fitting and using personal protective equipment (PPE)
- observing hygiene and housekeeping standards including cleaning and sanitising of work area, equipment and boxes
- preparing callusing media and boxes to specification
- preparing cuttings and applying pre-callusing treatment
- placing cuttings into callusing boxes
- monitoring and maintaining callusing environment to specification
- monitoring cuttings for correct callusing and reporting problems according to procedures
- applying post-callusing treatments
- removing callused cuttings
- recording appropriate information.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace, including:
  - purpose of PPE
  - correct operating procedures for equipment
  - safe and effective handling of equipment
  - safe preparation and handling of chemicals
- cleaning requirements and procedures for work area and equipment
- principles of nursery hygiene

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- environmental considerations and required controls
- waste disposal requirements and procedures
- correct procedures for preparing cuttings for callusing
- correct procedures for placing cuttings into boxes
- effects of variety, clone and source of cuttings on the placement and labelling of cuttings in boxes
- purpose and benefit of carrying out pre- and post-callusing treatments
- procedures used to carry out pre- and post-callusing treatments
- procedures for preparing pre-mixed callusing media
- factors in a controlled callusing environment that affect the vine cutting:
  - methods of pasteurising and treating callusing media
  - temperature
  - relative humidity
  - moisture levels of growing medium
- methods for setting, monitoring and maintaining the required temperature and relative humidity
- correct procedures for preparing callusing boxes
- quality control process in the callusing environment
- common problems that occur during callusing and how to resolve them
- procedures and responsibilities for reporting problems and anomalies
- procedures for maintaining workplace records
- procedures for selecting, operating, maintaining and storing the required equipment
- correct procedures for removing and transferring callused cuttings.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a plant nursery workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - equipment, services and corresponding information relevant to callusing
  - products and materials for callusing
  - cleaning procedures, materials and equipment
  - documentation, recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices, quality and environmental requirements
  - work instructions and schedules.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPVIT2006 Obtain and process rootlings

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has demonstrated the following for obtaining and processing rootlings from a field nursery, a sand bed and a callusing room, including:

- identifying health and safety hazards and controls in the workplace
- using personal protective equipment (PPE) according to job requirements
- handling and using treatments and disinfectants
- selecting and mixing treatments to required concentrations
- sanitising equipment and work surfaces according to workplace procedures
- set up and operate equipment according to workplace procedures
- treating, bundling, storing and labelling rootling according to workplace procedures
- preparing, packing and loading rootling for dispatch according to workplace procedures
- identifying and reporting non-conformances
- treating and disposing of waste according to workplace procedures
- maintaining records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace
- purpose and application of PPE
- safe equipment operation, storage and maintenance requirements according to workplace procedures
- principles of nursery hygiene for equipment and cleaning requirements
- methods for handling rootlings in different environments
- processes for treating rootlings:
  - hydration of all rootlings

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - chemical treatment of all rootlings
- common features of vine rootlings health
- procedures for monitoring the standard of rootlings, and grading and sorting them for:
    - diameter of stem
    - appearance
    - length and number of shoots
    - strength of graft union
- package, storage requirements and procedures for rootlings ready for sale, including:
    - cold room layout and temperature variations
    - customer requirements
    - storage time requirements
- procedures for checking stock against orders, including:
    - quantity of stock
    - varieties and clones
    - quality of stock is within specifications
    - procedures and responsibilities for reporting problems and anomalies
- procedures for dispatching stock, including:
    - correct manual handling
    - correct use of mechanical transfer equipment
- procedures for collecting and disposing of waste
- environmental issues and controls
- recording workplace information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a plant nursery workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - PPE
    - equipment, services and corresponding information
    - products and materials
    - cleaning procedures, materials and equipment
    - system for recording requirements and procedures
- specifications:
    - work procedures, including advice on company practices, safe work practices, food safety, quality and environmental requirements
    - work instructions and schedules.

Assessment Requirements for FBPVIT2008 Train vines

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared for vine training, trained vines and completed vine training activities on at least one occasion including:

- identifying health and safety hazards and controls in the workplace
- using personal protective equipment (PPE) according to job requirements
- setting up and operating equipment according to workplace procedures
- training vines according to instructions, including heading height, selection of appropriate laterals, positioning of laterals, securing of laterals, removing unwanted laterals from trunk and crown
- identifying and addressing non-conformances
- cleaning up and storing equipment according to workplace procedures
- maintaining records according to workplace procedures
- disposing of waste according to environmental guidelines.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace
- purpose and application of PPE
- safe and effective handling of equipment
- maintenance and storage of equipment according to workplace procedures
- range of vine training techniques, features, benefits and procedures
- different parts of the grapevine, including vine trunk and permanent framework, laterals, canes and cordons, tendrils and buds, and fruit
- how to report and address non-conformances according to workplace procedures
- responsibilities for identifying and controlling environmental issues
- cleaning and storage requirements and procedures for equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace procedures and responsibility for:
  - reporting problems
  - cleaning up
  - maintenance
  - handling and disposing of waste
  - reporting required information.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a vineyard workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - vine training equipment, services and corresponding information
  - range of grape vine varieties
  - cleaning procedures, materials and equipment
  - system for recording information
- specifications:
  - work procedures, including advice on company practices, safe work practices, and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPVIT2009 Plant vines by hand

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has planted cuttings and rootlings by hand on at least one occasion and demonstrated the following:

- using personal protective equipment (PPE)
- preparing vine equipment and material ready for use
- planting vines according to workplace procedures
- recognising health and non-conformances with cuttings and rootlings
- collecting, sorting, treating, and disposing of waste according to workplace procedures
- maintaining workplace records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace
- purpose and application of PPE
- appearance and features of healthy vine planting material
- conducting work according to terrain, climate and weather conditions
- operating procedures for equipment used for planting vines by hand including set up and shut down requirements
- environmental issues and controls
- procedures and responsibility for reporting non-conformances
- soil characteristics as they apply to vine establishment:
  - structure
  - compaction
  - condition
  - present moisture
  - present nutrients and toxic factors

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively taken and processed vine cuttings using hand-operated equipment on at least two separate occasions including:

- following health and safety procedures in the workplace
- selecting, fitting and using personal protective equipment (PPE)
- selecting cuttings and cutting according to workplace procedures
- using a variety of hand-operated or handheld cutting equipment
- treating, bundling, and labelling cuttings according to workplace procedures
- identifying and addressing non-conformances in cutting propagation of grape vines
- disposing of waste according to workplace procedures
- maintaining records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and environmental controls in the workplace
- purpose and application of PPE
- selection, setup and maintenance of vine cutting equipment
- vine components:
  - vine trunk and permanent framework
  - canes and cordons
  - tendrils and buds
- procedures for selecting and taking vine cuttings:
  - correct length and diameter
  - correct number of buds on the cutting

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - degree of straightness
    - cuts made correctly and cleanly
    - top cut at 45° angle or bottom bud flat, 1-2 cm from nearest bud
    - number of buds left on the vine
- treating cuttings procedures:
    - hydration of all cuttings
    - removing unwanted plant material
    - mixing treatments
- collecting and storing vine cuttings procedures:
    - numbers per bundle
    - all lying the same way in the bundle (basal and distal ends)
    - secure tying and labelling of bundles
    - maintaining hydration of cuttings
- cutting propagation techniques for grape vines:
    - identification of vine cuttings
    - cutting collection and storage requirements, including hydration
- features of healthy and unhealthy vine cuttings used to grade cuttings
- packing and storing cuttings:
    - cold room layout and temperature variations
    - storage time requirements
- cleaning requirements and environmental procedures for work area and equipment
- identifying and addressing non-compliances
- maintaining workplace records
- legislation, regulations and codes of practice related to handling of vine cuttings.

Assessment Conditions

Assessment of skills must take place under the following conditions:

Assessment Requirements for FBPVIT2011 Operate vineyard equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively operated at least three different types of vineyard equipment and for each type has demonstrated the following:

- identifying health and safety hazards and controls in the workplace
- using personal protective equipment (PPE)
- selecting and confirming availability of equipment, and preparing according to workplace procedures
- setting up, starting up, operating and shutting down equipment according to workplace procedures
- adjusting equipment operation to meet workplace conditions including yard, weather and terrain
- identifying and addressing non-conformances
- sorting, collecting, treating and disposing of waste according to environmental and workplace procedures
- maintaining records according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in all operating conditions
- selecting, fitting and using appropriate PPE
- basic equipment used and operated in a vineyard environment
- purpose, features, components and operational safety requirements of equipment:
  - all-terrain vehicles
  - tractor-mounted forklift
  - front-end loader

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - towed equipment (e.g. gondola)
    - three-point linkage equipment (e.g. discs)
    - power take-off driven equipment (e.g. slasher)
    - equipment with hydraulics (e.g. tipping trailer)
- confirming equipment status and condition, including:
    - fuel
    - water
    - oil (e.g. engine, gearbox and hydraulics)
    - belts
    - air intake
    - tyre pressure
    - metal fatigue or wear and tear
- following equipment shut down procedures
- identify and address non-conformances
- required weather conditions for equipment operation
- types of workplace terrain
- significance and methods of monitoring equipment performance
- procedures and responsibility for reporting problems and maintaining workplace records
- environmental issues and controls
- identifying, rectifying and reporting environmental non-compliance
- cleaning and storing according to workplace procedures
- collecting, treating and recycling or disposing of waste
- routine maintenance procedures for equipment
- recording requirements and procedures
- legislation and quarantine codes of practice related to vineyard operations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a vineyard workplace or simulated environment that accurately reflects performance in a real workplace setting
- resources, equipment and materials:
    - appropriate PPE
    - vineyard equipment and associated attachments
    - cleaning materials and equipment
- specifications:
    - work procedures, including advice on company practices, safe work practices and environmental requirements
    - legislative and local quarantine regulations and codes of practice
    - system for recording requirements and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT2012 Identify and treat nursery plant disorders

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0

Application

This unit of competency describes the skills and knowledge required to recognise common nursery plant disorders, monitor and record the severity of the disorder, and apply a range of treatments.

The unit applies to individuals who are required to follow workplace procedures in completing tasks to identify and treat nursery plant disorders.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Assessment Requirements for FBPVIT2012 Identify and treat nursery plant disorders

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified and treated at least two different plant disorders including:

- complying with health and safety and environmental policies and procedures
- selected and fitted personal protective equipment (PPE)
- reading and interpreting safety data sheets (SDS)
- following other specified health and safety procedures, including safe handling of chemicals
- identifying common plant disorders and implementing corrective actions
- selecting, mixing and applying treatments according to instructions
- taking corrective action in response to non-conformances
- conducting work according to environmental and health and safety requirements
- disposing of waste according to environmental policies and workplace procedures
- recording treatments according to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and controls in the workplace
- purpose and application of PPE
- safe preparation and handling of chemicals
- correct workplace procedures for equipment used to treat disorders:
  - safe and effective handling of equipment
  - preparing equipment
  - calibrating equipment
  - cleaning equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - applying particular settings
- health and safety in the workplace and environmental regulations affecting the use of chemicals for treating disorders:
    - environmental issues and controls
    - using appropriate cleaning techniques
    - identifying, rectifying and reporting environmental non-compliance
- characteristics of common vine disorders:
    - common plant disorders occurring in vine nurseries
    - life cycles of common vine disorders
- different types of control measures and their uses, including integrated pest management
- implementing appropriate control measures
- procedures for preparing treatments:
    - setting up application equipment
    - measuring treatment rates
    - mixing treatments to ensure homogenous mix
    - interpreting treatment label information
    - interpreting SDS information
- procedures and responsibilities for reporting problems and anomalies
- reporting and recording requirements and procedures
- principles of nursery hygiene
- cleaning requirements and procedures for work area and equipment
- waste disposal requirements and procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a plant nursery workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - PPE used for treating vine disorders
    - equipment, services and corresponding information
    - products and materials to be treated
    - equipment cleaning procedures and materials
    - documentation and recording requirements and procedures
- specifications:
    - work procedures, including advice on company practices, safe work practices, quality and environmental requirements
    - legislative and local quarantine regulations and codes of practice
    - work instructions and schedules.

Assessment Requirements for FBPVIT2013 Recognise disorders and identify pests and diseases

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified, assessed and reported symptoms of vine pests, diseases and disorders for at least two different vines including:

- selecting, fitting and using personal protective equipment (PPE)
- recognising symptoms of vine pests, diseases and disorders
- determining the cause of symptoms
- assessing the location and extent of spread
- determining the severity of pests, diseases and vine disorders
- recording and reporting findings according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- principles of workplace's integrated pest management program and importance of identifying vine disorders, pests and diseases
- responsibilities for health and safety in the workplace including:
  - health and safety hazards associated with treatment of disorders, pests and diseases
  - methods for controlling risks associated with health and safety hazards
- responsibilities for identifying and controlling environmental issues
- PPE
- vine physiology, as it applies to:
  - water intake
  - nutrient uptake
  - photosynthesis
  - transpiration, respiration and translocation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- parts of the root, trunk, shoot and fruit systems of the grapevine and their role in how the vine works:
  - buds, nodes and tendrils
  - cambium, epidermis, phloem and xylem
  - leaf blade, bract and petiole
  - bunch, berries and flowers
- annual growth stages of grapevines:
  - budburst
  - flowering
  - veraison
  - maturity
- vine types, characteristics and uses including:
  - family, genus and species names and categories
  - Vitis vinifera and commercial varieties
  - native species and hybrids (e.g. V. labrusca)
  - root stocks and scion stock
- key grape varieties and distinguishing features, including berry and bunch characteristics:
  - frost and disease resistance
  - flavour and style
- signs and symptoms of common vine disorders, pests and diseases including:
  - light brown apple moth
  - powdery mildew
  - downy mildew
  - botrytis
  - mites
  - fruit fly
- reporting responsibilities and procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a vineyard workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - equipment and materials for monitoring and controlling pests, diseases and disorders
  - system for recording and reporting information
- specifications:
  - workplace procedures for reporting pests, diseases and disorders
  - legislative and local quarantine regulations and codes of practice.

FBPVIT2014 Perform pest control activities

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to carry out pest control activities for weeds, vertebrate and invertebrate pests in wine operations.

The unit applies to individuals who work under general supervision, with limited autonomy and accountability for their own work.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

Use of chemical treatments may be controlled in some regions and advice should be sought from regulators in the relevant state or territory. Individuals performing shooting activities will require a gun licence under state and territory legislation.

Assessment Requirements for FBPVIT2015 Carry out basic canopy maintenance

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has demonstrated basic wine grapevine canopy maintenance at least twice using both manual and motorised equipment including:

- identifying and following health and safety procedures in the workplace
- selecting, fitting and using personal protective equipment
- selecting and confirming availability of equipment and preparing according to job requirements
- identifying and following instructions for canopy maintenance
- positioning vine shoots correctly, including removing unwanted growth
- using manual and motorised equipment according to workplace procedures
- controlling exposure of canopy to sunlight according to workplace procedures
- reporting problems and anomalies with vines or equipment
- shutting down and storing equipment according to workplace procedures
- disposing of waste according to workplace procedures
- completing workplace records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety and environmental hazards and controls in the workplace
- selecting, fitting and using personal protective equipment
- canopy maintenance requirements according to workplace procedures, including:
  - vineyard non-conformances
  - purpose of canopy management activities
  - positioning the vine canopy, including identifying and removing unwanted growth, positioning spurs, and making cuts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - manipulating the vines
  - controlling exposure of crop to light
- basic components and structure of vines, including:
  - vine trunk and permanent framework
  - canes and cordons
  - tendrils and buds
  - fruit
- operating equipment according to workplace procedures
- identifying equipment non-conformance including oiling moving parts and sharpening blades
- routine and emergency equipment shut down according to workplace procedures
- cleaning and storage requirements
- procedures for maintaining workplace records.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a vineyard or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - pruning equipment, services and corresponding information
  - vines and materials
  - cleaning procedures, materials and equipment
  - system for reporting and recording information
- specifications:
  - workplace procedures, including advice on company practices, safe work practices, quality and environmental requirements.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for hot water treatment	1.1 Confirm job requirements 1.2 Confirm environmental guidelines and identify potential health and safety hazards and controls according to workplace procedures 1.3 Select, fit and use appropriate personal protective equipment relevant to the job requirements 1.4 Ensure cuttings are available and ready for use 1.5 Clean and set up the hot water treatment (HWT) tank and cool down tank to remove foreign matter and contaminants according to industry standard 1.6 Prepare water for hot water treatment, hydration and cool down according to specifications 1.7 Check, maintain and calibrate equipment to meet production specifications
2. Treat cuttings	2.1 Load cuttings into treatment basket and lower into HWT according to workplace procedures 2.2 Monitor temperature and control parameters according to workplace procedures 2.3 Lower cuttings into the cool down tank according to workplace procedures 2.4 Identify and address non-conformances
3. Carry out post-treatment procedures	3.1 Unload treatment basket according to workplace procedures 3.2 Store and label treated cuttings according to workplace procedures 3.3 Check chlorine levels and sanitation requirements for water quality according to workplace procedures 3.4 Collect and dispose of waste according to workplace environmental and waste management procedures 3.5 Record treatment information and complete logs or batch information according to workplace requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Comprehend information from a variety of workplace documents
Writing	• Record hot water treatment information in required format
Numeracy	• Monitor temperature gauges and interpret numerical information relevant to the hot water treatment process
Navigate the world of work	• Apply workplace procedures to own role and responsibilities
Get the work done	• Respond to routine problems by referring to workplace procedures

Assessment Requirements for FBPVIT2016 Carry out hot water treatment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has prepared hot water treatments, treated cuttings and carried out the post-treatment procedures on at least two separate occasions and demonstrated the following:

- identifying health and safety hazards and controls in the workplace
- selecting, fitting and using personal protective equipment according to job requirements
- applying current viticulture industry standards to heat treatment of cuttings
- handling and treating cuttings according to workplace procedures
- monitoring treatment processes and responding according to workplace procedures
- disposing of waste according to instructions and workplace procedures
- maintaining records according to industry and workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and process of hot water treatment
- how to set up equipment for hot water treatment according to workplace procedures
- how to prepare cuttings for treatment or re-hydration
- how to prepare water for cool down, hot water treatment and hydration:
  - testing and adjusting chlorination levels
  - checking and adjusting temperature levels
- current industry standards, legislation and workplace specifications for hot water treatments
- reasons for using different specifications for hot water treatments
- how to monitor the dipping process to ensure compliance according to workplace procedures including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - monitoring critical control points for compliance with specifications
    - analysing readouts from data logging devices
    - maintaining level of agitation in the tanks
    - maintaining chlorine level
    - recalibrating thermometers
- procedures for storing treated cuttings:
    - separating from untreated cuttings to prevent contamination
    - covering with clean covers
    - placing cuttings in vented plastic bags to prevent dehydration
    - placing cuttings in the cold room
- workplace health and safety hazards and controls when undertaking hot water treatments
- principles of nursery hygiene
- cleaning requirements and procedures for work area and equipment
- environmental issues and controls:
    - identifying, rectifying and reporting environmental non-compliance
    - waste disposal requirements and procedures
- reporting and recording workplace procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a plant nursery workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - personal protective equipment used for heat treatment of vines
    - equipment, services and corresponding information
    - products and materials to be treated
    - equipment cleaning procedures and materials
    - system for recording requirements and procedures
- specifications:
    - work procedures, including advice on company practices, safe work practices and environmental requirements
    - legislative and local quarantine regulations and codes of practice and industry standards for heat treatment of grape vines
    - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT2018 Support mechanical harvesting operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to collect grapes from a mechanical harvester and deliver them to the receival point.

The unit applies to individuals who are required to follow workplace procedures in supporting operations for mechanical harvesting.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- AHCMOM202 Operate tractors

Unit Sector

Viticulture (VIT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for harvest support activities	1.1 Confirm job requirements 1.2 Confirm environmental guidelines and identify potential health and safety hazards and controls according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Select and fit personal protective equipment relevant to the job rrequirements 1.4 Check, maintain and set equipment to meet workplace procedures
2. Collect grapes from harvester	2.1 Operate machinery and equipment safely with trailer or gondola attached alongside mechanical harvester 2.2 Monitor collection activities to confirm performance is maintained according to workplace procedures 2.3 Recognise and address non-conformances according to workplace procedures 2.4 Maintain equipment in good working order according to workplace procedures
3. Transfer grapes to despatch location	3.1 Add treatments to grapes according to workplace procedures 3.2 Comply with relevant legislation and quarantine codes of practice 3.3 Deliver grapes to receival point to meet workplace procedures
4. Complete harvest support activities	4.1 Shut down equipment safely and according to operator instructions 4.2 Clean equipment according to workplace procedures 4.3 Collect, sort and dispose of waste generated by the process or cleaning procedures according to workplace practices 4.4 Record workplace information accurately in the appropriate format

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Comprehend information from a variety of workplace documents
Oral Communication	• Converse clearly with workplace personnel to ensure safety of self and others when supporting harvesting operations
Navigate the world of work	• Apply workplace procedures to own roles and responsibilities

Assessment Requirements for FBPVIT2018 Support mechanical harvesting operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has demonstrated the following on at least two separate occasions when supporting mechanical harvesting operations including:

- accessing workplace information to identify job requirements
- identifying health and safety hazards and controls in the workplace
- selecting, fitting and using personal protective equipment (PPE)
- checking and confirming readiness of equipment before operation
- starting and operating equipment according to instructions
- monitoring harvesting operation to achieve job requirements
- identify and address non-conformances
- treating and delivering grapes according to task requirements
- shutting down equipment according to workplace procedures
- cleaning and storing equipment according to workplace procedures
- sorting, collecting, treating and disposing of waste according to environmental and workplace procedures
- maintaining appropriate records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key factors that will affect grape and wine quality, including:
  - temperature
  - oxidation
  - material other than grapes collected
  - speed of processing
  - treatment requirement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- health and safety hazards and controls in the workplace
- how to select, fit and use appropriate PPE
- procedures for identifying and addressing environmental issues
- procedures for carrying out pre-operational checks of equipment
- procedures for selecting, attaching, setting up and operating harvesters and tractor trailers used in the workplace
- procedures for collecting grapes to avoid damage to grapes, equipment, vines, trellises or fences
- procedures for shutting down, cleaning and maintaining equipment
- common problems during grape collection activities and methods for avoiding addressing and reporting them, including:
  - equipment breakages or malfunction
  - vine or trellis damage
  - grape quality and quantity
  - matter other than grapes collected
  - load weight
  - treatment application to fruit loads
  - collection accuracy of grapes
  - tipping accuracy of grapes at receival point
  - congestion or backlog at receival point
- recording requirements and procedures
- legislation and quarantine codes of practice related to vineyard products.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a vineyard workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - appropriate PPE
  - equipment with attached gondola or trailer
  - products and materials to be collected and delivered
  - cleaning procedures, materials and equipment
  - system for recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices and environmental requirements
  - legislative and local quarantine regulations and codes of practice.

FBPVIT3001 Coordinate vineyard operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to coordinate vineyard operations in a range of day-to-day activities in areas such as harvesting, nursery, pruning or canopy management.

The unit applies to individuals who coordinate operations within a vineyard. They work under broad direction and exercise autonomy and judgement where required.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Viticulture (VIT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to coordinate vineyard activities	1.1 Interpret and confirm job requirements 1.2 Confirm environmental guidelines and identify potential health and safety hazards and controls according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Select and fit personal protective equipment according to the job requirements 1.4 Identify and clarify activity goals and job requirements with supervisor 1.5 Ensure appropriate personnel required are available 1.6 Ensure materials and equipment are available and ready
2. Coordinate vineyard activities	2.1 Confirm work targets, timelines and processes to achieve activity goals and job requirements 2.2 Allocate individual work tasks and roles to ensure activity goals and job requirements are met 2.3 Instruct workers and contractors according to workplace procedures 2.4 Monitor activities to ensure quality, timelines and job requirements are maintained according to workplace procedures 2.5 Identify and address barriers to achieving targets and job requirements
3. Complete coordination of vineyard activities	3.1 Monitor activities to ensure compliance with relevant workplace procedures on completion, shutdown and waste disposal 3.2 Debrief personnel according to workplace procedures 3.3 Record workplace information according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Comprehend information from a variety of workplace documents
Writing	• Record workplace information in required format
Oral Communication	• Converse clearly with workplace personnel to confirm job requirements, monitor activities and provide feedback on performance of daily tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Numeracy	• Timetable and schedule vineyard work tasks according to required timeframes
Navigate the world of work	• Apply workplace procedures and legislative requirements relevant to own role
Interact with others	• Use required communication mode to report operational information to relevant personnel
Get the work done	• Identify and solve problems by referring to workplace procedures • Plan and organise tasks to achieve job requirements

Assessment Requirements for FBPVIT3001 Coordinate vineyard operations

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has effectively coordinated operations in a vineyard involving day-to-day activities in areas of harvesting, nursery, pruning or canopy management at least once, including:

- complying with health and safety requirements in the workplace
- selecting and fitting personal protective equipment (PPE)
- determining activities required of the vineyard processes and individuals in order to meet job targets
- allocating activities and monitoring their implementation
- providing team leadership and instruction for vineyard personnel
- identifying and addressing non-conformances
- completing workplace records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace planning processes:
  - planning and scheduling vineyard activities
- personnel requirements:
  - equipment and materials required
  - location
  - transport
  - timing
  - environmental conditions
  - other vineyard activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- quality and quantity requirements
- vineyard health and safety hazards and controls in the workplace
- vineyard environmental issues and controls
- team leadership communication principles and strategies
- procedures for monitoring and reporting on individual and team performance
- vineyard activities to be monitored:
  - compliance with workplace, environmental and quality procedures
  - individual and team performance
  - achievement of targets, timelines and performance requirements
  - team members' learning needs
  - instructing individuals and groups
  - providing feedback to individuals and groups
  - resolving conflicts
- how to recognise, correct and report non-conformances
- how to maintain workplace records.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a vineyard workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - vineyard equipment, services and corresponding information
  - products and materials required for vineyard work
  - system for recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices, people management, quality and environmental requirements
  - work instructions and schedules
- relationships (internal and/or external):
  - small work groups or teams to coordinate.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT3003 Operate spreading and seeding equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to attach, set up and detach spreading and seeding equipment that requires calibration.

The unit applies to individuals who complete spreading and seeding activities such as planting cover crops and ensuring deep incorporation of ameliorants and fertilisers.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for FBPVIT3003 Operate spreading and seeding equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively set up, operated and shut down seed spreading equipment at least once and demonstrated the following, including:

- recognising health and safety hazards and applying controls in the workplace
- selecting and using personal protective equipment (PPE)
- ensuring availability of specified materials and preparing according to workplace requirements
- selecting, attaching, setting up and calibrating equipment to meet job requirements
- starting, operating and shutting down equipment in accordance with workplace procedures
- monitoring spreading or seeding operations to achieve specified result
- shutting down the equipment according to workplace procedures
- taking corrective action in response to non-conformance results
- disposing of waste materials according to workplace and environmental policies
- recording information accurately.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the purpose and application of spreading and seeding operations within the vineyard growing system, including:
  - soil ameliorants
  - inter-row cropping species and varieties
  - inter-row cropping practices and techniques
  - inorganic and organic fertilising materials
  - process specifications, procedures and operating parameters
- application parameters for seed or spreading materials:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - correct variety or type of seed and fertiliser
    - correct soil ameliorant and treatment
    - application rate
    - volume
    - application depth
    - density
    - coverage
    - required weather conditions for activity
- soil characteristics as they apply to spreading and seeding operations
- purpose and operation of seeding and spreading equipment and instrumentation components:
    - common causes of non-conformance and corrective action required
    - significance and methods of monitoring equipment performance
    - storage procedures for equipment and materials
    - routine maintenance procedures for equipment
    - start up and shutdown sequence
- equipment status and condition:
    - belts and chains
    - lubricants
    - hydraulics
    - air intake
    - tyre pressure and wear
    - wear and tear
- how to select, attach, set up and calibrate equipment to meet job requirements
- how to select, prepare and load materials according to job requirements
- how to start up, operate and monitor equipment
- how to conduct routine maintenance of equipment according to workplace procedures
- local environment and operating conditions
- health and safety hazards and controls in the workplace
- PPE
- procedures and responsibility for reporting non-conformances
- procedures for collecting, sorting, treating, disposing of and recycling waste to meet environmental compliance
- equipment cleaning requirements and procedures
- storage requirements associated with temporary or seasonal breaks in activity
- procedures for maintaining workplace records.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - an agricultural or horticultural workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - spreading and seeding equipment, services and corresponding information
  - spreading and seeding products and materials
  - cleaning procedures, materials and equipment
  - documentation and recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices, equipment calibration and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT3004 Monitor and maintain nursery plants

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to monitor and maintain containerised nursery plants.

The unit applies to individuals who carry out workplace procedures in completing tasks associated with maintaining nursery plants.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- FBPVIT2012 Identify and treat nursery plants and disorders

Unit Sector

Viticulture (VIT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Monitor environmental parameters	1.1 Confirm job requirements 1.2 Identify potential health and safety hazards and controls according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Select and fit personal protective equipment according to the job requirements 1.4 Monitor environmental parameters against the production plan 1.5 Alter environmental parameters to meet the needs of the plants 1.6 Maintain nursery hygiene to comply with industry and workplace procedures
2. Determine daily water requirements	2.1 Identify plant water requirements to maintain required health and growth according to workplace procedures 2.2 Irrigate plants according to workplace procedures 2.3 Monitor water requirements according to workplace procedures 2.4 Maintain nursery irrigation system to meet plant production plan
3. Implement treatments to promote plant growth	3.1 Test potting media according to workplace procedures 3.2 Monitor overall health of plants according to workplace procedures 3.3 Implement plant treatments according to production plans 3.4 Identify and address non-conformances according to workplace procedures
4. Monitor the dispatch of stock	4.1 Confirm availability of stock and timing of dispatch with customers according to workplace procedures 4.2 Prepare plants for dispatch in line with customer requirements 4.3 Check stock to ensure it meets quality specifications 4.4 Check orders against stock being dispatched to ensure compliance 4.5 Record workplace information according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Reading	• Comprehend information from a variety of workplace documents
Numeracy	• Calculate numerical information relating to measuring quantities, adjusting equipment controls and stock operations
Navigate the world of work	• Apply workplace procedures and legislative responsibilities relevant to own role
Interact with others	• Use required communication mode to report operational information to relevant personnel
Get the work done	• Respond to routine problems by referring to workplace procedures • Plan and organise tasks to achieve job requirements

Assessment Requirements for FBPVIT3004 Monitor and maintain nursery plants

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively monitored and maintained three different containerised nursery plants and demonstrated the following:

- identifying and following health and safety in the workplace procedures
- selecting and using personal protective equipment (PPE)
- identifying environmental factors and their effect on plant growth and health
- monitoring and controlling irrigation and treatments to meet production outcomes
- identifying and addressing non-conformances
- confirming available stock levels to meet customer requirements
- preparing stock for dispatch
- dispatching nursery plant stock to meet customer requirements
- completing documentation to workplace requirements.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- basic vine physiology, as it applies to:
  - transpiration
  - water intake
  - nutrient uptake
  - photosynthesis
  - respiration
  - translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - buds, nodes and tendrils
    - cambium, epidermis, phloem and xylem
    - leaf blade, bract and petiole
    - bunch, berries and flowers
- key grape varieties and their distinguishing features:
    - berry and bunch characteristics
    - frost and disease resistance
    - flavour and style
- annual grapevine growth stages:
    - budburst
    - flowering
    - on set of ripening
    - maturity
- irrigation systems and methods including:
    - methods of calculating daily water needs
    - methods for monitoring water use
    - relationship between water needs of nursery plants and environmental parameters
- maintenance of irrigation systems:
    - fixing blockages
    - servicing irrigation system components
    - identifying and reporting faults in the irrigation system
    - fixing leaking heads and hoses
    - monitoring water requirements
    - using soil moisture devices
- checking plants for physical signs of water stress or waterlogging
- types of potting media, their characteristics and effect on plant growth
- tests to determine quality of potting media:
    - pH, drainage, aeration
    - salinity
    - nitrate levels
    - water repellence
- maintenance of work area to meet workplace hygiene standards:
    - removing weeds
    - removing dead or diseased plant materials
    - washing work area on transfer of plants
    - disinfecting tools, equipment and work areas
    - using foot baths on entry to different work areas
- procedures for applying treatments to vines:
    - fungicides
    - fertilisers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - insecticides
  - hormones
  - pruning
  - hardening off
  - preparing, mixing and using chemicals
  - quality parameters for nursery plants
  - treatments required by plants at different growth stages
- health and safety hazards and controls in the workplace:
  - selecting, fitting and using appropriate PPE
  - identifying potential and existing hazards in the work area and implementing safe work procedures to minimise hazards
- procedures for monitoring and preparing stock for dispatch:
  - packing, dispatching and handling techniques of nursery plants
  - labelling containers
  - checking orders against stock prepared
  - hydrating stock
- procedures and responsibility for reporting problems and anomalies
- procedures for liaising with customers
- procedures for maintaining workplace records.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a plant nursey or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - equipment, services and corresponding information
  - nursery stock
  - hygiene procedures, materials and equipment
  - system for recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices, plant quality and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT3005 Install and maintain vine trellis

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to install and maintain vine trellising.

The unit applies to individuals who are required to follow workplace procedures in completing tasks associated with installing and maintaining a vine trellis and take responsibility for their own work using discretion and judgement in the selection and use of available resources.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Viticulture (VIT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for trellising activities	1.1 Confirm work instructions and identify potential health and safety hazards and controls according to workplace procedures 1.2 Select, fit and use personal protective equipment according to job

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	requirements 1.3 Check existing trellises for signs of disrepair according to workplace procedures 1.4 Check, maintain and set equipment according to workplace procedures 1.5 Select materials for trellis installation or repair 1.6 Lay out posts and supports according to workplace procedures 1.7 Run out wire according to workplace procedures
2. Erect and maintain trellises	2.1 Operate trellis equipment according to workplace procedures 2.2 Erect trellis ends and posts and strain assemblies 2.3 Attach and tension foliage and trellis wires according to workplace procedures 2.4 Identify and address non-conformances 2.5 Carry out trellis maintenance and repair activities according to workplace procedures
3. Complete trellising activities	3.1 Shut down equipment according to workplace procedures 3.2 Clean and store equipment and materials according to workplace procedures 3.3 Collect and dispose of waste according to workplace and environmental procedures 3.4 Undertake work in accordance with workplace environmental guidelines 3.5 Record workplace information according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Comprehend information from a variety of workplace documents

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Writing	• Complete workplace documents in required format
Oral Communication	• Communicate clearly to confirm vine trellis installation requirements
Numeracy	• Calculate numerical information relating to estimating and measuring materials
Navigate the world of work	• Apply workplace procedures and legislative responsibilities to own role
Interact with others	• Use required communication mode to report operational information to relevant personnel
Get the work done	• Plan, sequence and implement tasks according to set routines and procedures • Problem solve issues as they arise

Assessment Requirements for FBPVIT3005 Install and maintain vine trellis

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively installed and maintained a vine trellis at least twice and demonstrated the following:

- identifying health and safety hazards and controls in the workplace
- using and fitting personal protective equipment (PPE)
- carrying out trellis repairs according to workplace procedures
- laying out posts and supports according to workplace procedures
- cutting, securing, positioning and tensioning wires according to workplace procedures
- storing unused materials according to workplace procedures
- collecting and disposing of waste according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose, features and components of the trellis system:
  - trellis installation process
  - maintenance requirements of vineyard trellising and how to repair them
  - addressing non-conformances in trellis installation
  - selecting appropriate materials, including type and quantity
- health and safety hazards and controls in the workplace:
  - safe handling of materials and equipment
  - purpose and application of PPE
- how to repair a trellis, including:
  - positioning and depth of posts and strainers
  - positioning and number of wires

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - tightness and grade of wire
- practices to lay out posts and supports, including:
    - spacing
    - type
    - numbers
    - positioning
- practices to run out wire including:
    - positioning
    - cutting correct length
    - erecting trellis ends and assemblies
    - securing of ends
- methods of attaching foliage and trellis wires including:
    - spacing
    - alignment
    - height
    - tension
    - fixing method
    - joining systems
- operation of trellising equipment:
    - checking equipment
    - using hand tools
- environmental issues, controls and reporting requirements
- cleaning and storage requirements and procedures for equipment and materials.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a grape growing workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - PPE
    - trellising equipment, services and corresponding information
    - trellising materials
    - cleaning and storing procedures, materials and equipment
    - documentation and recording requirements and procedures
- specifications:
    - work procedures, including advice on company practices, safe work practices and environmental requirements
    - work instructions and schedules.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPVIT3006 Field graft vines

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively grafted vines in the field on at least two separate occasions including:

- selecting and preparing vine material for grafting, including disbudding
- using and fitting personal protective equipment (PPE)
- carrying out grafting of vines in the field according to workplace procedures
- conducting post-grafting treatment and packing of vines
- monitoring grafted vines, identifying and reporting non-compliances
- disposing of waste according to environmental workplace procedures
- recording and reporting results of grafting according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose of grafting
- various methods of budding and grafting
- criteria for successful grafting
- criteria for selecting parent vines for scion material:
  - variety and clone
  - matching cambium
  - matching bevels and sizes
  - viable buds
  - achievement of tight unions
- preparing vine material for grafting:
  - soaking buds
  - working appropriate incisions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - hot water treatment of cuttings
    - virus tests
    - compatibility tests
    - hydration of cuttings
    - cutting to size
- grafting vines in the field:
    - bud location to graft
    - cohesion of graft union
- vine treatments after grafting:
    - securing with tape
    - painting
- waxing
- storing unused grafting material
- correct procedure and optimum conditions for the storage and handling of vine material until required for grafting
- advantages of using clonal and registered vine improvement material
- importance of selection and use of rootstock
- stages of the grafting procedure and their purpose
- procedures for monitoring the process and equipment operation to identify out-of-specification results or non-compliance:
    - percentage take
    - weather conditions
    - pests and diseases
    - common problems and corrective action required
- purpose, components and operation of grafting equipment:
    - routine maintenance procedures for equipment
- methods of callusing vine cuttings and the criteria for best callus development
- procedures and responsibilities for reporting problems
- work health and safety (WHS) hazards and controls:
    - selecting, fitting and using appropriate personal protective clothing and equipment
- environmental issues and controls
- cleaning requirements for work area and equipment
- recording requirements and procedures.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
    - a grape growing workplace or an environment that accurately represents workplace conditions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- resources, equipment and materials:
  - PPE
  - field grafting equipment and services
  - grape vines
  - cleaning procedures, materials and equipment
  - system for recording information
- specifications:
  - workplace procedures, including advice on company practices, safe work practices, and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT3007 Operate specialised canopy management equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to attach, set up, operate and detach canopy management equipment.

The unit applies to vineyard workers who carry out the operation of specialised equipment used in grape growing and take responsibility for their own work using discretion and judgement in the selection and use of available resources.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- AHCMOM202 Operate tractors

Unit Sector

Viticulture (VIT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for canopy management activities	1.1 Interpret and confirm job requirements 1.2 Confirm environmental guidelines and identify potential health

Assessment Requirements for FBPVIT3007 Operate specialised canopy management equipment

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has safely and effectively set up, operated and shut down specialised canopy management equipment on at least one occasion including:

- recognising health and safety hazards in the workplace and applying controls
- selecting and using personal protective equipment (PPE)
- attaching and setting up equipment to meet job requirements
- starting, operating, and shutting down equipment safely and according to workplace procedures
- taking corrective action according to non-conformances
- disposing of waste according to workplace procedures
- recording information according to workplace procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- key factors affecting the canopy management technique, including:
  - climate, forecast and current weather conditions
  - vineyard aspect and terrain
  - grape variety and vigour
  - grape quality and characteristics required
  - trellis design
  - harvesting techniques
  - disease risk and occurrence
  - stage of maturity and development
- canopy management equipment, operating parameters and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- factors influencing vine vigour:
  - grape variety
  - trellis design
  - vine spacing
  - fertilisers
  - irrigation
  - rootstock
- features and benefits of a range of canopy management styles and techniques and their respective effect on grape quality, cropping yield and wine production requirements, including techniques to manage:
  - light penetration and shading
  - air circulation and disease reduction
  - annual growth stages of vine development
  - crop quality and quantity
- significance and method of monitoring canopy management activities
- purpose and basic components of canopy management equipment
- operational procedures for equipment:
  - attaching equipment to tractor
  - setting up equipment to meet requirements
  - confirming equipment status and condition
  - operating equipment to meet requirements
  - starting and shutting down equipment
  - recognising equipment performance problems and rectifying and reporting
  - cleaning and storing equipment
  - detaching equipment from tractor
  - using appropriate cleaning techniques
  - carrying out routine maintenance of equipment
- monitoring canopy management activities:
  - width of canopy
  - speed of tractor and power take-off rpm
  - density of foliage
  - air circulation
  - light penetration or shade
  - bud numbers, spur length
  - vine damage
  - rate of progress
- health and safety hazards and controls in the workplace
- selecting, fitting and using PPE
- environmental issues and controls
- basic vine canopy problems or anomalies

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- taking corrective action in response to non-conformances
- system for reporting problems
- cleaning and storage requirements and procedures for equipment
- maintaining workplace records.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a vineyard or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - canopy management equipment, services and corresponding information
  - vines requiring canopy management
  - cleaning procedures, materials and equipment
  - documentation and recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices, canopy management and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Assessment Requirements for FBPVIT3008 Operate a mechanical harvester

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has set up and safely operated a mechanical harvester to meet harvesting requirements on at least one occasion including:

- following health and safety in the workplace procdures
- selecting, fitting and using personal protective equipment (PPE)
- preparing, attaching and setting up equipment according to workplace procedures
- starting, operating and shutting down equipment according to workplace procedures
- adjusting operation to suit weather and terrain conditions
- identifying and addressing non-conformances
- managing the disposal of waste according to environmental workplace procedures
- recording information according to procedures.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- health and safety hazards and environmental controls in the workplace
- PPE
- key grape varieties and their distinguishing features for harvesting:
  - berry and bunch characteristics
  - frost and disease resistance
  - flavour and style as it applies to harvest
  - factors that affect grape ripening
  - effect of fruit quality on wine
- purpose of mechanical harvester components and operation including:
  - crop level

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - grape variety
  - vine age
  - row height, width and trellis design
  - slope, angle of row
  - visibility
- monitoring mechanical harvester operation:
  - vine damage
  - grape quality and maturity
  - harvesting effectiveness (amount of fruit left in fruiting zone)
  - matter other than grape (MOG) collected
- maintenance procedures for equipment
- procedures and responsibility for non-conformances
- cleaning and storage procedures.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a wine agricultural or horticultural workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - equipment, services and corresponding information
  - cleaning procedures, materials and equipment
  - a system for recording information
- specifications:
  - work procedures, including advice on equipment operations, company practices, safe work practices and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT3009 Monitor and control vine disorders and damage

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to recognise, identify and monitor a variety of vine disorders and damage, and recommend and implement preventive or corrective action.

The unit applies to individuals who work under broad direction and take responsibility for their own work to monitor and control vine disorders and damage.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified and treated vine disorders and damage on at least two separate occasions including:

- following health and safety in the workplace procedures
- selecting, fitting and using personal protective equipment (PPE)
- recognising symptoms of vine disorders and damage, and recommending appropriate treatments
- implementing treatments according to requirements
- evaluating effectiveness of treatments
- taking corrective action in response to non-conformances
- conducting work according to environmental and health and safety requirements
- completing workplace documentation.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- pests diseases and disorders that affect grape vines:
  - symptoms of vineyard pests, diseases, disorders and weeds, and their treatment
  - effect of pests, diseases, disorders and weeds on vine, fruit and wine quality
  - effect of prevention, control and eradication techniques on vine, fruit and wine quality
- basic vine physiology, as it applies to disorders:
  - water intake
  - nutrient uptake
  - photosynthesis
  - respiration, transpiration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - translocation
- parts of the root, trunk, shoot and fruit systems of the grapevine, their role in how the vine works and their contribution to fruit quality:
    - buds, nodes and tendrils
    - cambium, epidermis, phloem and xylem
    - leaf blade, bract and petiole
    - bunch, berries and flowers
- annual growth stages of grapevines:
    - budburst
    - flowering
    - on set of ripening
    - maturity
- vine types, their characteristics and uses:
    - family, genus and species
    - Vitis vinifera and commercial varieties
    - native species and hybrids (e.g. V. labrusca)
    - rootstocks and scion stock
- key grape varieties and their distinguishing features:
    - berry and bunch characteristics
    - frost and disease resistance
    - flavour and style
- industry processes for new variety development
- climatic implications and influence on the occurrence, development and treatment of vine disorders and damage
- resistance management strategies
- features and benefits of a variety of preventive, control and eradication techniques, including costs and interaction with environmental conditions
- environmental issues associated with preventive, control and eradication techniques, community issues and concerns
- monitoring techniques and procedures
- health and safety hazards and controls in the workplace
- evaluation techniques
- procedures and responsibility for non-conformances
- reporting and recording requirements
- procedures for rectifying and reporting environmental non-conformance
- procedures for maintaining workplace records
- procedures for instructing and supervising vineyard personnel and contractors.

Assessment Conditions

Assessment of skills must take place under the following conditions:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- physical conditions:
  - a vineyard or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - PPE
  - equipment, services and corresponding information
  - grape vines in nursery or vineyard
  - hygiene procedures, materials and equipment
  - documentation and recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices, quality and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPVIT3010 Implement a soil management program

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to monitor soil requirements and implement and evaluate a soil management program.

The unit applies to individuals who carry out workplace procedures in consultation with the manager in completing tasks associated with implementing a soil management program.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Viticulture (VIT)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Monitor vineyard soil management requirements	1.1 Interpret and confirm job requirements 1.2 Confirm environmental guidelines and identify potential workplace health and safety hazards and controls according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Select and fit personal protective equipment according to the job requirements 1.4 Monitor vineyard soil and interpret results according to workplace procedures 1.5 Sample and test soils to determine options for soil management 1.6 Identify and recommend appropriate soil management activities to supervisor for approval
2. Implement soil management program	2.1 Coordinate resources and brief personnel to undertake soil improvement 2.2 Implement approved soil management activities 2.3 Monitor soil management activities to maintain program within specification
3. Evaluate effectiveness of soil management program	3.1 Monitor vineyard soil to evaluate effectiveness of activities 3.2 Monitor surrounding areas to evaluate environmental impact of soil management activities 3.3 Recognise and address non-conformances according to workplace procedures 3.4 Document soil management information according to workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret information from a variety of workplace documents
Writing	• Produce workplace documents in required format
Numeracy	• Calculate numerical information relating to specifications, treatments and schedules
Navigate the world of	• Apply workplace procedures and legislative responsibilities relevant to own role

Assessment Requirements for FBPVIT3010 Implement a soil management program

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has monitored, implemented and evaluated a soil management program for a vineyard at least once and demonstrated the following including:

- accessing workplace information to identify vineyard soil requirements
- ensuring use of workplace health and safety procedures
- selecting and fitting personal protective equipment
- determining requirements for vineyard soil management and making recommendations for approval
- coordinating resources and activities to implement soil management program
- monitoring and identifying non-conformances with the effectiveness of soil management program
- completing workplace records.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- workplace health and safety hazards and controls including selecting, fitting and using appropriate personal protective equipment
- soil management techniques and their effect on soil, vine growth, cropping levels and wine quality:
  - ideal soil environment for vines plus specific requirements of grapes grown
  - visual signs of vine nutrient deficiencies
  - sampling techniques and procedures
  - routine testing techniques and procedures
  - interpretation of routine tests

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for monitoring the vineyard and interpreting the results to identify vineyard soil management requirements, including:
  - soil moisture content
  - water table level
  - weed population
  - nutrient levels in plant and soil
  - signs of vine nutrient deficiencies
  - climatic conditions
  - cover crop practices
  - soil analyses including pH and salinity
  - evidence of hard pans
  - soil texture
  - vine root distribution
  - irrigation water quality
  - erosion risk
  - soil management history
  - growth of mid-row sward
- procedures for planning and implementing the soil management program:
  - resources, including operators with appropriate skills
  - equipment availability and capability
  - materials and chemicals
  - maintenance programs and supplies
  - specific needs of individual blocks
  - application rates for soil addition
  - environmental conditions
- procedures for monitoring soil management activities:
  - operator performance
  - operating conditions
  - operating results
  - material supplies
  - equipment performance
- how to identify, rectify and report environmental non-conformance
- procedures and responsibility for reporting non-conformance
- consulting with appropriate personnel:
  - presenting and justifying recommendations to senior personnel
  - instructing and supervising operators
- application rates for soil addition
- how to complete workplace records.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a vineyard workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment
  - sampling and testing equipment, services and corresponding information
  - vineyard soils and growing media
  - documentation and recording requirements and procedures
- specifications:
  - work procedures, including advice on company practices, safe work practices, soil quality and environmental requirements
  - work instructions and schedules.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPWHS1001 Identify safe work practices

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Application

This unit of competency describes the skills and knowledge required to recognise known workplace hazards and identify work health and safety requirements and procedures relating to work activities.

The unit applies to individuals who are new entrants to the food industry and work alongside a supervisor in most situations, exercising limited autonomy within established and well-known parameters.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Work health and safety (WHS)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Recognise work health	1.1 Identify work health and safety legislative requirements applicable

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified safe work practices on at least one occasion, including:

- identifying hazards and controlling associated risks
- following safe work procedures when carrying out work tasks.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- applicable Commonwealth, state or territory work health and safety legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities
- basic principles of risk management and assessment relating to work role
- common known workplace hazards
- potential consequences of failing to follow safe work practices
- common workplace safety signs and their meanings
- general workplace emergency response and evacuation procedures
- work activities that require licences, tickets or certificates of competency
- workplace procedures for raising work health and safety issues
- workplace procedures for reporting work health and safety hazards, accidents, incidents, emergencies, injuries, near misses and dangerous occurrences
- workplace procedures for responding to hazards, incidents and injuries

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- own rights and responsibilities to comply with safe working practices, relating to identification of hazards, preventing bullying or harassment, use of amenities, smoking, use of drugs and alcohol and housekeeping
- role of work health and safety committees and representatives
- types of common personal protective equipment and fire safety equipment
- types of work health and safety information and documentation.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - personal protective equipment (PPE) and clothing
- specifications:
  - workplace health and safety policies and procedures
  - workplace health and safety legislation, regulations and codes of practice
- relationships:
  - supervisor or senior personnel.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has carried out work in accordance with health and safety requirements and procedures, and contributed to maintaining a safe workplace on at least two separate occasions, including:

- following clear, logical verbal or written instructions
- interpreting selected pictorial/graphical and written signs/instructions
- clarifying meaning of instructions with peers and supervisors
- giving accurate verbal or written descriptions of incidents or hazards
- actively participating in inspections, meetings and risk assessments.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- legislation, regulations, standards, codes of practice and industry standards/guidance notes relevant to own work, role and responsibilities
- safety signs and their meanings, including signs for:
  - personal protective equipment
  - emergency equipment
  - dangerous goods class signs
  - specific hazards, such as sharps and radiation
- the difference between a hazard and a risk
- nature of common workplace hazards, including chemicals, bodily fluids, sharps, noise, manual handling, work postures, underfoot hazards and moving parts of machinery

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- potential consequences of not following safe work practices
- the elements within the hierarchy of control
- safety measures for controlling common workplace hazards
- sources of information about health and safety in the workplace
- environmental hazards and controls relevant to the worksite, including waste disposal
- the roles and responsibilities of employees for health and safety in the workplace
- the roles and responsibilities of health and safety representatives, committees, supervisors, managers and employers
- workplace specific information, including:
  - hazards of the particular work environment
  - potential emergencies relevant to the workplace
  - designated person for raising issues about health and safety
  - organisation and work procedures, particularly those related to performance of own work, specific hazards and risk control, reporting of hazards, incidents and injuries, consultation, use of personal protective equipment and emergency response
- potential emergency situations, alarms and signals, and required responses.

Assessment Conditions

Assessment of the skills in this unit of competency must take place under the following conditions:

- physical conditions:
  - a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - personal protective equipment
- specifications:
  - workplace information about health and safety in the workplace, including legislative rights and responsibilities.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPWHS2002 Identify and control risks in own work

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to identify hazards and assess risks in own work activity and work area, and implement procedures to control risks.

It applies to individuals working in production environments. Individuals work under general supervision but are responsible for recognising and controlling operational risks related to environmental, equipment, product, safety or economic factors.

All work must be carried out to comply with workplace procedures according to state/territory health and safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Assessment Requirements for FBPWHS2002 Identify and control risks in own work

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified and controlled risks on at least two occasions, including:

- implementing workplace procedures associated with hazard identification and risk control
- identifying workplace hazards and associated risks
- assessing risks
- taking action to minimise risks
- documenting outcomes of risk assessments.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- steps in managing health and safety risks in the workplace
- hazard identification methods
- procedures for risk assessment
- ways of controlling hazards and risks, including hierarchy of control
- types of hazards relevant to work role, including:
  - physical environment
  - equipment or machinery
  - materials or substances
  - how work tasks are designed or performed
- basic health and safety legislative and workplace requirements for identifying hazards, assessing risk and applying controls:
  - when, where and how hazards must be identified
  - when, where and how risk assessments must be conducted

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- risk assessment mechanisms commonly used
- record keeping requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - skills must be demonstrated in a workplace setting or an environment that accurately represents a real workplace
- resources, equipment and materials:
  - production facilities
  - tools for conducting risk assessments, recording and reporting outcomes
- specifications:
  - current health and safety legislation and codes of practice relevant to identifying hazards and controlling risks in the workplace
  - workplace documentation relevant to identifying hazards and controlling risks in the workplace.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPWHS4001 Identify, assess and control work health and safety risk in own work

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0.

Application

This unit of competency describes the skills and knowledge required to identify and address risks associated with a product or system of work, and develop and implement risk control measures to ensure workplace safety.

The unit applies to individuals who are technicians or specialists working with a systematic approach for health and safety with access to work health and safety specialist advice. Work typically involves addressing risk to ensure their own safety, as well as that of others who may be affected by their work.

All work must be carried out to comply with workplace procedures, in accordance with State/Territory work health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

	as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Critically analyses documentation from a variety of sources and records and consolidates information to determine work health and safety requirements
Writing	• Prepares and produces models and associated documents that that convey complex relationships between risks and controls • Develops procedural material for a specific audience, using clear and detailed language in order to convey explicit information and requirements
Oral communication	• Uses collaborative and inclusive techniques, including active listening and questioning, and reading of verbal and non-verbal signals to convey and clarify information, and to confirm understanding on aspects of safety
Learning	• Accepts new learning challenges by reflecting on personal limitations and seeking out advice
Navigate the world of work	• Ensures knowledge of legislative requirements is kept up-to-date in order to provide accurate information • Takes personal responsibility for following explicit and implicit policies, procedures and legislative requirements • Seeks to improve policies and procedures to better meet organisational goals
Interact with others	• Recognises the diversity in people and manages this diversity to improve workplace relations and practices • Collaborates with others sharing information to build strong work groups and avoid behaviours that are not conducive to a safe environment
Get the work done	• Takes responsibility for planning, sequencing and prioritising tasks and own workload for efficiency and effective outcomes • Applies systematic and analytical decision-making processes for

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has, on at least one occasion:

- accessed, interpreted and applied work health and safety information, including work health and safety legislation, guidance material and benchmarks
- communicated with potential users of the product or system of work, other technicians/specialists, managers and expert advisers
- conducted risk assessments and analysed effectiveness of control measures
- analysed work systems and monitored safety performance
- assessed compliance with work health and safety legislation or procedures
- developed and maintained work health and safety records
- recognised and developed personal work health and safety expertise.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the difference between hazards and risks
- sources of work health and safety information both internal and external to the organisation
- nature of common workplace hazards, including chemicals, noise, manual handling work postures, underfoot hazards and moving parts of equipment
- regulatory requirements relevant to the particular industry/type of work site
- requirements for hazard identification and hazard identification processes
- principles of risk management, including risk analysis
- examples of safety benchmarks
- the hierarchy of control and its application
- principles of 'safe design' processes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work health and safety legislative requirements for record keeping and reporting
- personal protective equipment requirements, including selection, use, storage and maintenance
- workplace specific information, including:
  - in-depth knowledge of hazards of the particular work environment and how they cause harm
  - hazard identification procedures relevant to the hazards in their workplace
  - work procedures
- organisation procedures related to work health and safety, including:
  - hazard, incident and injury reporting
  - hazard identification, risk assessment and control
  - consultation and participation
  - incident investigation
  - record keeping
- the legal rights and responsibilities of the workplace parties in relation to work health and safety.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- specifications:
  - work health and safety legislation, regulations and codes of practice
  - relevant workplace policies and procedures
- relationships (internal and/or external):
  - additional external expertise for advice
  - teams and/or committees for developing work health and safety procedures.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPWHS5001 Manage work health and safety processes

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0.

Application

This unit of competency describes the skills and knowledge required to manage the ongoing implementation of work health and safety procedures and processes.

This unit applies to individuals who manage a small organisation, several work groups or a larger group within an organisation. Work is likely to have a focus on maintaining already established processes and the unit assumes that work health and safety advice and expertise is available.

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Unit Sector

Work health and safety (WHS)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Manage work health and safety information and records	1.1 Identify and access relevant work health and safety legislation, standards, codes of practice/compliance codes, guidance material and other sources of work health and safety information and evaluate their relevance to the specific work context 1.2 Collect and collate information on work health and safety requirements, trends and risk controls and provide to others

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Review records and record keeping processes to ensure that legal requirements for work health and safety record keeping are identified and addressed 1.4 Implement and monitor processes for ensuring that work health and safety records are accurately completed, collected and stored in accordance with legal requirements and workplace procedures
2. Manage work health and safety participative processes	2.1 Monitor participative processes to ensure compliance with legislative requirements and organisation procedures 2.2 Evaluate information provided to employees to ensure it is in a readily accessible and understandable format 2.3 Implement and monitor processes for ensuring that workgroup members have an opportunity, either directly or through their representative, to contribute to decisions that may affect their health and safety 2.4 Evaluate processes for addressing work health and safety issues to ensure issues raised through consultation are resolved promptly and in line with organisation procedures and legislative requirements 2.5 Provide prompt information about the outcomes of consultation to employees in a format and medium that is readily accessible
3. Manage work health and safety risk management processes	3.1 Ensure hazard, incident, and injury reporting and investigation processes are in place to meet legislative requirements and to inform future prevention strategies 3.2 Ensure processes are in place so that hazard identification and risk assessments occur according to organisation procedures 3.3 Ensure risk controls and hazard specific procedures are consistent with the hierarchy of control and are monitored to support compliance with legislative and regulatory requirements 3.4 Ensure processes are in place to identify and address any work health and safety implications of either proposed or implemented changes to the workplace, work processes or organisation of work 3.5 Recognise limits of own professional expertise and consult expert advisors as required
4. Manage work health and safety training program	4.1 Assess work health and safety training needs of workgroup members, taking into account legislative and regulatory requirements, internal policies and procedures, existing skills of work group members and risk control requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	4.2 Implement and monitor training programs to ensure identified work health and safety training requirements are addressed 4.3 Implement and monitor processes to ensure that all new employees receive work health and safety induction 4.4 Access and consult relevant work health and safety and training specialists as required in the development and implementation of the training program
5. Manage work health and safety continuous improvement process	5.1 Obtain and consider input from individuals and workgroup in identifying and implementing work health and safety improvement 5.2 Determine work health and safety priorities in consultation with appropriate managers and stakeholders 5.3 Develop work health and safety action plans, taking priorities and training needs into account 5.4 Monitor and update achievements against the work health and safety plans accordingly

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Comprehends, interprets and synthesises complex information from a range of sources
Writing	• Presents information using vocabulary and format suitable for the task
Oral communication	• Presents ideas and information choosing appropriate vocabulary for purpose and audience • Uses questioning and active listening to seek opinions or information and to clarify understanding
Navigate the world of work	• Monitors adherence to legal and regulatory responsibilities for self and others in relation to work health and safety requirements
Interact with others	• Chooses appropriate communication methods to present

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
	information to a range of individuals
Get the work done	• Develops plans to manage relatively complex tasks with an awareness of how they contribute to the organisation • Applies problem solving techniques to address complex work health and safety issues

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has completed all steps in managing the work health and safety process in at least one workplace context, including:

- accessing and interpreting work health and safety information, including legislation, guidance material and benchmarks
- monitoring a record keeping process for compliance with legal requirements for work health and safety
- communicating work health and safety information to others using a range of media and formats
- managing effective work health and safety consultation and participation processes including development, implementation, monitoring and review, in consultation with others
- managing work health and safety risk management processes
- implementing a risk management approach to developing solutions to complex work health and safety problems, utilising information from a range of sources
- applying an action planning process
- assessing policies and procedures for compliance with work health and safety legislation
- managing workplace information and records to ensure all are current and accurate
- facilitating participatory consultative processes
- evaluating work processes for collecting and providing information
- determining support and training needs of work group
- implementing and monitoring training programs
- evaluate and monitor risk management processes
- managing a continuous improvement process.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- the difference between hazard and risk
- sources of work health and safety information both internal and external to the workplace
- understanding of work health and safety legislation and regulatory requirements relevant to the particular industry/type of work site
- the roles and responsibilities of employees, supervisors and managers in the workplace
- legislative requirements for consultation
- legal and practical requirements for work health and safety training
- legal requirements for work health and safety record keeping and reporting
- guidance material, including codes of practice/compliance codes relevant to the particular industry/type of work site
- risk assessment process, including:
  - hazard identification procedures
  - principles of risk assessment
  - the hierarchy of control and its application
  - legislative requirements for record keeping and reporting
- systems for identifying skill needs, such as:
  - performance reviews
  - training needs analysis
  - identifying additional training needs of learners
- workplace specific information, including:
  - hazards of the particular work environment and how they cause harm
  - hazard identification procedures relevant to the hazards in their workplace
  - designated person for raising work health and safety issues
- organisation procedures related to work health and safety, including hazard, incident and injury reporting, hazard identification, risk assessment and control, consultation and participation, incident investigation and record keeping
- awards and enterprise agreements that impact on the particular workplace
- the characteristics and composition of the workforce and how they may impact on the management of work health and safety.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - sample documents and forms appropriate for recording and reporting work health and safety issues

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - sample emergency procedures and related resources
- specifications:
    - work health and safety legislation, regulations and codes of practice
    - workplace policies and procedures for work health and safety
- relationships (internal and/or external):
    - experts in work health and safety for advice and direction.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPWIN2001 Perform effectively in a wine industry workplace

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to work in a wine industry enterprise.

The unit applies to entry level wine industry workers who generally work under supervision but need to comprehend and follow workplace procedures.

All work must be carried out to comply with workplace procedures according to state/territory health and safety, and food safety legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all elements and performance criteria in this unit.

There must be evidence that the individual has accessed and used information for at least one wine industry enterprise and identified:

- its objectives
- its job roles and how these roles contribute to the objectives
- the range of products and/or services offered
- production sites, including:
  - site names
  - site locations
  - functions and contribution of each site to the overall objectives of the enterprise
  - key personnel and contact details
- key information about the enterprise, including:
  - brands, logos and labels
  - names of parent or other associated businesses
- responsibilities of own role in the enterprise
- daily work schedule for own role
- workplace requirements for personal hygiene
- workplace requirements for maintaining work area.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how an enterprise describes its purpose in:
  - mission statements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - vision statements
    - objectives
- the key functions within a wine industry workplace including:
    - viticulture, cellar operations (wine making), laboratory, bottling and packaging, and cellar door sales, and
    - how each function or process contributes to product and service quality
- stages in wine production and supply and the output at each stage
- key wine industry and enterprise events, including seasonal and promotional activities
- workplace procedures relevant to:
    - health and safety
    - food safety
    - environmental and waste management
    - anti-discrimination
    - continuous improvement
    - personal employment terms and conditions
    - maintaining work area
    - storing materials and equipment
- the legislative requirements associated with health and safety in the workplace, food safety, environmental management, anti-discrimination and employment
- personal hygiene standards and procedures:
    - cleanliness
    - hair and hair nets
    - work clothes and uniforms
    - reporting sickness or injuries
    - eating and drinking in the workplace
- using workplace information sources, including:
    - how and where to find information
    - updating and access requirements.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a wine industry workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - information about the Australian wine industry
    - information about the specific wine industry workplace
    - cleaning equipment and materials
- specifications:
    - relevant workplace policies and procedures and legislative information.

FBPWIN2002 Communicate wine industry information

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to communicate information on key characteristics of Australian wine production and the wine industry. It supports an introduction to the wine operations industry for basic wine grape growing (viticulture), cellar operations (wine making) and cellar door sales.

The unit applies to individuals who are new to the wine operations industry, including wine region tourism personnel and wine enterprise support staff who work alongside a supervisor in most situations and exercise limited autonomy.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all elements and performance criteria in this unit.

There must be evidence that the individual has provided and applied information in at least one wine operations workplace environment including:

- using industry-standard terminology to communicate information about wine grape growing activities regarding:
  - sequencing and timing of main processes
  - tasks and job roles during each process
- identifying the relationships between basic wine grape physiology, varieties and habit of growth to wine production activities
- identifying the key differences in grape production for Australian wine regions
- explaining how red, white, fortified and sparkling wines are produced including:
  - grape preparation
  - major processes
  - equipment needed
  - features or each wine type
- using industry terminology to communicate information about the features of one type of wine to a customer or client
- describing common types of wine bottling, labelling and packaging and reasons for particular choice of bottle, label or packaging
- describing the range of common wine products and how they are marketed.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- main stages of grape vine growth

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- principles of grape vine propagation:
  - cuttings
  - grafting
- basic wine grape growing techniques:
  - planting
  - irrigation
  - fertilising
  - canopy management
  - pruning
- impact of common impediments on grape growing:
  - frost
  - drought
  - pests (including phylloxera)
  - disease
  - nutrient deficiency
- major Australian wine regions, common wine styles and grape varieties
- basic purpose and principles of grape harvesting and wine production processes:
  - harvesting
  - crushing
  - fermentation
  - pressing
  - maturation
  - fining
  - filtering
- common bottling, labelling and packaging used for wine
- basic wine processing and storage equipment
- common marketing arrangements for wine, including cellar door sales, mail order, internet sales, distribution through agents or wholesalers
- basic features of domestic and export markets.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a wine operations workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - reference materials on the Australian wine industry
  - sample wine products and materials
- relationships:
  - clients or customers.

FBPWIN2003 Conduct sensory evaluation of wine

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to complete a basic sensory evaluation of wine, including the provision of tasting arrangements, identifying wine styles, grape varieties and faults and communicating basic information about wine.
The unit applies to individuals who work across a range of sectors in the wine industry including cellar door sales. Individuals generally work under supervision but have some autonomy and accountability for their own work.
All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Assessment Requirements for FBPWIN2003 Conduct sensory evaluation of wine

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has identified key wine styles and grape varieties using sensory evaluation techniques and has demonstrated the following on at least two separate occasions:

- accessed workplace information to determine wine evaluation requirements
- prepared tasting area and equipment required for wine tasting
- prepared wine products for tasting including opening bottles safely
- implemented appropriate conditions for tasting and maintained tasting environment
- poured tasting samples cleanly and in appropriate quantities
- tasted wine samples in most appropriate order
- evaluated wines in an appropriate manner for sight, smell and taste
- used sensory evaluation techniques to correctly identify wine styles, wine characteristics and faults
- verbally described a wine style and answered questions about wines tasted
- maintained work area to meet housekeeping requirements
- followed health and safety procedures for evaluating wine.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- purpose and principles of sensory evaluation of wines
- quality characteristics of equipment and materials used in wine tasting
- characteristics of key wine styles and grape varieties
- factors affecting the outcomes of a tasting and optimum conditions required:
  - environment
  - taster

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - glasses
    - equipment
    - wine preparation
- factors contributing to the order in which various wine styles should be tasted:
    - still versus sparkling
    - young versus old
    - dry versus sweet
    - non-oak versus oak
    - light in bodied versus full-bodied
    - white versus rosé versus red
    - lower alcohol versus higher alcohol
- wine sensory evaluation techniques and procedures, with reasoning:
    - handling of glass and swirling techniques
    - use of light and white background
    - visual appraisal
    - sniffing and nosing
    - tasting and spitting
    - key taste sensations
    - cleansing palate between tastings
- key wine features, how they vary and how they can be identified using tasting techniques:
    - wine and quality (taints and deposits)
    - sweetness
    - acidity
    - alcohol
    - flavour and aroma
    - tannin
    - body and weight
    - balance
    - length
    - texture
- key factors which affect the style and quality of wine:
    - climate
    - soil
    - grape variety
    - viticultural techniques
    - storage
    - vinification techniques
- basic wine faults and taints, features and causes:
    - oxidation-type faults
    - reductive wine faults

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - additive-related faults
  - common wine taints
- appropriate terminology for describing wine to customers and wine industry personnel
- interpretation of labels
- workplace procedures and responsibility for:
  - reporting problems
  - housekeeping
  - recording requirements
  - health and safety hazards and controls in the workplace.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
  - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
  - wine and equipment for tasting and evaluating
- specifications:
  - work instructions and workplace procedures relating to wine tasting and evaluation
- relationships (internal and/or external):
  - customers or industry personnel to communicate with during wine tasting and evaluation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

FBPWIN3001 Evaluate wines (advanced)

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Application

This unit of competency describes the skills and knowledge required to evaluate a broad range of wines and identify by grape variety, region and vintage. It includes identification of specialised wine faults, food and wine matching, and advice on serving and ageing.

The unit applies to individuals who work across a range of sectors in the wine industry including cellar door sales. Individuals work under broad direction and take responsibility for their own work.

All work must be carried out to comply with workplace procedures, according to state/territory health and safety, and food safety regulations, legislation and standards that apply to the workplace.

No occupational licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Prerequisite unit of competency for this unit is:

- FBPWIN2003 Conduct sensory evaluation of wine

Unit Sector

Wine Operations (WIN)

Elements and Performance Criteria

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify and evaluate specific wine	1.1 Use industry accepted tasting procedures including use of sight,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
characteristics	smell and taste to evaluate wine characteristics 1.2 Identify and describe Australian wines in terms of grape varieties, regions and vintage 1.3 Identify and discuss specific winemaking techniques with customers and/or industry personnel 1.4 Apply sensory evaluation techniques to inspect and identify specialised wine faults and report to relevant workplace personnel 1.5 Complete quality evaluations of selected wines
2. Compare Australian styles with key world wines	2.1 Identify well known world wines in terms of style and quality 2.2 Identify and compare workplace wine products and styles with international products 2.3 Recommend appropriate workplace wines as alternatives to international wine styles and products where possible
3. Enhance consumer enjoyment of wine	3.1 Select and recommend appropriate workplace wines to match food choices 3.2 Specify optimum ageing and serving requirements for selected wines

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential for performance in this unit of competency but are not explicit in the performance criteria.

Skill	Description
Reading	• Interpret wine product information about wine styles and characteristics from a variety sources
Writing	• Record evaluations using industry-based vocabulary and conventions
Oral Communication	• Provide information using language appropriate to audience • Use active listening skills to respond to questions or feedback from participants
Interact with others	• Use accepted practices and protocols for communicating with internal personnel and people external to the organisation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skill	Description
Get the work done	• Analyse information about wines to decide on recommendations

Assessment Requirements for FBPWIN3001 Evaluate wines (advanced)

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Performance Evidence

An individual demonstrating competency must satisfy all of the elements and performance criteria in this unit.

There must be evidence that the individual has evaluated a broad range of wines identified by grape variety, region and vintage and has demonstrated the following on at least two separate occasions:

- explained the impact of tasting conditions on wine evaluation
- explained specific winemaking techniques and described their effect on wine characteristics
- followed tasting procedures to identify wine by style and quality
- identified specialised wine faults using sensory evaluation techniques
- provided advice about wine service and comparisons between international and local styles
- selected and matched wine to food choices
- explained optimum ageing, cellaring and serving conditions for wine styles
- followed health and safety procedures for evaluating wine.

Knowledge Evidence

An individual must be able to demonstrate the knowledge required to perform the tasks outlined in the elements and performance criteria of this unit. This includes knowledge of:

- features and purpose of wine sensory evaluation techniques
- features and causes of wine faults and taints, and preventative or corrective action
- factors influencing the order in which wine should be tasted
- product labelling terminology and meanings
- characteristics of wine that can be assessed to identify key features:
  - country of origin
  - region of production

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - vintage
    - winemaking and grape growing techniques
    - quality
- common winemaking, grape growing techniques and how they can be utilised to manipulate wine style and characteristics
- key Australian and world wines and organisation or workplace products, including:
    - style and taste characteristics
    - price
    - quality
- serving and cellaring requirements of key world and Australian wines
- wine factors that determine cellaring and serving requirements, including balance of alcohol, tannin, acidity and fruit flavours
- factors that influence the matching of food and wine
- factors that detrimentally affect the quality of wine during cellaring:
    - temperature
    - humidity
    - ultraviolet (UV) light
    - vibrations.

Assessment Conditions

Assessment of skills must take place under the following conditions:

- physical conditions:
    - a workplace or an environment that accurately represents workplace conditions
- resources, equipment and materials:
    - wine and equipment for tasting and evaluating
- specifications:
    - product information and workplace procedures relating to wine tasting and evaluation (advanced)
- relationships (internal and/or external):
    - customers or industry personnel to communicate with during wine tasting and evaluation.

Assessors of this unit must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

CPCCDO3011A Perform dogging

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to undertake basic dogging work, both in sight and out of sight of the crane operator, for the purpose of shifting loads mechanically.

The unit includes selecting sling types and sizes and maintaining the stability of the load.

Application of the Unit

Application of the unit

This unit of competency supports the attainment of the understanding and skills to use dogging tools and equipment, which may include working with others and as a member of a team.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units

CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	1.1. Work instructions and operational details are obtained using relevant ***information***, confirmed and applied for ***planning and preparation*** purposes. 1.2. ***Safety*** (***OHS***) requirements are followed in accordance with safety plans and policies. 1.3. Signage and barricade requirements are identified and implemented. 1.4. ***Tools and equipment*** selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement. 1.5. Materials quantity requirements are calculated in accordance with plans, specifications and ***quality requirements***. 1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use. 1.7. ***Environmental requirements*** are identified for the project in accordance with environmental plans and regulatory obligations and applied.
2. Select dogging equipment.	2.1. Resources, materials and equipment are selected and inspected for compliance with job specifications. 2.2. Job sequencing schedule is communicated with team

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	members and others to ensure coordination.
	2.3. Load mass is ***calculated*** and confirmed using load charts and standard calculations.
	2.4. Loads in ***slings*** and equipment are calculated to suit job requirements.
3. Sling loads.	3.1. ***Lifting devices*** are assembled and erected for the movement of load.
	3.2. Using appropriate ***load slinging method***, loads are slung to ***crane*** ready for lifting.
4. Shift loads.	4.1. Loads are shifted ensuring stability and in compliance with work method statement.
	4.2. Load is directed to landing position using communications in compliance with Australian standards and recognised work practices.
	4.3. Load is landed in required position on packing or bearers.
5. Remove dogging equipment.	5.1. Load shifting equipment is dismantled and inspected for wear.
	5.2. Logbook and site records are completed to company requirements.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices.
	6.3. Work completion procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- communication skills to:
  - determine requirements
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
- evaluating own actions and making judgments about performance and necessary improvements
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- organisational skills, including the ability to plan and set out work
- recognising procedures, following instructions, responding to change and contributing to workplace responsibilities, such as current work site environmental and sustainability frameworks or management systems
- teamwork skills to coordinate own work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- crane operations and limitations
- designs and functions of lifting equipment
- dogging equipment
- dogging techniques
- elevated work platforms
- general construction terminology
- job safety analysis (JSA) and safe work method statements
- logbooks
- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- processes for the calculation of material requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- quality requirements
- relevant Acts, regulations and codes of practice
- safe working at heights and fall arrest
- safe working load tags
- signalling methods and communications
- types, characteristics, uses and limitations of plant, tools and equipment
- weather and ground considerations
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • locate, interpret and apply relevant information, standards and specifications • comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations • comply with organisational policies and procedures including quality requirements • safely and effectively operate and use tools, plant and equipment • communicate and work effectively and safely with others • as a minimum, read tags, sling, load, direct and land loads in conjunction with a slewing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	mobile crane with a telescopic boom and a winch, out of sight for: • rigid heavy loads to two thirds capacity of the crane • luff movements, boom retract and boom extend, slew right and slew left, winch up and down in combination • a flexible load with a minimum of three lifting points • using hand signals and whistle from minimum radius to maximum radius.
Context of and specific resources for assessment	This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints. Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements. Resource implications for assessment include: • an induction procedure and requirement • realistic tasks or simulated tasks covering the mandatory task requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work practices • support materials appropriate to activity • workplace instructions relating to safe work practices and addressing hazards and emergencies • material safety data sheets • research resources, including industry related systems information. Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Method of assessment	Assessment methods must: • satisfy the endorsed Assessment Guidelines of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

the Construction, Plumbing and Services Training Package

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to performing dogging
- relevant Australian standards
- safe work procedures relating to performing dogging
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Planning and preparation include:

- assessment of conditions and hazards
- determination of work requirements and safety plans and policies
- equipment defect identification
- work site inspection.

Safety (***OHS***) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:

- emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
- handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
- hazard control
- hazardous materials and substances
- organisational first aid
- PPE prescribed under legislation, regulations and workplace policies and practices
- safe operating procedures, including the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	conduct of operational risk assessment and treatments associated with: • earth leakage boxes • lighting • power cables, including overhead service trays, cables and conduits • restricted access barriers • surrounding structures • traffic control • trip hazards • work site visitors and the public • working at heights • working in confined spaces • working in proximity to others • use of firefighting equipment • use of tools and equipment • workplace environmental requirements and safety.
Tools and equipment include:	• brick cages • kibbles • personnel cages • rescue cages • rubbish bins • spreader bars and beams.
Quality requirements include:	• internal company quality policy and standards • manufacturer specifications, where specified • relevant regulations, including Australian standards • workplace operations and procedures.
Environmental requirements include:	• clean-up management • noise • vibration • waste management.
Calculations include:	• delivery dockets • load charts • load share • pre-cast compliance charts • safe working loads • standard calculations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Slings include:	• chain • flexible steel wire rope • natural or synthetic fibre.

Lifting devices:	• include:
	  • eye bolts
	  • lifting clutches
	  • shackles
	  • snatch blocks
	  • tags
	• may include:
	  • collared eye bolts
	  • equalizing sheaves
	  • lifting lugs
	  • rigging screws
	  • turn buckles.

Load slinging methods include:	• straight sling • adjustable sling • reeved sling • inclined sling.
Cranes include:	• fixed cranes • hydraulic mobile cranes • lattice boom mobile cranes • slewing cranes • tower cranes.

CPCCOHS2001A Apply OHS requirements, policies and procedures in the construction industry

Modification History

Not Applicable

Unit Descriptor

Unit descriptor

This unit of competency specifies the outcomes required to carry out OHS requirements through safe work practices at any on or off-site construction workplace. It requires the performance of work in a safe manner through awareness of risks and work requirements, and the planning and performance of safe work practices with concern for personal safety and the safety of others.

Application of the Unit

Application of the unit

This unit of competency covers fundamental OHS necessary to undertake work tasks within any sector in the construction industry. It includes the identification of hazardous materials, including asbestos, and compliance with legislated work safety practices. It does not cover removal of asbestos, which is a licensed activity.

The unit relates directly to the general induction training program specified by the *National Code of Practice for Induction for Construction Work* (ASCC 2007) required to enter a construction work site. Completion of unit CPCCOHS1001A covers this requirement.

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Identify and assess risks.	1.1. ***Hazards*** in the work area are identified, assessed and reported to ***designated personnel***. 1.2. Safety risks in the work area are identified, assessed and reported to designated personnel. 1.3. ***Safe work practices***, ***duty of care*** requirements and safe work instructions are followed for controlling risks. 1.4. OHS, hazard, accident or ***incident*** reports are contributed to according to workplace procedures and ***Australian government and state or territory OHS legislation*** and relevant ***information***.
2. Identify hazardous materials and other	2.1. ***Hazardous materials*** on a work site are correctly identified and, if appropriate, handled and used

ELEMENT	PERFORMANCE CRITERIA
hazards on work sites.	according to company and legislated procedures. 2.2. ***Measures for controlling risks*** and construction hazards are applied effectively and immediately. 2.3. Hazardous materials that have safety implications for self and other workers are secured immediately they are identified, using appropriate ***signs and symbols***. 2.4. Asbestos-containing materials are identified on a work site and reported to designated personnel.
3. Plan and prepare for safe work practices.	3.1. Correct ***personal protective equipment*** and clothing for each area of construction work are identified, worn, correctly fitted, used and stored according to enterprise procedures. 3.2. Selection of ***tools***, ***equipment*** and ***materials***, and organisation of tasks are performed in conjunction with other personnel on site and in accordance with enterprise procedures. 3.3. Required barricades and signage are determined and erected at the appropriate site location. 3.4. Material safety data sheets (MSDS), and job safety analysis (JSA) and safe work method statements relevant to the work to be carried out are identified and applied.
4. Apply safe work practices.	4.1. Tasks are performed in a manner that is safe for operators, other personnel and the general community in accordance with legislative requirements, and enterprise policies and procedures. 4.2. Plant and equipment guards are used in accordance with manufacturer specifications, work site regulations and Australian standards where applicable. 4.3. Procedures and relevant authorities for reporting hazards, incidents and injuries are used. 4.4. ***Prohibited tools and equipment*** in areas with identified asbestos are recognised and not used. 4.5. Work site safety signs and symbols are identified and followed. 4.6. Work site area is cleared and maintained to prevent and protect self and others from incidents and accidents and to meet ***environmental requirements***.
5. Follow emergency procedures.	5.1. Designated personnel are identified in the event of an emergency for communication purposes. 5.2. Safe workplace procedures for dealing with accidents,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	various ***types of fire*** and other emergencies are followed, including identification or use, if appropriate, of ***fire equipment*** within scope of responsibilities.
	5.3. ***Emergency response and evacuation procedures*** are known, practised and carried out effectively when required.
	5.4. Emergency first aid treatment of minor injuries is carried out correctly and details of any treatment administered are reported accurately to designated personnel as soon as possible.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- ability to accurately recognise OHS hazards, including asbestos and take all opportunities to alleviate safety problems in a variety of construction work sites and environments
- capacity to deal calmly and effectively with any potential safety problems and work closely with other team members and supervisors to ensure safe working conditions are maintained
- communication skills to:
  - determine and report hazards and risks
  - enable clear and direct communication, using questioning to identify and confirm requirements, share information, listen and understand
  - follow instructions
  - read and interpret:
    - MSDS, JSA and safe work method statements
    - other relevant documentation
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to contribute to reports
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- asbestos management code prevention of exposure
- basic first aid procedures
- common construction industry terminology
- common workplace safety hazards and risks and procedures for reporting these to designated personnel
- construction industry communications equipment and use
- construction industry health and safety signage
- emergency response and evacuation procedures
- JSA and safe work method statements
- MSDS
- OHS hierarchy of control and role of OHS committees and representatives
- relevant legislation, regulations and workplace requirements relating to OHS, including hazard reduction and personal safety, including duty of care responsibilities, workers' compensation and injury management requirements
- safe manual handling techniques
- safe work practices in normal working environment
- safety equipment, policies and requirements for working in confined spaces and at height, including on rooves
- tools and equipment prohibited for use near identified asbestos-containing materials (ACM)
- types of fires and basic firefighting equipment
- types, possible location and risks of ACM, including serpentine and amphibole groups, and their use in common building materials
- types, purpose and use of construction industry personal protective equipment and clothing
- workplace and equipment safety requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment

This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.

Critical aspects for assessment and evidence required to demonstrate competency in this unit

A person who demonstrates competency in this unit must be able to provide evidence of the ability to:

- correctly locate, interpret and apply relevant information, standards and specifications
- comply with a site safety plan, organisational policies, OHS regulations and state and territory legislation applicable to workplace operations, including quality requirements
- correctly identify ACM and policies and procedures for reporting this to designated personnel
- effectively communicate and work safely with others
- apply general procedures for responding to incidents and reporting hazards and injuries
- select and use firefighting equipment to extinguish a simulated mechanical fire
- evacuate a site through simulated response to an emergency, complying with workplace procedures.

Context of and specific resources for assessment

This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints.

Assessment of essential underpinning knowledge will usually be conducted in an off-site context.

Assessment is to comply with relevant regulatory or Australian standards' requirements.

Resource implications for assessment include:

- an induction procedure and requirement
- realistic tasks or simulated tasks covering the mandatory task requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- relevant specifications and work instructions
- tools and equipment appropriate to applying safe work practices
- support materials appropriate to activity
- workplace instructions relating to safe work practices and addressing hazards and emergencies
- material safety data sheets
- research resources, including industry related systems information.

Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.

Method of assessment

Assessment methods must:

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	indirect and supplementary evidence. Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed. Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Hazards include:

- chemical spills
- electrical safety work in confined spaces
- excavations, including trenches
- falling objects
- fires
- gases
- hazardous materials
- high or very low temperatures
- HIV and other infectious diseases
- liquids under pressure
- manual handling
- moving machinery and equipment
- noise, dust and vapours
- overhanging beams
- protrusions
- sharp equipment
- traffic
- ultraviolet (UV) radiation
- unplanned collapse

RANGE STATEMENT

	• working at heights.
Designated personnel to be contacted in case of an emergency, accident, fire or to report a risk such as identification of ACM are:	• designated safety officers, determined by the enterprise, who have undertaken specific safety response training • managers or other senior personnel • personnel competent and/or licensed in the safe handling of asbestos • supervisors.

Safe work practices:	• include:
	  • day to day observation of OHS policies and procedures
	  • emergency procedures
	  • risk assessment
	  • use of basic firefighting equipment
	• relate to:
	  • access to site amenities, such as drinking water and toilets
	  • general requirements for safe use of plant and equipment
	  • general requirements for use of personal protective equipment and clothing
	  • housekeeping to ensure a clean, tidy and safer work area
	  • no drugs and alcohol at work
	  • preventing bullying and harassment
	  • smoking in designated areas
	  • storage and removal of debris.

Duty of care requirements:	• relate to:
	  • legal responsibility under duty of care to do everything reasonably practicable to protect others from harm
	  • relevant state and territory OHS requirements and include employers and self-employed persons, persons in control of the work site, construction supervisors, designers, manufacturers and suppliers, construction workers, subcontractors and inspectors
	• may relate to:
	  • own responsibilities to comply with safe work practices, including activities that

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	require licences, tickets or certificates of competency.

Incidents include:	• accidents resulting in personal injury or damage to property
	• near misses or dangerous occurrences that do not cause injury but may pose an immediate and significant risk to persons or property, and need to be reported so that action can be taken to prevent recurrence, for example:
	  • breathing apparatus malfunctioning to the extent that the user's health is in danger
	  • collapse of the floor, wall or ceiling of a building being used as a workplace
	  • collapse or failure of an excavation more than 1.5 metres deep (including any shoring)
	  • collapse or partial collapse of a building or structure
	  • collapse, overturning or failure of the load bearing of any scaffolding, lift, crane, hoist or mine-winding equipment
	  • damage to or malfunction of any other major plant
	  • electric shock
	  • electrical short circuit, malfunction or explosion
	  • uncontrolled explosion, fire or escape of gas, hazardous substance or steam
	  • any other unintended or uncontrolled incident or event arising from operations carried on at a workplace.

Australian government and state or territory OHS legislative requirements include:	• Australian standards • construction industry OHS standards and guidelines • duty of care • health and safety representatives, committees and supervisors • JSA and safe work method statements • licences, tickets or certificates of competency • National Code of Practice for Induction Training for Construction Work • national safety standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• OHS and welfare Acts and regulations • safety codes of practice.
Information includes:	• diagrams or sketches • emergency situation contacts • evacuation plans • instructions issued by authorised organisational or external personnel • labels • manufacturer specifications and instructions • memos • MSDS • organisation work specifications and requirements • plans and specifications • regulatory and legislative requirements, such as Acts, regulations and codes of practice • relevant Australian standards • reports of near misses or accidents • safe work procedures or equivalent documentation • safety meeting minutes • signage • verbal or written and graphical instructions • work bulletins • work schedules.
Hazardous materials include:	• ACM • cleaning chemicals, including those in pressurised containers • glues • insulation materials • solvents • treated timber products.
Measures for controlling risk or minimising hazards in accordance with the hierarchy of control include:	• elimination • substitution • isolation • engineering control • administrative control • personal protective equipment.
Signs and symbols include:	• emergency information signs (exits, equipment, first aid) • fire signs (location of fire alarms and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	firefighting equipment) • hazard identification, facility or location signs • regulatory signs (e.g. prohibition, mandatory and limitation or restriction), such as hazard signs (danger and warning) • safety tags and lockout (danger tags, out of service tags) • site safety, directional, traffic and warning signs and symbols.
Asbestos-containing materials are identified:	• includes recognising common types of ACM that may be found in construction materials and buildings • covers asbestos rope/fabrics, asbestos cement sheeting, asbestos cement piping and lagging on pipes, bituminous waterproof membrane, fire doors, electrical switchboards, millboard, and sheeting under ceramic or vinyl floor tiles in wet areas.
Asbestos-containing materials are ***reported*** to:	• person in control of the workplace as set out in the relevant Asbestos Management Code.
Personal protective equipment is to include:	• aprons • arm guards • caps • dust mask/respirators • ear muffs/plugs • gloves • hard hats • high visibility retro reflective vests • jackets • overalls • safety glasses/goggles • steel capped boots • UV protective clothing and sunscreen.
Tools and equipment include:	• firefighting equipment • first aid kit • ladders and work platforms • personal protective equipment.
Materials include:	• first aid materials suitable for emergency first aid treatment of minor injuries.
Prohibited tools and equipment that cannot be used near identified	• high-speed abrasive power and pneumatic tolls, high pressure water cleaners, compressed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

ACM include:	air or abrasive blasting • any vacuum cleaning equipment not specifically designed for safe work with asbestos.
Environmental requirements are to cover workplace quality management and include:	• clean-up protection • stormwater protection • waste management.
Types of fire includes:	• electrical, chemical, gas, mechanical, paper, wood or natural fire.
Fire equipment includes:	• breathing apparatus • fire extinguishers • fire hydrant and hoses • fire reel • fire truck • manual firefighting instruments, such as fire blankets.
Emergency response and evacuation procedures include:	• emergencies, such as fire, toxic and/or flammable vapours emission, vehicle/mobile plant accident, structural collapse, chemical spill and injury to personnel • extinguishing fires, organisational first aid requirements and evacuation.

CPCCRI3012A Perform basic rigging

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit of competency specifies the outcomes required to erect or install permanent steel structures, dismantle structural steel and move or locate plant and equipment using a range of basic rigging and dogging techniques. It includes load distribution and calculation.

Application of the Unit

Application of the unit	This unit supports the attainment of skills and knowledge to perform rigging duties for erection and installation of steel structures and move plant and equipment, which includes working with others and as a member of a team.

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units

CPCCDO3011A	Perform dogging
CPCCOHS2001A	Apply OHS requirements, policies and procedures in the construction industry

Employability Skills Information

Employability skills This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained for relevant ***information***, confirmed and applied for ***scope of work***. 1.2. ***Safety*** (***OHS***) requirements are followed in accordance with safety plans and policies. 1.3. Signage and barricade requirements are identified and implemented. 1.4. Plant, ***tools and equipment*** selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults are rectified or reported prior to commencement. 1.5. Material quantity requirements are calculated in accordance with plans, specifications and ***quality requirements***. 1.6. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use. 1.7. ***Environmental requirements*** are identified for the project in accordance with environmental plans and ***statutory and regulatory authority*** obligations and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	applied.
2. Select equipment.	2.1. Resources, materials and equipment are selected and inspected for compliance with job specifications. 2.2. Lifting equipment is inspected according to manufacturer specifications. 2.3. Lifting equipment identified as inconsistent with manufacturer specifications is labelled, rejected and disposed of to prevent its use in any circumstance.
3. Connect equipment.	3.1. Loads and slings are slung to protect the load and associated equipment. 3.2. Whole or part loads are secured to prevent uncontrolled movement. 3.3. Slings, or parts of slings, are attached to the load and positioned to ensure safe movement. 3.4. Slings, or parts of slings, are attached to hook while the hoist wire is vertical. 3.5. Tag lines are attached to the load where specified. 3.6. Test lifts are performed to ensure safe and secure movement of the load where specified.
4. Move and position loads.	4.1. Load destination is determined and landing area prepared to accept the load. 4.2. Lifting or pulling device is assembled and erected where specified. 4.3. Load is safely moved to required destination and secured in position to client specifications or job requirements. 4.4. Standard communication signals are used to coordinate safe movement of the load.
5. Remove rigging equipment.	5.1. Lifting/moving equipment and packing are dismantled, lowered and inspected for wear. 5.2. Logbook and site records are completed to company requirements.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification. 6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with manufacturer recommendations and standard work practices. 6.3. Work completion procedures are applied and relevant personnel notified that work is finished.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - notify completion of work
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to complete logbooks, site records and relevant work completion procedures
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- basic rigging equipment and techniques
- crane operations and limitations
- designs and functions of lifting equipment
- general construction terminology
- job safety analysis (JSA) and safe work method statements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- relevant Acts, regulations and codes of practice
- signalling methods and communications
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • locate, interpret and apply of relevant information, standards and specifications • comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations • comply with organisational policies and procedures, including quality requirements • safely and effectively use tools, plant and equipment • communicate and work effectively and safely with others • complete one of the following: • install and use a fall arrest system to sling,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	receive, place and brace a minimum 16 square metre module of structural steel in the correct sequence a minimum of 5 metres high • set up, place, install and brace perimeter safety screen and jump for two floors and a loading bay • skid, locate and install heavy industrial equipment using winches and creeper skids for at least one tonne of plant.
Context of and specific resources for assessment	This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints. Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements. Resource implications for assessment include: • an induction procedure and requirement • realistic tasks or simulated tasks covering the mandatory task requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work practices • support materials appropriate to activity • workplace instructions relating to safe work practices and addressing hazards and emergencies • material safety data sheets • research resources, including industry related systems information. Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Method of assessment	Assessment methods must: • satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to performing basic rigging
- relevant Australian standards
- safe work procedures relating to performing basic rigging
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards and determination of work requirements
- calculations include load charts, fleet angles, diverter sheaves, lead loads, head loads, load angle factors, multiple fall, load share, pre-cast compliance charts and safe working loads
- sling types include chain, flexible steel wire rope, and natural or synthetic fibre
- load slinging methods are to include straight sling, adjustable sling, reeved sling and inclined sling
- lifting devices include shackles, turn buckles, jacks, chain winches, hand operated creeper winches, chain blocks, pulley blocks, come alongs, air winches, trolleys, eye bolts, rigging screws, lifting lugs, lifting clutches and snatch blocks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• types of cranes include fixed cranes, tower cranes, hydraulic mobile cranes, lattice boom mobile cranes, slewing cranes, non-slewing cranes and gantry cranes.

Safety (***OHS***) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
	• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
	• hazard control
	• hazardous materials and substances, including cement and curing agents
	• organisational first aid
	• PPE prescribed under legislation, regulations and workplace policies and practices
	• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
	  • earth leakage boxes
	  • lighting
	  • power cables, including overhead service trays, cables and conduits
	  • restricted access barriers
	  • surrounding structures
	  • traffic control
	  • trip hazards
	  • working at heights
	  • work site visitors and the public
	  • working in confined spaces
	  • working in proximity to others
	• use of firefighting equipment
	• use of tools and equipment
	• workplace environmental requirements and safety.

Tools and equipment:	• include:
	  • automatic levels
	  • drifts
	  • hammers
	  • podgers spanners

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• shifting spanners • sledge hammers • spirit levels • tape measures • wedges • wrenches • may include: • angle grinders • elevated work platforms • explosive power tools • laser levels • oxy-acetylene equipment • pneumatic tools • scaffolding • skids • water levelling equipment.
Quality requirements include relevant regulations, including:	• Australian standards • internal company quality policy and standards • manufacturer specifications • workplace operations and procedures.
Environmental requirements include:	• clean-up management • dust and noise • vibration • waste management.
Statutory and regulatory authorities include:	• federal, state and local authorities administering the applicable Acts, regulations and codes of practice.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
1. Plan and prepare.	1.1. Work instructions, including plans, specifications, quality requirements and operational details are obtained from relevant ***information***, confirmed and applied to the ***scope of work*** performed. 1.2. ***Safety*** (***OHS***) requirements are followed in accordance with safety plans and policies. 1.3. Signage and barricade requirements are identified and implemented. 1.4. Plant, ***tools and equipment*** selected to carry out tasks are consistent with the requirements of the job, checked for serviceability and any faults or concerns regarding ***quality requirements*** are rectified or reported prior to commencement. 1.5. Materials appropriate to the work application are identified, obtained, prepared, safely handled and located ready for use. 1.6. ***Environmental requirements*** are identified for the project in accordance with environmental plans and ***statutory and legislative authority*** obligations and applied.
2. Whip, tie, splice and inspect ropes.	2.1. Whipping cord and fibre rope are inspected for damage and wear. 2.2. Designated rope ends are whipped in accordance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	with regulations and project specifications.
	2.3. Designated rope ends are spliced in accordance with regulations and project specifications.
	2.4. Bends and hitches are applied and inspected in accordance with project specifications.
3. Erect scaffolding.	3.1. Purpose for scaffolding is confirmed and associated work tasks are identified.
	3.2. Expected loading on scaffold and supporting structure is determined using load tables and manufacturer specifications.
	3.3. Site access and egress routes are identified.
	3.4. Scaffolding and components are selected and inspected, and damaged components are labelled and rejected.
	3.5. Sole board/base plate is selected in accordance with regulations, legislation, codes of practice and manufacturer specifications.
	3.6. Scaffolding is set out and erected in accordance with regulatory and manufacturer requirements.
	3.7. Static lines are erected and installed where specified in accordance with regulatory requirements.
	3.8. Lifting device is assembled and erected where specified.
4. Inspect, repair and alter erected scaffolding.	4.1. Erected modular scaffolding is inspected for damage, corrosion, wear and compatibility.
	4.2. Current use of scaffolding is checked against original design and is in accordance with regulations and specifications.
	4.3. Scaffolding stability is inspected and confirmed.
	4.4. Alteration or repair is carried out where specified.
	4.5. Inspection log and handover is completed and dated, ready for signing by a certified scaffolder.
5. Dismantle scaffolding.	5.1. Scaffolding is isolated and appropriately signed and barricaded to ensure safe dismantling.
	5.2. Scaffolding is dismantled using reverse procedure as for erection.
6. Clean up.	6.1. Work area is cleared and materials disposed of, reused or recycled in accordance with legislation, regulations, codes of practice and job specification.
	6.2. Plant, tools and equipment are cleaned, checked, maintained and stored in accordance with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	manufacturer recommendations and standard work practices.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Required skills for this unit are:

- communication skills to:
  - determine requirements
  - follow instructions
  - read and interpret:
    - documentation from a variety of sources
    - drawings and specifications
  - report faults
  - use language and concepts appropriate to cultural differences
  - use and interpret non-verbal communication, such as hand signals
  - written skills to complete inspection log and handover
- identifying and accurately reporting to appropriate personnel any faults in tools, equipment or materials
- numeracy skills to apply measurements and calculations
- organisational skills, including the ability to plan and set out work
- teamwork skills to work with others to action tasks and relate to people from a range of cultural and ethnic backgrounds and with varying physical and mental abilities
- technological skills to:
  - use a range of mobile technology, such as two-way radio and mobile phones
  - voice and hand signals to access and understand site-specific instructions.

Required knowledge

Required knowledge for this unit is:

- general construction terminology
- job safety analysis (JSA) and safe work method statements
- lifting devices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

- material safety data sheets (MSDS)
- materials storage and environmentally friendly waste management
- plans, drawings and specifications
- plant, tools and equipment types, characteristics, uses and limitations
- processes for the calculation of material requirements
- quality requirements
- relevant Acts, regulations and codes of practice
- scaffolding equipment and techniques
- workplace and equipment safety requirements.

Evidence Guide

EVIDENCE GUIDE

The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.

Overview of assessment	This unit of competency could be assessed in the workplace or a close simulation of the workplace environment, provided that simulated or project-based assessment techniques fully replicate construction workplace conditions, materials, activities, responsibilities and procedures.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	A person who demonstrates competency in this unit must be able to provide evidence of the ability to: • locate, interpret and apply of relevant information, standards and specifications • comply with site safety plan and OHS legislation, regulations and codes of practice applicable to workplace operations • comply with organisational policies and procedures, including quality requirements • safely and effectively use tools, plant and equipment • communicate and work effectively and safely with others

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

	• complete whipping, splicing, tying and inspecting of five fibre ropes in accordance with regulations
	• complete planning, erection and dismantling of a modular scaffolding system, in accordance with JSA and safe work method statements and regulations, including a minimum of:
	  • five bays with an internal and external return
	  • four lifts, including ties
	  • ladder and stair access
	  • fall and edge protection.

Context of and specific resources for assessment	This competency is to be assessed using standard and authorised work practices, safety requirements and environmental constraints. Assessment of essential underpinning knowledge will usually be conducted in an off-site context. Assessment is to comply with relevant regulatory or Australian standards' requirements. Resource implications for assessment include: • an induction procedure and requirement • realistic tasks or simulated tasks covering the mandatory task requirements • relevant specifications and work instructions • tools and equipment appropriate to applying safe work practices • support materials appropriate to activity • workplace instructions relating to safe work practices and addressing hazards and emergencies • material safety data sheets • research resources, including industry related systems information. Reasonable adjustments for people with disabilities must be made to assessment processes where required. This could include access to modified equipment and other physical resources, and the provision of appropriate assessment support.
Method of assessment	Assessment methods must:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE

- satisfy the endorsed Assessment Guidelines of the Construction, Plumbing and Services Training Package
- include direct observation of tasks in real or simulated work conditions, with questioning to confirm the ability to consistently identify and correctly interpret the essential underpinning knowledge required for practical application
- reinforce the integration of employability skills with workplace tasks and job roles
- confirm that competency is verified and able to be transferred to other circumstances and environments.

Validity and sufficiency of evidence requires that:

- competency will need to be demonstrated over a period of time reflecting the scope of the role and the practical requirements of the workplace
- where the assessment is part of a structured learning experience the evidence collected must relate to a number of performances assessed at different points in time and separated by further learning and practice, with a decision on competency only taken at the point when the assessor has complete confidence in the person's demonstrated ability and applied knowledge
- all assessment that is part of a structured learning experience must include a combination of direct, indirect and supplementary evidence.

Assessment processes and techniques should as far as is practical take into account the language, literacy and numeracy capacity of the candidate in relation to the competency being assessed.

Supplementary evidence of competency may be obtained from relevant authenticated documentation from third parties, such as existing supervisors, team leaders or specialist training staff.

Range Statement

RANGE STATEMENT

The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.

Information includes:

- diagrams or sketches
- instructions issued by authorised organisational or external personnel
- manufacturer specifications and instructions, where specified
- MSDS
- memos
- regulatory and legislative requirements pertaining to erecting and dismantling modular scaffolding
- relevant Australian standards
- safe work procedures relating to erecting and dismantling modular scaffolding
- signage
- verbal, written and graphical instructions
- work bulletins
- work schedules, plans and specifications.

Scope of work:

- planning and preparation includes work site inspection, equipment defect identification, assessment of conditions and hazards, and determination of work requirements
- erection of scaffolding is to include placement, sequencing, squaring, levelling, tying to structure, and the reverse for dismantling
- purposes of scaffolding include provision of work platforms, edge protection, access ways, falsework, grandstands and covered walkways
- lifting devices include cantilevered hoists and gin wheels
- establishment of footings includes review of JSA and safe work method statements to determine the bearing capacity of ground or working surfaces
- whipping methods include common, west countryman, American and sail makers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

	• splicing methods include end splice and eye splice • types of bends and hitches include clove hitch around a tube, rolling hitch around a tube, single bow line, timber hitch and half hitch around a plank, and sheet bend to another rope • alteration and repair may be required due to storm damage, accidents, misuse and process changes.

Safety (***OHS***) is to be in accordance with state and territory legislation and regulations and project safety plan and may include:	• emergency procedures, including extinguishing fires, organisational first aid requirements and evacuation
	• handling activities that may require the assistance of others or the use of manual or mechanical lifting devices where size, weight or other issues, such as a disability are a factor
	• hazard control
	• hazardous materials and substances, including cement and curing agents
	• organisational first aid
	• PPE prescribed under legislation, regulations and workplace policies and practices
	• safe operating procedures, including the conduct of operational risk assessment and treatments associated with:
	  • earth leakage boxes
	  • lighting
	  • power cables, including overhead service trays, cables and conduits
	  • restricted access barriers
	  • surrounding structures
	  • traffic control
	  • trip hazards
	  • working at heights
	  • work site visitors and the public
	  • working in confined spaces
	  • working in proximity to others
	• use of firefighting equipment
	• use of tools and equipment
	• workplace environmental requirements and safety.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

RANGE STATEMENT

Tools and equipment:	• include:
	  • adjustable base plates
	  • bends and hitches
	  • box spanners
	  • braces
	  • bracket scaffolds (tank and formwork)
	  • cantilevered hoists (materials only with maximum capacity of 500kg)
	  • couplers and accessories
	  • fibre ropes
	  • guard rails
	  • hammers
	  • ledgers
	  • mesh guards
	  • mid rails
	  • modular and prefabricated scaffolds
	  • podgers hammers
	  • prefabricated components
	  • scaffold belts
	  • scaffolding planks
	  • spirit levels
	  • stairs or ladders
	  • standards
	  • steel and aluminium tubes
	  • tape measures
	  • torpedo levels
	  • transoms
	  • wire nips
	  • wrenches
	• may include:
	  • gin wheels
	  • safety nets
	  • shovels
	  • spanners
	  • static lines.

Quality requirements include relevant regulations, including:	• Australian standards • internal company quality policy and standards • manufacturer specifications

FSKDIG001 Use digital technology for short and basic workplace tasks

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use digital technology to undertake short and basic workplace tasks under supervision, such as operating machinery with computerised settings, sending an electronic messages, entering information into a word processor, completing work attendance records online, using access codes, and reading gauges, scales and meters.

An individual performing these tasks works alongside an expert or mentor where prompting and advice can be provided as needed.

This unit applies to individuals who use, or are preparing to use, digital skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Digital Technology

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to use digital technology	1.1 Identify nature and scope of short and basic workplace task that requires the use of digital technology 1.2 Clarify task requirements with suitable personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Element	Performance Criteria
	1.3 Identify and select digital technology required for task, with assistance 1.4 Identify and use simple terms and symbols associated with use of digital technology
2. Perform short and basic workplace task using digital technology	2.1 Follow verbal, written or pictorial instructions to access and use digital technology 2.2 Follow workplace procedures to perform task using selected technology
3. Finalise task	3.1 Follow simple instructions to shut down or reset technology following task completion 3.2 Review work against task requirements 3.3 Seek feedback and review performance to complete task

Foundation Skills

This section describes language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Mapping Information

Supersedes and is equivalent to FSKDIG01 Use digital technology for basic workplace tasks.

Assessment Requirements for FSKDIG001 Use digital technology for short and basic workplace tasks

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use digital technology to complete at least three short and basic workplace tasks with different required outcomes.

During the above, the candidate must communicate with relevant personnel to clarify task requirements and review results, and access and follow instructions for use of selected digital technology.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit, including knowledge of:

- basic features and functions of digital technologies used when completing short and basic workplace tasks
- processes to follow highly familiar workplace instructions for the use of digital technology as outlined in relevant procedures, guides or manuals
- workplace procedures for safely accessing and using digital technology
- workplace protocols for ensuring privacy and safety when using digital technology
- communication techniques to clarify and review digital technology task requirements.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Skills must be demonstrated using short and basic tasks that reflect those typically found in a workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The following resources are to be made available:

- an expert or mentor to provide prompting and advice to learner, as needed
- digital technology required to complete the task
- workplace procedures required to complete the task
- own familiar support resources.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of digital technology, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.
    -

FSKDIG002 Use digital technology for routine and simple workplace tasks

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use digital technology to undertake workplace tasks that are simple and routine in nature. It requires the ability to identify and interpret technical instructions, and setup and apply a range of digital technologies to achieve predetermined outcomes.

An individual performing these tasks may work with an expert or mentor where support is available if requested.

This unit applies to individuals who use, or are preparing to use, digital skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

FSKDIG003 Use digital technology for non-routine workplace tasks

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use digital technology to undertake non-routine workplace tasks, such as, operating machinery with computerised settings, entering text into a scanning device, collecting data to construct tables, graphs and charts in a spreadsheet, and measuring, recording and interpreting data using digital equipment.

An individual performing these tasks works independently and uses familiar support resources as needed.

This unit applies to individuals who use, or are preparing to use, digital skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

FSKLRG002 Identify strategies to respond to short and simple workplace problems

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to identify short and simple workplace problems and propose strategies to respond to the problems.

An individual performing these tasks works alongside an expert or mentor where prompting and advice can be provided as needed.

This unit applies to individuals who use, or are preparing to use, learning skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

The unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) learning core skill indicators .01 and .02 at level 1 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Learning

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify short and simple problems affecting own work	1.1 Identify a range of workplace problems that may routinely arise 1.2 Identify and select a workplace problem for review

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Element	Performance Criteria
	1.3 Identify possible factors contributing to identified problem
2. Propose problem solving strategies	2.1 Identify strategies to respond to a selected workplace problem 2.2 Identify appropriate resources or tools that may be required to solve selected problem
3. Review problem solving strategies	3.1 Seek feedback from expert or mentor on proposed strategy 3.2 Identify alternative or additional approaches or factors for resolving identified problem

Foundation Skills

This section describes language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

3. Review problem solving strategies	3.1 Seek feedback on proposed problem-solving strategy 3.2 Evaluate feedback and record 3.3 Revise strategies and make improvements as appropriate for future application

Foundation Skills

This section describes language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Mapping Information

Supersedes and is equivalent to FSKLRG09 Use strategies to respond to routine workplace problems.

Assessment Requirements for FSKLRG009 Use strategies to respond to routine workplace problems

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify at least two routine workplace problems and propose appropriate problem-solving strategies
- review and discuss the above strategies with workplace or training mentor or supervisor on at least one occasion.
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- routine problems relevant to workplace
- common internal and external factors that may contribute to routine workplace problems
- common workplace and personal barriers that may hinder the problem-solving process
- range of strategies to respond to routine workplace problems
- sources of advice and feedback
- strategies to evaluate feedback and make modifications to proposed problem solving strategy.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Skills must be demonstrated using routine texts or tasks that reflect those typically found in a workplace.

The following resources are to be made available:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- own familiar support resources.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, learning, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

FSKNUM003 Use whole numbers and halves for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge to use whole numbers into the 100s and halves in simple workplace tasks and texts. It includes locating and recognising mathematical information, performing simple mathematical processes and communicating simple mathematical information.

An individual performing these tasks works alongside an expert or mentor where prompting and advice can be provided as needed.

This unit applies to individuals who use, or are preparing to use, numeracy skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

The unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) numeracy core skill indicators .09, .10 and .11 at level 1 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Numeracy

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify simple everyday numbers	1.1 Locate and recognise whole numbers into the 100s and halves in highly familiar short and simple oral workplace texts and tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Element	Performance Criteria
	1.2 Locate and recognise whole numbers into the 100s and halves in highly familiar short and simple written workplace texts
2. Use simple arithmetical processes	2.1 Use simple addition to perform concrete workplace task involving one step 2.2 Use simple subtraction to perform concrete workplace task involving one step 2.3 Compare and order whole numbers in the 100s to perform concrete workplace task 2.4 Perform rough check of the reasonableness of simple arithmetical result with support
3. Communicate simple everyday number information	3.1 Use highly familiar and simple written representation to document simple workplace mathematical information in highly familiar workplace texts and tasks 3.2 Use everyday informal oral language to discuss simple number information in highly familiar workplace tasks and conversations

Foundation Skills

This section describes language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Mapping Information

Supersedes and is equivalent to FSKNUM03 Use whole numbers and money up to one thousand for work.

Assessment Requirements for FSKNUM003 Use whole numbers and halves for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- complete a workplace task using whole numbers and halves, including:
  - identifying simple number information
  - using simple arithmetical processes
  - communicating simple number information through written representation and oral language.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- purpose and application of arithmetical processes in the workplace
- place value for units, tens and hundreds and the role of zero as a place holder
- application of a halves and whole numbers into the 100s in the workplace
- relationship between adding and subtracting
- method and language for comparing and ordering whole numbers into the 100s
- purpose and method for roughly checking the reasonableness of the outcome
- mathematical symbols for half, numbers into the 100s, addition, subtraction and equals
- everyday informal oral language for half, numbers into the 100s, addition, subtraction, equals, bigger and smaller
- written language for numbers into the 100s.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Assistive technologies can be utilised to assist with oral and written communication.

Skills must be demonstrated using short and simple texts and tasks that reflect those typically found in a workplace.

The following resources are to be made available:

- a basic calculator
- an expert or mentor to provide prompting and advice to learner, as needed.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, numeracy, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

FSKNUM004 Use basic and familiar metric measurements for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge to use basic and familiar metric measurements and quantities in simple workplace tasks and texts. It includes locating and recognising measurement information, performing simple mathematical processes with measurements and communicating simple measurement information.

An individual performing these tasks works alongside an expert or mentor where prompting and advice can be provided as needed.

This unit applies to individuals who use, or are preparing to use, numeracy skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) numeracy core skill indicators .09, .10 and .11 at level 1 in the workplace and employment domain of communication.

Assessment Requirements for FSKNUM004 Use basic and familiar metric measurements for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify basic and familiar metric measurement information in a highly familiar short and simple oral communication and a written workplace text with a highly explicit purpose, including:
  - locating and recognising three of the following:
    - length, width, height or depth
    - mass
    - capacity or volume
    - digital 12- hour time
    - temperature
    - dates
- use simple measurement processes to perform a workplace task involving at least three of the above measurements including:
  - estimating, selecting and using highly familiar measurement tools to measure using simple and familiar units
  - roughly checking the reasonableness of the result with support.
  -

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- purpose and application of basic and familiar metric measurement in the workplace
- meaning and abbreviations for basic and familiar metric units
- purpose, function, set up and safe use of basic and familiar measuring tools and equipment
- purpose, application and method for adding, subtracting and comparing basic and familiar measurements in the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose and method for performing rough check of the reasonableness of the outcome with support
- everyday, informal comparative oral language for measurement
- simple mathematical symbols and abbreviations used in measurement.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Assistive technologies can be utilised to assist with oral and written communication.

Skills must be demonstrated using short and simple texts and tasks that reflect those typically found in a workplace.

The following resources are to be made available:

- an expert or mentor to provide prompting and advice to learner, as needed
- a calculator
- basic and familiar measuring tools and equipment.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, numeracy, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

FSKNUM006 Use simple and highly familiar spatial information for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use simple and familiar spatial information in highly familiar workplace maps, diagrams and oral directions. It includes locating and recognising direction and location information, performing simple spatial processes and communicating simple spatial information.

An individual performing this work operates alongside an expert or mentor where prompting advice can be provided.

This unit applies to individuals who use, or are preparing to use, numeracy skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. The unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) numeracy core skill indicators .09, .10 and .11 at level 1 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FSKNUM009 Use familiar and simple metric measurements for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- interpret simple metric measurement information and units of measurement partially embedded in familiar oral and written workplace texts, including at least three of the following:
  - dimensions: length, width, height or depth
  - mass
  - capacity or volume
  - temperature
  - time
- use familiar measurement processes to perform a workplace task including at least three of the above measurements, including:
  - estimating and selecting familiar measurement tools to measure
  - calculating addition and subtraction of measurements
  - checking reasonableness of the measurement process and outcome in relation to estimated outcome and to the workplace context.

In the course of the above the candidate must demonstrate use of relevant technology, such as calculators or spreadsheets.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- purpose of workplace measurement relevant to meeting workplace objectives
- purpose, meaning and abbreviations for familiar metric units
- purpose, function, selection, set up and safe use of simple measuring tools and equipment
- methods to estimate, measure and calculate measurements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- methods to perform reasonableness check of processes and outcomes in relation to the workplace context
- informal and some formal mathematical written language and symbolism
- relevant technology, such as calculators or spreadsheets.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Skills must be demonstrated using familiar texts and tasks with a clear purpose that reflect those typically found in a workplace.

The following resources are to be made available:

- an expert or mentor to provide support to learner if requested
- simple measuring equipment for workplace tasks.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, numeracy, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.
    -

FSKNUM012 Use familiar and simple data for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to identify and interpret familiar information in simple workplace tables, graphs and charts. It includes using familiar information and data in tables, graphs and charts to complete workplace activities, and communicate mathematical information.

An individual performing these tasks may work with an expert or mentor where support is available, if requested.

This unit applies to individuals who use, or are preparing to use, numeracy skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

The unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) numeracy core skill indicators .09, .10 and .11 at level 2 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify familiar data	1.1 Recognise and identify key features of simple graphs, charts and tables partially embedded in familiar workplace texts and tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Element	Performance Criteria
	1.2 Interpret familiar data and information in simple graphs, charts and tables partially embedded in familiar workplace texts and tasks in order to identify a question or issue to review
2. Use information in simple tables, graphs and charts for workplace task	2.1 Identify and compare data embedded in familiar and simple graphs, charts and tables relevant to workplace task 2.2 Relate information from tables, graphs and charts to relevant workplace task and the question or issue being reviewed 2.3 Perform reasonableness check of data and information extraction in relation to the workplace context
3. Communicate simple data handling information	3.1 Use informal and some formal mathematical written representation to write familiar data handling process information in simple and familiar workplace texts and tasks 3.2 Use informal and some formal mathematical oral language to discuss familiar data handling process information in simple and familiar workplace tasks and texts

Foundation Skills

This section describes language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Mapping Information

Supersedes and is equivalent to FSKNUM12 Identify and interpret information in familiar tables, graphs and charts for work.

Assessment Requirements for FSKNUM012 Use familiar and simple data for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- use familiar data handling processes to perform a workplace task with familiar data, including:
  - interpreting familiar data partially embedded in familiar oral and written workplace texts comparing familiar data in a simple graph
  - sorting and ordering familiar data in a table
  - comparing familiar data in a table
  - checking reasonableness of the data handling process and outcome in relation to the workplace context
  - using relevant technology, such as calculators or spreadsheets.
  -

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- methods to identify simple tables, graphs and charts partially embedded in workplace materials
- key features of simple tables, graphs and charts
- techniques and language to locate, interpret and describe information in tables, graphs and charts
- purposes and uses of different graphs, including:
  - pictograph
  - column graph or bar graph
- methods to perform reasonableness check of processes and outcomes in relation to the workplace context
- informal and some formal mathematical written and oral language and symbolism

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relevant technology, such as calculators or spreadsheets.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Assistive technologies can be utilised to assist with oral and written communication.

Skills must be demonstrated using familiar texts and tasks with a clear purpose that reflect those typically found in a workplace.

The following resources are to be made available:

- an expert or mentor to provide support to learner if requested
- simple tables, graphs and charts for workplace tasks.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, numeracy, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

FSKNUM015 Estimate, measure and calculate with routine metric measurements for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to undertake routine workplace metric estimations, measurements and calculations to complete workplace tasks. It includes interpreting and selecting workplace measurement information, completing workplace measurement tasks, and communicating workplace measurement information.

An individual performing these tasks works independently and uses their own familiar support resources.

This unit applies to individuals who use, or are preparing to use, numeracy skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) numeracy core skill indicators .09, .10 and .11 at level 3 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Numeracy

Assessment Requirements for FSKNUM015 Estimate, measure and calculate with routine metric measurements for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- identify routine and familiar metric measurement information and units of measurement in workplace texts and perform routine measurements, calculations, and conversions using at least three of the following measurements:
  - length or perimeter
  - mass
  - volume or capacity
  - temperature
  - area of a rectangle or square.

In the course of the above the candidate must demonstrate use of relevant technology, such as calculators or spreadsheets.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- purpose of workplace measurement relevant to meeting workplace objectives
- purpose and meaning of metric unit prefixes
- purpose, function, selection, set up and safe use of routine measurement tools and equipment
- methods to estimate, measure and calculate measurements
- methods for using estimation and assessment skills to check and reflect on outcome and its appropriateness to the workplace task
- informal and some formal mathematical written and oral language and symbolism of measurement
- relevant technology such as calculators or spreadsheets.

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- extract and interpret statistical information from each of the following embedded in a workplace text or task:
  - routine and familiar workplace table
  - routine and familiar workplace graph/chart
- interpret information in table and graph or chart above, including:
  - comparing data
  - determining and describing data features and trends
  - identifying data anomalies or misleading data pieces
  - making conclusions or summaries of data.

In the course of the above the candidate must demonstrate use of relevant technology, such as graphing calculators or spreadsheets.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- types of statistical information
- different types, purposes and uses of routine graphs and charts
- common features of routine tables, graphs and charts
- methods to perform calculations with data and information
- methods to use data and information to inform or persuade
- methods to identify misleading data
- methods to perform reasonableness check of processes and outcomes in relation to the workplace context
- informal and some formal mathematical written and oral language and symbolism

FSKNUM031 Apply specialised mathematical calculations for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge to extract and analyse a range of complex mathematical information and complete specialised mathematical calculations and processes in workplace tasks. This includes extracting and analysing complex workplace mathematical information, using rational and relevant irrational numbers, and performing calculations from specialist areas of mathematics applicable to the workplace, and communicating workplace mathematical information.

An individual performing these tasks works autonomously and accesses and evaluates support from a broad range of sources as needed.

This unit applies to individuals who use, or are preparing to use, numeracy skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is designed for integration and contextualisation with vocational units to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) numeracy core skill indicators .09, .10 and .11 at level 5 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FSKNUM031 Apply specialised mathematical calculations for work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- perform a broad range of multi-step mathematical problem solving processes with rational and irrational numbers to complete a sophisticated workplace task, including at least two of the following:
  - apply and transpose relevant formulas
  - use and apply laws of indices and powers
  - manipulate and simplify rational and irrational numbers
  - perform applications or calculations from a specialist area of mathematics
- make estimations to check problem solving outcomes and determine appropriate accuracy required for above task
- critically review mathematic processes and outcomes obtained during the above, evaluating real-world implications.

In the course of the above the candidate must demonstrate use of relevant technology such as CAS calculator, spreadsheets or other mathematical or workplace software

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- at least two of the following:
  - use and application of rational and irrational numbers
  - purpose of indices and powers and application of index laws
  - use, application and interpretation of relevant complex formulas and their transposition
  - use, application and interpretation of relevant calculations from a specialist area of mathematics
- problem solving techniques to analyse results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose, function and use of relevant technology such as CAS calculator, spreadsheets or other mathematical or workplace software
- implications of calculations and results for workplace tasks
- specialised and formal mathematical language and symbolism relevant to workplace task
- specialised mathematical oral language relevant to workplace task.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Assistive technologies can be utilised to assist with oral and written communication.

Skills must be demonstrated independently, using highly complex texts and tasks that reflect those typically found in a workplace.

The following resources are to be made available:

- a calculator
- own familiar support resources.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, numeracy, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

FSKOCM002 Engage in short and simple spoken exchanges at work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to interact with others in short and simple spoken exchanges at work, which have an explicit purpose, involve a familiar context and require the use of highly familiar vocabulary. For example, following simple instructions, asking or responding to simple questions, engaging in informal exchanges with colleagues, leaving a short telephone message, or describing a routine task.

An individual performing these tasks operates alongside an expert or mentor where prompting and advice can be provided.

This unit applies to individuals who use, or are preparing to use, oral communication skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) oral communication core skill indicators .07 and .08 at level 1 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Oral Communication

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Element	Performance Criteria
1. Prepare to interact in short and simple workplace spoken exchange	1.1 Identify type of spoken workplace exchange 1.2 Identify purpose and audience of exchange 1.3 Identify oral communication strategies required for engagement in exchange
2. Interact in spoken exchange	2.1 Use oral communication strategies to engage in exchange 2.2 Interact using basic grammar, highly familiar vocabulary and simple pronunciation appropriate to workplace 2.3 Recognise and use simple non-verbal communication methods
3. Review interaction	3.1 Seek feedback on whether exchange was appropriate for audience 3.2 Assess effectiveness of exchange in meeting identified purpose, with assistance

Foundation Skills

This section describes language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to FSKOCM02 Engage in basic spoken exchanges at work.

Assessment Requirements for FSKOCM002 Engage in short and simple spoken exchanges at work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- participate in at least two different short, simple and explicit spoken workplace exchanges.

Exchanges must be appropriate to audience and purpose and participation must include speaking and listening.

For individuals competent in this unit long pauses and numerous repetitions may be evident in spoken exchanges.

Knowledge Evidence

During the above spoken exchange the candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common purposes and audiences of short and simple workplace exchanges
- relevant oral communication strategies that support short and simple spoken exchanges
- simple non-verbal communication techniques for short and simple spoken workplace exchanges
- highly familiar vocabulary related to self and work context
- basic grammatical structures and simple verb tenses.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context. Spoken exchanges must be undertaken with real individuals.

Skills must be demonstrated using short, simple and explicit oral exchanges that reflect those typically undertaken in a workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

The following resources are to be made available:

- an expert or mentor to provide prompting and advice to learner, as needed
- own familiar support resources
- participants for short and simple exchanges described in performance evidence.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, oral communication, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

FSKOCM003 Participate in familiar spoken interactions at work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to participate in a limited range of familiar spoken interactions in the workplace, such as talking with co-workers, participating in workplace meetings, giving and responding to simple instructions, receiving and passing on simple messages, making an inquiry, or reporting a problem.

An individual performing these tasks may work with an expert or mentor where support is available if requested.

This unit applies to individuals who use, or are preparing to use, oral communication skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) oral communication core skill indicators .07 and .08 at level 2 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Assessment Requirements for FSKOCM003 Participate in familiar spoken interactions at work

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- participate in and review performance in at least two different simple spoken workplace interactions appropriate to audience and purpose.

Participation must include speaking and listening.

Knowledge Evidence

During the above spoken exchange the candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common purposes and audiences of simple workplace interactions
- relevant oral communication strategies that support familiar spoken interactions
- non-verbal communication methods to clarify and confirm meaning
- simple grammar and key vocabulary of personal significance
- simple verb tenses in sentences with one or more clauses
- some differences between informal and formal registers.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context. Spoken exchanges must be undertaken with real individuals.

Skills must be demonstrated using familiar oral exchanges that reflect those typically undertaken in a workplace.

The following resources are to be made available:

- an expert or mentor to provide support to learner if requested

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- own familiar support resources
- participants for familiar spoken interactions described in performance evidence.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, oral communication, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:

FSKOCM004 Use oral communication skills to participate in workplace meetings

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to use oral communication skills to contribute to workplace meetings, such as internal team meetings, staff meetings, external meeting with clients or suppliers, industry committee meetings, project meetings, and work health and safety (WHS) meetings.

An individual performing these tasks works independently and uses familiar support resources as needed.

This unit applies to individuals who use, or are preparing to use, oral communication skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) oral communication core skill indicators .07 and .08 at level 3 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Oral Communication

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to participate	1.1 Identify purpose of the meeting and desired outcome

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Element	Performance Criteria
in workplace meeting	1.2 Identify meeting participants and level of formality 1.3 Confirm any sensitivities or confidentialities
2. Participate in meeting	2.1 Use oral communication strategies to contribute to meeting 2.2 Participate using conventional grammar, every day and some specific vocabulary and routine pronunciation 2.3 Recognise and use appropriate non-verbal communication strategies
3. Review performance	3.1 Seek feedback on own contribution to meeting 3.2 Evaluate own performance and communication strategies to identify areas for improvement

Foundation Skills

This section describes language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to FSKOCM04 Use oral communication skills to participate in workplace meetings.

Assessment Requirements for FSKOCM004 Use oral communication skills to participate in workplace meetings

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- participate and review performance in at least two different workplace meetings.

Participation must include speaking and listening.

Knowledge Evidence

During the above spoken exchange the candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common purposes and outcomes of routine workplace meetings
- typical participants of workplace meetings and relevance of participants to the appropriate register of communication
- sensitivities or confidentialities relevant to workplace
- relevant oral communication strategies that support participation in workplace meetings
- non-verbal communication strategies to participate in workplace meetings
- range of tenses and appropriate use
- intelligible pronunciation of key language
- routine and some specialised vocabulary
- strategies to evaluate performance.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context. Spoken exchanges must be undertaken with real individuals.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Skills must be demonstrated using routine oral exchanges that reflect those typically undertaken in a workplace.

The following resources are to be made available:

- own familiar support resources
- participants for workplace meetings described in performance evidence.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, oral communication, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

FSKRDG002 Read and respond to short and simple workplace signs and symbols

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to interpret and respond to highly familiar, short and simple workplace signs and symbols in printed or digital formats, such as Work Health and Safety (WHS) symbols, safety tags, and warning signs.

An individual performing these tasks works alongside an expert or mentor where prompting and advice can be provided as needed.

This unit applies to individuals who use, or are preparing to use, reading skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) reading core skill indicators .03 and .04 at level 1 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Reading

Elements and Performance Criteria

Element	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare to read highly familiar, short and simple	1.1 Identify personally relevant reason for reading sign or symbol

Assessment Requirements for FSKRDG002 Read and respond to short and simple workplace signs and symbols

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- interpret and identify appropriate response to at least three different highly familiar, short and simple workplace signs and symbols, one of which must be a sign and one a symbol.
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- relevant reasons for reading workplace signs and symbols
- purpose and uses of highly familiar, short and simple workplace signs and symbols
- common features of short and simple workplace signs and symbols and their uses
- reading strategies that support the interpretation of highly familiar, short and simple workplace signs and symbols
- high frequency vocabulary
- methods to check understanding of signs and symbols
- suitable responses to highly familiar, short and simple signs and symbols.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Skills must be demonstrated using short and simple signs and symbols that reflect those typically found in a workplace.

The following resources are to be made available:

- an expert or mentor to provide prompting and advice to learner, as needed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- pictorial or bilingual dictionary
- small bank of workplace signs and symbols containing highly explicit text
- own familiar support resources.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, reading, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.

FSKWTG002 Write short and simple workplace formatted texts

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to complete short and simple workplace formatted texts, which have a highly explicit purpose and are in printed or digital formats. Formatted texts include personnel forms, time sheets, checklists, absent slips and maintenance/work logs.

An individual performing these tasks works alongside an expert or mentor where prompting and advice can be provided as needed.

This unit applies to individuals who use, or are preparing to use, writing skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) writing core skill indicators .05 and .06 at level 1 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for FSKWTG002 Write short and simple workplace formatted texts

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- complete, check and finalise two of the following different short and simple workplace formatted texts for a highly familiar context, in line with required purpose:
  - personnel form: application for leave, time sheets, absent slip
  - checklist
  - maintenance/work log
  - message or note in workplace message proforma
  - roster
  - standard workplace forms, for example, vehicle log or reimbursement form for expenses.
  -

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common purposes and uses of short and simple workplace formatted texts
- basic grammatical structures and limited verb tenses
- basic punctuation
- common text features of short and simple workplace formatted texts
- common symbols relevant to workplace formatted texts
- simple strategies to check writing.
-

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Skills must be demonstrated using short and simple texts and tasks that reflect those typically found in a workplace.

The following resources are to be made available:

- short and simple workplace forms requiring completion
- an expert or mentor to provide prompting and advice to learner, as needed
- functioning computer and keyboard when digital form is being completed in the performance evidence
- own familiar support resources.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, writing, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or
    - Bachelor of Education, Graduate Certificate or Graduate Diploma of Education, or higher. This may include qualifications relating to TESOL, adult education or vocational education.
    -

FSKWTG003 Write short and simple workplace information

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to write short and simple workplace information which has a highly explicit purpose and is in printed or digital formats. Information may include simple emails and messages, SMS texts, instant messages, short activity or process summaries and personnel forms.

An individual performing these tasks operates alongside an expert or mentor where prompting and advice can be provided as needed.

This unit applies to individuals who use, or are preparing to use, writing skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit can be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) writing core skill indicators .05 and .06 at level 1 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

FSKWTG008 Complete routine workplace formatted texts

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to complete routine workplace formatted texts, which may be in printed or digital format, such as online training applications, accident or incident reports, job report forms, purchase orders with detailed goods descriptions, shift handover reports, job applications, or performance appraisal forms.

An individual performing these tasks works independently and uses familiar support resources as needed.

This unit applies to individuals who use, or are preparing to use, writing skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

The unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) writing core skill indicators .05 and .06 at level 3 in the workplace and employment domain of communication.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- complete and review two of the following different routine workplace formatted texts appropriate to audience and purpose:
  - workplace form or template, for example, incident report form including sections for description of incident, action taken, and follow up action required
  - job application or training request form
  - shift handover report in template
  - pro-formas, for example, purchase orders requiring detailed descriptions of goods
  - job report form, for example, vehicle maintenance record form
  - performance appraisal review form.
  -

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common features of routine workplace formatted texts and their uses
- the purpose and use of different formatted texts to communicate relevant information and ideas to differing audiences
- techniques for planning completion of routine workplace formatted texts
- methods to organise and sequence information
- grammar and vocabulary appropriate for routine workplace formatted texts
- strategies to spell unfamiliar words
- punctuation appropriate to routine workplace formatted texts
- techniques to proofread, review and revise texts.
-

FSKWTG009 Write routine workplace texts

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Application

This unit describes the skills and knowledge required to write formal and non-formal routine workplace texts and could be used for a variety of writing types and purposes in printed or digital formats, including letters and emails, instructions, quotation for proposed work factual texts, incident or accident reports, application letter, forms, or formatted job reports.

An individual performing these tasks works independently and uses familiar support resources as needed.

This unit applies to individuals who use, or are preparing to use, writing skills to complete workplace activities. This includes existing workers and individuals preparing for employment through vocational education and training. This unit should be integrated and contextualised with vocational training to support achievement of vocational competency.

This unit is aligned to, but does not fully address, the Australian Core Skills Framework (ACSF) writing core skill indicators .05 and .06 at level 3 in the workplace and employment domain of communication.

Modification History

Release	Comments
Release 1	This version first released with FSK Foundation Skills Training Package Version 2.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- write and review two of the following different routine workplace texts:
  - email or letter for routine workplace communication
  - formal email or letter to client, supplier, contractor or human resources
  - covering letter for job application
  - routine report, for example, accident or incident report
  - instructions for using every day technology, for example, machinery or equipment
  - factual text, for example, job history as part of an application letter, or text following workplace guidelines
  - performance appraisal review form and personal goals
  - record of customer comments regarding quality of service provided
  - notes from a short workplace discussion.
  -

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- common features of a range of routine workplace texts and their uses
- purpose of different text types, formats and layouts to communicate relevant information and ideas to differing audiences
- techniques for planning routine workplace texts
- methods to organise and sequence information
- informal and formal register and relevance to different workplace audiences and purposes
- grammar and vocabulary appropriate for routine workplace texts
- acronyms and idioms relevant to workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- punctuation appropriate to routine formal workplace texts and techniques to use as an aid to meaning
- strategies to spell unfamiliar words
- use and application of automated writing assistance tools, such as spellchecking devices
- techniques to proofread, review and revise texts.
-

Assessment Conditions

Competency is to be assessed in the workplace, a workplace simulated environment or a vocational training context.

Skills must be demonstrated using routine formal texts and tasks that reflect those typically found in a workplace.

The following resources are to be made available:

- functioning computer and keyboard when digital information is being written in the performance evidence
- paper-based or electronic dictionary
- paper-based or electronic thesaurus
- automated writing assistance tools utilised in the knowledge evidence
- own familiar support resources.

Assessors must:

- satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards, and
- have sound knowledge of the ACSF and performance features of the ACSF level being assessed, and
- have demonstrable expertise, knowledge and skills in the vocational contextualisation and assessment of the core skill, writing, and
- have completed the following or equivalent:
  - TAESS00009 Address Foundation Skills in Vocational Practice Skill Set; or
  - a higher level education qualification, such as:
    - TAE80113 Graduate Diploma of Adult Language, Literacy and Numeracy Practice (and its equivalent TAE70111); or

HLTAID011 Provide First Aid

Modification History

Not applicable.

Application

This unit describes the skills and knowledge required to provide a first aid response to a casualty in line with first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies.

The unit applies to all persons who may be required to provide a first aid response in a range of situations, including community and workplace settings.

Specific licensing/regulatory requirements relating to this competency, including requirements for refresher training should be obtained from the relevant national/state/territory Work Health and Safety Regulatory Authorities.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Respond to an emergency situation.	1.1. Recognise and assess an emergency situation. 1.2. Ensure safety for self, bystanders and casualty. 1.3. Assess the casualty and recognise the need for first aid response. 1.4. Seek assistance from emergency services.
2. Apply appropriate first aid procedures.	2.1. Perform cardiopulmonary resuscitation (CPR) in accordance ARC guidelines. 2.2. Provide first aid in accordance with established first aid principles. 2.3. Display respectful behaviour towards casualty. 2.4. Obtain consent from casualty where possible. 2.5. Use available resources and equipment to make the casualty as comfortable as possible. 2.6. Operate first aid equipment according to manufacturers' instructions. 2.7. Monitor the casualty's condition and respond in accordance with first aid principles.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3. Communicate details of the incident.	3.1. Accurately convey incident details to emergency services. 3.2. Report details of incident in line with appropriate workplace or site procedures. 3.3. Complete applicable workplace or site documentation, including incident report form. 3.4. Maintain privacy and confidentiality of information in line with statutory or organisational policies.
4. Review the incident.	4.1. Recognise the possible psychological impacts on self and other rescuers and seek help when required. 4.2. Contribute to a review of the first aid response as required.

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and employment skills) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and not equivalent to HLTAID003 Provide first aid

Assessment Requirements for HLTAID011 Provide First Aid

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the workplace or community setting.

There must be evidence that the candidate has completed the following tasks in line with State/Territory regulations, first aid codes of practice, first aid guidelines determined by the Australian Resuscitation Council (ARC) and other Australian national peak clinical bodies and workplace or site procedures:

- managed, in line with ARC guidelines, the unconscious, breathing casualty including appropriate positioning to reduce the risk of airway compromise
- managed, in line with ARC guidelines, the unconscious, non-breathing adult, including:
  - performing at least 2 minutes of uninterrupted single rescuer cardiopulmonary resuscitation (CPR) (5 cycles of both compressions and ventilations) on an adult resuscitation manikin placed on the floor
  - following the prompts of an automated external defibrillator (AED) to deliver at least one shock
  - demonstrating a rotation of single rescuer operators with minimal interruptions to compressions
  - responding appropriately in the event of regurgitation or vomiting
- managed, in line with ARC guidelines, the unconscious, non-breathing infant, including:
  - performing at least 2 minutes of uninterrupted single rescuer CPR (5 cycles both compressions and ventilations) on an infant resuscitation manikin placed on a firm surface
- managed casualties, with the following:
  - anaphylaxis
  - asthma
  - non-life-threatening bleeding
  - choking
  - envenomation, using pressure immobilisation
  - fractures, dislocations, sprains and strains, using appropriate immobilisation techniques
  - minor wound cleaning and dressing
  - nosebleed
  - shock

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- responded to at least one simulated first aid incident contextualised to the candidate's workplace or community setting, where the candidate has no knowledge of the casualty's condition prior to starting treatment, including:
  - identifying the casualty's illness or injury through history, signs and symptoms
  - using personal protective equipment (PPE) as required
  - providing appropriate first aid treatment
  - conveying incident details to emergency services or advising casualty on any required post incident action
  - providing an accurate verbal and written report of the incident
  - reviewing the incident.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- guidelines and procedures including:
  - ARC guidelines relevant to the provision of first aid
  - first aid guidelines from Australian national peak clinical bodies
  - potential incident hazards and risk minimisation processes when providing first aid
  - infection control procedures, including use of standard precautions and resuscitation barrier devices
  - requirements for currency of skill and knowledge
  - first aid codes of practice
  - appropriate workplace or site procedures relevant to the provision of first aid
  - contents of first aid kits
- legal, workplace and community considerations including:
  - duty of care requirements
  - own skills and limitations
  - consent and how it relates to the conscious and unconscious casualty
  - privacy and confidentiality requirements
  - awareness of potential need for stress management techniques and available support for rescuers
- considerations when providing CPR, including:
  - upper airway and effect of positional change
  - appropriate duration and cessation of CPR
  - appropriate use of an AED
  - safety and maintenance procedures for an AED
  - chain of survival
  - how to access emergency services
- techniques for providing CPR to adults, children and infants including:
  - how to recognise that a casualty is unconscious and not breathing normally

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - rate, ratio and depth of compressions and ventilations
  - correct hand positioning for compressions
  - basic anatomy, physiology and the differences between adults, children and infants relating to CPR
- signs, symptoms and management of the following conditions and injuries:
  - allergic reaction
  - anaphylaxis
  - asthma
  - non-life-threatening and life-threatening bleeding
  - burns
  - cardiac conditions, including chest pain
  - choking
  - diabetes
  - drowning
  - envenomation - all current treatments
  - eye injuries
  - fractures, dislocations, strains and sprains
  - head, neck and spinal injuries
  - hypothermia
  - hyperthermia
  - minor wounds
  - nose-bleed
  - poisoning
  - seizures
  - shock
  - sharps injuries
  - stroke.

Assessment Conditions

Each candidate to demonstrate skills in an environment that provides realistic in-depth, scenarios and simulations to assess candidates' skills and knowledge.

Due to the nature of this type of training, it is acceptable for the performance evidence to be collected in a simulated environment.

Compression and ventilation skills must be demonstrated on resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures.

Assessment must ensure access to:

- adult and infant resuscitation manikins following ARC guidelines for the purpose of assessment of CPR procedures
- adrenaline auto-injector training device

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- AED training devices
- workplace first aid kit
- placebo bronchodilator and spacer device
- different types of wound dressings and bandages
- blankets and items to treat for shock
- personal protective equipment (PPE)
- workplace injury, trauma or illness record, or other applicable workplace or site incident report form.

Simulated assessment environments must simulate real-life situations where these skills and knowledge would be performed, with all the relevant equipment and resources of that workplace or community environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors and must hold this unit or demonstrate equivalent skills and knowledge to that contained within this unit.

HLTWHS005 Conduct manual tasks safely

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Application

This unit describes the skills and knowledge required to recognise potentially hazardous manual tasks, and then to prepare for and complete those tasks in a safe manner.

This unit applies to all workers involved in manual handling tasks.

The skills in this unit must be applied in accordance with Commonwealth and State/Territory legislation, Australian/New Zealand standards and industry codes of practice. The Hazardous manual tasks code of practice applies to this work.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
1. Identify manual tasks involving risk	1.1 Recognise manual tasks that may involve risk to self or others 1.2 Identify risk factors that make the manual task hazardous 1.3 Determine the nature and extent of the risk 1.4 Follow organisation procedures for controlling

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
Elements define the essential outcomes	*Performance criteria describe the performance needed to demonstrate achievement of the element*
	hazardous manual tasks
2. Prepare for manual tasks	2.1 Prepare workplace layout and environment according to organisation procedures
	2.2 Organise task and workflow appropriately
	2.3 Prepare and package loads for movement, taking account of specific requirements for different materials and organisation procedures
	2.4 Select and use personal protective equipment appropriate to the task
	2.5 Ensure task is within personal capabilities
3. Complete manual tasks	3.1 Use appropriate posture and handling techniques to reduce muscle load on exertion
	3.2 Select, adjust and use mechanical aids and handling devices according to manufacturers instructions
	3.3 Pace and schedule tasks according to procedures
4. Contribute to safe work practices	4.1 Identify hazardous manual tasks and report to supervisor according to organisation procedures
	4.2 Follow organisation procedures for reporting symptoms of injury or actual injury to self and others
	4.3 Participate in workplace safety activities and contribute to the improvement of manual tasks
	4.4 Contribute to risk management approach to reduce risks from manual tasks

Foundation Skills

The Foundation Skills describe those required skills (language, literacy, numeracy and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

employment skills) that are essential *to performance.*

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for HLTWHS005 Conduct manual tasks safely

Modification History

Release	Comments
Release 1	This version was released in *HLT Health Training Package release 2.0* and meets the requirements of the 2012 Standards for Training Packages. Significant changes to the elements and performance criteria. New evidence requirements for assessment, including volume and frequency requirements. Significant change to knowledge evidence.

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the job role. There must be evidence that the candidate has:

- followed legally compliant workplace procedures to prepare for and complete at least 3 different manual tasks relevant to the work role
- contributed to a consultation process about improving manual handling safety

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge required to effectively complete tasks outlined in elements and performance criteria of this unit, manage tasks and manage contingencies in the context of the work role. This includes knowledge of:

- key information from work health and safety (WHS) regulations relating to manual tasks and national code of practice
- role and responsibilities of the employer and employees in relation to manual handling safety
- ways in which individual workers are involved in consultation about workplace health and safety
- reporting mechanisms required for workplace injury and compensation claims
- key aspects of the risk management approach to manual tasks
- risk factors and potential sources of risks of hazardous manual tasks:
  - repetition

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - forces
    - postures
    - vibration
    - systems of work
- types of manual task activity and the types of injuries that can result
- the relationship between the human body and risk of injury from performing manual tasks
- functions of the human body:
    - basic function of the spine
    - body postures
    - types of muscles
    - principles of levers
- manual handling techniques that support safe work practice:
    - preparing the load/client
    - preparing the environment
    - using the stronger muscles in the legs where possible, rather than spinal muscles
    - maintaining a neutral spine when lifting and carrying
    - using two hands to lift or carry
    - keeping the load close to the body/centre of gravity
    - avoiding lifting objects above shoulder height
    - minimising repetitive movements
    - positions not held for long periods of time
    - avoiding twisting by repositioning feet whilst turning
- types and operational features of mechanical aids, tools and equipment

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - compliant workplace procedures
    - materials, loads and equipment as required by the individual workplace
- modelling of industry operating conditions, including:
    - presence of hazards
    - integration of situations requiring problem solving

Assessors must satisfy the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory competency requirements for assessors.

MEM09002B Interpret technical drawing

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers interpreting technical drawing applying to any of the full range of engineering disciplines.

Application of the Unit

Application of the unit	Technical drawings may utilise perspective, exploded views or hidden view techniques. Drawings are provided to Australian Standard 1100 and/or Australian Standard 1102 and their equivalents from the full range of engineering disciplines. Standard symbols to Australian Standard 1100 and/or Australian Standard 1102 or equivalent are recognised in field of employment. Technical drawings may include symbol glossaries. Where any drawing, sketch, chart, diagram is only used as the technique for communication, then this unit does not apply: see Unit MEM12023A (perform engineering measurements) or Unit MEM16006A (Organise and communicate information). **Band**: **A** **Unit Weight**: **4**

Licensing/Regulatory Information

Not Applicable

Pre-Requisites

Prerequisite units		

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Select correct technical drawing	1.1. Drawing is checked and validated against job requirements or equipment. 1.2. Drawing version is checked and validated.
2. Interpret technical drawing	2.1. Components, assemblies or objects are recognised as required. 2.2. Dimensions are identified as appropriate to field of employment. 2.3. Instructions are identified and followed as required. 2.4. Material requirements are identified as required. 2.5. Symbols are recognised in the drawing as appropriate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- checking the drawing against job requirements/related equipment in accordance with standard operating procedures
- confirming the drawing version as being current in accordance with standard operating procedures
- where appropriate, obtaining the current version of the drawing in accordance with standard operating procedures
- reading, interpreting information on the drawing, written job instructions, specifications, standard operating procedures, charts, lists and other applicable reference documents
- checking and clarifying task related information
- undertaking numerical operations, geometry and calculations/formulae within the scope of this unit

Required knowledge

Look for evidence that confirms knowledge of:

- application of AS1100.101 in accordance with standard operating procedures
- relationship between the views contained in the drawing
- objects represented in the drawing
- units of measurement used in the preparation of the drawing
- dimensions of the key features of the objects depicted in the drawing
- understanding of the instructions contained in the drawing
- the actions to be undertaken in response to those instructions
- the materials from which the object(s) are made
- any symbols used in the drawing as described in range statement
- hazard and control measures associated with interpreting technical drawings, including housekeeping
- safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to interpret technical drawings as described.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with interpreting technical drawings or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning should not require language, literacy and numeracy skills beyond those required in this unit. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Interpret technical drawing	AS1100.101 is an extensive work and the candidate is not required to have complete familiarity with all its contents, the application of AS1100 would usually be in line with standard operating procedures; interpretation may require guidance particularly in respect to any geometric tolerancing

MEM12023A Perform engineering measurements

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers performing measurement skills requiring straightforward use of mechanical measuring devices and associated calculations.

Application of the Unit

Application of the unit	This unit covers straightforward measurement using devices which incorporate visual indications representing units of measurement. It applies to the use of measuring devices in a range of manufacturing, engineering and related environments. It includes, where required, adjustment of measuring devices through simple means and typically includes zeroing or scale adjustment. Measurements may be expressed in metric or imperial units. All measurements are undertaken to standard operating procedures. Electrical/electronic devices used are those not requiring the connection or disconnection of circuitry. Work is undertaken autonomously or part of team environment, in the field, work station or workshops. For straightforward use of comparison or pre-set measuring devices, Unit MEM12001B (Use comparison and basic measuring devices) should be accessed. **Band**: **A** **Unit Weight**: **5**

Employability Skills Information

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Select appropriate device or equipment	1.1. Measurement requirements are determined from specifications. 1.2. Appropriate device or equipment is selected according to standard operating procedures, to achieve required outcome.
2. Obtain measurements using a range of measuring devices	2.1. Correct and appropriate measuring technique is used. 2.2. Measurements are accurately obtained .

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	2.3. Dimensions are determined or verified using basic calculations, where required.
3. Maintain measuring devices	3.1. Routine care and storage of devices is undertaken to manufacturers' specifications or standard operating procedures. 3.2. Routine adjustments to devices are made and checked.
4. Communicate measurements as required	4.1. Measurements are accurately recorded, where required. 4.2. Freehand sketch which depicts required information is prepared, as required.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE

This section describes the skills and knowledge required for this unit.

Required skills

Look for evidence that confirms skills in:

- selecting the appropriate measuring device for given measuring tasks
- using appropriate measuring technique
- reading all measurements taken accurately to the finest graduation of the selected measuring device
- handling and storing measuring devices in accordance with manufacturers' specifications or standard operating procedures
- verifying all measuring devices before use
- making, where appropriate, routine adjustments to measuring devices
- reading, interpreting and following information on written job instructions, specifications, standard operating procedures, charts, lists, drawings and other applicable reference documents
- planning and sequencing operations
- checking and clarifying task related information
- checking for conformance to specifications
- undertaking numerical operations involving addition, subtraction, multiplication, division, fractions and decimals within the scope of this unit
- preparing drawings as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE
Required knowledge
Look for evidence that confirms knowledge of: • correct application of a range of measuring devices • correct and appropriate measuring technique for a range of measuring devices • addition, subtraction, multiplication, division, fractions, decimals to the scope required by this unit • procedures for handling and storing a range of measuring devices • procedures for adjusting and zeroing a range of measuring devices • methods of communicating measurements by drawings, as required • safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to perform engineering measurements.

MEM18001C Use hand tools

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers using a range of hand tools for a variety of general engineering applications.

Application of the Unit

Application of the unit	Applications may include hand tools used for adjusting, dismantling, assembling and finishing of items or components, and the finishing, cutting, scraping of metallic and non-metallic material to size and shape. This includes simple tapping and threading and routine maintenance of hand tools. This unit should not be selected if the hand tool is dedicated to a single operation or machine and if only a machine specific/customised tool is used. When using hand held power tools or power tools used for hand held operations, refer to Unit MEM18002B (Use power tools/hand held operations). **Band**: **A** **Unit Weight**: **2**

MEM18055B Dismantle, replace and assemble engineering components

Modification History

Not Applicable

Unit Descriptor

Unit descriptor	This unit covers dismantling and identifying faulty components, selecting replacements, and assembling engineering components into assemblies or sub-assemblies in accordance with standard operating procedures.

Application of the Unit

Application of the unit	This unit involves dismantling, checking, replacing and assembling engineering components in accordance with standard operating procedures. All specifications are interpreted from manufacturers' manuals, engineering drawings, detailed/technical sketches and associated data sheets. Tasks are undertaken utilising engineering principles, designated procedures, appropriate tools, equipment and safe workshop practices. Work is undertaken autonomously or in a team environment using predetermined standards of quality, safety and workshop procedures. Where fitting techniques and principles are required to assess component condition, and/or modify components to achieve precision fits, unit MEM18006C (Repair and fit engineering components) should also be selected. Where precision mechanical measurement is required, then Unit MEM12003B (Perform precision mechanical measurement) should also be selected. **Band**: **A** **Unit Weight**: **3**

Employability skills	This unit contains employability skills.

Elements and Performance Criteria Pre-Content

Elements describe the essential outcomes of a unit of competency.	Performance criteria describe the performance needed to demonstrate achievement of the element. Where bold italicised text is used, further information is detailed in the required skills and knowledge section and the range statement. Assessment of performance is to be consistent with the evidence guide.

Elements and Performance Criteria

ELEMENT	**PERFORMANCE CRITERIA**
1. Dismantle engineering	1.1. Engineering components are inspected and task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
components	requirements are analysed. 1.2. Appropriate tools and equipment are selected and component/s are prepared for dismantling. 1.3. Component is dismantled using standard operating procedures, tools and equipment. 1.4. Engineering components are clearly marked to aid reassembly.
2. Identify faulty components	2.1. Specifications for components are obtained from appropriate source and are interpreted and understood. 2.2. Damaged or faulty components are assessed against specifications according to standard operating procedures. 2.3. Faulty components are identified for repair, replacement or adjustment according to standard operating procedures.
3. Select replacement components	3.1. Where applicable, replacement and/or repaired parts are selected for reassembly according to standard operating procedures.
4. Assemble engineering components into assemblies or sub-assemblies	4.1. Appropriate techniques are applied in the preparation, assembly and adjustment of components using fastening equipment and methods which ensure conformance to specifications, operational performance, quality and safety of the completed assembly according to standard operating procedures. 4.2. Correct lubrication, packing, sealing materials are selected and applied correctly in conformance to job specifications. 4.3. Final component assembly is inspected, tested and adjusted as necessary for compliance with operational specifications and returned to use according to standard operating procedures.

Required Skills and Knowledge

REQUIRED SKILLS AND KNOWLEDGE
This section describes the skills and knowledge required for this unit.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

REQUIRED SKILLS AND KNOWLEDGE

Required skills

Look for evidence that confirms skills in:

- obtaining and interpreting all relevant instructions, standard operating procedures, drawings and specifications
- preparing component for dismantling
- dismantling components using appropriate techniques, tools and equipment
- marking component parts appropriately for identification purposes
- checking components visually and dimensionally for conformance to specification
- where appropriate, marking faulty parts for repair, replacement or adjustment
- selecting and confirming replacement parts to specifications
- obtaining and using all relevant supplier catalogues
- preparing and assembling components using appropriate techniques in accordance with standard operating procedures
- where appropriate, applying lubricants correctly to the assembly in accordance with specifications and standard operating procedures
- where appropriate, applying packing and/or sealing materials in accordance with specifications and standard operating procedures
- inspecting and checking the final assembly for conformance to specification
- where appropriate, returning the final assembly to use

Required knowledge

Look for evidence that confirms knowledge of:

- tasks to be performed in accordance with standard operating procedures
- procedures for dismantling the assembly
- tools and equipment to be used to dismantle the components
- procedures and required equipment for checking components for conformance to specification
- specifications of the components to be replaced
- features and/or dimensions upon which replacement parts are to be selected
- process of identifying replacement parts from "third party" suppliers' catalogues
- procedures for assembling components
- requirements of the assembly in terms of specifications, operational performance, quality and safety
- procedures for lubricating the assembly
- materials
- checks to be undertaken during inspection of the final assembly
- procedures for returning components/assemblies into use
- hazards and control measures associated with dismantling, replacing and assembling engineering components, including housekeeping

REQUIRED SKILLS AND KNOWLEDGE
• safe work practices and procedures

Evidence Guide

EVIDENCE GUIDE	
The evidence guide provides advice on assessment and must be read in conjunction with the performance criteria, required skills and knowledge, range statement and the Assessment Guidelines for the Training Package.	
Overview of assessment	A person who demonstrates competency in this unit must be able to dismantle, replace and assemble engineering components. Competency in this unit cannot be claimed until all prerequisites have been satisfied.
Critical aspects for assessment and evidence required to demonstrate competency in this unit	Assessors must be satisfied that the candidate can competently and consistently perform all elements of the unit as specified by the criteria, including required knowledge, and be capable of applying the competency in new and different situations and contexts.
Context of and specific resources for assessment	This unit may be assessed on the job, off the job or a combination of both on and off the job. Where assessment occurs off the job, that is the candidate is not in productive work, then an appropriate simulation must be used where the range of conditions reflects realistic workplace situations. The competencies covered by this unit would be demonstrated by an individual working alone or as part of a team. The assessment environment should not disadvantage the candidate. This unit could be assessed in conjunction with any other units addressing the safety, quality, communication, materials handling, recording and reporting associated with dismantling, replacing and assembling engineering components or other units requiring the exercise of the skills and knowledge covered by this unit.
Method of assessment	Assessors should gather a range of evidence that is valid, sufficient, current and authentic. Evidence can be gathered through a variety of ways including direct observation, supervisor's reports, project work, samples and questioning. Questioning techniques should not

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

EVIDENCE GUIDE	
	require language, literacy and numeracy skills beyond those required in this unit of competency. The candidate must have access to all tools, equipment, materials and documentation required. The candidate must be permitted to refer to any relevant workplace procedures, product and manufacturing specifications, codes, standards, manuals and reference materials.
Guidance information for assessment	

Range Statement

RANGE STATEMENT	
The range statement relates to the unit of competency as a whole. It allows for different work environments and situations that may affect performance. Bold italicised wording, if used in the performance criteria, is detailed below. Essential operating conditions that may be present with training and assessment (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) may also be included.	
Engineering components	Includes a range of component parts found in equipment or product assemblies, sub-assemblies, e.g. couplings, universal joints, pumps etc. employing shafts, pre-manufactured bearings and seals, lubricants, fasteners, gaskets etc.
Appropriate tools and equipment	Includes a range of hand and power tools, bearing pullers, special purpose dismantling and assembly tools etc.
Selected	Replacement parts are selected from manufacturers' catalogues, etc.
Appropriate techniques	Are in accordance with standard operating procedures and may include the straightforward removal and replacement of pre-manufactured bearings and seals

MSL904002 Perform standard calibrations

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL904001 Perform standard calibrations. Foundation skills information added. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Application

This unit of competency describes the skills and knowledge to calibrate test and measurement equipment in accordance with standard calibration procedures and documented test methods. These procedures/methods specify all associated reference standards, materials, equipment and methods to be used and the required parameters or quantities and ranges to be tested, including the criteria for rejection or approval.

This unit applies to laboratory and calibration technicians who carry out tests and/or calibrations using standard calibration methods in first, second and third party laboratories, and laboratories where testing and/or calibration forms part of inspection or product certification. Personnel are not permitted to deviate from explicit instructions in any manner, modify the procedure, nor substitute alternative equipment. They work under limited supervision and results of their work are interpreted and checked by the laboratory supervisor, quality inspector or designated signatory.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Nil

Competency Field

Calibration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare items for calibration**	1.1	Select the authorised calibration procedure in accordance with workplace procedures
		1.2	Identify hazards and use appropriate personal protective equipment (PPE), safety equipment and procedures
		1.3	Confirm all measuring equipment meets the laboratory's specification requirements and complies fully with the calibration procedure
		1.4	Assemble and set up specified reference standards and associated equipment prior to testing
		1.5	Verify performance of reference standards and measuring equipment prior to use and adjust or calibrate as necessary
		1.6	Identify and minimise potential sources of measurement error
2	**Perform calibration**	2.1	Perform individual tests without variance according to the documented procedure to ensure repeatability of measurement
		2.2	Confirm readings are the result of a valid measurement and record data as required (as-found or before adjustment)
		2.3	Adjust device under test to bring readings within specification and record data (as-left or after adjustment) where required
		2.4	Analyse resulting test data to detect trends or inconsistencies that would significantly affect the accuracy or validity of test results
		2.5	Seek appropriate advice when interpretation of results is outside authorised scope of approval
3	**Document results**	3.1	Estimate and document uncertainty of measurement in accordance with workplace procedures, where required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	3.2	Document compliance/non-compliance with test requirements and/or specifications
	3.3	Record the results of each test/calibration accurately, unambiguously and objectively
	3.4	Ensure confidentiality of workplace information in accordance with workplace procedures
4 **Finalise calibration**	4.1	Prepare and issue a final report on the job/item detailing testing carried out, traceability, statement of compliance and relevant information
	4.2	Report any non-compliance and verify next course of action with supervisor
	4.3	Attach calibration labels, equipment stickers, quality control tags and tamper resistant seals as required in accordance with workplace procedures
	4.4	Store test equipment/measurement standards and results in accordance with workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Numeracy skills to:
  - perform calculations to give results in appropriate accuracy, precision and units
  - use statistical analysis (means, ranges and standard deviations) and estimation of uncertainty of measurement.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Assessment Requirements for MSL904002 Perform standard calibrations

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL904001 Perform standard calibrations. Foundation skills information added. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- safely and accurately calibrated a minimum of 3 different items of test and/or measurement equipment from the following list:
  - balance
  - thermometer
  - thermocouple
  - pH meter
  - refractive index meter
  - viscosity meter
  - flow meter (including digital)
  - volumetric dispenser including auto-pipette (POVAs)
  - volumetric glass (once for life time)
  - spectrophotometer
  - incubator/oven/fridge
  - digestion block
  - biological safety cabinet
  - fume cupboard.

Calibrations must be carried out in accordance with standard calibration procedures and documented test methods.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- purpose of metrology and calibration, including common terminology, concepts, principles, procedures and applications
- National Association of Testing Authority's (NATA) and National Measurement Institute's (NMI) role in the measurement and testing system in Australia and registration/licensing requirements
- requirements for the competence of testing and calibration laboratories (e.g. AS ISO/IEC 17025) as they affect job role and responsibilities
- Australian and international standards and codes covering requirements for the competence of testing and calibration laboratories
- standards imposed by regulatory and licensing bodies
- statistical analysis of quality control data, mean, median, mode, ranges and standard deviations
- hierarchy and appropriate selection of reference materials and instruments
- commonly used reference materials and working standards
- test equipment relevant to job role
- workplace procedures for:
  - non-conformance/non-compliance
  - equipment operation
  - calibration
  - troubleshooting for equipment and test methods
  - recording and reporting
  - handling, transport, storage and operation of reference and working standards
  - test methods and calibration (validated and authorised)
- different fields in which calibration work is conducted
- workplace and/or legal traceability requirements
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - specialised calibration/test equipment, reference standards and laboratory facilities
  - calibration methods, procedures and equipment specifications
  - workplace quality manual and procedures.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL912001 Work within a laboratory or field workplace (induction)

Modification History

Release 1. Supersedes and is equivalent to MSL912001A Work within a laboratory/field workplace (induction)

Application

This unit of competency covers the induction of an employee into scientific/technical work within a workplace.

This unit of competency is applicable to samplers/testers, production operators and field assistants working in all industry sectors.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

Pre-requisite Unit

Nil

Competency Field

Communication/organisation

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Work within workplace structure and culture**	1.1 Demonstrate broad knowledge of workplace business ethics, goals, products and/or scientific/technical services
		1.2 Identify key workplace sites and functions and their contribution to product range and quality

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2	**Work in accordance with workplace agreements and/or legislative requirements**	2.1	Locate key workplace information and apply it correctly
		2.2	Follow workplace policy and procedures relating to employment, security, confidentiality and reporting lines
		2.3	Perform all work activities in accordance with relevant environmental management procedures, including sustainability principles and work practices
3	**Provide scientific/technical support**	3.1	Identify workplace roles and responsibilities of scientific/technical personnel
		3.2	Identify typical tasks and calendar of events in work area
		3.3	Recognise and locate the equipment and resources required for everyday work
		3.4	Interpret work instructions correctly and seek clarification if necessary
		3.5	Follow work instructions to perform scientific/technical tasks safely and efficiently
		3.6	Maintain own work area, equipment and materials in a safe and organised manner according to workplace policy and procedures
4	**Organise daily work efficiently**	4.1	Assess and prioritise work load according to level of responsibility
		4.2	Advise supervisor if additional resources or support are required to improve performance
		4.3	Undertake duties in a positive manner to enhance workplace cooperation and efficiency
5	**Accept responsibility for quality of own work**	5.1	Monitor and adjust work practices to ensure that the quality of outputs is maintained
		5.2	Identify and report opportunities for improvements in procedures, processes and equipment in work area

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

6	**Identify own learning needs**	6.1 Identify career options and training opportunities in the workplace
		6.2 Consult appropriate personnel to identify own learning needs for future work requirements and career aspirations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or workplace requirements include the latest version of one or more of:

- Australian and international standards covering safety in laboratories, and quality and environmental management
- Australian codes covering good manufacturing practice for medicinal products (GMP), and Australian Dangerous Goods Code
- principles of good laboratory practice (GLP)
- national work health and safety (WHS) standards and codes of practice

Business ethics

Business ethics include:

- working diligently and responsibly in accordance with workplace policy and procedures
- behaving honestly and openly, respecting others and treating them with courtesy and impartiality
- ensuring confidentiality of information, including client identification and test results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Workplace sites

Workplace sites include, but are not limited to, one or more of:

- laboratories, head office functions, production or processing plants, supplier services and consultancy services

Key functions

Key functions include one or more of:

- production
- packaging, warehouse and distribution
- quality assurance
- purchasing, sales and marketing
- human resources (personnel, training and employee relations)

Sources of workplace information

Sources of workplace information include, but are not limited to, one or more of:

- noticeboards, public address or paging systems
- standard operating procedures (SOPs), manuals, work instructions, signs and notices, and material safety data sheets (MSDS)
- telephone or contact details, email systems and websites
- emergency exits, routes and collection points
- workplace recording and reporting procedures, quality manuals, and equipment and operating/technical manuals
- test methods (validated and authorised)
- schematics, workflows, laboratory layouts and production and laboratory schedules

Workplace agreements, policies and procedures

Workplace agreements, policies and procedures include, but are not limited to, one or more of:

- industrial awards, workplace bargaining agreements and individual contracts
- health, safety and environment procedures covering hazards, controls, safe work methods, emergencies, accidents and incidents, and incident and accident/injury reports
- quality of customer services

Legislative requirements

Legislative requirements involve, but are not limited to, one or more of:

- WHS and workers compensation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- environmental protection
- equal employment, anti-discrimination and anti-harassment
- ethics, copyright, intellectual property (IP) and privacy

Sustainable energy principles and work practices

Sustainable energy principles and work practices include one or more of:

- examining work practices that involve excessive use of electricity, gas and/or water and switching off equipment when not in use
- regularly cleaning filters
- minimising waste, recycling and reusing materials wherever feasible

Scientific and technical support

Scientific and technical support include one or more of:

- routine site sampling of raw materials and products
- packaging, labelling, storing and transporting samples
- visual inspection of products and packaging
- routine site measurements that take a short time and involve a narrow range of variables or easily recognised control limits
- cleaning of equipment and housekeeping of work areas

Equipment and resources

Equipment and resources will be determined by the scope and nature of the workplace's products, scientific/technical functions and services

WHS and environmental management requirements

WHS and environmental management requirements include:

- complying with WHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time
- applying standard precautions relating to the potentially hazardous nature of samples
- accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Assessment Requirements for MSL912001 Work within a laboratory or field workplace (induction)

Modification History

Release 1. Supersedes and is equivalent to MSL912001A Work within a laboratory/field workplace (induction)

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- following workplace procedures to complete tasks within the required timeframe without compromising safety, quality and ethics
- complying with legislative and workplace requirements in everyday work and efficiently organising own daily work
- using personal protective clothing (PPE), equipment and containment facilities as required
- accepting responsibility for quality of own work
- working efficiently when alone and with others
- identifying and reporting suggestions for improvements
- identifying own learning needs.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- range of workplace products and services
- workplace structure and reporting lines
- role of quality assurance and/or scientific/technical services in the workplace
- own role, rights, responsibilities and key tasks
- workplace procedures that govern personal work, health, safety and environment
- basic ethical values and principles, including respect for the law, responsibility, courtesy, diligence and confidentiality
- use and names of equipment, materials and other resources relevant to work function
- work health and safety (WHS) and environment requirements.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- This unit of competency is to be assessed in the workplace, or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - MSL922001 Record and present data
- Holistic assessment methods include:
  - observation of candidate performing a range of scientific/technical tasks
  - feedback about performance from peers and supervisors
  - oral or written questioning to check required knowledge
  - review of workplace documentation completed by the candidate.
- Access is required to instruments, equipment, materials, workplace documentation, procedures, and specifications associated with this unit, including, but not limited to:
- relevant documentation, such as workplace standard operating procedures (SOPs), legal/regulatory requirements and codes of practice
- organisational charts and flow diagrams showing links between workplace functions and/or production processes
- employment, training and career information.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competence and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSL922001 Record and present data

Modification History

Release	Comments
Release 2	Unit codes updated in Assessment conditions. Equivalent outcome.
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 1.0.* Supersedes and is equivalent to MSL922001A Record and present data

Application

This unit of competency covers the ability to record and store data, perform simple calculations of scientific quantities and present information in tables and graphs. The unit of competency requires personnel to solve predictable problems using clear information or known solutions. Where alternatives exist, they are limited or apparent.

This unit of competency is applicable to production operators, field assistants and laboratory assistants working in all industry sectors.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

essential outcomes.		demonstrate achievement of the element.	
1	**Record and check data**	1.1	Enter data into laboratory information system or record sheets as directed
		1.2	Check data to identify transcription errors or atypical entries
		1.3	Rectify errors in data using workplace procedures
2	**Calculate simple scientific quantities**	2.1	Calculate simple scientific quantities using given formulae and data
		2.2	Ensure calculated quantities are consistent with estimations and expectations
		2.3	Report all calculated quantities with appropriate precision and units
3	**Present data**	3.1	Present data accurately in tables, charts and graphs using given formats and scales
		3.2	Recognise and report obvious features and trends in data
4	**Store and retrieve data**	4.1	File and store data in accordance with workplace procedures
		4.2	Maintain workplace confidentiality standards

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or enterprise requirements include the latest version of one or more of:

- relevant Australian and international standards, such as the international system of units (SI) and its application
- national measurement regulations and guidelines

Data

Data includes:

- worksheets, spreadsheets or databases linked to information management systems
- results of observations, tests and measurements, or surveys
- graphs, tables and control charts
- semi quantitative observations expressed on a scale e.g. 1 to 4 or + to ++++

Work health and safety (WHS) and environmental management requirements

WHS and environmental management requirements include:

- complying with WHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time
- applying standard precautions relating to the potentially hazardous nature of samples
- accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Assessment Requirements for MSL922001 Record and present data

Modification History

Release	Comments
Release 2	Unit codes updated in Assessment conditions. Equivalent outcome.
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 1.0.* Supersedes and is equivalent to MSL922001A Record and present data

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- accurately coding, checking, recording and storing data in the required format
- performing simple calculations involving scientific quantities, with or without a calculator or computer software. The following must be performed:
  - decimals, fractions, ratios, proportions and percentages
  - unit conversion, multiples and submultiples
  - use of significant figures, rounding off, estimation and approximation
  - substitution of data in formulae
  - conversions between SI units
  - performing at least five (5) of the following calculations:
  - perimeters
  - angles
  - areas (m^2) and volumes (mL, L, m^3) of regular shapes (e.g. packaging and moulds)
  - average mass, mass %, density, specific gravity, moisture, relative and absolute humidity
  - ratios, such as mass to mass, mass to volume and volume to volume percentages
  - industry specific ratios, such as g/cm^2 , kg/m^2
  - concentration (e.g. g/100mL, mg/L, mg/L)
  - dilution
  - statistical values, such as mean, median, mode and standard deviation
  - average count, colonies per swab surface and cell counts (live and dead/total)
  - process variables, such as pressure, velocity and flow rates

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - % content of moisture, ash, fat, protein, alcohol, sulphur dioxide and trace metals, such as calcium or zinc
    - food properties, such as % concentration (dry), friability, bitterness, brix, free amino nitrogen, diastatic power, calorific content and yeast viability
- preparing and interpreting straightforward tables, graphs and charts of data
- recognising obvious features and trends in data, including:
    - maximum and minimum values
    - spread of data
    - increasing/decreasing data, rate of change
    - outliers, data beyond control limits or normal range
- presenting accurate results in the required format
- maintaining the confidentiality of data in accordance with workplace and regulatory requirements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- concepts of metrology, including:
    - that all measurements are estimates
    - repeated measurements belong to a sample of the measured parameter
    - repeatability, precision, accuracy and significant figures
- the international system of units (SI)
- scientific and technical terminology relevant to job role
- procedures for coding, entering, storing, retrieving and communicating data
- procedures for verifying data and rectifying mistakes
- procedures for maintaining and filing records, and security of data

work health and safety (WHS) and environment requirements.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency is to be assessed in the workplace or a simulated workplace environment, and assessment evidence must be relevant to the particular workplace context. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in either case).
- This unit may be assessed with technical units, such as:
  - MSL973013 Perform basic tests
  - MSL973014 Prepare working solutions
  - MSL973019 Perform microscopic examination
- Holistic assessment methods include:
  - review of data worksheets, calculations, graphs and tables prepared by the candidate
  - review of records transcribed, maintained or stored by the candidate
  - feedback from supervisors and peers
  - observation of the candidate as they record data and perform calculations
  - questions to assess understanding of relevant procedures and trends in data.
- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - data sets and records
  - computer and relevant software or laboratory information system
  - relevant workplace procedures.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competence and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSL924003 Process and interpret data

Modification History

Release	Comments
Release 1	This version was released in M*SL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL924001 Process and interpret data. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to retrieve data, evaluate formulae and perform scientific calculations, present and interpret information in tables and graphs and keep accurate records. The unit requires personnel to solve problems of limited complexity where the information may be less obvious, but not contradictory, and can be determined by direct reasoning.

This unit of competency applies to laboratory assistants, field/laboratory technicians and instrument operators in all industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Retrieve and check data**	1.1	Store and retrieve data using appropriate files and/or application software
		1.2	Verify the quality of data using workplace procedures
		1.3	Rectify errors in data using workplace procedures
2	**Calculate scientific quantities**	2.1	Calculate statistical values for given data
		2.2	Calculate scientific quantities using given formulae and data and estimate uncertainties
		2.3	Ensure calculated quantities are consistent with estimations and expectations
		2.4	Report all calculated quantities using the appropriate units and correct number of significant figures
3	**Present data**	3.1	Present data in clearly labelled tables, charts and graphs
		3.2	Graph data using appropriate scales to span the range of data or display trends
		3.3	Report all data using the appropriate units and number of significant figures
4	**Interpret data**	4.1	Interpret significant features of tables, charts and graphs, including gradients, intercepts, maximum and minimum values, and limit lines
		4.2	Recognise and report trends in data
5	**Keep accurate records**	5.1	Transcribe information accurately
		5.2	Verify the accuracy of records following workplace procedures

Assessment Requirements for MSL924003 Process and interpret data

Modification History

Release	Comments
Release 1	This version was released in M*SL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL924001 Process and interpret data. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- processed and interpreted different data sets
- calculated scientific and statistical quantities with or without a calculator or computer software, including the following items:
  - converting units involving multiples and submultiples
  - scientific notation, significant figures, round off, estimate and approximate
  - transposing and evaluating formulae
  - fractions, decimals, proportions and percentages
  - mean
  - median
  - mode
  - standard deviation
- performed at least 5 of the following calculations:
  - perimeters and angles
  - percentage and absolute uncertainties in measurements and test results
  - areas (m^2) and volumes (mL, L, m^3) of regular shapes, such as packaging
  - dose (mg), average mass, mass percentage, density, specific gravity, moisture, relative and absolute humidity, viscosity and permeability
  - ratios, such as mass to mass, mass to volume and volume to volume percentages
  - concentration, such as molarity, g/100mL, mg/L, mg/L, ppm, ppb, dilution mL/L
  - average count, colonies per swab surface and cell counts, such as live and dead/total
  - process variables, such as pressure, gauge pressure, velocity and flow rates

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - food properties, such as % concentration (dry), friability, bitterness, brix, free amino nitrogen, diastatic power, calorific content and yeast viability, % content of moisture, ash, fat, protein, alcohol, sulphur dioxide and trace metals, such as calcium or zinc
    - mechanical properties, such as stress, strain, moduli and force
    - presenting accurate results in the required format (significant figures, uncertainty units)
- prepared and presented data in the at least 5 of the following formats:
    - tables
    - graphs
    - line graphs
    - histograms
    - pie charts, bar charts and control charts
    - semi-quantitative observations expressed on a scale: 1 to 4 or + to ++++
- recognised and interpreted significant points, anomalies and trends in data.

Knowledge Evidence

- There must be evidence the candidate has knowledge of:
- concepts of metrology, including:
    - that all measurements are estimates
    - repeatability, precision, accuracy and significant figures
    - sources of error, and uncertainty associated with measurement steps
    - traceability
- the international system of units (SI)
- scientific and technical terminology relevant to job role
- workplace procedures for:
    - coding, entering, storing, retrieving and communicating data
    - verifying data and rectifying mistakes
    - maintaining and filing records, and maintaining security of data
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - data sets and records
    - a calculator
    - spreadsheets, computer software, databases and statistical packages
    - computer and relevant software or laboratory information system
    - relevant workplace procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL924004 Use laboratory application software

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL924002 Use laboratory application software. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to use and apply computer software for analysing and reporting in the laboratory, field and/or production plants.

This unit of competency applies to technical officers and laboratory technicians in all industry sectors. It describes the application and use of software packages, this software would be for the storage, retrieval, analysis and display of information. There is no expectation that candidates would be able to customise the software to meet specific needs.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Data

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Access application software**	1.1	Identify software required for the task
		1.2	Open software from a personal computer or network terminal
		1.3	Use information sources to locate details of software features and instructions for its use
2	**Use software for specified purposes**	2.1	Input a range of scientific data into a computing system
		2.2	Conduct searches for the retrieval of required data
		2.3	Use application features for efficient computation
		2.4	Construct data sets and databases for numerical and graphical analyses
3	**Produce reports of retrieved data and/or processed data**	3.1	Analyse data using features of the software package
		3.2	Select options for constructing data reports
		3.3	Print the results of data analyses using features of the software package
		3.4	Integrate data from diverse application software units in a report
		3.5	Report the outcomes and rationale for database searches
		3.6	Reference data sources according to the style requirements of the workplace
4	**Perform simple record housekeeping**	4.1	Maintain archived data according to workplace standard procedures
		4.2	Maintain hard copy data according to workplace standard procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Problem solving skills to refine searches to retrieve data.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Equivalent to MSL924002 Use laboratory application software, Release 1.

Assessment Requirements for MSL924004 Use laboratory application software

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL924002 Use laboratory application software. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- effectively used the most appropriate software for the analysis, reporting and management of 2 different sets of laboratory or field data and information.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- terminology associated with the software packages used in job role
- basic knowledge of the types of spreadsheet, database and data analysis packages that are available
- application of specific software package features to laboratory tasks relevant to job role
- relationship between the protocol for data input and file storage of the data
- general file and record maintenance
- importance of antivirus software and standard quarantine procedures
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a computer network, personal computer or laptop

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- software packages that cover databases, spreadsheets, statistical analysis and simple graphics output
- input and output data.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL933006 Contribute to the achievement of quality objectives

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL933002 Contribute to the achievement of quality objectives. Changes to performance criteria. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to apply quality principles to laboratory/field work to achieve quality outcomes.

This unit of competency apples to samplers/testers, production operators and laboratory/field assistants working in all industry sectors. These personnel have roles and responsibilities within the workplace's quality system which are set out in quality manuals and workplace procedures.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Quality

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Apply quality control procedures**	1.1	Record data for quality control purposes
		1.2	Recognise and report non-conformances in keeping with job role and quality procedures
2	**Contribute to quality improvements**	2.1	Review own work practices for opportunities to continuously improve performance
		2.2	Identify and report opportunities for improvements in procedures, processes and equipment in work area
3	**Maintain commitment to workplace quality standards in own work**	3.1	Maintain an objective of 'right first time'
		3.2	Conduct work in accordance with sustainability work practices
		3.3	Minimise waste and rework in accordance with workplace guidelines
		3.4	Demonstrate 'job ownership' for whole tasks through a commitment to finish and follow-up
		3.5	Ensure that personal actions conform with the code of ethics relevant to the workplace
4	**Assist in maintaining customer relationships**	4.1	Demonstrate an understanding of the business goals, products and services of the workplace when dealing with customers in relation to own function
		4.2	Communicate appropriately with customers in keeping with knowledge and authority limitations and quality requirements
5	**Update knowledge and skills as required**	5.1	Recognise own strengths and limitations
		5.2	Take advantage of opportunities for skill development

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Oral communication skills to work effectively with others in a team to improve productivity and efficiency, and to resolve simple customer inquiries.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Equivalent to MSL933002 Contribute to the achievement of quality objectives, Release 1.

Assessment Requirements for MSL933006 Contribute to the achievement of quality objectives

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL933002 Contribute to the achievement of quality objectives. Changes to performance criteria. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- applied workplace quality control principles and procedures to laboratory/field work to achieve quality outcomes for at least two different laboratory tasks or ‘jobs’, including:
  - communicating with customers
  - recording and reporting results.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- role of laboratory services to the workplace and customers
- quality requirements of the candidate's job role and functions
- workplace procedures associated with the candidate's routine technical duties
- layout of the workplace, divisions and laboratory
- lines of communication
- products and services provided by the workplace
- scheduling of tests and procedures to meet customer requirements
- fundamental role of internal and external audits
- recording, reporting and document control requirements
- continuous improvement and waste minimisation principles
- accreditation and regulatory requirements relating to quality objectives, such as Australian and international standards and the National Association of Testing Authorities (NATA) requirements as they relate to the job role.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - workplace quality system as set out in quality manuals and workplace procedures
  - standard operating procedures (SOPs).

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL933007 Apply critical control point requirements

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL933003 Apply critical control point requirements. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to monitor critical, quality and regulatory control points related to a person's work responsibilities. This unit of competency also covers support for ongoing improvement of the workplace hazard analysis and critical control points (HACCP) plan.

This unit of competency applies to production operators and laboratory assistants in the food processing and manufacturing sectors. Control points refer to those key points in a work process that must be monitored and controlled.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Provide routine input to the HACCP plan**	1.1	Obtain information about control points in the manufacturing process
		1.2	Locate control points for own work area responsibilities
		1.3	Perform relevant checks and inspections on materials and equipment to establish conformance to meet requirements
		1.4	Identify variations or common faults
		1.5	Record inspection results and report to appropriate personnel
2	**Contribute to the continuous improvement of the HACCP plan**	2.1	Recognise non-conformance to the HACCP plan
		2.2	Identify likely causes for non-conformance
		2.3	Record and report non-conformances to appropriate personnel
3	**Maintain a safe work environment**	3.1	Use established safe work practices and personal protective equipment (PPE) to ensure personal safety and that of other personnel
		3.2	Report potential hazards and/or maintenance issues in own work area to designated personnel
		3.3	Minimise the generation of waste and environmental impacts
		3.4	Dispose of waste in accordance with workplace procedures, relevant codes and regulations

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MSL933007 Apply critical control point requirements

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL933003 Apply critical control point requirements. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- correctly and appropriately monitored the critical, quality and regulatory control points for 2 different processes in own work area.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- the seven principles of HACCP and relationship to food or pharmaceutical safety, benefits of HACCP and preliminary steps for HACCP
- HACCP plan contents, including:
  - critical control points and control limits
  - consequences of non-conforming products being identified
- products/materials typically handled by laboratory assistants:
  - raw materials, ingredients, food additives, adjuncts/process aids and finished products
  - consumables, such as chemicals
- layout of the workplace, divisions and laboratory
- organisational structure of the workplace
- lines of communication
- quality policy, procedures and responsibilities of job role
- workplace procedures associated with the candidate's regular technical duties
- equipment and instrument calibration requirements
- continuous improvement practices
- methods used to monitor each critical, quality and regulatory control point
- methods for systematically investigating and responding to problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - quality manuals and procedures, HACCP plans and records
  - recording equipment
  - case studies to illustrate a range of HACCP issues.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Perform set-up and pre-use checks of laboratory equipment**	1.1	Perform laboratory equipment set-up and pre-use checks in accordance with workplace procedures
		1.2	Perform safety checks in accordance with relevant workplace and instrumental procedures
		1.3	Identify faulty or unsafe components and equipment and report to appropriate personnel
		1.4	Complete equipment log books/records to meet workplace requirements
2	**Perform calibration checks**	2.1	Start up equipment according to operating procedures
		2.2	Use specified standards for calibration check
		2.3	Check equipment in accordance with calibration procedures and schedules
		2.4	Record all calibration data accurately and legibly
		2.5	Compare data with specifications and/or previous records to identify non-compliant equipment
		2.6	Quarantine out-of-calibration equipment
3	**Assist with equipment maintenance**	3.1	Ensure all equipment work areas are clean during and after equipment use
		3.2	Perform basic maintenance in accordance with workplace procedures
		3.3	Clean and store equipment according to workplace and/or manufacturer's specifications/procedures
		3.4	Identify and replace, repair or dispose of damaged/worn equipment
4	**Maintain records**	4.1	Record maintenance details
		4.2	Report information on unsafe or faulty equipment

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL933004 Perform calibration checks on equipment and assist with its maintenance. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- accurately performed set-up, pre-use and calibration checks for at least 2 different items of laboratory equipment using standard procedures
- performed appropriate cleaning and maintenance tasks for at least 2 different items of laboratory equipment.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- role and importance of regular calibration checks and maintenance of laboratory equipment
- function of key components of the laboratory equipment and details of the pre-use, calibration and safety checks and operating procedures for items of equipment used
- sources of uncertainty in laboratory equipment operation and their control
- basic equipment used for cleaning and maintaining laboratory equipment
- common sources of faults in the instruments or equipment used and details of their repair
- basic cleaning, maintenance and storage procedures for items of equipment used
- workplace procedures for recording calibration data and reporting results, communicating with service agents and suppliers and ordering stocks
- relevant hazards, work health and safety (WHS) and environmental management, and control measures
- good laboratory practice (GLP)
- legal and ethical requirements specific to the work task.

MSL934004 Maintain and calibrate instruments and equipment

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to *MSL935004 Maintain instruments and equipment.* Change to elements and performance criteria. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to check the serviceability and calibration of laboratory/field instruments and equipment and perform routine maintenance, such as cleaning and replacement of consumables and minor components. Personnel are also required to perform basic troubleshooting and repairs consistent with warranty and service agreements.

This unit of competency applies to technical assistants, instrument operators and technical officers working in all industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Perform serviceability checks**	1.1	Perform pre-use and after-use checks in accordance with appropriate workplace and manufacturer procedures
		1.2	Identify faulty or unsafe components and equipment
		1.3	Identify and analyse service faults and report for appropriate for maintenance and/or repair
		1.4	Complete instrument/equipment logbooks to workplace requirements
2	**Conduct routine maintenance safely**	2.1	Identify maintenance procedures, records and safety requirements
		2.2	Plan and adjust maintenance schedules in accordance with operational requirements
		2.3	Identify and replace or repair damaged, worn and/or spent components or items
		2.4	Clean instruments and equipment using recommended cleaning agents and techniques
		2.5	Store instruments and equipment in accordance with workplace and/or manufacturer requirements
		2.6	Update maintenance records in accordance with workplace procedures
		2.7	Arrange for reordering of consumable stocks and equipment components as necessary
3	**Perform calibration/qualification checks**	3.1	Operate instruments and equipment in accordance with workplace and/or manufacturer procedures
		3.2	Check calibration/qualification using specified standards and/or procedures
		3.3	Record all calibration/qualification data accurately and legibly

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	3.4 Document calibration status and report out-of-calibration equipment/instruments
	3.5 Quarantine out-of-calibration items

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Reading skills to effectively interpret standard procedures and manufacturer requirements
- Writing skills to accurately record data and complete maintenance records
- Oral communication skills to interact effectively with suppliers and service agents.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Assessment Requirements for MSL934004 Maintain and calibrate instruments and equipment

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to *MSL935004 Maintain instruments and equipment.* Change to elements and performance criteria. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- checked the serviceability of at least 3 laboratory/field instruments or items of equipment and performing routine maintenance on each
- accurately conducted calibration status/qualification checks for at least 2 instruments or items of equipment.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- role and importance of regular calibration checks and maintenance of instruments and equipment, and maintenance schedules and procedures
- function of key components of the instrument or equipment operating principles, details of the pre-use, calibration and safety checks, and operating procedures for the items used
- sources of uncertainty in instrument or equipment operation and their control
- common laboratory instruments and equipment
- equipment manuals and warranties
- common sources of faults in the instruments or equipment used and details of their repair
- typical basic repairs carried out on equipment
- typical calibration status/qualification checks
- basic equipment cleaning, maintenance and storage procedures for items of equipment used
- service agents or other personnel accredited to calibrate, service and repair equipment used in job role

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- process involved in arranging calibration, repair and/or maintenance of equipment including assessment of instrument repair status and determining if local repair or maintenance is possible and economical
- workplace procedures for recording data and reporting results, communicating with service agents and suppliers and ordering stocks
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - standard laboratory equipped with appropriate instruments and equipment, reference materials, consumables; cleaning, decontamination and/or disinfection agents and equipment; and personal protective equipment (PPE)
  - workplace procedures, calibration and maintenance schedules, equipment manuals, supplier catalogues and information/records management system.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL943004 Participate in laboratory or field workplace safety

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL943002 Participate in laboratory or field workplace safety. Foundation skills information added. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to follow work health and safety (WHS) policies and procedures, deal with the identification and control of hazards, work safely at all times, follow emergency response procedures and contribute to the maintenance of workplace safety.

This unit of competency applies to laboratory assistants and instrument operators working in all industry sectors. WHS responses are restricted to a 'first response' approach, including the notification of appropriate workplace personnel. Workers will be provided with clear directions, information, training and appropriate supervision.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify, control and report WHS and environmental hazards**	1.1	Routinely check immediate work area for hazards prior to commencing and during work
		1.2	Address hazards within area of responsibility
		1.3	Report hazards and incidents to designated personnel according to workplace policies and procedures
2	**Conduct work safely**	2.1	Select, fit and use appropriate personal protective equipment (PPE)
		2.2	Follow workplace procedures when carrying out work tasks
		2.3	Keep all work areas clean and free from obstacles
		2.4	Maintain workplace standards of personal hygiene
		2.5	Safely store, transport and dispose of hazardous materials and dangerous goods
3	**Follow incident and emergency response procedures**	3.1	Identify incident and emergency situations
		3.2	Report and record incident and emergency situations according to workplace procedures
		3.3	Follow incident and emergency procedures as appropriate to the nature of emergency using emergency equipment according to workplace procedures
4	**Contribute to health and safety in the workplace**	4.1	Raise WHS and environmental issues with designated personnel in accordance with workplace procedures and legislated rights and obligations of employees
		4.2	Participate in WHS activities within scope of responsibilities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Oral communication skills to clarify obligations, procedures and work instructions that impact on safety and legal liability.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Equivalent to MSL943002 Participate in laboratory/field workplace safety, Release 1.

Assessment Requirements for MSL943004 Participate in laboratory or field workplace safety

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL943002 Participate in laboratory or field workplace safety. Foundation skills information added. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- completed 2 different routine work tasks working safely at all times by following work health and safety (WHS) policies and procedures.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- personal roles, rights and responsibilities and those of the employer
- signage, symbols and signals relating to WHS
- examples of hazards relevant to the work area, likely impacts and ways of addressing these using the hierarchy of control
- site layout, including emergency exits, location and use of safety alarms, emergency response system and procedures, and designated WHS personnel
- location, use, care and storage requirements for personal protective equipment (PPE) and emergency/hazard control equipment in the work area
- sources of advice and information on WHS issues, including safety data sheets (SDS) and key personnel
- relevant industry codes
- standard operating procedures (SOPs), workplace procedures and safe work practices relevant to job role, including:
  - handling, storage and disposal of hazardous substances and requirements for labelling of hazardous substances
  - handling equipment and any task-specific manual handling techniques as required by work role
  - controlling known hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - minimising environmental threats
  - minimising and disposing of waste
  - responding to safety, emergency, fire and incidents
  - selecting/using PPE
  - instructions that govern personal work, equipment use, and response to incidents and emergencies
- requirements and procedures for reporting (potential) WHS hazards and incidents, injuries, illness and near misses, and safety and environmental issues or concerns
- incidents that may occur in a laboratory or field workplace
- WHS and environmental issues that may occur
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - typical laboratory/field work equipment and materials
  - PPE
  - emergency equipment including first aid equipment, eye wash kit or shower and fire extinguisher
  - workplace procedures.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL952001 Collect routine site samples

Modification History

Release 1. Supersedes and is equivalent to MSL952001A Collect routine site samples

Application

This unit of competency covers the ability to collect samples at field or production sites using specified equipment and standard or routine procedures.

This unit of competency is applicable to production operators, field assistants and laboratory assistants in all industry sectors.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

Pre-requisite Unit

Nil

Competency Field

Sampling

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for sampling**	1.1	Confirm the purpose, priority and scope of the sampling request
		1.2	Liaise with relevant personnel to arrange site access and all necessary clearances/permits
		1.3	Identify site hazards and review workplace safety procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.4	Confirm what samples are to be collected, from where, how and when
		1.5	Assemble all specified sampling equipment, safety equipment, materials and containers
		1.6	Conduct pre-use and cleanliness checks of all items to ensure they are fit for purpose
		1.7	Check all items against given inventory and stow them to ensure safe transport
2	**Conduct sampling**	2.1	Locate sampling points and services at the site
		2.2	Remove security devices, such as locks and covers as required
		2.3	Seek advice if the required samples cannot be collected or if procedures require modification
		2.4	Select and use required sampling equipment in accordance with given procedures
		2.5	Closely follow sampling procedures to obtain required samples and maintain their integrity
		2.6	Record all labelling information in accordance with workplace/legal traceability requirements
		2.7	Record sample appearance, environmental conditions and any other factors that may impact on sample integrity
		2.8	Replace security devices, such as locks and covers as required
3	**Finalise sampling**	3.1	Follow workplace procedures for the cleaning/decontamination of equipment and vehicle as necessary
		3.2	Check all equipment, materials and samples against inventory and stow for safe transport
		3.3	Liaise with relevant personnel to restore normal production and/or services as necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.4	Maintain integrity of samples during transportation
		3.5	Deliver samples to the required collection point and complete all documentation to ensure traceability
		3.6	On return, check and document serviceability of equipment before storage
4	**Maintain a safe work environment**	4.1	Use established work practices and personal protective equipment (PPE) to ensure personal safety and that of others
		4.2	Minimise environmental impacts of sampling and generation of waste
		4.3	Dispose of all waste in accordance with workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or workplace requirements include the latest version of one or more of:

- Australian and international standards covering the requirements for the competence of testing and calibration laboratories, laboratory safety, quality and environmental management, and sampling of materials
- national work health and safety (WHS) standards and codes of practice, national environmental protection measures, and national measurement regulations and guidelines
- specific codes, guidelines and procedures, such as National

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Association of Testing Authorities (NATA) accreditation requirements, and principles of good laboratory practice (GLP)
- workplace documents, such as standard operating procedures (SOPs); quality and equipment manuals; calibration and maintenance schedules; material safety data sheets (MSDS); safety procedures; material, production and product specifications; production and laboratory schedules; workplace recording and reporting procedures; waste minimisation and safe disposal procedures; and maps and site plans
- sampling procedures for specific samples, sites and clients (labelling, preparation, storage, transport and disposal)

Materials sampled

Materials sampled as part of job role include one or more of:

- gas or air samples
- water, wastewater, stormwater, sewage and sludge
- solid samples, such as soil, sediments, rocks, concrete, quarry and mining material, and solid wastes
- raw materials, start, middle, end of production run samples, and final products and materials used in production processes, including food and beverages
- hazardous materials and/or dangerous goods

Maintenance of integrity of samples

Maintenance of integrity of samples includes one or more of:

- use of appropriate containers and lids, sealing of sample containers
- purging of sample lines and bores
- decontamination of sampling tools between collection of consecutive samples
- use of appropriate preservatives
- temperature control, which may involve prevention of direct contact between the sample and coolant, and wrapping container in foil or wet newspaper
- transfer of sterile sample into sterile container
- monitoring of storage conditions
- workplace/legal traceability through appropriate sample labelling and records

Services

Services include one or more of:

- water supply, gas and electricity
- telecommunications
- irrigation, stormwater and drainage systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- production plant

Safety procedures

Safety procedures include, but are not limited to, one or more of:

- use of PPE
- handling, labelling and storing hazardous material and equipment in accordance with labels, MSDS, manufacturer instructions and workplace procedures and regulations
- regular cleaning and/or decontamination of equipment
- use of machinery guards
- signage, barriers, service isolation tags, traffic control and flashing lights, lock out and tag-out procedures

Minimising environmental impacts

Minimising environmental impacts includes, but is not limited to, one or more of:

- replacement of soils and vegetation
- driving vehicles to minimise soil erosion and damage to fauna and vegetation
- appropriate disposal of surplus, spent or purged materials and hazardous waste
- recycling of non-hazardous wastes
- cleaning of vehicles and equipment to prevent transfer of pests and contaminants

WHS and environmental management requirements

WHS and environmental management requirements include:

- complying with WHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time
- applying standard precautions relating to the potentially hazardous nature of samples
- accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Unit Mapping Information

Assessment Requirements for MSL952001 Collect routine site samples

Modification History

Release 1. Supersedes and is equivalent to MSL952001A Collect routine site samples

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- locating services at sites
- collecting samples at field or production sites on at least three (3) occasions using specified equipment and standard/routine procedures
- collecting at least three (3) different types of samples
- collecting samples efficiently, safely and with minimal environmental impact in accordance with sampling procedures and plans
- maintaining the integrity and security of samples following safety procedures, workplace and/or legal traceability requirements
- completing sampling records using workplace procedures
- recognising own limitations and seeking timely advice
- liaising with others to access sites and conduct sampling efficiently.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- terminology and concepts, including sample, contamination, traceability, integrity and chain of custody, metrology and the international system of units (SI)
- types of samples, including grab samples (disturbed or undisturbed materials), composite samples (such as time, flow proportioned and horizontal/vertical cross section), and quality control samples (such as controls, background, duplicate and blanks)
- characteristics of product/materials sampled as part of job role
- purpose for which the samples have been collected
- function of key sampling equipment/materials and principles of operation
- sampling procedures covering labelling, preparation, storage, transport and disposal
- hazards, risks, environmental protection measures and work health and safety (WHS) procedures associated with routine sampling undertaken
- workplace procedures dealing with waste management, clean-up and spillage, handling, transport and storage of dangerous goods.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency is to be assessed in the workplace or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - MSL972001 Conduct routine site measurements
- Holistic assessment methods include:
  - review of sampling documentation completed by the candidate
  - review of the quality of samples collected by the candidate
  - observation of the candidate collecting a variety of samples at a range of sites
  - feedback from supervisors and clients that sampling plans were followed
  - oral/written questioning about sampling and safety procedures.
- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - field or production sites to sample and a variety of sample types
  - sampling tools, containers, equipment and procedures.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competence and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSL952002 Handle and transport samples or equipment

Modification History

Release	Comments
Release 2	Unit codes in Assessment Conditions updated. Equivalent outcome.
Release 1	Supersedes and is equivalent to MSL952002A Handle and transport samples or equipment.

Application

This unit of competency covers the ability to pick up and transport samples or test/calibration equipment in a way that ensures the integrity of subsequent test results.

This unit of competency is applicable to couriers and laboratory and field assistants in all industry sectors. The person transporting the items is not necessarily responsible for sampling or testing. This unit does not cover sample collection or the ability to handle and transport animals as might be defined under prevailing animal care and ethics legislation and practices.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

Pre-requisite Unit

Nil

Competency Field

Sampling

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Prepare for pickup**	1.1	Confirm pickup sequence and any licence or permit requirements with supervisor
		1.2	Check that vehicle and communication devices are in working order
		1.3	Check that required transport containers and materials are in the vehicle
2	**Pick up and transport items**	2.1	Confirm the number and nature of items to be picked up on arrival
		2.2	Ensure items match documentation
		2.3	Apply workplace requirements to the transport of samples and/or equipment
		2.4	Alert laboratory personnel to any special needs that are identified on documents accompanying the items
		2.5	Complete required documentation at pickup point
		2.6	Stow items in the specified transport containers and under the required conditions
		2.7	Maintain sample integrity at all times
		2.8	Deliver items to reception point in accordance with workplace procedures
		2.9	Maintain confidentiality of information
3	**Maintain transport equipment**	3.1	Maintain vehicle according to workplace requirements
		3.2	Maintain state of transport containers to ensure they are fit for purpose
		3.3	Requisition stocks of consumable materials as required
		3.4	Replenish stocks of collecting equipment at collection centres as required
4	**Maintain a safe work**	4.1	Use established work safety practices and personal protective equipment (PPE) to ensure personal safety

environment		and that of others
	4.2	Clean up spills, if they occur, using workplace procedures
	4.3	Minimise the generation of waste
	4.4	Dispose of all waste in accordance with workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or workplace requirements include the latest version of one or more of:

- Australian and international standards covering the requirements for the competence of testing and calibration laboratories; laboratory safety; quality management and environmental management; and labelling, storage, transport and disposal of hazardous materials
- national work health and safety (WHS) standards and codes of practice, and national environmental protection measures
- specific codes, guidelines and procedures, such as Australian Dangerous Goods Code, Australia Post Guides and International Air Transport Association (IATA) Regulations
- workplace documents, such as standard operating procedures (SOPs); material safety data sheets (MSDS); safety procedures for specific materials and equipment; material, production and product specifications; production and laboratory schedules; workplace recording and reporting procedures; spillage and waste containment and disposal protocols; maps and site plans; protocols regarding customer liaison and use of communication devices; vehicle log books and incident/accident report forms

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Workplace requirements for the transport of samples and/or equipment

Workplace requirements for the transport of samples and/or equipment include, but are not limited to, one or more of:

- using appropriate sample containers (glass, plastic and opaque) and preservatives
- using appropriate sample and equipment boxes (insulated, shockproof and waterproof)
- wrapping containers in foil to exclude light
- using temperature control, which may involve prevention of direct contact between the sample and coolant
- restraining containers to prevent movement
- checking sample viability during transport while avoiding unnecessary handling

Work safety procedures

Work safety procedures include, but are not limited to, one or more of:

- using safe vehicle driving practices
- handling, labelling and storing hazardous material and equipment in accordance with labels, MSDS, manufacturer instructions and workplace procedures and regulations, and signage
- using PPE
- regular cleaning and/or decontamination of equipment and vehicle
- containing and cleaning up spillage or breakages
- using appropriate techniques and equipment to safely dispose of waste materials

WHS and environmental management requirements

WHS and environmental management requirements include:

- complying with WHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time
- applying standard precautions relating to the potentially hazardous nature of samples
- accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Assessment Requirements for MSL952002 Handle and transport samples or equipment

Modification History

Release	Comments
Release 2	Unit codes in Assessment Conditions updated. Equivalent outcome.
Release 1	Supersedes and is equivalent to MSL952002A Handle and transport samples or equipment.

Performance Evidence

- Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:
- planning the pickup of items in conjunction with a supervisor on at least one (1) occasion
- safely picking up and transporting samples or test/calibration equipment on at least two (2) occasions in a way that ensures the integrity of subsequent test results
- checking that the vehicle, transport containers and materials, and communication devices are present and fit for purpose prior to departure
- using communication devices to maintain contact between the courier, reception centre and routine pickup locations
- communicating effectively and courteously with individuals, customers, clients and reception staff
- maintaining confidentiality and reporting problems, accidents and incidents in accordance with procedures
- recording details of item exchange in relevant sections of chain of custody forms, as required
- maintaining stocks of consumables and collecting equipment at collection centres, as required
- cleaning up spills, if they occur, and minimising and disposing of waste in accordance with workplace procedures.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- need for appropriate and timely transport and the importance of effective communication with clients and customers to workplace business
- nature of samples and/or equipment transported and the effects of changes in environmental conditions, vibration and shock on them
- control measures for minimising exposure to hazardous materials and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- procedures for safe, efficient containment and clean up of spillages and breakages and their disposal
- maintenance requirements of vehicle and equipment used in the handling and transporting samples and equipment
- workplace procedures for responding to emergencies
- relevant hazards, work health safety (WHS) and environment requirements

Additional knowledge requirements will apply for different industry sectors. For example for biomedical samples:

- labile nature of biological and environmental samples
- possible infectivity of biological materials
- effects of exposure to radioactive materials.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency is to be assessed in the workplace or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - MSL943004 Participate in laboratory or field workplace safety
- Holistic assessment methods include:
  - review of the candidate's job sheets or logs of completed activities
  - review of the quality of results traceable to the transport of samples or equipment by candidate
  - feedback from supervisors, other laboratory personnel and customers about the candidate's ability to communicate effectively and safely handle and transport samples and equipment in accordance with workplace procedures and schedules
  - direct observation of the candidate's work as a courier
  - oral or written questions to assess knowledge of workplace requirements for the handling and transport of samples and equipment
  - simulated role plays covering interactions between a courier and personnel at a reception desk or customer pickup centre.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:
  - transport vehicle, containers for transporting samples and test/calibration equipment, and communication devices
  - workplace protocols and procedures covering the handling and transport of samples or equipment.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competence and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSL972001 Conduct routine site measurements

Modification History

Release 1. Supersedes and is equivalent to MSL972001A Conduct routine site measurements

Application

This unit of competency covers the ability to make direct measurements using workplace procedures. Measurements will be straightforward and involve a minimal number of steps, take a short time, have easily recognised control limits and use equipment calibrated by others. Measurements include the use of instruments and/or kits.

This unit of competency is applicable to production operators, field assistants and laboratory assistants in manufacturing, construction materials and environmental services industry sectors.

While no specific licensing or certification requirements apply to this unit at the time of publication, laboratory operations are governed by relevant legislation, regulations and/or external accreditation requirements. Local requirements should be checked.

Pre-requisite Unit

Nil

Competency Field

Testing

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for measurements**	1.1	Confirm the purpose, priority and nature of measurements required
		1.2	Liaise with relevant personnel to arrange site access and all necessary clearances/permits

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Identify site hazards and review workplace safety procedures
		1.4	Assemble all measuring and safety equipment and check they are fit for purpose
		1.5	Check all equipment/materials against a given inventory and stow them to ensure safe transport
		1.6	Arrange appropriate transport for site access as required
2	**Perform measurements**	2.1	Locate measurement points and services at the site
		2.2	Gain access to measurement points by removing covers and locks as appropriate
		2.3	Seek advice if the required measurements cannot be made or if procedures require modification
		2.4	Operate measuring equipment in accordance with workplace procedures and manufacturer instructions
		2.5	Take sufficient readings to ensure reliable data
		2.6	Record data with appropriate accuracy, precision and units
		2.7	Record environmental/site conditions and any other observations that may impact on data quality
		2.8	Recognise obvious errors/atypical data and take appropriate corrective action
		2.9	Secure measuring points by replacing covers and locking as appropriate
3	**Finalise measurements**	3.1	Follow workplace procedures for the cleaning/decontamination of equipment and vehicle as necessary
		3.2	Check all equipment and materials against inventory and stow for safe transport
		3.3	Liaise with relevant personnel to restore normal production and/or services as necessary

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.4	Report all measurements in accordance with workplace procedures
		3.5	On return, check and document serviceability of equipment before storage
4	**Maintain a safe work environment**	4.1	Use established work practices and personal protective equipment (PPE) to ensure personal safety and that of others
		4.2	Minimise environmental impacts of measurements and generation of waste
		4.3	Dispose of all waste in accordance with workplace procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Standards, codes, procedures and/or workplace requirements

Standards, codes, procedures and/or workplace requirements include the latest version of one or more of:

- Australian and international standards covering the requirements for the competence of testing and calibration laboratories, laboratory safety, quality management and environmental management
- national work health and safety (WHS) standards and codes of practice, national environmental protection measures, and national measurement regulations and guidelines
- specific codes, guidelines and procedures, such as National Association of Testing Authorities (NATA) accreditation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

requirements and principles of good laboratory practice (GLP)
- workplace documents, such as standard operating procedures (SOPs); quality and equipment manuals; calibration and maintenance schedules; material safety data sheets (MSDS); safety procedures; material, production and product specifications; production and laboratory schedules; workplace recording and reporting procedures; waste minimisation and safe disposal procedures; and maps and site plans
- measurement procedures for specific sites and clients

Direct measurements

Direct measurements role include, but are not limited to, one or more of:

- basic production/process parameters (e.g. flow, temperature, pressure, mass and depth, and dimensions)
- simple surveys (e.g. number of trees in quadrant)
- meteorological measurements (e.g. temperature, rainfall and wind)
- sound (e.g. dB level and dBA)
- light levels and illumination
- background radiation (e.g. Geiger counter)
- chemical tests using simple instruments and/or kits to test pH, specific ions, such as iron in water using dipsticks, dissolved oxygen (DO) and electrical conductivity (EC)

Measuring equipment

Measuring equipment includes, but is not limited to, one or more of:

- tape measures, rulers, micrometers, Vernier callipers and water level indicators
- balances
- meter/probe systems, such as DO and EC
- analogue and digital meters, such as voltage, current, resistance, pressure, temperature, barometers, anemometers and hygrometers
- dipsticks and spot test kits
- clocks and timing devices

Services

Services include one or more of:

- water supply, gas and electricity
- telecommunications
- irrigation, stormwater and drainage systems
- production plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Safety procedures

Safety procedures include, but are not limited to, one or more of:

- use of PPE
- handling, labelling and storing hazardous material and equipment in accordance with labels, MSDS, manufacturer instructions, and workplace procedures and regulations
- regular cleaning and/or decontamination of equipment
- use of machinery guards
- signage, barriers, service isolation tags, traffic control and flashing lights, and lockout and tag out procedures

Minimising environmental impacts

Minimising environmental impacts includes, but is not limited to, one or more of:

- appropriate disposal of surplus, spent or purged materials and hazardous waste
- recycling of non-hazardous wastes
- driving vehicles to minimise soil erosion and damage to fauna and vegetation
- cleaning of vehicles and equipment to prevent transfer of pests and contaminants

WHS and environmental management requirements

WHS and environmental management requirements include:

- complying with WHS and environmental management requirements at all times, which may be imposed through state/territory or federal legislation. These requirements must not be compromised at any time
- applying standard precautions relating to the potentially hazardous nature of samples
- accessing and applying current industry understanding of infection control issued by the National Health and Medical Research Council (NHMRC) and State and Territory Departments of Health, where relevant

Assessment Requirements for MSL972001 Conduct routine site measurements

Modification History

Release 1. Supersedes and is equivalent to MSL972001A Conduct routine site measurements

Performance Evidence

Evidence of competence in this unit must satisfy all of the requirements of the elements and performance criteria, and include demonstration of:

- safely making a variety of direct measurements at different sites on at least three (3) occasions
- liaising with others to access sites and perform measurements efficiently
- correctly locating measurement points and services at sites
- making measurements to minimise environmental impact and/or disruption to normal site operations
- safely operating instruments and test kits in accordance with workplace procedures and manufacturer instructions
- reading scales/displays accurately and taking sufficient measurements to ensure reliable data
- recording data that is legible, free of errors and has appropriate accuracy, precision and units
- recognising obvious errors/atypical data and using corrective actions, including:
  - logical check of equipment set-up
  - check of calibration, zero error and drift for basic instruments
  - careful re-reading of procedures
  - repeating measurements
  - seeking advice
- maintaining confidentiality and reporting problems and incidents in accordance with procedures
- following workplace procedures for safely conducting site measurements; recording and reporting data and any relevant legal traceability requirements; and maintenance, storage and transport of measurement equipment
- recognising own limitations and seeking timely advice.

Knowledge Evidence

Must provide evidence that demonstrates knowledge of:

- concepts of metrology, including:
  - all measurements are estimates
  - measurements belong to a population of measurements of the measured parameters

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - precision, accuracy and significant figures
  - sources of error, uncertainty and repeatability
  - traceability
- international system of units (SI)
- purpose of measurements performed as part of job role and the principles of operation for the equipment/instruments used
- sources of uncertainty in measurement and methods for control
- workplace safety procedures associated with measurements undertaken as part of job role; the maintenance, storage and transport of measurement equipment; waste management and handling of dangerous goods
- workplace and/or legal traceability requirements
- procedures for recognising and reporting of unexpected or unusual results
- relevant hazards, work health safety (WHS) and environment requirements.

Assessment Conditions

- Judgement of competence must be based on holistic assessment of the evidence. Assessment methods must confirm consistency of performance over time, rather than a single assessment event.
- This unit of competency is to be assessed in the workplace or a simulated workplace environment. A simulated workplace environment must reflect realistic operational workplace conditions that cover all aspects of workplace performance, including the environment, task skills, task management skills, contingency management skills and job role environment skills.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept in each case).
- This unit of competency may be assessed with:
  - MSL952001 Collect routine site samples
- Holistic assessment methods include:
  - review of the quality of site measurement data and documentation provided by the candidate
  - observation of the candidate performing a range of site measurements
  - feedback from supervisors and clients that relevant procedures were followed and that measurements were conducted in an efficient manner
  - oral/written questioning about workplace procedures for conducting site measurements; maintenance, storage and transport of measurement equipment; waste management and handling of dangerous goods.
- Access is required to instruments, equipment, materials, workplace documentation, procedures and specifications associated with this unit, including, but not limited to:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - a variety of sites and relevant measuring equipment
  - safe operating procedures for equipment, site measurement procedures and documented safe work practices.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competence and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience.
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with a laboratory about performing the competency being assessed within the last twelve months.

MSL973013 Perform basic tests

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973001 Perform basic tests. Foundation skills information added. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to prepare samples and perform tests and measurements using standard methods with access to readily available advice from supervisors.

This unit of competency applies to laboratory/field assistants working in all industry sectors. In general, they do not calibrate equipment and make only limited adjustments to the controls. They do not interpret or analyse results or troubleshoot equipment problems.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Nil

Competency Field

Testing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Interpret test requirements**	1.1	Review test request to identify samples to be tested, test method and equipment involved
		1.2	Identify hazards and workplace controls associated with the sample, preparation methods, reagents and/or equipment
2	**Prepare sample**	2.1	Record sample description, compare with specification, record and report discrepancies
		2.2	Prepare sample in accordance with appropriate standard methods
3	**Check equipment before use**	3.1	Set up test equipment in accordance with test method
		3.2	Perform pre-use and safety checks in accordance with workplace procedures and manufacturer instructions
		3.3	Identify faulty or unsafe equipment and report to appropriate personnel
		3.4	Check calibration status of equipment and report any out-of-calibration items to appropriate personnel
4	**Perform tests on samples**	4.1	Identify, prepare and weigh or measure sample and standards to be tested
		4.2	Conduct tests in accordance with workplace procedures
		4.3	Record data in accordance with workplace procedures
		4.4	Perform calculations on data as required
		4.5	Identify and report out of specification or atypical results promptly to appropriate personnel
		4.6	Shut down equipment in accordance with operating procedures
5	**Maintain a safe work environment**	5.1	Use established safe work practices and personal protective equipment (PPE) to ensure personal safety and that of other laboratory personnel
		5.2	Minimise the generation of wastes and environmental impacts
		5.3	Ensure safe disposal of laboratory and hazardous wastes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	5.4 Clean, care for and store equipment and reagents as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Numeracy skills to calculate simple quantities using appropriate equations, units, uncertainties and precision

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Assessment Requirements for MSL973013 Perform basic tests

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973001 Perform basic tests. Foundation skills information added. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- prepared samples using different processes
- performed at least 3 basic tests or measurements using standard methods and procedures.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- concepts of metrology, including:
  - all measurements are estimates
  - measurements belong to a population of measurements of the measured parameters
  - precision, accuracy and significant figures
  - sources of error, uncertainty and repeatability
  - traceability
- international system of units (SI)
- purpose of tests performed as part of job role and principles of the standard methods/specifications used
- sample preparation processes relevant to job role
- typical basic tests and methods relevant to job role
- measurements used for typical tests
- function of key components of the test equipment, pre-use equipment and safety checks
- sources of uncertainty in measurement and methods for control
- workplace and/or legal traceability requirements
- interpretation and recording of test result, including simple calculations
- procedures for recognising and reporting of unexpected or unusual results
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a standard laboratory equipped with basic test equipment, common measuring instruments, materials, standard methods, workplace procedures, SDS and equipment manuals.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL973014 Prepare working solutions

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973002 Prepare working solutions. Changes to elements and performance criteria. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to prepare working solutions and to check that existing stocks of solutions are suitable for use. Working solutions include those required to perform laboratory tests. Personnel are required to calculate quantities and make dilutions.

This unit of competency applies to laboratory assistants working in all industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Assessment Requirements for MSL973014 Prepare working solutions

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973002 Prepare working solutions. Changes to elements and performance criteria. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- safely prepared at least 5 examples of correctly labelled working solutions, including calculation of the quantities involved and any dilutions required
- checked existing stocks of working solutions and identified those unfit for use.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- concepts of metrology, including:
  - all measurements are estimates
  - precision, accuracy and significant figures
  - sources of error, uncertainty and repeatability
  - traceability
- working solutions
- international system of units (SI)
- concentration terms, such as % w/w, % w/v, % v/v, ppm (mg/L) and molarity
- basic theory of acids, bases, salts, buffers and neutralisation
- what affects solubility
- difference between aqueous and organic solutions
- periodic table, symbols of the elements, atomic weights, and difference between elements and compounds
- chemical formulae
- workplace procedures for preparing solutions
- calculations required to prepare specified amounts of solutions of specified concentration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- use of safety data sheets (SDS) and workplace procedures for preparing, handling and disposing of solutions and cleaning up spillages
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a standard laboratory equipped with appropriate reagents and equipment
  - standard methods and workplace procedures
  - containers and storage facilities.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL973015 Prepare culture media

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973003 Prepare culture media. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to prepare culture media which is free of contamination to facilitate optimal growth of organisms and cells. It includes the ability to organise the materials, equipment and work environment and follow standard methods. Media may be prepared from formulated powders obtained from microbiological companies or by first principles under supervision of a technical officer or scientist.

This unit of competency applies to laboratory assistants in the biomedical, biological, environmental, food processing and pharmaceutical industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare culture media**	1.1	Prepare mixture of media and solvent to ensure solution and even settling of heat soluble materials
		1.2	Label media to allow tracking in subsequent processes
		1.3	Use a vessel large enough to endure adequate mixing and heating of the media
		1.4	Check pH of media where pH is critical
		1.5	Dispense media into vessels for sterilisation, leaving room for expansion during heating and cooling
2	**Sterilise media**	2.1	Load the steriliser in keeping with maximum permitted loads and appropriate positioning of materials
		2.2	Ensure a sterilisation indicator is correctly placed with the load to monitor sterilisation process
		2.3	Operate sterilisation cycle in accordance with manufacturer requirements to achieve sterilisation at the required settings
		2.4	Cool media to the temperature specified in the media formulation procedures
		2.5	Sterilise media and/or media additives using membrane filtration techniques
3	**Dispense or aliquote media**	3.1	Add labile constituents where necessary, under conditions that will not lead to their denaturation or contamination of media
		3.2	Ensure even mixing of additives and media before dispensing
		3.3	Aseptically dispense media to minimise occurrence of procedural contamination
		3.4	Label media to allow for selection, avoiding areas of the culture vessel required for examination of colony growth
4	**Label media**	4.1	Date batch media to ensure correct batch rotation
		4.2	Label media to allow for selection, avoiding areas of the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			culture vessel required for examination of colony growth
		4.3	Maintain records of batches of media
5	**Store and incubate media**	5.1	Incubate control plates as a sterility check
		5.2	Store media to maximise shelf life and minimise contamination
6	**Perform quality control checks**	6.1	Inspect media for any evidence of possible contamination or problems with structure or sterilisation
		6.2	Check useability of selective media by growth of expected organism
		6.3	Check stored stocks at regular intervals for conformance to required standards
7	**Maintain work area and equipment to prevent cross-infection and contamination**	7.1	Use personal protective equipment (PPE) and safe work practices to ensure personal safety and that of other laboratory personnel
		7.2	Place disposable and reusable items into relevant receptacles
		7.3	Clean and disinfect work area and equipment after use
		7.4	Transport disposable and reusable contaminated materials to relevant areas for disinfection, sterilisation and cleaning or disposal

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MSL973015 Prepare culture media

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973003 Prepare culture media. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- effectively used standard methods to safely prepare at least 3 different batches of culture media that meet specifications and are free of contamination, including:
  - using appropriate sterilisation techniques, including maintaining adequate space between containers to prevent cross-contamination
  - performing quality assurance checks on media, including streaking out of cultures to a single colony
- effectively operated a pH meter.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- basic microbiological concepts and terminology, including growth rates in culture, and production of gas and haemolysis of red cells in media
- growth requirements of cells including microorganisms and tissue cells in terms of their laboratory culture
- purpose, content and features of culture media prepared in job role, and the relationship between the correct preparation of culture media and the optimal growth of organisms or cells
- nature, properties and use of a range of biological media
- cell culture:
  - agars, broths and solutions
  - slopes and deeps
  - common enriched media, differential media and selective media
  - common tissue culture media and transport media

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - labile constituents including blood, hormones or antibiotics
- sterilisation techniques:
    - boiling, high temperature, high pressure steam and autoclaving
    - membrane filtration
    - radiation, gas and/or chemical treatments
- relationship between sterile practices, hygiene procedures and the ability to obtain growth free of contamination
- the effect of physical requirements including pH and temperature on optimal growth of organisms and cells
- the effect of inappropriate storage on culture media quality and performance
- relevant hazards and how to deal with the risks presented:
    - microorganisms and reagents
    - sharps and broken glassware
    - sources of heat including ovens and burners
    - fluids under pressure including steam from autoclaves
    - UV radiation
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - a standard laboratory equipped with appropriate reagents and equipment, including pH meters; balances; stirrers, water baths and hot plates; burners, autoclave; measuring cylinders, flasks and glassware; Petri dishes; media storage bottles; self-refilling syringes; membrane filtration equipment; labelling equipment; distilled water apparatus; refrigerators; sterilisation equipment and indicators
    - workplace schedules and procedures, SDS and documented safe work practices.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL973016 Perform aseptic techniques

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973004 Perform aseptic techniques. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to perform aseptic techniques to maintain the integrity of both the sample source and the sample. It applies to sampling techniques in tissue culture and to generic microbiological procedures.

This unit of competency applies to laboratory assistants and technicians working in the field or laboratory in the biomedical, biological, food processing and environmental industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for aseptic sampling or transfer**	1.1	Check the sampling procedure conforms with the required sampling plan
		1.2	Use specified personal protective equipment (PPE)
		1.3	Prepare the work area for safe and effective sample transfer
		1.4	Select equipment and materials specified by the procedure
		1.5	Organise equipment to minimise contamination during manipulations
		1.6	Label containers for clear identification
		1.7	Record details in relevant log or database
		1.8	Macroscopically assess media and/or reagents to confirm sterility before use
2	**Transfer materials aseptically**	2.1	Protect the integrity of the sample source
		2.2	Sterilise inoculating loops and/or pipette where used to prevent contamination
		2.3	Perform transfer while minimising opportunities for contamination and cross-infection
		2.4	Protect the integrity of the sample source and destination after transfer, and before sealing the transport or culture vessel
		2.5	Re-sterilise inoculating loops, minimising the generation of aerosols as required
		2.6	Perform quality control checks to confirm aseptic transfer was successful
		2.7	Label transport or culture vessels for clear identification
3	**Maintain work area and equipment to prevent cross-infection and**	3.1	Place disposable and reusable items into relevant receptacles
		3.2	Clean and disinfect work area and equipment after use
		3.3	Transport disposable and reusable contaminated

Assessment Requirements for MSL973016 Perform aseptic techniques

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973004 Perform aseptic techniques. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- safely and effectively performed aseptic techniques when performing at least 3 different types of sample transfers from the following list:
  - body fluids (or simulated body fluids)
  - sterile liquid culture media
  - water
  - soil
  - sterile pharmaceuticals
  - yeasts and moulds
  - milk and yoghurt
  - swabs and smears
  - propagation tissue
  - plant material
  - fermented foods
  - fermented beverages
  - bacterial cultures.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- growth requirements of microorganisms including bacteria and fungi in terms of their laboratory culture

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relationship between sterile practices, hygiene procedures and the ability to obtain growth free of contamination
- relationship between sterile practices and accurate test results
- importance of pure culture techniques and aseptic transfer to the successful microbiological investigation and correct interpretation of laboratory results
- cleaning and sanitising requirements of equipment and work area, and effects of physical and chemical agents on microbial growth and death
- sterilisation techniques:
  - flaming
  - high temperature, boiling and autoclaving
  - membrane filtration
  - radiation, gas and/or chemical treatments
- disinfection and sterilisation procedures used in the collection, processing and safe disposal of samples and materials
- principles of infection control related to work health and safety (WHS), and sampling and transfer of materials in microbiological investigations including how to minimise the generation of aerosols when flaming
- relevant hazards and how to deal with the risks presented:
  - injuries from sharps, burners, molten agar
  - ultraviolet (UV) light sources
  - exposure to hazardous substances and/or infectious agents
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and WHS requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a standard laboratory
  - test samples
  - appropriate equipment, including:
    - transfer equipment, such as inoculating loops, pipettes (quantitative and qualitative), flasks, tubes and spatulas
    - Sterilisation equipment such as bunsen burners, bench incinerators, autoclave and/or pressure cooker
    - Storage equipment such as incubators, water baths, refrigerators, freezers, anaerobic jars as required
    - laminar flow units or biohazard cabinets as required
    - swabs
  - appropriate materials, including:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - solid and/or liquid media
  - disinfecting and sterilising agents
  - consumables
  - receptacles for safe disposal of wastes and for processing of reusable materials
  - bar coding material and labels
- workplace schedules, procedures and standard methods, SDS and documented safe work practices.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL973019 Perform microscopic examination

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973007 Perform microscopic examination. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to set up a light microscope for optimum resolution, to prepare routine samples and to observe, identify and report sample characteristics.

This unit of competency applies to laboratory or technical assistants in all industry sectors. The unit of competency covers limited interpretation and analysis of results. Troubleshooting of equipment and procedures is not required.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Prepare samples for examination**	1.1	Log and label samples according to workplace procedures to ensure traceability
		1.2	Follow documented standard operating procedures to prepare samples for microscopic examination
2	**Set up and use a light microscope**	2.1	Carry and use a microscope correctly preventing damage to the equipment and ensuring operator safety
		2.2	Perform pre-use and safety checks to ensure equipment is fit for purpose
		2.3	Check lenses to ensure they are clean
		2.4	Set up the microscope for optimum resolution and even illumination
		2.5	Select the appropriate objectives and filter for the sample being examined
		2.6	Place sample correctly on the stage
3	**Observe and identify sample characteristics**	3.1	Recognise and identify significant sample characteristics
		3.2	Perform required calculations accurately
4	**Maintain a safe work environment**	4.1	Ensure safety and minimise cross-contamination through the use of personal protective equipment (PPE)
		4.2	Handle all samples and equipment in accordance with workplace safety protocols
		4.4	Minimise generation of waste and environmental impacts
		4.5	Collect and dispose of all wastes safely

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Numeracy skills to:
  - perform counts on samples using grids
  - take basic measurements
  - perform accurate calculations as required by the method, including:
    - dilutions
    - number of cells in original sample after dilution
    - calculation of cells/ml in a number of squares of a counting chamber
  - interpret and record test results reliably
  - log and track samples through all steps from sample receipt to completion of the examination and reporting.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Assessment Requirements for MSL973019 Perform microscopic examination

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL973007 Perform microscopic examination. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- set up a microscope for köhler illumination on 10x, 40x and 100x magnification on at least 3 occasions
- safely prepared and focused on at least 3 different sample types for examination with a compound light microscope including 3 from the following list:
  - preparing and staining a smear or film with a monolayer of cells
  - preparing a wet mount
  - loading a sample into a counting chamber
  - preparing hand cut samples
- observed, identified and reported the microscopic characteristics of at least 2 different sample types including at least 1 from the following list:
  - intact living or non-living organism
  - fixed and stained cells
  - wet mount
- taken basic measurements
- performed a count using a grid
- performed accurate calculations as required by the method, including:
  - dilutions
  - number of cells in original sample after dilution
  - calculation of cells/volume based cell counts.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- nature of samples, sample preparation methods, methods of examination and associated hazards
- parts and functions of a light microscope and steps taken to optimise the resolution of images
- procedures and reporting requirements for spills, faulty or unsafe equipment, hazards and incidents
- types of samples relating to job role
- causes and basic troubleshooting of common artefacts or incorrect results in microscopy
- vernier measurement and micrometry techniques
- sample characteristics restricted to what can be viewed by light microscopy:
  - shape and size of particles
  - presence of contamination
  - colour
  - consistency and variability
  - number of cells (e.g. cells in blood or other particulate samples, such as a yeast suspension or pollen grains)
  - type of cells
  - colour/staining and morphology
- applications of different types of microscopes/setups including compound light, dark field, phase contrast, fluorescent, electron, polarising and stereomicroscope (dissecting)
- awareness of environmental sustainability issues as they relate to the work task
- traceability requirements
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a standard laboratory equipped with appropriate equipment, including light microscopes and samples
  - workplace procedures, standard methods and materials
  - a light microscope.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL974017 Prepare, standardise and use solutions

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL974001 Prepare, standardise and use solutions. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to prepare, standardise and monitor the quality of solutions.

This unit of competency applies to laboratory technicians working in all industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Competency Field

Testing

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare solutions**	1.1	Select appropriate procedure for solution preparation
		1.2	Select equipment, materials and solvent of specified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			purity
		1.3	Measure appropriate quantities of reagents for solution preparation and record data
		1.4	Select and assemble specified laboratory equipment and appropriate grade of glassware
		1.5	Perform specified dilutions
		1.6	Prepare solutions to achieve homogeneous mix of the specified concentration
		1.7	Label and store solutions to maintain identity and stability
2	**Standardise and use volumetric solutions**	2.1	Assemble appropriate laboratory equipment
		2.2	Perform serial dilutions as required
		2.3	Standardise the solution to the required specified range and precision
		2.4	Label and store solutions to maintain identity and stability
		2.5	Use standard volumetric solutions to determine concentration of unknown solutions
3	**Calculate and record data**	3.1	Calculate specified concentrations
		3.2	Use authorised procedure if data is to be modified
		3.3	Estimate and document uncertainty of measurement in accordance with workplace procedures
		3.4	Record all relevant details according to laboratory procedures and report results
		3.5	Report concentration with appropriate units
4	**Monitor the quality of laboratory**	4.1	Check solutions for visual deterioration and expiry date
		4.2	Record details and label solutions according to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	solutions		laboratory procedures
5	**Maintain a safe work environment**	5.1	Use established safe work practices and personal protective equipment (PPE) to ensure personal safety and that of other laboratory personnel
		5.2	Clean up spills using appropriate techniques to protect personnel, work area and environment
		5.3	Minimise generation of waste and environmental impacts
		5.4	Ensure the safe collection of laboratory and hazardous waste for subsequent disposal
		5.5	Store equipment and reagents as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Numeracy skills to:
  - select and use primary and secondary standards and indicators
  - determine equivalence points using indicators and graphical methods
  - calculate the concentration of the solution with appropriate units and uncertainties given the chemical reaction for the titration
  - recognise control results that are not within acceptable range.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Equivalent to MSL974001 Prepare, standardise and use solutions, Release 1.

Assessment Requirements for MSL974017 Prepare, standardise and use solutions

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL974001 Prepare, standardise and use solutions. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- prepared and effectively standardised at least 3 different solutions in accordance workplace procedures and/or standard methods
- selected and used primary and secondary standards and indicators
- determined equivalence points using indicators and graphical methods.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- concepts of metrology, including:
  - all measurements are estimates
  - precision, accuracy and significant figures
  - sources of error, uncertainty and repeatability
  - traceability
- scientific terminology for different types of solutions
- the chemistry of acids, bases, buffers and redox reactions
- chemical symbols and atomic mass
- formulae for calculating concentration % w/w, % w/v, % v/v, ppm (mg/L)
- moles and molarity
- what affects solubility
- reactions used for standardisation and desirable characteristics
- function and use of basic laboratory equipment
- grades of glassware, reagents and their use
- established safe work practices:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - use of PPE, such as safety glasses, gloves and coveralls
  - correctly labelling reagents and hazardous materials
  - handling and storing hazardous material and equipment in accordance with labels, SDS, manufacturer instructions, and workplace procedures and regulations
  - regular cleaning and/or decontamination of equipment and work areas
  - prompt clean-up of spills in accordance workplace procedures
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a standard laboratory equipped with appropriate reagents and equipment to prepare and standardise solutions, such as pH meters; balances; magnetic stirrers, water baths and hot plates; measuring cylinders, beakers, conical flasks, volumetric flasks, pipettes and burettes; filter papers and funnels; and fume cupboards
  - standard methods and workplace procedures
  - containers and storage facilities.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL974019 Perform chemical tests and procedures

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL974003 Perform chemical tests and procedures. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to interpret chemical test requirements, prepare samples, conduct pre-use and calibration checks on equipment and perform routine chemical tests. These tests will involve several measurement steps. The unit includes basic data processing and interpretation of results.

This unit applies to laboratory or technical assistants and instrument operators in all industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Interpret and schedule test requirements**	1.1	Review test request to identify samples to be tested, test method and equipment and instruments involved
		1.2	Identify hazards and workplace control measures associated with the sample, preparation and test methods, reagents and/or equipment
		1.3	Plan work sequences to optimise throughput of multiple samples
2	**Receive and prepare samples**	2.1	Log samples using standard operating procedures (SOPs)
		2.2	Record sample description, compare with specification and note and report discrepancies
		2.3	Prepare samples and standards in accordance with chemical testing requirements
3	**Check equipment before use**	3.1	Set up equipment and instruments in accordance with test method requirements
		3.2	Perform pre-use and safety checks in accordance with relevant workplace and operating procedures
		3.3	Check equipment calibration using specified standards and procedures
		3.4	Inspect reagents required for quality issues including visual checks and expiry
		3.5	Maintain equipment log in accordance with workplace procedures
4	**Test samples to determine chemical species or properties**	4.1	Operate equipment and instruments in accordance with test method requirements
		4.2	Perform tests or procedures on all samples and standards in accordance with specified methods
		4.3	Shut down equipment and instruments in accordance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
			with operating procedures
5	**Process and interpret data**	5.1	Record test data noting atypical observations and anomalies
		5.2	Construct calibration graphs and compute results for all samples from these graphs
		5.3	Check calculated values for consistency with expectations
		5.4	Record and report results in accordance with workplace procedures
		5.5	Determine if obvious procedure or equipment problems have led to atypical data or results
6	**Maintain a safe work environment**	6.1	Use established safe work practices and personal protective equipment (PPE) to ensure personal safety and that of other laboratory personnel
		6.2	Minimise the generation of wastes and environmental impacts
		6.3	Safely collect and dispose of laboratory and hazardous waste
		6.4	Care for and store equipment and reagents as required
7	**Maintain laboratory records**	7.1	Record entries on report forms or into a laboratory information management system accurately calculating, recording or transcribing data as required
		7.2	Ensure traceability of sample from receipt to reporting of results

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Problem-solving skills to trace and source obvious causes of artefacts, track obvious test malfunctions for standardised procedures, and troubleshoot basic equipment and methods.
- Calculate the concentration of solutions.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Assessment Requirements for MSL974019 Perform chemical tests and procedures

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL974003 Perform chemical tests and procedures. Changes to performance criteria. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- safely performed at least 3 different chemical tests involving several measurement steps including at least 1 of the following:
  - colorimetric techniques
  - infrared and ultraviolet-visible (UV-VIS) spectrophotometry
  - other spectrometric techniques
  - chromatographic techniques
  - electrochemical techniques
  - electrophoretic techniques
  - soil testing techniques
  - gravimetric analysis
  - titrimetric analysis
  - filtration, separation and solvent extraction techniques
  - corrosion testing, cement content and accelerated weathering.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- why chemical tests are performed
- relevant chemical principles and concepts, including:
  - elements, compounds, ions, atoms, molecules, bonding and links to chemical properties
  - periodic table and symbols of elements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - atomic mass and molecular weight
  - moles and molarity
  - chemical formulae and balancing equations
  - chemical reactions
  - energy levels and absorption/emission spectra
- purpose of the tests and/or procedures conducted
- international system of units (SI)
- principles and concepts related to equipment and instrument operation, tests and/or procedures
- requirements for cleaning up spills and reporting faulty or unsafe equipment, hazards and incidents.
- concepts of metrology, including:
  - all measurements are estimates
  - precision, accuracy and significant figures
  - sources of error, uncertainty and repeatability
  - traceability
- function of key components of the equipment and instrument and reagents and effects of modifying equipment and instrument variables
- common causes of analytical errors
- calibration requirements and basic equipment and method troubleshooting procedures
- sample preparation procedures for the tests and/or procedures conducted
- traceability requirements
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a standard laboratory equipped with appropriate sample preparation and test equipment, instruments, standards and reagents
  - workplace procedures and standard methods
  - records, including test and calibration results; equipment use, maintenance and servicing history, and faulty or unsafe equipment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL974020 Perform food tests

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL974004 Perform food tests. Changes to performance criteria. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to interpret food test requirements, prepare samples, conduct pre-use and calibration checks on equipment, and perform routine testing of raw food materials, in-process materials and final products. These tests will involve several measurement steps. The unit includes data processing and some interpretation of results and tracking of obvious test malfunctions where the procedure is standardised. However, personnel are not required to analyse data, optimise tests/procedures for specific samples or troubleshoot equipment problems where the solution is not apparent.

This unit applies to laboratory or technical assistants and instrument operators working in the food and beverage processing industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Assessment Requirements for MSL974020 Perform food tests

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL974004 Perform food tests. Changes to performance criteria. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- performed at least 5 routine food tests or procedures involving several measurement steps including at least 4 of the following:
  - sensory tests
  - visual tests
  - package integrity and compatibility test
  - physical/mechanical tests
  - chemical tests
  - thermal tests including stability of products and effectiveness of heat treatments

- prepared samples using 3 different processes including at least 2 of the following:
  - grinding and milling
  - preparation of discs
  - digestion
  - extracting
  - refluxing
  - degassing
  - enzymatic treatment
  - washing and drying
  - ashing and temperature equilibration
  - precipitation and centrifugation
  - filtration
  - flocculation

- evaporation.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- basic principles and concepts underpinning the food tests or procedures including:
  - ions, atoms, molecules, bonding, affinities and related properties
  - chemical reactions (acid/base and complexiometric)
  - structure and properties of proteins, lipids, carbohydrates, vitamins and minerals
  - food additives, flavourings and essences
  - nutrient value of major food groups
  - interaction of water with food components
  - chemical and microbial changes in food
  - food preservation techniques including atmosphere and modified atmosphere in relation
  - basic biochemistry of fermentation reactions
  - function of packaging for product integrity and controlled atmosphere
  - electromagnetic spectrum and absorption, emission and refraction of light
  - quality control program for raw materials, process control and finished product inspection
- purpose of the food tests or procedures conducted
- basic principles and concepts related to equipment and instrument operation and tests or procedures implemented
- concepts of metrology, including:
  - all measurements are estimates
  - precision, accuracy and significant figures
  - sources of error, uncertainty and repeatability
  - traceability
- function of key components of the equipment/instrument used
- effects on the test of modifying equipment/instrument variables
- common sample preparation processes relevant to job role
- types of food tests and procedures:
  - sensory tests
  - visual tests of content and package
  - physical/mechanical tests
  - chemical analysis
  - microbiological tests
  - molecular tests
  - thermal tests including stability of products and effectiveness of heat treatments
- workplace and/or legal traceability requirements
- awareness of environmental sustainability issues as they relate to the work task

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- legal, ethical and work health and safety (WHS) requirements specific to the work task.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a standard laboratory equipped with test equipment, instruments, standards and materials
  - workplace procedures and standard methods
  - records, including:
    - test and calibration results
    - equipment use, maintenance and servicing history.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL974021 Perform biological procedures

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL974006 Perform biological procedures. Changes to elements and performance criteria. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to interpret work requirements, prepare samples, and perform routine biological procedures. These procedures may involve several steps and are used to classify organisms and biologically active compounds by analysing their biological and/or chemical characteristics. This unit includes interpretation of results and troubleshooting obvious departures from standard procedures.

This unit of competency applies to technical assistants working in the biomedical, environmental, biotechnology and education industry sectors.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL974006 Perform biological procedures. Changes to elements and performance criteria. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- classify 2 organisms from 2 different kingdoms to species level using a dichotomous approach
- safely and accurately performed 3 multistep biological procedures, using a minimum of 2 different techniques from the following list:
  - multistep staining:
    - haematological
    - histological
    - microbiological
  - preparation and examination of samples to demonstrate mitosis microscopically
  - preparation and enumeration of microscopic samples
  - colorimetry
  - spectrophotometry
  - chromotography
  - electrophoresis
  - electrochemistry
  - multistep molecular technique
  - multistep immunological technique.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- biological principles and concepts underpinning tests and procedures associated with job role:
  - basic classification and taxonomy of organisms including prokaryotes and eukaryotes, bacteria, viruses, fungi, plants, animals, parasites and prions
  - interrelationships of biological systems including the carbon cycle and energy cycle
  - basic structure and function of a plant and animal cell and the respective organelles (plant and animal)
  - cell membrane activity, including diffusion (passive, facilitated and active), osmosis, tonicity and plasmolysis
  - plant and animal tissue types
  - phases of the cell cycle including phases of mitosis
  - mendelian genetics including inheritance, meiosis, karyotypes, dominant and recessive traits, genotypes, phenotypes, and pedigrees
  - basic structure and function of chromosomes, nucleic acids and proteins
  - chemical and physical characteristics of organic molecules
  - basic structure and function of including carbohydrates, fats and amino acids
  - basic role of biologically significance of ions, including calcium, iron, magnesium, sodium, potassium, chloride and phosphate
- purpose of procedures implemented (why they are used and what they demonstrate)
- calculation steps to give results in appropriate units and precision
- importance and appropriate use of controls and certified reference materials
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety (WHS) requirements specific to the work task including traceability, confidentiality and security requirements of all clinical information, and laboratory data and records.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - a standard laboratory equipped with appropriate test equipment and instruments, safety equipment, reagents and materials
  - standard operating procedures (SOPs) and testing methods
  - records, including:
    - test calibration results
    - equipment use, maintenance and servicing history
    - faulty or unsafe equipment
    - batch number, catalogue number and use-by-date for analytical kits.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSL975038 Conduct sensory analysis

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL975005 Conduct sensory analysis. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Application

This unit of competency describes the skills and knowledge to set up and coordinate sensory analysis and assess the results obtained from a routine sensory analysis.

This unit applies to laboratory technicians and technical officers working in the food industry. Although a supervisor may not always be present, the technician will follow standard operating procedures (SOPs) that will clearly describe the scope of permitted practice in modifying testing procedures and for communicating results to people outside of the laboratory.

No licensing or certification requirements exist at the time of publication. However, regulations and/or external accreditation requirements for laboratory operations exist, so local requirements should be checked. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Pre-requisite Unit

Nil

Competency Field

Testing

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Select panellists/individuals for sensory analysis**	1.1	Perform initial screening of potential panellists/individuals based on the testing brief
		1.2	Use information to select suitable people
		1.3	Analyse and report the results used to establish a panel
2	**Prepare panellists for sensory analysis**	2.1	Prepare panellists for sensory analysis
		2.2	Conduct any training required to detect test characteristics
		2.3	Instruct panellists on recording and reporting requirements of test data
3	**Prepare samples for sensory analysis**	3.1	Prepare reference samples to be used for the sensory analysis specification
		3.2	Prepare evaluation samples to sensory analysis specification
		3.3	Apply food safety procedures in the preparation and presentation of samples
		3.4	Identify and report on any defects or abnormalities in samples
4	**Conduct routine sensory analysis**	4.1	Select appropriate test materials for the information required
		4.2	Ensure tests are conducted according to workplace procedures
		4.3	Analyse data
		4.4	Report on process and results in accordance with workplace procedures
5	**Evaluate and**	5.1	Assess the possible effects of group attributes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.	
	report findings	5.2 Review reliability of results for group bias
		5.3 Complete all relevant documentation and present findings
6	**Maintain a safe work environment**	6.1 Use established work practices to ensure personal safety and that of other personnel
		6.2 Minimise the generation of waste and environmental impacts
		6.3 Safely collect laboratory waste for subsequent disposal
		6.4 Care for and store equipment and reagents as required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Writing skills to develop questionnaires
- Oral communication skills to interact effectively with panellists including those who have diverse cultural and social backgrounds.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Unit Mapping Information

Equivalent to MSL975005 Conduct sensory analysis, Release 1.

Assessment Requirements for MSL975038 Conduct sensory analysis

Modification History

Release	Comments
Release 1	This version was released in *MSL Laboratory Operations Training Package Release 2.0.* Supersedes and equivalent to MSL975005 Conduct sensory analysis. Foundation skill information added. Range of conditions removed. Assessment requirements amended.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- established and coordinated at least 1 sensory analysis test that includes a minimum of 5 panellists.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- anatomy, physiology and functions of taste and smell to determine sample appearance, texture, aroma and flavour
- the primary flavour characteristics of sweet/sour, umamic and bitter/salty
- interaction of sensory activity, such as the interaction between taste and smell, and effect of temperature on samples
- associated characteristics of mouth feel and appearance
- consumer research methods
- information used to select suitable panellists
- principles of descriptive, discriminative and affective sensory analysis methods
- principles of effective control of the sensory testing environment, such as conditions that can dull sensitivity
- principles and purpose of test methods implemented (why they are used and what they demonstrate)
- attributes of panellists which could affect the results, such as:
  - age, gender and ethnicity
  - smoking
  - medications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - qualifications and trained/untrained
    - random panel
    - cultural food preferences/food styles
- likely causes of variation in results and their control
- typical samples include:
    - raw materials, ingredients, final products, packaging materials, and materials which come in contact with the product
    - materials at stages of production
    - process aids and adjuncts
- common testing methods:
    - triangular test, duo-trio test, ranking test, paired comparison test and blending test
    - flavour profile
    - threshold analysis
    - discriminative testing, descriptive testing and affective testing
- typical uses of the results obtained from the sensory analysis:
    - marketing studies
    - purchasing requirements
    - quality assurance at various stages of production
    - quality control and troubleshooting
    - research and development of new products
    - customer returns
    - product recalls
- awareness of environmental sustainability issues as they relate to the work task
- legal, ethical and work health and safety (WHS) requirements specific to the work task including traceability, confidentiality and security requirements of all client information, and laboratory data and records.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - statistical data sheets and charts, logbooks and scientific calculators
    - relevant ISO Standards and Australian Standards
    - a sensory evaluation panel room and group of panellists.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSMBLIC001 Licence to operate a standard boiler

Modification History

Release 1. Supersedes and is equivalent to MSABLIC001 Licence to operate a standard boiler.

Application

This unit specifies the outcomes required to operate a standard boiler safely. This includes boiler start-up, handover, monitoring, shutdown and storage of a boiler that uses a single fuel source and does not have an air pre-heater, feed water heater, superheater, attempurator or desuperheater, simultaneous dual fuel firing capability or economiser attached.

This unit also covers the preparation for inspection procedures as specified in manufacturer recommendations, identification of maintenance requirements and relevant risk control measures.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, High Risk Work, and meets Commonwealth, state and territory high risk work licensing requirements. Any alteration to the unit content or outcomes would result in a unit that is not acceptable to WHS/Occupational Health and Safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit

Nil

Competency Field

Unit Sector

Boiler operation (licensed)

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element
1	**Plan and prepare**	1.1 Follow standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	for work	1.2	Comply with work health and safety (WHS) requirements at all times
		1.3	Identify potential workplace hazards and appropriate risk control measures consistent with appropriate standards to ensure the safety of personnel and equipment
		1.4	Locate and review appropriate records to prepare for boiler operation
		1.5	Identify the type of boiler and plan boiler operations according to procedures
		1.6	Identify appropriate personal protective equipment (PPE) in accordance with SOPs
		1.7	Identify suitable communication methods and confirm with appropriate personnel
2	**Start up boiler**	2.1	Apply risk prevention and risk control measures to the work area according to procedures
		2.2	Select communication equipment and inspect for serviceability
		2.3	Select all necessary equipment and inspect for operational effectiveness according to procedures, including establishing water level
		2.4	Check boiler visually for any damage or defects and report and record any found according to procedures with appropriate action taken
		2.5	Vent boiler to atmosphere prior to start-up, as required
		2.6	Carry out pre-start up checks on the boiler and bring the boiler online safely according to procedures
		2.7	Start up boiler according to procedures
		2.8	Identify maintenance requirements and any visual faults and report according to procedures
		2.9	Confirm, complete and log all maintenance and/or repairs and associated isolations and make the equipment serviceable

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Monitor boiler operation**	3.1	Diagnose operating status of the boiler
		3.2	Maintain operating log clearly and accurately according to procedures
		3.3	Monitor boiler, valves, fittings and pressure gauges according to procedures
		3.4	Blow boiler water level gauges through both steam and water sides
		3.5	Test standby plant and equipment according to procedures
		3.6	Conduct boiler water quality tests, where required, and record the results according to procedures
		3.7	Adjust boiler water chemicals after tests, where appropriate and required according to procedures and notify downstream users, if necessary
		3.8	Activate the automatic blowdown and, where required, boiler is blown down to adjust total dissolved solids (TDS) levels to recommendations
		3.9	Communicate handover information regarding boiler status and operation clearly to relevant personnel according to procedures
		3.10	Respond immediately to any boiler emergency in accordance with procedures
4	**Shut down boiler**	4.1	Shut down the boiler for inspection according to procedures, as required
		4.2	Identify maintenance requirements and report any visual faults according to procedures
		4.3	Complete isolations associated with in-service maintenance according to procedures
		4.4	Clean boiler internally and externally to manufacturer recommendations and procedures, where required
		4.5	Complete boiler operating log for shutdown

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5	**Store boiler in shutdown mode**	5.1	Identify storage time and condition of storage, where required
		5.2	Store boiler in safe condition for access in accordance with manufacturer recommendations and procedures
		5.3	Test stored boiler water and chemicals, where required, and handle in accordance with procedures, where storage is for extended periods

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Boiler includes:

Fixed and modulating combustion controls and a single heat source. Operation includes a battery of boilers and boilers that have a single thermal or solar heat source.

Note: Boilers meeting the definition of ‘advanced boiler’ are excluded.

Standard boiler includes:

- vessel or an arrangement of vessels and interconnecting parts in which steam and vapour is generated or in which water or other liquid is heated above that of the atmospheric pressure by the application of:
  - fire
  - the products of combustion
  - electrical power
  - similar means
- fixed and modulating combustion controls, fixed and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

modulated air supply, a single fuel source and will have:

- boiler piping
- supports
- mountings
- valves
- gauges
- fittings
- controls
- boiler settings and directly associated equipment

Type of boiler includes one or more of the following:

- fire tube
- water tube
- once through boilers
- waste heat
- electrically heated
- novel or unique

Hazards include one or more of the following:

- asbestos lagging
- chemical hazards
- thermal hazards
- manual handling hazards
- machinery guard requirements
- hot exposed steam pipe
- leakage of steam
- leakage of fuel
- odour of gas
- fumes from a liquid chemical spill
- faulty/broken ladder or hand rail
- working at heights
- flammable liquids
- fire and explosion
- electrical hazards
- work area, including:
  - illumination
  - excessive noise from machinery
  - spillage of oil
  - rubbish and combustibles
  - obstruction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Risk control methods include:	Risk control methods refer to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls. It includes the application of the hierarchy of control: • elimination • substitution • isolation • engineering controls • administrative controls • personal protective equipment (PPE)
Appropriate standards include one or more of the following:	• legislation • codes of practice • manufacturer specifications • Australian Standards • technical standards (International) • industry standards (where applicable)
Procedures include one or more of the following:	• manufacturer guidelines (e.g. instructions, specifications or checklists) • industry operating procedures • workplace procedures (e.g. work instructions, operating procedures or checklists)
Equipment includes one or more of the following:	• gas monitoring equipment • water testing equipment • fire-fighting equipment • workplace first aid equipment • work platform and associated gear, including walkways
Communication methods include one or more of the following:	• verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Appropriate personnel includes one or more of the following:	• production workers • maintenance workers • supervisors and managers • other boiler operators • suppliers • colleagues
Records include one or more of the following:	• operating log books • maintenance records • records of faults and potential faults • isolation procedures • safe operating procedures • daily operating inspections • repairs carried out according to manufacturer recommendations and operating procedures • workplace record keeping requirements • details of any daily or periodic maintenance work • details of yearly programmed or additional maintenance work
Risk control measures include one or more of the following:	• barricades and controls • machine guarding • fall prevention • pedestrian controls • adequate illumination • noise controls • signage • PPE
PPE includes one or more of the following:	• thermally insulated gloves • hard hat protection • ear protection (muffs or plugs) • chemical resistant gloves and apron • respiratory devices • eye protection • working protective gloves • whole body fire-resistant clothing
Communication equipment includes one or more of the	• two-way radios • mobile phones

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

following:

- intercoms
- landline telephones
- pagers
- satellite phones
- computers

Pre-start up checks include:

- testing warning lamps or visual warning indicators
- control panel checks
- checks of feedwater supply system
- fuel supply/heat source system
- operation and position of boiler valves
- combustion air supply system
- boiler water level
- essential fittings and gauges
- selection of PPE
- inspection and location of inspection and explosion doors (where applicable)
- identification of hazards and management of risks and maintenance problems
- fire-fighting equipment
- manufacturer recommendations and checklists
- relevant records and logs

Start-up includes:

- purge boiler furnace
- heat input
- warm-up reticulation system
- venting the boiler of air, where required
- steam traps and steam line purge system operations
- reticulation line pressure
- steam usage and supply

Maintenance includes:

- leaking steam pipe
- pressure gauge accuracy
- exposed electrical wiring
- defective illumination in the workplace
- leaking fuel pump gland
- leaks in high pressure feed line
- leaking gauge glass mounting
- leaking safety valve
- isolation procedures, hardware and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Faults include one or more of the following:

- abnormal operating conditions
- boiler tube failure
- feedwater supply and/or other major auxiliary loss
- wet steam
- high dissolved oxygen
- pH of water
- high conductivity
- actuator or valve mechanical or electrical fault/failure
- instrument failure
- steam leak

Diagnosed includes one or more of the following:

- senses, including:
  - audio
  - smell
  - touch
  - visual
- remote or local indicators and recorders
- computers and alarms, including:
  - visible
  - audible

Operating log includes:

- date and time of checking
- each check, examination and results
- printed and signed name of person who performed the checks
- date and time of any lockout or equipment malfunction
- results of tests on boiler or feedwater
- changes in operation

Valves and fittings include one or more of the following:

- safety valves
- gauge glasses
- main steam stop valve
- feedwater stop valve
- feed check valve
- blowdown valve
- steam side/line drain valves
- flame failure detection device
- water level controller

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- boiler steam pressure gauge

Monitored includes:

- water supply system
- checks of steam reticulation line pressure
- usage and supply of steam
- quality of steam
- combustion/heat source system and management
- feedwater system
- fuel system
- combustion air supply
- water level
- boiler steam pressure
- boiler and steam manifold valves (where fitted)
- soot blowers (where fitted)
- operation of control/safety devices, including control panels

Tested includes one or more of the following:

- response checks
- standby plant ‘cut in’ tests
- valve operating checks
- hydrostatic tests
- performance tests
- alarm and protection tests

Tests include one or more of the following:

- pH levels
- conductivity
- oxygen
- TDS
- hardness
- other contaminants

Chemicals include one or more of the following:

- oxygen scavenger
- feedwater additives
- other chemicals
- hardness
- condensate chemicals
- pH buffers

Handover includes:

- previous load requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- maintenance issue, including equipment isolated for maintenance
- operational incidences
- read operating log
- general inspection of boiler to detect any defects
- accept responsibility of boiler
- noted equipment malfunctions
- required equipment tests

Emergencies include one or more of the following:

- tube failure
- loss of water level
- power failure
- inadequate housekeeping
- explosion
- fire
- bomb threat
- terrorism
- personal accidents
- chemical spills
- major steam leaks
- major water leaks and flooding
- natural disasters
- oil spills

Appropriate emergency response measures include one or more of the following:

- identification of emergency
- isolation of heat source
- selection and application of appropriate fire-fighting equipment and PPE
- notification of downstream users
- operation of boiler only when safe to do so
- notification of appropriate regulatory authorities, including Commonwealth, state, territory and boiler manufacturer

Shutdown includes:

- checks of water level
- cooling down process
- valve settings
- equipment isolation
- boiler pressure/vacuum
- fuel/heat source isolation in accordance with manufacturer recommendations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- boiler post-purge

Storage mode includes:

- wet and dry storing
- open or closed position

Unit Mapping Information

Assessment Requirements for MSMBLIC001 Licence to operate a standard boiler

Modification History

Release 1. Supersedes and is equivalent to MSABLIC001 Licence to operate a standard boiler.

Performance Evidence

Evidence of competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include demonstration of:

- following work instructions, SOPs and safe work practices
- complying with Commonwealth, state and territory work health and safety (WHS) legislation and regulations
- complying with Australian and industry standards, organisation workplace standards, policies and relevant codes of practice requirements at all times
- planning and preparing for work, including identifying potential hazards and implementing appropriate risk control measures
- identifying the type of standard boiler
- reading and interpreting maintenance records, operating logs and safety data sheets (SDS)
- conducting the appropriate pre-start up checks, including identifying all maintenance requirements and visual faults
- using appropriate tools, equipment and PPE in accordance with procedures
- completing all maintenance and rectification requirements in accordance with manufacturers' and workplace procedures, including recording/reporting requirements
- completing the start-up procedures and bringing the boiler online
- monitoring the boiler, including conducting relevant tests and activities and adjusting boiler water quality in accordance with procedures
- interpreting boiler operation tables and figures
- communicating handover of boiler status to appropriate personnel
- demonstrating emergency operating procedures
- identifying all boiler energy sources required to be isolated and made safe for maintenance, inspection and repairs
- applying boiler cleaning and storage techniques.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of PPE
- Commonwealth, state and territory WHS/OHS legislation and approved codes of practice relevant to standard boiler operation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Australian and industry standards relevant to standard boiler operation
- basic principles of heat transfer and thermodynamics in relation to boiler operations
- boiler steam equipment operating principles and operating methods
- types and characteristics of feedwater systems and treatment
- types and use of equipment and fittings for operation and maintenance of boilers
- function, purpose and operation of main steam stop valve
- boiler auxiliary equipment characteristics and capabilities
- essential fittings required where more than one boiler is installed (e.g. battery of boilers)
- processes for confirming operational status of a boiler
- workplace communication techniques and procedures
- responsibilities for checking and testing boilers
- location and inspection procedures and techniques for inspection and explosion doors
- steam and boiler hazards for cold start and handover
- hierarchy of risk control
- type and limitations of corrective action and/or adjustments that can be made in response to routine boiler operation problems and emergencies
- various harmful energy sources in boiler operation and the means to effectively isolate these energy sources and make them safe
- modes of boiler storage and procedures for storing boiler in open or closed condition
- SDS and safe chemical handling and storage methods for boiler operation and cleaning
- procedures for cleaning boilers internally and externally, as required
- procedures for recording, reporting and maintenance of workplace records and information.

Assessment Conditions

- Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessments must be conducted in the English language.
- Where possible, assessment of performance should be undertaken in the workplace and/or under realistic workplace conditions that typically reflect:
  - the use of full-scale equipment
  - performing tasks/activities within timelines that would be expected in a workplace
  - standard and authorised work practices, safety requirements and environmental constraints.
- Where this is not possible or where personal safety, plant operation or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Accredited assessors are responsible for ensuring that candidates have access to all tools, equipment, PPE, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

MSMBLIC002 Licence to operate an advanced boiler

Modification History

Release 1. Supersedes and is equivalent to MSABLIC002 Licence to operate an advanced boiler

Application

This unit specifies the outcomes required to operate an advanced boiler safely. This includes boiler start-up, handover, monitoring, shutdown and storage of a boiler.

This unit also covers the preparation for inspection procedures as specified in manufacturer recommendations, identification of maintenance requirements and relevant risk control measures.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, High Risk Work, and meets Commonwealth, state and territory high risk work licensing requirements. Any alteration to the unit content or outcomes would result in a unit that is not acceptable to WHS/Occupational Health and Safety (OHS) regulators for the purpose of licensing.

			maintenance according to procedures
		4.5	Complete boiler operating log for shutdown
5	**Store boiler in shutdown mode**	5.1	Identify storage time and condition of storage, where required
		5.2	Store boiler and associated equipment in safe condition for access in accordance with manufacturer recommendations and procedures
		5.3	Test stored boiler water and chemicals, where required, and handle in accordance with procedures, where storage is for extended periods

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Boiler includes: Boilers covered by this unit are standard boilers and advanced boilers, including boilers defined in *AS 2593:2004 Safety management and supervision systems* and *AS 3873:2001 Pressure equipment – Operation and maintenance* and typically have a modulating combustion air supply and heat source.

Standard boiler includes:

- vessel or an arrangement of vessels and interconnecting parts in which steam and vapour is generated or in which water or other liquid is heated above that of the atmospheric pressure by the application of:
  - fire
  - the products of combustion

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- electrical power
- similar high temperature means

- fixed and modulating combustion controls, fixed and modulated air supply, a single fuel source and will have:
  - boiler piping
  - supports
  - mountings
  - valves
  - gauges
  - fittings
  - controls
  - boiler settings and associated equipment

Advanced boiler includes:

- vessel or an arrangement of vessels and interconnecting parts in which steam and vapour is generated or in which water or other liquid is heated above that of the atmospheric pressure by the application of:
  - fire
  - the products of combustion
  - electrical power
  - similar high temperature means
- fixed and modulating combustion controls, fixed and modulated air supply, multiple fuel sources, pre-heaters, superheaters and economisers and will have:
  - boiler piping
  - supports
  - mountings
  - valves
  - gauges
  - fittings
  - controls
  - boiler settings and directly associated equipment

Hazards include one or more of the following:

- asbestos lagging
- chemical hazards
- thermal hazards
- manual handling hazards
- machinery guard requirements
- hot exposed steam pipe
- leakage of steam

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- leakage of fuel
- odour of gas
- fumes from a liquid chemical spill
- faulty/broken ladder or hand rail
- working at heights
- flammable liquids
- fire and explosion
- electrical hazards
- work area, including:
  - illumination
  - excessive noise from machinery
  - spillage of oil
  - rubbish and combustibles
  - obstruction

Risk control methods include:

Risk control methods refer to the systematic process of eliminating or reducing the risk to personnel and property through the application of controls.

It includes the application of the hierarchy of control:

- elimination
- substitution
- isolation
- engineering controls
- administrative controls
- personal protective equipment (PPE)

PPE includes one or more of the following:

- thermally insulated gloves
- hard hat protection
- ear protection (muffs or plugs)
- chemical resistant gloves and apron
- respiratory devices
- eye protection
- working protective gloves
- whole body fire-resistant clothing

Appropriate standards include one or more of the following:

- legislation
- codes of practice
- manufacturer specifications
- Australian Standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• technical standards (International) • industry standards (where applicable)
Procedures include one or more of the following:	• manufacturer guidelines (e.g. instructions, specifications or checklists) • industry operating procedures • workplace procedures (e.g. work instructions, operating procedures or checklists)
Equipment includes one or more of the following:	• gas monitoring equipment • water testing equipment • fire-fighting equipment • workplace first aid equipment • work platform and associated gear, including walkways
Communication methods include one or more of the following:	• verbal and non-verbal language • written instructions • signage • hand signals • listening • questioning to confirm understanding • appropriate worksite protocol
Appropriate personnel includes one or more of the following:	• production workers • maintenance workers • supervisors and managers • other boiler operators • suppliers • colleagues
Records include one or more of the following:	• operating log books • maintenance records • records of faults and potential faults • isolation procedures • safe operating procedures • daily operating inspections • repairs carried out according to manufacturer recommendations and operating procedures • workplace record keeping requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- details of any daily or periodic maintenance work
- details of yearly programmed or additional maintenance work

Risk control measures include one or more of the following:

- barricades and controls
- machine guarding
- fall prevention
- pedestrian controls
- adequate illumination
- noise controls
- signage
- PPE

Communication equipment includes one or more of the following:

- two-way radios
- mobile phones
- intercoms
- landline telephones
- pagers
- satellite phones
- computers

Pre-start up checks include:

- testing warning lamps or visual warning indicators
- control panel checks
- checks of feedwater supply system
- fuel supply/heat source systems
- operation and position of boiler valves
- combustion air supply system
- boiler water level
- essential fittings and gauges
- selection of personal protective equipment
- inspection and location of inspection and explosion doors (where applicable)
- identification of hazards and management of risks and maintenance problems
- fire-fighting equipment
- manufacturer recommendations and checklists
- relevant records and logs

Associated equipment includes one or more of

- multiple fuel sources
- pre-heater
- superheater

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

the following:

- economiser
- superheater safety valves
- economiser relief valves
- air heater
- feedwater heater
- attemperator
- main steam stop valve

Start-up includes:

- purge boiler furnace
- heat input
- warm-up reticulation system
- venting the boiler of air, as required
- steam traps and steam line purge system operations
- reticulation line pressure
- steam usage and supply
- superheater
- air heater
- feedwater heater
- economiser

Maintenance includes:

- leaking steam pipe
- pressure gauge accuracy
- exposed electrical wiring
- defective illumination in the workplace
- leaking fuel pump gland
- leaks in high pressure feed line
- leaking gauge glass mounting
- leaking safety valve
- isolation procedures, hardware and equipment

Faults include one or more of the following:

- abnormal operating conditions
- boiler tube failure
- feedwater supply and/or other major auxiliary loss
- wet steam
- high dissolved oxygen
- pH of water
- high conductivity
- actuator or valve mechanical or electrical fault/failure
- instrument failure
- steam leak

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- associated equipment failure

Diagnosed includes one or more of the following:

- senses, including:
  - audio
  - smell
  - touch
  - visual
- remote or local indicators and recorders
- computers and alarms, including:
  - visible
  - audible

Operating log includes:

- date and time of checking
- each check, examination and results
- printed and signed name of person who performed the checks
- date and time of any lockout or equipment malfunction
- results of tests on boiler or feedwater
- changes in operation

Valves and fittings include one or more of the following:

- safety valves
- gauge glasses
- main steam stop valve
- feedwater stop valve
- feed check valve
- blowdown valve
- steam side/line drain valves
- flame failure detection device
- water level controller
- boiler steam pressure gauge
- economiser relief valve
- superheater safety valve

Monitored includes:

- water supply system
- checks of steam reticulation line pressure
- usage and supply of steam
- quality of steam
- combustion/heat source system and management
- feedwater system and condensate returns
- fuel system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- combustion air supply
- water level
- boiler steam pressure
- boiler and steam manifold valves
- soot blowers
- operation of control/safety devices, including control panels

Tested includes one or more of the following:

- response checks
- standby plant ‘cut in’ tests
- valve operating checks
- hydrostatic tests
- performance tests
- alarm and protection tests

Tests include one or more of the following:

- pH levels
- conductivity
- oxygen
- TDS
- hardness
- other contaminants

Chemicals include one or more of the following:

- oxygen scavenger
- feedwater additives
- other chemicals
- hardness
- condensate chemicals
- pH buffers

Handover includes:

- previous load requirements
- maintenance issue, including equipment isolated for maintenance
- operational incidences
- read operating log
- general inspection of boiler to detect any defects
- accept responsibility of boiler
- noted equipment malfunctions
- required equipment tests

Emergencies include one

- tube failure

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

or more of the following:

- loss of water level
- power failures
- inadequate housekeeping
- explosion
- fire
- bomb threat
- terrorism
- personal accidents
- chemical spills
- major steam leaks
- major water leaks and flooding
- natural disasters
- oil spills

Appropriate emergency response measures include one or more of the following:

- identification of emergency
- isolation of heat source
- selection and application of appropriate fire-fighting equipment and PPE
- notification of downstream users
- operation of boiler only when safe to do so
- notification of appropriate regulatory authorities, including Commonwealth, state, territory and boiler manufacturer

Shutdown includes:

- checks of water level
- cooling down process
- valve settings
- equipment isolation
- boiler pressure/vacuum
- fuel/heat source isolation in accordance with manufacturer recommendations
- boiler post-purge

Storage mode includes:

- wet and dry storing
- open or closed position

Assessment Requirements for MSMBLIC002 Licence to operate an advanced boiler

Modification History

Release 1. Supersedes and is equivalent to MSABLIC002 Licence to operate an advanced boiler

Performance Evidence

Evidence of competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include demonstration of:

- following work instructions, SOPs and safe work practices
- complying with Commonwealth, state and territory work, health and safety (WHS) legislation and regulations
- complying with Australian and industry standards, organisation workplace standards, policies, relevant codes of practice requirements at all times
- planning and preparing for work, including identifying potential hazards and implementing appropriate risk control measures
- identifying the type of standard or advanced boiler and associated equipment
- reading and interpreting maintenance records, operating logs and safety data sheets (SDS)
- conducting the appropriate pre-start up checks, including identifying all maintenance requirements and visual faults
- using appropriate tools, equipment and PPE in accordance with procedures
- completing all maintenance and rectification requirements in accordance with manufacturers' and workplace procedures, including recording/reporting requirements
- completing the start-up procedures and bringing the boiler online
- monitoring the boiler and associated equipment, including conducting relevant tests and activities and adjusting boiler water quality in accordance with procedures
- interpreting advanced boiler operation tables and figures
- communicating handover of boiler status and associated equipment to appropriate personnel
- demonstrating emergency operating procedures
- identifying all boiler energy sources required to be isolated and made safe for maintenance, inspection and repairs
- applying advanced boiler cleaning and storage techniques.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- safe work practices and procedures and use of PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Commonwealth, state and territory WHS/OHS legislation and approved codes of practice relevant to standard and advanced boiler operation
- Australian and industry standards relevant to standard and advanced boiler operation
- basic principles of heat transfer and thermodynamics in relation to standard and advanced boiler operation
- standard and advanced boiler operation steam equipment operating principles and operating methods
- types and characteristics of multiple fuel systems for standard and advanced boilers
- types and characteristics of feedwater systems and treatment, including de-aerator
- types and use of equipment and fittings for operation and maintenance of boilers
- function, purpose and operation of the following:
  - pre-heater
  - superheater
  - economiser
  - air heater
  - feedwater heater
  - attemperator
  - superheater safety valves
  - economiser relief valves
  - main steam stop valve
- standard and advanced boiler and auxiliary equipment characteristics and capabilities
- essential fittings required where more than one boiler is installed (e.g. battery of boilers)
- processes for confirming operational status of a boiler
- workplace communication techniques and procedures
- responsibilities for checking and testing advanced boilers
- location and inspection procedures and techniques for inspection and explosion doors
- steam and boiler hazards for cold start and handover
- hierarchy of risk control
- type and limitations of corrective action and/or adjustments that can be made in response to routine boiler operation problems and emergencies
- various harmful energy sources in standard and advanced boiler operation and the means to effectively isolate these energy sources and make them safe with particular consideration to advanced boilers
- modes of standard and advanced boiler storage and procedures for storing boiler in open or closed condition
- SDS and safe chemical handling and storage methods for boiler operation and cleaning
- procedures for cleaning boilers internally and externally, where required
- procedures for recording, reporting and maintenance of workplace records and information.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- Assessments must be conducted by an assessor accredited for this high risk work (HRW) licence class in the Commonwealth/state/territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth/state/territory WHS/OHS regulator).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and all assessments must be conducted in the English language.
- Where possible, assessment of performance should be undertaken in the workplace and/or under realistic workplace conditions that typically reflect:
  - the use of full-scale equipment
  - performing tasks/activities within timelines that would be expected in a workplace
  - standard and authorised work practices, safety requirements and environmental constraints.
- Where this is not possible or where personal safety, plant operation or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Accredited assessors are responsible for ensuring that candidates have access to all tools, equipment, PPE, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications.
- As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations (RTOs) current at the time of assessment.

MSMENV272 Participate in environmentally sustainable work practices

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed. Duplication between Performance Evidence and Performance Criteria removed. Assessment conditions updated.

Release 1. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices.

Application

This unit describes the skills and knowledge required to comply with environmental regulations, identify environment issues and minimise the risks of negative impact on work and carry out improvements in own work area.

This unit applies to operators and team members who are required to follow procedures to work in an environmentally sustainable manner.

This unit applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be contextualised for the industry sector, organisation and section.

This unit applies to an individual working alone or as part of a team and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must also be applied.

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	**Performance Criteria**
Elements describe the essential *outcomes.*	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Identify current resource use and environmental issues	1.1 Identify workplace environmental and resource efficiency issues 1.2 Identify resources used in own work role 1.3 Confirm current usage of resources
2. Comply with environmental regulations	2.1 Read and follow environmental policies and procedures to ensure compliance with federal, state/territory and local government laws, by-laws, regulations and mandated codes of practice, and codes and standards that the organisation applies voluntarily 2.2 Ask questions and seek clarification relating to environmental work requirements 2.3 Identify incidents, including breaches or potential breaches of environmental regulations and occurrences outside of standard procedures and report to appropriate personnel 2.4 Report environmental incidents using workplace forms and procedures
3. Seek opportunities to improve environmental practices and resource efficiency	3.1 Follow workplace procedures to improve environmental practices and resource efficiency 3.2 Make suggestions for improvements to environmental workplace practices and work plans

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Release 2. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices.

Assessment Requirements for MSMENV272 Participate in environmentally sustainable work practices

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed. Duplication between Performance Evidence and Performance Criteria removed. Assessment conditions updated.

Release 1. Supersedes and is equivalent to MSAENV272B Participate in environmentally sustainable work practices.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- followed environmental policies and identified potential breaches of environmental regulations and suggested improvements within the limit of own authority.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- environmental sustainability issues relevant to organisation
- resource use and impact of inefficiencies associated with own work role
- environmental and resource efficiency policies and procedures for own work role
- environmental regulations and guidelines and their impact on own work role
- the environmental issues, hazards and risks associated with own work role
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
  - environmental regulations, guidelines and procedures
  - workplace incident reporting procedures and forms.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSMENV472 Implement and monitor environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV472B Implement and monitor environmentally sustainable work practices

Application

This unit of competency covers the skills and knowledge required to effectively analyse the workplace in relation to environmentally sustainable work practices, and to implement improvements and monitor their effectiveness.

This unit of competency applies to those who have responsibility for a specific area of work or who lead a work group or team. It addresses the knowledge, processes and techniques necessary to implement and monitor environmentally sustainable work practices, including the development of processes and tools.

It includes identifying areas for improvement, developing plans to make improvements, and implementing and monitoring improvements in environmental performance.

This unit of competency applies to all sectors of the manufacturing industry and members of its value chain. It may also be applied to all sections of an organisation, including office and warehouse. This unit will need to be appropriately contextualised as it is applied across an organisation and across different industry sectors.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	**Investigate current practices in relation to resource usage**	1.1	Identify environmental regulations applying to the enterprise
		1.2	Assess procedures for assessing compliance with environmental regulations
		1.3	Collect information on environmental and resource efficiency systems and procedures and provide to the work group, as required
		1.4	Measure and record current resource usage by members of the work group
		1.5	Analyse and record current purchasing strategies
		1.6	Analyse current work processes to access information and data, and assist in identifying areas for improvement
2	**Set targets for improvements**	2.1	Seek input from stakeholders, key personnel and specialists
		2.2	Access external sources of information and data as required
		2.3	Evaluate alternative solutions to workplace environmental issues
		2.4	Set efficiency targets
3	**Implement performance**	3.1	Source and use techniques/tools to assist in achieving targets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	improvement strategies	3.2	Apply continuous improvement strategies to own work area of responsibility, and communicate ideas and possible solutions to the work group and management
		3.3	Integrate environmental and resource efficiency improvement plans for own work group with other operational activities and implement them
		3.4	Seek suggestions and ideas about environmental and resource efficiency management from stakeholders and act upon them where appropriate
		3.5	Implement costing strategies to fully value environmental assets
4	**Monitor performance**	4.1	Document outcomes and communicate reports on targets to key personnel and stakeholders
		4.2	Evaluate strategies and environmental performance, including breaches or potential breaches of regulations and occurrences outside of standard procedure which may lead to lower environmental performance
		4.3	Set new targets and investigate and apply new tools and strategies
		4.4	Promote successful strategies and reward participants where possible

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- *ISO 14001:2015 Environmental management systems*

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Unit Mapping Information

Assessment Requirements for MSMENV472 Implement and monitor environmentally sustainable work practices

Modification History

Release 1. Supersedes and is equivalent to MSAENV472B Implement and monitor environmentally sustainable work practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- investigate/analyse resource usage
- evaluate improvement alternatives and set targets
- implement improvements within the limit of own authority
- monitor the performance of improvements.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- relevant environmental and resource efficiency issues, specific to industry practices, including:
  - contribution to climate change and other macro threats that can arise from materials and work processes used
  - regulated environmental issues
  - issues relevant to licencing conditions
- best practice environmental approaches relevant to own area of responsibility
- methods for measuring and calculating resource usage.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - will typically include the use of appropriate tools, equipment and documents

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
    - walk-throughs
    - pilot plant operation
    - demonstration of skills
    - industry based case studies/scenarios
    - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMOPS400 Optimise process/plant area

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS400A Optimise process/plant area

Application

This unit of competency covers the skills and knowledge required to optimise the process performance of a complete process, plant area or system. It requires optimising a more significant portion of a plant than would be required for one of the PMAOPS3## series. It also requires a more strategic approach to the optimisation than the routine, day-to-day optimisation undertaken as a routine part of plant operation. The optimisation may, or may not involve capital expenditure.

It includes ensuring that the process/plant area complies with health, safety and environment (HSE) requirements, that process, plant and equipment improvement is planned and carried out, and that problems are solved to meet operational needs and ensure that production of finished goods meets customer requirements. It includes all items of equipment and unit operations which form part of the production process of a complete area.

This unit of competency requires the application of detailed operational and process knowledge, including the principles of operation of equipment, and the chemistry and/or physics and/or biology/biochemistry of changes to materials occurring during processing. It embodies a significant breadth and depth of technical knowledge and process understanding which is applied to process improvement.

This competency is typically performed by a senior operator, team leader or frontline manager.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Analyse and evaluate current plant, equipment and processes	1.1	Compare actual process, plant and equipment performance with requirements and/or historical data/records and/or design performance
		1.2	Identify abnormal or sub-optimal process, plant and equipment performance
		1.3	Identify hazards associated with the plant and equipment
		1.4	Collect and evaluate product, materials and/or process records to determine possible causes for sub-optimal performance
		1.5	Use appropriate techniques to rank possible causes from most to least probable cause
2	Develop plan for corrective and/or optimisation action	2.1	Analyse causes to determine appropriate corrective action
		2.2	Predict the impact of a change in one unit/area on other related plant units/areas
		2.3	Predict the impact of a change on HSE performance
		2.4	Develop measurable objectives and evaluate alternatives
		2.5	Identify requirements to implement change
		2.6	Consult with stakeholders regarding planned changes and impacts
		2.7	Develop optimisation plan taking account of hazards identified and HSE implications and communicate to appropriate personnel
		2.8	Evaluate optimisation action to determine measures of effectiveness

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	Coordinate corrective and/ or optimisation action plan	3.1	Coordinate all appropriate unit areas and operations in order to rectify problem causes in process, plant and equipment performance
		3.2	Initiate and/or implement all required corrective/optimisation actions
		3.3	Communicate corrective/optimisation outcomes to all relevant personnel
		3.4	Record and maintain log of all relevant information
4	Develop continuous improvement strategies	4.1	Identify opportunities to continuously improve performance of process/plant area
		4.2	Develop recommendations for continual improvement of process, plant and equipment effectiveness
		4.3	Consult with appropriate personnel and implement continuous improvement strategies
		4.4	Document implementation of continuous improvement strategies

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- equipment start-up, operation and shutdown procedures
- calibration and maintenance schedules
- quality manuals and procedures
- organisation recording and reporting procedures
- material, production and product specifications
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Process optimisation

Process optimisation requires application of detailed operational and process knowledge to address one or more of the following:

- starting material quality
- yield maximisation
- throughput maximisation
- energy efficiency
- use of utilities
- labour utilisation
- overall cost
- efficient use of equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reducing downtime
- minimisation of waste and rework
- improved workplace layout and work flow

Unit Mapping Information

Assessment Requirements for MSMOPS400 Optimise process/plant area

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS400A Optimise process/plant area

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify and interpret information from a range of internal and external sources
- use analytical techniques to identify cause of a complex problem
- determine corrective actions to optimise the condition of the process, plant and equipment
- plan and coordinate corrective/optimisation actions and related changes that may be required
- develop written plans
- complete documentation
- identify and control hazards by applying the hierarchy of control as part of the optimisation process
- distinguish between:
  - optimum and marginal performance of the plant
  - effective and marginal performance corrections and actions
- communicate and consult with stakeholders at all levels
- read and interpret technical information and relevant regulatory requirements
- develop and implement continuous improvement strategies.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- relevant technical theory of the plant area
- an in depth understanding of plant and process across the entire plant area being optimised
- process parameters and limits, including:
  - temperature
  - pressure
  - flow
  - pH

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- effects of variations in process conditions and materials
- functions and principles of operation of equipment in the production process
- chemistry and/or physics and/or biology/biochemistry relevant to changes to materials during processing.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- It is desirable that this evidence comes from implemented optimisation projects. However, where the project does not receive sanction to be implemented, or is otherwise not implemented, then sufficient evidence may be able to be obtained from a detailed implementation plan and a simulated implementation.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or practical, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements

MSMOPS401 Trial new process or product

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS401A Trial new process or product

Application

This unit of competency covers the skills and knowledge required to take a lead technical role in the trialling of a new or significantly altered product or process. The new/changed product/process has been independently developed and its development is not part of this unit.

The unit of competency applies to a person in a technician role in a plant or a similar role. The technician is expected already to be a technical expert in that part of the plant/process where the trial is being conducted and be able to operate and control all equipment required for the trial. The technician is often the most technically competent member of an operational team. As such, they may not have the 'hands on' role of operating items of equipment; but they are required to have the competence to direct the operation of equipment as appropriate throughout the trial.

Typically the technician will be part of a team during the trial and will work in conjunction with a process/product development expert, such as a chemist or engineer and liaise and cooperate with other members of the team.

Trialling refers to the scale-up and other development steps required to take a new product or process from its design/laboratory trials to full commercial operation on a plant. Trialling may be done on a pilot plant where available and/or on a full scale plant.

This unit of competency does not apply to minor modifications to existing products or processes. Similarly it does not apply to a technician or operator taking part in such trials and/or who is simply following directions from a technician, chemist, engineer, supervisor or manager.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Operations

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Contribute to the selection of equipment/ process conditions	1.1	Liaise with appropriate technical experts
		1.2	Interpret properties of materials and desired product characteristics
		1.3	Interpret technical specifications/drawings of plant requirements
		1.4	Recommend equipment/ancillary equipment appropriate for the materials, products and conditions
		1.5	Recommend process conditions appropriate for the equipment, materials and product characteristics
		1.6	Recommend feed rates/order/condition appropriate to the process conditions, equipment, materials and product characteristics
		1.7	Ensure hazard identification and analysis procedures are completed, including consultation with stakeholders, and findings included in plan
		1.8	Ensure recommendations meet the identified need
2	Prepare for trials	2.1	Determine the availability of resources required, such as materials, equipment, people and skills
		2.2	Estimate time required for trial
		2.3	Liaise with relevant stakeholders
		2.4	Schedule trial at a convenient time

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.5	Develop documentation for the trial
		2.6	Identify potential hazards and required hazard control procedures by applying the hierarchy of control
		2.7	Determine permit and other authorisation requirements and special safety and storage requirements
		2.8	Verify decisions with appropriate experts/stakeholders
		2.9	Ensure people with adequate skills are available for the trial
3	Conduct trials	3.1	Ensure hazard controls are implemented prior to commencement
		3.2	Run trials
		3.3	Maintain communication with all relevant personnel
		3.4	Closely monitor critical parameters
		3.5	Recognise actual and potential problems
		3.6	Make adjustments to process conditions as required during trial
		3.7	Sample and test product as required
		3.8	Record and report performance data
		3.9	Ensure all materials, products and waste are handled correctly
		3.10	Leave plant in a condition suitable for routine production to recommence
4	Evaluate results and identify modifications	4.1	Interpret data from trial
		4.2	Identify factors which might be related to low rates or low charge amounts
		4.3	Recommend modifications and improvements required
		4.4	Develop and check standard operating procedures (SOPs)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.5 Complete documentation and report to appropriate personnel

4.6 Ensure all relevant staff have required skill levels for the introduction of the new process

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- emergency procedures
- work instructions
- SOPs
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Technical experts

Technical experts include one or more of the following:

- manufacturers
- chemists
- engineering personnel
- designers
- WHS advisors
- maintenance personnel
- potential customers

Non-routine problems

Routine problems must be resolved by applying known solutions.

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts, to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems are unexpected problems, or variations of previous problems and include one or more of the following:

- mixing is poor
- materials do not behave as expected
- process/reaction does not proceed/proceeds too slowly
- process/reaction proceeds too quickly/runs away
- yield is low
- quality is out of specification
- process is unstable
- instrumentation is not sufficiently sensitive/too sensitive

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- variable catalyst activity
- surging flow/pressure

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Hazard analysis procedures

Hazard analysis procedures must be undertaken, however, it is not required that the candidate conducts the procedures. Hazard analysis procedures include one or more of the following:

- job safety analysis (JSA)/job hazard analysis (JHA)
- hazard and operability (HAZOP) studies
- hazard analysis (HAZAN) studies
- similar company specified procedures

Assessment Requirements for MSMOPS401 Trial new process or product

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS401A Trial new process or product

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- analyse technical information from a range of sources
- determine recommendations for new process or product, including:
  - materials
  - equipment
  - process and process conditions
  - required variations in process variables
- plan the trials
- conduct trials
- communicate and liaise with people at a range of levels about technical matters
- write technical documentation, including specifications and procedures required for the trial
- ensure formal hazard analysis procedures are undertaken
- recognise early warning signs of equipment/processes or potential problems needing attention
- isolate the causes of problems to an item of equipment within the plant system
- identify any additional skills needs.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures
- relevant technical theory of the plant area
- chemistry and/or physics and/or biology/biochemistry relevant to changes to materials during processing
- effects of variations in process conditions and materials
- routine and non-routine problems that may arise, the range of possible causes and processes to develop solutions
- methods of changing rate and the advantages and disadvantages of each
- methods of controlling other process variables and the advantages and disadvantages of each.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- The trial may, or may not be a success.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible or practical, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent, process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPER200 Work in accordance with an issued permit

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER200C Work in accordance with an issued permit

Application

This unit of competency covers the skills and knowledge required to work in accordance with an issued permit. It aims to ensure that people working under a permit to work understand the system, know the limitations of the permit under which they are working and comply with all the requirements of the permit. The people to whom this unit applies may be called 'permit recipients' or 'permit holders' by some organisations. Some organisations call 'permits' 'clearances'.

This unit of competency applies to persons who are required to conduct work activities under the authority of an issued permit to work and within the context and requirements of that permit. This typically applies to all work done by maintenance staff and contractors and also to any other non-process work performed on the plant.

This unit of competency applies to an individual working alone or as part of a team/work group and working in liaison with other team members, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Work Control Systems

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes	Performance criteria describe the performance needed to demonstrate achievement of the element

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Apply for permit**	1.1	Confirm the scope and location of the work to be done
		1.2	Identify the need for a work permit for the work to be carried out
		1.3	Identify the type of work permit required
		1.4	Collate information required for the issue of the permit
		1.5	Apply for the permit following the organisation's requirements
2	**Identify the scope of the permit**	2.1	Check that work to be done complies with the permit type
		2.2	Check that the scope and location of work comply with the permit issued
		2.3	Identify hazards and check that the hazard controls specified on the permit are consistent with the hazard analysis
		2.4	Check that preparations specified on the permit have been completed
		2.5	Sign onto/receive the permit
3	**Prepare for permitted work**	3.1	Maintain safe working conditions and environment by using available isolation procedures and safety equipment
		3.2	Monitor plant conditions and hazards to ensure work under the permit remains safe
		3.3	Ensure that appropriate personal protective equipment (PPE) is selected and worn, and emergency equipment is available, as required by the permit and relevant procedures
		3.4	Inspect work area to ensure safety and compliance with permit requirements and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	**Work in accordance with an issued permit**	4.1	Use required hazard reduction/control measures
		4.2	Comply with requirements of the permit, including safety observer if required
		4.3	Display issued permit on work site as required
		4.4	Ensure compliance with scope, location and timeframe specified in the permit.
		4.5	Seek variation to permit/new permit if job or work environment vary from that specified in the permit
		4.6	Suspend job and make worksite safe before leaving job
		4.7	Formally seek and receive authorised extensions to the permit when required
		4.8	Give end-of-day status report to permit issuer
5	**Complete permit to work**	5.1	Obtain new permit or have existing permit revalidated before work is recommenced
		5.2	Check the work conducted against the issued permit to ensure that all the nominated work requirements have been satisfied
		5.3	Monitor general housekeeping to ensure that the site has been left in a clean and safe condition
		5.4	Ensure personal lock outs/tag outs/isolations are removed in accordance with procedures
		5.5	Communicate status of the work conducted and the results of the permit to relevant personnel
		5.6	Complete documentation as required and have permit signed off when job is completed

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided

Work permits

Work permits include one or more of the following:

- cold work/general permit to work
- excavation
- hot work
- vehicle entry
- minor repairs
- working at heights
- confined space entry
- other special permits where there is an appropriate sign-off as required

Information required for

Information required for the issue of the permit includes one or more of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

permit

the following:

- work description
- tools to be used
- process/methods of work/SOPs

Where hazardous materials are being used relevant material safety data sheets (MSDS) will also be required.

Hazards

Hazards include one or more of the following:

- slips and trips
- emergency equipment is unavailable
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- work where a fall by a person from one level to another is reasonably likely to cause injury
- working in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- spills or leaks
- extreme weather
- other hazards that might arise
- unsafe conditions developing through failure to conform with the provisions of a work permit
- hazards created by the nature or location of the work
- hazards created by the proximity of the work to other work or normal operations

Display issued

The permit holder must keep the issued permit with them on site. It must

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

permit	be displayed or ready to be shown as required by the site/job requirements, including one or more of the following: • displayed in a mounting provided by the site • accessible in a folder which is on the worksite • carried in overall pockets in a manner which allows it to be readily shown on request

Assessment Requirements for MSMPER200 Work in accordance with an issued permit

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER200C Work in accordance with an issued permit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria, and demonstrate the ability to:

- identify type and scope of permit relevant to the job
- interpret and implement permit conditions
- identify changes to conditions which may lead to the permit being revoked before the job is completed
- monitor hazards and hazard controls.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- different types of permits and the work they cover, including three (3) or more of:
  - cold work/general permit to work
  - excavation
  - hot work
  - vehicle entry
  - minor repairs
  - working at heights
  - confined space entry
  - other permit types as used on site
- the impact of the regulatory framework and organisation procedures under which the permit operates upon the particular job requiring the permit
- hazards associated with tasks covered by the permit and related hazard controls
- types of tests/inspections required for the issue of work permits including one (1) or more of:
  - atmospheric, oxygen/breathability
  - temperature
  - humidity
  - combustibles, oxygen, enriched or reduced
  - electricity
  - stored pressure/energy

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- flammability/explosivity
- toxicity
- electricity
- stored energy/pressure.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job, appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPER201 Monitor and control work permits

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER201A Monitor and control work permits

Application

This unit of competency covers the skills and knowledge required to monitor a work situation in which the activity is conducted under a permit to work. The individual will be required to monitor the work situation for conformance to the permit and immediately intervene if the parameters of the permit are not met or work proceeds outside the boundaries set by the permit.

This role is typically carried out by the plant operator for that area or other suitably qualified person.

The role of ‘hole watcher’ and ‘fire watcher’ are covered by MSMPER202 Observe permit work

This unit of competency carries a high level of responsibility and the level and area of responsibility of the role is typically prescribed by the permit process.

This unit of competency applies to the activities and functions associated with work carried out in a hazard controlled environment.

Not all sites/plants will have all permits. Some sites will call permits by other names, e.g. clearances.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify and monitor permit conditions	1.1	Identify permit requirements
		1.2	Monitor conditions to ensure that the work being conducted conforms to the issued permit requirements
		1.3	Identify and communicate changes in the operating conditions or requirements of the permit to permit holders to ensure they are kept aware of any hazards
2	Control work permit systems	2.1	Check and verify the permit holder's knowledge of the issued permit and its requirements before allowing any work to be undertaken
		2.2	Control work activities to comply with the work permit system and safety procedures
		2.3	Undertake site inspections to ensure that the work to be undertaken is in sequence and completed in a safe and coordinated manner
		2.4	Identify hazards, and confirm with those undertaking the permitted work that control measures, as defined in the permit, are established
3	Identify and action non-compliance	3.1	Identify conditions of active permits
		3.2	Take corrective action upon incidences of non-compliance with permit conditions through the withdrawal or suspension of the issued permit
		3.3	Report and record incidents of non-compliance according to procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4	Confirm compliance with permit	4.1	Complete checklists in accordance with standard procedures
		4.2	Document and communicate findings to appropriate personnel

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirement
- Dangerous Goods regulations
- Hazardous substances regulations
- Hazardous Substances Information System
- Major hazard facility requirements, if relevant
- Australian Standard AS 2865-2009 Confined spaces
- Australian Standard AS 1674 Set-2007 Safety in welding and allied processes (covers all hot work)
- Australian Standard AS 4024.1-2014 Series - Safety of machinery
- Australian Standard AS/NZ 1715:2009 Selection use and maintenance of respiratory protective equipment
- National Standard for Plant [NOHSC:1010 (1994)]
- National exposure standards for atmospheric contaminants in the

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

occupational environment [NOHSC:1003 (1995)]

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- permit control system
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Work permits

Work permits include one or more of the following:

- cold work
- excavation
- vehicle entry
- minor repairs
- working at heights
- hot work
- confined space
- electrical
- increased hazard
- permits covering a single plant item or plant area, such as might be an operator's scope of responsibility
- other relevant permits

The work control (permit) system

The work permit system includes:

- types of permits
- legislative/regulatory/standards framework
- roles and responsibilities of parties under the permit system
- specifications for undertaking the work covered by a permit
- alternative ways of conducting a job

Work

Work specifications include one or more of the following:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

specifications

- any requirements for testing of atmospheric conditions and ventilation
- safety structures and control measures
- communications
- incident response
- equipment which can and cannot be used

Safety structures and control measures

Safety structures and control measures include one or more of the following:

- isolations
- lockout/tag out
- barriers and signage
- emergency response
- gas testing/atmosphere monitoring
- standby person
- other measures specified in the permit

Monitor

Monitor includes observing conditions of the workplace at a frequency appropriate to the risk and work practices, and includes one or more of the following:

- supervision/monitoring of contractors and/or employees
- verification of permits, licences and tests
- document control
- checking work activities against permit conditions, site-specific safety procedures and requirements and relevant legislation/codes
- identifying non-compliances
-

Tools and equipment

Tools and equipment include one or more of the following:

- locks and tags
- blinds/blanks
- blind/blank list
- gas testers and monitors
- barricades
- signage
- communications equipment
- process and equipment drawings
-

Hazards

Hazards include one or more of:

- process isolations incomplete

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- mechanical and electrical isolations not in place
- atmospheric testing incomplete and atmosphere not safe
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working where a fall is reasonably likely, in restricted or confined spaces, or in environments subjected to heat, noise, dusts, smoke, darkness, vapours or other atmospheric hazards
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Assessment Requirements for MSMPER201 Monitor and control work permits

Modification History

Release 1. Supersedes and is equivalent to MSAPMPER201A Monitor and control work permits

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- identify activities requiring a permit and type of permit required
- monitor the conditions of work under the permit
- identify changes in work and site circumstances that affect permit
- communicate effectively with team/work group and other personnel to:
  - explain the requirements of the permit
  - explain and verify complex issues and requirements relevant to permit conditions
  - withdraw or cause work to cease outside permit conditions
  - explain and implement safety and incident response procedures
- identify and report any non-conformance with permit conditions
- speak clearly and unambiguously in the language of the worksite
- complete workplace forms and reports
- differentiate between acceptable and unacceptable conditions

identify hazards and apply relevant hazard controls.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - work permit systems
  - safety, emergency and hazard control
  - incident response
  - plant isolation and preparation requirements
  - relevant organisation procedures
- hazards that may arise in the job and plant, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
- functions and components of a permit system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- types of permits, what they cover, limitations and associated hazards.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - must include the use of typical permits
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPER300 Issue work permits

Modification History

Release 2. Addition of information missing from the Assessment Requirements. Equivalent.

Release 1. Supersedes and is equivalent to MSAPMPER300C Issue work permits

Application

This unit of competency covers the skills and knowledge required to issue work permits. It covers an understanding of the permit system and the limitations of each permit, and making decisions regarding the need for and correct use of each permit. This unit includes the issue of any and all permits. Permits are called ‘clearances’ by some organisations.

This unit of competency applies to personnel who are required to issue appropriate permits to work to persons conducting a variety of activities in workplace environments in which hazards exist or specific procedures need to be followed and monitored to protect the safety of personnel and the integrity of plant or process.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

MSMWHS201 Conduct hazard analysis

Competency Field

Work control systems

Unit Sector

Elements and Performance Criteria

Elements describe the Performance criteria describe the performance needed to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

essential outcomes		demonstrate achievement of the element	
1	Identify need for work permit	1.1	Identify work permit needed from job scope
		1.2	Confirm with appropriate personnel the need for work permit
2	Ensure job site is prepared for authorised work	2.1	Inspect the job site
		2.2	Identify work health and safety (WHS) and environmental requirements
		2.3	Conduct hazard identification and risk assessment
		2.4	Ensure job site is prepared in accordance with specified work permit conditions
		2.5	Check permit conditions and report to appropriate personnel
		2.6	Conduct job site testing in accordance with procedures
3	Raise and issue work permits	3.1	Ensure conditions are documented on permit
		3.2	Ensure appropriate testing is carried out and results documented in accordance with procedures
		3.3	Determine an appropriate validity period
		3.4	Check that permit conditions are met (i.e. validate permit)
		3.5	Complete and authorise permit
		3.6	Ensure recipient is advised of and agrees to abide by the requirements of the permit
		3.7	Ensure recipient signs permit
4	Monitor work for compliance	4.1	Ensure regular job site inspections are done
		4.2	Monitor conditions and work progress and respond

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			appropriately to changing conditions and circumstances
		4.3	Ensure permit currency and revalidate as required
		4.4	Ensure permit is displayed in accordance with procedures
		4.5	Identify and act on incidences of non-compliance and report promptly to relevant personnel
		4.6	Withdraw/cancel permit if conditions warrant it
		4.7	Report any issues which arise with regard to work under the permit in accordance with procedures
5	Receive end of day report	5.1	Receive end of day report from permit recipients
		5.2	Confirm job progress and status.
		5.3	Revalidate/arrange for revalidation of permit as required
		5.4	Confirm work area has been left safe
		5.5	Handover ongoing permits and status of suspended permits to oncoming shift
6	Close work permit	6.1	Inspect job status
		6.2	Check that work undertaken satisfies permit conditions
		6.3	Ensure that work site is ready for a safe return to working conditions
		6.4	Check required returns to work status have been completed
		6.5	Sign off documentation and close permit in accordance with procedures
		6.6	Communicate worksite and process status to relevant personnel

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- Dangerous Goods regulations
- Hazardous substances regulations
- Hazardous Substances Information System
- Australian Standard AS 2865 2009 Confined spaces
- Australian Standard AS 1674 Set-2007, Safety in welding and allied processes (covers all hot work)
- Australian Standard AS 4024.1-2014 Series - Safety of machinery
- Australian Standard AS/NZ 1715:2009 Selection use and maintenance of respiratory protective equipment
- National Standard for Plant [NOHSC:1010 (1994)]
- National exposure standards for atmospheric contaminants in the occupational environment [NOHSC:1003 (1995)]

Procedures

All operations are must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- company policy and permit control systems

Work permits

Work permits include one or more of the following:

- cold work
- excavation
- vehicle entry
- minor repairs
- working at heights
- hot work
- confined space
- electrical
- increased hazard
- permits covering a single plant or plant area, such as might be an operator's scope of responsibility
- other relevant permits

The work permit system

The work permit system includes:

- types of permits
- legislative/regulatory/standards framework
- roles and responsibilities of parties under the permit system
- specifications for undertaking the work covered by a permit
- alternative ways of conducting a job

Work specifications

Work specifications include:

- any requirements for testing of atmospheric conditions and ventilation
- safety structures and control measures
- communication
- incident response
- equipment which can and cannot be used

Safety structures and control measures

Safety structures and control measures include one or more of the following:

- isolations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- lockout/tag out
- barriers and signage
- emergency response
- gas testing/atmosphere monitoring
- standby person
- other measures specified in the permit

Confined space

AS 2865 2009 Confined spaces definition given for confined space is used in this Training Package, i.e.:

'An enclosed or partially enclosed space that is not intended or designed primarily for human occupancy, within which there is a risk of one or more of the following:

(a) An oxygen concentration outside the safe oxygen range

(b) A concentration of airborne contaminant that may cause impairment, loss of consciousness or asphyxiation

(c) A concentration of flammable airborne contaminant that may cause injury from fire or explosion

(d) Engulfment in a stored free-flowing solid or a rising level of liquid that may cause suffocation or drowning'

Hot work

Hot work includes:

- any activity which has the potential to be or cause a source of ignition

Hazards

Hazards include one or more of the following:

- slip/trip hazards
- PPE unavailable and not functional
- emergency equipment unavailable
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment in unsafe condition with hazard controls not functional
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions, swarf and scrap
- spills or leaks
- extreme weather
- unsafe conditions developing through failure to conform with the provisions of a work permit
- hazards created by the nature or location of the work
- hazards created by the proximity of the work to other work or normal operations
- other hazards that might arise

Unit Mapping Information

Assessment Requirements for MSMPER300 Issue work permits

Modification History

Release 2. Addition of information missing from the Assessment Requirements. Equivalent.

Release 1. Supersedes and is equivalent to MSAPMPER300C Issue work permits

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and demonstrate the ability to:

- recognise types of work permits required for different situations
- undertake and interpret hazard analysis
- conduct and interpret tests/inspections for gas or other hazards, including one or more of:
  - atmospheric, including explosivity
  - flammability
  - toxicity
  - temperature
  - humidity
  - combustibles, oxygen, enriched or reduced
  - electricity
  - stored pressure/energy
- ensure correct preparation of worksite is undertaken, including one or more of:
  - mechanical, electrical and other energy sources, and process isolations
  - de-energising all sources of energy/pressure
  - purging of plant
  - ventilation of plant
  - lockout/tag out procedures
  - blinding/blanking lines
  - other hazard controls
- ensure supervision/monitoring of people working under the permit
- speak clearly and unambiguously in the language of the worksite.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the organisation's work control system
- types of permits and their application
- hazards of the area for which permit is being issued

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- hazards that may be created by the interactions of the permit, the job, the process and the plant area
- focus of operation of work systems and equipment.

Assessment Conditions

- Competency must be achieved before performing this work unsupervised. Therefore this unit will typically be assessed off the job. Where assessment is undertaken on the job appropriate supervision and safety precautions must be provided.
- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
- should provide evidence of the ability to perform over the range of situations which might be expected to be encountered, including typical disruptions to normal, smooth work conditions
  - will require the issuing of example permits for realistic case study situations
  - may use industry-based simulation particularly where safety, lack of opportunity or significant cost is an issue.
- Off-the-job assessment must sufficiently reflect realistic operational workplace conditions that cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - demonstration of skills
  - industry based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMPMC400 Carry out stock control

Modification History

Release 1. New unit. Supersedes and is equivalent to PMC563081 Carry out stock control

Application

This unit describes the skills and knowledge required to carry out stock control. It applies to stock held in a store, warehouse or locally in the plant.

This unit applies to experienced operators, leading hands, supervisors or those in similar roles who are required to monitor stock levels, reconcile stock with inventory data and liaise with suppliers. Operators use a broad range of specialised knowledge and skills to interpret and provide information; identify and resolve problems and communicate technical solutions and advice.

This unit applies to an individual working alone or as part of a team or group and in liaison with other shift team members, team leader and supervisor.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Elements and Performance Criteria

Elements	**Performance Criteria**
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Monitor stock reordering	1.1 Monitor stock levels and maintain them at optimum levels 1.2 Adjust stock reorder levels in response to customer demand

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements	Performance Criteria
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	1.3 Receive stock and report quality and quantity variations of delivered goods to suppliers 1.4 Identify and use alternative suppliers which meet required quality and safety standards when required 1.5 Reorder stock in compliance with procedures
2. Maintain inventory records systems	2.1 Maintain accurate records of the storage and the movement of stock 2.2 Identify, and act upon, stock discrepancies 2.3 Ensure minimum inconvenience to customers resulting from stock movements
3. Undertake stocktaking and cyclical counts	3.1 Coordinate stocktaking and cyclical counts 3.2 Reconcile inventory data with actual stock on hand 3.3 Report stock variations or shortages 3.4 Identify missing or damaged stock and report
4. Respond to problems	4.1 Identify possible problems in stock levels, storage, quantity and quality if stock, timeliness of supplies and production issues 4.2 Rectify problems using appropriate solution within area of responsibility 4.3 Report problems outside area of responsibility to designated person
5. Control hazards	5.1 Identify stock control hazards 5.2 Assess the risks arising from those hazards 5.3 Implement measures to control those risks

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MSMPMC400 Carry out stock control

Modification History

Release 1. New unit. Supersedes and is equivalent to PMC563081 Carry out stock control

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- carried out stock control for at least 1 store, warehouse or plant, including monitoring the following key variables:
  - production requirements
  - stock levels
  - reorder levels
  - quantity and quality of deliveries
  - supplier contracts
  - stock condition
- identified discrepancies in stock quantities and/or quality.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- methods of monitoring production requirements and stock availability
- effective inventory management techniques to meet production requirements
- supplier contractual requirements
- stock control, stocktaking and cycle counting techniques
- optimum stock levels and relationship with cost
- methods of identifying and rectifying variations to quality and quantity of delivered goods
- methods and criteria for sourcing alternative suppliers
- routine and non-routine problems that may arise, the range of possible causes and appropriate actions
- stock control hazards and:
  - their possible causes
  - potential consequences
  - risk control procedures.
  -

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies, as well as, using suitable facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSMSUP303 Identify equipment faults

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP303A Identify equipment faults

Application

This unit of competency covers the skills and knowledge required to plan and carry out checks to identify and deal with equipment faults and to determine solutions.

This unit of competency applies to experienced personnel, such as experienced operators, team leaders or supervisors, who are required to apply knowledge of materials, product purpose and processes to identify and deal with routine and non-routine faults in equipment, propose solutions, carry out solutions within scope of authority and competence and complete logs and reports.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments and sectors within the industry. It does not include maintenance that would require trade-level skills. It is not intended that this competency would cover maintenance that is carried out in a workshop.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify scope of operational check	1.1	Identify and classify equipment components and operating systems
		1.2	Match appropriate checks and procedures to the equipment operating systems
		1.3	Identify special checking procedures and parameters in manufacturer specifications and procedures
		1.4	Identify sources of information and data relevant to key variables
		1.5	Identify and control hazards
		1.6	Observe and undertake checks on the physical condition of equipment in accordance with procedures
		1.7	Record preliminary observations
		1.8	Discuss checking procedures with appropriate personnel and obtain necessary permission where required
2	Plan operational checks	2.1	Check specifications and notes from preliminary observations and identify areas to be clarified
		2.2	Plan sequence for checks, noting areas where results and observations should be recorded
		2.3	Ensure area is safe for operational check
		2.4	Make arrangements for any additional resources, including other employees
3	Check unit through full	3.1	Undertake operational checks observing relevant safety and operational requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	operational range	3.2	Confirm results and findings
		3.3	Identify faults to be dealt with
4	Identify faults and formulate recommendations	4.1	Identify impact of faults on work schedule
		4.2	Record proposals for equipment repair based on faults found, cost/time implications and workplace approval systems
		4.3	Explain proposals to relevant workplace personnel, including any options and recommendations
		4.4	Take appropriate action to return equipment to full operation in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- plant description manuals
- manufacturer instructions and specifications
- service manuals
- machine circuit diagrams for hydraulic/pneumatic and electrical/electronic circuits
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- hand tools specific for the task
- product testing equipment (e.g. flowmeter, scales, tape measure, micrometer, calliper and ultrasonic thickness)
- equipment checking equipment (e.g. vibration meter, tachometer, current tester, thermal imaging and temperature gauge)

Hazards

Hazards include one or more of the following:

- rotating and moving machinery
- process materials, solids, fluids and gases under pressure or flowing
- temporary connections or by-passes
- electrical, hydraulic or pneumatic energy sources
- out-of-specification operation
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Faults

Faults may arise from routine and non-routine causes and must be resolved by applying operational knowledge to apply existing, or develop new solutions, either individually or in collaboration with relevant experts to:

- determine faults needing action
- determine possible fault causes
- develop solutions to faults which do not have a known solution
- follow through items initiated until final resolution has occurred
- report faults outside area of responsibility/expertise to designated person

Non-routine faults are unexpected faults, or variations of previous faults and are associated with one or more of the following:

- out-of-specification product or variations
- response of equipment to materials variations
- new or changed materials
- changed equipment settings (e.g. higher speed or throughput)
- equipment breakdown or in need of maintenance

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information such as journals, engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Variables

Key variables to be monitored include one or more of the following:

- equipment performance (e.g. speed, output and variations)
- equipment component performance
- sequences and timing of operations
- materials changes (desired and not desired)

Sources of information and data

Sources of information and data include one or more of the following:

- plant data
- log sheets
- operational and performance reports
- physical aspects, such as noise, smell, feel and pressure condition monitoring information
- planned maintenance schedules
- procedures

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSAPMSUP303A Identify equipment faults

Assessment Requirements for MSMSUP303 Identify equipment faults

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP303A Identify equipment faults

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- check and identify a fault within an item of equipment/plant
- ensure workplace is safe for checking and maintenance of equipment
- communicate effectively with personnel and all levels
- evaluate the impact of fault in terms of work schedule, cost/time and approvals needed and make recommendations for repairs
- apply operational knowledge to non-routine problems
- take appropriate action within scope of authority in accordance with procedures.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures, including:
  - work permit systems
  - safety, emergency and hazard control
  - standard operating procedures (SOPs)
- hazards that may arise in the job/work environment, including:
- their possible causes
- potential consequences
- appropriate risk controls/ hierarchy of control
- principles of the operation of the equipment to be maintained:
  - operating principles for mechanical, hydraulic, pneumatic and electrical/electronic systems
  - functions and troubleshooting of internal components and their problems
  - routine and non-routine causes of equipment failures and the service conditions which may increase maintenance
- types and application of testing procedures and equipment.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations
  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP310 Contribute to the development of workplace documentation

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP310A Contribute to the development of plant documentation

Application

This unit of competency covers the skills and knowledge required to develop workplace documentation in response to identified information requirements. Develop covers ‘develop from scratch’ or ‘take existing and improve’.

This unit of competency applies to experienced operators, leading hands, supervisors and similar personnel who are required to determine what needs to be done, develop the existing or new workplace documentation and apply document control.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other team members as appropriate.

This unit of competency applies to all work environments and sectors within the industry.

Work is governed by established workplace procedures, and extent of authority for drafting/document approval.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify information need/ deficiency	1.1	Determine the information needs of the organisation
		1.2	Evaluate current documentation
		1.3	Recognise information need/deficiency
		1.4	Discuss information needs with appropriate personnel
		1.5	Identify purpose of, and target audience for, documentation
2	Develop workplace documentation	2.1	Specify information need and set/prioritise objectives
		2.2	Analyse existing documentation/records for compliance with identified needs
		2.3	Develop draft documentation in required format
		2.4	Issue draft documentation to appropriate personnel for review
		2.5	Edit documentation and amend in accordance with review feedback
		2.6	Complete documentation to satisfy the initial identified need/deficiency
		2.7	Check document complies with required template and document control procedures
3	Communicate changes to workplace documentation	3.1	Explain need for revised/new documentation to all relevant personnel
		3.2	Distribute documentation to all appropriate personnel
		3.3	Evaluate effectiveness of documentation.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.4 Amend documentation if required

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- document control procedures and style sheets
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Documentation Documentation includes one or more of the following:

- maintenance logs
- non-compliance reports
- incidence and accident reports
- permits
- schematics/process flows/engineering drawings
- job cards
- SOPs
- work instructions
- operating manuals
- quality procedures
- training program contents
- material safety data sheets (MSDS)

Assessment Requirements for MSMSUP310 Contribute to the development of workplace documentation

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP310A Contribute to the development of plant documentation

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- communicate with other personnel to:
  - determine the need for and purpose of documentation development and/or amendment
  - identify specifications and format to be used
  - identify target audience
  - communicate and evaluate changes to documentation
- identify and evaluate current documentation
- convey information clearly and concisely in writing using language and structure suitable for the purpose and target audience
- apply procedures for drafting, review and revision of documentation
- apply document control.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisational procedures, including those covering:
  - data systems and data security
  - record keeping
  - privacy
  - intellectual property (IP)
  - document control and approvals
  - style guides and standards for documentation
  - use of internet
  - relevant standard operating procedures (SOPs)
- writing styles, including:
  - plain or technical English
  - short/simple sentences, or well developed arguments
  - dot points or use of paragraphs
  - appropriate inclusion of graphics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- sections and headings or other navigational tools
- logical sequencing of information
- distinguishing between relevant and peripheral issues
- planning, drafting and editing own work.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from work activities, which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible or practical assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment may use industry-based simulation for all or part of the unit where the use of real experience is not practicable.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP330 Develop and adjust a production schedule

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP330A Develop and adjust a production schedule

Application

This unit of competency covers the skills and knowledge required to plan, schedule and prioritise production to meet operational requirements.

This unit of competency applies to experienced operators, team leaders or similar who are required to optimise plant production and costs of production using daily and weekly run plan guidelines/production schedules.

The person will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments and sectors within the industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify resources to meet production requirements	1.1	Determine demand for product
		1.2	Access and verify information on orders, stocks and delivery
		1.3	Determine plant/production equipment capacity
		1.4	Determine material requirements
		1.5	Determine human resource requirements
		1.6	Identify and control hazards
2	Develop schedules	2.1	Determine production priorities
		2.2	Identify production opportunities ('windows')
		2.3	Develop production schedules in accordance with procedures taking account of health, safety and environment (HSE) requirements
		2.4	Communicate and distribute production schedules to appropriate personnel
3	Monitor production schedules	3.1	Monitor production output against schedule
		3.2	Identify variations between production and schedule
		3.3	Record operational variation and discuss with appropriate personnel
		3.4	Identify possible cause of variation
4	Adjust schedules	4.1	Adjust schedules in response to operational variation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.2 Adjust schedules in response to unexpected events

4.3 Distribute adjusted/amended schedules to appropriate personnel

4.4 Maintain product output in accordance with production and HSE requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Assessment Requirements for MSMSUP330 Develop and adjust a production schedule

Modification History

Release 1. Supersedes and is equivalent to MSAPMSUP330A Develop and adjust a production schedule

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- identify production objectives, priorities, targets and resource requirements
- plan, sequence and schedule production taking account of health, safety and environment (HSE) priorities
- monitor and adjust schedules in response to operational variations
- communicate effectively with other personnel.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- organisation procedures
- hazards that may arise in the job/work environment, including:
  - their possible causes
  - potential consequences
  - appropriate risk controls
  - hierarchy of control
- customer and quality requirements
- routine and non-routine causes of production variation
- relevant equipment and operational processes
- types of adjustments that can be made and their likely impact on process/plant efficiencies and production outcomes/targets.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems
  - may use industry-based simulation for all or part of the unit particularly where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMSUP390 Use structured problem-solving tools

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed.

Release 1. Supersedes and is equivalent to MSAPMSUP390A Use structured problem-solving tools.

Application

This unit describes the skills and knowledge required to use structured process improvement tools to solve process and other problems. It describes the broad application of in-depth and rigorous structured problem-solving techniques to identify opportunities for improvement.

This unit applies to experienced operators, team leaders, supervisors or people in similar roles who are required to identify improvements and/or solve problems beyond those associated directly with the process unit and/or equipment.

This unit applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all work environments.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Assessment Requirements for MSMSUP390 Use structured problem-solving tools

Modification History

Release 2. Equivalent. Minor edits for improved clarity. Range of conditions removed.

Release 1. Supersedes and is equivalent to MSAPMSUP390A Use structured problem-solving tools.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- identified at least 1 problem
- analysed problem using at least 1 analysis tool drawn from each of 2 different groups of tools (basic, visual, process, business and organisation specific)
- selected the preferred solution
- developed and used an implementation plan, that includes:
  - specific, measurable, achievable, relevant, timed (SMART) objectives
  - resource requirements
  - methods for reaching objectives
  - timelines
  - methods of checking and adjusting adherence to plan
- communicated effectively with other personnel.
-

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- relevant organisation procedures
- risks, risk assessment and controls relevant to problem being analysed
- targets and measures for output and quality
- types and application of problem-solving tools and analytical techniques
- relevant equipment and operational processes.
-

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies, as well as, using suitable facilities, equipment and resources.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSMSUP406 Identify faults in electronic control

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS406A Identify problems in electronic control

Application

This unit of competency covers the skills and knowledge required to recognise and diagnose control system faults in electrical/electronic control systems on process equipment. It includes the implementation of appropriate corrective action.

This unit of competency applies to technicians. The technician will be required to apply knowledge of electronic control systems and components to the identification and isolation of faults in equipment. The key factors are the diagnosis and the recommendation of action to resolve routine and non-routine faults, in order to return the equipment to production.

The operator will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

This unit of competency applies to all common equipment used in the manufacturing industry and should be able to be applied to all equipment using electrical/electronic control systems. It applies to all work environments and sectors within the manufacturing industry.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify electrical/electronic control system faults	1.1	Categorise the types of machine malfunctions due to electrical and/or electronic faults
		1.2	Describe the effects on product quality of electrical and/or electronic faults
		1.3	Identify possible faulty components from a circuit diagram and knowledge of the function of each component
2	Identify maintenance requirements	2.1	Determine recommended maintenance schedule from manufacturer instructions
		2.2	Determine adequacy of current maintenance regime and any special requirements from fault and maintenance history
		2.3	Determine criticality of machine to production and/or business
		2.4	Develop maintenance schedule and requirements for machine
		2.5	Liaise with all relevant stakeholders to ensure schedule is appropriate
		2.6	Report outcome to appropriate personnel
3	Determine appropriate corrective action	3.1	Examine other possible faults
		3.2	Short list possible fault causes
		3.3	Conduct investigations of machine, products or data to determine most likely fault causes
		3.4	Take appropriate action to ensure fault is rectified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.5 Follow up on action to ensure completion in an appropriate timeframe

3.6 Recheck after corrective action to ensure fault has been rectified

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- temporary instructions
- any similar instructions provided for the smooth running of the plant

Tools and equipment

Tools and equipment include one or more of the following:

- programmable logic controls (PLC) and ancillaries
- solid-state control/switching units
- switches, relays and solenoids
- position and pressure transducers
- temperature controllers

Hazards

Hazards include one or more of the following:

- electricity
- incorrect/failed connections
- insulation failure
- polarity of components
- gas
- equipment malfunction/failure
- industrial (machinery, equipment and product)
- noise, rotational equipment or vibration
- temperature from hot surfaces and equipment
- test equipment
- unauthorised personnel
- other hazards that might arise

Faults

Faults may arise from non-routine causes and must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine faults needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report faults outside area of responsibility to designated person

Non-routine faults are unexpected faults, or variations of previous faults and include one or more of the following:

- loss of flow, power
- power failure
- component malfunction

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- poor maintenance procedures
- regular maintenance
- shutdown
- motor failure effect on cycle time
- short shots
- loss of clamp pressure
- no power
- electronic/electrical faults
- analysis with PLC

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Unit Mapping Information

Assessment Requirements for MSMSUP406 Identify faults in electronic control

Modification History

Release 1. Supersedes and is equivalent to MSAPMOPS406A Identify problems in electronic control

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- recognise and analyse control system faults
- identify and select testing methods based on cost and time effectiveness
- identify and develop maintenance requirements
- propose solutions and carry out solutions within scope of authority
- apply operational knowledge to non-routine problems
- identify and implement corrective actions
- monitor process and equipment conditions.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- fundamentals of electricity and electronics
- electronic circuit diagrams
- principles of electronic circuit components
- principles of PLC programming, troubleshooting and diagnosis
- appropriate testing procedures and use of equipment for a range of equipment faults
- interaction of process conditions on product quality
- routine and non-routine causes of equipment failures and processes to develop solutions.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of an operating plant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report or other evidence, focusing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - may use industry-based simulation for part only of the unit where safety, lack of opportunity or significant cost is an issue.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from one or more of:
  - walk-throughs
  - pilot plant operation
  - demonstration of skills
  - industry-based case studies/scenarios
  - ‘what ifs’.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS201 Conduct hazard analysis

Modification History

Release 1 - New unit

Application

This unit of competency covers the skills and knowledge required to conduct a hazard analysis. These are typically called:

- job safety analysis (JSA)
- job hazard analysis (JHA)
- job safety and environmental analysis (JSEA)
- safe work method statement (SWMS)

It is not intended to apply to simpler routine hazard checks, such as ‘Take 5’, Step Back 5x5’, five step or similar.

This might be done as an independent activity in order to identify hazards and the appropriate hazard controls, or it might be done as part of a broader process, such as identifying and applying for the permits required for a job.

The conducting of a hazard analysis may be required under a safety case, by organisation procedures or simply as being good practice.

This unit of competency applies to an individual working alone or as part of a team or group and working in liaison with other shift team members and the control room operator, as appropriate.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Define the context for the hazard analysis	1.1	Identify the scope and purpose of the hazard analysis
		1.2	Access the relevant forms or procedures for conducting a hazard analysis
		1.3	Identify specialised knowledge which may be required to conduct the hazard analysis
2	Identify hazards	2.1	Find out job steps to be undertaken
		2.2	Identify hazards of job site
		2.3	Obtain specialised knowledge required
		2.4	Identify hazards for each job step
		2.5	Enter information into appropriate forms in accordance with procedures
3	Assess risks	3.1	Estimate the potential severity/consequence of each identified hazard
		3.2	Consider how hazards may cause harm
		3.3	Estimate the likelihood/possible frequency of harm
		3.4	Use the organisation’s risk matrix to prioritise each risk
		3.5	Enter information into appropriate forms in accordance with procedures
4	Control risks	4.1	Apply organisation’s risk control procedures
		4.2	Use the hierarchy of control so that risks are as low as reasonably practicable (ALARP)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		4.3	Specify risk controls
		4.4	Check the effectiveness of controls
		4.5	Identify residual risk and implement any additional controls required
		4.6	Enter information into appropriate forms in accordance with procedures.
5	Monitor and review risk controls	5.1	Monitor risk controls and review their effectiveness
		5.2	Keep records in accordance with procedures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements
- Dangerous Goods regulations
- Hazardous substances regulations
- Hazardous Substances Information System
- Major hazard facility requirements, if relevant

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- AS 2865-2009 Confined spaces
- AS 1674 Set-2007 Safety in welding and allied processes (covers all hot work)
- AS 4024.1-2014 Series - Safety of machinery
- AS/NZ 1715:2009 Selection use and maintenance of respiratory protective equipment
- National Standard for Plant [NOHSC:1010 (1994)]
- National exposure standards for atmospheric contaminants in the occupational environment [NOHSC:1003 (1995)]

Scope and purpose

The scope includes the unique identification of the plant items and/or work area which is the subject of the hazard analysis, and by default the adjoining plant/areas.

The purpose includes undertaking one or more of:

- a routine hazard analysis for a work area
- a hazard analysis for a specified job
- a hazard analysis as a precursor to issuing permits
- other purposes defined by organisation procedures

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- permit control system
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- incomplete process isolations
- mechanical and electrical isolations not in place
- atmospheric testing incomplete and atmosphere unsafe
- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- extreme weather
- other hazards that might arise

Specialised knowledge

Specialised knowledge includes information sourced from one or more of the following:

- the person doing the job
- an internal or external technical specialist
- a health and safety expert
- other operational personnel
- literature or internet information
- incident and other records
- risk register
- other knowledge resources of the organisation

Risk

Risk requires the consideration of the consequences of an event and one or both of:

- likelihood/probability
- expected frequency

Severity/consequence

The severity or consequence is typically interpreted against a scale ranging from minor (may require first aid, no lost time, no damage to plant or environment) through to major (may result in death,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

significant damage to plant or environment)

Harm from hazards Harm from hazards includes:

- exposure routes (ingestion, inhalation and skin/eye contact)
- chain of events (event/cause tree and bow tie)
- causal sequence which results in harm to persons, environment, plant or product

ALARP ALARP means as low as reasonably practicable and requires:

- identifying the risk reduction measures available
- determining the level of risk reduction that can be achieved and the associated cost
- implementing the risk reduction measure unless the cost is grossly disproportionate to the benefits of the risk reduction
- justifying available measures that are not taken

Unit Mapping Information

No equivalent unit.

Assessment Requirements for MSMWHS201 Conduct hazard analysis

Modification History

Release 1 - New unit

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- complete a hazard analysis
- specify risk controls to bring risks to ALARP
- identify relevant personnel
- complete appropriate hazard analysis forms (paper or electronic)
- monitor and review effectiveness of risk controls.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- the significance of the analysis context
- how the identified hazards may cause harm
- purpose and use of the risk matrix
- monitoring and review of risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a hazard analysis report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Where part of a broader role it may be conveniently co-assessed with units relevant to that broader job.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSMWHS401 Assess risk

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS401A Assess risk

Application

This unit of competency covers the skills and knowledge required to identify hazards and operability problems and then analyse them by hazard analysis techniques to assess risk.

This unit of competency is a specialist unit requiring technical knowledge and is suitable for plant technicians and people in similar roles.

A team with a broad knowledge of the system and its operation will carry out the analysis. It is expected that the risk assessment processes are already defined for the enterprise and that the risk acceptance criteria have already been established. The team will be steered by engineering experts or risk assessment specialists in the industry.

This unit of competency applies to workers who take an active role in a hazard and operability study (HAZOP) or similar methodology. They are not expected to lead the HAZOP. This unit is not restricted to HAZOPs and may be applied to other methodologies requiring similar competency. The risk assessment should be consistent with AS/NZS ISO 31000:2009 Risk management – Principles and guidelines.

Team members will contribute their understanding of the process and particularly the operational aspects, and then carry out whatever tasks are assigned to them by the analysis team.

The aim of this unit of competency is to apply a methodical examination of the system and its elements to identify hazards and the states or conditions where there may be loss of control of the hazard and the resultant consequences.

The technique can be applied at any stage of a project/process life cycle.

Although hazard identification should be the main focus, operability problems should be identified to the extent that they have the potential to lead to a breakdown in hazard controls resulting in a health, safety or environmental (HSE) violation or have a negative impact on profitability.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

This unit of competency applies to an individual working as part of a team or group.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Work health and safety

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes		Performance criteria describe the performance needed to demonstrate achievement of the element	
1	Identify hazards and potential operability problems	1.1	Contribute to the compiling of a system description of all the machinery, equipment, operations, products and materials relevant to the everyday working procedures of the facility
		1.2	Contribute to the compiling of a checklist containing process parameters (primary key words) and guide words (secondary key words) relevant to the system
		1.3	Identify hazards, existing control measures and potential operability problems or breakdowns in control measures using the compiled system descriptions and the checklist
2	Assess impact of risk and determine alternative strategies	2.1	Screen for causes of deviations and establish consequences
		2.2	Determine alternative strategies for action in relation to each deviation within the range of competency and responsibility
		2.3	Review, clarify and/or analyse risk information to determine its relevance and reliability depending upon

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			the task assigned, level of competency and area of responsibility
3	Assess risk information against established risk criteria in risk management plan	3.1	Check risk acceptance criteria for any changes over past period
		3.2	Compare risk information against risk acceptance criteria and procedures to assess acceptability of risk
		3.3	Liaise with other internal departments to assess impact on business, if applicable
		3.4	Document findings according to company policies and procedures
4	Develop a risk register	4.1	Develop a risk assessment chart for each system studied containing deviation, cause, consequence, control measures and action
		4.2	Develop action plan for implementation of control measures, including any changes to procedures
		4.3	Establish or review the procedures by consulting relevant/different work groups.
		4.4	Inform relevant work groups of any changes and implement, within area of responsibility, changes in the procedures
		4.5	Monitor effectiveness of the control measures, including revised procedures
5	Establish and maintain procedures for identifying hazards, and assessing and controlling risk	5.1	Identify and develop procedures for routine hazard identification, assessment and control of risks
		5.2	Address identification of all hazards at the planning, design and evaluation stages of any changes in the workplace to ensure that new hazards are not created by the proposed changes
		5.3	Develop and maintain procedures for selection and implementation of risk control measures in accordance with the hierarchy of control

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.4	Identify inadequacies in existing risk control measures in accordance with the hierarchy of control and, within area of responsibility, promptly provide resources enabling implementation of new measures

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, and include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- temporary instructions
- any similar instructions provided for the smooth running of the plant

Hazards

Hazards include one or more of the following:

- smoke, darkness and heat
- heat, smoke, dust or other atmospheric hazards
- electricity
- gas
- gases and liquids under pressure
- structural hazards
- structural collapse
- equipment failures
- industrial (machinery, equipment and product)
- equipment or product mass
- noise, rotational equipment or vibration
- limited head spaces or overhangs
- working at heights, in restricted or confined spaces, or in environments subjected to heat, noise, dusts or vapours
- fire and explosion
- flammability and explosivity
- hazardous products and materials
- unauthorised personnel
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- limited head spaces or overhangs
- extreme weather
- other hazards that might arise

Non-routine problems

Non-routine problems must be resolved by applying operational knowledge to develop new solutions, either individually or in collaboration with relevant experts to:

- determine problems needing action
- determine possible fault causes
- develop solutions to problems which do not have a known solution
- follow through items initiated until final resolution has occurred
- report problems outside area of responsibility to designated person

Non-routine problems include one or more of the following:

- incidents with a potential for injury

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- fires and explosions
- chemical spills
- bomb scares

Operational knowledge includes one or more of the following:

- procedures
- training
- technical information, such as journals and engineering specifications
- remembered experience
- relevant knowledge obtained from appropriate people

Risk assessment methodology

Risk assessment methodology must:

- enhance the understanding of risk and how it may be reduced
- permit the modelling and evaluation of a wide range of failure modes
- enable the analysis to be carried out in a manner that is auditable, repeatable and verifiable
- be usable by other staff
- be appropriate to the system operating in the given domain
- give valid results from the type and quantity of data that is available
- be appropriate for the particular life cycle phase at which it is to be applied
- be supported by standard proformas for the technique
- have a rational technical basis, typically through reference to national or international standards, Defence standards or published reference books

This is not restricted to HAZOP methodology; other methodologies requiring similar competency may be used.

Process parameters

Specific process parameters (primary key words) relevant to the system will include three (3) or more of:

- flow
- temperature
- pressure
- relief
- instrumentation
- sampling
- addition
- safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- reaction
- reduce (grind and crush)
- absorb
- isolate
- vent
- start-up
- composition
- phase
- level
- corrosion
- erosion
- services
- utilities
- maintenance/maintain
- inserting
- purging
- contamination
- separate (settle, filter and centrifuge)
- mix
- drain
- shutdown

Assessment Requirements for MSMWHS401 Assess risk

Modification History

Release 1. Supersedes and is equivalent to MSAPMOHS401A Assess risk

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and must include the ability to:

- apply a systematic risk assessment methodology
- identify and interpret information from a range of internal and external sources
- interpret hazard and probability data to determine risk profiles
- communicate with a range of stakeholders to:
  - identify risks and causes
  - identify consequences and assess impact of risks
  - plan and implement changes to procedures
- plan and implement control measures
- apply operational knowledge to non-routine problems
- monitor and evaluate outcomes of control measures and procedures and make improvements as appropriate
- document findings and complete reports.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- day-to-day operations of the facility, including:
  - machinery, equipment, operations, products and materials
  - process parameters (primary key words) and guide words (secondary key words)
  - workplace systems and the importance of critical procedures
- hazard identification and control measures
- how hazard controls may break down
- quantitative risk assessment, such as hazard analysis (HAZAN)
- risks and how they may be reduced
- key features of a systematic risk assessment methodology, including:
  - what makes it auditable, repeatable, verifiable and usable by other staff
  - how it can be used for modelling and evaluation of a wide range of failure modes
  - available data and how it can give valid results
  - its rational technical basis
- analysis systems appropriate to the system operating in the given domain and appropriate for the particular life cycle phase at which it is to be applied.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of having been a member of a HAZOP (or similar) team and meeting the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should occur in operational workplace situations. Where this is not possible, or where personal safety or environmental damage are limiting factors, assessment must occur in a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- As a minimum, assessors must satisfy the Standards for Registered Training Organisations 2015 assessor requirements.

MSS402002 Sustain process improvements

Modification History

Release 1. Supersedes and is equivalent to MSS402002A Sustain process improvements

Application

This unit of competency covers the skills and knowledge required by an individual to prevent process improvements in their own work from slipping back to former practices or digressing to less efficient practices.

This unit applies to organisations implementing competitive systems and practices and continuous improvement. It covers the skills needed to ensure that process improvements are sustained and opportunities taken to suggest further improvements.

Improvement initiatives can be made by any of a number of methods and by teams or individuals. The unit assumes that desired levels of performance or quality are known to employees.

The unit can be applied to all areas of an organisation, including production, maintenance, logistics and office functions.

This unit requires the application of skills associated with problem solving, initiative and enterprise and self-management in order to understand implement and monitor improvement practices. It also requires the ability to identify and address personal skill gaps in order to manage own ability to implement change.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Examine previous improvements**	1.1	Identify impact of previous process improvements to equipment, operations, services or products in own work area.
		1.2	Identify improvements where objectives have not been met.
2	**Implement corrective actions**	2.1	Identify corrective actions that can be taken by self on process improvements that have not met objectives.
		2.2	Obtain any required approvals.
		2.3	Identify any additional, personal skill gaps and seek skill development.
		2.4	Adopt improved processes.
3	**Check changes**	3.1	Identify claimed improvements.
		3.2	Identify methods of observing and measuring claimed improvements in own work area.
		3.3	Check if claimed improvements are occurring and report problems in accordance with procedures.
4	**Check for further improvements**	4.1	Look for areas of possible further improvement.
		4.2	Discuss further improvements with peers and supervisors.
		4.3	Take action to implement improvements in accordance with procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Customers include one or more of:	• internal customers • external customers sufficiently close to the individual’s work as to be easily identifiable • final customers used as the basis for the identification of value and waste.
Suppliers include	• internal suppliers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

one or more of:	• external suppliers sufficiently close to the individual's work as to be easily identifiable.
Measuring improvements includes one or more of:	• personally taking measurements • arranging for measurements to be taken/made by appropriate personnel.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Corrective actions to sustain improvements include one or more of:	• techniques for preventing mistakes by designing the operations process, equipment and tools so that an operation literally cannot be performed incorrectly (e.g. baka-yoke) • techniques that generate warning signals where a mistake is about to be performed (poka-yoke) • administrative techniques, such as procedure/work instruction changes • skilling techniques, such as training, mentoring, demonstration • process techniques, such as changing the process/conditions/variables.

Assessment Requirements for MSS402002 Sustain process improvements

Modification History

Release 1. Supersedes and is equivalent to MSS402002A Sustain process improvements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to examine three (3) or more previous improvements, including one (1) or more where improvement objectives have not been met, and to:

- identify corrective actions that can be taken by self
- implement those corrective actions
- check whether the claimed improvements have occurred
- check for further improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- muda (waste)
- indicators of processes not delivering claimed improvements
- baka-yoke and poka-yoke techniques.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include actions to sustain process improvements in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402020 Apply quick changeover procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402020A Apply quick changeover procedures

Application

This unit of competency covers the skills and knowledge required to apply quick changeover procedures in an organisation implementing competitive systems and practices.

This unit applies to individuals in an organisation which is implementing competitive systems and practices and is pursuing quick changeover as one of its competitive operations tools. The unit can apply to quick changeovers of equipment, processes, batches or product type. It requires the application of skills associated with applying quick changeover procedures, including the planning and organising of own work, identifying problems and making suggestions for improvement of procedures.

Particular technical skills may also be required in some operations sectors and for some jobs. These skills should be gained from the Training Package relevant to the individual's industry and occupation.

This unit may not be applicable to a totally continuous operation producing only the one product, or simultaneous range of products. The unit is also not applicable to a maintenance/PVI shutdown as experienced by continuous process manufacturers.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for changeover**	1.1	Determine when changeover will be required.
		1.2	Review plans and instructions for quick changeover.
		1.3	Identify role of others in quick changeover.
		1.4	Obtain all required tools/parts/materials for changeover.
		1.5	Organise process and tools/parts/materials ready for changeover.
2	**Make quick changeover**	2.1	Plan changeover according to quick changeover principles.
		2.2	Liaise and work with relevant people in quick changeover.
		2.3	Complete changeover according to procedures.
		2.4	Check output meets specification.
		2.5	Debrief with all relevant stakeholders.
		2.6	Note any steps which cause a problem.
		2.7	Recommend changes to problematic steps.
3	**Improve work health and safety (WHS)**	3.1	Identify hazards to self or others in all steps/actions.
		3.2	Determine risks from each hazard.
		3.3	Identify actions which may be performed in a more ergonomic manner.
		3.4	Recommend changes to improve WHS.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • monitoring and data gathering systems, such as Systems Control and Data Acquisition (SCADA) software, Enterprise Resource Planning (ERP) systems, Materials Resource Planning (MRP) and proprietary systems • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Changeover may include one or more of:	• an exchange of equipment (often dies or tools (traditional)) • a change between products/batches or between campaigns or processes. It may be any quantum change to produce a different product or undertake a different process.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Set-up can be divided into two types:	• internal set-up (requires work to stop, work that can be done only when the machine or process is not actively engaged in production, computers etc. need to be reset and restarted) • external set-up (work can continue during the changeover, work can be done concurrently with the machine or process performing production duties).
Set-up time includes:	• the work time required to change over a machine or process from one item or operation to the next item or operation.
Procedures (written, verbal, visual, computer based, etc.) include one or more of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS402020A Apply quick changeover procedures

Assessment Requirements for MSS402020 Apply quick changeover procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402020A Apply quick changeover procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more quick changeovers, to:

- identify the scope and equipment to be used in a quick changeover implemented in their own workplace
- plan and complete changeover
- identify problems in quick changeovers
- contribute suggestions for improvement.

Knowledge Evidence

- Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision and to solve routine problems, including knowledge of:
- principles of quick changeover, including:
  - setting of target time for changeover
  - conversion of internal set-up time to external set-up time, where appropriate
  - simplification of changeover steps
  - monitoring and continuous improvement of changeovers
- purpose and requirements of changeover
- minimisation of changeover waste (e.g. scrap and energy)
- quality requirements for products and purposes
- relevant operational procedures
- health, safety and environment (HSE) principles relevant to own job.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include actual quick changeovers, the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402021 Apply Just in Time procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402021A Apply Just in Time procedures

Application

This unit of competency covers the skills and knowledge required to work in an organisation implementing and/or utilising Just in Time (JIT) procedures.

This unit applies to an individual working in an organisation following JIT who will need to follow procedures which are specific to JIT, such as the controlled flow of material (e.g. the use of kanban and elimination of waste). This will involve the individual in the application of the pull system to their job and the authorisation of product/material flows in accordance with procedures and their level of authority.

This unit requires the application of skills associated with planning and organising and self-management to deliver product on demand using necessary tools, equipment and processes to meet production requirements. The unit also requires an ability to recognise and act on problems that may interfere with meeting production demands.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Respond to indicator of demand**	1.1	Identify pull of product through work role.
		1.2	Recognise indicator of flow authorisation.
		1.3	Identify production or service required.
2	**Make products or deliver service to demand**	2.1	Make product or deliver service as required by ticket.
		2.2	Identify any factors likely to prevent demand being satisfied in own work or work of the team.
		2.3	Take action in accordance with procedures.
3	**Update demand information as required**	3.1	Record information on ticket to procedures, as required.
		3.2	Facilitate operation of flow authorisation as part of work.
4	**Recommend improvements**	4.1	Examine the operation of the JIT system as it relates to own work.
		4.2	Identify areas for improvement.
		4.3	Identify any additional personal skill requirements to implement JIT procedures.
		4.4	Recommend improvements.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
JIT requires availability:	• precisely when the service, product or operation is to be produced or undertaken • in the right quantity and at the right quality.
Product includes one or more of:	• a physical product • a supporting utility service, such as water, gas and power • some other service (e.g. cranes and forklifts).
Indicator of demand includes one or more of:	• kanban bin, ticket or similar • some other indicator of demand pull which authorises production or movement of an item (in some plants, this may also include authorisation using SCADA software).
Procedures (written, verbal, visual, computer based, etc.) include one or	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

more of:

- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS402021 Apply Just in Time procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402021A Apply Just in Time procedures

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more JIT procedures, to:

- identify the indicators of demand and the flow authorisation system in their own workplace
- relate products and services supplied by suppliers and customers to the flow authorisation system
- interpret received indicators of demand correctly for quantity, quality and time of delivery
- contribute suggestions for improvement.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- JIT methods relevant to own job
- relevant indicator of demands for own job
- own role in flow authorisation
- faults and other issues that may threaten the JIT delivery of own product or service
- procedures for recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include JIT procedures in own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
    - relevant VET or other qualification/Statement of Attainment AND/OR
    - relevant workplace experience
- Currency can be demonstrated through:
    - performing the competency being assessed as part of current employment OR
    - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402040 Apply 5S procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402040A Apply 5S procedures

Release 2. Duplicated performance Criteria removed. Equivalent outcome.

Application

This unit of competency covers the skills and knowledge required by an individual to apply 5S procedures to their own job and work area. The unit assumes the individual has a particular job and an allocated work area and that processes in the work area are known by the individual.

This unit applies to an individual in an organisation who works in an operational position as part of production, maintenance, logistics, etc. The unit can also apply to individuals in other organisations who have a discrete role and responsibility for individually managed processes.

This unit applies where an organisation has decided to embark on a competitive systems and practices strategy and as part of this has adopted the philosophy of 5S as one of the tools to improve performance. The employee needs to apply 5S to their job and work area and maintain the housekeeping and other standards set by 5S.

This unit requires the application of skills associated with planning and organising, problem solving and self-management, in order to identify and implement 5S housekeeping practices.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Sort needed items from unneeded**	1.1	Identify all items in the work area.
		1.2	Sort items to achieve deliverables and value expected by downstream and final customers.
		1.3	Sort items required for regulatory or other required purposes.
		1.4	Place any non-essential item in an appropriate place other than the workplace.
		1.5	Regularly check that only essential items are in the work area.
2	**Set the workplace in order**	2.1	Identify the best location for each essential item.
		2.2	Place each essential item in its assigned location.
		2.3	After use immediately return each essential item to its assigned location.
		2.4	Regularly check that each essential item is in its assigned location.
3	**Shine the work area**	3.1	Keep the work area clean and tidy at all times.
		3.2	Conduct regular housekeeping activities during shift.
		3.3	Ensure the work area is neat, clean and tidy at both beginning and end of shift.
4	**Standardise activities**	4.1	Follow procedures.
		4.2	Follow checklists for activities, where available.
		4.3	Keep the work area to specified standard.
5	**Sustain the 5S system**	5.1	Clean up after completion of job and before commencing next job or end of shift.
		5.2	Identify situations where compliance to standards is unlikely and take actions specified in procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.3 Inspect work area regularly for compliance to specified standard.

5.4 Recommend improvements to lift the level of compliance in the workplace.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

5S includes all of:

- sort

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- set in order
- shine
- standardise
- sustain.

Sort includes all of:

- separating necessary from unnecessary items (equipment and supplies)
- keeping only what is absolutely necessary for the work processes that comprise the job
- disposing of (or relocating) all other items.

Set in order includes all of:

- assigning required equipment and materials appropriate locations in the work area
- consideration of frequency of use, ergonomics and work health and safety (WHS)
- provision of facilities to maintain the locations.

Shine includes one or more of:

- keeping the work area clean at all times which should be carried out to a regular daily schedule against allowed time, usually at the end of the day or of a particular process
- keeping work area organised
- noting any signs of wear, damage, leakage, safety risks or other issues that require immediate attention.

Best location includes one or more of:

- changes to the layout of furniture
- arrangement of equipment
- provision of services
- location of personnel.

Standardising includes one or more of:

- activities that help maintain the order and the housekeeping standards
- using procedures and checklists developed from a procedure.

Sustain includes one or more of:

- making sure that daily activities are completed every day regardless of circumstance
- cleaning up after a job
- undertaking inspections, including:
- informal inspections carried out often, at least weekly
- formal inspections carried out at least monthly

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- generating continuous improvement actions from daily activities
- following up specific actions to generate continuous improvement.

Items in work area include one or more of:

- tools
- jigs/fixtures
- materials/components
- plant and equipment
- manuals
- personal items (e.g. bags, lunch boxes and posters)
- safety equipment and personal protective equipment (PPE)
- other items which happen to be in the work area.

Procedures (written, verbal, visual, computer based, etc.) include one or more of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS402040 Apply 5S procedures

Modification History

Release 1. Supersedes and is equivalent to MSS402040A Apply 5S procedures

Release 2. Duplicated performance Criteria removed. Equivalent outcome.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, in one (1) or more allocated areas, to:

- implement and sustain 5S in own workplace
- identify own tasks and responsibilities
- contribute suggestions for improvement.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- purpose of 5S in the workplace
- meaning and application of 5S steps to own workplace and job
- principles of efficient workplace organisation
- identifying waste (muda)
- procedures for recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of 5S procedures in a work area where 5S has not previously been undertaken, or, demonstration of sustaining 5S principles in a work area that has already undergone prior 5S procedures
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402050 Monitor process capability

Modification History

Release 1. Supersedes and is equivalent to MSS402050A Monitor process capability

Application

This unit of competency covers the skills and knowledge required for gathering of data and the interpretation of simple information to determine the compliance of the process and the taking of action as defined by the procedures where the information reveals the process is out of control parameters.

This unit applies to an individual in an organisation adopting specific competitive systems and practices, usually either six sigma or statistical process control/three sigma, as a means of determining and improving the capability of their process to customer requirements. The individual is involved in collecting specified data and performing specified manipulations to the data (typically by plotting on a chart or by entering into a nominated computer program). The information is typically presented to team members in terms of graphs/charts which they are expected to interpret at a basic level and then take action in accordance with procedures to restore the process to being under control parameters.

This unit requires the application of skills associated with entering and monitoring operational data and information and requires initiative, enterprise and problem solving in identifying production variations and making improvement recommendations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Collect and process data**	1.1	Take specified measurements/readings/observations, as required.
		1.2	Enter data in log, computer or other record.
		1.3	Manipulate and/or chart data as required by procedures.
2	**Identify variations that are not random and take action**	2.1	Examine chart and/or reliability information.
		2.2	Distinguish between random variations and those with an identifiable cause.
		2.3	Take action specified in procedures when a variation with an identifiable cause occurs.
3	**Assist in process improvement**	3.1	Collect data for process capability improvement trials.
		3.2	Make recommendations for improvement.
		3.3	Implement revised capability monitoring procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems	• lean operations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

and practices include one or more of:	• agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Process capability includes one or more of:	• the capability of the process to deliver to customer defined requirements • process stability against standardised practices and documentation to eliminate variation against customer requirements • statistical capability to deliver product within a specified range • a statistical technique to determine the range within which a product might be expected to fall.

Assessment Requirements for MSS402050 Monitor process capability

Modification History

Release 1. Supersedes and is equivalent to MSS402050A Monitor process capability

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability to assist in one (1) or more process improvements and to routinely:

- collect and process data
- identify non-random variations and take the action specified in the procedures
- make recommendations for improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- defects and defective product
- variation and the related statistical distribution
- control charting (or similar) methods
- analysis of information to identify trends or other non-random results
- determination of identifiable causes from variation information
- process capability determination from variation data.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include routine collection of data and identification of non-random variation in own workplace
  - must include participation in a process capability improvement project

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include the use of appropriate statistical tools, aids and apps.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402051 Apply quality standards

Modification History

Release 2. Mapping updated to include superseded unit (not equivalent to LMTGN2002B Apply quality standards)

Release 1. Supersedes and is equivalent to MSS402051A Apply quality standards

Application

This unit of competency covers the skills and knowledge required to apply quality standards to work operations in an organisation. The unit is designed to complement competitive systems and practices units.

This unit applies to an individual who is expected to take responsibility for the quality of their own work, and to take actions specified in the procedures and within the scope of their job and authority to ensure that quality standards are met.

This unit requires the application of skills associated with interpreting and applying workplace standards and identifying and addressing problems that interfere with quality outcomes. The unit requires initiative, enterprise and self-management to ensure quality standards are achieved.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Assess own work**	1.1	Continuously check completed work against workplace standards relevant to the operation being undertaken.
		1.2	Demonstrate an understanding of how the work activities and completed work relate to the next production process or processes and to the final products or services concerned.
		1.3	Identify and isolate faulty components, products or processes.
		1.4	Record and/or report faults and any identified causes to the supervisor concerned, where required, in accordance with workplace procedures.
2	**Assess quality of received components, parts or materials**	2.1	Continuously measure/check received components, parts, materials, information, service or final products against workplace standards and specifications for conformance.
		2.2	Demonstrate an understanding of how the received components, parts or materials, information or service relate to the current operation and how they contribute to the final quality of the product or service.
		2.3	Identify and isolate faulty components, parts, materials or information that relate to the operator's work.
		2.4	Record and/or report faults and any identified causes in accordance with workplace procedures.
		2.5	Identify causes of any identified faults and take corrective action as specified in workplace procedures.
3	**Investigate causes of quality deviations**	3.1	Record information on quality and other indicators of process performance.
		3.2	Investigate and report causes of deviations from specified quality standards for components.
		3.3	Recommend suitable preventative action based on workplace quality standards and the identified causes of deviations from specified quality standards of materials.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Quality parameters include one or more of:

- finish
- size
- durability
- product or process variations
- materials

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• alignment • colour • damage and imperfections • time • is complete/contains all required information/data • complies to template • uses the correct styles and formats.
Quality checks include one or more of:	• visual inspection • physical measurements • chemical tests • checks against patterns, templates, styles, formats and guides • processing time.
Materials include one or more of:	• physical raw materials • orders, forms and other documentation • services required for undertaking an operation (e.g. power, water, compressed air and fuel).
Procedures (written, verbal, visual, computer based, etc) include one or more of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Indicators of production performance include one or more of:	• number of items/production rate • delays and causes of delays (where known) • other information as specified in the procedures.
Data entry/recording includes one or more of:	• keyboard • written (including ticks or signs) • verbal.
Sources of information/ documents include one	• quality and Australian Standards and procedures • work instructions, patterns, designs and recipes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

or more of:	• organisation work procedures • manufacturer instructions for materials and equipment • organisational or external personnel • customer requirements.
Investigate and report requires following set procedures which include one or more of:	• verbal instructions • documented procedures • other quality procedures as implemented within an organisation or work environment.

Workplace context includes one or more of:	• work organisation procedures and practices relating to the manufacture and quality outcomes for products
	• conditions of service, legislation and industrial agreements, including:
	  • workplace agreements and awards
	  • federal or state/territory legislation
	  • standard work practice.

Reporting/communication includes one or more of:	• verbal and written communication in accordance with organisational policies and procedures • oral, written or visual communication, including simple data.
Being responsible for the maintenance of own work quality includes one or more of	• contributing to the quality improvement of team or section output, where necessary, in accordance with workplace procedures • following safety, environmental, housekeeping and quality procedures as specified by materials/machine/equipment manufacturers, regulatory authorities and the organisation.
Applicable regulations and legislation include one or more of	• work health and safety (WHS) legislation relevant to workplace activities • workers compensation legislation.

Unit Mapping Information

Release 2. Mapping updated to include supersedes and not equivalent to LMTGN2002B Apply quality standards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Release 1. Supersedes and is equivalent to MSS402051A Apply quality standards

Companion Volume implementation guides are found in VETNet - https://vetnet.gov.au/Pages/TrainingDocs.aspx?q=5b04f318-804f-4dc0-9463-c3fb9a3fe998

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Requirements for MSS402051 Apply quality standards

Modification History

Release 2. Mapping updated to include superseded unit (not equivalent to LMTGN2002B Apply quality standards)

Release 1. Supersedes and is equivalent to MSS402051A Apply quality standards

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more products/processes, to:

- check and measure relevant quality parameters
- interpret results of quality checks in terms of specifications, patterns and work standards
- take required action where standards of materials, component parts, final product or work processes are found to be unacceptable
- maintain accurate records.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- relevant quality standards, policies and procedures
- relevant production processes, materials and products
- relevant measurement techniques and quality checking procedures
- reporting procedures.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of quality standards to own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
    - relevant VET or other qualification/Statement of Attainment AND/OR
    - relevant workplace experience
- Currency can be demonstrated through:
    - performing the competency being assessed as part of current employment OR
    - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402061 Use SCADA systems in operations

Modification History

Release 1. Supersedes and is equivalent to MSS402061A Use SCADA systems in operations

Application

This unit of competency covers the skills and knowledge required by an individual to interact with a System Control and Data Acquisition (SCADA) system as part of their job.

This unit applies to an individual in an organisation using a SCADA system and the individual must interface with that system. The individual will need to access this system as part of their routine and take actions based on the information they obtain from the SCADA system in accordance with procedures.

This unit requires the application of skills associated with using communication tools and technology for management of own work, planning and problem solving.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.
1	**Use operator interface**	1.1 Identify SCADA terminals relevant to own workstation and functions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.2	Use keyboards, track ball, monitor and/or stand-alone controllers to access/interrogate system.
		1.3	Use correct level of access and find all relevant screens and information.
		1.4	Access message section and acknowledge messages.
		1.5	Input and output information correctly according to program and organisation requirements.
2	**Use information**	2.1	Obtain data and information from SCADA, as required, including process, supply and product chain data.
		2.2	Interpret data and information as required by own job.
		2.3	Find and use relevant historical data and information.
		2.4	Use manufacturer manuals or specifications, as required, to expand knowledge of SCADA system relevant to own work.
		2.5	Determine and prioritise required actions.
3	**Make required changes in accordance with procedures**	3.1	Adjust production/process in response to SCADA information.
		3.2	Record adjustments and variations to specifications/schedules and report to appropriate personnel.
		3.3	Seek feedback and information on adjustments to further improve procedures, where required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Procedures (written, verbal, visual, computer based, etc.) include one or more of:

- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS402061 Use SCADA systems in operations

Modification History

Release 1. Supersedes and is equivalent to MSS402061A Use SCADA systems in operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more adjustments to production/process utilising SCADA information, to:

- identify scope and relevance of SCADA system to own work
- access correct levels of SCADA system
- enter and retrieve data, including normal performance and variations
- use SCADA system to assist in own work.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- hierarchy of SCADA system and operation
- available information from, and controls exercised by, SCADA system.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include use of SCADA systems in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402080 Undertake root cause analysis

Modification History

Release 1. Supersedes and is equivalent to MSS402080A Undertake root cause analysis

Application

This unit of competency covers the skills and knowledge required to undertake root cause analysis (RCA). This unit also covers the competencies needed by operators to contribute to an advanced maintenance strategy using RCA coupled with diagrams and charts.

This unit applies to individuals working in an organisation that is applying competitive systems and practices strategies. The unit applies to the formal problem solving to root cause that the individual must undertake in their own work area or where the individual contributes to problem solving to root cause as part of a team.

This unit requires an ability to seek and apply information from a variety of sources in order to inform RCAs. Initiative and enterprise is also required to identify quick fix and permanent solutions to problems.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Recognise problems**	1.1	Identify features or occurrences indicative of a problem.
		1.2	Use appropriate tools, techniques and charts to define the problem.
2	**Implement quick fix**	2.1	Recommend a quick fix within the scope of competency and authority.
		2.2	Use technology or processes relevant to the problem to implement quick fix.
3	**Determine root cause**	3.1	Identify a range of possible causes.
		3.2	Gather data and other information to eliminate or confirm possible causes.
		3.3	Use available data and information to link causes and effects.
		3.4	Seek assistance to obtain additional information if problem is beyond own competency/authority.
		3.5	Identify root cause.
4	**Develop permanent solution**	4.1	Identify a range of methods to eliminate the root cause or break the cause tree.
		4.2	Select the most appropriate solution.
		4.3	Liaise with relevant people.
		4.4	Recommend or implement solution within the limits of competency and authority.
		4.5	Monitor impact of solution and make further recommendations, as required.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Problems include one or more of:

- variation to normal plant or equipment operation
- unplanned or non-conforming process or operations outcomes
- out of specification products
- excess scrap
- accidents and emergencies
- regulatory breaches
- customer returns and complaints
- reduction or loss of sales.

Techniques/charts include one or more

- control charts
- Pareto charts

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

of:

- run charts
- flow charts
- cause and effect diagrams
- tree diagrams
- 5 Whys analysis
- organisation specified/mandated methods.

Assessment Requirements for MSS402080 Undertake root cause analysis

Modification History

Release 1. Supersedes and is equivalent to MSS402080A Undertake root cause analysis

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more problems, to:

- undertake problem identification
- use appropriate processes to achieve root cause identification
- recommend solutions and implementation procedures to problems within own area
- monitor implementation of solutions.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role under routine only supervision, including:

- methodology of root cause analysis, including:
  - difference between quick fix and root cause elimination
  - breaking of causal tree
- indicators of problems and variances to normal operation
- relevant analysis tools (e.g. Pareto charts, 5 Whys).

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include a root cause analysis in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS402083 Use planning software systems in operations

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Application

This unit describes the skills and knowledge to access planning software (often known as Enterprise Resource Planning (ERP), Materials Resource Planning (MRP and MRPII), and often by a proprietary name, to make routine business decisions required of the person as a regular part of their job.

This unit applies to an individual in an organisation using a planning software system and who must interface with that system. The unit applies to both accessing information from the planning software system and using it as an aid to decision making. This unit requires the application of communication, planning, and problem solving associated with using planning software in own work.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Use interface**	1.1	Identify terminals relevant to own workstation and functions
		1.2	Use peripherals to access system

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
		1.3	Navigate through system and screens to find program menu and data relevant to own work
		1.4	Identify and input information on own work processes at required frequency and to required detail
		1.5	Access message section and read and acknowledge messages
		1.6	Identify problems and make suggestions for improvements to relevance of planning software to own work
2	**Access information**	2.1	Identify work processes that require information from planning software system
		2.2	Obtain data and information on current operations from the planning software system
		2.3	Identify the status of items in the value stream
		2.4	Access and read historical data and information
		2.5	Read and interpret information and identify and prioritise actions required in response to information
3	**Take action in accordance with procedures**	3.1	Take action in response to information obtained from planning software
		3.2	Follow up to ensure anticipated results have occurred
		3.3	Record adjustments and variations
		3.4	Identify any learning needs to use planning software and seek support

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MSS402083 Use planning software systems in operations

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit and:

- used planning software systems for at least 3 different purposes, utilising outcomes to aid decision making.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- planning software system and operation, including:
  - terminal locations and types
  - security and access arrangements
  - information held in planning software relevant to own work
  - data collection methods for operations in work area
  - assistance arrangements for users of planning software
  - business activities exercised with the planning software system
- procedures for recommending improvements
- data and information sources.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of facilities, equipment and resources, including:
  - planning software systems.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS403010 Facilitate change in an organisation implementing competitive systems and practices

Modification History

Release 1. Supersedes and is equivalent to MSS403010A Facilitate change in an organisation implementing competitive systems and practices

Application

This unit of competency covers the skills and knowledge required by individuals responsible for facilitating change processes in an organisation implementing competitive operational practices.

This unit applies to individuals who facilitate the change process resulting from implementing one or more competitive systems or practices. This implementation may also be associated with other changes, such as the introduction of new products, processes or equipment. The unit will usually apply to individuals whose responsibility is at the team, area or section level rather than the whole organisation. The responsibility may be formally designated or be informal, as in mentoring and assisting fellow employees.

This unit assumes that consultation and agreement on the implementation of the competitive systems and practices and other associated changes has already occurred and the nature and extent of the change has been agreed.

This unit does not cover the negotiation of change in a formal industrial relations sense but does cover the skills needed to identify real or potential change implementation issues, including those that may need to be referred to formal consultation and/or dispute settlement procedures.

This unit has a strong emphasis on planning, encouraging and facilitating in a changing environment within the organisation, including using appropriate communication, teamwork, problem solving, initiative and self-management.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Define nature and impact of change for designated area and processes**	1.1	Identify the organisation's aims and objectives for the competitive systems and practices techniques related to the change process.
		1.2	Identify opportunities for implementation of change within work area.
		1.3	Determine impacts of change for work area, including potential benefits and impacts on own work and work of fellow employees.
2	**Identify key performance indicators (KPIs)**	2.1	Liaise, where required, with managers, engineers and other staff responsible for designing and/or implementing change.
		2.2	Identify KPIs for own work responsibility and that of the work area.
		2.3	Communicate KPIs to fellow employees.
		2.4	Check that data collection and processing are appropriate for KPIs.
		2.5	Raise and resolve issues related to KPIs with relevant personnel.
3	**Liaise with key stakeholders**	3.1	Identify key stakeholders impacted by the change.
		3.2	Communicate with key stakeholders within scope of authority.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		3.3	Identify and address issues and concerns of each stakeholder if within scope of authority.
		3.4	Develop and/or locate information required to address key concerns.
		3.5	Refer issues and concerns outside of scope of authority to appropriate personnel.
4	**Develop a strategy to help implement change**	4.1	Identify or develop a work plan for implementing change.
		4.2	Make information required to support change available to team members.
		4.3	Communicate/circulate draft work plan to other employees in work area, supervisors, technical experts and other appropriate personnel for comment.
		4.4	Assess suggested changes and incorporate into work plan, where appropriate.
5	**Implement change**	5.1	Obtain authorisation to commence change implementation in accordance with organisation procedures.
		5.2	Implement change in accordance with work plan and organisational work health and safety (WHS) and consultation procedures.
6	**Monitor implementation of change**	6.1	Maintain open communication channels with all stakeholders during implementation.
		6.2	Monitor KPIs during implementation.
		6.3	Encourage and facilitate improvement suggestions of team members.
		6.4	Identify areas requiring improvement in change implementation.
		6.5	Make improvements to implementation according to organisation procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Work plan for change includes one or more of:	• timetables • KPIs • training needs • WHS implications • contingency plans

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• responsibilities with team members and senior managers, engineers and other staff responsible for designing and/or implementing change.
Issues and concerns include one or more of:	• individual and group concerns • those expressed by and through industrial processes.
Gathering and monitoring performance data includes one or more of:	• manually by individual employees through charts, tally sheets or keypad/board entry • automatically through software, such as SCADA software, ERP systems, MRP and proprietary systems.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS403010A Facilitate change in an organisation implementing competitive systems and practices

Assessment Requirements for MSS403010 Facilitate change in an organisation implementing competitive systems and practices

Modification History

Release 1. Supersedes and is equivalent to MSS403010A Facilitate change in an organisation implementing competitive systems and practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more changes, to:

- identify competitive systems and practices in own workplace
- identify changes to own work and work area flowing from implementation of relevant competitive systems and practices
- consult with stakeholders regarding changes and issues
- develop a strategy to implement required changes
- make suggestions for improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- features of competitive operational practices in own work area
- health, safety and environment (HSE) principles and requirements for area of responsibility
- change implementation procedures
- planning and implementation strategies
- employee assistance mechanisms within organisation.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include facilitating change in relation to the implementation of competitive operational practices in own work area
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403011 Facilitate implementation of competitive systems and practices

Modification History

Release 1. Supersedes and is equivalent to MSS403011A Facilitate implementation of competitive systems and practices

Application

This unit of competency covers the skills and knowledge required by individuals who facilitate, lead or mentor others in competitive systems and practices implementation in a work area.

This unit applies to people responsible for facilitating others in implementing competitive systems and practices in their work. It may apply to formally designated team leaders or people given special roles in the implementation process that go beyond their own work and which involve guiding, facilitating or mentoring others. The unit applies to competitive systems and practices implementation activities at the work area or section level.

The unit requires an individual to integrate a range of competitive systems and practices knowledge and skills as part of their role. The unit covers assisting others to understand and apply a holistic view of their job and their role within an organisation, including the objectives that must be met as part of competitive systems and practices used by the organisation.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management. This unit has a strong emphasis on planning and implementation, and also requires an ability to learn from experience and feed new information back into strategies to improve own performance and that of others.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Facilitate the development of process and competitive systems and practices knowledge**	1.1	Ensure necessary technical documentation and information about the process and competitive systems and practices is available.
		1.2	Assist and mentor others in accessing information.
		1.3	Identify work activities which may inhibit the ongoing development of competitive systems and practices skills and knowledge of others.
		1.4	Arrange for the provision of workforce development and training for self and others, as appropriate.
		1.5	Encourage others to apply technical knowledge to the improvement process.
2	**Facilitate commitment to efficiency improvements**	2.1	Ensure budgets, operating procedures and other related documentation is available.
		2.2	Assist others to apply this information to their work responsibilities.
		2.3	Encourage the identification of waste.
		2.4	Encourage an environment where efficiency improvements are recommended by fellow employees.
3	**Encourage a competitive systems and**	3.1	Encourage and, where necessary, develop communications between specialists and work group members.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	practices approach to work	3.2	Lead development of strategies to monitor and deal with identified waste issues.
		3.3	Resource and encourage other employees to identify and take action on potential problems.
		3.4	Arrange for workforce development and training for self and others, as required, in relevant competitive systems and practice procedures and techniques.
		3.5	Guide others in relating identified problems to the maintenance strategy, and developing any required changes, to ensure awareness, learning and commitment.
4	**Implement process and organisation improvements**	4.1	Plan the implementation of work group suggestions and externally suggested improvements.
		4.2	Facilitate commitment to, and involvement in, the implementation planning of improvements and to follow improvements to their conclusion.
		4.3	Encourage the application of the 'plan, do, measure, improve, control' approach to the job.
		4.4	Arrange for workforce development and training, as required, to facilitate continued involvement by others in improvement processes.
		4.5	Involve work group and other key personnel in identification of skill needs and means of skills acquisition to fill any identified gaps.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Budgets include one or more of:	• financial • time • materials/products • other business plans which are relevant to the team and the work area.
Categories of waste include one or more of:	• excess production and early production • delays • movement and transport • poor process design • inventory • inefficient performance of a process • making defective items • activities which do not yield any benefit to the organisation or any benefit to the organisations customers.
Key reliability issues	• cleanliness

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

include one or more of:	• poor lubrication • incorrect adjustment • poor training and instructions for employees.

Assessment Requirements for MSS403011 Facilitate implementation of competitive systems and practices

Modification History

Release 1. Supersedes and is equivalent to MSS403011A Facilitate implementation of competitive systems and practices

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more organisation improvements which include the facilitation of competitive systems and practices, to:

- identify processes and products of the organisation and work area
- analyse future skill development needs of work group
- mentor effectively in a one-on-one situation
- facilitate communication between work group and external competitive systems and practices specialists and managers
- lead work group in identifying efficiency improvements and elimination of waste.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- information technology systems used in the organisation
- features of competitive operational practices in own work area
- monitoring and data gathering systems in work area (e.g. SCADA, ERP and MRP)
- methods of gathering data against key performance indicators (KPIs)
- facilitation techniques to encourage work group development and improvement.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - must include facilitation of competitive systems and practices implementation in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403021 Facilitate a Just in Time system

Modification History

Release 1. Supersedes and is equivalent to MSS403021A Facilitate a Just in Time system

Application

This unit of competency covers the skills and knowledge required to facilitate the implementation/operation of a Just in Time (JIT)/kanban system in a team or work area.

This unit applies to a person who needs to monitor the operation of a JIT system and facilitate its working in a team or work area. This will involve liaison with stakeholders as well as examining the data generated and being alert to potential problems and areas for improvement.

This unit requires the application of skills associated with gathering, analysing and communicating information to facilitate implementation of the JIT system. It requires planning and organising skills and has a strong emphasis on communication and teamwork skills to ensure the JIT system is being effectively implemented. This unit also requires the ability to problem solve and take the initiative to consider performance issues and learn from experience to improve future performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

essential outcomes.		demonstrate achievement of the element.	
1	**Monitor the operation of the JIT system**	1.1	Track value of key measures.
		1.2	Recognise indicators of poor performance.
		1.3	Take appropriate quick fix action.
2	**Liaise with relevant stakeholders**	2.1	Regularly communicate with team or work group members regarding the operation of the JIT system.
		2.2	Review JIT key performance indicators (KPIs) with team or work group members.
		2.3	Communicate with relevant personnel up and down the value stream regarding the operation of the JIT system.
		2.4	Identify issues with stakeholders and take appropriate quick fix action.
3	**Improve the JIT system**	3.1	Identify areas requiring improvement in the JIT system.
		3.2	Identify root cause of JIT-related problems.
		3.3	Review value of key measures.
		3.4	Recognise skill gaps in team members and other stakeholders.
		3.5	Determine any other issues in team or work group, other stakeholders and JIT system leading to poor performance indicators.
		3.6	Develop appropriate improvement solutions.
		3.7	Liaise with relevant people regarding improvement solutions.
		3.8	Implement and/or assist with the implementation of the solutions.

MSS403023 Monitor a levelled pull system of operations

Modification History

Release 1. Supersedes and is equivalent to MSS403023A Monitor a levelled pull system of operations

Application

This unit of competency covers the skills and knowledge required to monitor the operation of a pull system in a work area and recommend improvements.

This unit covers the skills needed to monitor a pull operations system in a work area or team operation although knowledge of the overall pull system in the enterprise is also required. The unit is targeted at individuals, such as team leaders and senior operators, who have an overview of the work area or team operation and the ability to implement corrective action in the event of discrepancies.

The unit covers the skills needed to monitor daily working of the system, identify problems and take action on problems. The operations system may be a total demand pull system or it may be a mixed push/pull system.

This unit primarily requires the application of skills associated with using information and problem solving skills to monitor pull system and analyse discrepancies. It also requires skills in initiative and enterprise, and planning and organising to determine and act on opportunities for improvement. Aspects of self-management and learning are required to ensure own ability to improve systems.

The unit is based on manufacturing principles but can be contextualised for other types of organisations.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Monitor the pull system**	1.1	Identify the pacemaker process.
		1.2	Identify rate of production set by the pull system.
		1.3	Determine actual rate of production at key parts of the process.
		1.4	Identify types of inventories within process.
		1.5	Compare actual inventories with planned inventories.
		1.6	Note discrepancies between actual and planned rates and inventories.
2	**Take corrective action**	2.1	Determine causes of discrepancies.
		2.2	Determine action required to rectify causes of discrepancies.
		2.3	Take action in conjunction with relevant stakeholders.
3	**Test/improve the pull system**	3.1	Identify recurrent discrepancies.
		3.2	Determine causes of discrepancies.
		3.3	Determine action required to rectify cause.
		3.4	Identify unnecessary levels of inventories.
		3.5	Discuss impacts of reduced inventories with relevant stakeholders.
		3.6	Take/initiate action to rectify recurrent discrepancies/reduce levels of unnecessary inventory.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.7 Monitor the system to determine the effects of changes.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Pull system includes one or more of:	• operations done to order and not for holding large inventories of parts and completed stock • work flow done according to demand pull from the next work

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	stage • operations in response to customer demand.
Production used in a manufacturing sense includes one or more of:	• repetitive production of items (e.g. components and whitegoods) • continuous or batch production (e.g. hydrocarbons, chemicals and cement).
Types of inventories include one or more of:	• cycle stock which reflects the replenishment quantity and frequency • buffer stock to meet demand variability and forecast errors • safety stock required to guard against quality and delivery failures upstream.
Determine cause for an individual/team leader includes one or more of:	• analysing cause themselves • identifying that expert analysis is required and requesting this analysis • setting up an improvement team to analyse cause • identifying that the cause of the discrepancy is upstream or downstream of the team or area.
Stakeholders include one or more of:	• managers • supervisors • employees • shareholders • worke health and safety (WHS) mechanisms/representatives • industrial relations mechanisms/representatives • suppliers • customers • service providers.

Assessment Requirements for MSS403023 Monitor a levelled pull system of operations

Modification History

Release 1. Supersedes and is equivalent to MSS403023A Monitor a levelled pull system of operations

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for three (3) or more monitored discrepancies/problems, to:

- identify the demand pull system used in own work area
- identify pacemaker process
- identify types of inventories used by team or work area
- determine actions to rectify discrepancies between actual and planned rates of production
- facilitate and monitor changes to rectify discrepancies.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- operation and capabilities of equipment used in own work area
- abilities and skills of personnel in work area
- ultimate customer order process and relationship to demand pull for team or work area
- inventories held by enterprise
- stakeholders relevant to team or work area
- possible actions available to address discrepancies

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include monitoring the operation of a pull system in own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403032 Analyse manual handling processes

Modification History

Release 1. Supersedes and is equivalent to MSS403032A Analyse manual handling processes

Application

This unit of competency covers the skills and knowledge required to analyse manual handling in terms of its efficiency and safety.

This unit applies to an individual who is required to examine the manual handling component of a job and improve it in terms of safety, effort required and efficiency. This may be conducted for a job performed by others or it may be for the person's own job.

This unit primarily requires the application of skills associated with problem solving, initiative and enterprise to identify safe and efficient manual handling, and planning and organising to ensure processes are implemented. This unit also requires communication with, and involvement of, others to ensure they understand the approach and to facilitate training.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Assess manual**	1.1	Identify manual handling hazards in work area.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	handling risks	1.2	Assess risks arising from manual handling hazards.
2	**Analyse physical effort requirements of job**	2.1	Determine basic manual handling requirements of job.
		2.2	Analyse requirements in terms of components, such as lift, move, place and hold.
		2.3	Analyse items to be handled in terms such as weight, size, shape or other hazards.
3	**Determine time/effort components of physical effort**	3.1	Break required movement pattern down into movement components.
		3.2	Determine time and effort requirements for movements.
		3.3	Develop alternative movement patterns.
		3.4	Determine time and effort requirements for alternative movements.
		3.5	Determine handling aids required to assist movement.
		3.6	Determine preferred movement pattern.
4	**Analyse the ergonomics of physical effort**	4.1	Analyse the ergonomics of the preferred movement pattern.
		4.2	Develop substitute movements for any movement which is not ergonomically sound.
		4.3	Determine handling aids required to improve ergonomics of required movements.
5	**Optimise application of physical effort**	5.1	Select movement patterns which are ergonomically sound and time and effort efficient.
		5.2	Ensure all relevant people are trained to use these methods.
		5.3	Ensure procedures and practices reflect the optimum methods.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.4 Communicate with team members and involve them in development of alternatives to ensure awareness and facilitate learning.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Procedures (written,	• work instructions

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

verbal, visual, computer based, etc.) include one or more of:	• standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.
Manual handling hazards include one or more of	• loads that pose a risk of injury • ergonomically unsound movements • hazard requirements as defined by relevant work health and safety (WHS) Acts and regulations, industry standards and best practice.
Ergonomically unsound movements include one or more of	• awkward and repetitive movements • carrying, pushing, pulling or lifting of heavy loads • carrying or movement of hard, sharp, slippery or other difficult to grasp loads.
Ergonomically sound movements include one or more of	• keeping loads close to the body and near the person's centre of gravity • using diagonal foot positions for lifting • moving loads at waist height rather than directly from the floor.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS403032A Analyse manual handling processes

Assessment Requirements for MSS403032 Analyse manual handling processes

Modification History

Release 1. Supersedes and is equivalent to MSS403032A Analyse manual handling processes

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for at least (1) one job/process, to:

- analyse manual handling requirements and risks
- distinguish between ergonomically sound and unsound movement
- analyse manual handling movements and risks for an individual
- relate manual handling requirements to job efficiency.

Knowledge Evidence

- Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:
- principles of ergonomics/safe movement
- principles of work analysis
- relevant work health and safety (WHS) Acts and regulations as they apply to manual handling
- principles of job and work method design as applied to efficient and safe movement
- aids that can assist with or substitute for manual handling.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include analysing manual handling processes in own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - will typically include the use of appropriate manual handling guides, tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
    - relevant VET or other qualification/Statement of Attainment AND/OR
    - relevant workplace experience
- Currency can be demonstrated through:
    - performing the competency being assessed as part of current employment OR
    - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403040 Facilitate and improve implementation of 5S

Modification History

Release 1. Supersedes and is equivalent to MSS403040A Facilitate and improve implementation of 5S

Application

This unit of competency covers the skills and knowledge required by an individual to facilitate the implementation and improvement of the 5S by self and others in a team or work area. The facilitation may be undertaken by formally designated supervisory staff, such as team leaders or other individuals in a competitive systems and practices implementation role, who need to provide support and encouragement to others to facilitate the achievement of 5S outcomes in the workplace.

This unit requires the application of skills associated with communication, teamwork, problem solving, initiative and enterprise, planning and organising, and self-management in order to provide leadership in a 5S environment. This unit has a strong emphasis on planning and change management, but also requires an ability to learn from experience and feed new information back into strategies to improve performance.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Facilitate the set-up of 5S**	1.1	Assist others to determine what are necessary and unnecessary items in the work area.
		1.2	Assist others to determine optimum assigned location for all necessary items.
		1.3	Liaise with relevant production and work health and safety (WHS) personnel in determining optimum locations.
		1.4	Assist others to determine optimum location for unnecessary items.
		1.5	Assist others to determine 5S schedule.
		1.6	Assist others to achieve the required level of skill.
2	**Facilitate the implementation of 5S**	2.1	Ensure procedures reflect 5S practices.
		2.2	Assess skill base of team or work group members in 5S and arrange for any required training.
		2.3	Ensure that any damage and/or safety risks reported by the team or work group are addressed through correct mechanisms.
3	**Monitor 5S**	3.1	Check work area for 5S implementation as part of normal routine.
		3.2	Identify non-conformances.
		3.3	Negotiate solutions to non-conformances.
4	**Improve 5S**	4.1	Work with others to find areas for improvement.
		4.2	Assist others to develop improvement solutions.
		4.3	Facilitate the availability of resources required for the improvement solution.
		4.4	Facilitate the implementation of the improvement solution.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Procedures (written, verbal, visual, computer based, etc.) include one or more of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of the plant.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5S includes all of:

- sort
- set in order
- shine
- standardise
- sustain.

Sort includes all of:

- separating necessary from unnecessary items (equipment and supplies)
- keeping only what is absolutely necessary for the work processes that comprise the job
- disposing of (or relocating) all other items.

Set in order includes all of:

- assigning required equipment and materials appropriate locations in the work area
- consideration of frequency of use, ergonomics and WHS
- provision of facilities to maintain the locations.

Shine includes one or more of:

- keeping the work area clean at all times which should be carried out to a regular daily schedule against allowed time, usually at the end of the day or of a particular process
- keeping work area, including virtual work area, organised
- noting any signs of wear, damage, leakage, safety risks or other issues that require immediate attention.

Standardising includes one or more of:

- activities that help maintain the order and the 5S standards
- using procedures and checklists developed from a procedure.

Sustain includes one or more of:

- making sure that daily activities are completed every day regardless of circumstance
- undertaking inspections, including:
  - informal inspections that should be carried often, at least weekly
  - formal inspections that should be carried out at least monthly.

Items in work area include one or more of:

- office supplies
- materials
- paperwork

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• furniture • storage systems and cabinets • lighting, wiring, plumbing and other services designed to support a working environment in the office • manuals • personal items (e.g. bags, phones, lunch boxes, clothing, photos and ornaments) • safety and personal protective equipment • any other item which happens to be in the work area.
Teams include one or more of:	• formal teams • informal teams • people working in the same area.
Target work area may be a physical and/or virtual workspace and includes one or more of:	• used by a person, a team or a cross-functional group • common to part/s of a process or value stream (already defined) • shared by people who undertake a defined procedure or set of procedures • needed to support a particular function.
Appropriate places include areas designated for one or more of:	• recycling • rubbish removal • staff room/lunch room/kitchen • office supplies, filing and other storage • functions, such as printing/copying • holding until status is confirmed.
Optimum assigned location includes:	• making changes to the layout of furniture, equipment and personnel in order to facilitate the smooth and continuous flow of work through process steps taking into account WHS considerations.
Non-conformance includes:	• incorrect or incomplete application of 5S procedures, including any daily tasks, scheduled inspections and continuous improvement procedures.

Assessment Requirements for MSS403040 Facilitate and improve implementation of 5S

Modification History

Release 1. Supersedes and is equivalent to MSS403040A Facilitate and improve implementation of 5S

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, in one (1) or more allocated areas, to:

- identify the scope of the services and/or functions supplied to and by the team or work area and the deliverables expected by customers, including the ultimate customer
- facilitate a systematic approach to implementing 5S
- lead and motivate others in achieving 5S outcomes and making improvements to the 5S systems
- set up systems for monitoring and improving 5S implementation
- manage non-conformances in implementation of 5S.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- principles and purpose of 5S
- methods of identifying waste in the work area, such as:
  - waste walk
  - document tagging
  - tracking/log sheets
  - spaghetti diagrams
  - existing information technology and enterprise resource systems (e.g. SCADA, ERP and MRP)
- methods of identifying and evaluating options
- work health and safety (WHS) requirements relevant to team and work areas
- processes for identifying and addressing skill gaps.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the implementation of 5S procedures in a work area where 5S has not previously been undertaken, or, demonstration of improving 5S application in a work area that has already undergone prior 5S procedures
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations. Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS403041 Facilitate breakthrough improvements

Modification History

Release 1. Supersedes and is equivalent to MSS403041A Facilitate breakthrough improvements

Application

This unit of competency covers the knowledge and skills required to facilitate implementation of discrete targeted improvement activities to achieve breakthrough improvements in selected processes, operations or products. Typically this approach is used for improvements in areas of waste identified through value stream mapping.

This unit applies to team leaders and others who are providing guidance and support to assist a team of employees to identify improvements that can be implemented to operations, processes or products in a brief intensive project.

The unit also covers ensuring that the improvements are sustained. The process of achieving breakthrough improvements is often called kaizen blitz in lean terminology.

This unit assumes that one or more processes and operations have been mapped.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Prepare for improvement event**	1.1	Engage team members in the improvement event.
		1.2	Identify process or processes to be targeted in the improvement event.
		1.3	Assist team members to identify how their own roles contribute to value to the customer.
		1.4	Assist team to identify the boundaries of the event, including any imposed exclusions.
		1.5	Identify key process indicators and other information required for improvement event.
		1.6	Identify skill needs for personnel engaged in breakthrough improvement event and arrange for any required training.
		1.7	Establish communication processes with sponsor and stakeholders.
2	**Identify improvements**	2.1	Assist team to review current processes, operations or products and identify options for radical improvements.
		2.2	Facilitate team activities and other relevant personnel to evaluate the options and agree on improvements to be made.
		2.3	Encourage and assist team and others to plan the activities and identify metrics to be monitored.
		2.4	Facilitate allocation of resources and strategies to manage impact on routine work.
3	**Facilitate the event**	3.1	Assist team to gather baseline data on the selected metrics.
		3.2	Assist team to identify and address barriers to making the improvements.
		3.3	Monitor team dynamics and facilitate team focus and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			cooperation.
		3.4	Liaise with sponsor to communicate progress and maintain their support.
4	**Evaluate improvements**	4.1	Assist team to gather and interpret data on the metrics.
		4.2	Facilitate team activities to evaluate the outcomes of the event.
		4.3	Identify causes for areas of poor performance from changes and identify any additional changes to address them.
		4.4	Report to sponsor and other stakeholders on the outcomes of the event.
5	**Embed improvements**	5.1	Establish mechanisms to ensure new systems and/or practices are communicated to relevant personnel.
		5.2	Motivate team to apply the new systems and/or practices and sustain improvements.
		5.3	Ensure the new systems and/or practices are reflected in relevant procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.
Team in this unit is any group of employees engaged in a breakthrough improvement event and includes one or more of:	• a permanent formally identified team • a sub-group of a team • a formally designated teams • an informal groups of employees • other stakeholders who may be brought together for a breakthrough improvement event • a specially established group for the breakthrough event (e.g. a combined production/administration/ logistics group convened for a breakthrough event addressing delivery issues).
Scope and benefit statements include one or more of:	• description of the business • the target work process • what key stakeholders seek from the improvement project • a mission for the event • a set of goals • a statement of the do's and don'ts for the improvement project.
Boundaries define one or more of:	• the start and end point of the process being targeted • the steps of the process to be included and excluded • specific job roles or related processes to be included or excluded • timeframe for the event.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Breakthrough improvement (also known as kaizen blitz) is characterised by one or more of:	• using a formal process • being a discrete targeted activity that is achieved in a relatively short timeframe • delivering significant level of improvement.
Mechanisms to communicate and sustain improvements include one or more of:	• scheduled audits • regular monitoring and/or reporting activities • use of visual aids, such as targets and progress boards, process charts and procedure posters • communications, such as standing items for team meetings, email reminders or updates.
Imposed exclusions include one or more of:	• equipment excluded from efficiency or layout review because of budget constraints • regulatory requirements that do not add value • organisation requirements, policies or procedures beyond the influence of the team • other required muda.
Key process indicators include one or more of	• statistical process control data/charts • orders • lost time, injury and other work health and safety (WHS) records • equipment reliability charts.

Assessment Requirements for MSS403041 Facilitate breakthrough improvements

Modification History

Release 1. Supersedes and is equivalent to MSS403041A Facilitate breakthrough improvements

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more breakthrough improvement events, to:

- interpret operations, processes and products in terms of value to the customer
- identify, analyse and evaluate information from a variety of sources to identify opportunities for breakthrough improvements
- lead and motivate others in planning, implementing and sustaining improvements.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- team and organisation deliverables and processes used to achieve them
- how organisation operations and processes contribute to the value stream
- types of waste (muda) and imposed exclusions
- methods of identifying and evaluating options
- work health and safety (WHS) requirements relevant to the target work areas.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.
  -

Assessment Requirements for MSS403054 Facilitate breakthrough improvements

Modification History

Release 1. Unit code changed. Application changed. Performance criteria changed. Range of conditions removed. Foundation skills information added. Assessment requirements changed. Supersedes and is equivalent to MSS403041 Facilitate breakthrough improvements.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- facilitated at least 1 breakthrough improvement event, including:
  - leading and motivating at least 1 of the following types of teams in planning, implementing and sustaining improvements:
    - a permanent formally identified team
    - a sub-group of a team
    - a formally designated team
    - an informal group of employees
    - stakeholders or specially established group brought together for the breakthrough improvement event.
    -

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- how organisation operations and processes contribute to the value stream
- types of waste (muda)
- imposed exclusions
- methods of identifying and evaluating options
- work health and safety (WHS) requirements relevant to facilitating breakthrough improvements.

Assessment Conditions

- Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS403085 Ensure process improvements are sustained

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Application

This unit describes the skills and knowledge required to ensure that the gains which have been made by using improved methods, processes and/or equipment are sustained as the new baseline or standard for an area of work and so prevent regression to former practices, or digression to less efficient practices.

This unit applies to individuals working in a team or work area who have already implemented competitive systems and practices related improvements in their own work and who must work effectively with others implementing competitive systems and practices to ensure that performance improvement gains are sustained.

The unit applies to team leaders, senior operators, technicians or tradespeople who are required to mentor others and integrate the application of their technical skills with the implementation of competitive systems and practices in an organisation. Employees will be required to problem solve, show initiative, plan, organise and manage own output and development.

The unit applies to all areas of an organisation, including production, maintenance, logistics and office functions.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Examine previous improvements**	1.1	Identify impact of previous process improvements to systems, equipment, operations or products in work area
		1.2	Identify previous improvements that have not met objectives
2	**Ensure corrective actions are implemented**	2.1	Identify corrective actions that can be taken on process improvements that have not met objectives
		2.2	Liaise with relevant people associated with the anticipated corrective action
		2.3	Obtain any required approvals
		2.4	Arrange for the supply of resources
		2.5	Check impacts of corrective action on work health and safety (WHS), quality and environmental systems in work area and take action in accordance with procedures
		2.6	Check that self and others in team or work area have required skills for corrective actions
		2.7	Monitor implementation of corrective action
		2.8	Make required adjustments
3	**Verify systems support improvement**	3.1	Verify procedures reflect improvements
		3.2	Check that training and assessment activities in team or work area reflect improvements
		3.3	Liaise with relevant people to ensure their support of the new or modified system/s
4	**Audit the change**	4.1	Determine an audit period or cycle
		4.2	Agree measures and indicators for the improvement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
	4.3 Measure performance at agreed times using agreed measures
	4.4 Investigate causes of under-performance
	4.5 Take corrective action to improve performance
	4.6 Re-audit the improvement on an agreed basis

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS403002 Ensure process improvements are sustained.

Assessment Requirements for MSS403085 Ensure process improvements are sustained

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- identified at least 1 previous improvement that has not met objectives and identified and implemented actions to correct this without adverse impact on other areas
- conducted at least 1 audit to measure the improvement from the change.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- muda and its causes
- processes and procedures for the organisation relevant to the work area
- sustaining approaches, including poka yoke, baka yoke
- measures of performance relevant to the work area and the improvement.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS403087 Mistake proof an operational process

Modification History

Release 1. Updated unit code. Changes to elements and performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Application

This unit describes the skills and knowledge to analyse a process that a team is responsible for and determine methods of mistake proofing it. This includes determining, implementing and sustaining improvement activities.

The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to mistake proof the production process in their area.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Analyse process**	1.1	Identify sources of variability and non-conformance in the process
		1.2	Identify critical control points in process
		1.3	Analyse causes of variability and non-conformance

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
2	**Develop preventative options**	2.1	Liaise with team members and other people to develop mistake proof options for performing operation
		2.2	Test and validate mistake proofing options
3	**Implement permanent fix**	3.1	Liaise with relevant people to have systems and procedures changed to implement solution
		3.2	Liaise with relevant people to implement the solution
		3.3	Liaise with relevant people to ensure self and others in the team or work area have appropriate skills
		3.4	Follow through to ensure implementation occurs
4	**Monitor implementation**	4.1	Critically observe the implementation
		4.2	Compare the results of the implementation against the expected outcomes
		4.3	Modify solution to improve outcomes
		4.4	Confirm procedures reflect change
		4.5	Confirm training and assessment reflects change
		4.6	Audit change at agreed period or cycle
		4.7	Address any observed deviation
5	**Seek improvements**	5.1	Observe and monitor changes
		5.2	Analyse process again to ensure improvements are sustained

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MSS403087 Mistake proof an operational process

Modification History

Release 1. Updated unit code. Changes to elements and performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- mistake proofed (applied baka yoke or poka yoke) to at least 1 operational process.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- baka yoke and poka yoke approaches
- factors causing variability in the process and methods of controlling it
- error causes and control options
- cost benefit analysis, feasibility, regulatory compliance and perceived value to the customer
- validation of baka yoke and poka yoke proposals.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS404052 Apply statistics to operational processes

Modification History

Release 1. Supersedes and is equivalent to MSS404052A Apply statistics to operational processes

Application

This unit covers the ability to gather and analyse process data to support the control of processes and operations. It includes interpretation of sampling procedures, frequency distributions, random and non-random variations in data/control charts; use of control limits to determine whether or not monitored processes are in control; and communicating this information to others.

This unit applies to a person working in an organisation applying statistical process control on processes or operations. The statistical process control will usually be used to monitor the processes or operations and determine when action needs to be taken. The appropriate action will then be taken in accordance with standard procedures.

This unit primarily requires the application of skills associated with gathering and analysing data and communicating statistical information to others. This unit also has a strong emphasis on problem solving, initiative and enterprise, planning and organising, and self-management to solve problems and manage processes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Competitive systems and practices

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Collect process data**	1.1	Interpret sampling scheme.
		1.2	Obtain measurements in accordance with standard sampling procedures.
		1.3	Handle data in accordance with procedures.
2	**Interpret data**	2.1	Plot data on appropriate control chart.
		2.2	Distinguish between random and non-random patterns of results.
		2.3	Identify results outside the control limits.
		2.4	Recognise situations requiring action.
		2.5	Take action in accordance with procedures.
		2.6	Determine cost of non-conformance.
3	**Calculate control limits**	3.1	Consult relevant stakeholders to determine appropriate limits.
		3.2	Use relevant methods to calculate/revise control limits.
		3.3	Plot limits on control chart and complete other records in accordance with procedures.
		3.4	Explain impact of limit to relevant stakeholders.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Sampling schemes include one or more of:

- sampling for attributes or sampling for variables
- batch, continuous or custom made products
- type of sample
- size of sample
- number of items/samples
- number/type of measurements to be done on each sample
- timing of sampling
- location of sampling points
- sampling equipment
- measurement/testing equipment/methods.

Checking, analysing and storing data includes one or more of:

- calculating means, ranges, mean of means and standard deviations (using appropriate calculation aids)
- entering data into a software package
- recording data either in writing or electronically

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• other required manipulations of the data.
Control charts include one or more of:	• run • tally • mean/range • attributes • other relevant charts.
Variations include all of:	• random variations for which no cause can be found • non-random variations for which a cause can be found and so the cause of the variation eliminated (also called identifiable cause, assignable cause or special cause) • non-random variations used to predict possible breaches of the control limits.
Limits include one or more of:	• control limits (also referred to as process capability) within which the process will operate if it is 'under control' • appropriate limits: 1 sigma warning limits, 2 sigma warning limits, 3 sigma control limits, and 6 sigma limits.
Costs of non-conformance include one or more of:	• reprocessing/rework • expediting • unplanned service • excess inventory • complaint handline • downtime • returns • scrap • labour costs • material costs • infrastructure costs/overhead • utility costs.
Procedures (written, verbal, visual, computer based, etc.) include one or any combination of:	• work instructions • standard operating procedures (SOPs) • safe work method statements • formulas/recipes • batch sheets • temporary instructions • any similar instructions provided for the smooth running of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

the process.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS404052A Apply statistics to operational processes

Assessment Requirements for MSS404052 Apply statistics to operational processes

Modification History

Release 1. Supersedes and is equivalent to MSS404052A Apply statistics to operational processes

Performance Evidence

Evidence required to demonstrate competency in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria under the specified conditions of assessment and must include on two (2) or more occasions:

- gathering, analysing and interpreting process data to support the control of processes and operations
- applying specified sampling procedures
- investigating the causes of variation in a process
- communicating with other employees to obtain samples/data and to explain results and limits
- calculating and plotting data and control limits
- completing other required documentation.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- purpose of sampling and measurement
- sampling methods to be used
- methods of calculating means, standard deviations and the like and their purpose in statistical control
- concept of limits, including 1, 2, 3 and 6 sigma limits
- types of control charts and their applications to different types of process/product and for different purposes
- process causes of variation and typical cause types of non-random variation
- non-process (e.g. measurement) causes of variation
- recognition of stable and unstable processes
- causes of stability/instability in the process
- calculation of control limits/process capability and the applications of different control limits
- the standard distribution curve and confidence limits.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include the application of statistics to an operational process in own workplace
  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404053 Use DMAIC techniques

Modification History

Release 1. Supersedes and is equivalent to MSS404053A Use six sigma techniques

Application

This unit of competency covers the skills and knowledge required to apply the Define, Measure, Analyse, Improve, and Control and standardise (DMAIC) to improve quality, cost and delivery in operations and other supporting processes in the workplace. This will be undertaken with other members of the process team.

This unit requires the application of skills associated with using information, problem solving, initiative, enterprise, planning and organising in order to identify an area requiring improvement and develop a measured process to make improvements.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify an area requiring improvement**	1.1	Identify customer needs from process.
		1.2	Identify customer benefits delivered by process.
		1.3	Identify areas requiring improvement.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2	**Apply DMAIC process**	2.1	Define improvement project.
		2.2	Acquire required measurements/data.
		2.3	Analyse data and determine possible process improvements.
		2.4	Develop and test improvement solutions.
		2.5	Control and standardise the improvement.
3	**Review and confirm improvement**	3.1	Determine and document benefits.
		3.2	Ensure procedures and other relevant documentation is updated for improved procedure.
		3.3	Review process data after an appropriate period and confirm the improvement.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems ,including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations

Assessment Requirements for MSS404053 Use DMAIC techniques

Modification History

Release 1. Supersedes and is equivalent to MSS404053A Use six sigma techniques

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability on one (1) or more occasions to:

- identify a required improvement
- apply DMAIC to that improvement
- confirm the improvement has occurred.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- methods of identifying customer needs and benefits
- methods of identifying areas requiring improvement
- DMAIC processes
- methods of confirming benefits and improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real DMAIC approach to a workplace improvement.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404060 Facilitate the use of planning software systems in a work area or team

Modification History

Release 1. Supersedes and is equivalent to MSS404060A Facilitate the use of planning software systems in a work area or team

Application

This unit of competency covers the skills and knowledge required to facilitate the use of planning software in an organisation in an individual's work area or team. These systems are known by various generic names, such as Enterprise Resource Planning (ERP), Materials Resource Planning (MRPII, MRP III etc.) or by proprietary names.

This unit applies to an individual who will access the planning software system for their own work, but will also need to provide support and organise skill development programs for their team or work group members. The individual will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to facilitate the use of the planning software system. The planning software system will be used routinely in the work of the team or work group.

This unit primarily requires the application of skills associated with using communication technology and supporting team use of planning software. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure that planning software is used efficiently. This requires aspects of learning and self-management to ensure own performance and that of the team.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify scope of planning software**	1.1	Identify categories of information held by planning software.
		1.2	Identify information categories relevant to team and area processes.
		1.3	Identify range of information able to be provided to planning software by team or work group.
		1.4	Identify range of information able to be provided to team or work group by planning software.
2	**Communicate using the planning software system**	2.1	Send and receive information using planning software.
		2.2	Send and receive messages using planning software.
3	**Make decisions using planning software**	3.1	Interrogate the planning software system to find required current, historical or predicted information.
		3.2	Take actions appropriate to the information in accordance with procedures.
4	**Monitor the use of planning software**	4.1	Routinely monitor planning software information.
		4.2	Review performance and use of planning software with team.
5	**Support others to use planning software**	5.1	Regularly communicate with team or other work group members, both using planning software and face to face.
		5.2	Identify improvements required.
		5.3	Take action to implement improvements in accordance with procedures.

Assessment Requirements for MSS404060 Facilitate the use of planning software systems in a work area or team

Modification History

Release 1. Supersedes and is equivalent to MSS404060A Facilitate the use of planning software systems in a work area or team

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, to facilitate and/or provide support on three (3) or more occasions, to:

- identify team or work group area information requirements and relate to planning software categories
- lead and motivate others in using planning software
- ensure information sent to planning software is accurate and appropriate
- obtain regular and one-off information from planning software
- make decisions using planning software generated information.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- hierarchy of planning software system and operation
- information available from/through the planning software system
- query facilities and information analysis capabilities offered by planning software
- support/training/skill development mechanisms available for access by team members.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include facilitating and/or support for teams or work groups using planning software systems in own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404061 Facilitate the use of SCADA systems in a team or work area

Modification History

Release 1. Supersedes and is equivalent to MSS404061A Facilitate the use of SCADA systems in a team or work area

Application

This unit of competency covers the skills and knowledge required by a team leader or technical expert to personally use and facilitate the use of System Control and Data Acquisition (SCADA), or other similar systems, and support the team in their use of SCADA.

This unit applies to individuals who will access the SCADA system for their own work, but will also need to provide support and organise skill development programs for their team members. It is also relevant to maintenance personnel using a SCADA system to coordinate maintenance activities.

This unit primarily requires the application of skills associated with using communication technology and supporting team use of SCADA systems. Problem solving, initiative and enterprise, and planning and organisational skills are required to ensure the system is used efficiently.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify scope of SCADA system**	1.1	Identify categories of information held in and control options of SCADA system relevant to team or area.
		1.2	Identify range of information able to be provided to SCADA system by team.
		1.3	Identify range of information able to be provided to team by SCADA system.
		1.4	Identify team or area functions impacted by SCADA system.
2	**Communicate using SCADA system**	2.1	Send and receive information using SCADA.
		2.2	Send and receive messages using SCADA.
3	**Make decisions using SCADA**	3.1	Interrogate the SCADA system to find required current, historical or predicted information.
		3.2	Take actions appropriate to the information.
4	**Monitor the use of SCADA**	4.1	Routinely monitor SCADA information.
		4.2	Identify poor uses of SCADA system within team and system inadequacies.
		4.3	Identify system improvements required.
		4.4	Take action to improve SCADA system and its use.
5	**Support team use of SCADA**	5.1	Regularly communicate with team, both using SCADA-based communication and face to face.
		5.2	Identify skill improvement needs.
		5.3	Identify team members who require additional support.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.4 Take action to provide support according to procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:	• lean operations • agile operations • preventative and predictive maintenance approaches • statistical process control systems, including six sigma and three sigma • Just in Time (JIT), kanban and other pull-related operations control systems • supply, value, and demand chain monitoring and analysis • 5S • continuous improvement (kaizen) • breakthrough improvement (kaizen blitz) • cause/effect diagrams • overall equipment effectiveness (OEE) • takt time • process mapping • problem solving • run charts • standard procedures • current reality tree.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Stages where value stream actions occur include one or more of:	• sales outlet/representative • information gathering, data analysis and research • product design • raw material sourcing • intermediate processing • final assembler/collation/preparation • support services (e.g. accounting, finance and legal) • storage and delivery to customer • after market support.

Unit Mapping Information

Release 1. Supersedes and is equivalent to MSS404061A Facilitate the use of SCADA systems in a team or work area

Assessment Requirements for MSS404061 Facilitate the use of SCADA systems in a team or work area

Modification History

Release 1. Supersedes and is equivalent to MSS404061A Facilitate the use of SCADA systems in a team or work area

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, to facilitate and/or provide support on three (3) or more occasions, to:

- identify team or area information and operations requirements and relate to SCADA system
- lead and motivate others in using SCADA system
- obtain regular and one-off information from SCADA system
- make decisions using SCADA generated information.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- hierarchy of SCADA system and operation
- information available from and controls exercised by/through the SCADA system
- query, control and other facilities and information offered by SCADA
- support/training/skill development mechanisms available for access by team members.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence:
  - should occur over a range of situations which include typical disruptions to normal, smooth operation of the workplace
  - will typically include a supervisor/third-party report focussing on consistent performance and problem recognition and solving. A supervisor/third-party report must be prepared by someone who has a direct, relevant, current relationship with the person being assessed and who is in a position to form a judgement on workplace performance relevant to the unit of competency
  - must include facilitating and/or support for teams or work groups using SCADA systems in own workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - will typically include the use of appropriate tools, equipment and safety gear requiring demonstration of preparation, operation, completion and responding to problems.
- Assessment should occur in operational workplace situations.
- Knowledge evidence may be collected concurrently with performance evidence (provided a record is kept) or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404082 Assist in implementing a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS404082A Assist in implementing a proactive maintenance strategy

Application

This unit of competency covers the skills and knowledge required by a maintenance person to assist in the implementation of a proactive maintenance strategy in an organisation. This unit includes the interaction between a maintenance worker and operators, as appropriate.

This unit applies to a maintenance person in an organisation that has adopted or is implementing total preventative/productive maintenance (TPM), reliability centred maintenance (RCM) or similar strategies. As part of this, the maintenance person is expected to assist in the implementation by determining appropriate maintenance related schedules and also by providing maintenance related assistance to non-maintenance personnel, such as assisting production personnel to fulfil their role in the TPM/RCM strategy.

This unit requires the application of skills associated with problem solving and initiative and enterprise in order to analyse maintenance requirements. Communication, teamwork and planning and organising skills will be required to implement reliability strategies. This requires aspects of self-management to ensure improvement of own performance and learning.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Develop components of reliability strategy for a work/plant area**	1.1	Determine manufacturer's recommended inspection, servicing and related schedules for relevant plant.
		1.2	Consult with relevant people with regard to appropriate inspections, services and schedules.
		1.3	Discuss any conflicts with relevant people and seek resolution of conflicts.
		1.4	Develop schedules in liaison with relevant people.
		1.5	Identify inspections and servicing which may be done by operations personnel in liaison with relevant stakeholders.
2	**Assess current practice for maintenance implications**	2.1	Identify the overall equipment effectiveness (OEE) or other organisation targets for equipment/plant.
		2.2	Evaluate procedures for plant/equipment reliability implications.
		2.3	Discuss current practices with relevant people to determine any plant/equipment reliability implications.
		2.4	Recommend changes to improve plant/equipment reliability in accordance with procedures.
3	**Assist in implementing the reliability strategy**	3.1	Arrange for schedules to be incorporated in relevant work plans.
		3.2	Identify training needs in discussion with relevant personnel.
		3.3	Assist personnel to develop required skills for inspections/ servicing within scope of authority.
		3.4	Collect data/information as required by own work plan.
		3.5	Compare data/information with performance indicators.
		3.6	Recommend improvements to reliability strategy in

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

accordance with procedures.

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Competitive systems and practices include one or more of:

- lean operations
- agile operations
- preventative and predictive maintenance approaches
- statistical process control systems, including six sigma and three sigma
- Just in Time (JIT), kanban and other pull-related operations control systems
- supply, value, and demand chain monitoring and analysis
- 5S
- continuous improvement (kaizen)
- breakthrough improvement (kaizen blitz)
- cause/effect diagrams
- overall equipment effectiveness (OEE)
- takt time
- process mapping
- problem solving
- run charts
- standard procedures
- current reality tree.

Strategies include one or more of:

- mean time between failure (MTBF) which is one key measure of the effectiveness of a maintenance procedure, and is an indicator as to whether root causes are being found and resolved. If MTBF is reducing, then it is an indicator that the maintenance regime is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

failing
- failure mode and effects analysis (FMEA) which is a systematic approach that identifies potential failure modes in a system, product or equipment based operations caused by either design or operation/process deficiencies. It also identifies critical or significant design or process characteristics that require special controls to prevent or detect failure modes. FMEA is a tool used to prevent problems from occurring
- industry sectors have highly adapted forms of FMEA and which may practice traditional FMEA in their routine maintenance while using another technique, such as Hazard and Operability Studies (HAZOP) for design and modification. HAZOP is a form of FMEA which has been practiced by the process industries for over 30 years and examines the implications of changes in process conditions to process stability
- condition monitoring which often involves quite sophisticated monitoring of equipment, including such things as vibration monitoring, instrumental analysis of lubricating oil, and so on, to determine the current state of the equipment, monitor the change in this condition and predict when it needs servicing/maintenance to maintain reliability.

Inspection includes one or more of:
- reading dials, gauges and meters
- observations, including those using sight, hearing, smell and feel
- observations of product quality/faults/rejects.

Servicing includes one or more of:
- cleaning
- lubricating
- topping up
- adjusting.

Procedures (written, verbal, visual, computer based, etc.) include one or more of:
- work instructions
- standard operating procedures (SOPs)
- safe work method statements
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Assessment Requirements for MSS404082 Assist in implementing a proactive maintenance strategy

Modification History

Release 1. Supersedes and is equivalent to MSS404082A Assist in implementing a proactive maintenance strategy

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and include the ability, for one (1) or more work/plant areas, to:

- source information from manuals and other technical documentation or software
- effectively communicate with users on equipment operational and maintenance history
- develop schedules for maintenance activities, including seeking technical assistance, where appropriate
- differentiate between proactive and traditional maintenance strategies.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job role sufficient to fulfil their job role independently, including:

- requirements of the proactive maintenance strategy being implemented
- operating principles and procedures for equipment/plant subject to proactive maintenance strategy
- purpose and processes for data collection in proactive maintenance strategies
- procedures relevant to own job and organisation implementation of proactive maintenance
- methods of making/recommending improvements.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Knowledge evidence may be collected concurrently with performance evidence or through an independent process such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- The assessor must demonstrate both technical competency and currency.
- Technical competence can be demonstrated through:
  - relevant VET or other qualification/Statement of Attainment AND/OR
  - relevant workplace experience
- Currency can be demonstrated through:
  - performing the competency being assessed as part of current employment OR
  - having consulted with an organisation providing relevant environmental monitoring, management or technology services about performing the competency being assessed within the last twelve months.

MSS404084 Undertake process capability improvements

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Application

This unit describes the skills and knowledge required to make process capability improvements, including analysing data from the process, developing improvements to eliminate variation due to assignable causes and then implementing actions.

This unit applies to a person who reviews a range of process capability data and information and makes (or arranges for) changes to be made to procedures, equipment or process and then recalculates the process capability and monitors resulting improvement actions. The person will typically be a technical expert, team leader or be in a role where they have sufficient technical understanding of processes in their own work and that of others to be able to suggest and justify process capability improvements.

Process capability may have been determined using either a six sigma or three sigma processes. This unit applies to the application of statistical methods and the determination of capability based on those methods.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Assessment Requirements for MSS404084 Undertake process capability improvements

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- planned and implemented at least 1 process capability improvement.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- data collection and manipulation techniques
- variability, normal distribution and three and six sigma limits
- type of variations:
  - random variation (no assignable cause)
  - non-random variation (which has an assignable cause).
- causes of non-random variation in the process
- approaches to reducing variability.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS404085 Undertake proactive maintenance analyses

Modification History

Release 1. Unit code changed. Application changed. Performance criteria changed. Range of conditions removed. Assessment requirements changed. Supersedes and is equivalent to MSS404081 Undertake proactive maintenance analyses.

Application

This unit describes the skills and knowledge required to undertake the most common forms of analyses associated with predictive/preventative/reliability centred maintenance strategies.

This unit applies to a technical expert (usually an engineer, technician or tradesperson) who is required to undertake analyses for predictive, preventative and/or reliability centred maintenance of plant/equipment as part of a competitive systems and practices strategy. This includes undertaking a failure effects analysis in accordance with organisation's procedures.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Nil.

Competency Field

Unit Sector

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element.	
1. Liaise with operator	1.1	Establish a relationship with the operator of equipment
	1.2	Check the operator has the required skills and resources to keep the equipment clean
	1.3	Check the operator can monitor the operation of the equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.4	Communicate with operator about the overall equipment effectiveness (OEE) of equipment
	1.5	Involve operator, team leader and key personnel in identification of skill needs and means of skill acquisition to fill any identified gaps
2. Analyse history	2.1	Read maintenance records and analyse mean time between failures (MTBF)
	2.2	Read and analyse performance data of the equipment
	2.3	Identify causes of changes to historic trends and status
	2.4	Determine methods of ensuring causes of improvements and resolution of deterioration are locked in
3. Undertake failure effects analysis	3.1	Undertake analysis of failure effects and causes and record results
	3.2	Investigate methods of eliminating possibility of failure and minimising probability of failure
	3.3	Investigate methods of minimising the impact when failure cannot be eliminated
	3.4	Liaise with operator, team leader and key personnel regarding solutions
	3.5	Select and implement solutions
4. Undertake condition monitoring analysis	4.1	Obtain data for condition monitoring analysis
	4.2	Read and interpret condition monitoring data
	4.3	Predict required maintenance type and timing from condition monitoring data
	4.4	Liaise with operator, team leader and key personnel regarding implications of condition monitoring report
	4.5	Involve team members in development of changes to maintenance strategy to ensure awareness, learning and commitment

Assessment Requirements for MSS404085 Undertake proactive maintenance analyses

Modification History

Release 1. Unit code changed. Application changed. Performance criteria changed. Range of conditions removed. Assessment requirements changed. Supersedes and is equivalent to MSS404081 Undertake proactive maintenance analyses.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- undertaken proactive maintenance analyses of at least 2 items of equipment.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- cleaning requirements and operational principles of equipment in area of responsibility
- methods of assessing operator and maintenance skill gaps and filling them
- techniques for determining mean time between failures (MTBF)
- techniques for undertaking failure effects analysis
- principles of competitive systems and practices strategies being implemented and how to adapt them to maintenance
- root cause analysis
- techniques to analyse condition monitoring data.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS404087 Support proactive maintenance

Modification History

Release 1. Unit code changed. Application changed. Performance criteria changed. Range of conditions removed. Assessment requirements changed. Supersedes and is equivalent to MSS404083 Support proactive maintenance.

Application

This unit describes the skills and knowledge required to lead a production or maintenance team in a proactive maintenance environment. This unit has a strong emphasis on developing and resourcing the team to interpret information and monitor equipment and operation.

This unit applies in a competitive systems and practices organisation where proactive maintenance strategies, such as total preventative and/or productive maintenance (TPM) or reliability centred maintenance (RCM) are used. This unit applies to a team leader or other person who as part of their role assists others in implementing and following the proactive maintenance practices.

The unit covers the leading of a team in proactive maintenance activities, including keeping records, visual checks, analysis of failures and effects on production and housekeeping.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Nil.

Competency Field

Competitive systems and practices

Unit Sector

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element.	
1. Lead team in monitoring process and equipment	1.1	Demonstrate to team how to observe the process and equipment continuously and critically using senses to identify potential and actual problems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.2	Identify to team data indicators that must be monitored and recorded
	1.3	Ensure team monitors identified data indicators frequently and critically
	1.4	Ensure symptoms of operations outside the desired range of conditions and performance are recognised
	1.5	Analyse cause of equipment non-standard performance within scope of role
	1.6	Ensure team members take timely action to solve and refer problems in accordance with procedures
2. Apply proactive maintenance strategy	2.1	Obtain and discuss maintenance strategy with relevant people
	2.2	Identify aspects of maintenance strategy which require specific input from team
	2.3	Discuss maintenance strategy with team members
	2.4	Ensure team members have resources and training to be able to make the required contributions
3. Analyse standard procedures and work practices	3.1	Read and review team procedures and practices for compatibility with maintenance strategy
	3.2	Identify areas where production procedures and practices should be changed to comply with maintenance strategy
	3.3	Identify areas where maintenance strategy should change to comply with production procedures and practices
	3.4	Identify activities or areas where changes might increase equipment reliability
	3.5	Take action to have the required changes made
4. Facilitate team contribution to proactive maintenance	4.1	Monitor team's contribution to proactive maintenance
	4.2	Arrange for competency development of team members
	4.3	Facilitate ongoing examination by the team of process reliability and overall equipment effectiveness (OEE)
	4.4	Arrange for follow through and implementation of team originated improvements

Assessment Requirements for MSS404087 Support proactive maintenance

Modification History

Release 1. Unit code changed. Application changed. Performance criteria changed. Range of conditions removed. Assessment requirements changed. Supersedes and is equivalent to MSS404083 Support proactive maintenance.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- led at least 1 production or maintenance team to implement a proactive maintenance strategy.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- production process as it applies to the team area of responsibility
- equipment controls and function used in team's work area
- data ranges and indicators for normal team operations
- data and equipment variations and fault indicators able to be identified by team during operations
- data required from team for proactive maintenance strategy
- typical analyses used by the proactive maintenance strategy and their implication for work of the team
- responsibilities of the team, maintenance staff and technical experts
- overall equipment effectiveness (OEE) and relationship to team's operational capability.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS405013 Facilitate holistic culture improvement in an organisation

Modification History

Release 2. Minor updates and removal of superfluous information. Equivalent unit. Supersedes and is equivalent to MSS403013 Lead team culture improvement.

Application

This unit of competency covers the skills and knowledge required by a manager in an organisation that has embarked on competitive systems and practices and who seeks to change/improve the organisation culture to be consistent with that required to maximise the benefits from a competitive systems and practices strategy.

This unit primarily requires the application of skills associated with communication, teamwork, problem solving, and initiative and enterprise in order to assess and address culture development needs in the organisation. Planning and organising is required to ensure a systematic approach to the development of an organisation's culture that supports competitive systems and practices processes.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Nil.

Competency Field

Competitive systems and practices

Unit Sector

Not applicable

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element.	
1. Facilitate company-wide appreciation for the competitive	1.1	Communicate with all levels of the organisation the objectives and benefits of a competitive systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

systems and practices strategy		and practices strategy
	1.2	Communicate to all levels of the organisation the techniques and methods that will be used in achieving the competitive systems and practices strategy
	1.3	Facilitate the development of a systems approach to how the organisation works
	1.4	Establish mechanisms to measure current understanding of, and support for, competitive systems and practices amongst employees and other stakeholders
	1.5	Set targets for culture improvement from measurement of current understanding and support for competitive systems and practices
	1.6	Demonstrate a constancy of purpose for the organisation in the push for the continual improvement in all activities.
	1.7	Break down any communication barriers between parts of the organisation that may inhibit the competitive systems and practices strategy
	1.8	Develop a work structure that allows for everyone to participate and be heard in the transformation of the organisation
2. Facilitate application of knowledge about variation and ways to improve the operational processes	2.1	Facilitate commitment to enterprise data collection procedures
	2.2	Facilitate the identification of variation in processes
	2.3	Facilitate review of processes with a view to reducing variation
	2.4	Encourage the approach of building quality in and eliminating the need for end of process inspection
3. Facilitate development of knowledge and skill acquisition	3.1	Involve employees in identification of skill needs and any skills gaps
	3.2	Develop strategies for training, skills acquisition and employee self- improvement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	3.3	Set key performance indicators (KPIs) for training, skills acquisition and employee self-improvement
	3.4	Institute on and off-the-job training
	3.5	Institute a vigorous program of education and self-improvement for all employees
	3.6	Monitor KPIs and adjust training, skills acquisition and employee self- improvement strategies and delivery
4. Facilitate development of support within the organisation for competitive systems and practices	4.1	Ensure sufficient resources and adequate equipment is available to meet the requirements of the competitive systems and practices strategy
	4.2	Encourage acceptance of change
	4.3	Encourage employee commitment to and responsibility for the quality of their own work
	4.4	Monitor the level of employee understanding and support for competitive systems and practices
	4.5	Provide continuous feedback and communication of progress at all levels in implementing the strategy

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range of Conditions
Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included. Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Competitive systems and practices include one or more of:	• 5S • agile operations • breakthrough improvement (kaizen blitz) • cause/effect diagrams • continuous improvement (kaizen) • current reality tree • just in time (JIT), Kanban and other pull-related operations control systems • lean operations • overall equipment effectiveness (OEE) • preventative and predictive maintenance approaches • problem solving • process mapping • run charts • standard procedures • statistical process control systems, including six sigma and three sigma • supply, value, and demand chain monitoring and analysis • takt time.
Systems approach includes consideration of all of:	• customer requirements • effect of changes • internal/external relationships through which products and services are produced • member of the public issues • supplier issues • value stream member requirements • other external individual, group or organisation.
Mechanisms to measure current understanding and support for competitive systems and practices include one or more of:	• employee surveys • individual consultations with selected employees and employee representatives • information from toolbox meetings and other employee consultations • monitoring of suggestion schemes • qualitative and/or quantitative methods.

Assessment Requirements for MSS405013 Facilitate holistic culture improvement in an organisation

Modification History

Release 2. Minor updates and removal of superfluous information. Equivalent unit. Supersedes and is equivalent to MSS403013 Lead team culture improvement.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and has facilitated:

- culture improvement for an organisation, department or section
- appreciation for competitive systems and practices
- reduction in variation
- development of knowledge and skills
- increased support for competitive systems and practices.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- competitive systems and practices tools relevant to the organisation and its processes, their features and benefits
- the use of techniques for measuring support and culture
- organisation processes
- change management
- persuasion and influence techniques
- employee assistance available to facilitate coping with change.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSS407016 Lead a process to determine and solve root cause for a complex problem

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Application

This unit describes the skills and knowledge required to guide or lead a problem-solving process to solve complex and/or unusual problems. The problem-solving process will usually involve the use of either real or nominal groups to determine the root cause and propose the solution.

This unit applies to managers and/or technical experts who are confronted by complex problems to which they need to develop a solution. The problem may be related to any area or process within the organisation or in the value stream and may have been formally presented to the individual for consideration or arise as part of other work.

The person may or may not have the required technical expertise for the particular problem, although the problem will require technical expertise to be solved. The problem may be capable of being adequately defined at the beginning of the problem solving activity, or may be progressively defined through continued iterations of the problem-solving activity.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Recognise complex problem**	1.1	Identify a complex issue which needs to be addressed
		1.2	Undertake an initial investigation of the issue
		1.3	Determine initial areas of expertise and data which may be required to analyse the problem
		1.4	Write an initial definition of the problem
2	**Develop problem-solving methodology**	2.1	Draft a problem-solving methodology
		2.2	Develop required approaches and protocols for obtaining required data and information
		2.3	Establish group to assist with problem solving
		2.4	Allocate tasks, responsibilities and reporting arrangements to group
		2.5	Develop arrangements for consultation with required people outside of group
3	**Analyse problem**	3.1	Apply methodology
		3.2	Obtain data and information
		3.3	Review problem definition
		3.4	Review methodology
		3.5	Obtain additional data and information
4	**Identify root cause**	4.1	Map causal links for the problem
		4.2	Determine indicators of the problem or the problem precursors
		4.3	Identify causes which can be controlled

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
5	**Develop a solution**	5.1	Develop solutions for controllable causes
		5.2	Determine cost benefit for proposed solutions
		5.3	Investigate proposed solutions for efficacy
		5.4	Select the best available solution
		5.5	Obtain support and authorisations for proposed solution
6	**Check problem is solved and standardised**	6.1	Monitor indicators of problem and problem precursor
		6.2	Review problem solution and implementation
		6.3	Confirm solution is standardised

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for MSS407016 Lead a process to determine and solve root cause for a complex problem

Modification History

Release 1. Updated unit code. Changes to performance criteria. Range of conditions removed. Assessment requirements amended. Equivalent outcome.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- led a process to determine and solve root cause for at least 1 complex problem.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- organisational goals, products and processes
- sources of data (actual and possible) within the organisation and the value stream
- techniques and methodologies of formal problem solving
- data required for problem solving and alternative or proxy data sources
- cost benefit analysis
- strategies for facilitation of real groups (physical and face to face) and nominal groups (never meets and may not know each other).

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions, contingencies, facilities, equipment and resources.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

MSTGN3017 Monitor and operate trade waste process

Modification History

Release 1. Supersedes **and is equivalent to** MSTGN3007 Monitor and operate trade waste.

Application

This unit of competency describes the skills and knowledge required to monitor, operate, measure and report on trade waste system performance and process quality control in work areas / processing plant operations. Work may be conducted in restricted spaces or exposed conditions or controlled or open environments.

This unit applies to all sectors of the textiles, clothing and footwear (TCF) industry.

Work may be conducted in small to large scale enterprises and may involve individual and team activities. Work is performed within defined procedures under direct supervision.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Nil

Competency Field

Generic

Elements and Performance Criteria

Elements *Elements describe the* essential *outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Monitor treatment plant performance	1.1 Determine job and safe work requirements from work information 1.2 Conduct and assess routine waste treatment plant inspections in accordance with organisational and plant requirements 1.3 Collect and conduct tests of waste samples in accordance with organisational and plant requirements 1.4 Collect and report waste process data in accordance with organisational and plant requirements 1.5 Identify and report corrosion damage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements *Elements describe the* essential *outcomes.*	**Performance Criteria** *Performance criteria describe the performance needed to demonstrate achievement of the element.*
2. Control chemical use	2.1 Use, handle and store chemicals used in waste treatment in accordance with organisational and statutory requirements 2.2 Prepare chemical dosing for waste treatment in accordance with plant processes and organisational and statutory requirements 2.3 Maintain information related to chemical supply and usage in accordance with statutory requirements 2.4 Interact and communicate with other employees and relevant authorities about chemical use and supplies
3. Operate and control processes	3.1 Monitor processes to maintain parameters of waste treatment operation 3.2 Identify and report process faults and operational conditions of plant in accordance with organisational and statutory requirements 3.3 Make basic system adjustments to enhance system performance to ensure waste treatment complies with organisational and statutory requirements 3.4 Compile reports developed from plant and system data to meet organisational and statutory requirements

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Reading skills to interpret statutory requirements for waste treatment
- Numeracy skills to accurately measure and mix doses for waste treatment and interpret test results.

Other foundation skills essential to performance are explicit in the performance criteria of this unit.

Assessment Requirements for MSTGN3017 Monitor and operate trade waste process

Modification History

Release 1. Supersedes **and is equivalent to** MSTGN3007 Monitor and operate trade waste.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit, and:

- operated and maintained a trade waste treatment system for at least 1 waste product, including:
    - conducting routine plant inspections
    - collecting and conducting tests of process samples
    - complying with organisational and statutory requirements for chemical use and waste processing
    - complied reports using data extracted from plant and system.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- safe work practices and procedures and use of personal protective equipment (PPE)
- key requirements of Australian and industry standards, regulations and codes of practice relevant to waste product and waste disposal
- Environment Protection Authority (EPA) requirements for disposing of trade waste, including licencing arrangements and types of waste that can be discharged into sewers
- types of samples taken, and tests carried out on waste, and their purpose, including:
    - dissolved oxygen
    - pH
    - settling tests
- waste processing, including:
    - activated sludge
    - biodegradable reduction
    - chemical precipitation
    - solids handling
- chemical dosing processes
- hazardous material handling procedures
- work health and environmental aspects of relevant testing processes
- monitoring systems and equipment, including:
    - electronic monitoring and metering systems

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - manual chart recording systems
    - laboratory testing and sampling equipment
    - computerised equipment
- workplace recording and reporting practices.

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies. The following conditions must be met for this unit:

- use of suitable facilities, equipment and resources, including:
    - waste treatment plant set up with standard operating procedures (SOPs)
    - regulatory and organisational requirements for waste treatment.

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

PMASUP420 Minimise environmental impact of process

Modification History

Release 1. Supersedes and is equivalent to PMASUP420B Minimise environmental impact of process

Application

This unit of competency covers the skills and knowledge required to minimise the environmental impact of a plant and/or process. It applies to all resources used and products made by the plant, capital projects and improvements brought about by changes in work practices and procedures.

This unit of competency applies to experienced operators or those in similar roles who are required to apply in-depth knowledge of process and plant to in order to develop practices or procedures for conserving resources and minimising pollution and waste that will deliver the most benefits.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Support

Unit Sector

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Develop resource conservation practices and/or procedures**	1.1	Identify the nature of resources used in the plant/process
		1.2	Identify the primary source of these resources
		1.3	Determine the impact of the depletion of these resources

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

			on the environment and society
		1.4	Determine which resources will yield a greater benefit from their conservation
		1.5	Develop methods to reduce the consumption of these resources
		1.6	Complete required documentation to implement change
2	**Develop pollution minimisation practices and/or procedures**	2.1	Identify the nature of pollutants produced by the plant/process
		2.2	Determine the sources of these pollutants within the plant/process
		2.3	Determine the impact of these pollutants on the environment and society
		2.4	Determine which pollutant will yield a greater benefit from their reduction
		2.5	Develop methods to reduce the production of this pollutant
		2.6	Complete required documentation to implement change
3	**Develop waste minimisation practices and/or procedures**	3.1	Identify the nature of wastes produced by the plant/process
		3.2	Determine the sources of these wastes within the plant/process
		3.3	Identify the impact of these wastes on the environment and society
		3.4	Determine which wastes will yield a greater benefit from their reduction
		3.5	Develop methods to reduce the production of this waste
		3.6	Complete required documentation to implement change

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used, and include one or more of the following:

- legislative requirements, including work health and safety (WHS)
- industry codes of practice and guidelines
- environmental regulations and guidelines
- Australian and other standards
- licence and certification requirements

All operations to which this unit applies are subject to stringent health, safety and environment (HSE) requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and HSE requirements, the HSE requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

Procedures are written, verbal, visual, computer-based or in some other form, include one or more of the following:

- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Assessment Requirements for PMASUP420 Minimise environmental impact of process

Modification History

Release 1. Supersedes and is equivalent to PMASUP420B Minimise environmental impact of process

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria, and include the ability to:

- examine plant records, data and operating procedures and practices to determine options for:
  - maximisation of product yield from raw materials
  - reduction in volume of pollutants made and/or reduction in concentration/intensity of pollutants made and/or reduction in emissions
  - minimisation of wastes
- determine relative benefits of the options and develop processes/procedures to achieve preferred options
- document preferred options and complete written and/or electronic records.

Knowledge Evidence

Evidence must be provided that demonstrates knowledge of:

- resources used by the plant and the impact on the environment and society of using resources
- nature and source of pollutants and waste materials produced by the plant
- nature and severity of the effect the pollutants and waste materials can have on the environment and society
- types of local conditions that can make environmental threats more ‘sensitive’
- pathways of entry to the environment from the plant
- process parameters and limits
- product specifications and tolerances
- principles of operation of plant/equipment
- science (e.g. physics, chemistry and biochemistry) relevant to the process, its materials and eco impacts
- regulatory framework
- organisation procedures, including those covering:
  - environmental management
  - safety, emergency and hazard control
  - procurement.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence based on a holistic assessment of the evidence.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.
- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or practical, assessment must occur using a sufficiently rigorous simulated environment reflecting realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews (provided a record is kept).
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition, the assessor or anyone acting in subject matter expert role in assessment must demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they must assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures
- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on-the-job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBTECH406 Diagnose production equipment problems

Modification History

Release 1. Supersedes and is equivalent to PMBTECH406A Diagnose production equipment problems

Application

This unit of competency covers the skills and knowledge required to diagnose production equipment problems. It applies to product faults, including reject products and other faults, and production faults/problems.

This unit of competency applies to advanced operators, technicians or those in similar roles who are required to determine the possible causes of product/production faults; investigate the likely equipment, plant and/or process causes of the faults; isolate the most probable cause; recommend the solution and monitor its implementation.

This unit of competency applies to an operator/technician applying specialised theoretical and technical knowledge and well developed skills in situations that require autonomy, discretion and judgement. The operator/technician will take the lead role in the activity but will need to liaise with a range of people at all levels in the organisation to obtain information and to implement the solution. The operator/technician will have detailed operational and process knowledge but is not required to demonstrate 'hands on' operation of equipment as part of this competency.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Elements and Performance Criteria

Elements describe the essential outcomes.		Performance criteria describe the performance needed to demonstrate achievement of the element.	
1	**Identify faults in products/production**	1.1	Examine products/production process
		1.2	Identify faults
		1.3	Categorise faults according to type/likely cause
		1.4	Prioritise faults for action
2	**Determine most probable possible cause(s) of fault**	2.1	Analyse fault to determine possible causes
		2.2	Investigate possible causes to eliminate less probable causes
		2.3	Short list probable causes
		2.4	Check hypothesis of cause(s) is supported by the data available
		2.5	Identify most probable cause
3	**Implement solution to fault**	3.1	Develop recommended solution to fault
		3.2	Check health, safety and environment (HSE) implications of solution and modify solution as appropriate
		3.3	Communicate the recommendation as appropriate
		3.4	Check recommendation has been understood and can be implemented
		3.5	Check all hazard controls are in place
		3.6	Monitor progress of implementation
		3.7	Modify recommended solution as required
4	**Check fault**	4.1	Monitor product/process for fault

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

solution has worked	4.2	Monitor HSE impacts of changes
	4.3	Repeat analysis and solution process if required
	4.4	Update records and procedures to reflect successful solution

Foundation Skills

This section describes those required skills (language, literacy and numeracy) that are essential to performance.

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

This field allows for different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Regulatory framework

The latest version of all legislation, regulations, industry codes of practice and Australian/international standards, or the version specified by the local regulatory authority, must be used.

Applicable legislation, regulations, standards and codes of practice include:

- HSE legislation, regulations and codes of practice relevant to the workplace, manual handling, hazardous materials
- Australian/international standards relevant to the materials being used and products being made
- any relevant licence and certification requirements.

All operations to which this unit applies are subject to stringent HSE requirements, which may be imposed through state/territory or federal legislation, and these must not be compromised at any time. Where there is an apparent conflict between performance criteria and such requirements the legislative requirements take precedence.

Procedures

All operations must be performed in accordance with relevant procedures.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Procedures are written, verbal, visual, computer-based or in some other form, and include one or any combination of:

- technical specifications
- technical drawings
- test procedures
- emergency procedures
- work instructions
- standard operating procedures (SOPs)
- safe work method statements (SWMS)
- formulas/recipes
- batch sheets
- temporary instructions
- any similar instructions provided for the smooth running of the plant.

Hazards

Hazards must be identified and controlled. Identifying hazards requires consideration of:

- hazardous products and materials
- vapours or other atmospheric hazards
- interaction of polymers, additives and other materials
- sharp edges, protrusions or obstructions
- slippery surfaces, spills or leaks
- structural hazards
- equipment failures
- machinery, equipment and product mass
- other hazards that might arise.

Assessment Requirements for PMBTECH406 Diagnose production equipment problems

Modification History

Release 1. Supersedes and is equivalent to PMBTECH406A Diagnose production equipment problems

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy the requirements of the elements and performance criteria and demonstrate the ability to:

- read and interpret test results, technical information, product specifications, instruments/control panels, material labels and safety data sheets (SDS)
- examine products/process to identify faults via one (1) or more of:
  - visual examination
  - examination of product quality or other records
  - examination of inspection records
  - examination of test results
  - specific examination testing undertaken as part of a product improvement activity
- analyse the faults to identify all feasible causes of the problem
- investigate possible causes to short list probable causes including one (1) or more of:
  - talking with operators and others
  - checking machine histories for prevailing process conditions
  - checking current process/equipment conditions
  - carrying out small tests to determine the likelihood of a causal link between a condition and a fault
- confirm most probable cause based on available data
- develop and communicate solution to the fault which meets safety requirements
- monitor implementation of the solution and review and make adjustments as required
- communicate effectively with team/work group and supervisors
- complete workplace records
- document updates to procedures
- write equipment/process condition specifications.

Knowledge Evidence

Must provide evidence that demonstrates knowledge relevant to their job sufficient to fulfil their job role including knowledge of:

- how the process/equipment works

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- characteristics of materials and their behaviour in relation to process conditions and stages of production
- impact of variations process conditions on the product
- impacts of equipment failure/change/variation on the product
- changes to materials at various stages of production
- quality/inspection/testing regime and relationship of results of to process conditions and equipment faults
- types of product faults, including variations in:
  - colour
  - surface finish
  - size/shape
  - physical properties
  - chemical properties
  - biological/biochemical/microbiological properties
- types of process/equipment condition problems, including:
  - settings, such as temperature and pressure
  - rates, such as feed rate and flow rate
  - setting and adjustment of equipment parts
  - worn and broken equipment parts
- product faults that can be caused by process/equipment problems and possible solutions
- organisation procedures relevant to the work environment/job role
- hierarchy of control
- hazards that may arise in the job/work environment and:
  - their possible causes
  - potential consequences
  - appropriate risk controls.

Assessment Conditions

- The unit should be assessed holistically and the judgement of competence shall be based on a holistic assessment of the evidence.
- The diagnosis and solving of a number of faults with different types of causes is required, including:
  - product defect with process condition cause
  - product defect with equipment problem cause
  - process fault/problem with process condition or equipment cause.
- The collection of performance evidence is best done from a report and/or folio of evidence drawn from:
  - a single project which provides sufficient evidence of the requirements of all the elements and performance criteria
  - multiple smaller projects which together provide sufficient evidence of the requirements of all the elements and performance criteria.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- A third-party report, or similar, may be needed to testify to the work done by the individual, particularly when the project has been done as part of a project team.
- Assessment should use a real project in an operational workplace. Where this is not possible or where personal safety or environmental damage are limiting factors assessment must occur using a sufficiently rigorous simulated environment that reflects realistic operational workplace conditions. This must cover all aspects of workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.
- Assessment in a simulated environment should use evidence collected from demonstration of skills and one or more of:
  - walk-throughs
  - pilot plant operation
  - industry-based case studies/scenarios
  - 'what ifs'.
- Knowledge evidence may be collected concurrently with performance evidence or through an independent process, such as workbooks, written assessments or interviews.
- Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.
- Conditions for assessment must include access to all tools, equipment, materials and documentation required, including relevant workplace procedures, product and manufacturing specifications associated with this unit.
- The regulatory framework will be reflected in workplace policies and procedures and is not required to be independently assessed.
- Foundation skills are integral to competent performance of the unit and should not be assessed separately.
- Assessors must satisfy the assessor competency requirements that are in place at the time of the assessment as set by the VET regulator.
- In addition the assessor or anyone acting in subject matter expert role in assessment shall demonstrate both technical competency and currency. If the assessor cannot demonstrate technical competency and currency they shall assess with a subject matter expert who does meet these requirements.
- Technical competence can be demonstrated through one or more of:
  - relevant VET or other qualification/Statement of Attainment
  - appropriate workplace experience undertaking the type of work being assessed under routine and non-routine conditions
  - appropriate workplace experience supervising/evaluating the type of work being assessed under routine and non-routine conditions
- Currency can be demonstrated through one or more of:
  - being currently employed undertaking the type of work being assessed
  - being employed by the organisation undertaking the type of work being assessed and having maintained currency in accordance with that organisation's policies and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having consulted/had contact with an organisation undertaking the type of work being assessed within the last twelve months, the consultation/contact being related to assessment
- conducting on the job training/assessments of the type of work being assessed
- being an active member of a relevant professional body and participating in activities relevant to the assessment of this type of work.

PMBTECH406E Diagnose production equipment problems

Modification History

Release 1. Unit code. Application changed. Elements and Performance Criteria changed. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to PMBTECH406 Diagnose production equipment problems.

Application

This unit covers the skills and knowledge required to assess production equipment output and diagnose the causes of product output variances.

This unit applies to an experienced technician working alone or as part of a team.

The unit principally refers to the competency requirements for formal diagnostic skills and knowledge required by dedicated production process and machine operators or technicians, and those supporting specialist technicians.

No licensing or certification requirements exist at the time of publication. Relevant legislation, industry standards and codes of practice within Australia must be applied.

Pre-requisite Unit

Nil.

Competency Field

Technical

Elements and Performance Criteria

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Identify variance in product and associated production output	1.1 Examine product and associated production output for variance against job and equipment specifications 1.2 Categorise identified variance by type and prioritise it for action
2. Determine most probable possible cause(s) of variance	2.1 Analyse variance to determine possible causes 2.2 Examine possible causes to prioritise more likely ones for further investigation 2.3 Compare hypotheses of variance with available data to support

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements Elements describe the essential outcomes.	**Performance Criteria** Performance criteria describe the performance needed to demonstrate achievement of the element.
	diagnosis 2.4 Identify most probable cause for further action
3. Develop and implement solution to rectify variance	3.1 Develop solution for recommendation to rectify variance that considers work health and safety implications and established workplace procedures 3.2 Use appropriate techniques to communicate recommendation and verify understanding 3.3 Seek support from relevant stakeholders for recommendation 3.4 Identify potential hazards and ensure controls are in place 3.5 Implement agreed solution and monitor initial progress to ensure resolution is achieved
4. Check success of variance solution	4.1 Monitor ongoing success of solution to product or production output variance 4.2 Monitor work health and safety and other workplace impacts of solution 4.3 Update workplace records and procedures to reflect solution

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

- Numeracy skills to measure and quantify variances and their impacts.
- Reading skills to interpret job and equipment specifications for comparison with product outcomes.
- Writing and oral communication skills to record and report variances and their solutions to stakeholders, and document procedural updates and records.

Other foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

Supersedes and is equivalent to PMBTECH406 Diagnose production equipment problems.

Assessment Requirements for PMBTECH406E Diagnose production equipment problems

Modification History

Release 1. Unit code. Application changed. Elements and Performance Criteria changed. Range of Conditions removed. Assessment Requirements changed. Supersedes and is equivalent to PMBTECH406 Diagnose production equipment problems.

Performance Evidence

There must be evidence the candidate has completed the tasks outlined in the elements and performance criteria of this unit competency, and demonstrated the ability to:

- diagnose and rectify product equipment problems at least once, to meet job specifications, including:
  - examination of products and processes to identify variances using:
    - visual examination
    - examination of product quality or other records
    - examination of inspection records
    - examination of test results
    - specific examination testing undertaken as part of a product improvement activity.

Knowledge Evidence

There must be evidence the candidate has knowledge of:

- how the process and equipment functions
- characteristics of materials in relation to process conditions and stages of production
- types of product faults, including variations in:
  - colour
  - surface finish
  - size/shape
  - physical properties
  - chemical properties
- regimes for product and process testing
- techniques for communicating proposals to stakeholders
- typical process and product problems, including early warning signs, possible causes and corrective actions.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Skills must have been demonstrated in the workplace or in a simulated environment that reflects workplace conditions and contingencies

Assessors must satisfy the NVR/AQTF mandatory competency requirements for assessors.

RIICBM305D Install pre-cast concrete bridge decks

Modification History

Release	Comment
1	This unit replaces RIICBM305A Install pre-cast concrete bridge decks
2	Corrected Knowledge Evidence formatting. Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to apply install pre-cast concrete bridge decks in Civil Construction.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and Industry sectors. Relevant information must be sourced prior to application of the unit.

Pre-requisite Unit

Elements and Performance Criteria

1. Plan and prepare to install pre-cast concrete bridge decks	1.1 Access, interpret and apply documentation to install pre-cast concrete bridge decks and ensure the work activity is compliant 1.2 Obtain, interpret, clarify and confirm work instructions before proceeding 1.3 Confirm and apply environmental protection and safety requirements 1.4 Obtain, interpret and implement traffic management signage 1.5 Select and check for faults plant, tools and equipment to carry out tasks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.6 Identify, address and report hazards, risks and environmental issues 1.7 Obtain and interpret emergency procedures, and be prepared for fire/accident/emergency
2. Install bearings	2.1 Determine bearing types and position 2.2 Check bearing dimensions and material for quality 2.3 Install bearings 2.4 Identify locating brackets/bolts and install in preparation for placement of girders
3. Install concrete bridge deck	3.1 Prepare deck components for grouting prior to placement 3.2 Place deck components 3.3 Carry out and complete pre-fabricated concrete decking grouting 3.4 Insert and tension pre-fabricated concrete decking transverse stressing bar 3.5 Grout transverse stressing bar 3.6 Grout anchor bolts 3.7 Place and specify deck joints of pre-fabricated decking and scuppers
4. Fix bridge fittings	4.1 Fit posts and bridge rails 4.2 Assemble and install pre-fabricated stairs
5. Clean up	5.1 Clear work area and dispose of or recycle materials 5.2 Clean, check, maintain and store plant, tools and equipment

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIICBM305D Install pre-cast concrete bridge decks

Modification History

Release	Comment
1	This unit replaces RIICBM305A Install pre-cast concrete bridge decks
2	Corrected Knowledge Evidence formatting. Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies applicable legislation, documentation, policies and procedures
- works effectively with others to undertake and complete the installation of pre-cast concrete bridge decks that meets all of the required outcomes including:
  - communicating clearly and concisely with others to receive and clarify work instructions
  - using a range of communication techniques and systems such as signage to advise others of work activity and exclusion zones
- demonstrates completion of installing pre-cast concrete bridge decks that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - installing bearings and brackets/bolts in preparation for placement of girders
  - installing pre-cast concrete deck units including installation of transverse stressing bars and bearings on a multi-span bridge with a minimum length of twenty (20) metres to specifications
  - assembling and installing pre-fabricated stairs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

The candidate must demonstrate knowledge of the following in applying the install pre-cast concrete bridge decks through:

- applying legislative, organisational and site requirements and procedures for:
  - risk assessment and management
  - site and equipment safety requirements
  - bridge construction and sequencing
  - pre-cast concrete bridge decks and installation
  - bearing types and installation
  - safe lifting techniques
  - safe working procedures, working at heights and over water
  - project quality requirements
  - civil construction terminology
- interpreting engineering drawings
- equipment types, characteristics, technical capabilities and limitations
- site isolation and traffic control responsibilities and authorities
- safety data sheets and materials handling methods
- JSA/JSEA/safe work method statements

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit must be assessed in the context of this sector's work environment; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	**AQF** Level**	**Required assessor or Industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

**Where a unit is being delivered outside of a Qualification the first numeric character in the Unit code should be considered to indicate the AQF level

RIIHAN305D Operate a gantry or overhead crane

Modification History

Release	Comment
1	This unit replaces RIIHAN305A Operate a gantry or overhead crane.
2	Editorial corrections Amended reference to Licensing requirements in Unit Application
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Application

This unit describes a participant's skills and knowledge required to operate a gantry or overhead crane in the Resources and Infrastructure Industries.

This unit is appropriate for those working in operational roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories and industry sectors. Relevant information must be sourced prior to application of the unit.

Elements and Performance Criteria

1. Plan and prepare for gantry/overhead crane operations	1.1 Access, interpret and apply crane operation documentation and ensure the work activity is compliant 1.2 Obtain, read, interpret, clarify and confirm work requirements 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures 1.4 Select and wear personal protective equipment appropriate for work activities 1.5 Coordinate activities with others prior to commencement and throughout operations
2. Operate	2.1 Prepare load for lift in accordance with crane limitations and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

gantry/overhead crane	rigging requirements 2.2 Perform pre-start, start-up, park-up and shutdown procedures 2.3 Confirm the work area hazards are removed or controlled prior to commencing the lift 2.4 Interpret signals in accordance with AS2550 2.5 Operate controls to lift, transfer and lower loads 2.6 Monitor lift operations and ensure compliance
3. Perform gantry/overhead crane operator maintenance	3.1 Inspect crane for faults 3.2 Perform routine operational servicing, lubrication and housekeeping tasks 3.3 Process written records

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit. Further information is available in the Resources and Infrastructure Industry Training Package Companion Volume.

Assessment Requirements for RIIHAN305D Operate a gantry or overhead crane

Modification History

Release	Comment
1	This unit replaces RIIHAN305A Operate a gantry or overhead crane.
2	Editorial corrections Amended reference to Licensing requirements in Unit Application
3	Required frequency and volume of evidence amended in Performance evidence. Substantial amendments made in Assessment Conditions field, including: references to Industry Sectors, assessor and subject matter expert experience requirements, how assessment should be conducted and what it should confirm.

Performance Evidence

Evidence is required to be collected that demonstrates a candidate's competency in this unit. Evidence must be relevant to the roles within this sector's work operations and satisfy all of the requirements of the performance criteria of this unit and include evidence that the candidate:

- locates and applies relevant documentation, policies and procedures
- implements the requirements, procedures and techniques for the safe, effective and efficient completion of the operation of a gantry or overhead crane including:
  - planning and preparing for operating the gantry or overhead crane
  - performing crane inspection and fault finding
  - accessing, interpreting and applying technical information
  - selecting and using relevant tools and equipment
- works effectively with others to undertake and complete the operation of a gantry or overhead crane that meets all of the required outcomes including:
  - using a range of communication techniques and equipment to coordinate activities with others
  - maintaining all written and verbal reporting requirements and procedures
- demonstrates completion of operating a gantry or overhead crane that safely, effectively and efficiently meets all of the required outcomes on more than one (1) occasion including:
  - performing pre-start, start-up, park-up and shutdown procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operating crane controls to lift, transfer and lower loads
- completing maintenance operations, including:
  - inspection of gantry or overhead crane
  - performing operational servicing and lubrication
- calculating volume and weights
- disposing of environmentally sensitive fluids and materials

Knowledge Evidence

The candidate must demonstrate knowledge of the following when operating a gantry or overhead crane:

- accessing and applying the National Standard for High Risk Work
- identifying crane equipment characteristics, technical capabilities and limitations
- accessing, interpreting and applying technical crane information
- applying fault finding techniques
- identifying, interpreting and using hand and whistle signals

Assessment Conditions

- An assessor of this unit must satisfy the requirements of the NVR/AQTF or their successors; and Industry regulations for certification and licensing; and,
- this unit is best assessed in the context of this sector's work environment;
- where personal safety or environmental damage are limiting factors, assessment may occur in a simulated environment provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills; and,
- this unit must be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- assessment may be conducted in conjunction with the assessment of other Units of Competency; and,
- assessment must confirm consistent performance can be applied in a range of relevant workplace circumstances; and,
- assessors must demonstrate the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and through the minimum years of current* work experience specified below in an Industry sector relevant to the outcomes of the unit; or,
- where the assessor does not meet experience requirements a co-assessment or partnership arrangement must exist between the qualified assessor and an Industry subject matter expert. The Industry subject matter expert should hold the unit being assessed (or an equivalent unit) and/or demonstrate equivalence of skills and knowledge at the unit level. An Industry technical expert must also demonstrate skills and knowledge from the minimum years of current work experience specified below in the Industry sector, including time spent in roles related to the unit being assessed; and,

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- assessor and Industry subject matter expert requirements differ depending on the Australian Qualifications Framework Level (AQF) of the qualification being assessed and/or Industry Sector as follows:

Industry sector	AQF** Level	Required assessor or Industry subject matter expert experience
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Construction	1	1 Year
	2	2 Years
Drilling, Coal Mining and Extractive (Quarrying)	3-6	3 Years
Metalliferous Mining and Civil Construction	3-6	5 Years
Other sectors	Where this Unit is being assessed outside of the Resources and Infrastructure Sectors assessor and/or Industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no Industry standard is specified should comply with any relevant regulation.	

*Assessors can demonstrate current work experience through employment within Industry in a role relevant to the outcomes of the Unit; or, for external assessors this can be demonstrated through exposure to Industry by conducting frequent site assessments across various locations.

RIIMPO319E Conduct backhoe/loader operations

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Application

This unit describes the skills and knowledge required to operate a backhoe/loader to load, distribute and place materials.

This unit applies to those working in site based roles.

Licensing, legislative, regulatory and certification requirements that apply to this unit can vary between states, territories, and industry sectors, and must be sourced from state jurisdictions prior to applying this unit.

Unit Sector

Civil infrastructure

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare for backhoe/loader operations	1.1 Access, interpret and apply backhoe/loader operations documentation 1.2 Obtain, interpret, clarify and confirm work instructions 1.3 Identify hazards and environmental issues, assess the risks and implement control measures in line with workplace policies 1.4 Select and wear personal protective equipment required for work activities 1.5 Identify, obtain and implement signage traffic management requirements according to standard operating procedures and safe work practices 1.6 Select required backhoe/loader equipment and confirm suitability

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
	for work activities 1.7 Obtain and interpret emergency procedures for backhoe/loaders, and be prepared for fires, accidents and emergencies 1.8 Coordinate and communicate planned activities with others at the site prior to commencement of work activity
2. Operate backhoe/ loader in line with established requirements	2.1 Carry out prestart and start-up checks in line with workplace procedures 2.2 Identify faults or defects and rectify or report within scope of own responsibility and according to workplace procedures 2.3 Drive and operate machine using techniques suited to equipment capabilities, site and work conditions, and according to workplace procedures 2.4 Monitor hazards and risks during operations , and ensure safety of self, other personnel, plant and equipment 2.5 Monitor and manage equipment performance using indicators and alarms
3. Load, carry and place materials to complete work activity	3.1 Establish weight of load and ensure it is within safe operational limits of the machine 3.2 Use lifting gear within safe working load requirements and in line with workplace procedures 3.3 Position and locate machinery to ensure stable and effective shift materials according to work requirements 3.4 Shift materials safely and effectively, using hand, audible and communication signal, in line with workplace procedures 3.5 Park up, shut down, secure and carry out post operational inspection of equipment in line with workplace procedures
4. Select, remove, fit and attachments for a backhoe/loader	4.1 Select attachment for the task and fit attachment in line with workplace procedures 4.2 Test attachment and ensure correct fitting and operation 4.3 Use attachment within design limits and in accordance with workplace procedures 4.4 Remove, clean and store attachments in designated location in line with workplace procedures
5. Relocate the	5.1 Prepare backhoe/loader for relocation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
backhoe/ loader	5.2 Move backhoe/loader safely between worksites, observing relevant codes and traffic management requirements
6. Conduct housekeeping activities	6.1 Clear work area and dispose of or recycle materials according to workplace procedures 6.2 Manage and/or report hazards to maintain a safe working environment 6.3 Complete and file or distribute documentation in a manner that complies with workplace practices

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance.

Skill	Description
Reading	• Identifies and interprets information from workplace procedures, documentation, legislation and regulations
Numeracy	• Uses equipment operating capacity schedule to confirm safe weight load limits

Unit Mapping Information

Code and title current version	Code and title previous version	Comments	Equivalence status

Assessment Requirements for RIIMPO319E Conduct backhoe/loader operations

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 3.0.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements and performance criteria of this unit.

The candidate must demonstrate completion of loader/backhoe operations that safely, effectively and efficiently follows workplace procedures to carry out work activity on at least two occasions, and include:

- conducting prestart checks prior to commencing operations and shutdown procedures on completion of operations
- driving and operating the equipment, and adjusting techniques to suit site conditions
- completion of operations to specification using at least two different material types (i.e. one different material type per occasion) including:
  - mixing materials
  - stripping/spreading materials
  - trench excavation
  - backfilling
  - lifting and carry materials
  - loading dump trucks, wagons, hoppers, chutes, and cutting/boxing
- selecting, fitting, testing, using and removing at least two attachments (i.e. one attachment per occasion), which must be certified and approved in line with workplace procedures and could include, but are not limited to, the following:
  - extending devices
  - tilt bucket
  - buckets
  - compaction wheel
  - ripper
  - plate compactor
  - rock breaker
  - auger

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - broom
  - mower/slasher
  - forklift
  - 4 in 1 bucket and free/rock grab
- parking and securing of equipment

In the course of the above work the candidate must also:

- locate and apply relevant documentation, policies and procedures
- select and wear personal protective equipment required for work activities
- carry out vehicle refuelling requirements and procedures where applicable
- apply safe work practices, identifying and reporting all potential hazards, risks and environmental issues
- apply problem solving and troubleshooting techniques when operating equipment
- monitor and manage equipment performance using indicators and alarms
- identify common equipment faults
- apply levelling techniques
- establish weight of load
- manage changes in the loads centre of gravity during transportation
- select and use the required tools and equipment
- work safely around other machines and personnel
- apply methods of changing machine attachments
- use a range of communication techniques and equipment essential to the safe completion of work activity, including hand, audible and other signals
- meet written and verbal reporting requirements and procedures associated with equipment operations
- organise work activities to meet all task requirements
-

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements and performance criteria of this unit. This includes:

Key policies and procedures, legislation and established requirements for backhoe/loader operations, including those relating to:

- isolation requirements
- fires, accidents and emergencies
- work health and safety, including signs of operator fatigue and how it should be managed
- site isolation and traffic control responsibilities and authorities
- project quality requirements
- operational, maintenance and basic diagnostics
- personal protective equipment
- recyclable materials
- housekeeping activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Key factors affecting work activities described in performance evidence above, including:

- equipment processes, technical capability and limitations
- drawings and sketches
- ground conditions
- materials characteristics, including density and viscosity

Key features associated with civil construction works, including:

- civil construction terminology
- basic principles of material technology and material compaction for civil works
- basic earthworks calculations
- civil construction activity sequences of road construction, earthworks and drainage

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
  - backhoe/loader
  - personal protective equipment
- be conducted in a safe environment; and,
- be assessed in context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures, processes and operational manuals directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector’s workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory competency standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/AQTF mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing a high level of RII training product knowledge

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- having an understanding and knowledge of legislations and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence as outlined in this Unit of Competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must hold the relevant vocational competencies and have current industry skills directly relevant to the training and assessment being provided and must work alongside a trainer and/or assessor to conduct the assessment. This means the industry subject matter expert should hold the unit being assessed (or an equivalent unit), and must also demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**AQF indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 Year
	2	2 Years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 Years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the RII implementation guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a Unit of Competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

RIIWHS202E Enter and work in confined spaces

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.
Release 2	Minor amendment to Knowledge Evidence to correct typographical error.

Application

This unit describes the skills and knowledge required to enter and work in confined spaces in the resources and infrastructure industries.

It applies to those working in operational roles. They generally work under supervision to undertake a prescribed range of functions involving known routines and procedures and take responsibility for the quality of work outcomes.

Licensing, legislative and certification requirements that apply to this unit can vary between states, territories and industry sectors. Users must check requirements with relevant body before applying the unit.

Note: The terms Occupational Health and Safety (OHS) and Work Health and Safety (WHS) are equivalent and generally either can be used in the workplace. In jurisdictions where the National Model WHS Legislation has not been implemented RTOs are advised to contextualise the unit of competency by referring to the existing State/Territory OHS legislative requirements.

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Plan and prepare for working in confined space	1.1 Obtain, interpret and confirm work requirements 1.2 Access, interpret and apply documentation required to enter and work in confined spaces 1.3 Identify and address potential risks, hazards and environmental issues, and implement control measures according to workplace procedures 1.4 Obtain and confirm authorisation of a confined space entry permit

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	that meets regulatory requirements 1.5 Select and wear appropriate personal protective equipment for planned work activities 1.6 Obtain and interpret emergency procedures with the stand-by person, and be prepared for emergency situations 1.7 Identify, obtain and implement signage and barrier requirements according to workplace procedures 1.8 Select tools and equipment for the tasks, check for serviceability and rectify or report any faults to relevant personnel 1.9 Position rescue equipment by the entry permit
2. Work in confined space	2.1 Gain access to confined space 2.2 Test and monitor the atmosphere for harmful elements according to workplace procedures 2.3 Correctly apply tagging and lock-out procedures 2.4 Enter the confined space according to workplace procedures 2.5 Maintain ongoing communication with the stand-by person 2.6 Comply with entry permit requirements 2.7 Monitor and adhere to allocated entry time
3. Exit confined space	3.1 Exit confined space according to workplace procedures 3.2 Recover tools, equipment and materials 3.3 Conduct inspection of the confined spaces according to workplace procedures 3.4 Remove tagging and lock-out procedures 3.5 Complete confined space entry permit requirements according to workplace procedures
4. Clean up	4.1 Clear work area and dispose of materials according to workplace procedures 4.2 Remove, clean and store barriers and signs 4.3 Conduct equipment inspections to identify faults according to manufacturer specifications and workplace procedures and report to relevant personnel 4.4 Conduct routine operational servicing, lubrication and housekeeping activities according to workplace procedures 4.5 Process written maintenance records according to workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes those language, literacy, numeracy and employment skills that are essential to performance but not explicit in the performance criteria.

SKILL	DESCRIPTION
Reading	• Identifies and interprets information from workplace procedures, documentation and regulations
Writing	• Produces and completes written documents required for workplace procedures
Self-management	• Monitors and minimises own exposure to worksite risks and hazards during activities
Oral communication	• Uses a range of communication techniques and systems to communicate with others

Unit Mapping Information

Supersedes and is equivalent to RIIWHS202D Entering and working in confined spaces.

Assessment Requirements for RIIWHS202E Enter and work in confined spaces

Modification History

Release	Comments
Release 1	This version first released with RII Resources and Infrastructure Industry Training Package Version 5.0.
Release 2	Minor amendment to Knowledge Evidence to correct typographical error.

Performance Evidence

The candidate must demonstrate the ability to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including evidence of the ability to:

- enter and work in confined spaces on at least two occasions, including:
  - obtaining the required entry permit and instructions for performing work in confined spaces
  - interpreting and applying workplace procedures
  - applying tagging and lock out procedures
  - selecting, wearing and caring for personal protective equipment
  - using atmospheric monitoring devices prior to entering the confined space
  - entering the confined space
  - working in the confined space
  - using atmospheric monitoring devices during confined space activity
  - applying safe materials handling methods
  - exiting the confined space
  - removing tagging and lock out.

During the above, the candidate must:

- locate and apply relevant legislation, documentation, policies and procedures and confirm that the work activity is compliant
- implement the requirements, procedures and techniques for entering and working in confined spaces
- work effectively with others to enter and work in confined spaces in a way that meets all required outcomes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- communicate clearly and concisely with others to receive and clarify work instructions and to determine coordination requirements prior to commencing and during work activities.

Knowledge Evidence

The candidate must be able to demonstrate knowledge to complete the tasks outlined in the elements, performance criteria and foundation skills of this unit, including knowledge of:

- key legislation relevant to enter and work in confined spaces
- key policies, procedures and documentation required to enter and work in confined spaces, including:
  - entry and exit procedures, risks and regulations
  - site and equipment safety requirements
  - site isolation and site control responsibilities and authorities
  - safety data sheets
  - incidents and emergency response documentation
- principles and techniques for identifying and responding to:
  - areas that constitute confined spaces
  - types of air contaminants and toxic gases
  - limitations of breathing apparatus
  - relevant hazards and emergencies
- equipment types, characteristics, technical capabilities and limitations
- principles and techniques for using confined space and industry terminology
- techniques for coordinating and communicating job activities with others.

Assessment Conditions

Mandatory conditions for assessment of this unit are stipulated below. The assessment must:

- include access to:
  - personal protective equipment
  - equipment related to entering and working in confined spaces
  - relevant documentation
- be conducted in a safe environment; and,
- be assessed in the context of this sector's work environment; and,
- be assessed in compliance with relevant legislation/regulation and using policies, procedures and processes directly related to the industry sector for which it is being assessed; and,
- confirm consistent performance can be applied in a range of relevant workplace circumstances.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Where personal safety or environmental damage are limiting factors, assessment may occur in a simulated work environment* provided it is realistic and sufficiently rigorous to cover all aspects of this sector's workplace performance, including environment, task skills, task management skills, contingency management skills and job role environment skills.

Assessor requirements

Assessors must be able to clearly demonstrate current and relevant industry knowledge and experience to satisfy the mandatory regulatory standards as set out in the Standards for Registered Training Organisations (RTOs) 2015/Australian Quality Training Framework mandatory requirements for assessors current at the time of assessment and any relevant licensing and certification requirements. This includes:

- vocational competencies at least to the level being delivered and assessed
- current industry skills directly relevant to the training and assessment being provided
- current knowledge and skills in vocational training and learning that informs their training and assessment
- formal relevant qualifications in training and assessment
- having knowledge of and/or experience using the latest techniques and processes
- possessing the required level of RII training product knowledge
- having an understanding and knowledge of legislation and regulations relevant to the industry and to employment and workplaces
- demonstrating the performance evidence, and knowledge evidence outlined in this unit of competency, and
- the minimum years of current** work experience after competency has been obtained as specified below in an industry sector relevant to the outcomes of the unit.

It is also acceptable for the appropriately qualified assessor to work with an industry expert to conduct assessment together and for the industry expert to be involved in the assessment judgement. The industry expert must have current industry skills directly relevant to the training and assessment being provided. This means the industry subject matter expert must demonstrate skills and knowledge from the minimum years of current work experience after competency has been obtained as specified below, including time spent in roles related to the unit being assessed:

Industry sector	**AQF indicator level*** **	**Required assessor or industry subject matter expert experience**
Drilling, Metalliferous Mining, Coal Mining, Extractive (Quarrying) and Civil Infrastructure	1	1 year
	2	2 years
Drilling, Coal Mining, Extractive (Quarrying), Metalliferous Mining and Civil Infrastructure	3-6	3 years
Other sectors	Where this unit is being assessed outside of the resources and infrastructure sectors assessor and/or industry subject matter expert	

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Industry sector	AQF indicator level***	Required assessor or industry subject matter expert experience
	experience should be in-line with industry standards for the sector in which it is being assessed and where no industry standard is specified should comply with any relevant regulation.	

*Guidance on simulated environments has been stipulated in the Companion Volume Implementation Guide located on VETNet.

**Assessors can demonstrate current work experience through employment within industry in a role relevant to the outcomes of the unit; or, for external assessors this can be demonstrated through exposure to industry by conducting a minimum number of site assessments as determined by the relevant industry sector, across various locations.

*** While a unit of competency does not have an AQF level, where a unit is being delivered outside of a qualification the first numeric character in the unit code should be considered as the AQF indicator level for assessment purposes.

SIRCDIS006 Maintain dispensary stock

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to assist pharmacists maintain all types of dispensary stock including scheduled medicines, perishable goods and raw materials for compounding. It requires the ability to order, receive and store stock, maintain its quality and administer stock control records.

This unit applies to senior dispensary assistants working in community pharmacies. When maintaining dispensary stock, they work under the direct supervision of a pharmacist and their role is limited to those functions that do not require them to exercise professional pharmaceutical judgement or discretion.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Dispensary

Unit Sector

Community Pharmacy

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Order dispensary stock.	1.1.Follow organisational procedures for stock maintenance activities. 1.2.Identify dispensary stock maintenance requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.3.Refer to and interpret preferred supplier arrangements and confirm stock availability, cost and delivery times. 1.4.Seek direction or clarifications from pharmacist and obtain pharmacist approval for stock orders. 1.5.Place clear, unambiguous documented orders for dispensary items within required timelines. 1.6.Complete and keep accurate purchase and costing records.
2. Take delivery of dispensary stock.	2.1.Check incoming dispensary stock against orders and delivery documentation, and identify, record and report discrepancies. 2.2.Inspect items for damage, quality and use by dates and record and report findings. 2.3.Check cold chain items have been maintained at optimum temperature and report unacceptable quality to pharmacist. 2.4.Record details of incoming stock. 2.5.Alert pharmacist to delivery of controlled drugs.
3. Store dispensary stock.	3.1.Use safe manual handling techniques when moving and storing stock to avoid injury. 3.2.Identify dispensary product layout and store stock promptly in appropriate storage location. 3.3.Choose and maintain appropriate environmental conditions for storage of perishable items. 3.4.Ensure special dispensary items are stored according to security requirements.
4. Maintain dispensary stock.	4.1.Check and adjust environmental conditions of storage regularly to maintain perishable dispensary stock at optimum quality. 4.2.Check quality of other stock regularly and make adjustments to ensure stock protection. 4.3.Rotate stock for maximum use and minimum wastage. 4.4.Assist pharmacist to manage-out stock of branded medicines when introducing generic equivalents. 4.5.Monitor, calculate and maintain working stock levels in consultation with pharmacist and with consideration of Pharmaceutical Benefits Scheme (PBS) price disclosure system. 4.6.Organise and participate in stocktakes at appropriate intervals. 4.7.Produce accurate stocktake reports within designated timelines and maintain accurate stock control records. 4.8.Investigate, resolve and report stock losses and discrepancies. 4.9.Use stock control system to maintain stock control records.
5. Dispose of dispensary stock waste.	5.1.Sort waste and obtain pharmacist approval to reject out-of-date, damaged and excess dispensary stock. 5.2.Dispose of waste under pharmacist supervision, according to environmental and special waste disposal requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5.3.Update dispensary stock records following disposal.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for SIRCDIS006 Maintain dispensary stock

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- order and take delivery of each of these types of dispensary stock for three supply periods:
  - Prescription Only Medicine (S4)
  - branded medicines
  - bio-equivalent generic medicines
  - drops
  - insulin
  - liquids
  - ointments and creams
  - pessaries
  - suppositories
  - tablets and capsules
  - vaccines
- maintain dispensary stock in optimum condition across three supply periods
- safely dispose of the following types of dispensary waste:
  - hazardous substances
  - expired stock
  - damaged stock
  - medicines returned by customers
- participate in a stocktake
- generate each of the following stock reports over the above supply periods:
  - stock level reports
  - stock performance reports
  - stock loss reports
  - stocktake reports.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- role boundaries and responsibilities of dispensary assistants and pharmacists for maintaining dispensary stock
- organisational procedures for maintaining dispensary stock:
  - ordering dispensary stock
  - recording incoming stock
  - recording and reporting discrepancies and quality deficiencies
  - recording stock levels
  - monitoring and maintaining quality of stock
  - maintaining security of dispensary stock
  - work health and safety for stock control
  - dispensary stocktakes
  - waste handling, sorting and disposal
- organisational stock reorder cycles
- safe manual handling techniques for moving and storing dispensary stock; those for bending, lifting and carrying heavy items
- principles of stock control:
  - rotation and replenishment
  - product life cycle and maximising the use of all stock
  - managing out stock of branded medicines when introducing generic equivalents
  - checking for slow moving items
  - financial implications of stock level control
- sources of product and supplier information
- sources of information on negotiated cost of supply, contractual arrangements and preferred supplier arrangements
- Pharmaceutical Benefits Scheme (PBS) price disclosure system, and how this impacts on stock management
  - when scheduled reduction days occur and how this affects the amount of stock held and its value
  - types of medicines subject to price disclosure
- purpose of batch numbering and expiry dates on pharmaceutical products
- dispensary layout and storage requirements for dispensary items:
  - alphabetical arrangement of medications
  - sequential positioning of medications along shelves
  - controlled substances under specific secured storage conditions
  - grouping of Pharmacist Only Medicines (S3)
  - hazardous substances
  - refrigeration
- optimum environmental storage conditions, including temperature, light and humidity controls, for perishable and cold chain dispensary items
- reasons for stock loss and damage and methods to control these
- disposal methods for dispensary waste:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - returning to supplier
    - using a disposal service
- environmentally sound disposal methods for hazardous waste:
    - pharmaceutical raw materials
    - cleaning products
    - pharmaceutical sharps
- formats for, use and contents of:
    - order and delivery documentation
    - stock recording documentation
    - Electronic Data Interchange (EDI) forms
    - stock level reports
    - stock performance reports
    - stock loss reports
    - stocktake reports
- features and functions of dispensary stock control software.

Assessment Conditions

Skills must be demonstrated in a pharmacy with a designated operational dispensary area and stock control and storage facilities for perishable and non-perishable dispensary stock. This must be in an industry workplace, which meets Pharmacy Board of Australia and relevant industry standards for dispensary operations.

Assessment must ensure use of:

- information technology hardware and software
- dispensary stock control software currently used by the community pharmacy industry
- refrigerator or freezer dedicated to pharmaceuticals
- secured storage locations for dispensary items requiring secured storage conditions
- pharmacy shelving, shelf facings and signage for dispensary medicines
- a diverse commercial product range of pharmacy medicines:
    - Prescription Only Medicine (S4)
    - branded medicines
    - bio-equivalent generic medicines
    - drops
    - insulin
    - liquids
    - ointments and creams
    - pessaries
    - suppositories
    - tablets and capsules

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - vaccines
- waste disposal bags and containers for pharmaceutical waste including sharps containers
- template dispensary stock control documents:
    - order and delivery documentation:
        - purchase orders
        - standing orders
        - packing slips
    - stock recording documentation
    - Electronic Data Interchange (EDI) forms
- template dispensary stock control reports:
    - stock level reports
    - stock performance reports
    - stock loss reports
    - stocktake reports
- organisational procedures for maintaining dispensary stock
- pharmacists with whom the individual can interact
- assessment activities that allow the individual to work with commercial speed, timing and productivity to complete stock control activities within nominated deadlines.

Assessors must satisfy the Standards for Registered Training Organisation's requirements for assessors, and:

- have worked in the pharmacy sector for at least two years.

SIRRFSA001 Handle food safely in a retail environment

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to handle food safely in the retail environment following organisational food safety procedures and relevant legislation and standard procedures.

It applies to individuals working in roles that involve the handling of food. They operate with some independence under general supervision and guidance from others, and within established organisational policies and procedures and relevant legislative requirements.

Food handlers must comply with the requirements contained within the Australia New Zealand Food Standards (ANZFS) Code (the Code).

The legislative requirement for a business to comply with the national standard for food safety practices, along with training and certification requirements, differ between State and Territory Governments. Those developing training to support this unit must consult the relevant state or territory food safety authority to determine any accreditation arrangements for courses, trainers and assessors.

In some states and territories businesses are required to designate a food safety supervisor who is required to be certified as competent in this unit through a registered training organisation.

Pre-requisite Unit

Nil

Competency Field

Food Safety

Unit Sector

Retail

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Follow food safety program.	1.1. Access information from food safety program to ensure food handling is completed safely. 1.2. Monitor food safety according to organisational processes and document as required. 1.3. Control identified food safety hazards relevant to operations. 1.4. Take corrective action within scope of job responsibility when non-compliance and food safety hazards are identified and report to relevant personnel as required. 1.5. Record food safety information, including equipment breakdowns, according to food safety program.
2. Store and handle food safely.	2.1. Receive and transport food supplies to appropriate storage areas promptly, safely and without damage. 2.2. Store and display food in environmental conditions that protect against contamination and maximise freshness, quality and appearance. 2.3. Store food at controlled temperatures and ensure that food items remain at correct temperature during storage and display. 2.4. Use cooling and heating processes that support microbiological safety of food. 2.5. Identify and take action to remove potentially unsafe food safety processes or situations. 2.6. Change or sanitise food-handling implements between handling different food products to avoid cross-contamination. 2.7. Mark and keep separate from other foodstuffs any food identified for disposal until disposal is complete. 2.8. Dispose of food promptly to avoid cross-contamination.
3. Maintain personal hygiene standards.	3.1. Follow hand washing procedures to minimise risk of contamination. 3.2. Wear appropriate clothing and footwear and maintain uniform cleanliness standards. 3.3. Secure hair and cover all open wounds to minimise risk to food safety. 3.4. Report any health issues or illness to appropriate personnel.
4. Maintain equipment and work area.	4.1. Clean and sanitise equipment, surfaces and utensils following organisational procedures. 4.2. Identify and report cleaning, sanitising and maintenance requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.3. Dispose of or report chipped, broken or cracked food handling utensils.

4.4. Take measures within scope of responsibility to ensure food-handling areas are free from insects, pests and vermin and report incidents of animal or pest infestation.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret plain English documents that outline organisational policies and procedures for food safety and hygiene and sanitation practices.
Numeracy skills to:	• calibrate and use a temperature probe and calculate timing appropriate to the preparation of food products • follow simple dilution requirements for chemicals and cleaning products, and calculate ratios in order to make them up.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for SIRRFSA001 Handle food safely in a retail environment

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- demonstrate safe handling of food, following organisational policies and procedures and food safety program during three work shifts, by:
  - using appropriate control measures to control food hazards at each of the following points:
    - receiving
    - storing
    - preparing
    - displaying
    - disposing
  - completing food safety documentation, recording and reporting
  - maintaining personal hygiene standards
  - maintaining food work area and equipment.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- key aspects of Commonwealth, state or territory and local food safety compliance requirements as relevant to job role:
  - personal hygiene
  - contents of national codes and standards that underpin regulatory requirements
  - reasons for food safety programs and what they must contain
  - local government food safety regulations and inspection regimes
  - consequences of failure to observe food safety policies and procedures
  - meaning of contaminant, contamination and potentially hazardous foods as defined by the Australia New Zealand Food Standards (ANZFS) Code (the Code)
- food handling and hygiene principles:
  - organisational food safety program, its purpose and implications for own work
  - own roles and responsibilities, and those of food safety personnel for food handling requirements from raw material to finished product

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- techniques for minimising contamination and spoilage
- common sources and types of contamination and food safety hazards, including:
  - conditions conducive to microbial growth
  - known allergens associated with food handling and processing
- common types of physical, chemical and microbiological agents that can contaminate food
- conditions that can cause physical, chemical and microbiological contamination
- correct storage of food, including hot, cold, raw and cooked, and appropriate control measures
- causes of deterioration of food, contamination, cross-contamination
- procedures for identifying and reporting potential or actual sources of contamination
- food handling implements
- need for change of implements between products
- correct storage medium for serving implements
- shelf life of food products
- control measures for food hazards
- procedures for recording failures in the food safety program, including equipment breakdowns
- temperature control and the temperature danger zone
- correct temperature of storage and display units and how to maintain:
  - load limits and effects of overloading
  - effects of breaking temperature chain
  - effects of blocking coils and air vents
- food storage requirements for:
  - refrigeration
  - freezers
  - dry stores
- cleaning work areas:
  - cleaning procedures and schedules for work areas and equipment (internal and external)
  - purpose and importance of cleaning and sanitation procedures
  - safe use and storage of cleaning tools, equipment and chemicals, and insecticides and pesticides
  - routine maintenance for work areas and equipment
  - waste collection and disposal, recycling and handling procedures
  - pest control procedures
- food handling practices for:
  - food segregation
  - food packaging for storage
  - labelling of food
  - stock rotation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- optimal maintenance of storage areas:
  - cleanliness and sanitation
  - ventilation
  - lighting
  - required temperature
  - free from vermin or infestation
  - free from defects
- correct disposal of damaged or spoiled supplies
- known allergens associated with food ingredients, food processing and handling
- application of workplace documentation for food handling:
  - organisational food safety program
  - organisational policies and procedures on hygiene and sanitation practices
  - food safety incident reports
  - safety data sheets for cleaning and sterilising products.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- relevant documentation:
  - current plain English regulatory documents distributed by government regulators outlining key aspects Commonwealth, state or territory and local food safety compliance requirements as relevant to job role
  - organisational food safety program
  - organisational policies and procedures for food safety and hygiene and sanitation practices
  - hazard control measures
  - food safety incident report
  - cleaning and maintenance schedules and safety data sheets for cleaning and sterilising products
- personal protective clothing and equipment:
  - aprons and outerwear
  - food handling gloves
  - correct head and footwear
- cleaning and sanitation materials and chemicals
- a range a food products
- food handling implements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- food storage and display equipment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Competency Field

Inventory

Unit Sector

Retail

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Monitor stock receipt and dispatch.	1.1. Implement organisational policies and procedures for receipt, dispatch and secure storage of stock. 1.2. Allocate tasks and monitor staff to ensure organisational procedures are followed, and documentation is completed

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	correctly. 1.3. Confirm that stock quantity and quality inspections on receipt meet organisational standards. 1.4. Act on variations to quantity and quality of delivered stock. 1.5. Supervise safe stock handling and storage.
2. Maintain stock records.	2.1. Monitor stock and maintain stock at required levels. 2.2. Maintain, monitor and adjust stock reorder cycles as required. 2.3. Provide clear information to team members about individual stock recording responsibilities. 2.4. Maintain stock storage and movement records. 2.5. Record and report stock discrepancies. 2.6. Monitor stock performance and identify and report fast and slow-selling items.
3. Process and follow up orders.	3.1. Process and raise stock orders according to organisational procedures. 3.2. Monitor delivery of stock to ensure agreed deadlines and inventory requirements are met. 3.3. Liaise with suppliers to ensure continuity of supply. 3.4. Resolve routine supply problems or refer to appropriate personnel for action. 3.5. Distribute stock within the organisation according to required allocations. 3.6. Handle routine supply problems or refer to management as required by store policy.
4. Minimise stock losses.	4.1. Regularly check storage of stock and ensure its protection. 4.2. Identify, record and report stock losses. 4.3. Identify avoidable losses and establish reasons for them. 4.4. Recommend solutions and implement procedures to prevent future losses.
5. Coordinate stocktake or cyclical count.	5.1. Explain procedures for stocktake and cyclical counts to team members. 5.2. Allocate stocktaking tasks to individual team members ensuring effective use of staff resources to complete task. 5.3. Provide team members with clear directions for performance of each task. 5.4. Produce accurate reports for management on stocktake data, including discrepancies.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret supplier purchasing agreements, purchase orders, records of incoming stock and organisational policies and procedures for stock control.

Numeracy skills to:	• calculate:
	  • supplier costs and complex order costs
	  • complex details of stock on hand and stock losses and produce complex numerically-based reports
	• reconcile incoming stock and invoices against purchase orders.

Technology skills to:	• use business technology for inventory management.

Assessment Requirements for SIRRINV002 Control stock

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- maintain and order stock across one stock cycle according to organisational procedures using all of the following stock processes:
  - receipt
  - dispatch
  - ordering
  - stock level monitoring
  - records maintenance
- produce three different stock control reports
- organise and coordinate one stocktake or cyclical count
- provide clear and correct information to team members involved in stock control processes.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - receipt and dispatch of goods, including inspection for quantity and quality
  - stock ordering and reordering
  - stock replenishment
  - stock rotation
  - reporting of stock discrepancies, damage and loss
  - safe transport, handling and storage of goods
  - stock control
  - stocktaking and cyclical counts
  - pricing, labelling and packaging
  - stock security
- key aspects of legislation and codes of practice relevant to stock control:
  - Australian Consumer Law
  - Work Health and Safety (WHS)

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - manual handling
  - licensing for mechanical movement of stock
- principles of stock control:
  - rotation and replenishment
  - product life cycle
- impact of business planning and sales forecasts on stock control
- types of stock control systems used in the sector
- reasons for stock loss and damage and methods to control these and protect stock.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- current plain English regulatory documents distributed by government regulators outlining key aspects of legislation and codes of practice relevant to stock control as listed in Knowledge Evidence
- a computerised stock control system
- stock for use in stock control activities
- organisational policies and procedures for stock control
- team members; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SIRRMER001 Produce visual merchandise displays

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to display retail merchandise. It requires the ability to prepare, produce and maintain merchandise displays in accordance with visual merchandising requirements.

This unit applies to all businesses that sell retail merchandise. It applies to frontline personnel who have limited autonomy and work under close supervision and guidance of others in frontline operational roles. However; in smaller businesses, senior personnel might also undertake this function.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Merchandising

Unit Sector

Retail

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to produce visual merchandise display.	1.1. Review visual merchandising display guidelines, and seek clarification as required. 1.2. Obtain merchandise, materials and equipment required for

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	the display. 1.3. Prepare product labels and price tickets from in-house documents and according to organisational requirements. 1.4. Unpack merchandise according to manufacturer instructions.
2. Display merchandise.	2.1. Produce display following visual merchandising display guidelines. 2.2. Ensure merchandise is displayed according to manufacturer instructors where specific requirements for display and storage exist. 2.3. Display merchandise labels and price tickets according to organisational requirements. 2.4. Handle and move stock and equipment according to safe manual handling guidelines to prevent injury to self. 2.5. Promptly return excess stock to storage area, and store according to organisational requirements. 2.6. Check and ensure area around the display remains clear of debris.
3. Maintain display.	3.1. Review displays against visual merchandising display guidelines, and refine as required. 3.2. Maintain clear and correct product and pricing information for merchandise. 3.3. Identify damaged or out of date stock, and remove from display as required. 3.4. Rotate and replenish merchandise to maintain optimum stock levels. 3.5. Monitor the display regularly to maintain appearance and cleanliness of display and display area.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

Reading skills to:	• interpret plain English documents that outline organisational policies and procedures related to display of merchandise.
Numeracy skills to:	• estimate dimensions of display areas and appropriate size of displays from display documentation.
Planning and organising skills to:	• prepare for display and complete display activities in a logical and time-efficient sequence.
Technology skills to:	• prepare product labels and price tickets.

Assessment Requirements for SIRRMER001 Produce visual merchandise displays

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow merchandising display guidelines and organisational procedures to prepare and produce three merchandise displays, from the following list, of varying sizes and complexities:
  - an existing merchandise range
  - a new merchandise range
  - a seasonal merchandise range
  - a promotional event
  - discounted merchandise
- maintain each of the above displays and display area, adequate stock level and appearance of display.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- basic principles of visual merchandising as they relate to producing retail visual merchandise displays
- visual merchandise display guidelines and how they are used in creating a retail displays
- organisational procedures for:
  - correct manual handling techniques for protection of self and merchandise
  - correct storage of merchandise and equipment
  - damaged or out of date stock
  - maintenance of display areas
  - merchandise rotation and replenishment
  - product labelling and pricing
  - unpacking merchandise.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- a range of retail merchandise
- display areas
- retail display equipment and props
- product labels and price tickets
- ticketing and pricing equipment
- organisational visual merchandise display guidelines
- organisational procedures for:
  - manual handling techniques for protection of self and merchandise
  - storage of merchandise and equipment
  - damaged or out of date stock
  - maintenance of display areas
  - merchandise rotation and replenishment
  - product labelling and pricing
  - unpacking merchandise
- assessment activities that allow the individual to:
  - work within commercial speed, timing and productivity
  - manage tasks and contingencies in the context of the job role.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Prepare to produce food display.	1.1. Review organisational food display guidelines for display of food products, and seek clarification as required. 1.2. Clean and sanitise food display equipment, and check for defects including irregularities in temperature as required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.3.Use personal protective equipment and correct equipment for handling food products as required. 1.4.Follow manufacturer instructions to ensure correct handling and display of food. 1.5.Follow food safety requirements to ensure food safety at all times of handling and display. 1.6. Unpack food and check it is fit for purchase according to organisational policies and procedures. 1.7.Prepare product labels and price tickets for food display according to organisational policies and procedures. 1.8.Wrap, package or plate food items as required.
2. Display food products.	2.1.Produce food display following organisational display guidelines for the display of food products. 2.2.Identify and use correct handling and display techniques according to food characteristics and organisational policies and procedures. 2.3.Ensure correct pricing and labelling of food displays. 2.4.Promptly return excess stock to storage area, and store in accordance with organisational policies and procedures.
3. Maintain food display.	3.1.Maintain cleanliness of display areas ensuring products are displayed neatly and excess packaging is removed. 3.2.Maintain optimum stock levels and replenish stock as required. 3.3.Identify damaged, deteriorated, spoiled or out of date food and reset or remove as required. 3.4.Monitor correct temperatures for food display as required and report temperature irregularities to appropriate personnel without delay.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret plain English documents that outline organisational procedures relevant to merchandising food.
Numeracy skills to:	• interpret temperature readings against requirements for food display.

Assessment Requirements for SIRRMER002 Merchandise food products

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow organisational food display guidelines to prepare and produce four different food displays of varying sizes and complexities
- prepare and display two of the following food types for the above four displays:
  - fresh food produce
  - baked food items
  - general grocery items
  - food items requiring packaging
  - food items requiring specific temperature control.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - food safety
  - hygiene and sanitation
  - food display labelling and pricing
  - correct storage of stock
  - location of display areas
  - principles of display
  - availability and use of display materials
  - stock rotation
  - stock replenishment
  - damaged and out of date stock
  - scheduling, building and rotating displays
  - correct manual handling techniques for protection of self and merchandise
  - maintenance and cleaning of equipment and working areas
- food safety monitoring:
  - storing food in appropriate timeframes

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - monitoring and recording food temperatures
  - monitoring and recording temperature of storage equipment
  - visually examining food for quality review
- food safety requirements as specific to food products displayed
- food product characteristics and required preparation and handling
- techniques for creating visually appealing food displays that attract customers and maximise sales.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- food products for display as selected in the Performance Evidence
- display areas
- display equipment and props for:
  - cleaning equipment and materials
  - food preparation and handling
- personal protective equipment and clothing
- product labels and price tickets
- ticketing and pricing equipment
- organisational food display guidelines
- relevant documentation:
  - organisational policies and procedures as listed in the Knowledge Evidence
  - food safety guidelines as applicable to specific food products.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SIRRMER005 Implement visual merchandising concepts

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to plan the implementation of a visual merchandising concept. It requires the ability to accurately interpret a concept, arrange resourcing, monitor concept implementation and determine the effectiveness of the concept.

This unit applies to visual merchandisers and stylists working in a diverse range of sectors and business contexts. They operate with independence, under limited supervision of others, and within established organisational policies and procedures. They may have responsibility for making a range of creative and operational decisions within the scope of their job role.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Merchandising

Unit Sector

Retail

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Develop concept implementation plan.	1.1. Access and review visual merchandising concept and determine implementation requirements and constraints.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.2. Determine internal and external resource requirements including available budget.
	1.3. Access and review organisational visual merchandising guidelines and standards to inform implementation plan development.
	1.4. Identify opportunities to create cost-efficiencies and maximise use of resources.
	1.5. Identify potential risks to be managed throughout the implementation process and develop contingency plans.
	1.6. Identify key activities and plan the allocation of roles, responsibilities and timelines.
	1.7. Plan product selection and inventory management.
	1.8. Plan internal and external communication strategies for communicating implementation roles, responsibilities and timelines.
	1.9. Develop performance criteria to evaluate the effectiveness of the concept.
	1.10. Document an implementation plan and seek any required approval.
2. Implement the concept.	2.1. Communicate concept implementation plan to relevant personnel.
	2.2. Monitor the implementation of visual merchandising concept and respond to issues as they arise.
	2.3. Provide support and coaching to team members throughout the implementation process.
	2.4. Photograph and document concept implementation.
	2.5. Finalise concept according to implementation plan.
3. Review concept.	3.1. Seek feedback from stakeholders about concept effectiveness.
	3.2. Evaluate concept implementation against predetermined performance criteria.
	3.3. Review and assess effectiveness of concepts in achieving desired performance outcomes.
	3.4. Use findings to make suggestions for future improvements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria, are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Numeracy skills to:	• interpret diverse components of budgets and develop resource specifications within budgetary parameters.
Technology skills to:	• access, document and communicate information using digital technologies.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for SIRRMER005 Implement visual merchandising concepts

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- develop a visual merchandising implementation plan for one visual merchandising concept, detailing:
  - objectives
  - resource requirements
  - budgeting
  - product selection
  - inventory management
  - key activities and timelines
  - allocation of roles and responsibilities
  - risk considerations and contingency plans
  - communication strategy
  - performance criteria
  - exit strategy
- oversee the implementation of one concept, by:
  - communicating implementation plan to others
  - ensuring objectives and standards are met
  - managing risks and issues
- review visual merchandising concept performance against performance criteria to determine effectiveness and make recommendations for future improvements.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- key aspects of visual merchandising implementation planning:
  - steps in the planning process
  - technologies that support effective implementation planning
  - stakeholder involvement
  - managing implementation and consistency across multiple channels and locations

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - alignment to organisational visual merchandising guidelines and standards
  - implementation plan formats and key considerations:
    - objectives
    - resource requirements
    - budgeting
    - product selection and availability
    - inventory management
    - key activities and timelines
    - allocation of roles and responsibilities
    - risk considerations and contingency plans
    - communication strategy
    - performance criteria
    - exit strategy
- internal and external factors impacting on the successful implementation of visual merchandising concepts and strategies to minimise impacts:
  - availability of resources and product
  - scalability
  - communication issues
  - budget overruns
  - feedback
  - consistency and quality across multiple channels and locations
- techniques to evaluate and determine the effectiveness of a visual merchandising campaign:
  - profitability
  - operational efficiency
  - success in meeting objectives.

Assessment Conditions

Skills must be demonstrated in a service industries environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- visual merchandising concept
- visual merchandising concept performance data.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors, and:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- have worked in a job role for at least two years where they have applied the skills and knowledge within this unit of competency.

SIRRRTF001 Balance and secure point-of-sale terminal

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to balance and reconcile a register or terminal in a retail environment, clear registers, count money, calculate non cash transactions, and reconcile and record takings.

It applies to individuals working in frontline operational roles in a diverse range retail industry sectors and business contexts. They operate with some independence under general supervision and guidance from others, and within established organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Retail Financials

Unit Sector

Retail

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Balance and secure takings.	1.1. Perform register or terminal balance at designated times. 1.2. Separate cash float from takings prior to balancing and secure takings.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.3. Supply change to register or terminal and accurately record. 1.4. Obtain and interpret register or terminal reading or print-out. 1.5. Secure cash and non cash documents according to organisational procedures.
2. Reconcile takings.	2.1. Count cash accurately. 2.2. Calculate non cash documents accurately. 2.3. Determine balance between register or terminal reading and sum of cash and non cash transactions. 2.4. Investigate or report discrepancies between register or terminal reading and sum of cash and non cash transactions to relevant personnel. 2.5. Record takings and file records according to organisational procedures.

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for SIRRRTF001 Balance and secure point-of-sale terminal

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- consistently apply organisational policies and procedures to:
  - balance a register or terminal on three occasions with complete accuracy
  - reconcile three different sets of takings comprising both cash and non-cash with complete accuracy
  - identify and resolve three different types of balancing discrepancies
  - process three different types of takings according to organisational policies and procedures.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- role and importance of the balancing process
- techniques for identifying and resolving discrepancies
- functions and procedures for operating point-of-sale equipment:
  - opening and closing
  - balancing
  - clearance of terminal and transference of tender
  - recording takings
  - consumables required by system
  - security
- cash handling procedures:
  - counting cash
  - handling cash floats
  - change required, denominations of change and tendering change
  - security
- organisational policies and procedures for non-cash transactions:
  - credit cards
  - EFTPOS

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - vouchers
- organisational policies and procedures for:
  - exchanges
  - refunds
  - lay-by
  - cash handling
  - cash float
  - operation of point-of-sale equipment
  - register or terminal balance
  - security of cash and non cash transactions.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- organisational policies and procedures related to point-of-sale
- point-of-sale equipment and consumables
- financial transaction documentation for non-cash sales
- cash
- assessment activities that allow the individual to work with commercial speed, timing and productivity.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SIRWSLS002 Analyse and achieve sales targets

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to set, analyse and achieve personal sales targets to guide performance and monitor the progress of sales against business objectives.

It applies to frontline sales personnel who are responsible for identifying factors affecting sales performance; reviewing and analysing personal sales outcomes against agreed sales targets; and implementing strategies to attain sales targets.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Nil

Competency Field

Sales

Unit Sector

Wholesale

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Analyse sales targets.	1.1.Confirm team sales targets with relevant personnel. 1.2.Analyse personal sales targets in relation to agreed parameters. 1.3.Regularly monitor progress towards sales targets. 1.4.Analyse customers and performance and determine common

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	factors supporting or deterring sales.
2. Determine factors affecting attainment of sales targets.	2.1. Evaluate factors affecting sales performance against the agreed sales targets. 2.2. Identify and anticipate changing business circumstances and other factors that may influence capacity to meet or exceed sales targets and determine a course of action to address the challenge. 2.3. Amend or create new sales targets based on evaluation according to agreed organisational processes.
3. Attain sales targets.	3.1. Plan and initiate actions to address sales under-performance with specific customers, and report progress to relevant personnel. 3.2. Identify customers with strong sales performance and initiate actions to extend sales opportunities and sustain customer loyalty. 3.3. Report sales progress to relevant personnel.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Numeracy skills to:	• read and understand numerical sales data.
Technology skills to:	• use business technology to obtain sales data.

Unit Mapping Information

No equivalent unit.

Assessment Requirements for SIRWSLS002 Analyse and achieve sales targets

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- analyse at least one set of organisational and personal sales targets
- monitor and review sales targets over specified workplace sales period
- develop strategies to address under performance with two different customers or two different products
- complete one sales report according to organisational requirements.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - sales planning and evaluation
  - approval processes
  - internal and external communication
  - sales processes
- aspects of legislation that impact sales work:
  - Australian Consumer Law
  - commercial law
  - work health and safety (WHS)
- business plans and targets that affect personal sales targets
- types of parameters for personal sales targets
- sales territory characteristics and features
- different types of business customers and their needs
- internal and external factors affecting attainment of business and personal sales targets
- strategies to address sales under-performance
- features of products and services being sold.

Assessment Conditions

Skills must be demonstrated in a wholesale environment. This can be:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- organisational policies and procedures for sales activities
- a business sales system
- organisational business plans and objectives.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Assessment Requirements for SIRXCEG004 Create a customer-centric culture

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- monitor and review customer service standards, on three different occasions, and document a plan to improve customer service standards based on observations
- demonstrate the following approaches to promoting a customer-centric culture:
  - role-modelling customer service standards
  - observing standard of customer service delivery
  - coaching team members towards improvement
  - identifying and rectifying customer service delivery issues.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- principles of quality customer service:
  - customer expectations
  - enhancing customer experience
- techniques for:
  - coaching others
  - providing performance feedback
  - seeking feedback
  - monitoring and reviewing customer services standards
  - improving customer service standards
- organisational customer services standards:
  - professional service standards
  - designated response times
  - customer service procedures
  - resources required to deliver on customer service standards
- commercial impact of:
  - quality customer service
  - poor customer service

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - positive and negative customer reviews
- value and role of customer feedback in improving service delivery.

Assessment Conditions

Skills must be demonstrated in a services industry environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- organisational customer service standards:
  - professional service standards
  - designated response times
  - customer service procedures
  - resources required to deliver on customer service standards
- team members and customers; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SIRXCEG006 Provide online customer service

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to interact with customers using online communication tools. It requires the ability to provide information to customers, handle customer difficulties, and provide customer service and support in an online environment.

It applies to individuals who interact with customers online in a diverse range of businesses with an online presence. They operate with some independence, under limited supervision and guidance from others, and within established organisational policies and procedures.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Communicate with customers online.	1.1. Use digital communication tools to communicate with customers online according to organisational online customer

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	service standards and procedures.
	1.2. Communicate with customers online using appropriate communication styles and within designated response times.
	1.3. Use correct spelling and grammar when communicating with customers in written form.
	1.4. Identify and take opportunities to improve customer experience within scope of own responsibility.
	1.5. Promote customer loyalty and repeat business when communicating with customers online.
	1.6. Request referrals, ratings and user-generated content from customers.
	1.7. Monitor customer demand for products and services and inform relevant personnel to ensure customer needs are met.
	1.8. Record customer interactions and feedback according to organisational policies and procedures.
	1.9. Make suggestions for improved customer service standards and procedures to relevant personnel.
2. Respond to customer difficulties online.	2.1. Identify customer difficulties and provide required support.
	2.2. Identify customer dissatisfaction and take action to avoid escalation.
	2.3. Follow organisational online customer service standards and procedures to respond to customer complaints.
	2.4. Refer complex customer complaints to relevant personnel for action.
	2.5. Maintain a professional manner during online customer interactions.
	2.6. Identify consistent and potential customer difficulties and report to relevant personnel to minimise future customer dissatisfaction.
3. Process online refunds and exchanges.	3.1. Identify reasons for refunds and exchanges, and offer a replacement or alternative product or solution to maximise sales opportunities.
	3.2. Process online refunds and exchanges according to organisational policies and procedures.

Assessment Requirements for SIRXCEG006 Provide online customer service

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- identify customer requirements and provide online customer service to address requirements, across four different online customer interactions
- provide service to the above customers following organisational online customer service standards and procedures
- follow organisational customer service standards and procedures to:
  - resolve a customer complaint
  - resolve a customer difficulty
  - process an online refund
  - process an online exchange
- make suggestions for improved online customer service standards and procedures.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- key legal and ethical considerations as related to online customer service provision:
  - Australian Consumer Law
  - privacy
- organisational policies and procedures:
  - processing refunds and exchanges online
  - recording customer information
- organisational online customer service standards:
  - response times
  - communication styles
  - handling customer complaints
  - reporting customer services issues
- key aspects of online communication:
  - written communication techniques
  - appropriate communication styles

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - role and use of tone in written communication
    - maintaining brand integrity
- common causes of customer complaints and difficulties in an online environment
- online customer service provision and techniques for:
    - identifying customer dissatisfaction
    - handling customer complaints
    - handling customer difficulties
    - generating customer loyalty
    - building rapport with customers
    - seeking referrals and user generated content
- role and impact of customer feedback in an online environment:
    - positive feedback
    - negative feedback
- commercial impact of:
    - unresolved customer complaints
    - customer dissatisfaction
    - refunds and exchanges.

Assessment Conditions

Skills must be demonstrated in a service industries environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- relevant documentation:
    - organisational policies and procedures:
        - processing refunds and exchanges online
        - recording customer information
    - organisational online customer service standards:
        - response times
        - communication styles
        - handling customer complaints
        - reporting customer service issues
- information technology hardware and software
- online communication tools
- online information systems
- online customers with whom the individual can interact. These can be:
    - individuals in an industry workplace, or

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Assessment Requirements for SIRXMKT003 Manage promotional activities

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- access a promotions brief and develop promotion objectives for one of the following promotional activities:
  - launch of new product or service
  - promotion of seasonal event
  - promotion of sales event
- coordinate and monitor the above promotional activity across one promotional period
- review activities against objectives by:
  - assessing impact on sales
  - reporting on promotion activity outcomes and impacts.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for promotional activities
- commercial law and legislation relevant to promotional activities
- organisational promotional guidelines
- promotional briefs and their role in marketing activities
- techniques for managing and coordinating promotional activities
- internal and external factors that impact on success of promotional activities including:
  - economic
  - social
  - technological
  - environmental
  - competition
- strategies for improving success of retail promotions
- promotional planning processes:
  - setting objectives
  - allocation of responsibilities

Assessment Requirements for SIRXPDK001 Advise on products and services

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- access and interpret sources of information on four different products or services
- respond to four different customer inquiries for product or service information that individually or cumulatively require provision of information on all of the following:
  - features and benefits
  - price
  - alternative products or services
  - complementary products or services.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - interactions with customers
  - product or service pricing
- basic key aspects of legislation that impact provision of information for the product or service range:
  - Australian Consumer Law
  - product or service specific legislation
- interpersonal communication techniques:
  - active listening and questioning
  - communication methods which convey information clearly and concisely
- product and service information for the product or service range:
  - features and benefits
  - price
  - care and handling of products
  - availability
  - storage requirements, shelf life and use by date
  - warranties

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- ingredients or materials contained in product
- origins
- alternative products and services
- complementary products and services.

Assessment Conditions

Skills must be demonstrated in a services industries environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- a product or service range
- sources of product information
- relevant documentation:
  - current plain English regulatory documents distributed by government regulators outlining factors that impact provision of information for the product or service range
  - price lists
  - organisational policies and procedures relevant to product and service advice
- customers; these can be:
  - customers in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Assessment Requirements for SIRXRSK001 Identify and respond to security risks

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow organisational policies and procedures to demonstrate the appropriate response, within scope of job role, to four of the following security issues:
  - faulty security equipment
  - suspicious customer behaviour
  - suspicious team member behaviour
  - breaches of cash handling security procedures
  - breaches of merchandise movement security procedures
  - theft of cash
  - theft of merchandise
  - armed robbery
  - individual posing threat to personal safety
- identify potential security risks within the workplace and determine appropriate measures to eliminate the risk.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - use of security equipment
  - suspicious customer behaviour
  - suspicious team member behaviour
  - armed robbery
  - cash and non-cash security
  - merchandise security
  - theft
  - responding to security breaches
  - reporting security risks and breaches
  - surveillance of merchandise

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - personal security
- common security risks within the retail workplace and techniques to:
  - identify risk
  - minimise risk
- impacts of security breaches on individuals and organisation:
  - emotional distress
  - financial loss
  - commercial loss.

Assessment Conditions

Skills must be demonstrated in a services industry environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- organisational policies and procedures relevant to security as listed in the Knowledge Evidence
- customers and team members; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment
- assessment activities that allow the individual to work with commercial speed and timing.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Establish customer needs.	1.1. Connect with the customer within designated response times and establish rapport. 1.2. Use questioning and active listening to facilitate effective two-way communication.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.3. Observe and determine appropriate level of interaction based on customer verbal and non-verbal cues. 1.4. Determine and clarify customer preferences, needs and expectations.
2. Provide advice on products and services.	2.1. Use product and service knowledge to tailor options to specific customer needs, and offer alternatives when product is unavailable. 2.2. Clearly explain and promote product and service features and benefits where relevant. 2.3. Advise on promotional events where relevant. 2.4. Provide additional information to address customer questions and objections. 2.5. Offer comparisons to competitor product or service range as required. 2.6. Collaborate with the customer to determine product or service option most suited to their needs. 2.7. Take opportunities to upsell and cross sell products and services that enhance customer request and maximise profitability of sale.
3. Facilitate the sale of products and services.	3.1. Select and use appropriate techniques to close sale. 3.2. Direct the customer to designated point-of-sale and process sale, as required, according to organisational procedures. 3.3. Farewell customer on leaving, and invite to return. 3.4. Provide any required after sales service according to organisational procedures.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

Reading skills to:	• interpret:
	  • detailed in-house and supplier product information documents
	  • plain English documents that outline organisational customer service policy and procedures.

Numeracy skills to:	• interpret basic fee information from in-house documents and complete basic pricing calculations.
Problem-solving skills to:	• respond to customer objections and provide appropriate solutions to satisfy customer needs.
Technology skills to:	• use technologies equipped with search functionality and information systems to source product and service information.

Assessment Requirements for SIRXSLS001 Sell to the retail customer

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- interact with four different retail customers to initiate and close the sale of different retail products or services
- demonstrate the following during the above customer interactions:
  - appropriate communication
  - establishment and clarification of customer needs, wants and expectations
  - product and/or service knowledge
  - appropriate sales approach to sell benefits and features of products and/or services
  - overcome objections and close sales
  - upsell and/or cross sell additional products and/or services that complement the sale
  - promotion of customer loyalty and repeat sales.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- appropriate body language for customer service
- basic principles of positive customer service and sales
- open and closed questioning techniques related to the sale of product and services
- verbal and non-verbal cues indicating customer understanding of information
- techniques for effective communication with customers of diverse backgrounds:
  - cultural diversity
  - special needs
- sales techniques:
  - opening techniques
  - recognising buying signals
  - strategies to focus customer on specific products and services
  - selling add-ons and complementary products
  - overcoming customer objections
  - closing techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- primary components of consumer protection laws that relate to selling products and services, especially organisational responsibility for supplying products and services as described or substituting suitable products and services when unable
- primary components of privacy law, and actions that retail business must take to protect privacy of customer information
- for the specific retail sector:
  - professional service standards and protocols for retail industry personnel
  - attitudes and attributes expected by the retail industry to work with customers
  - different customer service needs and expectations
- for the particular retail organisation:
  - product and service knowledge:
    - product and service range offering
    - product specifications, features and benefits
  - designated response times for providing customer service
  - customer service procedures including recording of and storing customer details.

Assessment Conditions

Skills must be demonstrated in a retail environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- relevant documentation:
  - organisational policies and procedures for:
    - customer service
    - sale of products and services
    - resolving customer complaints
    - collection and storage of customer details
  - organisational product information and price lists
  - supplier brochures, information sheets and price lists
  - promotional activity information
  - current plain English regulatory documents distributed by government regulators for:
    - consumer protection law
    - privacy law
- customers with whom the individual can interact to sell products and services; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- assessment activities that allow the individual to:
  - work within commercial speed, timing and productivity
  - manage tasks and contingencies in the context of the job role.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

Assessment Requirements for SIRXSLS003 Achieve sales results

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- monitor sales performance against sales targets over a designated organisational sales period by:
  - reviewing sales targets and determining strategies for achievement
  - communicating sales targets to team members
  - responding to the following situations:
    - sales targets consistently not achieved
    - sales targets achieved
    - internal factors impacting on sales
    - external factors impacting on sales.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- organisational policies and procedures for:
  - customer service
  - sales process
- internal factors impacting on sales:
  - lack of resources
  - stock issues
  - team lacking sales skills
- external factors impacting on sales:
  - competitor activity
  - operating environmental impacts
- strategies for:
  - interpreting sales targets
  - achieving sales targets
  - corrective action for response to poor performance
- sales processes and how they are used to achieve sales targets
- required action to improve sales when the following problems occur:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- operational issues
- lack of resources
- stock issues
- competitor activity.

Assessment Conditions

Skills must be demonstrated in a services industry environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- relevant documentation:
  - organisational policies and procedures for sales process and customer service standards
  - sales targets
  - records of previous sales
- team members; these can be:
  - individuals in an industry workplace, or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SITHFAB002 Provide responsible service of alcohol

Modification History

Version	Comments
Release 1.0 updated on 2 March 2023	Minor changes to Knowledge Evidence in Assessment Requirements

Application

This unit describes the performance outcomes, skills and knowledge required to responsibly sell or serve alcohol.

Responsible practices must be undertaken wherever alcohol is sold or served, including where alcohol samples are served during on-site product tastings. This unit, therefore, applies to any workplace where alcohol is sold or served, including all types of hospitality venues, packaged liquor outlets and wineries, breweries and distilleries.

The unit applies to all levels of sales personnel involved in the sale, service and promotional service of alcohol in licensed premises. Those selling or serving alcohol may include food and beverage attendants; packaged liquor sales persons selling in person, over the phone or online; winery, brewery and distillery cellar door staff; and supplier sales representatives. The unit also applies to security staff who monitor customer behaviour and to the licensee who is ultimately responsible for responsible service of alcohol (RSA) management.

The unit incorporates the knowledge requirements, under state and territory liquor licensing law, for employees engaged in the sale or service of alcohol.

Certification requirements differ across states and territories. In some cases all people involved in the sale, service and promotional service of alcohol in licensed premises must be certified in this unit. This can include the licensee and security staff.

This unit covers the RSA skill and knowledge requirements common to all States and Territories. Some legislative requirements and knowledge will differ across borders. In some cases after completion of this unit, state and territory liquor authorities require candidates to complete a bridging course to address these specific differences.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Those developing training to support this unit must consult the relevant state or territory liquor licensing authority to determine any accreditation arrangements for courses, trainers and assessors.

Pre-requisite Unit

Nil

Competency Field

Food and Beverage

Unit Sector

Hospitality

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Sell or serve alcohol responsibly.	1.1. Sell or serve alcohol according to provisions of relevant state or territory legislation, licensing requirements and responsible service of alcohol principles. 1.2. Where appropriate, request and obtain acceptable proof of age prior to sale or service. 1.3. Provide accurate information to customers on alcoholic beverages according to organisation or house policy and government legislation. 1.4. Assist customers with information on the range of non-alcoholic beverages available for purchase. 1.5. Identify issues related to the sale or service of alcohol to different types of customers, especially those at risk, and incorporate them into sales or service.
2. Assist customers to drink within appropriate limits.	2.1. Prepare and serve standard drinks or samples according to industry requirements and professional standards. 2.2. Use a professional manner to encourage customers to drink within appropriate limits. 2.3. Recognise erratic drinking patterns as an early sign of possible intoxication and take appropriate action. 2.4. Monitor emotional and physical state of customers for

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	signs of intoxication and effects of illicit or other drug use. 2.5. Where appropriate, offer food and non-alcoholic beverages. 2.6. Decline requests for alcohol to be dispensed in a manner that is irresponsible and advise customers of the reasons for the refusal.
3. Assess alcohol affected customers and identify those to whom sale or service must be refused.	3.1. Assess intoxication levels of customers using appropriate methods. 3.2. When assessing intoxication, take into account factors that may affect individual responses to alcohol. 3.3. Identify customers to whom sale or service must be refused according to state and territory legislation.
4. Refuse to provide alcohol.	4.1. Refuse sale or service in a professional manner, state reasons for the refusal, and where appropriate point out signage. 4.2. Provide appropriate assistance to customers when refusing service. 4.3. Where appropriate, give customers a verbal warning and ask them to leave the premises according to organisational or house requirements, the specific situation, and provisions of state or territory legislation and regulations. 4.4. Use appropriate communication and conflict resolution skills to handle difficult situations. 4.5. Refer difficult situations beyond the scope of own responsibility to the appropriate person. 4.6. Promptly identify situations that pose a threat to the safety or security of colleagues, customers or property, and seek assistance from appropriate colleagues according to organisational policy.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION

Reading skills to:	• read at times complex information in:
	  • general regulatory and advisory information issued by local, or state and territory liquor licensing authorities
	  • in house policies and procedures
	  • specific provisions of relevant state or territory legislation and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	licensing requirements • read a range of identification (ID) and proof of age documents, statutory signage, and warning signs and wording within in house policies and procedures.
Oral communication skills to:	• provide complex information on responsible service of alcohol laws in a way that is easily understandable for customers • speak firmly and clearly with intoxicated customers in a manner that de-escalates conflict.
Numeracy skills to:	• measure and calculate standard drinks or samples • determine customer's age from date of birth on ID and proof of age documents.
Learning skills to:	• source relevant information on laws, regulations and codes of practice or conduct relating to responsible service of alcohol and continuously update knowledge of changes in that information.
Teamwork skills to:	• share customer information with team members to ensure proper responsible service of alcohol practices within the organisation.
Self-management skills to:	• deal with hostile and uncooperative customers in a professional manner and in line with organisational procedures.

Assessment Requirements for SITHFAB002 Provide responsible service of alcohol

Modification History

Version	Comments
Release 1.0 updated on 2 March 2023	Minor changes to Knowledge Evidence in Assessment Requirements

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- interpret the legal requirements for responsible sale or service of alcohol for the local state or territory law
- document organisational policies and procedures that must be followed for the responsible sale or service of alcohol
- identify at least three early indicators of intoxication and identify suitable intervention strategies to prevent intoxication
- demonstrate procedure to refuse sale or service of alcohol and assist each of the following groups of intoxicated customers:
  - those in emotional or physical distress
  - those with no food consumption during extended service of alcohol
  - those who appear to be under the effect of illicit substances or other drugs
- demonstrate organisational or house requirements and use effective communication and conflict-resolution skills when asking the following different intoxicated customers to leave the premises:
  - one compliant customer
  - one difficult customer refusing to leave.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- public interest reasons for implementing responsible service of alcohol (RSA) practices:
  - government and community concern with alcohol misuse and abuse
  - alcohol-impaired driving accidents, crime, public violence, family violence and anti social behaviour associated with alcohol abuse
- ways of assessing intoxication:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - observing changes in behaviour
    - observing emotional and physical state
    - monitoring noise levels and drink purchases
- customers to whom sale or service must be refused according to state and territory legislation:
    - minors and those purchasing on behalf of minors
    - intoxicated persons
    - persons affected by the consumption of illicit and other drugs
- impact of excessive drinking on:
    - local neighbourhood and community
    - the night-time economy
    - premises and staff
    - customers
    - particular types of customers who are at heightened risk:
        - minors
        - people affected by the consumption of illicit and other drugs
        - women, particularly pregnant women
        - young people
    - physical and mental health of individuals who drink to excess
    - productivity of individuals who drink to excess
    - those around the person drinking to excess:
        - family
        - friends
        - colleagues
    - government agencies:
        - local police
        - health facilities
        - road authorities
        - local councils
- key agencies and how to source relevant information on laws, regulations and codes of practice or conduct
- methods of supplying information on responsible sale or service of alcohol to customers:
    - use of fact sheets and advertising material that comply with legislative requirements
    - use of mandatory signage
    - verbally
    - websites
- current promotional and strategic community education campaigns developed and conducted by agencies and industry groups
- effects of alcohol on:
    - emotional state

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - health
    - physical alertness
- factors that affect individual responses to alcohol:
    - food consumption
    - gender
    - general health
    - rate of consumption
    - other substances taken
    - weight
- time for effects of alcohol to be registered
- what constitutes a standard drink for different beverage types and acceptable measures of alcohol:
    - types and strengths of standard drinks
    - alcoholic percentages of a range of frequently sold alcoholic beverages
- indicators of erratic drinking patterns:
    - mixing a wide range of drink types
    - drinking quickly and asking for more immediately
    - ordering more than one drink for own consumption
    - mixing alcohol consumption with consumption of prescription or illicit drugs
    - consistently returning to the tasting site to request more samples
    - ordering multiple samples
    - ordering large samples
    - ordering ‘triple shots’ or extra-large drinks
- ways of assessing customers affected by the consumption of illicit and other drugs
- communications methods used when refusing service:
    - using open and non-aggressive body language
    - using a number of strategies to defuse a situation:
        - taking the person away from an audience
        - blaming the refusal on ‘the law’
    - monitoring the reactions of other customers
    - picking early warning signs and intervening before the person is intoxicated
    - not using physical touch or body language
    - remaining calm and using tactful language
- appropriate means of assistance to be offered when refusing service:
    - assisting the customer to connect with their designated driver
    - offering alternatives to alcohol:
        - food
        - non-alcoholic drinks
    - organising transport for customers wishing to leave
    - providing information on taxis

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- principles of responsible delivery of packaged liquor:
  - ensuring adequate instruction to person delivering liquor
  - seeking proof that the delivery is being received by a person over the age of 18
  - procedures for delivering alcohol to an unoccupied premises
- principles of responsible service of alcohol, and their purpose and benefits
- principles of harm minimisation and community safety described in the jurisdiction's liquor legislation
- strategies to minimise the harm associated with liquor abuse:
  - those laid down in legislation and codes of conduct developed by government agencies and industry groups
  - organisational policies that are designed to reduce the harm associated with liquor abuse
- key provisions of liquor laws and regulations at a depth relevant to the scope of job responsibility in licensed premises and the following general requirements of liquor legislation and information that must be customised for each State or Territory:
  - legislative definition of intoxication; intoxicated person and unduly intoxicated
  - role of individual staff members and supervisors or managers in providing responsible service of alcohol, and seller or server duty of care and liability
  - requirement to adopt and use statutory signage on the premises for the entire range of circumstances applicable to the organisation
  - requirements for mandatory content of warning signs and wording in advertising or promotional material of any form
  - requirements relating to the remote sale and delivery of alcohol sales generated via the telephone, fax, email, internet or mail
  - requirements for proof of age and obligations to minors under local legislation
  - provisions for retaining and reporting falsified proof of age documents
  - provisions for requiring someone to leave the premises
  - transportation options for customers who have been removed from the premises
  - procedures for barring customers from premises
  - opening and closing hour provisions
  - requirements for monitoring noise and disturbances in and around licensed premises
  - requirements described by an in house policy, standard or code of practice or conduct for patrons and RSA staff in regard to responsible serving principles adopted by venue management
  - organisational training and training record keeping requirements to maintain currency in RSA certification
  - products that are banned or undesirable when responsibly selling or serving alcohol
  - personal and business implications of breaching any laws, regulations, government or industry-driven codes of practice or conduct
  - offences relating to the sale or service of alcohol and ramifications of non-compliance with the law and industry codes for the organisation, licensee and individual staff members

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- legal restrictions on alcohol use customised to state or territory legislation
- intoxication provisions of liquor licensing laws
- legal drink and drive limits customised to state or territory legislation
- organisation specific policies and procedures for the responsible sale or service of alcohol.

Assessment Conditions

Skills must be demonstrated in an operational hospitality environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- measures used to serve standard drinks or samples
- organisation specifications:
  - signage:
    - signs that comply with wording required by legislation
    - standard promotional signs issued by the relevant state or territory licensing authority
    - warning notices within any form of advertising
  - information and plain English fact sheets distributed by government regulators and industry bodies
  - contact information on taxis and available transport options for intoxicated customers
- industry-realistic range of customers to whom alcohol is sold or served; these can be:
  - customers in an industry workplace during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors; and:

- have worked in industry for at least three years where they have applied the skills and knowledge of this unit of competency.

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Evaluate Australian wines.	1.1. Identify and examine the characteristics of Australian wines from all major and emerging Australian wine regions using the full range of sensory evaluation techniques. 1.2. Review other information about viticulture and specific wine styles, regions and production methods to complement sensory evaluation process. 1.3. Develop informed opinions about Australian wines that support work as a specialist in wine.
2. Handle, store and monitor Australian wine products.	2.1. Store and cellar Australian wine according to particular requirements of different wines. 2.2. Monitor wine quality and recognise impaired quality based on in-depth knowledge of Australian wines. 2.3. Resolve issues with wine quality through appropriate corrective action. 2.4. Decant wines using techniques appropriate to the variety, style and vintage of wine.
3. Advise customers on Australian wines.	3.1. Provide accurate information and assistance on different Australian wine options. 3.2. Discuss and debate wine characteristics, origins and production methods, taking account of customer level of wine knowledge. 3.3. Take account of business considerations when providing advice and make adjustments accordingly. 3.4. Assist customers with wine selections according to taste, price preferences and other specific needs.
4. Extend and update knowledge of Australian wines.	4.1. Conduct formal and informal research to access current, accurate and relevant information about wines. 4.2. Identify customer taste trends based on customer contact and workplace interactions. 4.3. Source information on current and emerging beverage service trends and customer preferences. 4.4. Provide informed input about Australian wines to support organisational activities.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

SKILLS	DESCRIPTION
Reading skills to:	• comprehend detailed product information, promotional material and reviews about Australian wines.
Writing skills to:	• summarise notes, and record information in basic documents, information sheets and files.
Oral communication skills to:	• discuss and debate different ideas and opinions about products.
Learning skills to:	• review own knowledge of Australian wines and participate in activities that continuously update it.
Problem-solving skills to:	• identify product faults and make judgments about appropriate remedial action.
Planning and organising skills to:	• schedule regular checks on the storage of beverage products.
Self-management skills to:	• take responsibility for sourcing and updating current and emerging product information.

Assessment Requirements for SITHFAB012 Provide advice on Australian wines

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- discuss the characteristics of each of the following Australian wines with different customers on three different occasions:
  - red and white
  - blended wines
  - sparkling wines
  - ports
  - popular fortified wines
  - dessert wines
- demonstrate the correct application of each of the following sensory evaluation techniques to evaluate wines:
  - assessing balance of wine features on the palate
  - smell or nose appraisal
  - taste appraisal
  - visual appraisal
- provide current, accurate and relevant advice to each of the above customers on their selection to meet different taste and price preferences
- maintain and continuously extend personal product knowledge to enhance workplace activities.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- full range of sensory evaluation techniques and their relevance to different types of wines:
  - assessing balance of wine features on the palate
  - smell or nose appraisal:
    - techniques for releasing aroma and bouquet
    - recognising ‘off’ odours
    - assessing intensity of aromas
    - describing smell characteristics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - assessing age
  - taste appraisal:
    - techniques for releasing wine flavours (sucking in air, swirling wine over taste buds)
    - spitting techniques
    - recognising acidity, sweetness, weight or body, length, note, and wine faults
  - visual appraisal:
    - wine swirling and glass handling
    - use of light and background
    - intensity and type of colour
    - clarity
    - identifying ‘legs’ or ‘tears’ to assess alcohol or glycerol content
- structure, history, trends and philosophies of the Australian wine industry and beverage service
- past, current and emerging trends in the Australian wine industry:
  - contemporary eating and drinking habits
  - cultural and ethnic influences
  - major events and festivals
  - media influence
  - seasonal and popular influences
- place of Australian wines in the international marketplace
- general understanding of the operation of wine shows and wine medal systems in an Australian context
- characteristics of major Australian wines from all major and emerging Australian wine regions:
  - red:
    - cabernet sauvignon
    - shiraz
    - pinot noir
    - merlot
    - grenache
  - white:
    - semillon
    - sauvignon blanc
    - riesling
    - chardonnay
    - pinot gris
  - blended wines
  - sparkling wines
  - port:
    - tawny

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - vintage
  - popular fortified wines:
    - apera
    - muscat
    - topaque
  - dessert wines
- characteristics for each wine region:
  - different wine types and their styles
  - different production methods
  - label terminology and interpretation
  - major regional variations
  - principal grape varieties used in wine types
  - how Australian wine types and styles compare with imported wines
- broad overview of Australian geography and its impact on wine growing
- climatic classification of Australian grape-growing regions registered by the Geographical Indications Committee
- factors that influence character of wine
- impact of vineyard and viticultural techniques affecting taste and style of wine
- annual cycle of a general vineyard and regional specific cycles
- wine production methods and variations for white, red, sparkling and fortified wines:
  - basic wine production steps and variations for different wines
- new world approaches to wine making
- specific production techniques for:
  - white wine
  - red wine
  - sparkling wines
  - fortified wines
- factors that affect style and quality of wine:
  - climate
  - soil
  - grape variety
  - viticultural techniques
  - storage
  - vinification techniques
- key structural components in wine and their impact on taste:
  - alcohol
  - tannin
  - sugar
  - fruit flavour
- indicators of quality in wines, and analysis and diagnosis of wine faults or impairments:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - oxidation
    - tartrates
    - cloudiness
    - cork faults
    - presence of hydrogen sulphide
- organisational activities for which knowledge of Australian wines is required:
    - conducting product tastings and tours
    - providing product advice and selling beverages to customers
    - selecting or assisting with selection of products from suppliers
    - writing or providing input into:
        - beverage menus
        - beverage lists
    - food and beverage matching menus
- wine service techniques:
    - serving aged wines
    - processes for decanting wine
- storage and cellaring requirements for a range of wines and reasons for them:
    - amount of ultraviolet (UV) light
    - humidity
    - shelf life
    - stock rotation
    - temperature fluctuations
    - vibrations
- contributing factors of a successful wine list
- business considerations in the provision of information and advice on wines:
    - current stock
    - profitability requirements
    - range being promoted
    - stock availability
    - supplier arrangements
- overview of types of foods that match successfully with different wines
- formal and informal research methods to extend and update knowledge:
    - attending trade shows
    - attending wine tastings
    - joining associations and industry bodies
    - reading general and trade media and supplier information
    - reading wine reference books
    - talking to product suppliers, winemakers and vineyard managers
    - using the internet.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Skills must be demonstrated in an operational wine sales or service environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- fixtures and large equipment:
  - bar service area
  - refrigerator
  - storage area for glassware and drinks
- stock:
  - wide commercial range of Australian wines
- organisational specifications:
  - information on wines currently listed in the Australian Wine and Brandy Corporation Register of Protected Names
  - price lists
  - promotional materials
  - product information, product reviews and information on production methods
  - promotional materials and details of presentation sessions
  - reference texts on Australian wines
  - organisational safety procedures
  - wine lists
- industry realistic ratios of staff to customers; these can be:
  - staff and customers in an industry workplace during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors; and:

- have worked in industry for at least three years where they have applied the skills and knowledge of this unit of competency.

  - taste appraisal:
    - techniques for releasing wine flavours (sucking in air, swirling wine over taste buds)
    - spitting techniques

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

        - recognising acidity, sweetness, weight or body, length, note, and wine faults
    - visual appraisal:
        - wine swirling and glass handling
        - use of light and background
        - intensity and type of colour
        - clarity
        - identifying ‘legs’ or ‘tears’ to assess alcohol or glycerol content
- structure, history, trends and philosophies of:
    - international wine industry
    - major international wine producing nations
    - general understanding of the operation of wine shows and wine medal systems in an international context
- characteristics of major imported wines from:
    - old world regions:
        - France
        - Italy
        - Spain
        - other European countries
    - new world regions:
        - New Zealand
        - South Africa
        - South America
- characteristics for each wine region:
    - different wine types and their styles
    - different production methods
    - label terminology and interpretation
    - major regional variations
    - principal grape varieties used in wine types
    - a broad overview of wine production and naming laws
- past, current and emerging trends in the imported wine industry:
    - contemporary eating and drinking habits
    - cultural and ethnic influences
    - major events and festivals
    - media influence
- seasonal and popular influences
- broad overview of relevant geography and its impact on wine growing
- impact of the vineyard and viticultural techniques affecting the taste and style of wine
- annual cycle of a general vineyard and regional specific cycles
- wine production methods and variations for white, red, sparkling and fortified wines:
    - basic wine production steps and variations for different wines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - old world approaches to wine making and attitudes to new world wine making
    - specific production techniques for:
        - white wine
        - red wine
        - sparkling wines
        - fortified wines
- factors that affect the style and quality of wine:
    - climate
    - soil
    - grape variety
    - viticultural techniques
    - storage
    - vinification techniques
- key structural components in wine and their impact on taste:
    - alcohol
    - tannin
    - sugar
    - fruit flavour
- indicators of quality in wines and analysis and diagnosis of wine faults or impairments:
    - oxidation
    - tartrates
    - cloudiness
    - cork faults
    - presence of hydrogen sulphide
- organisational activities for which knowledge of imported wines is required:
    - conducting product tastings and tours
    - providing product advice and selling beverages to customers
    - selecting or assisting with selection of products from suppliers
    - writing or providing input into:
        - beverage menus
        - beverage lists
    - food and beverage matching menus
- wine service techniques:
    - serving aged wines
    - processes for decanting wine
- storage and cellaring requirements for a range of wines and reasons for them:
    - amount of ultraviolet (UV) light
    - humidity
    - shelf life
    - stock rotation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - temperature fluctuations
    - vibrations
- contributing factors of a successful wine list
- business considerations in the provision of information and advice on wines:
    - current stock
    - profitability requirements
    - range being promoted
    - stock availability
    - supplier arrangements
- overview of types of foods that match successfully with different wines
- formal and informal research methods to extend and update knowledge:
    - attending trade shows
    - attending wine tastings
    - joining associations and industry bodies
    - reading general and trade media and supplier information
    - reading wine reference books
    - talking to product suppliers, winemakers and vineyard managers
    - using the internet.

Assessment Conditions

Skills must be demonstrated in an operational wine sales or service environment. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- fixtures and large equipment:
    - bar service area
    - refrigerator
    - storage area for glassware and drinks
- stock:
    - wide commercial range of imported wines from the regions specified in the performance evidence
- organisational specifications:
    - price lists
    - promotional materials
    - product information, product reviews and information on production methods
    - promotional materials and details of presentation sessions
    - reference texts on imported wines
    - organisational safety procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - wine lists
- industry realistic ratios of staff to customers; these can be:
  - staff and customers in an industry workplace during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors; and:

- have worked in industry for at least three years where they have applied the skills and knowledge of this unit of competency.

SITHPAT005 Produce petits fours

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to produce, using standard recipes, specialised petits fours which require finishing, decoration and presentation of a high order. It requires the ability to select, prepare and portion ingredients and to use equipment and a range of cookery methods to make, fill, assemble and decorate specialised petits fours.

The unit applies to hospitality and catering organisations that produce and serve specialised patisserie products, including hotels, restaurants and patisseries.

It applies to patissiers who usually work under the guidance of more senior chefs.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

SITXFSA001 Use hygienic practices for food safety

Competency Field

Patisserie

Unit Sector

Hospitality

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to demonstrate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

essential outcomes.	achievement of the element.
1. Select ingredients.	1.1. Confirm food production requirements from food preparation list and standard recipes. 1.2. Calculate ingredient amounts according to requirements. 1.3. Identify and select ingredients from stores according to recipe, quality, freshness and stock rotation requirements.
2. Select, prepare and use equipment.	2.1. Select type and size of equipment suitable to requirements. 2.2. Safely assemble and ensure cleanliness of equipment before use. 2.3. Use equipment safely and hygienically according to manufacturer instructions.
3. Portion and prepare ingredients.	3.1. Sort and assemble ingredients according to food production sequencing. 3.2. Weigh and measure wet and dry ingredients according to the recipe and quantity of petits fours required. 3.3. Minimise waste to maximise profitability of petits fours produced.
4. Cook bases, fillings and coatings.	4.1. Use cookery methods for bases, fillings and coatings to achieve desired product characteristics. 4.2. Follow standard recipes and make ***food quality adjustments*** within scope of responsibility. 4.3. Pipe a selection of small choux paste shapes. 4.4. Prepare and blind bake sweet paste in small moulds or tins in a variety of shapes. 4.5. Select baking conditions, required oven temperature and bake petit four bases. 4.6. Cool bases in appropriate conditions to retain optimum freshness and product characteristics.
5. Prepare iced petits fours.	5.1. Cut sponges and bases into a variety of shapes. 5.2. Fill and assemble petits fours according to standard recipe specifications. 5.3. Prepare icing at the correct temperature. 5.4. Ice petits fours with icing of a consistency that achieves required coating thickness and surface gloss. 5.5. Apply icing to ensure a smooth and seamless finish. 5.6. Design and use decorations that enhance flavour and appeal.
6. Prepare fresh petits fours.	6.1. Select pre-cooked small choux and sweet pastry shapes. 6.2. Fill and assemble fresh petits fours according to standard recipe specifications. 6.3. Use appropriate garnishes, glazes and finishes to enhance flavour and visual appeal.
7. Prepare marzipan petits fours.	7.1. Flavour and colour marzipan according to the recipe and soften with egg whites if required.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	7.2. Pipe or model marzipan by hand or shape with the aid of moulds to produce mini-size fruits. 7.3. Seal marzipan fruits with cocoa butter or food lacquer using applied heat to preserve desired eating characteristics.
8. Prepare caramelised petits fours.	8.1. Select and coat fresh fruits or fruit segments with pale amber coloured caramel. 8.2. Sandwich dried fruits or nuts or fill with flavoured marzipan and coat with pale amber coloured caramel.
9. Present and store petits fours.	9.1. Visually evaluate petits fours and ***adjust presentation*** before displaying. 9.2. Use suitable receptacles to attractively present petits fours according to organisational standards. 9.3. Display petits fours in appropriate conditions to retain optimum freshness and product characteristics. 9.4. Store petits fours in appropriate ***environmental conditions***. 9.5. Clean work area, and dispose of or store surplus and re-usable by-products according to organisational procedures, environmental considerations, and cost-reduction initiatives.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• locate information in food preparation lists and standard recipes to determine preparation requirements • locate and read date code and stock rotation labels.
Oral communication skills to:	• express opinion about petits fours, advising on most appropriate selection and ingredients.
Writing skills to:	• write notes on recipe requirements and calculations.
Numeracy skills to:	• determine cooking times and temperatures suitable to the type of petits fours being prepared.
Problem-solving skills to:	• evaluate quality of ingredients and finished petits fours and make adjustments to ensure a quality product • adjust taste, texture and appearance of food products according to identified deficiencies.
Planning and organising skills to:	• efficiently sequence the stages of food preparation and production.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Self-management skills to:	• manage own speed, timing and productivity.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Food quality adjustments must involve consideration of factors relating to:	• ratio of wet to dry ingredients • taste • temperature • texture.

Adjusting presentation must involve consideration of:	• fillings, icings and decorations to maximise visual appeal:
	  • balance
	  • colour
	  • contrast
	• plating food for practicality of:
	  • customer consumption
	  • service
	• wiping drips and spills.

Environmental conditions must ensure appropriate:	• atmosphere • humidity • light • packaging • temperature • use of containers • ventilation.

Assessment Requirements for SITHPAT005 Produce petits fours

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow classical and contemporary standard recipes to safely and hygienically produce and decorate two different types of petits fours from each of the following main groups:
  - iced petits fours
  - fresh petits fours
  - marzipan petits fours
  - caramelised petits fours
- use each of the following flavoured fillings at least once when preparing the above petits fours:
  - cream
  - custard
  - ganache
- use each of the following coatings at least once when preparing the above petits fours:
  - caramel
  - cocoa butter
  - food lacquer
- use each of the following decorations at least once when decorating the above petits fours:
  - chocolate
  - fresh fruits
  - glazes
- use appropriate preparation and cookery methods from the list in the knowledge evidence when producing the above petits fours
- prepare above petits fours:
  - that are consistent in quality, size, shape and appearance
  - within commercial time and cost constraints and deadlines
  - reflecting required quantities to be produced
  - following procedures for portion control and food safety practices when handling and storing petits fours
  - responding to special customer requests and dietary requirements.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- culinary terms and trade names for:
  - ingredients commonly used to produce petits fours
  - classical and contemporary petits fours specified in the performance evidence
- contents of stock date codes and rotation labels
- preparation and cookery methods used when producing petit four fillings, coatings and decorations listed in the performance evidence:
  - adding fats and liquids to dry ingredients
  - adding flavourings or colourings
  - blind baking sweet paste in small moulds
  - piping of choux pastry into small shapes
  - preparing and using pre-bake finishes and decorations
  - selecting and preparing appropriate cake tins and moulds
  - stirring and aerating to achieve required consistency and texture
  - using required amount of batter and paste according to desired characteristics of finished products
  - weighing or measuring and sifting dry ingredients
  - whisking, folding, piping and spreading
- expected product characteristics of the classical and contemporary petits fours specified in the performance evidence:
  - appearance
  - colour
  - consistency
  - crumb structure
  - moisture content
  - shape
  - size
  - taste
  - texture
- historical and cultural derivations of a variety of petits fours
- appropriate cooking temperatures and times for petits fours and fillings
- indicators of freshness and quality of stocked ingredients for petits fours
- mise en place requirements for producing petits fours and fillings
- common bases used for producing petits fours:
  - choux pastry
  - sponge
  - sweet pastry
- types of caramelised petits fours:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - filled
    - fresh or dried fruit
    - fresh or dried nuts
    - unfilled
- types of marzipan based petits fours:
    - coloured
    - flavoured
    - modelled by hand
    - sealed with cocoa butter or food lacquer
    - shaped with the aid of moulds
- decoration techniques for petits fours:
    - cocoa mass screen techniques
    - cigarette paste decoration techniques
- appropriate environmental conditions for storing petits fours and re-usable by-products of their preparation to:
    - ensure food safety
    - optimise shelf life
- safe operational practices using essential functions and features of equipment used to produce petits fours.

Assessment Conditions

Skills must be demonstrated in an operational pastry kitchen. This can be:

- an industry workplace
- a simulated industry environment, such as a training kitchen servicing customers.

Assessment must ensure access to:

- fixtures and large equipment:
    - commercial grade work benches (1.5 m/person)
    - commercial cake mixer and attachments:
        - dough hook
        - paddle
        - whisk
    - commercial refrigeration and freezer unit with shelving
    - double sinks with hot and cold water
    - gas or electric stove tops
    - industrial strength food processor
    - marble bench or slab
    - ovens with timer and trays:
        - convection

    - deck
    - microwave
  - pastry/dough break
  - proofer
  - storage facilities:
    - shelving
    - trays
- small equipment:
  - beaters
  - bowl cutters
  - cake moulds
  - cutting boards
  - cutting implements for nuts and fruits
  - fluted and plain flan rings and cutter
  - food handler gloves
  - graters
  - knives:
    - large serrated cake knives
  - measurers:
    - metric calibrated measuring jugs
  - oven mitts
  - saccharometer
  - scales
  - service-ware:
    - platters, dishes, and bowls
    - serving tongs and trowels
  - sets of stainless steel bowls
  - silicon mats
  - small utensils:
    - flour and drum sieves
    - strainers and chinois
    - spatulas
    - whisks:
      - fine stainless steel wire
      - coarse stainless steel wire
  - spatulas
  - spoons:
    - wooden spoons
    - large plain and slotted metal spoons
  - storage containers and trays

- wire cooling racks
- specific equipment for producing petits fours:
  - chocolate thermometer
  - dipping forks
  - icing and decorating equipment:
    - chocolate spray gun
    - crimpers
    - decorative combs
    - fine icing sugar sieves
    - fine paint brushes
    - fine piping tubes
    - matfer-type stencils
    - piping bags and attachments
    - silk screens
  - presentation equipment:
    - cake boards
    - cake boxes
    - cake stands:
      - multi-tier
      - clear cover
    - cake wheels
    - doilies
    - mirrors
    - petit four cutters
    - petit four dipping racks
    - petit four moulds
    - petit four paper cases
    - platters
    - refrigerated cake display cases or towers
  - receptacles made from both edible and non-edible materials:
    - ceramic
    - chocolate
    - croquant
    - crystal
    - glass
    - metallic platters and trays
    - sugar lace
    - tulip paste
- diverse and comprehensive range of commercial ingredients for the petits fours specified in the performance evidence

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cleaning materials and equipment:
  - cleaning cloths
  - commercial cleaning and sanitising agents and chemicals for cleaning commercial kitchens, equipment and food storage areas
  - dustpans and brooms
  - garbage bins and bags
  - hand towel dispenser and hand towels
  - mops and buckets
  - separate hand basin and antiseptic liquid soap dispenser for hand washing
  - sponges, brushes and scourers
  - tea towels
- organisational specifications:
  - equipment manufacturer instructions
  - current commercial stock control procedures and documentation for ordering, monitoring and maintaining stock
  - food preparation lists
  - mise en place lists, menus, standard recipes, and recipes for special dietary requirements
  - ordering and docketing paperwork
  - food safety plans
  - guidelines relating to food disposal, storage and presentation requirements
  - safety data sheets (SDS) for cleaning agents and chemicals
- industry realistic ratios of kitchen staff to customers; these can be:
  - staff and customers in an industry workplace during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors; and:

- have worked in industry for at least three years where they have applied the skills and knowledge of this unit of competency.

Hospitality

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1. Select ingredients.	1.1. Confirm food production requirements from food preparation list and standard recipes. 1.2. Calculate ingredient amounts according to requirements. 1.3. Identify and select ingredients from stores according to recipe, quality, freshness and stock rotation requirements.
2. Select, prepare and use equipment.	2.1. Select type and size of equipment suitable to requirements. 2.2. Safely assemble and ensure cleanliness of equipment before use. 2.3. Use equipment safely and hygienically according to manufacturer instructions.
3. Portion and prepare ingredients.	3.1. Sort and assemble ingredients according to food production sequencing. 3.2. Weigh and measure wet and dry ingredients according to the recipe and quantity of desserts required. 3.3. Minimise waste to maximise profitability of desserts produced.
4. Produce desserts and sauces.	4.1. Following standard recipes, produce desserts using cookery methods to achieve desired product characteristics. 4.2. Follow special dietary recipes to produce desserts for those with special dietary requirements. 4.3. Produce hot and cold sauces to desired consistency and flavour. 4.4. Use thickening agents suitable for sweet sauces. 4.5. Make ***food quality adjustments*** within scope of responsibility.
5. Portion, present and store desserts.	5.1. Portion desserts to maximise yield and profitability of food production. 5.2. Use accompaniments that balance and enhance taste and texture of desserts. 5.3. Select garnishes and decorations with flavours and textures that complement desserts. 5.4. Plate desserts, accompaniments and garnishes attractively, with artistic flair appropriate for the occasion and the item. 5.5. Plate and decorate desserts for practicality of service and customer consumption. 5.6. Visually evaluate desserts and ***adjust presentation*** before serving. 5.7. Display desserts with appropriate sauces and garnishes. 5.8. Store desserts in appropriate ***environmental conditions***. 5.9. Clean work area, and dispose of or store surplus and re-usable by-products according to organisational procedures, environmental considerations, and cost-reduction initiatives.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• locate information in food preparation lists and standard recipes to determine preparation requirements • locate and read date code and stock rotation labels.
Writing skills to:	• write notes on recipe requirements and calculations.
Numeracy skills to:	• calculate the number of portions.
Planning and organising skills to:	• efficiently sequence the stages of food preparation and production.
Self-management skills to:	• manage own speed, timing and productivity.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Food quality adjustments must involve consideration of factors relating to:	• ratio of wet to dry ingredients • taste • temperature • texture.

Adjusting presentation must involve consideration of:	• accompaniments and garnishes to maximise visual appeal:
	  • balance
	  • colour
	  • contrast
	• plating food for practicality of:
	  • customer consumption
	  • service
	• wiping drips and spills.

Environmental conditions must ensure appropriate:	• atmosphere • humidity • light

Assessment Requirements for SITHPAT006 Produce desserts

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- follow standard and special recipes to produce at least ten different desserts from the common desserts listed in the knowledge evidence
- ensure that at least two of the above desserts are produced to meet requirements of different special dietary requirements as listed in the knowledge evidence
- produce and use each of the following sauces at least once when preparing above range of desserts:
  - chocolate based sauces
  - custards and crèmes
  - flavoured butters and creams
  - fruit purées, sauces or coulis
  - fruit syrups
  - sabayon and zabaglione
  - sugar syrups
- use each of the garnishes and decorations listed in the knowledge evidence at least once when preparing above desserts
- use appropriate cookery methods from the list in the knowledge evidence when producing the above desserts
- present desserts, accompaniments and garnishes attractively and decoratively
- prepare above desserts:
  - that are consistent in quality, size, shape and appearance
  - within commercial time constraints
  - reflecting required quantities to be produced
  - following procedures for portion control and food safety practices when handling and storing desserts
  - responding to special customer requests and dietary requirements.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- culinary terms and trade names for:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- variety of common desserts:
  - bavarois
  - crème brulee
  - crème caramel
  - crêpes
  - custards and creams
  - flans
  - fritters
  - ice-cream
  - meringues
  - mousse
  - parfait
  - pies
  - prepared fruit
  - puddings
  - sabayon
  - sorbet
  - soufflé
  - tarts
- ingredients commonly used to produce desserts
- substitute ingredients used to produce desserts for special dietary recipes:
  - gluten free flour
  - yeast-free flour
  - non-sugar sweeteners
- common special dietary requirements which must be considered when producing desserts:
  - fat free
  - low carbohydrate
  - low fat
  - low gluten
  - gluten free
  - low kilojoule
  - low sugar
  - sugar free
  - type one and two diabetic
  - vegan
- meaning of:
  - food allergy
  - food intolerance
- key health and legal consequences of failing to address special requirements
- contents of stock date codes and rotation labels

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- cookery methods used when preparing desserts:
  - adding fats and liquids to dry ingredients
  - baking
  - chilling
  - flambé
  - freezing
  - poaching
  - reducing
  - selecting and preparing appropriate dessert moulds
  - steaming
  - stewing
  - stirring and aerating to achieve required consistency and texture
  - using required amount of batter according to desired characteristics of finished products
  - weighing or measuring and sifting dry ingredients
  - whisking, folding, piping and spreading
- expected product characteristics of the classical and contemporary desserts specified in the performance evidence:
  - appearance
  - colour
  - consistency
  - moisture content
  - shape
  - size
  - structure
  - taste
  - texture
- common garnishes and decorations used when preparing desserts:
  - coloured and flavoured sugar
  - fresh, preserved or crystallised fruits
  - jellies
  - shaved chocolate
  - sprinkled icing sugar
  - whole or crushed nuts
- appropriate cooking temperatures and times for desserts
- techniques to garnish, decorate, plate and present attractive desserts
- indicators of freshness and quality of stocked ingredients for desserts
- mise en place requirements for producing desserts
- appropriate environmental conditions for storing desserts and re-usable by products of their preparation to:

SITHPAT008 Produce chocolate confectionery

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to temper couverture (pure coating chocolate) to produce individual chocolates. It requires the ability to select, prepare and portion ingredients and to use equipment and a range of cookery methods to mould and fill individual chocolates with hard or soft fillings and centres.

The unit applies to hospitality and catering organisations which produce, display and serve specialist patisserie products, including hotels, restaurants, patisseries and chocolatiers.

The preparation and moulding of individual chocolates is a high order technical skill used by experienced patissiers who operate independently or with limited guidance from others.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

SITXFSA001 Use hygienic practices for food safety

Competency Field

Patisserie

Unit Sector

Hospitality

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to demonstrate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

essential outcomes.	achievement of the element.
1. Select ingredients.	1.1. Confirm food production requirements from food preparation list and standard recipes. 1.2. Calculate ingredient amounts according to requirements. 1.3. Identify and select ingredients from stores according to recipe, quality, freshness and stock rotation requirements.
2. Select, prepare and use equipment.	2.1. Select type and size of equipment suitable to requirements. 2.2. Safely assemble and ensure cleanliness of equipment before use. 2.3. Use equipment safely and hygienically according to manufacturer instructions. 2.4. ***Protect*** polished chocolate moulds from contamination. 2.5. Keep chocolate moulds at an appropriate and constant temperature.
3. Portion and prepare ingredients.	3.1. Sort and assemble ingredients for chocolate confectionery according to food production sequencing. 3.2. Weigh and measure wet and dry ingredients according to the recipe and quantity of chocolates required. 3.3. Minimise waste to maximise profitability of chocolates produced.
4. Temper couverture.	4.1. Use tempering methods and appropriate temperatures to melt and temper couverture. 4.2. Manipulate couverture to the correct viscosity and desired flow properties to achieve desired colour, gloss, sheen and snap upon solidification. 4.3. Control the temperature to retain workable consistency.
5. Prepare centres and fillings.	5.1. Use cookery methods for centres and fillings to achieve full flavoured, interesting and natural characteristics. 5.2. Manipulate ingredients at correct temperature to achieve the correct viscosity and consistency. 5.3. Follow standard recipes and make ***food quality adjustments*** within scope of responsibility. 5.4. Prepare centres of precisely uniform shapes and sizes.
6. Make moulded chocolates.	6.1. Select tempered couverture to match fillings. 6.2. Set tempered couverture in moulds to achieve even and appropriate thickness free from marks or air bubbles. 6.3. Insert fillings to a level surface and allow space for seal. 6.4. Seal with a layer of chocolate of appropriate thickness. 6.5. Cool, de mould chocolates and handle carefully to retain a glossy surface.
7. Coat chocolate centres.	7.1. Select tempered couverture to match centres. 7.2. Bring centres to be coated to the correct temperature. 7.3. Use appropriate methods to coat centres to achieve an even and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	appropriate thickness with a uniform quality finish.
8. Decorate, present and store chocolates.	8.1. Decorate chocolates attractively, according to standard recipes, using designs suited to the product. 8.2. Use suitable service-ware to attractively present chocolates according to organisational standards. 8.3. Display chocolates in appropriate conditions to retain optimum freshness. 8.4. Store chocolates in appropriate ***environmental conditions***. 8.5. Clean work area, and dispose of or store surplus and re-usable by-products according to organisational procedures, environmental considerations, and cost-reduction initiatives.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• locate information in food preparation lists and standard recipes to determine preparation requirements • locate and read date code and stock rotation labels.
Writing skills to:	• record clear sequenced instructions for new recipes, specifying ingredient quantities.
Numeracy skills to:	• determine tempering times and temperatures.
Problem-solving skills to:	• evaluate quality of ingredients and finished chocolates and make adjustments to ensure a quality product • adjust taste, texture and appearance of food products according to identified deficiencies.
Planning and organising skills to:	• efficiently sequence the stages of food preparation and production.
Self-management skills to:	• manage own speed, timing and productivity.

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Protecting mould from contamination must involve:	• ensuring that the polished surface is:
	  • clean, polished and free of dust or residue
	  • untouched by bare fingers
	• untouched by objects that may dull, scratch or damage it.

Food quality adjustments must involve consideration of factors relating to:	• ratio of wet to dry ingredients • taste • temperature • texture.
Environmental conditions must ensure appropriate:	• atmosphere • humidity • light • packaging • temperature • use of containers • ventilation.

Assessment Requirements for SITHPAT008 Produce chocolate confectionery

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- prepare individual chocolates from three different types listed in the knowledge evidence with each of the following:
  - hard centres
  - soft centres
  - fillings
- use at least six different centres or fillings listed in the knowledge evidence when producing above chocolates
- use at least one of the tempering methods for couverture when producing above chocolates
- produce above individual chocolates in commercial quantities:
  - that are consistent in quality, size, shape and appearance
  - within commercial time constraints
  - following procedures for portion control and food safety practices when handling and storing chocolate ingredients and chocolates
  - responding to special customer requests and dietary requirements.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- culinary terms and trade names for:
  - ingredients commonly used to produce chocolate confectionery
  - classical and contemporary individual chocolates specified above in the performance evidence
- contents of stock date codes and rotation labels
- types of chocolates:
  - cut or dressed
  - hand coated
  - machine enrobed
  - made with prepared hollow shells

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - moulded
- classical and contemporary centres and fillings used when producing chocolates:
    - caramel
    - croquant
    - flavoured fondant
    - ganache
    - jellies
    - liqueurs
    - marzipan
    - nougat
    - nuts and fruits
- historical and cultural derivations of a variety of chocolates
- indicators of freshness and quality of stocked ingredients for chocolates
- mise en place requirements for producing chocolate confectionery
- tempering methods for couverture:
    - controlling the formation of seed crystals
    - tabling method
    - use of heated water jackets
    - use of microwave
    - vaccination or addition method
- appropriate temperatures to melt and temper couverture
- properties of tempered couverture:
    - flow properties
    - setting properties
    - viscosity
- expected product characteristics of solidified couverture specified in the performance evidence:
    - colour
    - gloss
    - sheen
    - snap
- methods to coat centres:
    - hand coating
    - hand dipping
    - machine enrobed
- complementary tastes and textures of dark, milk and white couverture for fillings and centres
- decoration techniques for individual chocolates
- appropriate environmental conditions for storing ingredients and individual chocolates to:
    - ensure food safety

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - optimise shelf life
- safe operational practices using essential functions and features of equipment used to:
    - produce chocolate confectionery
    - protect polished chocolate moulds from contamination and damage.

Assessment Conditions

Skills must be demonstrated in an operational pastry kitchen. This can be:

- an industry workplace
- a simulated industry environment, such as a training kitchen servicing customers.

Assessment must ensure access to:

- fixtures and large equipment:
    - commercial grade work benches (1.5 m/person)
    - commercial refrigeration and freezer unit with shelving
    - double sinks with hot and cold water
    - gas or electric stove tops
    - industrial strength food processor
    - marble bench or slab
    - microwave
    - proofer
    - storage facilities:
        - shelving
        - trays
    - warming area
- small equipment:
    - acetate plastic sheets, baking sheets/paper, parchment paper and silicon paper
    - beaters
    - brushes
    - bowl cutters
    - cutting implements for nuts and fruits
    - cutting boards
    - food handler gloves
    - graters
    - knives:
        - large serrated cake knives
    - measurers:
        - metric calibrated measuring jugs
    - mixers

  - pastry brushes
  - pastry cutters and shapes
  - piping bags and attachments
  - range of presentation equipment:
    - doilies
    - mirrors
    - platters
  - range of service-ware
  - range of saucepans and pots for small and large production
  - saccharometer
  - scales (1 gram increments)
  - sets of stainless steel bowls
  - spoons:
    - wooden spoons
    - large plain and slotted metal spoons
  - storage containers and trays
  - whisks:
    - fine stainless steel wire
    - coarse stainless steel wire
- diverse and comprehensive range of commercial ingredients for the chocolate confectionery specified in the performance evidence
- cleaning materials and equipment:
  - cleaning cloths
  - commercial cleaning and sanitising agents and chemicals for cleaning commercial kitchens, equipment and food storage areas
  - dustpans and brooms
  - garbage bins and bags
  - hand towel dispenser and hand towels
  - mops and buckets
  - separate hand basin and antiseptic liquid soap dispenser for hand washing
  - sponges, brushes and scourers
  - tea towels
- organisational specifications:
  - equipment manufacturer instructions
  - current commercial stock control procedures and documentation for ordering, monitoring and maintaining stock
  - food preparation lists
  - mise en place lists, standard recipes, and recipes for special dietary requirements
  - ordering and docketing paperwork
  - food safety plans

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - guidelines relating to food disposal, storage and presentation requirements
  - safety data sheets (SDS) for cleaning agents and chemicals
- industry realistic ratios of kitchen staff to customers; these can be:
  - staff and customers in an industry workplace during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors; and:

- have worked in industry for at least three years where they have applied the skills and knowledge of this unit of competency.

SITXCCS003 Interact with customers

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to deliver fundamental customer service to both internal and external customers. It requires the ability to greet and serve customers, and respond to a range of basic customer service enquiries, including routine customer problems.

The unit applies to frontline service personnel who operate under close supervision and with guidance from others. They provide routine customer service and would not be expected to respond to complex customer requests or complaints.

The unit applies to individuals working in a range of tourism, travel, hospitality and events contexts.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1. Greet and serve customers.	1.1. Prioritise customers ahead of other workplace duties. 1.2. Greet customers according to organisational customer service standards. 1.3. ***Communicate with customers*** in a clear and professional manner. 1.4. Explain and match products and services to customer needs.
2. Work with others to deliver service.	2.1. Identify personal limitations in serving the needs of customers and seek assistance from ***others*** where appropriate. 2.2. Follow directions of supervisors and managers to deliver quality service. 2.3. Resolve routine customer problems according to own level of responsibility and organisational policy. 2.4. Escalate other service issues to a higher level staff member for action in line with organisational procedures.
3. Provide feedback on customer service.	3.1. Report service issues and customer problems as they arise. 3.2. Provide customer feedback to relevant supervisors or managers.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret sometimes detailed procedures documents.
Writing skills to:	• record simple notes and basic information.
Oral communication skills to:	• ask questions and actively listen to customers to determine their needs • discuss causes of customer problems with colleagues and supervisors in a professional manner.
Problem-solving skills to:	• recognise customer problems and resolve or refer service issues.
Initiative and enterprise skills to:	• recognise delays and deficiencies in customer service and rectify to customer satisfaction in line with own level of responsibility.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

Specifies different work environments and conditions that may affect performance. Essential operating conditions that may be present (depending on the work situation, needs of the candidate, accessibility of the item, and local industry and regional contexts) are included.

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Ways to ***communicate with customers*** must include:	• communicating:
	  • by telephone
	  • electronically
	  • face-to-face
	• showing interest in customer needs and maintaining a welcoming customer environment during service delivery through the use of:
	  • appropriate voice tonality and volume
	  • basic gestures
	  • product information sheets.

Others must include:	• colleagues • managers • supervisors.

Assessment Requirements for SITXCCS003 Interact with customers

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- identify customer requirements and provide effective customer service to two different internal and two different external customers to meet requirements
- interact with above customers in line with organisational customer service standards and within designated organisational response times
- demonstrate procedures to respond to three different customer problems according to organisational policies and procedures
- identify situations where problems are beyond own level of responsibility, and process to escalate in line with organisational policies and procedures
- seek informal feedback from customers on above activities.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- importance of the customer in the service industries
- customer service standards expected in the service industries
- profiles of different types of customers:
  - external
  - internal
  - new
  - regular or repeat
  - visitors
- value and role of customer feedback in improving service delivery
- presentation standards for:
  - customer environment
  - customer service personnel
  - documents and promotional materials
- customer service policies and procedures:
  - application of booking or cancellation fees
  - response times for acknowledging and greeting customers

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - response times for delivering products and services
  - customer service policies for resolving routine customer problems
  - policies regarding product pricing and quality
  - processing refunds and exchanges
  - empowerment of different levels of personnel to resolve complaints, disputes, service issues and customer compensation
  - policies for escalating and reporting service issues and customer problems
- procedures for responding to routine customer problems:
  - incorrect pricing of products and services
  - delays or errors in providing products or services
  - misunderstanding customer requests.

Assessment Conditions

Skills must be demonstrated in an operational business environment where customers are served. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- organisational policies and procedures relating to:
  - customer service standards
  - designated response times
  - presentation standards
  - dealing with customer problems
  - recording and reporting customer feedback
- internal and external customers with whom the individual can interact; these can be:
  - customers in an industry workplace during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SITXFSA001 Use hygienic practices for food safety

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to use personal hygiene practices to prevent contamination of food that might cause food-borne illnesses. It requires the ability to follow predetermined organisational procedures and to identify and control food hazards.

The unit applies to all organisations with permanent or temporary kitchen premises or smaller food preparation or bar areas.

This includes restaurants, cafes, clubs, hotels, and bars; tour operators; attractions; function, event, exhibition and conference catering; educational institutions; aged care facilities; correctional centres; hospitals; defence forces; cafeterias, kiosks, canteens and fast food outlets; residential catering; in-flight and other transport catering.

It applies to food handlers who directly handle food or food contact surfaces such as cutlery, plates and bowls during the course of their daily work activities. This includes cooks, chefs, caterers, kitchen stewards, kitchen hands, bar, and food and beverage attendants, and sometimes room attendants and front office staff.

Food handlers must comply with the requirements contained within the Australia New Zealand Food Standards Code.

In some States and Territories businesses are required to designate a food safety supervisor who is required to be certified as competent in this unit through a registered training organisation.

Food safety legislative and knowledge requirements may differ across borders. Those developing training to support this unit must consult the relevant state or territory food safety authority to determine any accreditation arrangements for courses, trainers and assessors.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Follow hygiene procedures and identify food hazards.	1.1. Follow organisational hygiene procedures. 1.2. Report unsafe practices that breach hygiene procedures promptly. 1.3. Identify food hazards that may affect the health and safety of customers, colleagues and self. 1.4. Remove or minimise the hygiene hazard and report as appropriate for follow-up.
2. Report any personal health issues.	2.1. Report personal health issues likely to cause a hygiene risk. 2.2. Report incidents of food contamination resulting from personal health issues. 2.3. Cease participation in food handling activities where own health issue may cause food contamination.
3. Prevent food contamination.	3.1. Maintain clean clothes, wear required personal protective clothing, and only use organisation-approved bandages and dressings. 3.2. Prevent food contamination from clothing and other items worn. 3.3. Prevent unnecessary direct contact with ready to eat food. 3.4. Ensure hygienic personal contact with food and food contact surfaces. 3.5. Use hygienic cleaning practices that prevent food-borne illnesses.
4. Prevent cross-contamination by washing hands.	4.1. Wash hands at appropriate times and follow hand washing procedures consistently. 4.2. Wash hands using appropriate facilities.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION

Reading skills to:	• interpret organisational documents or diagrams relating to:
	  • organisational food safety programs
	  • hygiene and food safety procedures
	  • hazard analysis and critical control points (HACCP) practices.

Oral communication skills to:	• report hygiene hazards and non-compliant organisational practices accurately.

Unit Mapping Information

Assessment Requirements for SITXFSA001 Use hygienic practices for food safety

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- demonstrate use of safe food handling practices in food handling work functions in line with organisational hygiene procedures on at least three occasions
- demonstrate procedures to:
  - identify food hazards
  - report unsafe practices
  - report incidents of food contamination.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- basic aspects of commonwealth, state or territory food safety laws, standards and codes as follows:
  - meaning of contaminant, contamination and potentially hazardous foods as defined by the Australia New Zealand Food Standards Code
  - employee and employer responsibility to participate in hygienic practices
  - reasons for food safety programs and what they must contain
  - role of local government regulators
  - ramifications of failure to observe food safety law and organisational policies and procedures
- health issues likely to cause a hygiene risk relevant to food safety:
  - airborne diseases
  - food-borne diseases
  - infectious diseases
- hygiene actions that must be adhered to in order to avoid food-borne illnesses
- hand washing practices:
  - before commencing or recommencing work with food
  - immediately after:
    - handling raw food
    - smoking, coughing, sneezing or blowing the nose

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - eating or drinking
    - touching the hair, scalp or any wound
    - using the toilet
- basic aspects of hazard analysis and critical control points (HACCP) method of controlling food safety
- specific industry sector and organisation:
    - major causes of food contamination and food-borne illnesses
    - sources and effects of microbiological contamination of food
    - workplace hygiene hazards when handling food and food contact surfaces
    - basic content of organisational food safety programs
    - contents of organisational hygiene and food safety procedures
    - hygienic work practices for individual job roles and responsibilities.

Assessment Conditions

Skills must be demonstrated in an operational food preparation area. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- fixtures:
    - work benches
    - refrigeration unit
    - sink
    - storage facilities
- small equipment:
    - assorted pots and pans
    - containers for hot and cold storage
    - crockery
    - cutlery
    - cutting boards
    - food handler gloves
    - glassware
    - knives
    - packaging materials
    - receptacles for presentation and display purposes
    - small utensils:
        - tongs
        - serving utensils
- appropriate facilities for handwashing:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - designated hand washing sink
  - antiseptic liquid soap
  - single use towels
  - warm running water
- food ingredients and ready to eat food items
- current plain English regulatory documents distributed by the commonwealth, state, territory or local government food safety authority
- Australia New Zealand Food Standards Code
- current commercial food safety programs, policies and procedures used for managing food safety.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SITXHRM001 Coach others in job skills

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to provide on-the-job coaching to colleagues. It requires the ability to explain and demonstrate specific skills, knowledge and procedures and monitor the progress of colleagues until they are able to operate independently of the coach.

The unit applies to experienced operational personnel and to supervisors and managers who informally train other people in new workplace skills and procedures.

It applies to all tourism, hospitality and event sectors.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1. Prepare for on-the-job coaching.	1.1. Identify need for coaching based on a range of factors. 1.2. Identify specific coaching needs through discussion with colleague and organise coaching sessions.
2. Coach colleagues on-the-job.	2.1. Explain overall purpose of coaching to colleague. 2.2. Explain and demonstrate specific skills. 2.3. Communicate required knowledge and check colleague understanding. 2.4. Advise organisational procedures for completing workplace tasks. 2.5. Provide colleague with opportunity to practise skill and ask questions. 2.6. Provide feedback in constructive and supportive manner.
3. Follow-up coaching.	3.1. Monitor progress of new workplace skills and provide supportive assistance. 3.2. Report progress to the appropriate person. 3.3. Identify performance problems or difficulties with coaching and rectify or refer to appropriate person for follow-up.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• review workplace documentation completed by colleague.
Oral communication skills to:	• use active listening and open questioning techniques to confirm understanding.
Numeracy skills to:	• calculate adequate time required for coaching and for the colleague to complete required tasks.
Planning and organising skills to:	• complete own work tasks within designated timeframes and simultaneously coach others in their job skills.

Assessment Requirements for SITXHRM001 Coach others in job skills

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- provide effective on-the job coaching to four different colleagues
- address identified performance problems or difficulties experienced by colleagues in each of the above coaching sessions and rectify or refer as appropriate
- evaluate colleagues' performance and provide constructive feedback as part of above coaching sessions
- demonstrate the following during each of the above coaching activities:
  - clear communication and demonstration of the organisational tasks required of the colleague
  - completion of training within commercial time constraints
  - application of the key principles of training.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- communication techniques suitable to a workplace training context
- objectives and scope of the coaching
- factors which impact need for coaching:
  - direction from colleagues
  - own observation and workplace experience
  - request for coaching from colleagues to be coached
- key principles of training:
  - explanation
  - demonstration
  - review
  - listening to trainee explanation
  - observing and evaluating trainee demonstration
  - providing feedback
- legislative work health and safety and hygiene requirements
- possible causes of performance problems or difficulties:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- breakdown in communication
- inappropriate circumstances for coaching
- insufficient opportunity to practice
- language or cultural barriers
- shyness or lack of confidence.

Assessment Conditions

Skills must be demonstrated in an operational environment with colleagues requiring coaching. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- work tasks in which to coach others
- colleagues in need of training; these can be:
  - colleagues in an industry workplace who are assisted by the individual during the assessment process; or
  - individuals who participate in role plays or simulated activities, set up for the purpose of assessment, in a simulated industry environment operated within a training organisation.

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

SITXHRM002 Roster staff

Modification History

Not applicable.

Application

This unit describes the performance outcomes, skills and knowledge required to develop, administer and communicate staff rosters. It requires the ability to plan rosters according to industrial provisions, operational efficiency requirements, and within wage budgets.

This unit applies to individuals responsible for developing staff rosters for situations involving potentially large numbers of staff working across a range of different service periods or shifts. It does not apply to small office environments.

It applies to senior personnel who operate independently or with limited guidance from others, including dedicated specialist staff or operational supervisors and managers.

The unit applies to all tourism, travel, hospitality and event sectors.

No occupational licensing, certification or specific legislative requirements apply to this unit at the time of publication.

Pre-requisite Unit

Cross-Sector

Elements and Performance Criteria

ELEMENTS **PERFORMANCE CRITERIA**

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1. Develop staff rosters.	1.1. Develop rosters according to relevant industrial agreements and other considerations and wage budgets. 1.2. Maximise operational and customer service efficiency while minimising wage costs. 1.3. Combine duties where appropriate to ensure effective use of staff. 1.4. Roster teams with complementary skills mix to meet operational requirements. 1.5. Take account of social and cultural considerations and broader organisational policies that affect staff rosters. 1.6. Consult with colleagues to ensure input into rosters. 1.7. Use roster systems and equipment to administer rosters.
2. Present and communicate rosters.	2.1. Present rosters in required formats to ensure clarity of information according to organisational standards. 2.2. Communicate rosters to appropriate colleagues within designated timeframes.
3. Maintain rostering records.	3.1. Administer records of shift time completed by employees or contractors. 3.2. Maintain staff rostering records according to organisational procedures
4. Evaluate rosters.	4.1. Monitor effectiveness of rosters in consultation with colleagues. 4.2. Identify ways in which rosters and roster development processes may be improved and take appropriate action.

Foundation Skills

Foundation skills essential to performance in this unit, but not explicit in the performance criteria are listed here, along with a brief context statement.

SKILLS	DESCRIPTION
Reading skills to:	• interpret documents outlining opening and closing times, operational hours, and expected customer traffic.
Writing skills to:	• write potentially complex roster documentation.
Oral communication skills to:	• ask colleagues questions to confirm their requirements • listen, understand and interpret messages.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Numeracy skills to:	• complete planning activities involving dates, times and staff ratios.
Problem-solving skills to:	• re-work rosters in cases of staff illness.
Teamwork skills to:	• consider staff requests and personal commitments when planning rosters.
Technology skills to:	• use system capabilities and functions of rostering software programs.

Assessment Requirements for SITXHRM002 Roster staff

Modification History

Not applicable.

Performance Evidence

Evidence of the ability to complete tasks outlined in elements and performance criteria of this unit in the context of the job role, and:

- prepare staff rosters that meet diverse operational requirements across three different roster periods
- demonstrate the following when preparing each of the above staff rosters:
  - sufficient staff to ensure the delivery of required services within wage budget constraints
  - appropriate skills mix of the team
  - compliance with industrial provisions and organisational policy
  - completion of rosters within commercial and staff time constraints.

Knowledge Evidence

Demonstrated knowledge required to complete the tasks outlined in elements and performance criteria of this unit:

- sources of information on awards and other industrial provisions
- industrial agreements and other considerations which impact the preparation of staffing rosters:
  - single or multiple awards and enterprise agreements
  - award provisions for:
    - leave
    - mandated breaks between shifts
    - maximum allowed shift hours
    - standard, overtime and penalty pay rates
  - overall number of hours allocated to different staff members
  - use of:
    - contractors and consideration of fees
    - permanent or casual staff
- key elements of applicable awards and enterprise agreements:
  - leave provisions
  - mandated breaks between shifts
  - maximum allowed shift hours
  - standard, overtime and penalty pay rates

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- organisational policies which impact the preparation of staffing rosters:
  - sociocultural-friendly organisational initiatives
  - family-friendly workplace initiatives
  - leave for:
    - carers
    - compassionate reasons
    - illness or injury
    - jury service
    - long service
    - maternity or paternity
    - rehabilitation of injured workers
    - study
  - recreation
- industry sector:
  - role of rosters and their importance in controlling staff costs
  - system capabilities and functions of rostering software programs
  - different formats for and inclusions of staff rosters
  - different methods used to communicate rosters, both electronic and paper-based
- specific organisation:
  - social, cultural and skills mix of the team to be rostered
  - full details of human resource policies and procedures that cover leave provisions and socio-cultural issues
  - operational requirements of the business activity, department or event subject to rostering
  - wage budget for the business activity, department or event subject to rostering.

Assessment Conditions

Skills must be demonstrated in an operational tourism, travel, hospitality or events business operation or activity requiring staff rostering. This can be:

- an industry workplace
- a simulated industry environment.

Assessment must ensure access to:

- computers, printers and rostering software programs
- records of shift time and where relevant electronic equipment used by staff to log commencement and completion time of rostered duties
- applicable industrial awards and enterprise agreements
- operational information about the organisation or department subject to rostering
- information about the cultural and skills mix of a team subject to rostering.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessors must satisfy the Standards for Registered Training Organisations' requirements for assessors.

TAEASS301 Contribute to assessment

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Application

This unit describes the skills and knowledge required to contribute to the assessment process.

It applies to a person with technical or vocational expertise who is in a supervisory or mentoring/coaching work role, and for whom collecting the evidence for assessment is an adjunct to principal work responsibilities. The unit applies to those involved in collecting evidence for assessment against units of competency or accredited courses.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Assessment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
1. Clarify role and responsibilities in the assessment process	1.1 Discuss and confirm the purpose of the assessment with relevant people 1.2 Discuss and confirm benchmarks for assessment with the qualified assessor 1.3 Access, read and clarify assessment plan with the qualified assessor 1.4 Discuss and agree with the qualified assessor specific responsibilities in gathering evidence, and the types of evidence to be gathered
2. Confirm organisational arrangements for evidence gathering	2.1 Access and confirm relevant assessment system policies and procedures, organisational, legal and ethical requirements, and other relevant advice on assessment 2.2 Clarify the nominated assessment tools and methods for collecting evidence with the qualified assessor, to ensure that the procedures to be followed, and the instruments to be used are clear 2.3 Discuss and confirm with the relevant people the assessment context, including the candidate's characteristics and any need for reasonable adjustments 2.4 Confirm and arrange resource requirements in consultation with relevant people
3. Collect evidence in accordance with the assessment plan	3.1 Explain the assessment process to the candidate, including the different responsibilities of the parties involved, and refer any candidate issues or concerns to the qualified assessor, prior to undertaking assessment activities 3.2 Use assessment instruments to gather quality evidence within the available time and resources, according to organisational, legal and ethical requirements
4. Record and report findings	4.1 Organise and provide evidence to the qualified assessor in a format suitable for analysis according to the assessment system's policies and procedures 4.2 Actively seek feedback from the qualified assessor on whether evidence-gathering activities meet the principles of assessment, and whether the evidence collected meets the rules of evidence 4.3 Document areas for improvement in collecting evidence for future assessment activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Learning	4.2	• Seeks feedback to build knowledge to improve process and professional practice
Reading	1.3, 2.1, 2.2, 2.4, 3.2	• Sources and interprets procedural, and compliance information
Writing	1.1, 1.2, 1.3, 2.1, 2.3, 2.4, 3.2, 4.1, 4.3	• Completes workplace documentation accurately using the appropriate language
Oral Communication	1.1, 1.2, 1.3, 1.4, 2.1, 2.2, 2.3, 2.4, 3.1	• Communicates information and process requirements clearly, based on techniques appropriate to the audience and environment • Uses appropriate speaking and listening techniques to obtain specific information, and to support the assessment process
Navigate the world of work	2.1, 2.2, 3.2, 4.1	• Accesses, confirms and takes responsibility for adherence to policies, procedures, and legal and ethical requirements
Interact with others	4.2	• Asks questions to clarify understanding, and seeks feedback and further information
Get the work done	3.1, 4.1	• Organises work according to defined requirements, taking some responsibility for decisions regarding the format of information

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- clarifying the role to be taken during the assessment
- clarifying the assessment plan with the qualified assessor, including agreement about:
  - what evidence will be collected
  - how the evidence will be collected
- carrying out a minimum of three evidence-gathering activities and, on each occasion:
  - document evidence in a clear and concise manner
  - document feedback from others involved in the assessment

reporting findings to the qualified assessor, including an explanation of how the assessment meets the rules of evidence on each of the three occasions.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- competency-based assessment
- the principles of assessment
- the rules of evidence
- the different purposes of assessment
- the diversity of assessment contexts
- different types of evidence
- evidence-gathering methods
- the purpose and features of assessment tools, and assessment plans

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- potential barriers and processes relating to evidence-gathering procedures, and assessment processes
- the organisational policies and procedures relevant to this unit of competency.

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment, and include access to qualified assessors for consultation.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

TAEASS402 Assess competence

Modification History

Release	Comments
Release 2	This was first released with *TAE Training and Education Training Package Release 2.1.* Minor update to Assessment Conditions.
Release 1	This version first released with *TAE Training and Education Training Package Release 2.0.*

Application

This unit describes the skills and knowledge required to implement an assessment plan, and gather quality evidence to assess the competence of a candidate using compliant assessment tools.

It applies to teachers, trainers and assessors in enterprises and registered training organisations (RTOs) and those providing assessment advisory services.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Assessment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for the assessment	1.1 Interpret assessment planning documentation and applicable organisational, legal and ethical requirements for conducting the assessment and confirm with the relevant people 1.2 Access and interpret units of competency that are to be used as

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	benchmarks for assessment, and the nominated assessment tools, to confirm the requirements for the evidence to be collected 1.3 Determine opportunities for integrated assessment activities and document any changes to the assessment instruments, where required 1.4 Determine opportunities for evidence-gathering in actual or simulated activities, through consultation with the candidate and relevant personnel 1.5 Conduct a candidate briefing and explain, discuss and agree on the details of the planned assessment 1.6 Arrange identified material and physical resource requirements 1.7 Identify any specialist support requirements for the assessment, and organise if necessary
2. Gather quality evidence	2.1 Use agreed assessment methods and tools to gather, organise and document evidence in a format suitable for determining competence 2.2 Apply the principles of assessment and rules of evidence in gathering quality evidence
3. Support the candidate	3.1 Discuss and guide candidates in gathering their own evidence to support the recognition of prior learning (RPL) 3.2 Use appropriate communication and interpersonal skills to develop a professional relationship with the candidate that reflects sensitivity to individual differences and enables two-way feedback 3.3 Make decisions on reasonable adjustments with the candidate, based on the candidate's needs and characteristics 3.4 Access specialist support, if required, in accordance with the assessment plan 3.5 Address any workplace health and safety (WHS) risk to a person or equipment immediately
4. Make the assessment decision	4.1 Assess the collected evidence, and to evaluate whether it reflects the evidence required to demonstrate competence 4.2 Use judgement to infer whether competence has been demonstrated, based on the available evidence 4.3 Make the assessment decision in line with agreed assessment procedures and according to the agreed assessment plan 4.4 Provide clear and constructive feedback to the candidate regarding the assessment decision, and clearly document

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	follow-up, if required
5. Record and report the assessment decision	5.1 Record assessment outcomes promptly and accurately 5.2 Complete and submit required assessment documentation, according to assessment procedures and confidentiality conventions 5.3 Inform other relevant parties of the assessment decision, according to confidentiality conventions
6. Review the assessment process	6.1 Review the assessment process in consultation with candidates and other relevant people to improve future practice 6.2 Document and record the review according to relevant assessment system policies and procedures

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.2, 2.1, 4.1	• Accesses and interprets procedural and compliance documentation relevant to the assessment process • Examines and evaluates assessment evidence
Writing	1.1, 1.3, 1.5, 2.1, 3.1, 5.1, 5.2, 5.3, 6.2	• Completes workplace documentation accurately using appropriate language and following organisational requirements
Oral Communication	1.1, 1.4, 1.5, 3.1, 3.4, 4.4, 5.3, 6.1	• Communicates information and assessment process requirements clearly, using techniques appropriate to the audience and environment • Interacts appropriately with candidates to build rapport and understanding, and obtain specific information to support the assessment process
Navigate the world of work	1.1, 3.5, 5.3	• Identifies, confirms and takes responsibility for adherence to legal and ethical requirements • Recognises, and follows, explicit and implicit protocols and meets expectations associated with own role

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Interact with others	1.1, 1.4, 1.5, 3.1, 3.2, 3.4, 5.3, 6.1	• Adjusts personal communication style in recognition of the values and experiences of others to build rapport • Cooperates and collaborates with others and contributes to activities requiring joint responsibility and accountability
Get the work done	1.1, 1.2, 1.3, 1.4, 1.6, 1.7, 2.1, 2.2, 3.3, 3.4, 4.1, 4.2, 4.3, 6.1, 6.2	• Uses systematic, analytical processes in complex, non-routine situations, gathering information, and identifying and evaluating options against agreed criteria • Organises work according to specific requirements taking some responsibility for decisions regarding the format of information • With guidance, reviews the effectiveness of solutions in relation to the set goals

Assessment Requirements for TAEASS402 Assess competence

Modification History

Release	Comments
Release 2	This was first released with *TAE Training and Education Training Package Release 2.1.* Minor update to Assessment Conditions.
Release 1	This version first released with *TAE Training and Education Training Package Release 2.0.*

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- assessment of at least five candidates within the vocational education and training (VET) context against at least one endorsed or accredited unit of competency according to the organisation's assessment processes and practices.
- using recognition of prior learning (RPL) processes in the assessment of at least one candidate (which may be one of the five candidates above)
- making reasonable adjustments in the assessment of at least one candidate.

The assessments must be undertaken under the supervision of a qualified assessor and cover an entire unit of competency for each candidate, including:

- the application of different assessment methods and instruments involving a range of activities and events
- using two-way communication and feedback with the candidate
- exercising judgement in making the assessment decision
- recording and reporting assessment outcomes in accordance with the assessment system and organisational, legal and ethical requirements

reviewing the assessment process.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- competency-based assessment, including:
  - VET as a competency-based system
  - how competency based assessment differs from other types of assessment
  - competency standards as the basis of qualifications
  - structure and application of competency standards
  - the principles of assessment and how they are applied
  - the distinction between assessment tools and assessment instruments
  - the rules of evidence and how they are applied
  - the range of assessment purposes and assessment contexts, including RPL
  - different assessment methods, including suitability for gathering various types of evidence, suitability for the content of units, and resource requirements and associated costs
  - reasonable adjustments and when they are applicable
  - types and forms of evidence, including assessment instruments that are relevant to gathering different types of evidence used in competency-based assessment, including RPL
  - the training and assessment strategies, including policies and procedures established by the industry, organisation or training authority
- RPL policies and procedures established by the organisation
- cultural sensitivity and equity considerations in assessment activities
- current legislative requirements relevant to the assessor and the assessment process
- workplace health and safety (WHS) responsibilities associated with assessing competence, including:
  - requirements for reporting hazards and incidents
  - emergency procedures
  - procedures for the use of relevant personal protective equipment
  - the safe use and maintenance of relevant equipment
  - sources of WHS information.

Assessment Conditions

Gather evidence to demonstrate consistent performance in a real assessment environment. The assessment environment must include access to assessment tools and recording materials.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

TAEASS403 Participate in assessment validation

Modification History

Release	Comments
Release 2	This was first released with *TAE Training and Education Training Package Release 2.1.* Minor updates to Assessment Conditions.
Release 1	This version first released with *TAE Training and Education Training Package Release 2.0*

Application

This unit describes the skills and knowledge required to participate in an assessment validation process.

It applies to assessors and workplace supervisors with assessment validation responsibilities participating in, but not necessarily leading, the process.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Assessment

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Prepare for validation	1.1 Discuss and confirm the purpose, context and scope of the validation process within relevant assessment system policies and procedures 1.2 Arrange materials for validation activities

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	1.3 Check all documents used in the validation process for accuracy and version control 1.4 Analyse relevant units of competency and agree on the evidence needed to demonstrate competence
2. Participate in the validation of assessment tools	2.1 Demonstrate active and appropriate participation in validation sessions and activities using agreed communication methods and modes 2.2 Apply principles of assessment and rules of evidence during validation sessions and activities 2.3 Check that context and conditions of assessment include clear instructions for assessor and candidate and relate directly to the assessment conditions of the relevant unit 2.4 Check that tasks to be administered to the candidate include clear and concise instructions and an outline of evidence requirements 2.5 Check that assessment decision-making rules and benchmarks, are clear and enable consistent outcomes 2.6 Check that recording mechanisms are clear and allow for sufficient information to be recorded 2.7 Review and use assessment maps to assist in determining validity of assessment instruments
3. Contribute to validation outcomes	3.1 Discuss validation findings to support improvements in the quality of assessment in a collective environment 3.2 Discuss, agree and record recommendations to improve assessment practice

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Foundation Skills

This section describes language, literacy, numeracy and employment skills incorporated in the performance criteria that are required for competent performance.

Skill	Performance Criteria	Description
Reading	1.1, 1.3, 1.4, 2.3, 2.4, 2.5, 2.6, 2.7	• Analyses and interprets relevant policies and procedures, benchmarks and validation materials
Writing	1.1, 3.2	• Records key information from the validation process accurately to meet requirements
Oral Communication	1.1, 1.4, 2.1, 2.2, 3.1, 3.2	• Communicates with others to confirm approaches, exchange ideas and information, articulate opinions, and reach agreement with others, using suitable tone, style and language
Navigate the world of work	1.1	• Identifies, confirms and takes responsibility for adherence to policies and procedures
Interact with others	1.1, 2.1, 2.2, 3.1, 3.2	• Collaborates with others and contributes to activities requiring joint responsibility and accountability
Get the work done	1.1, 1.2, 1.3, 1.4, 2.3, 2.4, 2.5, 2.6, 2.7, 3.2	• Organises and prioritises work commitments with a sense of what is achievable within the timeframe • Uses analytical processes in non-routine situations gathering information, and identifying and evaluating options against agreed criteria

Modification History

Release	Comments
Release 2	This was first released with *TAE Training and Education Training Package Release 2.1.* Updates to Assessment Conditions.
Release 1	This version first released with *TAE Training and Education Training Package Release 2.0*

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- actively participating in a minimum of three validation sessions that address the critical aspects of validation
- clearly identifying the purpose for each validation, and the legal and ethical responsibilities of assessors
- collating and presenting documentation for each validation in a logical manner
- communicating and liaising with relevant people
- providing feedback and interpreting documentation in validation sessions
- recording their contribution to validation findings.
-

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- how to determine the evidence needed to demonstrate competence in a competency-based environment
- the reasons for carrying out validation and different approaches to validation that may be appropriate before, during and after an assessment
- the components of assessment tools
- critical aspects of validation, including validation of assessment processes, methods and products
- how principles of assessment are addressed in validation

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- how rules of evidence are addressed in validation
- work health and safety legislation, codes of practice, standards and guidelines that impact on assessment
- obligations of an assessor under applicable legislation and/or standards, particularly in relation to validation activities.
-

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment, and include access to:

- the texts and tasks usually found in the workplace
- units of competency and other materials used in validation sessions.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

TAEDEL301 Provide work skill instruction

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Application

This unit describes the skills and knowledge required to conduct individual and group instruction, demonstrate work skills and assess the success of training and one's own training performance, using existing learning resources in a safe and comfortable learning environment.

It emphasises the training as being driven by the work process and context, and applies to a person working under supervision as a work skill instructor in a wide range of settings not restricted to training organisations,

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Unit Sector

Delivery and facilitation

Elements and Performance Criteria

ELEMENT	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	*Performance criteria describe the performance needed to demonstrate achievement of the element.*
1. Organise instruction and demonstration	1.1 Gather information about learner characteristics and learning needs 1.2 Confirm a safe learning environment 1.3 Gather and check instruction, demonstration objectives, and seek assistance if required 1.4 Access and review relevant learning resources and learning

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

ELEMENT	PERFORMANCE CRITERIA
	materials for suitability and relevance, and seek assistance to interpret the contextual application 1.5 Organise access to necessary equipment or physical resources required for instruction and demonstration 1.6 Notify learners of details regarding the implementation of the learning program and/or delivery plan
2. Conduct instruction and demonstration	2.1 Use interpersonal skills with learners to establish a safe and comfortable learning environment 2.2 Follow the learning program and/or delivery plan to cover all learning objectives 2.3 Brief learners on any workplace health and safety (WHS) procedures and requirements prior to, and during, training 2.4 Use delivery techniques to structure, pace and enhance learning 2.5 Apply coaching techniques to assist learning 2.6 Use communication skills to provide information, instruct learners and demonstrate relevant work skills 2.7 Provide opportunities for practice during instruction and through work activities 2.8 Provide and discuss feedback on learner performance to support learning
3. Check training performance	3.1 Use measures to ensure learners are acquiring, and can use, new technical and generic skills and knowledge 3.2 Monitor learner progress and outcomes in consultation with the learner 3.3 Review relationship between the trainer/coach and the learner, and adjust to suit learner needs
4. Review personal training performance	4.1 Reflect upon personal performance in providing instruction and demonstration, and document strategies for improvement 4.2 Maintain, store and secure learner records, according to organisational and legal requirements

Foundation Skills

Assessment Requirements for TAEDEL301 Provide work skill instruction

Modification History

Release	Comments
Release 1	This version first released with *TAE Training and Education Training Package Version 2.0.*

Performance Evidence

The candidate must show evidence of the ability to complete tasks outlined in the elements and performance criteria of this unit, including:

- carrying out a minimum of three training sessions, involving demonstrating and instructing particular work skills for at least two different individuals or small groups, with each session addressing:
  - different learning objectives
  - a range of delivery techniques and effective communication skills appropriate to the audience.

Knowledge Evidence

The candidate must be able to demonstrate essential knowledge to effectively complete the task outlined in the elements and performance criteria of this unit. This includes knowledge of:

- learner characteristics and needs
- the content and requirements of the relevant learning program, and/or the delivery plan
- the sources and availability of relevant learning resources and learning materials
- the content of relevant learning resources and learning materials
- training techniques that enhance learning, and when to use them
- introductory knowledge of learning principles and learning styles
- key workplace health and safety (WHS) issues in the learning environment, including:
  - roles and responsibilities of key personnel
  - responsibilities of learners
  - relevant policies and procedures, including hazard identification, risk assessment, reporting requirements, safe use of equipment and emergency procedures
  - risk controls for the specific learning environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Assessment Conditions

Gather evidence to demonstrate consistent performance in conditions that are safe and replicate the workplace. Conditions must be typical of those experienced in the training and assessment environment and include access to any necessary workplace documents.

Assessors must satisfy the requirements for assessors in applicable vocational education and training legislation, frameworks and/or standards.

TLIA0003 Complete and check import/export documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to complete and check import and export documentation in accordance with the requirements of Customs and related legislation and workplace procedures.

It includes identifying procedures required for documenting import/export of goods, completing documentation to meet legislative and workplace requirements, checking documentation to ensure it meets legislative requirements and lodging documentation for processing.

Work is performed under some supervision generally within a team environment. Work is undertaken in a range of environments, including small to large worksites, in the Customs broking and freight forwarding industries.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Identify procedures required for	**1.1** Documents required for import/export of goods are identified

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	documentation for import/export of goods		
		1.2	Required documents are sourced
		1.3	Content requirements for each section of the documentation are applied
		1.4	Timelines for completion of documents are identified and noted
		1.5	Requirements for permits and other documentation (such as quarantine) are identified and implications are noted
		1.6	Procedures for obtaining clearances are identified and followed in accordance with the requirements of Customs, related legislation and workplace procedures
		1.7	Letters of credit are identified and implications of each are noted
		1.8	Assistance is sought, as required, to identify necessary documents and to commence process of assessing or completing these documents
2	**Complete documentation to meet legislative and workplace requirements**	**2.1**	Content requirements for each section of the documentation are identified and applied in accordance with the requirements of Customs, related legislation and workplace procedures
		2.2	Workplace procedures for authorisations are followed
		2.3	Data entry for documents is completed
		2.4	Problems arising in completing required documents are identified and assistance is sought to resolve these in accordance with the requirements of Customs, related legislation and workplace procedures
		2.5	Actions are taken to meet deadlines
		2.6	Assistance is sought, as required, in completing required documents
3	**Check documentation to ensure it meets legislative requirements**	**3.1**	Documents are collated and checked before forwarding to supervisor, manager or more senior personnel for checking within designated timelines in accordance with the requirements of Customs, related legislation and workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	3.2	Declarations are checked to ensure they meet the requirements of Customs, related legislation and workplace procedures
	3.3	Letters of credit are checked to ensure they meet commercial, transport and overseas requirements
	3.4	Dangerous goods (DG) documentation is checked in accordance with the requirements of Customs, related legislation and workplace procedures
	3.5	Document revisions are finalised, rechecked and forwarded to supervisor, manager or more senior personnel prior to lodgement
4 Lodge documentation for processing	**4.1**	Documents are copied then forwarded to relevant personnel in accordance with the requirements of Customs, related legislation and workplace procedures
	4.2	Copies of documents are filed, stored and retained in accordance with the requirements of Customs, related legislation and workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces and is equivalent to TLIA2009 Complete and check import/export documentation.

Assessment Requirements for TLIA0003 Complete and check import/export documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others when completing import and export documentation
- completing and checking documentation and records to meet relevant Customs legislation, related legislation and workplace procedures
- completing and/or assessing accuracy of import and export documentation
- identifying procedures required for documentation for import and export of goods
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- providing customer/client service
- reading, interpreting and following import and export instructions, procedures and labels
- reporting and/or rectifying identified problems promptly in accordance with regulatory requirements and workplace procedures
- selecting and using relevant communications, computing and office equipment when completing import and export documentation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian and international standards, codes, conventions and regulations relevant to importing and exporting cargo and freight
- Customs Act and related legislation
- documentation requirements for importing and exporting cargo and freight
- focus of operation of work systems, equipment, management and site operating systems for completing import and export cargo and freight documentation
- problems that may occur when completing import and export documentation and appropriate action that can be taken to resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace procedures and policies for completing import and export documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE)
- applicable documentation, including workplace procedures, regulations, codes of practice and operation manuals.

TLIA0004 Complete receival and despatch documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to complete receival and despatch documentation in accordance with relevant regulations and workplace requirements as part of work activities within the transport and logistics industry.

It includes analysing orders to identify work requirements to fill order, following workplace order documentation processes, and finalising documentation in accordance with workplace procedures and any relevant regulatory requirements.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Analyse order to identify work requirements to fill order	**1.1** Order request documentation is interpreted

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	1.2	Ordered goods are noted and workplace locations identified
	1.3	Workplace and goods information is used to organise documentation
	1.4	Required schedules for order movement are identified and communicated with relevant personnel
	1.5	Special aspects of order are identified and information on required documentation procedures and relevant regulatory requirements are identified, accessed and interpreted
2 Follow workplace order documentation processes	**2.1**	Workplace procedures for order receival and despatch documentation are identified
	2.2	Complete receival and despatch documentation in accordance with workplace procedures and regulatory requirements
3 Finalise documentation	**3.1**	Order is checked against schedule and order form
	3.2	Workplace records are completed and labels and appropriate documentation are attached in accordance with workplace procedures and regulatory requirements
	3.3	Special transportation requirements are identified and conveyed to appropriate personnel
	3.4	Required documentation for dangerous goods and hazardous materials is completed in accordance with regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Mapping Information

This unit replaces and is equivalent to TLIA3015 Complete receival/despatch documentation.

Assessment Requirements for TLIA0004 Complete receival and despatch documentation

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- applying work health and safety (WHS)/occupational health and safety (OHS) procedures
- communicating effectively with others
- completing receival and despatch documentation
- estimating size, shape and special requirements of goods and loads
- identifying containers and goods coding markings and emergency information panels
- interpreting and following operational instructions, procedures and information
- monitoring work activities in terms of planned schedule
- selecting and using relevant systems.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- documentation requirements for receiving and despatching goods
- focus of operation of work systems, equipment, management and site operating systems for receiving and despatching goods
- housekeeping standards and procedures
- national and international standards, codes and regulations relevant to completing receival and despatch documentation including:
    - bond requirements
    - dangerous goods codes
    - legislative requirements
    - quarantine requirements
- receival and despatch documentation anticipated problems and appropriate actions for resolution
- requirements of loads with special conditions including:
    - controlled substances

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - dangerous goods
    - hazardous materials
    - security requirements
    - temperature-controlled goods
- site layout and obstacles
- specifications and standards for checking and inspecting received and despatched goods
- WHS/OHS and environmental protection procedures and guidelines
- workplace procedures and policies for completing receival and despatch documentation.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation including legislation, regulations, codes of practice, workplace procedures and operation manuals.

TLIA0015 Organise receival and despatch operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to organise receival and despatch operations in accordance with regulations, codes of practice and workplace requirements in the transport and logistics industry.

It includes planning and organising receival operations, storing received stock, despatching ordered stock and completing documentation and records.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan and organise receival and despatch operations	**1.1** Product characteristics and workplace procedures are applied to stock analysis
	1.2 Resources are identified to match product characteristics

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3	Timeframes are scheduled to enable receival or despatch of stock according to workplace procedures
		1.4	Work processes are planned to meet specified timeframes
2	**Organise the storage and despatch of stock**	**2.1**	Employees, equipment and storage areas are allocated and supervised
		2.2	Individuals are informed of work requirements and deadlines
		2.3	Work processes are monitored to ensure human resources and equipment are maintained at productive levels in accordance with workplace procedures and work health and safety (WHS)/occupational health and safety (OHS) requirements
		2.4	Discrepancies in stocks are noted and reported in accordance with workplace procedures
3	**Complete documentation**	**3.1**	Documentation and records regarding receival and despatch operations are confirmed
		3.2	Documentation and records are completed and proofread
		3.3	Documentation and records are processed in accordance with workplace procedures and relevant regulatory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Unit Mapping Information

This unit replaces but is not equivalent to TLIA3018 Organise despatch operations and TLIA3019 Organise receival operations.

Assessment Requirements for TLIA2014 Use product knowledge to complete work operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting to differences in products and services in accordance with standard operating procedures
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when handling, transporting and storing products and providing information on products and services
- completing documentation related to work activities
- estimating the size, shape and special requirements of goods and loads
- identifying containers and goods coding, Australian Dangerous Goods (ADG) and International Maritime Dangerous Goods (IMDG) markings and where applicable, emergency information panels
- reading and comprehending simple statements in English
- reading, interpreting and following instructions, procedures, information and signs relevant to handling, transporting, storing products and providing information on products and services
- selecting and using relevant communications, computing and load handling equipment
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Australian codes and regulations relevant to products being identified, handled, transported, stacked and/or stored as part of work operations
- categories or groups of products and requirements for special handling, stacking and storage
- documentation requirements including reports and records concerning damaged or contaminated goods
- focus of operation of work systems, equipment, management and site operating systems for packaging goods
- housekeeping standards and procedures
- purpose and use of cataloguing and labelling systems
- site layout and obstacles
- strategies to seek out sources of product knowledge and to use this information to inform work
- types of equipment and storage areas appropriate for different categories of goods including perishable, fragile, dangerous, composition/state goods
- workplace procedures and policies for identifying, handling, stacking and storing particular categories of products.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

TLIA2020 Replenish stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to replenish stock in accordance with workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes applying product knowledge to participate in stock rotation activities, interpreting and filling replenishment requests, and completing all required stock replenishment tasks.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Participate in stock rotation activities	1.1 Stock levels are counted against appropriate documentation
	1.2 Stock levels are recorded and reported
	1.3 Stocks are replenished, adjusted or rotated in accordance with

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	workplace procedures
	1.4 Stock re-ordering processes are activated when appropriate
	1.5 Routine and non-routine problems with products or storage systems are reported in accordance with workplace procedures
2 Interpret and fill replenishment request	2.1 Order request documentation is interpreted
	2.2 Product/s in order are noted and workplace location/s are identified
	2.3 Workplace and product knowledge is used to plan sequence of work
	2.4 Appropriate materials handling equipment is selected in accordance with workplace procedures and timeframes, and work health and safety (WHS)/occupational health and safety (OHS) regulations
	2.5 Required schedules for order movement and despatch or storage are identified
3 Complete stock replenishment	3.1 Products are sorted, assembled and consolidated in the appropriate storage areas
	3.2 Work is checked in accordance with company procedures
	3.3 Documentation and records are completed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Assessment Requirements for TLIA2020 Replenish stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- communicating and working effectively with others when replenishing stock
- completing documentation related to replenishing stock
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in stock and equipment in accordance with standard operating procedures
- reading, interpreting and following instructions, procedures and labels relevant to replenishing stock
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant communications, computing and office equipment when replenishing stock
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- Australian codes and regulations relevant to replenishing stock
- computer records and documentation requirements for replenishing stock
- focus of operation of work systems, equipment, management and site operating systems for replenishing stock
- housekeeping standards and procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- principles of operation and functions of stock control systems
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- workplace procedures and policies for replenishing stock.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to despatch stock in accordance with codes/regulations and workplace requirements as part of work activities undertaken within the transport and logistics industry.

It includes analysing orders to identify work requirements, following workplace order picking processes to prepare goods for despatch, and completing despatch tasks in accordance with workplace procedures and schedules.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Analyse order to identify	1.1 Order request and consignment note documentation is

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

work requirements	interpreted
	1.2 Required schedules for despatch are identified
	1.3 Product(s) in order are identified
	1.4 Workplace and product knowledge is used to plan sequence of work
	1.5 Appropriate materials handling equipment is selected within required work health and safety (WHS)/occupational health and safety (OHS) regulations and timeframe for the despatch
2 Follow workplace order picking processes to prepare goods for despatch	2.1 Goods for despatch are selected and checked against product knowledge, labels and other identification systems
	2.2 Products are sorted, assembled and consolidated
	2.3 Orders are secured and placed in storage/despatch zones, in accordance with schedule
	2.4 Order is checked against despatch schedule and order form
3 Complete despatch following workplace procedures and schedules	3.1 Workplace records are completed, and labels and appropriate documentation are attached
	3.2 Load labels and documentation are checked and loading is organised in accordance with workplace procedures and Australian Dangerous Goods (ADG) Code as required
	3.3 Final check of load labels and documentation is completed in accordance with requirements
	3.4 Transportation requirements are communicated to driver as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIA2021A Despatch stock.

Assessment Requirements for TLIA2021 Despatch stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate hazards that may exist during work activities
- applying relevant legislation and workplace procedures
- communicating and working effectively with others when organising despatch operations
- completing documentation related to organising despatch operations
- estimating size, shape and special requirements of goods and loads
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in goods and equipment in accordance with standard operating procedures
- reading, interpreting and following instructions, procedures and labels relevant to organising despatch operations
- selecting and using relevant equipment and communications technology when organising despatch operations
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- documentation and record requirements for despatch operations
- equipment used during despatch operations and the precautions and procedures that should be followed in its use
- housekeeping standards and procedures
- operational work systems, equipment, management and site operating systems for despatching goods
- problems that may occur when despatching goods and appropriate action that can be taken to resolve these problems
- regulations relevant to despatch operations, including the Australian Dangerous Goods (ADG) Code and relevant bond, quarantine or other legislative requirements
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout and obstacles
- workplace procedures and policies for organising despatch operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations, current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIA4025 Regulate temperature controlled stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to regulate temperature controlled stock in accordance with relevant regulations and workplace procedures within the transport and logistics industry.

It includes identifying goods requiring temperature control, monitoring temperature of goods, and identifying and rectifying identified problems.

Work is performed under some supervision generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

A – Handling Cargo/Stock

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

essential outcomes.	demonstrate achievement of the element.
1 Identify goods requiring temperature control	1.1 Goods requiring temperature control are identified
	1.2 Temperature for short-term and long-term storage is selected to match product type
	1.3 Upper and lower limits for temperature control are identified
	1.4 Storage separations and co-storage applications are identified for products
2 Monitor temperature	2.1 Appropriate methods for determining temperature of goods are identified
	2.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	2.3 Storage areas are monitored for temperatures within range for product types
	2.4 Products are monitored to ensure compliance with temperature storage requirements
	2.5 Short-term storage times are identified for transit goods
	2.6 Documentation is completed in accordance with workplace procedures
3 Identify and rectify problems	3.1 Implications of incorrect temperature are identified
	3.2 Damaged goods are identified and appropriate action is taken in accordance with workplace procedures
	3.3 Causes of out-of-temperature range are identified
	3.4 Appropriate personnel are notified for problem rectification
	3.5 Goods handling workplace procedures for maintenance of stock under temperature control are identified and implemented

Assessment Requirements for TLIA4025 Regulate temperature controlled stock

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant legislation and workplace procedures
- checking refrigeration equipment operation in terms of maintenance schedule and standard operating procedures
- communicating effectively with others
- implementing contingency plans
- operating and adapting to differences in stock and equipment in accordance with workplace procedures
- reading and interpreting relevant instructions, procedures and labels
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using relevant equipment, processes and procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- focus of operation of work systems, equipment, management and site operating systems for regulating temperature controlled stock
- hazards when regulating and working with temperature controlled stock and appropriate action to control the risks involved
- problems that can occur with temperature controlled stock and appropriate action that can be taken
- procedures for pre-cooling and snap freezing

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- relevant codes of practice, food safety standards and regulations for temperature controlled stock
- relevant work health safety (WHS)/occupational health and safety (OHS) and environmental protection procedures and guidelines
- special handling, stacking and storage requirements for temperature controlled stock
- workplace procedures and policies for regulating temperature controlled stock.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID0006 Move materials mechanically using automated equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to move materials mechanically using automated equipment.

It includes selecting appropriate automated mechanical moving equipment, moving materials in accordance with operational requirements, checking condition of materials and completing required records.

Work must be carried out in compliance with relevant work health and safety (WHS)/occupational health and safety (OHS) regulations related to automated mechanical equipment.

Work is performed under limited or minimum supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Identify task and select automated equipment**	**1.1**	Automated equipment is selected in accordance with workplace procedures, manufacturer specifications and loads characteristics
		1.2	Pre-operational checks are completed and safe working load is determined in accordance with workplace procedures and manufacturer specifications
		1.3	Automated equipment faults are identified and appropriate action taken in accordance with workplace procedures
		1.4	Dangerous goods (DG) and hazardous materials are identified and handled in accordance with workplace procedures
2	**Move materials with automated equipment**	**2.1**	Planned route is determined and work area deemed safe
		2.2	Hazards are identified, risks are assessed and control measures are implemented
		2.3	Materials are moved using automated equipment in accordance with manufacturer specifications and workplace procedures
		2.4	Materials are monitored in accordance with workplace procedures
3	**Complete material move and records**	**3.1**	Materials are inspected in accordance with workplace procedures
		3.2	Records are updated in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Assessment Requirements for TLID0006 Move materials mechanically using automated equipment

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying workplace procedures when using automated equipment
- following relevant instructions, workplace procedures and signs
- monitoring performance of automated equipment and taking action in accordance with workplace procedures
- reporting automated equipment faults in accordance with workplace procedures
- undertaking operational checks of automated equipment
- using personal protective equipment (PPE) according to workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- characteristics, capabilities and limitations of automated equipment
- hazards when using automated equipment and related risk control measures
- problems that may occur and appropriate actions that can be taken to resolve these problems
- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and regulations
- workplace policies and procedures for using automated equipment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational

TLID2003 Handle dangerous goods/hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to handle dangerous goods and hazardous substances in accordance with relevant work health safety (WHS)/occupational health and safety (OHS) regulations concerning the safe handling of dangerous goods and hazardous substances, within the transport and logistics industry.

It includes identifying requirements for working with dangerous goods and/or hazardous substances, confirming site incident procedures and selecting handling techniques.

Work is performed under general supervision.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Identify requirements for working with dangerous goods and/or hazardous substances	1.1 Dangerous goods/hazardous substances are identified from information including class labels, manifests and other documentation
	1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.3 Storage requirements for dangerous goods/hazardous substances are identified and applied
	1.4 Legislative requirements for dangerous goods/hazardous substances are used to plan work activities
	1.5 Handling procedures for different classes and characteristics of goods are observed
	1.6 Confirmation is sought from relevant personnel where dangerous goods/hazardous materials do not appear to be appropriately marked
2 Confirm site incident procedures	2.1 Incident reporting processes are identified
	2.2 Emergency equipment is located and checked in accordance with workplace procedures and statutory regulations
	2.3 Emergency procedures are identified and confirmed
3 Select handling techniques	3.1 Load handling and shifting procedures are selected in accordance with identified requirements for particular goods
	3.2 Handling equipment is checked for conformity with workplace requirements and manufacturer guidelines
	3.3 Suitable signage or placards are checked for compliance with workplace procedures, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLID2003 Handle dangerous goods/hazardous substances

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others
- completing relevant documentation
- determining required permits
- estimating weight and dimensions of load and any special requirements
- identifying and assessing handling and storage precautions and requirements for dangerous goods/hazardous substances
- identifying and selecting safety requirements for handling dangerous goods/hazardous substances
- identifying containers and goods coding, markings and emergency information panels for mode of transport storage selected
- identifying dangerous goods/hazardous substances using labels, International Maritime Dangerous Goods (IMDG) Code markings, HAZCHEM signs and other relevant identification criteria
- identifying job and site hazards, and planning work to minimise risks
- implementing contingency plans
- maintaining workplace records and documentation
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule, predicting consequences and identifying improvements
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, regulations, information and signs
- recognising hazards and applying precautions and required action to minimise, control or eliminate recognised hazards
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- selecting and using required personal protective equipment (PPE) conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- selecting appropriate equipment and work systems including PPE
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- equipment applications, capacities, configurations, safety hazards and control mechanisms
- housekeeping standards and procedures
- permit and licence requirements
- problems that may arise when handling of dangerous goods and hazardous substances and actions that should be taken to prevent or solve these problems
- relevant aspects of current Australian Dangerous Goods (ADG) Code and relevant Australian Standards
- relevant regulations and codes concerning handling dangerous goods/hazardous substances
- risks when handling dangerous goods/hazardous substances and related precautions to control risk
- workplace procedures for handling and storing dangerous goods/hazardous substances.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID2004 Load and unload goods/cargo

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to load and unload goods and cargo in accordance with relevant state/territory roads and traffic authority regulations/permit requirements.

It includes loading and unloading goods and cargo, securing and protecting a load and completing all required documentation.

Work is performed under general supervision within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Load and unload goods/cargo**	1.1 Load characteristics are identified and taken into account when determining appropriate loading and unloading workplace procedures
		1.2 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
		1.3 Dangerous or hazardous goods are identified and handled in accordance with the current Australian Dangerous Goods (ADG) Code and other relevant regulations/permit requirements
		1.4 Load is packed/unpacked to make safe and effective use of available spaces
		1.5 Goods/cargo are loaded in accordance with relevant mass and loading regulations and workplace procedures
		1.6 Lifting aids and appliances are selected and used to aid loading procedures in accordance with workplace procedures and safety legislation
		1.7 Unloading activities are conducted in a safe and efficient manner taking into account suitable locations, stowage, safe use of equipment and balance of remaining load
		1.8 Goods requiring special handling and/or documentation are identified and workplace procedures are followed
		1.9 Relocated material is restacked appropriate for transport method, safe height, weight loading, size and crushability of goods
2	**Secure and protect load**	2.1 Load distribution is checked to ensure it is even, legal and within safe working capacity
		2.2 Load is checked to ensure dangerous goods and hazardous substances are appropriately segregated in accordance with current ADG Code
		2.3 Load is secured using correct load restraint and protection equipment for different loads, carrying and storage conditions
		2.4 Load is protected in accordance with legal and workplace safety requirements
3	**Complete**	3.1 Load is inspected and checked for security to travel, in accordance with relevant regulations/permit requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

documentation		and current ADG Code, as required
	3.2	All required goods documentation is completed in accordance with workplace requirements including current ADG Code, as required

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- chain of responsibility workplace procedures
- housekeeping workplace procedures
- national load restraint guidelines
- problems that may arise when loading and unloading goods and cargo and actions that should be taken to prevent or solve these problems
- relevant Australian and international regulations and codes of practice for handling and transporting dangerous goods and hazardous substances
- relevant Australian Standards and regulations including state/territory mass and loading regulations
- risks when loading and unloading goods/cargo and related precautions to control risk
- safe work methods for securing load
- security awareness requirements when loading and unloading vehicles and in particular recognising, isolating and reporting suspicious cargo and goods
- site layout and obstacles
- WHS/OHS procedures and guidelines concerning the lifting and movement of loads
- workplace procedures and policies for loading and unloading goods/cargo.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

TLID2010 Operate a forklift

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a forklift in compliance with the relevant state/territory authority licence requirements and regulations, in a variety of operational contexts.

It includes checking forklift condition, driving forklift to fulfil operational requirements, and monitoring and maintaining forklift performance and site conditions.

Assessment of this unit will usually be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory work health and safety (WHS)/occupational health and safety (OHS) authority.

Operation of a forklift is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Elements and Performance Criteria

Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Check forklift condition	1.1 Condition of forklift is checked for compliance with WHS/OHS and workplace requirements for warning devices, manufacturer specifications and nature of load shifting task
	1.2 Attachments are checked to ensure appropriate adjustment and operation
	1.3 Mirrors and seats are adjusted for safe operation by driver
	1.4 Logbooks are checked and appropriate workplace documentation is completed in accordance with workplace requirements
2 Drive forklift	2.1 Forklift is started, steered, manoeuvred, positioned and stopped in accordance with regulations and manufacturer instructions
	2.2 Engine power is managed to ensure efficiency and performance and to minimise engine and gear damage
	2.3 Operational hazards are identified and/or anticipated and avoided or controlled through defensive driving and appropriate hazard control techniques
	2.4 Forklift is driven in reverse, maintaining visibility and achieving accurate positioning
	2.5 Forklift is parked, shut down and secured in accordance with manufacturer specifications, regulations and workplace procedures
3 Operate forklift to handle loads	3.1 Lifting task to be undertaken is appropriately planned, and correct lifting truck and attachments are selected
	3.2 Load is lifted, carried, lowered and set down in accordance with WHS/OHS legislation, manufacturer specifications and company procedures
4 Monitor site conditions	4.1 Hazards and traffic flow are identified when selecting the most efficient route and appropriate adjustments are made
	4.2 Site conditions are assessed to enable safe operations and to ensure no injury to people or damage to property, equipment, loads or facilities occurs

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

5 Monitor and maintain forklift performance	5.1 Performance and efficiency of vehicle operation is monitored during use
	5.2 Defective/irregular performance and malfunctions are reported to relevant personnel
	5.3 Forklift records are maintained/updated in accordance with workplace procedures and legislative requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2010A Operate a forklift.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- checking and replenishing fluids, and carrying out lubrication processes
- communicating and working effectively with others
- completing relevant documentation
- ensuring forklift and its equipment are maintained in terms of service schedule and standard operating procedures
- identifying points of balance and safe lifting positions on a range of loads when operating a forklift (including accessories)
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of forklift and its equipment, and taking appropriate action as required
- monitoring and prioritising work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with standard operating procedures
- operating electronic communications equipment to required protocol
- reading, interpreting and following relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and WHS/OHS standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- efficient driving techniques
- engine power management and safe operating strategies
- forklift controls, instruments and indicators, and their use
- forklift handling procedures
- high risk work licence requirements
- operating hazards and related defensive driving and hazard control techniques
- operational emergency procedures
- pre-operational checks carried out on forklift and related action
- principles of stress management when driving a forklift
- relevant duty of care requirements for operating a forklift
- relevant WHS/OHS and environmental procedures and regulations
- site layout and obstacles
- workplace operating procedures.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLID2022 Conduct weighbridge operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct weighbridge operations in accordance with regulatory requirements and workplace procedures, within the transport and logistics industry.

It includes setting up for weighbridge operations, weighing loaded and unloaded vehicles, finalising weighbridge operations, and completing required records and documentation.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Set up for weighbridge operations**	1.1 Weighbridge systems, including equipment, computer and recording arrangements, are checked for operational status
		1.2 Tests to confirm accuracy of weighbridge operation and related functions are conducted in accordance with workplace procedures, manufacturer instructions and relevant legislation
		1.3 Accurate reporting of results of inspection and testing is kept in accordance with statutory requirements, workplace procedures and industry guidelines
		1.4 Hazards are identified, risks are assessed and control measures are implemented
		1.5 Faults/discrepancies in weighbridge operation are identified and appropriate action is undertaken in accordance with workplace procedures
2	**Weigh loaded vehicles**	2.1 Vehicles likely to exceed weighbridge weight limit are turned away in accordance with workplace procedures
		2.2 Vehicles are directed onto platform to obtain accurate weight
		2.3 Weight of loaded stationary vehicle is registered against vehicle and load identification
		2.4 Vehicle and load information is entered into workplace recording system and driver is issued with receipt and/or statement
		2.5 Areas of dispute are resolved or forwarded for further action to be undertaken in accordance with workplace procedures
3	**Weigh unloaded vehicles**	3.1 Vehicles are directed onto platform to obtain accurate weight
		3.2 Weight of unloaded stationary vehicle is registered against vehicle
		3.3 Proposed load weight is assessed for conformance to statutory requirements
		3.4 Loading operations are commenced in accordance with legal loading weight, customer requirements and workplace procedures, and vehicle is re-weighed to establish final load weight, as required
		3.5 Vehicle and load information are entered into workplace recording system and invoice is issued to driver, as required

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	3.6	Driver signatures on weighbridge documents, invoices or receipts are obtained in accordance with statutory and workplace requirements
	3.7	Areas of dispute are resolved or forwarded for further action to be undertaken in accordance with workplace procedures
4 Complete weighbridge operations	4.1	Weighbridge systems, including equipment, computer and recording arrangements are secured or made ready for next shift
	4.2	Record of operations is maintained and filed in accordance with workplace procedures and statutory requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID2022A Conduct weighbridge operations.

Assessment Requirements for TLID2022 Conduct weighbridge operations

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- completing relevant documentation
- identifying, selecting, and efficiently and effectively using weighbridge equipment
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring and prioritising work activities in terms of planned schedule
- monitoring performance of weighbridge equipment
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- reading, interpreting and following relevant instructions, procedures and information
- reporting and/or rectifying identified problems, errors or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health safety (WHS)/occupational health and safety (OHS) standards
- setting up and maintaining weighbridge equipment
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- calculation method and approaches for metric and imperial systems
- classification procedures
- correct weighing procedures including statutory and workplace requirements
- emergency response procedures
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- problems that may occur when conducting weighbridge operations and appropriate action that can be taken to resolve these problems
- records and documentation requirements for weighbridge operations
- relevant regulations for conducting weighbridge operations including current Australian Dangerous Goods (ADG) Code
- relevant WHS/OHS and environmental protection procedures and guidelines
- site layout
- weights and measures regulations
- workplace procedures for conducting weighbridge operations.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, weights and measures regulations, national Load Restraint Guide (LRG), current ADG Code, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLID3035 Operate a boom type elevating work platform

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to operate a boom type elevating work platform less than 11 metres boom length, in accordance with relevant state/territory licence/permit requirements and regulations, in a variety of operational contexts.

It includes inspecting and testing elevating work platform, assessing job and work requirements, planning work and setting up for lift, and carrying out elevation. It also includes implementing planned hazard controls and strategies, and packing up work platform after operations.

Work is performed with limited supervision, and with duty of care responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the	Performance criteria describe the performance needed to

essential outcomes.	demonstrate achievement of the element.
1 Inspect and test elevating work platform	1.1 Work platform is visually inspected prior to operation for evidence of damage, structural weakness or interference in accordance with pre-operational safety check procedures
	1.2 Routine pre-operational equipment checks are carried out in accordance with available checklists
	1.3 Work platform logbook is checked, service requirements are noted and maintenance personnel are advised of requirements
	1.4 Elevating work platform is started in accordance with manufacturer guidelines and start-up procedures for operations, and abnormal noise or movement is reported to authorised person for corrective action
	1.5 Start-up checks are conducted in accordance with manufacturer specifications and company procedures to ensure work platform and equipment are operating correctly
	1.6 Faults are corrected or reported to authorised person for corrective action in accordance with company procedures
	1.7 Operating and emergency controls are checked for correct operation in accordance with manufacturer specifications, including use of emergency decent device
	1.8 Boom is lowered under simulated emergency conditions to check for operational effectiveness
	1.9 Gear and accessories are checked and damaged or worn gear is segregated and reported to authorised person for testing/repair/destruction
	1.10 Results of inspections are recorded and reported in accordance with company procedures
2 Assess job requirements and work	2.1 Briefing, handover details, authorisations and clearances are received, interpreted and clarified in accordance with company and site procedures, and legislative requirements
	2.2 Work area is inspected, potential hazards are identified and appropriate elimination or control measures are selected
	2.3 Weight of load including personnel and equipment, is correctly estimated to ensure job is within limits of work platform capacity

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3	**Plan work and set up for lift**	3.1 Work plan is developed and agreed with relevant workplace personnel, including hazard prevention/control measures, and safety and emergency procedures in line with applicable Australian Standards
		3.2 Suitable firm and level standing is chosen and prepared for location of elevating work platform
		3.3 Outriggers and stabilisers are correctly deployed and positioned in accordance with manufacturer instructions and appropriate Australian Standards
		3.4 Appropriate plates or packing are correctly used under footplates as required to adequately distribute loading
		3.5 Ground is checked before and after packing is installed to ensure it is firm enough to bear load
		3.6 Job plan is developed including hazard prevention/control measures and safety procedures in accordance with applicable Australian Standards and equipment manufacturer specifications
		3.7 Work platform load chart is located and information on permissible loads, radii and heights is taken into account in planning job
		3.8 Job requirements, and workplace rules and procedures are taken into account in job plan
		3.9 Job plan is discussed and confirmed with relevant personnel
		3.10 Work gear and tools are properly stowed in elevating work platform in accordance with Australian Standards, company procedures and guides
4	**Carry out elevation**	4.1 Configuration and operation of elevating work platform are checked as required to ensure safe lift
		4.2 Operation of work platform is carried out in accordance with job plan, appropriate Australian Standard and manufacturer specifications
5	**Implement planned hazard control strategies**	5.1 Load is constantly monitored to ensure safety of personnel, load and structural stability
		5.2 Unplanned situations are responded to in accordance with company procedures, in a manner that minimises risk to personnel and equipment

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	5.3	Required signals are correctly given, interpreted and followed in accordance with appropriate Australian Standards
6 Pack up work platform	6.1	Elevating work platform is shut down using correct sequence of procedures in accordance with manufacturer instructions
	6.2	Routine post-operational equipment checks are carried out in accordance with manufacturer instructions and available checklists, and defects are recorded and reported in accordance with company procedures
	6.3	Elevating work platform is dismantled in accordance with job plan, manufacturer instructions and relevant statutory regulations
	6.4	Outriggers and stabilisers are secured and stowed in accordance with manufacturer instructions
	6.5	Elevating work platform is correctly stowed and secured in accordance with manufacturer instructions and company procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLID3035A Operate a boom type elevating work platform.

Assessment Requirements for TLID3035 Operate a boom type elevating work platform

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating effectively with others
- completing relevant documentation
- identifying and correctly using equipment, processes and procedures
- implementing contingency plans
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of equipment
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- planning own work, predicting consequences and identifying improvements
- reading and interpreting relevant instructions, procedures, regulations, codes of practice and manuals
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- servicing equipment in terms of maintenance schedule and workplace operating procedures
- working collaboratively with others
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- boom type elevating work platform applications, capacities, configurations, safety hazards and control mechanisms
- capability on boom type elevating work platform compliance plate
- operational work systems and equipment
- problems that may arise when operating a boom type elevating work platform and actions that should be taken to prevent or solve these problems
- relevant road rules, regulations, permit and licence requirements for boom type elevating work platform operation
- relevant WHS/OHS and environmental procedures and regulations
- risks and hazards involved in operating a boom type elevating work platform and associated action that can be taken to eliminate or minimise the risk/hazards concerned
- wind speed equipment capability (wind loading)
- workplace procedures for operating a boom type elevating work platform less than 11 metres boom length, at a worksite.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals

TLID3036 Lift and move load using a mobile crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to lift and move a load using a non-slewing mobile crane or a slewing mobile crane, in a variety of operational contexts.

It includes operating mobile crane to complete job requirements, monitoring lift conditions, implementing shut-down procedures, packing up crane after operations and completing all required job records.

People achieving competence in this unit will need to fulfil the applicable state/territory legislated high risk work licence requirements and to comply with relevant codes of practice and/or guidelines for mobile crane operations.

Work is performed with limited supervision and duty of care responsibility for self and others, in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

D – Load Handling

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Operate mobile crane	1.1 Job hazards are identified and required action is taken to minimise, control or eliminate identified hazards
	1.2 In ascent and descent to/from crane, correct use is made of means provided, in accordance with relevant codes of practice and workplace procedures
	1.3 Required signals are correctly given, interpreted and followed in accordance with appropriate workplace procedures
	1.4 Boom is positioned to ensure load to be lifted is plumbed under hook
	1.5 Load is hoisted and lowered into position using crane movements, in accordance with appropriate workplace procedures
	1.6 Crane controls are operated smoothly
	1.7 Crane is shut down and secured during periods of non-operation, in accordance with manufacturer specifications and workplace procedures
2 Monitor lift conditions	2.1 Load is constantly monitored to ensure load and structural stability
	2.2 Conditions that may affect continuing stability of crane are identified and monitored
	2.3 Unplanned situations are responded to in accordance with workplace procedures in a manner that minimises risk to personnel and equipment
	2.4 Dogger is advised of new information that affects lift
	2.5 Necessary changes to job plan are discussed and confirmed with rest of crew
	2.6 Advice is sought from supervisor where there is doubt about correct response to unanticipated conditions, or conflict with customer request

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		2.7	Supervisor/allocator is advised of concerns about completing job within timeframe
3	**Implement shut-down procedures**	3.1	Relevant motion locks and brakes are applied
		3.2	Crane is shut down using correct sequence of procedures in accordance with manufacturer specifications and workplace procedures
		3.3	Routine post-operational equipment checks are carried out in accordance with manufacturer specifications
4	**Pack up crane**	4.1	Crane is de-rigged with other crane personnel in accordance with manufacturer instructions
		4.2	All lifting equipment and crane components are checked in consultation with crane personnel for signs of deterioration or damage in accordance with appropriate Australian Standard
		4.3	Damaged or worn equipment is segregated and reported to authorised person for testing/repair/destruction
		4.4	Crane and equipment are correctly stowed and secured in accordance with manufacturer instructions and appropriate Australian Standard
5	**Complete job records**	5.1	Customer feedback is sought about satisfaction with completed job, and areas of concern are reported in accordance with workplace procedures
		5.2	Customer signature on job completion documentation is obtained
		5.3	Required workplace records are updated accurately and promptly, and processed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Assessment Requirements for TLID3036 Lift and move load using a mobile crane

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant high risk work legislation and workplace procedures
- applying risk assessment and management procedures
- calculating safe working load (SWL) and working load limit (WLL)
- communicating and working effectively with others
- completing relevant documentation
- effectively completing pre-operational checks, positioning, stabilising, set-up, post-operational checks of mobile crane
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring performance of equipment
- monitoring work activities in terms of planned schedule
- operating and adapting to differences in equipment in accordance with workplace operating procedures
- operating crane, including all functions to their maximum extension, in lifting and moving a load
- reading and interpreting relevant instructions, procedures, information and signs
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- servicing equipment in terms of maintenance schedule and standard operating procedures
- using load charts to determine crane limitations and/or required crane set-up
- using mathematical procedures to determine load weight and lifting equipment required for lift.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- communications systems used during a lift
- hazard management, using the principle of hierarchy of control
- high risk work licence requirements
- mobile crane applications, capacities, configurations, safety hazards and control mechanisms
- operational work systems and equipment
- problems that may occur during a lift, and associated action that can be taken to address these problems
- relevant road rules, regulations, permit and licence requirements for mobile crane operation
- relevant work health and safety (WHS)/occupational health and safety (OHS) and environmental procedures and regulations
- risks and hazards involved in mobile crane operations, and associated action that can be taken to eliminate or minimise the risk
- workplace procedures for operating a mobile crane at a worksite.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- mobile crane, of the type currently used in industry
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLIG2007 Work in a socially diverse environment

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in Knowledge Evidence
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply cultural awareness, communication principles and problem-solving techniques to facilitate working in a socially diverse environment. This is done in accordance with workplace procedures, relevant anti-discrimination and equal employment opportunity (EEO) regulations.

It includes communicating with customers and colleagues from diverse backgrounds and dealing with cross-cultural misunderstandings.

Work is performed with limited or minimum supervision, with some accountability and responsibility for self and others in achieving the prescribed outcomes.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

G – Teamwork

Unit Sector

Rail sector.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA

outcomes.	demonstrate achievement of the element.
1 Communicate with customers and colleagues from diverse backgrounds	**1.1** Customers and colleagues from all cultural groups are valued and treated with respect and sensitivity
	1.2 Cultural differences are accommodated in verbal and non-verbal communication
	1.3 Where language barriers exist, efforts are made to communicate through use of gestures or simple words in the other person's language
	1.4 Assistance from colleagues, reference material or outside organisations is obtained as required
2 Deal with cross-cultural misunderstandings	**2.1** Issues that may cause conflict or misunderstanding in the workplace are identified
	2.2 Difficulties are addressed with the appropriate people and assistance is sought from team leader/supervisor as required
	2.3 When difficulties or misunderstandings occur, possible cultural differences are considered
	2.4 Efforts are made to resolve misunderstandings, taking account of cultural considerations
	2.5 Issues and problems are referred to the appropriate team leader/supervisor for follow-up

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit Mapping Information

This unit replaces and is equivalent to TLIG2007A Work in a socially diverse environment.

Assessment Requirements for TLIG2007 Work in a socially diverse environment

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in Knowledge Evidence
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- adapting appropriately to cultural differences in the workplace, including modes of behaviour and interactions with others
- communicating and working effectively with others when working in a socially diverse environment
- completing documentation related to working in a socially diverse environment
- reading, interpreting and applying instructions, legislation, procedures, information and signs relevant to working in a socially diverse environment
- reporting and/or rectifying identified problems promptly, in accordance with regulatory requirements and workplace procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- awareness of the culture of Australia's Indigenous and non-Indigenous peoples
- cultural awareness
- principles of equal employment opportunity (EEO) and anti-discrimination legislation as they apply to individual employees
- principles that underpin cultural awareness
- recognition of the different cultural groups in Australian society
- recognition of various international customer groups (appropriate to the sector and individual workplace)
- typical cross-cultural misunderstandings and problems, and appropriate ways of dealing with them
- typical modifications or reasonable adjustments that can occur in a workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- workplace policies and procedures relevant to socially diverse work environment.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation including workplace procedures, regulations and codes of practice.

TLIJ0001 Apply grain protection measures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to apply grain protection measures.

It includes identifying, preparing for and applying pest control measures, monitoring the application of pest control measures, ventilating fumigated storages and maintaining records in accordance with workplace requirements.

Work is performed under some supervision, generally within a team/group environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

J – Quality

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Prepare to apply pest control measures	**1.1** Legal and workplace requirements for fumigation are followed in accordance with work order
	1.2 Hazards are identified, risks are assessed and control measures are implemented

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		1.3 Fumigation or spray application requirements are followed using silo and grain storage information in accordance with manufacturer instructions
		1.4 Records are confirmed by site measurements and observations
		1.5 Access and site-specific safety requirements to meet legislation and workplace instructions are determined
		1.6 Equipment is checked for conformance to workplace requirements and manufacturer specifications
		1.7 Storage is checked for gas-proofing in accordance with manufacturer and workplace instructions prior to fumigation
2	**Apply pest control measures**	**2.1** Personal protective equipment (PPE) and engineering controls are selected and used in accordance with workplace procedures
		2.2 Fumigant and spray applications are applied in accordance with manufacturer and workplace instructions
		2.3 Warning signs are placed in accordance with legislative and workplace requirements
		2.4 Application of fumigant or spray is monitored to ensure effectiveness of operation
		2.5 Empty fumigant containers are returned to manufacturer or retailer or are disposed of in accordance with legislative and workplace requirements
		2.6 Baits are prepared in accordance with legislation and manufacturer instructions
		2.7 Baits are placed in accordance with site requirements and manufacturer instructions

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the TLI Transport and Logistics Training Package Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIJ2003 Apply grain protection measures.

Links

Assessment Requirements for TLIJ0001 Apply grain protection measures

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- communicating and working effectively with others
- completing relevant documentation
- identifying hazards, assessing risks and implementing control measures
- carrying out work in accordance with required work health and safety (WHS)/occupational health and safety (OHS) procedures and hazard control strategies, including using:
  - fumigant and pest control chemical labels
  - manufacturer instructions
  - personal protective equipment (PPE)
- identifying, selecting and using required equipment efficiently and effectively
- implementing contingency plans
- interpreting and following relevant instructions, procedures, information and labels
- modifying activities depending on operational contingencies, risk situations and environments
- operating and adapting to differences in equipment in accordance with operating procedures
- operating communications equipment to required protocol
- setting up and maintaining grain protection equipment
- using pest control agents in accordance with relevant national, state/territory legislation.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- characteristics of grain types, varieties and grades, and their identification
- emergency response procedures
- equipment applications, capacities, configurations, safety hazards and control mechanisms
- grain site layout and obstacles
- pests that infest grain in grain storage facilities
- potential problems with applying grain protection measures and appropriate resolutions
- procedures for environmental control and disposal activities
- relevant legislation and regulations for applying grain protection measures in grain storage facilities
- relevant WHS/OHS and environmental protection procedures and guidelines
- relevant workplace procedures and policies for applying grain protection measures
- storage and safe handling procedures for fumigants, chemicals and other grain protection materials.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to:

- relevant and appropriate materials, tools, equipment and PPE currently used in industry
- applicable documentation including legislation, regulations, codes of practice, workplace procedures and operation manuals.

TLIK2010 Use infotechnology devices in the workplace

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to use infotechnology devices in the workplace in accordance with the relevant work health and safety (WHS)/occupational health and safety (OHS) regulations and workplace procedures, within the transport and logistics industry.

It includes identifying infotechnology equipment and systems; setting up, using and shutting down computer-based equipment and systems; and inputting, storing and presenting files/data. It also involves implementing workplace procedures for managing and securing data.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

K – Technology

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1	**Identify infotechnology systems**	**1.1**	Types of infotechnology equipment used in the work area are identified
		1.2	Functions of equipment, component parts and accessories are identified
		1.3	Applications for workplace activities of different infotechnology equipment and systems are interpreted
		1.4	Routine faults in operating systems, software applications and operator errors are identified
		1.5	Sources of information on rectifying/reporting faults with operating equipment, systems and application are identified
2	**Access and operate computer-based equipment and systems**	**2.1**	Work environments and equipment are adjusted to meet ergonomic requirements and workplace policies and procedures
		2.2	Systems are accessed and checked, as required, for viruses
		2.3	Equipment is set up for work requirements in accordance with workplace procedures and manufacturer guidelines
		2.4	Infotechnology equipment and software operating manuals and/or help screens are used to inform work practices
		2.5	Required application software packages and accessories are selected and accessed
		2.6	Required file and/or data to be accessed is identified
		2.7	Files/data are filed in accordance with workplace procedures
		2.8	Shut-down procedures for files, applications and equipment are followed
3	**Input, store and present files/data**	**3.1**	Data is entered using appropriate equipment, keyboard/mouse, bar code reader, touch screen or other system
		3.2	Accurate input is confirmed
		3.3	Files are accessed in accordance with workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		procedures
	3.4	Data is manipulated to suit work requirements and is checked for accuracy
	3.5	Saved files are accessed through relevant directories
	3.6	Information and disk/s are stored, as required
	3.7	Information is presented using computerised projection facilities as required
4 Implement workplace procedures for managing and securing data	**4.1**	Security procedures are followed in accordance with workplace procedures
	4.2	Precautions against the loss or corruption of data are followed in accordance with workplace procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIK2010A Use infotechnology devices in the workplace.

Assessment Requirements for TLIK2010 Use infotechnology devices in the workplace

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- accessing and/or completing electronic documentation through the use of infotechnology devices in the workplace
- adapting to differences in software and hardware equipment in accordance with operating procedures
- applying precautions and required action to minimise, control or eliminate hazards that may exist when using infotechnology devices in the workplace
- applying relevant legislation and workplace procedures
- identifying and using computer equipment, software, processes and procedures required within the job context
- identifying fault-finding procedures
- implementing contingency plans when using infotechnology devices in the workplace including using security and backup software and procedures
- modifying activities depending on operational contingencies, risk situations and environments
- operating infotechnology devices used within the workplace in accordance with operational requirements
- reading and interpreting instructions, procedures, information, operational instructions and manuals relevant to using infotechnology devices in the workplace
- reporting and/or rectifying identified problems, faults or malfunctions promptly, in accordance with regulatory requirements and workplace procedures
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

the requirements of the elements and performance criteria and include knowledge of:

- relevant work health and safety (WHS)/occupational health and safety (OHS) procedures and guidelines for using computer equipment in the workplace
- typical problems that can occur when using infotechnology devices and computer applications in the workplace and related appropriate action that can be taken to prevent or solve these problems
- WHS/OHS risks and hazards when using computer equipment for work tasks, and ways of controlling these risks/hazards
- workplace procedures for using computer equipment and application software appropriate for work role.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools, equipment and personal protective equipment (PPE) currently used in industry
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals.

TLIL3003 Conduct induction process

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to conduct an induction process for new workers and trainees commencing employment in the workplace, in accordance with relevant regulatory requirements, operational policies and procedures for the workplace concerned.

It includes outlining the relationship between the employee and the company, establishing and explaining the requirements of the position, and completing relevant workplace documentation.

Work involves planning, coordinating and conducting an induction program to prepare workers to enter and participate in the work activities of a workplace.

Work is performed under some supervision, generally within a team environment.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Competency Field

L – Resource Management

Unit Sector

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

1 Outline the relationship between employee and the company	1.1 Employee is greeted and introduced to key personnel and areas in the workplace
	1.2 Workplace objectives, operating systems and workplace structures are explained
	1.3 Relationship between employee's position, and the workplace structure and objectives is identified
	1.4 Required work health and safety (WHS)/occupational health and safety (OHS), workplace procedures and employment conditions are explained
	1.5 Sources of information and assistance for employee are identified
	1.6 Emergency procedures are explained
2 Establish requirements of position	2.1 Job role, responsibilities and reporting relationships are explained
	2.2 Immediate work colleagues are introduced
	2.3 Workplace facilities and layout are shown to employee and flow of work/materials/goods and functions carried out in the area/s are explained
	2.4 Initial training in relevant WHS/OHS, equipment and work systems is provided in accordance with workplace procedures
	2.5 Employee rights and responsibilities in terms of equal employment opportunity, sexual harassment and anti-discrimination are explained
	2.6 Training opportunities are organised to develop individual job roles
	2.7 Workplace expectations of work functions and outputs are clarified
	2.8 Opportunities for employee to clarify concerns and ask questions are provided
3 Complete relevant workplace documentation	3.1 Workplace personnel records are completed in accordance with workplace requirements
	3.2 Tax declaration and other relevant documentation are checked for compliance with requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3.3 Employee is requested to provide any additional information needed and notes are taken of any additional actions required

3.4 Workplace-specific documentation is submitted to appropriate personnel as required, in accordance with workplace requirements

3.5 Requirements of commonwealth and state/territory legislation on equal employment opportunity, sexual harassment and anti-discrimination are fulfilled

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLIL3003A Conduct induction process.

Assessment Requirements for TLIL3003 Conduct induction process

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- applying precautions and required action to minimise, control or eliminate identified hazards
- applying relevant legislation and workplace procedures
- communicating and working effectively with others
- identifying and correctly using relevant equipment
- interpreting and following operational instructions
- modifying activities depending on operational contingencies, risk situations and environments
- monitoring work activities in terms of planned schedule
- operating electronic communications equipment to required protocol
- prioritising work
- reading interpreting and following relevant instructions, procedures, information and signs
- selecting and using required personal protective equipment conforming to industry and work health and safety (WHS)/occupational health and safety (OHS) standards
- working systematically with required attention to detail without injury to self or others, or damage to goods or equipment.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- customer service standards and procedures
- emergency procedures and related equipment
- employee conditions of service
- instructional methods and resources required to conduct an induction program

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- personal protective equipment and instructions for its use
- site or workplace layout
- WHS/OHS policies and procedures
- workplace documentation and record keeping procedures and requirements
- workplace hazards and related hazard minimisation procedures
- workplace induction procedures and documentation requirements
- workplace structures and employee roles and responsibilities.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so; where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is a release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a forklift truck safely in accordance with all relevant legislative requirements. Competence in this unit, does not in itself result in a HRWL licence to operate this plant.

Forklift truck means a powered industrial truck equipped with lifting media made up of a mast and an elevating load carriage to which is attached a pair of fork arms or other attachments that can be raised 900 mm or more above the ground, but does not include a pedestrian-operated truck or a pallet truck.

A person performing this work is required to hold a forklift truck High Risk Work Licence (HRWL).

This unit requires a person operating a forklift truck to:

- plan for the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency.

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate the relevant licencing class as detailed in this unit.

Pre-requisite Unit

Not applicable

Competency Field

LIC - Licencing Units

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and confirmed with relevant people and site inspection is conducted in accordance with workplace procedures
	1.2 Work area operating surface is assessed to determine suitability for operational use of forklift truck in accordance with workplace procedures
	1.3 Suitability of forklift truck and attachment working load limit (WLL) is determined for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4 Working area is inspected and appropriate paths for operating the forklift truck and moving and placing load/s in work area are assessed and managed in accordance with workplace procedures
	1.5 Hazard and risk control measures are identified and reported to relevant person/s in accordance with workplace procedures
	1.6 Traffic management plan implementation is confirmed in accordance with workplace procedures
	1.7 Appropriate communication procedures are identified with relevant people in accordance with workplace procedures
	1.8 All work is confirmed to ensure coverage of work/task requirements for the relevant work area is in accordance with workplace procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

2 Prepare for work/task	**2.1**	Consultation with workplace person/s is maintained to ensure workplan is clear and consistent with site requirements in accordance with safe work procedures
	2.2	Weather and work environmental conditions are assessed to determine any impact on forklift truck operations in accordance with manufacturer requirements and safe work procedures
	2.3	Risk control measures for hazards identified are checked for implementation in accordance with safe work procedures
	2.4	Forklift truck is accessed in a safe manner in accordance with manufacturer requirements and workplace procedures
	2.5	Forklift truck logbook is checked in accordance with manufacturer, regulatory requirements and safe work procedures
	2.6	Pre-start checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with safe work procedures and manufacturer requirements
	2.7	Forklift truck is set up correctly with any relevant attachments as per work plan in accordance with relevant manufacturer requirements including data plate and safe work procedures
	2.8	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
	2.9	Hazard and risk control measures are checked for implementation and communicated to people in the work area in accordance with safe work procedures
3 Perform work/task	**3.1**	Weight and positioning of load is assessed to ensure compliance with forklift truck data plate requirements and in accordance with safe work procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	3.2	Forklift truck is operated safely in accordance with manufacturer requirements and safe work procedures
	3.3	Loads are monitored constantly when lifting, moving, lowering and placing to ensure stability of load and avoidance of hazards in accordance with safe work procedures
	3.4	Unplanned and unsafe situations are responded to in accordance with safe work procedures
	3.5	Loads are picked up, transported and placed using all forklift truck movements in accordance with safe work procedures
	3.6	Forklift truck is parked, switched off and isolated appropriately in accordance with manufacturer requirements and safe work procedures
4 Pack Up	**4.1**	Forklift truck shutdown procedures are carried out in accordance with manufacturer requirements and safe work procedures
	4.2	Forklift truck is secured to prevent unauthorised access/use in accordance with safe work procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2001 Licence to operate a forklift truck

Assessment Requirements for TLILIC0003 Licence to operate a forklift truck

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying safe operating procedures for a forklift truck including:
  - maintaining safe operating speed
  - travelling with load lowered to an appropriate height for the terrain, operating surface and visibility in relation to direction of travel
- applying relevant forklift truck manufacturer requirements and data plate information and approved modifications to attachments fitted are in accordance with manufacturer requirements
- carrying out pre-start checks, including visual inspection which must include:
  - battery charge as required by manufacturer requirements
  - checking and interpreting data plate/s are relevant to the attachment and the forklift truck
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - document evidence of damage
  - engine / mechanical fluid level checks including fuel as required by manufacturer requirements
  - ensuring availability of correct forklift truck logbook and updating records as required
  - ensuring forklift truck tynes or other attachment/s are securely fitted
  - ensuring seat and mirrors are adjusted appropriately and seat belt is functional
  - fluid leaks
  - lights are working effectively
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - wheels and tyres for damage/correct inflation if applicable
- conducting and applying risk and hazard assessment strategies including:
  - insufficient lighting
  - other specific hazards including dangerous goods
  - overhead hazards and fixed structures, roof beams and doorways
  - restricted and poorly ventilated areas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - surface suitability based on forklift truck and task requirements
  - the risk of collision with people, moving plant and fixed structures
  - weather conditions
- complying with Commonwealth, State and Territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation, regulations safe work and workplace procedures
- conducting operational checks, which must ensure:
  - all controls are located, identified and tested for functionality
  - all hydraulic functions operated to maximum extension and ensuring attachment (if fitted) movements and control functions are smooth and comply with operating requirements
  - hazard warning systems (e.g. reversing beepers, lights and horns) are functional
  - recording and maintaining accurate information relating to forklift truck operations
  - safety devices as fitted
  - start-up is in accordance with manufacturer requirements
  - steering, transmission and brake functions comply with operating requirements
  - there are no unusual noises
- confirming and following traffic management plan procedures relevant to their role in the work area
- conducting relevant procedures for refuelling and isolating fuel/power source as per manufacturer requirements using appropriate PPE
- determining relevant lifting attachment to perform work/task
- determining lift requirements including:
  - positioning of unusually balanced/shaped loads
  - centre of gravity
  - dynamic nature of load
  - tyne/attachment positioning
  - weight
- ensuring risk control measures within the work area are effective as per workplace procedures
- identifying, isolating and tagging out defective equipment and reporting to authorised person/s
- interpreting and confirming relevant documentation, workplace instructions, safety information, emergency procedures for the work task and relevant area
- interpreting workplace procedures in relation to various environmental conditions
- maintaining communication with other workplace personnel through using worksite procedures including:
  - audible and visual warning devices
  - signage
  - two-way radio
  - verbal instructions
  - written instructions
- maintaining three points of contact whilst accessing and egressing forklift truck and ensuring

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

rungs / steps are free of hazards
- operating and monitoring safe forklift truck operations using minimum 250kg dynamic and non-dynamic loads that include:
  - aligning tynes/attachment to load
  - carrying out a lift to 75% of the maximum height
  - conducting trial lift to ensure forklift truck and load are stable, and load is safe to move
  - correctly using horns and mirrors in workplace
  - correctly positioning and using an observer to assist when operating with a load that may restrict vision or be placed out of vision of the operator
  - driving applicable to conditions and moving loads safely
  - driving a forklift truck safely with load in forward and reverse, while maintaining visibility through an obstacle course including:
    - an 'S' bend with a minimum 90 degrees left and right turn
    - ensuring load/s remains stable through pick up, transport and placement
    - forklift truck speed is appropriate to load and surroundings
    - lowering dynamic and non-dynamic loads to appropriate height for travel in forward and reverse
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely at various heights within a compliant racking system
  - picking up, driving, manoeuvring and placing dynamic and non-dynamic loads safely into/onto an elevated, flat, stable area
  - tilting mast (or forks if applicable) to ensure balance of load
  - using gluts/dunnage appropriately and lowering load safely
  - using tilt and side shift (where fitted) safely to manoeuvre dynamic and non-dynamic loads into allocated space
- reporting to relevant person/s on site risk control measures that are not in place or are deficient
- setting up an exclusion zone
- securely parking forklift truck and isolating in appropriate position including:
  - minimising possible access by unauthorised person/s
  - tynes/attachment lowered to required position in accordance with manufacturer requirements
  - park brake applied
  - switching off, isolating fuel/power source and removing key according to workplace procedures
- shutting down a forklift truck in accordance with manufacturer requirements and workplace procedures

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- Australian and industry standards, codes of practice and guidelines to safely operate a forklift truck
- communication procedures including:
  - audible and visual warning devices
  - hand signals
  - questioning techniques
  - signage
  - traffic warning systems
  - two-way radio
  - written instructions
- forklift truck characteristics and capabilities, manufacturer requirements and instructions for any attachments
- impact of the following on the operation of the forklift truck including:
  - failure/loss of control including brakes and steering
  - failure of equipment during forklift truck operations
  - forklift truck instability causes including:
    - deterioration of ground condition
    - overloading
    - pick up and placement of load
    - irregular loads
  - operating on ramps and uneven surfaces and in restricted spaces
  - use of forklift truck data plate and attachment data plate and appropriate methodology to determine weight of a load is appropriate for forklift truck and any attachment if fitted including the estimation or determination from:
    - labels on the actual load
    - markings on the actual load
    - paperwork such as consignment notes, running sheets and weighbridge dockets
    - weighing a carton and calculating load
- manufacturer requirements, instructions and operator's manual
- problems, and appropriate response procedures to unplanned and/or unsafe environmental conditions including:
  - wind
  - lightning
  - water/ice impacted surface/ground
  - rain
  - extreme heat
  - Ultra violet (UV) exposure
- problems and equipment faults, and implementing appropriate response procedures to unplanned and/or unsafe situations including:
  - lock out and tag out procedures
- relevant procedures for refuelling and recharging forklift truck using appropriate PPE

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

including:

- gas bottle
- connecting battery to charger and disconnecting battery from charger and reconnecting to forklift truck
- refuelling

- procedures for recording, reporting and maintaining workplace records and information
- risk assessment process including hierarchy of control:
  - elimination
  - substitution
  - isolation
  - engineering controls
  - administrative controls
  - personal protective equipment (PPE)
- safe use and compliance of different types of attachments including:
  - bale clamps
  - carpet spike for carpet rolls
  - drum carrier
  - jib attachment
  - paper roll clamps
  - personnel work platforms
  - rotators
  - slippers/fork extensions on tynes
- suitability and lifting capability of the attachment to be used
- shut down procedures for a forklift truck in accordance with manufacturer requirements
- traffic management plan procedures and requirements
- typical routine problems encountered operating a forklift truck and associated equipment, and adjustments required for correction
- workplace procedures including work plan which may be verbal, documented/written, or electronically generated
- work area operating surface suitability including issues with:
  - backfilled ground
  - bitumen (damaged, cracked)
  - concrete (damaged, cracked)
  - hard compacted soil
  - potholes
  - railway tracks
  - rough uneven or difficult terrain including sloping surfaces, uneven surfaces, steel decks and grates
  - soft soils
  - trench covers

and Health (OSH) requirements, safe work and workplace procedures

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- a suitable forklift truck that complies with AS 2359 Powered industrial trucks and is in a safe/serviceable condition in accordance with manufacturer requirements
- associated equipment for forklift truck operations
- suitable dynamic and non-dynamic loads
- suitable compliant racking system
- relevant and appropriate materials, tools, equipment and personal protective equipment currently used in industry
- applicable documentation including:
  - approved codes of practice and relevant guidance material
  - relevant Australian technical standards
  - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable)

TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit specifies the skills and knowledge required to operate a non-slewing mobile crane with a Maximum Rated Capacity (MRC) exceeding 3 tonnes safely, in accordance with all relevant legislative responsibilities. Competence in this unit, does not in itself result in a High Risk Work Licence (HRWL) to operate this plant.

A person undertaking this unit must hold:

- a current National HRWL to perform dogging or a current certification for a specific VET course for HRWL to perform dogging that has been issued by, or on behalf of a WHS Regulator

Non-slewing mobile crane means a mobile crane incorporating a boom or jib that cannot be slewed, and includes:

- an articulated mobile crane
- a locomotive crane
- but does not include vehicle tow trucks.

A person performing this work is required to hold a non-slewing mobile crane HRWL.

This unit requires a person operating non-slewing mobile crane with an MRC exceeding 3 tonnes to:

- plan the work/task
- prepare for the work/task
- perform work/task
- pack up

Licensing/Regulatory Information

Legislative and regulatory requirements are applicable to this unit of competency. This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations and meets Commonwealth, State and Territory HRWL requirements.

The National Assessment Instrument (NAI) is the mandated assessment for the HRWL to operate

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

the relevant licencing class as detailed in this unit.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work/task	**1.1** Task requirements are identified from work orders or equivalent and a lift plan is confirmed with associated personnel and a site inspection is conducted in accordance with workplace procedures
	1.2 Work area operating surface is confirmed to determine the quality of ground suitability for operational use of non-slewing mobile crane in accordance with workplace procedures
	1.3 Non-slewing mobile crane rated capacity (RC) and the lifting gear Working Load Limit (WLL) are established for the load/s and work/task requirements in accordance with manufacturer requirements and workplace procedures
	1.4 Appropriate paths for operating the mobile crane and moving and placing load/s in work area are assessed and determined in accordance with workplace procedures
	1.5 Relevant hazard identification and risk elimination/control measures are applied and advised to associated personnel in accordance with workplace

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

		procedures
	1.6	Traffic management plan implementation is confirmed and followed in accordance with workplace procedures
	1.7	Appropriate communication procedures are identified and tested with associated personnel in accordance with workplace procedures
	1.8	All tasks are confirmed to ensure requirements for the relevant work area in accordance with a lift plan and workplace procedures
2 Prepare for work/task	**2.1**	Consultation with workplace personnel is established and maintained to ensure lift plan is clear and consistent with site requirements in accordance with a lift plan and workplace procedures
	2.2	Risk control measures for hazards identified are checked for implementation in accordance with the lift plan and safe work procedures
	2.3	Non-slewing mobile crane is accessed safely in accordance with manufacturer requirements and safe work procedures
	2.4	Pre-start crane checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures
	2.5	Mobile crane is set up correctly with any lifting gear as per the lift plan in accordance with relevant manufacturer requirements including load chart/s and safe work procedures
	2.6	Fly jib (if fitted) is set up as required in accordance with specific manufacturer requirements and safe work procedures
	2.7	Operational checks are carried out and any damage and defects are reported, recorded and appropriate action is taken in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	2.8	Crane logbook is checked to confirm current compliance, is correct for the crane type, is completed and signed and required rectifications have been signed off in accordance with manufacturer requirements and safe work procedures
	2.9	Weather and work environment conditions are assessed to determine any impact on mobile crane operations in accordance with manufacturer requirements and safe work procedures
3 Perform work/task	**3.1**	Lifts are determined within the RC of the non slewing mobile crane in accordance with the load chart/s and lift plan
	3.2	Boom/jib and hook block is safely positioned over the load following directions from associated personnel in accordance with the lift plan and safe work procedures
	3.3	Lifting gear where required is connected to the load and used safely in accordance with the lift plan, safe work procedures and manufacturer requirements
	3.4	Test lift is carried out in accordance with dogging and safe work procedures
	3.5	Loads are transferred using relevant crane movements and tag lines as required, in accordance with lift plan and safe work procedures
	3.6	Load and crane movement is monitored constantly and crane is operated safely in accordance with lift plan and safe work procedures
	3.7	All required communication signals are correctly interpreted and followed whilst crane is operated in accordance with the lift plan and safe work procedures
	3.8	Load is lowered and landed safely in accordance with lift plan and safe work procedures
	3.9	Lifting gear is disconnected from load and crane is positioned safely and efficiently for next task in accordance with lift plan and safe work procedures
4 Pack Up	**4.1**	Crane boom/jib, lifting gear and associated equipment is stowed and secured as required in accordance with manufacturer requirements and safe work procedures

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

4.2 Relevant motion locks and brakes are applied as required in accordance with manufacturer requirements and safe work procedures

4.3 Crane is shut down and secured to prevent unauthorised access/use in accordance with safe work procedures

4.4 Post-operational crane checks are carried out in accordance with legislative responsibilities, safe work procedures and manufacturer requirements

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non -essential conditions may be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC3006 Licence to operate a non-slewing mobile crane (greater than 3 tonnes)

Assessment Requirements for TLILIC0008 Licence to operate a non-slewing mobile crane (greater than 3 tonnes capacity)

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package:

- Minor statement changes in unit Application
- Minor statement changes in Assessment Conditions.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and include:

- applying relevant mathematical calculations in conjunction with lift plan and load chart, radius requirements and relevant lifting gear to perform work/task to enable crane to be configured for load including:
  - boom
  - fly-jib (where fitted)
  - line pull
  - mobiling
  - type of hook
  - side slope derations
  - articulation derations
- applying relevant crane movements including:
  - boom/jib up and down (luffing)
  - positioning and using main and auxiliary hook and lifting gear to connect to load safely
  - raise and lower hoist
  - telescope in and out
  - travel and articulating (as required)
- communicating with other workplace personnel through using appropriate worksite procedures including:
  - 2-way radio
  - listening
  - making and interpreting hand signals
  - questioning to confirm understanding
  - signage

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - verbal language
  - visual aids
  - whistles
  - written instructions
- complying with Commonwealth, state and territory Work Health and Safety (WHS)/Occupational Health and Safety (OHS)/Occupational Safety and Health (OSH) legislation and safe work procedures
- completing the pre-start check including:
  - battery power level as required by manufacturer requirements
  - engine / mechanical fluid level checks as required by manufacturer requirements
  - presence of correct logbook
  - evidence of damage
  - fluid leaks
  - lights work effectively
  - locating, identifying and confirming all controls
  - mirrors and seat are adjusted appropriately
  - safety equipment checks
  - signage and labels to ensure they are visible and legible
  - checking for signs of paint separation and stressed welds indicating potential structural weakness
  - tyres and wheels for damage/wear and correct inflation (Water/Air)
  - updating records as required
  - visual damage or equipment faults
- conducting and applying risk and hazard strategies including:
  - confirming work area operating surface suitability based on crane and task requirements
  - articulation of crane
  - dynamic loads
  - ground conditions including surface and slopes
  - impact of tyre inflation/condition
  - load swing
  - overloading
  - pick and placement of load
  - asymmetric loads
  - overhead hazards
  - restricted site/s and poorly ventilated area/s
  - risk of collision with people, moving plant and fixed structures
  - adequate lighting
  - weather conditions
- completing operational checks ensuring:
  - all controls are located, identified and tested for functionality

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - all hydraulic functions are operated
  - lifting gear movements and control functions are smooth and comply with lift plan
  - hazard warning systems, safety, audible and visual warning devices are checked to ensure they are functional including:
    - reversing beepers
    - lights
    - horns
    - crane computer alarm (where fitted)
    - anti-two block alarms (where fitted)
  - start-up is in accordance with manufacturer requirements and workplace procedures
  - there are no unusual noises
  - steering, transmission and brake functions comply with operating requirements
- confirming and following traffic management plan procedures relevant to crane operator role in the work area
- determining any defects or faults with operation of crane and reporting to relevant person/s
- ensuring risk control measures within the work area are effective as per workplace procedures
- ensuring stability of load and avoidance of hazards by applying best mobile practice including:
  - allowing for boom deflection
  - boom/jib as low as possible
  - boom/jib in line with crane
  - carrying load near to ground surface
  - crane stability whilst manoeuvring load into position with drive/steering wheels and articulating as required
  - gently accelerating and braking to minimise load swing
  - lowering load safely and stably onto appropriate dunnage taking into consideration swing and restrictions of area
  - minimum boom/jib length
  - minimum speed
  - using handheld taglines/bridling
- following directions of dogger or rigger
- interpreting and confirming relevant documentation for the work task and relevant area
- inputting crane configuration into crane computer (where fitted) and checking operation to accurately reflect crane configuration
- interpreting and acting on communications signals including:
  - hoist down - hand and whistle and radio
  - hoist up - hand and whistle and radio
  - luff boom down - hand and whistle and radio
  - luff boom up - hand and whistle and radio
  - articulate left - hand and whistle and radio

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - articulate right - hand and whistle and radio
  - stop - hand and whistle and radio
  - telescope in - hand and whistle and 2-way radio (where manufacturer requirements allow)
  - telescope out - hand and whistle and 2-way radio (where manufacturer requirements allow)
  - travel - hand and radio
- maintaining three points of contact whilst accessing crane and ensure rungs / steps are free of hazards
- monitoring load disconnection from hook is safe and ensuring no movement of controls
- observing relevant communication signals from relevant person
- operating an articulated non-slewing mobile crane with a rated capacity (RC) of 12 tonnes or greater to lift four different loads using the main hook through an obstacle course using all crane operational controls while the load is in full view of the crane operator. Loads must consist of:
  - a load of >50% of the Rated Capacity (RC) of the crane with a boom length of >75%, and
  - a round load with a minimum diameter of 300 mm and minimum length of 3 m that requires a dogger to sling, and
  - an asymmetrical load that requires a dogger to sling, and
  - travelling with a load of stillage containing at least ten scaffolding standards or containing a load of steel pipes of equivalent weight that requires a dogger to sling and a boom length of <75%
- positioning the non-slewing mobile crane for safe operation for:
  - application of the task
  - manoeuvring in the workplace
  - aligning of crane boom to the load
  - stability of the non-slewing mobile crane and the load whilst driving to load set down position
- recording and maintaining accurate information relating to crane operations
- reporting to relevant person/s on site risk control measures that are not in place or deficient
- setting up of:
  - fly jib (where fitted)
  - manual boom section (where fitted)
- setting up and validating an exclusion zone
- shutting down a non-slewing mobile crane in accordance with manufacturer requirements and workplace procedures
- stabilising a non-slewing mobile crane for operation by ensuring level and articulation (if required) is checked and within deration load chart requirements
- test-lifting load just clear of lifting plane to allow for checks to be safely made in consultation with associated personnel to ensure:
  - slinging is correct
  - all crane equipment is functioning properly
  - load centre of gravity is correct

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - loads of unusual shape or weight distribution are correctly slung
- test-lifting load just clear of lifting plane to allow for checks of crane computer (where fitted) to ensure:
    - load measuring equipment can be used to verify calculated weight of load
    - near capacity loads do not overload crane

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- appropriate worksite communication procedures including:
    - listening
    - hand signals
    - questioning techniques
    - signage
    - two-way radios
    - written instructions
    - whistles
- crane configuration mathematical calculations to:
    - estimate loads
    - establish counterweight/s requirements (where fitted)
    - radius requirements
    - relevant lifting gear to perform work/task
- characteristics and impact of factors affecting non-slewing mobile crane stability whilst mobiling loads including:
    - side slope derations
    - articulation derations of crane
    - correct tyre pressure (inflation/condition)
    - driving safely on roadways
    - pick up and carry the load
- crane and lifting gear load chart/s and manufacturer requirements
- lift impacting factors including:
    - centre of gravity
    - dynamic nature of load
    - deflection of boom
    - length
    - radius of lift
    - weight
    - side slope derations
    - articulation derations of crane

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - tyre inflation pressures
- hazards including:
    - pack up and crane stability, crane tipping and demolition sites
    - ground stability including ground condition, recently filled trenches and slopes
    - insufficient lighting
    - obstacles or obstruction
    - catching load swing appropriately
    - other specific hazards and dangerous materials
    - overhead hazards including:
        - electric lines
        - service pipes
        - fixed structures
        - Vegetation (Trees)
    - traffic including pedestrians, vehicles and other plant
    - operations on unusual, uneven or difficult terrains
- impact of factors affecting non-slewing mobile crane stability including:
    - overloading
    - pick up and placement of load
    - unbalanced loads
    - articulation of crane
    - correct tyre pressures (inflation/condition)
    - side slope derations
- manufacturer requirements and instructions on shutting down and packing up crane
- mobile non-slewing crane characteristics and capabilities to allow crane configuration to suit a range of loads
- relevant workplace instructions, safety information, emergency procedures
- relevant documentation requirements and procedures for recording, reporting and maintaining workplace records and information
- risk assessment management and mitigation strategies including hierarchy of control:
    - elimination
    - substitution
    - isolation
    - engineering controls
    - administrative controls
    - personal protective equipment (PPE)
- roles and responsibilities of duty holders as per legislative obligations of Work Health and Safety (WHS)/Occupational health and Safety (OHS)/Occupational Safety and Health (OSH) requirements and safe work/workplace procedures
- prestart and operational checks required for a non-slewing mobile crane
- starting procedure of crane as per manufacturer requirements
- set up of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

  - jib
  - fly jib (where fitted)
  - manual boom section (where fitted)
- weather bureau forecasts and environmental conditions that could impact operation
- workplace standards, requirements, policies and procedures for conducting operations for the mobile non-slewing crane
- problems and applying appropriate response procedures to unplanned and/or unsafe situations and environmental conditions
- work area suitability based on relevant ground reports including:
  - backfilled ground
  - bitumen
  - concrete
  - hard compacted soil
  - pre-contaminated soils
  - rock
  - rough uneven ground
  - soft soils

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment must occur in workplace operational situations. Where this is not appropriate, assessment must occur in simulated workplace operational situations that reflect workplace conditions.

- Simulators must not be used in the assessment of this unit of competency.

Resources for assessment must include access to:

- non-slewing articulated mobile crane with an MRC 12 tonnes or greater in safe/serviceable working order in accordance with manufacturer specifications
- appropriate loads as outlined in the performance evidence requirements
- associated personnel to sling and direct loads including:
  - dogger or rigger
- communications equipment including:
  - two-way radios
  - whistles

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- personal protective equipment (PPE)
- relevant documentation for operating a non-slewing mobile crane over 3 tonnes including:
  - approved codes of practice and relevant guidance material
  - relevant Australian technical standards
  - manufacturer guidelines (instructions, requirements or checklists), relevant industry standards and operating procedures (where applicable).

TLILIC2014 Licence to drive a light rigid vehicle

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

Modification of assessment conditions to remove an implementation barrier.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to obtain a licence to drive a light rigid vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Types of light rigid vehicles include:

- a rigid truck above 4.5 tonnes GVM but less than or equal to 8 tonnes GVM or
- a rigid bus with less than or equal to 8 tonnes GVM or seats more than 12 adults, including the driver.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

This unit applies to driving that is carried out in accordance with relevant state/territory driver licensing authority licence requirements and regulations for light rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and to operate a light rigid vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Light Rigid Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Light Rigid Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm other eligibility requirements before undertaking training and/or assessment.

Pre-requisite Unit

Not applicable.

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Drive a light rigid vehicle	1.1 Light rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturer instructions and relevant vehicle handling procedures
	1.2 Engine power is managed to ensure efficiency and performance, and to minimise engine and transmission damage
	1.3 Braking system of light rigid vehicle is managed and operated efficiently to ensure effective control of vehicle under all conditions
	1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
	1.5 Light rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
	1.6 Light rigid vehicle is parked, shutdown and safely secured in accordance with traffic regulations
	1.7 Load is safely and effectively restrained
2 Monitor traffic and road conditions	2.1 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to people or damage to property, equipment, loads and facilities
	2.2 Interaction with other road users is conducted courteously in accordance with road rules to ensure safe and efficient traffic flow
3 Monitor and	3.1 Vehicle performance is maintained through pre-operational

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

maintain vehicle performance		inspections and vehicle checks
	3.2	Appropriate signage, lights and equipment are checked for operational effectiveness and for conformity to prescribed traffic regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2014B Licence to drive a light rigid vehicle.

Assessment Requirements for TLILIC2014 Licence to drive a light rigid vehicle

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

Modification of assessment conditions to remove an implementation barrier.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- anticipating and monitoring traffic hazards and taking appropriate action
- applying precautions and required action to eliminate, minimise or control identified hazards
- applying relevant procedures that reflect legislative requirements
- carrying out pre-operational vehicle checks including:
  - checking and topping up fluid levels
  - checking:
    - brakes
    - operation of vehicle lights and indicators
    - tyre pressures
  - visually checking vehicle
- communicating effectively with others
- handling vehicle including:
  - accelerating and braking
  - managing engine performance
  - operating vehicle controls, instruments and indicators
  - positioning and stopping a vehicle
  - reversing a vehicle
  - starting a vehicle
  - steering and manoeuvring a vehicle
  - using defensive driving techniques
- negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings)
- reading and interpreting relevant instructions, procedures, information and signs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- light rigid vehicle controls, instruments and indicators, and their use
- light rigid vehicle handling procedures
- pre-operational checks carried out on vehicle and related action
- relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted.

The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit, in accordance with licensing authority requirements

The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Assessment must occur in the following traffic and road conditions:

- on open and/or private roads with moderate inclines and declines
- typical weather conditions.

and may also include traffic and road conditions at a depot, base or warehouse.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- appropriate range of relevant on-road operational or workplace situations
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLILIC2015 Licence to drive a medium rigid vehicle

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

Modification of assessment conditions to remove an implementation barrier.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to obtain a licence to drive a medium rigid vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Types of medium rigid vehicles include:

- two axle rigid trucks, not being a prime mover, above 8 tonnes GVM or
- a two axle bus above 8 tonnes GVM.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

This unit applies to driving that is carried out in accordance with relevant state/territory driver licensing authority licence requirements and regulations for medium rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and to operate a medium rigid vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Medium Rigid Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Medium Rigid Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm other eligibility requirements before undertaking training and/or assessment.

Assessment Requirements for TLILIC2015 Licence to drive a medium rigid vehicle

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

Modification of assessment conditions to remove an implementation barrier.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria on at least one occasion and include:

- anticipating and monitoring traffic hazards and taking appropriate action
- applying precautions and required action to eliminate, minimise or control identified hazards
- applying relevant procedures that reflect legislative requirements
- carrying out pre-operational vehicle checks including:
  - checking and topping up fluid levels
  - checking:
    - brakes
    - operation of vehicle lights and indicators
    - tyre pressures
  - visually checking vehicle
- communicating effectively with others
- handling vehicle including:
  - accelerating and braking
  - managing engine performance
  - operating vehicle controls, instruments and indicators
  - positioning and stopping a vehicle
  - reversing a vehicle
  - starting a vehicle
  - steering and manoeuvring a vehicle
  - using defensive driving techniques
- negotiating a range of complex traffic infrastructure (such as roundabouts, traffic lights, stalemate intersections, railway level crossings)
- reading and interpreting relevant instructions, procedures, information and signs.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all of the requirements of the elements and performance criteria and include knowledge of:

- driving hazards and related defensive driving techniques
- efficient driving techniques
- engine power management and safe driving strategies
- medium rigid vehicle controls, instruments and indicators, and their use
- medium rigid vehicle handling procedures
- pre-operational checks carried out on vehicle and related action
- relevant state/territory driver licensing authority road rules, regulations, permit and licence requirements.

Assessment Conditions

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the *Standards for Registered Training Organisations* current at the time of assessment.

Practical driving aspects must be assessed in a vehicle typical of the class as approved by the state/territory driver licensing authority. The use of simulators for driver testing is not permitted.

The assessor must use the mandatory assessment tool provided by the state/territory driver licensing authority to conduct the assessment for this unit, in accordance with licensing authority requirements.

The state/territory driver licensing authority may prescribe approved routes, which must be used for the final assessment.

Assessment must occur in the following traffic and road conditions:

- on open and/or private roads with moderate inclines and declines
- typical weather conditions.

and may also include traffic and road conditions at a depot, base or warehouse.

Resources for assessment include:

- a range of relevant exercises, case studies and/or simulations
- appropriate range of relevant on-road operational or workplace situations
- applicable documentation including workplace procedures, regulations, codes of practice and operation manuals
- relevant materials, tools, equipment and personal protective equipment currently used in industry.

TLILIC2016 Licence to drive a heavy rigid vehicle

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

Modification of assessment conditions to remove an implementation barrier.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to obtain a licence to drive a heavy rigid vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, and effectively managing hazardous situations.

Heavy rigid vehicle includes:

- a rigid vehicle, not being an unladen prime mover, with a minimum of three axles and a minimum 15 tonnes GVM or
- a modified three axle prime mover with a certified detachable tray (with capacity to carry 75% of its specified GVM) with a GVM of 15 tonnes and holds dual registration (HC & HR) or
- a three axle articulated bus or
- a three axle bus above 15 tonnes GVM.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

This unit applies to driving that is carried out in accordance with relevant state/territory driver licensing authority licence requirements and regulations for heavy rigid vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

Driving involves the application of routine vehicle driving principles and procedures to maintain safety and to operate a heavy rigid vehicle across a variety of driving contexts.

The primary legislative requirements applicable to this unit of competency are state/territory legislation in relation to road use and driver licensing.

This unit addresses the knowledge and skills necessary for the granting of a Heavy Rigid Driver Licence.

Being awarded this unit of competency is a necessary requirement to obtain a Heavy Rigid Driver Licence but is only one of several criteria. Prospective licence applicants should check with the state/territory driver licensing authority for other criteria (such as licence tenure and medical fitness) to confirm other eligibility requirements before undertaking training and/or

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Drive a heavy rigid vehicle	1.1 Heavy rigid vehicle is started, steered, manoeuvred, positioned and stopped in accordance with traffic regulations, manufacturer instructions and relevant vehicle handling procedures
	1.2 Engine power is managed to ensure efficiency and performance, and to minimise engine and gear damage
	1.3 Braking system of heavy rigid vehicle is managed and operated efficiently to ensure effective control of vehicle under all conditions
	1.4 Driving hazards are identified and/or anticipated and avoided or controlled through defensive driving
	1.5 Heavy rigid vehicle is driven in reverse, maintaining visibility and achieving accurate positioning
	1.6 Heavy rigid vehicle is parked, shutdown and safely secured according to traffic regulations
	1.7 Load is safely and effectively restrained
2 Monitor traffic and	2.1 Traffic and road conditions are constantly monitored and acted on to enable safe operation and to ensure no injury to

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	road conditions		people or damage to property, equipment, loads and facilities
		2.2	Interaction with other road users is conducted courteously in accordance with road rules to ensure safe and efficient traffic flow
3	**Monitor and maintain vehicle performance**	3.1	Vehicle performance is maintained through pre-operational inspections and vehicle checks
		3.2	Appropriate signage, lights and equipment are checked for operational effectiveness and for conformity to prescribed traffic regulations

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions can be found in the Companion Volume Implementation Guide.

Unit Mapping Information

This unit replaces and is equivalent to TLILIC2016B Licence to drive a heavy rigid vehicle.

TLILIC3017 Licence to drive a heavy combination vehicle

Modification History

Release 2. This is the second release of this unit of competency in the TLI Transport and Logistics Training Package.

Modification of assessment conditions to remove an implementation barrier.

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit involves the skills and knowledge required to obtain a licence to drive a heavy combination vehicle. It includes systematically and efficiently controlling all vehicle functions, monitoring traffic and road conditions, managing vehicle condition and performance, coupling and uncoupling of trailer, and effectively managing hazardous situations.

A heavy combination vehicles includes:

- a prime mover with a minimum of three axles and a semi-trailer with a minimum of two axles – vehicle must have a GCM rating of at least 24 tonnes or
- a heavy rigid vehicle towing a trailer – trailer must have at least two axles and a GVM of 12 tonnes or more.

Assessment of this unit will be undertaken within a licensing examination conducted by, or under the authority of, the relevant state/territory driver licensing authority.

This unit applies to driving that is carried out in accordance with relevant state/territory driver licensing authority licence requirements and regulations for heavy combination vehicles.

Driving is performed with limited or minimum supervision, and with limited accountability and responsibility for self and others in achieving the prescribed outcomes.

TLIX0004X Administer inventory systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit of competency describes the skills and knowledge required to administer inventory systems. It includes identifying inventory systems, tracking inventory, planning and administering inventory systems and completing inventory audits and reports.

Inventory is defined as the quantity of goods owned and stored by an organisation that is intended either for resale or is raw materials and components used in producing goods that are then sold.

Inventory systems provide visibility and integration in the supply chain and they are used to record transactions associated with receiving, reducing or writing inventory off. An inventory system can include desktop software, barcode scanners, barcode labels, mobile devices and applications.

The unit is applicable to those with responsibilities for inventory systems within a supply chain.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Assessment Requirements for TLIX0004X Administer inventory systems

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- assessing and managing stock quality including analysing discrepancies, out of specification and redirection opportunities
- categorising and labelling stock
- checking inventory specifications
- ensuring handling, sorting, disposal and recycling of stock is performed
- following organisational inventory policies and procedures
- identifying inventory characteristics
- maintaining and managing optimum stock levels
- meeting inventory system documentation requirements
- monitoring stock security
- reading and interpreting information and data related to inventory systems
- recording and maintaining inventory information
- undertaking quality control
- using the inventory system including inventory software and applications
- utilising Vendor Managed Inventory (VMI) systems
- validating third party inventory control operations.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- features of inventory systems
- financial implications of inventory management
- inventory documentation and reporting requirements including those for discrepancies, out of specification and redirection opportunities
- inventory loss and damage control
- inventory policies and procedures
- inventory tracking and security
- layout of inventory storage areas

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- maintenance and monitoring of stock quality and levels
- methods for categorising and labelling inventory
- principles of inventory management
- principles of quality control
- reorder cycles
- storage conditions for the maintenance of inventory including product life cycles, maximising use, rotation and replenishment requirements
- third party inventory control operations
- types of inventory systems
- valuation methods for different inventory items
- Vendor Managed Inventory (VMI) systems.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to a range of

- exercises, case studies or other simulations
- materials, tools and equipment used in industry including:
  - inventory systems and stock control equipment and tools
- documentation including organisational policies and procedures, industry standards, regulations, codes of practice, operational manuals and equipment specifications.

TLIX0013X Maintain stock control and receivals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Application

This unit of competency describes the skills and knowledge required to maintain stock control and receivals. It includes establishing supply arrangements, monitoring and maintaining stock, processing receivals and storing stock, determining stock wastage and discrepancies and performing stock audits and reporting.

Stock control involves the monitoring and managing of an organisation's stock. It applies to all stock at every stage of the production process from purchasing and delivery to using and reordering stock.

Receivals is the function of checking items delivered as new stock or supplies. It requires the inspection of goods and materials for quality, condition and quantity and the allocating of space in the storage facility or warehouse.

The unit is applicable to those with responsibilities for stock control and/or receivals within a supply chain.

No licensing, legislative or certification requirements apply to this unit at the time of publication.

Pre-requisite Unit

Not applicable.

Assessment Requirements for TLIX0013X Maintain stock control and receivals

Modification History

Release 1. This is the first release of this unit of competency in the TLI Transport and Logistics Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria on at least one occasion and includes

- assessing stock loss, wastage, excesses and discrepancies
- completing stock orders and receivals within established timelines
- disposing of stock safely including hazardous substances
- forecasting stock and receivals using approved methods and tools
- identifying supply sources for different types of products
- identifying third party inventory control operations
- implementing cost effective stock purchasing and control systems
- maintaining stock and receival data and records
- monitoring optimal safety stock placement and service level optimisation
- monitoring stock control systems, stock quality and cost effectiveness of supplies
- performing stock audits
- producing stock control reports
- receiving, storing, monitoring and maintaining stock levels over life cycle periods
- undertaking supplier and customer relationship management
- utilising stock handling, receivals and data collection technologies
- working with continuity plan and stock control and receival policies and procedures.

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements and performance criteria and includes knowledge of

- continuity plans
- contractual and preferred supplier arrangements
- disposal methods for stock and waste including hazardous substances
- stock control and receivals policies and procedures
- principles of stock control including:
    - approaches to calculating stock levels and replenishment requirements
    - factors that may influence purchase specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

    - forecasting methods for calculating inventory consumption
- methods and tools for calculating cost effective stock quantities including
    - methods of stock control including FIFO (First In, First Out) and LIFO (Last In, First Out)
    - standard measures and formulas for yield testing
    - stock control systems including bin card system, imprest system, integrated point of sale system and ledger systems
- product life and storage requirements for specific stock
- real time information using stock data technologies
- report requirements on stock loss, wastage, excesses and discrepancies
- safe manual handling techniques
- safe stock placement and service level optimisation
- security measures for stock including storage and tracking
- stock control audits
- stock ordering and delivery processes
- stock quality control
- stock reorder cycles for standard business periods, peak seasons and special events
- supplier and customer relationship management
- supply sources for different types of products
- types of computerised stock control systems, their functions and features.

Assessment Conditions

Assessors must hold credentials specified within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must satisfy the Principles of Assessment and Rules of Evidence and all regulatory requirements included within the Standards for Registered Training Organisations current at the time of assessment.

Assessment must occur in workplace operational situations where it is appropriate to do so. Where this is not appropriate, assessment must occur in simulated workplace operational situations that replicate workplace conditions.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Resources for assessment must include access to a range of

- exercises, case studies or other simulations
- materials, tools and equipment used in industry including:
    - access to suppliers with whom the learner can interact, commercial purchase specifications, stock control procedures and reports and costs and contractual documentation used for the purchase of stock
    - stock control software systems and applications
- documentation including organisational policies and procedures, industry standards, regulations, codes of practice, operational manuals and equipment specifications.

UEPOPL001 Licence to operate a steam turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Application

This unit specifies the outcomes required to operate a steam turbine for licensing purposes, steam turbine means equipment that is driven by steam acting on a turbine or rotor to cause a rotary motion.

It covers the operation of any steam turbine (except a steam turbine that produces a power output of less than 500 kW) that:

- is multi-wheeled
- is capable of a speed greater than 3600 rpm or
- uses attached condensers or
- a multi-staged heat exchange extraction process.

This unit requires the operator to plan the work, carry out preoperational safety checks, start the steam turbine, monitor steam turbine operation and shutdown the steam turbine.

A person performing this work is required to hold a turbine operation high risk work (HRW) licence.

Licensing/Regulatory information

This unit is based on the licensing requirements of Part 4.5 of the Model Work Health and Safety (WHS) Regulations, HRW and meets Commonwealth, state and territory HRW licensing requirements.

Any alteration to this unit would result in a unit that would not be acceptable to Work, Health and Safety (WHS)/Occupational Health and Safety (OHS) regulators for the purpose of licensing.

Pre-requisite Unit

There are no prerequisite units

Competency Field

Licensing

Unit Sector

Electricity generation

Elements and Performance Criteria

ELEMENTS	PERFORMANCE CRITERIA
Elements describe the essential outcomes.	Performance criteria describe the performance needed to demonstrate achievement of the element.
1 Plan work	**1.1** Type of operations to be conducted for steam turbine are assessed and prepared
	1.2 Steam turbine operations are planned, in accordance with procedures
	1.3 Personal Protective Equipment (PPE) is selected for use, ensuring statutory requirements and procedures are followed
	1.4 Hazards and potential hazards in work area are identified and assessed for risk, and controls recommended are consistent with appropriate standards
	1.5 Appropriate communication methods are identified, in accordance with procedures
2 Start-up steam turbine	**2.1** Downstream user of output power from steam turbine is advised of start up
	2.2 Controls are implemented for identified hazards and potential hazards in work area consistent with appropriate standards
	2.3 Availability of quality steam from upstream provider is confirmed
	2.4 Preoperational safety checks of steam turbine are conducted, in accordance with procedures
	2.5 Start-up checks are performed upon ancillary plant
	2.6 Maintenance requirements are identified and reported, in accordance with procedures
	2.7 Steam turbine is started and brought up to speed and placed on line safely, in accordance with procedures, including performance of start-up checks

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

3 Monitor steam turbine operation	**3.1**	Steam turbine is monitored, in accordance with required procedures, including performing of operational checks and fault finding
	3.2	Operating log is maintained clearly and accurately, in accordance with established procedures
	3.3	Operating status of steam turbine is diagnosed and verified
	3.4	Status of steam turbine is communicated to other operational personnel, including downstream users of steam turbine output power
	3.5	Steam turbine emergencies and contingencies are dealt with, in accordance with local workplace procedures, manufacturers' specifications and environmental requirements
4 Shut down steam turbine	**4.1**	Energy isolation procedures are followed
	4.2	Routine shutdown of steam turbine is performed, in accordance with operational and manufacturers' requirements and procedures, including performing shut down checks
	4.3	Maintenance requirements are identified, recorded and reported, in accordance with procedures

Foundation Skills

Foundation skills essential to performance are explicit in the performance criteria of this unit of competency.

Range of Conditions

Range is restricted to essential operating conditions and any other variables essential to the work environment.

Non-essential conditions may be found in the Companion Volume Implementation Guide.

appropriate standards must include	but not be limited to: • codes of practice • state, territory and federal legislation • Australian standards • manufacturers’ specifications

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

communicated and communication must include	• but not be limited to:
	  • verbal
	  • written
	  • telephone
	  • two-way radio
	  • log records
	  • computer record systems

emergencies must include	• but not be limited to:
	  • fire
	  • bomb threat
	  • terrorism
	  • personal accidents
	  • chemical spills
	  • major steam leaks
	  • major water leaks
	  • and flooding
	  • natural disasters

faults must include	• but not be limited to:
	  • abnormal operating conditions
	  • loss of a major auxiliary
	  • steam turbine water ingress
	  • wet steam
	  • excessively high turbine and turbine valves heating or cooling rates and/or differentials
	  • loss of condenser vacuum
	  • condenser tube leak
	  • high dissolved oxygen
	  • conductivity
	  • high steam turbine bearing temperatures or vibration
	  • high or low bearing oil temperatures
	  • loss of steam turbine bearing oil flow or pressure
	  • low or high pressure heaters malfunction
	  • actuator, valve, mechanical and electrical faults or failure
	  • instrument failure
	  • steam turbine protection

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

hazards must include	• but not be limited to:
	  • chemical hazards
	  • thermal hazards
	  • manual handling hazards
	  • guarding of machinery requirements
	  • illumination of work area
	  • rubbish and combustibles in area
	  • leakage of steam
	  • leakage of fuel
	  • obstructions in the work area
	  • fire
	  • noise
	  • vibration
	  • water and working at heights

operational checks must include	• but not be limited to:
	  • quality of steam supply
	  • cooling water system
	  • condenser operation
	  • position and operation of valves and fittings
	  • cylinder drainage system
	  • lubrication system, speed control, vibration level and steam reticulation line pressure
	  • operation of control or safety devices

Personal Protective Equipment (PPE) must include	• but not be limited to:
	  • prescribed under legislation, regulations, codes of practice and workplace policies and procedures
	  • hard hat, safety boots, gloves and high visibility clothing
	  • breathing, hearing, sight, skin and sun protection
	  • fall arrest equipment such as harnesses and lanyards, horizontal lines and inertia reel

preoperational safety checks must include	• but not be limited to:
	  • steam supply system
	  • position and operation of steam turbine valves
	  • safety devices

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	• overspeed shutdown • pressure relieve devices • speed governor • exhaust system • auxiliary equipment • lubrication system
procedures must include	• but not be limited to: • manufacturers' instructions, specifications or checklists • industry operating procedures • workplace procedures including instructions, operating procedures and checklists
recorded information must include	• but not be limited to: • operations and maintenance of steam turbine equipment • difficulties or issues • environmental issues • recommendations for future work • results • costs • hazards • incidents or injuries • dangerous occurrences or equipment malfunctions • log book and proformas • production reports and maintenance records
simulated training must include	• reproduction of conditions in working situation • enabling tasks to be learned and practised safely and economically
shut down checks must include	• but not be limited to: • checks of cooling down process • steam supply isolated • load on steam turbine • auxiliary equipment shutdown • cylinder drain system • isolation from any common connection
start-up checks must include	• but not be limited to: • position and operation of valves and

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

	fittings • operation of lubrication system • operation of drainage system • steam quality • heat input • operation of auxiliary equipment • freedom of rotation of steam turbine • steam turbine warmup • operation of steam traps and steam line purge systems • warm up of reticulation system • reticulation line pressure
industrial equipment must include	• where steam acts on a steam turbine or rotor to cause a rotary motion with any or all the following features: • attached condensers • multi-wheeled • multi-staged heat exchange extraction process at speed greater than 3600 rpm may include: • axial flow • back pressure • condensing • impulse • non-condensing pass out • radial flow • reaction and velocity compounding steam turbines with a power output of greater than 500kw • the operation may be assisted by remote indicators of plant status and other parameters monitored (e.g. central control stations), in wet, noisy, dusty or hot areas or during continuous operation
steam turbine emergencies and contingencies must include	• but not be limited to: • identification of type of emergency • isolation of steam supply • selection and application of appropriate firefighting equipment • notification of upstream steam supplier • operation of steam turbine only when safe to do so

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

testing must include	• but not be limited to:
	  • loss of a major auxiliary controls response checks
	  • standby plant tests
	  • valves operating checks
	  • emergency governor operation test
	  • performance tests
	  • alarm and protection tests

Unit Mapping Information

This unit replaces and is equivalent to UEPOPL001A Licence to operate a steam turbine.

Assessment Requirements for UEPOPL001 Licence to operate a steam turbine

Modification History

Release 1. This is the first release of this unit of competency in the UEP Generation Training Package.

Performance Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions on at least one occasion and includes:

- communicating effectively and working safely with others in the work area
- completing verification of problems and steam turbine equipment faults and demonstrating appropriate response procedures
- compliance with Commonwealth, state or territory regulations for the acquisition of a high risk work licence for steam turbine operation
- compliance with legislation, regulations, standards, codes of practice and established safe practices and procedures for starting, operating, shutting down and maintaining a steam turbine
- compliance with organisational and site policies and procedures including quality requirements and state or territory legislation applicable to workplace operations
- compliance with WHS and environmental regulations, policies and procedures
- controlling and monitoring any ancillary equipment which may be connected or interfaced to the steam turbine recording accurately and maintaining information related to operation of a steam turbine
- identifying hazards associated with the operation of the steam turbine and put in place effective hazard controls for those hazards identified
- performing efficiently and safely when starting, operating, shutting down and maintaining a steam turbine
- starting up, monitoring and shutting down a steam turbine effectively which meets the definition of this licence class
- undertaking diagnostic and testing techniques as applied to steam turbines
- using appropriate communication techniques with colleagues and others
- utilising relevant tools and equipment

Knowledge Evidence

Evidence required to demonstrate competence in this unit must be relevant to and satisfy all the requirements of the elements, performance criteria and range of conditions and includes knowledge of:

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- basic principles of heat transfer and thermodynamics
- Commonwealth, state or territory WHS legislation, regulations, standards and codes of practice relevant to the full range of techniques for operating steam turbines
- confined space awareness and the limits for entry into a confined space
- environmental protection requirements relating to the disposal of waste material and storage of environmentally hazardous materials
- established communication channels and protocols in the workplace
- organisational and workplace standards, requirements, policies and procedures for starting, operating, shutting down and maintaining a steam turbine
- procedures for the recording, reporting and maintenance of workplace records and information
- safety data sheets and material handling methods
- steam turbine capabilities and components
- steam turbine fault finding and problem solving techniques
- steam turbine operations and operating techniques
- steam turbine safety devices and testing techniques
- steam turbine speed control equipment
- system components and their interaction with other plant and equipment.
- typical routine problems encountered in the process and with equipment and adjustments required for correction
- understanding of the hierarchy of hazard identification and control

Assessment Conditions

Assessments must be conducted by an assessor accredited for this High Risk Work (HRW) licence class in the Commonwealth, state or territory where the licence will be obtained (i.e. an assessor authorised by a Commonwealth, state or territory WHS/OHS regulator).

As a minimum, assessors must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

As a minimum, assessment must satisfy applicable regulatory requirements, which include requirements in the Standards for Registered Training Organisations current at the time of assessment.

Assessment processes and techniques must be appropriate to the language, literacy and numeracy requirements of the work being performed and the needs of the candidate.

Assessment of performance must be undertaken in the workplace and/or under realistic workplace conditions which typically reflect:

- performing tasks and activities within timelines that would be expected in a workplace
- standard and authorised work practices, safety requirements and environmental constraints
- using full scale equipment

The use of simulators in the assessment of this unit of competency is acceptable.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Resources for assessment must include access to:

- a range of relevant exercises, case studies and/or other simulations
- relevant and appropriate materials, tools and equipment used in industry including:
  - Personal Protective Equipment (PPE) for performance assessment
  - appropriate safety equipment in safe condition
  - appropriate steam turbine and associated equipment in safe condition
- communication equipment, as required, applicable documentation including workplace procedures, industry standards, equipment specifications, regulations, codes of practice and operation manuals.

FBPSS00001 Advanced baking skill set

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 2.0. Corrected typographical errors.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0.

Description

This skill set addresses the skills required to provide bakers with advanced knowledge and skills to produce baking products.

Pathways Information

These units of competency provide a pathway from *FBP30417 Certificate III in Bread Baking* and *FBP30517 Certificate III in Baking*. Three of the units provide credit toward *FBP40217 Certificate IV in Baking*.

Licensing/Regulatory Information

Food safety legislation applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users of this skill set are advised to check with their food safety authority for specific requirements.

Skill Set Requirements

An asterisk next to the unit code indicates that there are prerequisite requirements which must be met as part of the skill set requirements. Please refer to the Prerequisite requirements table for details.

- FBPRBK3005 Produce basic bread products
- FBPRBK3018 Produce basic artisan products
- FBPRBK4001* Produce artisan bread products
- FBPRBK4002* Develop advanced artisan bread methods

Prerequisite requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit of competency	Prerequisite requirement
FBPRBK4001 Produce artisan bread products	FBPRBK3005 Produce basic bread products
FBPRBK4002 Develop advanced artisan bread methods	FBPRBK4001 Produce artisan bread products

Target Group

This skill set is for experienced bakers working in a commercial baking environment.

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet industry requirements for producing advanced bakery products in a commercial baking environment.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSS00002 Bread baking for pastry cooks skill set

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 2.0. Corrected typographical error.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0.

Description

This skill set addresses the skills required to provide pastry cooks with the knowledge and skills to bake bread products.

Pathways Information

These units of competency provide a pathway from the *FBP30317 Certificate III in Cake and Pastry* or equivalent.

Licensing/Regulatory Information

Food safety legislation applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users of this skill set are advised to check with their food safety authority for specific requirements.

Skill Set Requirements

An asterisk next to the unit code indicates that there are prerequisite requirements which must be met as part of the skill set requirements. Please refer to the Prerequisite requirements table for details.

- FBPRBK3005 Produce basic bread products
- FBPRBK3006 Produce savoury bread products
- FBPRBK3007 Produce specialty flour bread products
- FBPRBK3014 Produce sweet yeast products
- FBPRBK4001* Produce artisan bread products

Prerequisite requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit of competency	Prerequisite requirement
FBPRBK4001 Produce artisan bread products	FBPRBK3005 Produce basic bread products

Target Group

This skill set targets experienced pastry cooks who require the skills and knowledge to bake bread products in a commercial baking environment.

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet industry requirements for baking bread products in commercial bakeries.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSS00003 Cake and pastry baking for bread bakers skill set

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 2.0. Corrected typographical errors in *Suggest words for Statement of Attainment* section.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package version 1.0.

Description

This skill set addresses the skills required to provide bread bakers with the knowledge and skills to bake cake and pastry products.

Pathways Information

These units of competency provide a pathway for individuals who hold the *FBP30417 Certificate III in Bread Baking* or equivalent.

Licensing/Regulatory Information

Food safety legislation applies to workers in this industry. Requirements vary between industry sectors and state/territory jurisdictions. Users of this skill set are advised to check with their food safety authority for specific requirements.

Skill Set Requirements

- FBPRBK3001 Produce laminated pastry products
- FBPRBK3002 Produce non laminated pastry products
- FBPRBK3008 Produce sponge cake products
- FBPRBK3009 Produce biscuit and cookie products
- FBPRBK3010 Produce cake and pudding products
- FBPRBK3018 Produce basic artisan products

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Target Group

This skill set targets experienced bread bakers who require the skills and knowledge to bake cake and pastry products in a commercial baking environment.

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet industry requirements for baking cake and pastry products in commercial bakeries.

FBPSS00004 Food Safety Auditor Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Description

This skill set is designed to cover the knowledge and skills required of an entry level food safety auditor who conducts low risk safety audits (as outlined in the National Regulatory Food Safety Auditor Guideline and Policy) in food preparation or food processing sites.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package,* including:

- *FBP40418 Certificate IV in Food Science and Technology*
- *FBP50118 Diploma of Food Science and Technology*.

Licensing/Regulatory Information

This Skill Set supports relevant legislation, including food standards included in the Australian New Zealand Food Standards Code and industry codes of practice relating to validation and verification of a food safety program and the audit requirements detailed in the National Regulatory Food Safety Auditor Guideline and Policy, and should be read in conjunction with these documents.

Regulatory food safety audits in Australia are covered by state/territory legislative frameworks that support the requirements of the National Food Safety Audit Policy 2009.

Skill Set Requirements

- FBPAUD4001 Assess compliance with food safety programs
- FBPAUD4002 Communicate and negotiate to conduct food safety audits
- FBPAUD4003 Conduct food safety audits
- FBPAUD4004 Identify, evaluate and control food safety hazards

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Target Group

This skill set is for food safety auditors who carry out low risk food safety audits.

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package*, meet the requirements for a food safety auditor who audits low risk food preparation and processing sites.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSS00006 Pasteuriser and Homogeniser Operator Skill Set

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Description

This skill set is designed to develop the knowledge and skills of pasteuriser and homogeniser operators so that work is carried out in accordance with company policies and procedures, regulatory/licensing requirements and legislative requirements for the operation of high temperature/short time (HTST) and ultra-high temperature (UHT) pasteurisation equipment.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package*, including:

- FBP20121 Certificate II in Food Processing
- FBP30121 Certificate III in Food Processing.

Licensing/Regulatory Information

No licensing or certification requirements apply to this skill set at the time of publication. However, legislative and regulatory requirements for food processing exist so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Skill Set Requirements

- FBPOPR2088 Operate pumping equipment
- FBPOPR2094 Clean equipment in place
- FBPOPR3011 Operate a heat treatment process
- FBPOPR3013 Operate and monitor an homogenising process
- FBPOPR3016 Operate and monitor a separation process

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Target Group

This skill set is for pasteuriser and homogeniser operators who work in the dairy industry.

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package*, meet the requirements for pasteuriser and homogeniser operators who work in the dairy industry.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSS00017 Sugar Lab Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Description

This skill set addresses the skills required to analyse samples for cane payment and routine factory control.

Pathways Information

These units of competency provide credit towards a *FBP31018 Certificate III in Sugar Milling Industry Operations*.

Licensing/Regulatory Information

No occupational licensing or regulatory requirements apply to this skill set at the time of publication.

Skill Set Requirements

- BSBWHS201 Contribute to health and safety of self and others
- FBPSUG2006 Collect and prepare samples
- FBPSUG2024 Perform standard tests on cane samples
- FBPSUG3007 Perform factory control tests
- MSL933008 Perform calibration checks on equipment and assist with its maintenance

Target Group

This skill set is for sugar laboratory assistants.

Suggested words for Statement of Attainment

This skill set from the *FBP Food, Beverage and Pharmaceutical Training Package* meets the industry requirements for an individual working as a sugar laboratory assistant.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSS00024 Cellar Door Sales Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0. Supersedes *FDFSS00001 Cellar Door Sales Induction*. Updated unit codes and titles.

Description

This skill set addresses the entry level skills required by individuals working in cellar door sales within the wine industry.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package,* including:

- FBP20518 Certificate II in Wine Industry Operations
- FBP30918 Certificate III in Wine Industry Operations.

Licensing/Regulatory Information

No occupational licensing or regulatory requirements apply to this skill set at the time of publication.

Skill Set Requirements

- FBPCDS2001 Conduct a standard product tasting
- FBPCDS2003 Sell cellar door products and services
- FBPWIN2003 Conduct sensory evaluation of wine
- SITHFAB002 Provide responsible service of alcohol
- SITXCCS003 Interact with customers

Target Group

This skill set is for individuals that are new to cellar door sales and need to obtain skills and knowledge to perform effectively in a sales role.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the industry requirements for new workers in cellar door sales within the wine industry.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSS00025 Cellar Operations Induction Skill Set

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0. Supersedes FDFSS00002 Cellar Hand Induction. Updated unit codes and titles.

Description

This skill set addresses the entry level skills required by individuals working in cellar operations (wine making) within the wine industry.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package,* including:

- FBP20521 Certificate II in Wine Industry Operations
- FBP30921 Certificate III in Wine Industry Operations.

Licensing/Regulatory Information

No licensing or regulatory requirements apply to this skill set at the time of publication.

Skill Set Requirements

- FBPCEL2008 Carry out inert gas handling operations
- FBPCEL2009 Carry out transfer operations
- FBPOPR2095 Clean and sanitise equipment
- FBPWIN2001 Perform effectively in a wine industry workplace

Target Group

This skill set is for individuals that are new to cellar hand operations and need to obtain skills and knowledge to perform effectively in cellar operations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the F*BP Food, Beverage and Pharmaceutical Training Package* meet the industry requirements for new workers in cellar hand operations within the wine industry.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSS00027 Seasonal Vineyard Hand Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0. Supersedes *FDFSS0010 Hand Pruning Induction*. Updated unit codes and titles.

Description

This skill set addresses the entry level skills required by individuals working as seasonal vineyard hand (viticulture) within the wine industry.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package,* including:

- FBP20518 Certificate II in Wine Industry Operations
- FBP30918 Certificate III in Wine Industry Operations.

Licensing/Regulatory Information

No occupational licensing or regulatory requirements apply to this skill set at the time of publication.

Skill Set Requirements

An asterisk next to the unit code indicates that there are prerequisite requirements which must be met as part of the skill set requirements. Please refer to the prerequisite requirements table for details.

- AHCIRG215 Assist with low volume irrigation operations
- AHCIRG217 Assist with pressurised irrigation operations
- AHCMOM202 Operate tractors
- AHCPHT201 Plant horticultural crops
- BSBWHS301 Maintain workplace safety
- FBPVIT2003 Hand prune vines
- FBPVIT2004 Pick grapes by hand

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- FBPVIT2008 Train vines
- FBPVIT2009 Plant vines by hand
- FBPVIT2015 Carry out basic canopy maintenance
- FBPVIT2018* Support mechanical harvesting operations
- FBPWIN2001 Perform effectively in a wine industry workplace

Prerequisite requirements

Unit of competency	Prerequisite requirement
FBPVIT2018 Support mechanical harvesting operations	AHCMOM202 Operate tractors

Target Group

This skill set is for individuals who are new to vineyard opearations and need the skills to perform a variety of seasonal vineyard operations within the wine industry.

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the industry requirements for new operatives as seasonal vineyard hands within the wine operations industry.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

FBPSS00028 Wine Hospitality Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0. Supersedes *FDFSS00024 Wine Evaluation*. Updated unit codes and titles.

Description

This skill set addresses the skills required by individuals working in wine evaluation and tasting events within wine industry operations.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package,* including:

- FBP20518 Certificate II in Wine Industry Operations
- FBP30918 Certificate III in Wine Industry Operations.

Licensing/Regulatory Information

No occupational licensing or regulatory requirements apply to this skill set at the time of publication.

Skill Set Requirements

An asterisk next to the unit code indicates that there are prerequisite requirements which must be met as part of the skill set requirements. Please refer to the prerequisite requirements table for details.

- FBPCDS2001 Conduct a standard product tasting
- FBPCDS3002 Plan and deliver a wine tasting event
- FBPWIN2003 Conduct sensory evaluation of wine
- FBPWIN3001* Evaluate wines (advanced)
- SITHFAB002 Provide responsible service of alcohol

Prerequisite requirements

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Unit of competency	Prerequisite requirement
FBPWIN3001 Evaluate wines (advanced)	FBPWIN2003 Conduct sensory evaluation of wine

Target Group

This skill set is for individuals that need to obtain the skills and knowledge to performing wine evaluation and tasting roles within cellar door operations.

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the industry requirements for workers in wine evaluation and tasting within the wine industry.

FBPSS00029 Bottling and Packaging Operator Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Description

This skill set is designed to cover the knowledge and skills required of a bottling and packaging operator, working in wine or food processing industries.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package,* including:

- FBP20518 Certificate II in Wine Industry Operations
- FBP30918 Certificate III in Wine Industry Operations.

Licensing/Regulatory Information

No occupational licensing, legislative or certification requirements are known to apply to this unit at the time of publication.

Skill Set Requirements

- BSBWHS301 Maintain workplace safety
- FBPBPG2001 Operate the bottle supply process
- FBPBPG2003 Operate the carton packing process
- FBPBPG3001 Operate the bottle filling process
- FBPBPG3002 Operate the labelling process
- FBPBPG3004 Operate the bottle sealing process

Target Group

This skill set is for individuals who carry out bottling and packaging operations.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the requirements for a bottling and packaging operator who may work across a range of industry areas.

FBPSS00030 Vineyard Operations Hand Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 2.0.

Description

This skill set addresses the entry level skills required by individuals working in vineyard operations (viticulture) within wine industry operations.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package,* including:

- FBP20518 Certificate II in Wine Industry Operations
- FBP30918 Certificate III in Wine Industry Operations.

Licensing/Regulatory Information

No occupational licensing or regulatory requirements apply to this skill set at the time of publication.

Skill Set Requirements

Skill Set Requirements

An asterisk next to the unit code indicates that there are prerequisite requirements which must be met as part of the skill set requirements. Please refer to the prerequisite requirements table for details.

- AHCCHM101 Follow basic chemical safety rules
- AHCCHM201 Apply chemicals under supervision
- AHCMOM202 Operate tractors
- BSBWHS301 Maintain workplace safety
- FBPVIT2003 Hand prune vines
- FBPVIT2008 Train vines
- FBPVIT2011 Operate vineyard equipment
- FBPVIT2013 Recognise disorders and identify pests and diseases

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

- FBPVIT2014 Perform pest control activities
- FBPVIT2015 Carry out basic canopy maintenance
- FBPVIT2018* Support mechanical harvesting operations
- FBPWIN2001 Perform effectively in a wine industry workplace

Prerequisite requirements

Unit of competency	Prerequisite requirement
FBPVIT2018 Support mechanical harvesting operations	AHCMOM202 Operate tractors

Target Group

This skill set is for individuals who are new to vineyard hand operations and need to obtain skills and knowledge to perform effectively in vineyard operations.

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the industry requirements for new workers in vineyard operations within the wine operations industry.

FBPSS00050 Milk Tanker Operator Skill Set

Modification History

Release	Comments
Release 2	This version released with FBP Food, Beverage and Pharmaceutical Training Packafge Version 6.0.
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 4.0.

Description

This skill set is designed to provide milk tanker operators with the skills and knowledge around pre-competitive requirements for food safety compliance and testing.

Pathways Information

These units of competency provide credit towards a number of qualifications in the FBP Food, Beverage and Pharmaceutical Training Package, including:

- FBP20121 Certificate II in Food Processing
- FBP30121 Certificate III in Food Processing.

Licensing/Regulatory Information

No licensing or certification requirements apply to this skill set at the time of publication. However, legislative and regulatory requirements for food processing exist so local requirements must be checked. All work must comply with Australian food safety standards and relevant codes of practice.

Skill Set Requirements

- FBPOPR2066 Apply sampling procedures
- FBPOPR2070 Apply quality systems and procedures
- FBPOPR3008 Load and unload tankers
- FBPOPR3009 Participate in sensory analyses

Target Group

This skill set is for milk tanker operators who undertake milk transfer from farm to processor.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the FBP Food, Beverage and Pharmaceutical Training Package, meet the requirements for milk tanker operators who undertake milk transfer from farm to processor.

FBPSS00051 Pharmaceutical Manufacturing Operator Induction Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 4.1.

Description

This skill set is designed to address the skills and knowledge required of pharmaceutical manufacturing operators, for workers entering the pharmaceutical manufacturing industry. This skill set may provide an induction to work in that setting.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package,* including:

- FBP20418 Certificate II in Pharmaceutical Manufacturing
- FBP30818 Certificate III in Pharmaceutical Manufacturing.

Licensing/Regulatory Information

No licensing, legislative or certification requirements apply to this skill set at the time of publication.

Skill Set Requirements

- FBPPHM2001 Follow work procedures to maintain Good Manufacturing Practice requirements
- FBPPHM3002 Operate a pharmaceutical production process
- FBPPHM3003 Work in a controlled environment
- FBPWHS2001 Participate in work health and safety processes

Target Group

This skill set is suitable for individuals entering pharmaceutical manufacturing environments and who will carry out operational tasks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the requirements for those entering the pharmaceutical manufacturing industry in an operator role.

FBPSS00052 Manage Allergens in Food Processing Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Description

This skill set is designed to cover the skills and knowledge required to manage and control allergens in a food processing workplace.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package*, including:

- FBP40421 Certificate IV in Food Science and Technology
- FBP50121 Diploma of Food Science and Technology

Licensing/Regulatory Information

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Skill Set Requirements

An asterisk (*) next to the unit code indicates that there are prerequisite requirements which must be met. An individual must be competent in the prerequisite unit(s) of competency before undertaking any assessment in the unit containing the prerequisite(s).

- FBPFSY4003 Perform an allergen risk review
- FBPFSY4004* Provide accurate food allergen information to consumers
- FBPFSY5002 Develop an allergen management program

Target Group

This skill set is for those who work in food processing environments who have responsibility for controlling and managing allergens in food products, including communicating information about allergens to consumers through labels or product information sheets.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the requirements for those who manage and control allergens in a food processing workplace.

FBPSS00053 Check Traceability of Food Products Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Description

This skill set is designed to cover the skills and knowledge required to check the traceability of food products in a food processing, production or retail environment.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package*, including:

- FBP30121 Certificate III in Food Processing
- FBP40421 Certificate IV in Food Science and Technology

Licensing/Regulatory Information

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Skill Set Requirements

- FBPFSY3004 Participate in traceability activities
- FBPFSY4005 Conduct a traceability exercise

Target Group

This skill set is for those who work in food processing environments who have responsibility for checking traceability of food products.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the requirements for those who check traceability of products in a food processing, production or retail environment.

FBPSS00054 Food Processing Induction Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Description

This skill set is designed to cover the skills and knowledge required of workers who are new to work in the food processing industry.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package*, including:

- FBP10121 Certificate I in Food Processing
- FBP20121 Certificate II in Food Processing

Licensing/Regulatory Information

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Skill Set Requirements

- FBPFSY1002 Follow work procedures to maintain food safety
- FBPOPR1017 Follow work procedures to maintain quality
- FBPOPR2074 Carry out manual handling tasks
- FBPPPL1001 Communicate workplace information
- FBPWHS1001 Identify safe work practices

Target Group

This is an introductory skill set and is suitable for those who are starting work in food processing environments and who will carry out operational tasks.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the requirements for those entering the food processing industry.

FBPSS00055 Introduction to Food Processing Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Description

This skill set is designed to cover the skills and knowledge required at entry level to the food processing industry. This skill set may provide an induction to work in that setting.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package*, including:

- FBP10121 Certificate I in Food Processing
- FBP20121 Certificate II in Food Processing

Licensing/Regulatory Information

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Skill Set Requirements

- FBPFSY1002 Follow work procedures to maintain food safety
- FBPOPR1014 Monitor process operation
- FBPOPR1016 Take and record basic measurements
- FBPOPR2076 Inspect and sort materials and product
- TLID0006 Move materials mechanically using automated equipment

Target Group

This skill set is for those entering a work in food processing workplace who will carry out operational tasks under supervision.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the requirements for those entering the food processing industry.

FBPSS00056 Supervised Food Processing Operator Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Description

This skill set is designed to cover the skills and knowledge required to begin work in a food processing setting, in an operational role under supervision. In this role workers have the technical skills to use a limited range of machinery and/or equipment to process food and carry out routine tasks guided by established procedures.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package*, including:

- FBP20121 Certificate II in Food Processing

Licensing/Regulatory Information

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Skill Set Requirements

- FBPFSY2002 Apply food safety procedures
- FBPOPR2071 Provide and apply workplace information
- FBPOPR2096 Follow procedures to maintain good manufacturing practice in food processing
- FBPWHS2001 Participate in work health and safety processes

Target Group

This skill set is for those beginning work as an operator in a food processing workplace, who will carry out operational tasks under supervision.

© Commonwealth of Australia, 2025 Manufacturing Industry Skills Alliance

Suggested words for Statement of Attainment

These competencies from the *FBP Food, Beverage and Pharmaceutical Training Package* meet the requirements for those entering the food processing industry.

FBPSS00057 Food Processing Operator Skill Set

Modification History

Release	Comments
Release 1	This version released with FBP Food, Beverage and Pharmaceutical Training Package Version 6.0.

Description

This skill set is designed to cover the skills and knowledge required to work in an operational role in the food processing industry. In this role, workers are required to work autonomously, use judgement, interpret information, and apply solutions to routine and some non-routine problems.

Pathways Information

These units of competency provide credit towards a number of qualifications in the *FBP Food, Beverage and Pharmaceutical Training Package*, including:

- FBP30121 Certificate III in Food Processing

Licensing/Regulatory Information

Legislative and regulatory requirements apply to food safety and are enforced through state/territory jurisdictions. Users must check with the relevant regulatory authority before delivery.

Skill Set Requirements

- FBPFSY3003 Monitor the implementation of food safety and quality programs
- FBPFSY3004 Participate in traceability activities
- FBPOPR3019 Operate and monitor interrelated processes in a production or packaging system
- FBPOPR3021 Apply good manufacturing practice requirements in food processing
- FBPWHS3001 Contribute to work health and safety processes

Target Group

This skill set is for those entering or re-entering the food processing workplace as an operator.
